four branches of OP-0941. The final stage comprised the integration of the OP-0941 programs with the Naval Telecommunications Command (NAVTELCOM) programs into a single priority list.

The hierarchical prioritization process described in this report provided a structured comparison of small groups of programs in such a way that the group comparisons could be merged into an initial overall priority list based upon benefit to the Navy in meeting its national defense missions. Cost-effectiveness and other programmatic factors were then included in revising the priorities of the programs. Once the military worth of the programs had been defined in a quantitative manner as described in this report, a logical, analytical approach was used to establish the priorities based upon cost-effectiveness. This approach is described in detail in Decision-Analytic Support of the United States Marine Corps' Program Development: A Guide to the Methodology (AD A101135).

1.0 PRIORITIZATION PROCESS

This report describes the process and results that Decisions and Designs, Incorporated (DDI) implemented to support OP-0941 (Communications Division) in developing the priorities of its POM-85 programs above the Minimum Essential Program (MEP). This process was completed in two major stages. The initial stage consisted of prioritizing the programs (or BEI's) within and across the four branches of OP-0941; 941D - strategic C³, 941F - electromagnetic spectrum management, 941H - fleet tactical and automation communication, and 941J - communications security. The integration of the OP-0941 programs with the Naval Telecommunications Command (NAVTELCOM) programs into a single priority list was the final stage of the process.

The criterion for prioritizing these programs was initially based upon a desire to benefit the Navy and its contributions to the national defense -- military worth. After the programs of the OP-0941 branches were integrated with those of NAVTELCOM, other programmatic considerations were examined to identify those programs that would be funded, based upon direction outside of OP-0941 and NAVTELCOM. Finally, cost-effectiveness considerations were examined for information purposes. The following steps comprised the entire prioritization process:

1. Programs were first ranked and scaled within each of the OP-0941 branches in terms of their relative military worth. For example, a benefit or military worth figure of 50 for program B indicates that program B is half as beneficial as program A, which is assigned a benefit of 100.

2. Three programs from each of the four branches were chosen to integrate all of the programs from the four branches into one priority list. These twelve programs were then ranked and scaled in terms of their relative military worth. These relative benefits were then used to merge the four branch benefit scales onto one overall OP-0941 benefit scale. The sixty-four OP-0941 were then ranked from most beneficial to least beneficial.
3. The OP-0941 branch chiefs then inspected this priority list and made a small number of ad hoc revisions, primarily to cryptological programs that supported other programs in the list. The result was the OP-0941 priority list that would be merged with NAVTELCOM's priority list.
4. The NAVTELCOM priority list of fifty-eight programs was revised from the initial priority list that was developed on 15 and 22 October with DDI's support. Those revisions included both programmatic and dollar value factors of numerous programs which made the OP-0941/NAVTELCOM integration more difficult.
5. Four programs from each of the OP-0941 and NAVTELCOM priority lists were chosen for the purposes of integrating these two lists. These eight programs were then ranked and scaled in terms of their relative military worth. In this case, the relative benefits permitted the integration of the two lists, resulting in a ranking from 1 to 122.
6. This initial priority list was examined by OP-0941 and NAVTELCOM personnel, and it was agreed that those programs whose funding had previously been

agreed to would be identified and eliminated from further discussion. A total of sixteen programs were thus identified, and their relative benefits established their considered military worth as viewed by the OP-0941 and NAVTELCOM personnel.

7. Next, the OP-0941 and NAVTELCOM personnel reviewed the list and found that there were a disproportionate number of NAVTELCOM programs at the top of the list. As a result, some of NAVTELCOM's priority's were revised, and a large number of NAVTELCOM's programs had their relative benefits reduced to reflect the group's judgment about how the programs should be integrated. In addition, those programs requiring additional manpower were placed at the bottom of the list since no manpower offsets had been offered up.
8. Finally, the five year POM costs were input into DDI's computer program for all 122 programs so that dollar cumulatives for the five years could be generated. Three alternative priority lists were generated; a military worth priority list, a cost-effectiveness priority list, and a net benefit priority list. The military worth priority list is identical to what had been developed through step 7. The cost-effectiveness priority list used the military worth scale, from step 7, to calculate a benefit-to-cost ratio; and then ranked the programs based upon this ratio from highest to lowest. This priority list provides the Navy with the maximum military worth within the dollars available in the POM process. However, the programs often do not seem prioritized in the right order because very low cost/low benefit programs are near the top of the list. So, the net benefit list was developed to reprioritize those programs above

the funding level, based upon benefit minus cost (times a constant) calculations. These net benefit calculations are described in detail in Decision Analytic Support of the United States Marine Corps' Program Development: A Guide to the Methodology.¹

Section 2.0 provides the results of stage one (the OP-0941 branch prioritization, steps 1-3) of this effort. The results of the integration of the OP-0941 and NAVTELCOM priority lists (steps 4-7) are presented in section 3.0. Finally, step 8 is presented in section 4.0. A brief statement of conclusions and recommendations is provided in section 5.0.

¹Kenneth P. Kuskey et al., Decision Analytic Support of United States Marine Corps' Program Development: A Guide to the Methodology, Final Report PR 81-6-158 (McLean, VA: Decisions and Designs, Inc., May 1981).

2.0 OP-0941 PRIORITIZATION

This section presents the results of the initial OP-0941 branch priorities for their own POM-85 programs, and the subsequent integration of the four branch priority lists into an overall OP-0941 priority list.

Tables 2-1 through 2-4 present the initial priorities of the four branches for their own programs. The twelve programs that were selected to merge the branch priorities are shown in Table 2-5. The priorities and benefit scale assigned to these twelve programs by the OP-0941 branch chiefs (or their representatives) are presented in Table 2-6.

Then, the overall OP-0941 priority list is shown in Table 2-7; and the corresponding branch priority lists are presented in Tables 2-8 through 2-11.

In addition to the priorities and benefit scales, prioritization criteria were developed with branches 941D and 941H. Figures 2-1 and 2-2 present these criteria in relation to the 941D and 941H programs, respectively. In these figures, "H" means high impact, "M" - medium, "L" - low, and "O" - none.

941H PRIORITIZATION CRITERIA

3.0 MERGE OF OP-0941 AND NAVTELCOM

The nine programs selected from the OP-0941 and NAVTELCOM priority lists are presented in Table 3-1. (Originally, there were only eight, but the last two NAVTELCOM programs were significantly below the last OP-0941 program, so a lower OP-0941 program was selected.) The priorities and benefit scale for these nine programs are presented in Table 3-2.

The final prioritized list, including the ad hoc adjustments that were made, is shown in Table 3-3. Table 3-4 lists those programs that were declared "directed", and were removed from further discussion. The accumulated costs by fiscal year for these directed programs are also shown in the table.

Table 3-1. PROGRAMS FOR OP-0941 AND NAVTELCOM

4.0 CUMULATIVE COSTS FOR THE PRIORITY LISTS

This section of the report presents the benefit, cost-benefit, and net benefit priority lists with the associated cost totals. Table 4-1 presents the cost data by program that was used for those reports. This cost data was current as of 22 November 1982 and includes escalation factors.

The cumulative costs for the overall benefit priority list that was presented in the previous section are shown in Table 4-2. Based upon the amount of FY85 dollars that we expected at this time, the programs through NAMRAADS (2 38), on the second page of Table 4-2, would be funded some \$7,000,000 left for smaller programs. This includes funding for all directed programs.

Tables 4-3 and 4-4 provide similar information for the cost-benefit and net benefit priority lists, respectively. Item (4 39), OVERSEAS AUTOVON SSU, was the last program funded on the cost-benefit priority list, and was used as the pivot point for calculating net benefits for Table 4-4. This OP-0941 net benefit priority list is shown in Table 4-5; NAVTELCOM's net benefit priority list in Table 4-6.

5.0 CONCLUSIONS AND RECOMMENDATIONS

A hierarchical process for delivering program priorities is described herein. The process was used by both NAVTELCOM and OP-0941 for developing and integrating their priorities. This hierarchical prioritization process provided a structured comparison of small groups of programs in such a way that the group comparisons could be merged into an overall priority list based upon benefit to the Navy in meeting its national defense missions. This structured process reduced the influence of parochialism upon the program priorities by basing the evaluation of programs upon military worth within the Navy's missions.

Cost-effectiveness and other programmatic factors should also be included in the prioritizing of programs. However, once the military worth of the programs has been defined in a quantitative manner as described in this report, there is a logical, analytical approach to establishing the priorities based upon cost effectiveness.

This analytical approach to cost-effectiveness is based upon cost-benefit ratios of the individual programs. The benefit index is the quantitative scale for military worth, and the cost must be carefully defined to reflect the fiscal constraints faced in the POM and budget cycles. This approach is described in detail in Decision-Analytic Support of the United States Marine Corps' Program Development: A Guide to the Methodology.²
