SUBJECT: Los Angeles Simulation Model Calibration
Results and Input Data for Stage 1 Experiments

FROM: NAFEC Program Manager, ANA-220

TO: Royal Mink, AWE-4

Enclosed are data packages for review by the Task Force members.

Attachment A presents the results of the Simulation Model Calibration. This calibration was rerun based on input from the Task Force on January 22, 1979, after reviewing data package #2. This calibration includes revised departure-to-departure separations considering aircraft which departed on the north end of the airfield and crossed over to a south departure fix.

Attachment B contains the model inputs (less the demand schedule) for the Los Angeles Stage 1 Experiments. The combined lateness distribution provided by American and United Airlines is included along with the revisions to Experiments #15 and #16 involving the by-pass taxiway to runway 7L. Separation values for all the experiments are included in accordance with comments made at the meeting and discussions with Los Angeles operations personnel. (Only model input changes from the previous experiments are noted under each new Stage 1 experiment number.)

Attachment C contains the revised arrival and departure runway, class, fix, and gate distributions which may be used to establish the demand (A/C schedule) for each experiment. In addition, an estimated percentage of departures from the north side of the field to a south departure fix is included in the appendix. The values used in the distributions were obtained during discussions of the operational procedures at Los Angeles.

Please forward the data package to the Task Force participants. The stage 1 experiments will be performed after completion of the demand schedule (A/C Schedule) by the Task Force. Any comments on the calibration and the model inputs would be appreciated and included in the experiments before making the computer runs.

JOHN R. VANDERVEER

n.a. = not applicable.

a. Study cases (combinations of runway use and weather conditions) are defined in Figure III-1.

b. FAA will describe impact of 1982 and post-1987 ATC systems on model inputs.

c. Potential near-term improvements are identified in the Los Angeles International Airport Improvement Task Force Interim Report, and in Appendix B.

d. Airfield Simulation Model.

e. Task Force establishes packages of near-term improvements most likely to be implemented in 1982 and 1987 time frames. The 1982 package includes improvement # 2 (high-speed taxiway off Runway 25L to the south), improvement # 3 (strengthening of the Sepulveda Tunnel), (cont.)

TABLE 2 (CONTINUED)

- e. (cont.) new taxiway access to threshold of Runway 24R, and temporary holding areas on future Taxiway 75. The 1987 package includes all 1982 improvements plus Satellite 1, International Terminal, and/or remote parking for 20 aircraft at west end of airport. These packages of improvements are subject to Task Force review and revision.
- f. Impact of absence of improvements # 2 and #3 (high-speed taxiway of Runway 25L and strengthening of the Sepulveda Tunnel).
- g. Improvement # 5 is a high-speed taxi exit off Runway 7. Improvement # 7 is a high-speed taxi exit to Taxiway 47 from Runway 6R. Improvement #8 is a bypass area on the north side of Runway 7L.
- h. Annual Delay Model.
- i. Runway Capacity Model.
- j. Runway 25R closed for tunnel construction.
- k. During closure of 25R for tunnel construction, parts of Runway 25 are open for small aircraft arrivals and departures.

DEMAND FORECASTS
DATA

LOS ANGELES INTERNATIONAL AIRPORT

LOS ANGELES
AIRPORT IMPROVEMENT TASK FORCE DELAY STUDIES

MARCH 1979

The demand forecasts data shown in tables 8 to 13 were taken from the FAA Aviation Forecasts for Los Angeles dated June 1978. The data from the report is shown in figure 8 of this data package.

The figure illustrates two points of interest over the time period from 1978 to 1987. First, the number of air carrier operations are shown to remain relatively constant while the air-taxi operations are projected to increase steadily. Second, the number of passengers will increase substantially over the period of interest.

The response to this increase in demand is reflected in the forecasts required for model demand inputs in two assumed ways. The number of wide-body aircraft operating into the Los Angeles International Airport will increase to accommodate the increase in passengers and the air-taxi operations will upgrade their aircraft fleet and increase the frequency of their operations.

Tables 15 and 16 show the effects of the data provided by the task force on the percentage of operations for each class of aircraft. There is a general trend towards higher number of wide-body aircraft (the percentage of heavy, Class D, aircraft of the total number of operations which increase from 1978 to 1987), and an increase in Class C aircraft due to the upgrading of the air-taxi fleet.

A 4-percent conversion of Class C to Class D operations in the demand forecast data between 1982 and 1987 results in the 30 percent of Class D aircraft operating into the Los Angeles International Airport. This assumption and the demand forecast data should be examined by the task force for use in the 1987 demand projection.

The total number of annual operations will be reduced to an average day in the peak month for the delay model aircraft demand (the actual 1978 annual demand approximates the 1982 projected demand).

FIGURE 8 FORECAST DEMAND DATA

ATTACHMENT F

PRELIMINARY ANNUAL DELAY BASELINE
DATA PACKAGE

LOS ANGELES INTERNATIONAL AIRPORT

LOS ANGELES
AIRPORT IMPROVEMENT TASK FORCE DELAY STUDIES

MARCH 1979

1. Annual Demand: 500,976 (1977)

2. Group Specification:

3 day groups : High, Average, Low
 12 week groups : 12 months, January through December
 3 weather groups : VFR, IFR1, IFR2

| 7 runway uses | Arrivals <u>Runway</u> | Departures <u>Runway</u> |
|---------------|---------------------------|-----------------------------|
| 1. | 24LR, 25LR | 24LR, 25LR |
| 2. | 24LR, 25LR | 24L, 25R |
| 3. | 24R, 25L | 24L, 25R |
| 4. | 6R, 7L | 24L, 25R |
| 5. | 6LR, 7LR | 6LR, 7LR |
| 6. | 6LR, 7LR | 6R, 7L |
| 7. | 6L, 7R | 6R, 7L |

3,4. Traffic Distribution:

| Week Group | <u>Jan</u> | <u>Feb</u> | <u>Mar</u> | <u>Apr</u> | <u>May</u> | <u>Jun</u> | <u>Jul</u> | <u>Aug</u> | <u>Sep</u> | <u>Oct</u> | <u>Nov</u> | <u>Dec</u> |
|--------------------------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|------------|
| % of annual in one week | 1.83 | 1.83 | 1.88 | 1.88 | 1.87 | 1.98 | 2.00 | 2.04 | 1.98 | 1.91 | 1.93 | 1.86 |
| Number of weeks in month | 4.43 | 4.00 | 4.43 | 4.29 | 4.43 | 4.29 | 4.43 | 4.43 | 4.29 | 4.43 | 4.29 | 4.43 |
| % of annual in month | 8.12 | 7.32 | 8.32 | 8.07 | 8.30 | 8.51 | 8.84 | 9.05 | 8.51 | 8.44 | 8.28 | 8.24 |

5.6. Daily Traffic Distribution:

| Day Group | <u>High</u> | <u>Average</u> | <u>Low</u> |
|--|-------------|----------------|------------|
| % of weekly in one day | 15.21 | 14.58 | 12.92 |
| Number of days | 2 | 3 | 2 |
| % of weekly traffic in day group | 30.43 | 43.73 | 25.84 |

7. Weather Occurrences: (Task Force Report of LAX Operational Weather, Table 17)

| Month | Jan | Feb | Mar | Apr | May | Jun | Jul | Aug | Sep | Oct | Nov | Dec |
|-------|------|------|------|------|------|------|------|------|------|------|------|------|
| %VFR | 97.7 | 83.2 | 99.1 | 90.6 | 96.8 | 72.7 | 85.3 | 84.6 | 86.4 | 66.6 | 93.0 | 78.1 |
| %IFR1 | 2.3 | 13.0 | 0.9 | 8.4 | 3.0 | 27.3 | 14.6 | 15.4 | 12.3 | 29.5 | 5.0 | 17.6 |
| %IFR2 | 0 | 3.8 | 0 | 1.0 | 0.2 | 0 | 0.1 | 0 | 1.3 | 3.9 | 2.0 | 4.3 |

8. Hourly Runway Capacity Parameters:

| Runway Use | Hourly Capacity (Operations/hour) | | |
|------------|--------------------------------------|------|------|
| | VFR | IFR1 | IFR2 |
| 1 | — | — | — |
| 2 | — | — | — |
| 3 | — | — | — |
| 4 | — | — | — |
| 5 | — | — | — |
| 6 | — | — | — |
| 7 | — | — | — |

9. Runway Use/Weather Group Demand Factors:

For all runway uses:

| Weather | Weather | | |
|---------|---------|------|------|
| | VFR | IFR1 | IFR2 |
| | 1.0 | 1.0 | 0.95 |

10. Runway Use Occurrences:

| Runway Use | Percent Occurrence | | |
|------------|--------------------|------|------|
| | VFR | IFR1 | IFR2 |
| 1 | 63.53 | — | — |
| 2 | — | 9.14 | — |
| 3 | — | — | 1.03 |
| 4 | 18.62 | 2.68 | 0.30 |
| 5 | 4.05 | — | — |
| 6 | — | 0.58 | 0.07 |
| 7 | — | — | — |

86.2

11. Hourly Traffic:

| <u>Hour</u> | <u>% daily traffic</u> | <u>Hour</u> | <u>% daily traffic</u> | <u>Hour</u> | <u>% daily traffic</u> | <u>Hour</u> | <u>% daily traffic</u> |
|-------------|------------------------|-------------|------------------------|-------------|------------------------|-------------|------------------------|
| 00-01 | 2.7 | 06-07 | 1.9 | 12-13 | 6.5 | 18-19 | 6.5 |
| 01-02 | 1.5 | 07-08 | 4.6 | 13-14 | 5.7 | 19-20 | 6.5 |
| 02-03 | 0.9 | 08-09 | 6.8 | 14-15 | 4.8 | 20-21 | 4.8 |
| 03-04 | 0.6 | 09-10 | 5.4 | 15-16 | 5.7 | 21-22 | 4.8 |
| 04-05 | 0.5 | 10-11 | 6.0 | 16-17 | 4.8 | 22-23 | 4.4 |
| 05-06 | 0.5 | 11-12 | 5.8 | 17-18 | 5.2 | 23-24 | 3.1 |

12,13. Delay Curve Specification: To be determined after airfield simulation runs.

14. Percent Arrivals:

| <u>Hour</u> | <u>%Arrivals</u> | <u>Hour</u> | <u>%Arrivals</u> | <u>Hour</u> | <u>%Arrivals</u> | <u>Hour</u> | <u>%Arrivals</u> |
|-------------|------------------|-------------|------------------|-------------|------------------|-------------|------------------|
| 00-01 | 50 | 06-07 | 54 | 12-13 | 46 | 18-19 | 59 |
| 01-02 | 50 | 07-08 | 44 | 13-14 | 35 | 19-20 | 57 |
| 02-03 | 55 | 08-09 | 36 | 14-15 | 58 | 20-21 | 61 |
| 03-04 | 43 | 09-10 | 31 | 15-16 | 54 | 21-22 | 58 |
| 04-05 | 83 | 10-11 | 49 | 16-17 | 52 | 22-23 | 44 |
| 05-06 | 67 | 11-12 | 58 | 17-18 | 54 | 23-24 | 54 |

15. Cancellation Diversion Specification: 75 minutes

16. User-Specified Title: LAX ANNUAL BASELINE

1. Improvement #10 consists of a series of taxiway improvements identified in Appendix B.
m. Improvement #11 contains temporary holding areas on present Taxiway 47 west of Satellites 3 and 4. The need for this experiment will be reviewed by the Task Force after consideration of temporary holding areas on future Taxiway 75.
n. Construction of Satellite 1 and International Terminal. The need for this experiment will be reviewed by the Task Force after consideration of future airline terminal locations.
o. Remote parking for 20 aircraft at west end of Airport.
p. Additional experiment may be needed to test value of dual taxiway system around Satellite 4 during tunnel construction!

LAX - STAGE 2EXPERIMENT NO. 18Objective:

To assess delays to aircraft in 1982 for the following runway configuration in VFR 1 with an improved ATC system scenario and improvement #10 (taxiways).

ARRIVAL RUNWAYS

24R, 24L, 25R, 25L

DEPARTURE RUNWAYS

24R, 24L, 25R, 25L

Related Comparison Experiments:

Experiment #19 is identical except for improvement #11 (temporary holding areas on taxiway 47 west of satellites 3 and 4).

Prior Experiment #11 is identical except for improvement #10 (taxiway improvements).

Remaining Data Items:

- . New route structure

| 38. Demand | |

LAX - STAGE 2EXPERIMENT NO. 19Objective:

To assess delays to aircraft in 1982 for the following runway configuration in VFR 1 with an improved ATC system scenario and improvement #11 (temporary holding areas on taxiway 47).

ARRIVAL RUNWAYS

24R, 24L, 25R, 25L

DEPARTURE RUNWAYS

24R, 24L, 25R, 25L

Related Comparison Experiments:

Experiment #20 is identical except for terminal expansion.
(Construction of satellite 1 and international terminal)

Prior Experiment #18 is identical except for improvement #11
(temporary holding areas on taxiway 47 west of satellites 3 and 4).

Remaining Data Items:

- . New holding area
(on present taxiway 47 west of satellites 3 and 4)

Experiment Number:

19

LAX - STAGE 2EXPERIMENT NO. 20Objective:

To assess delays to aircraft in 1982 for the following runway configuration in VFR 1 with an improved ATC system scenario and terminal expansion.

ARRIVAL RUNWAYS

24R, 24L, 25R, 25L

DEPARTURE RUNWAYS

24R, 24L, 25R, 25L

Related Comparison Experiments:

Experiment #21 is identical except for remote parking for 20 aircraft at west end of airport.

Prior Experiment #19 is identical except for terminal expansion.

Remaining Data Items:

- . New demand distributions
(Gate area assignments)
- . New route structure
