19. KEY WORDS (Continue on reverse side if necessary and identify by block number) land use directors administrative personnel		
20. ABSTRACT (Continue on reverse side if necessary and identify by block number) → This report is primarily a compendium of the names, addresses, and telephone numbers of Federal agency and State government officials having control over, or interest in, land use and plans and programs related to land use. Discussion of inconsistencies between Army actions and such land use plans, policies, and controls is required by AR 200-2 in Environmental Assessments (EAs) and Environmental Impact Statements (EISs). Such discussion has been made very difficult by the lack of readily available information about what information these plans contain. Furthermore, many of the policies are relatively informal, or subject to subregional interpretation by regulatory officials. → <i>all</i>

BLOCK 20. (CONTINUED).

~~This~~ ^{IT} compendium provides for the Army preparer of EAs and EISs a point of contact who can answer questions about applicable policies at an early stage of project planning; determination of the appropriate lead/cooperating agency; scoping requirements; and document preparation process. Twenty categories of State-level programs are included, with one or more points of contact suggested for each state for each applicable type of program. Twenty-six Federal government agencies are identified whose programs may require coordination with Army activities. A State-level or regional point of contact is given for each agency for each state or larger region. Any of the points of contact may be asked to comment on the content of a completed EIS after coordination has been completed by Headquarters, Department of the Army.

This document is an updated version of CERL Technical Report N-40, published in July 1978. Therefore, the previous edition of TR N-40 can be discarded.

FOREWORD

This investigation was performed for the Directorate of Military Programs, Office of the Chief of Engineers (OCE), under Project 4A762720A896, "Environmental Quality for Construction and Operation of Military Facilities"; Task 04, "Land Use Planning"; Work Unit 001, "Guidelines for Preserving Natural Resources and Environmental Land Use Planning." The applicable ACR is 1.03.006. The OCE Technical Monitor was Mr. Donald Bandel, DAEN-MPO-B.

This document updates information provided in CERL Technical Report N-40, published in July 1978. The work was done by the Environmental Division (EN), U.S. Army Construction Engineering Research Laboratory (CERL). The assistance of Mr. Robert Baran of CERL in many phases of this study is gratefully acknowledged.

Dr. R. K. Jain is Chief of EN. COL Louis J. Circeo is Commander and Director of CERL, and Dr. L. R. Shaffer is Technical Director.

COMPENDIUM OF ADMINISTRATORS OF LAND USE AND RELATED PROGRAMS, UPDATED EDITION

1 INTRODUCTION

Background

Public Law 91-190—the National Environmental Policy Act of 1969 (NEPA)—requires that all Federal agencies prepare a detailed statement discussing environmental impacts of proposed actions which will significantly affect the quality of the human environment.¹ This basic requirement has been supplemented by regulations issued by the President's Council on Environmental Quality (CEQ)² and by Army Regulations 200-2 and 200-1.³ Both the CEQ and Army regulations require that an Environmental Impact Statement (EIS) prepared for a proposed Army action consider Federal, State, and local land use plans, policies, and controls for the affected area.

The U.S. Army Construction Engineering Research Laboratory (CERL) has developed the Computer-Aided Environmental Legislative Data System (CELDS).⁴ This system lets the Army preparer of an EIS or of an Environmental Assessment (EA) determine whether a proposed activity is likely to violate Federal or State environmental laws or rules. However, many land use plans and policies are less formal. They may be regional in nature, subject to individual rulemaking, or otherwise beyond the scope of the CELDS records. Army personnel therefore need additional guidance to adequately address land use and other environmentally related plans within the context of an EA or EIS.

Objective

The primary objective of this compendium is to provide a way for Army preparers of EAs and EISs to

¹National Environmental Policy Act of 1969, P.L. 91-190; 83 Stat. 851.

²Council on Environmental Quality, "Regulations for Implementing the Procedural Provisions of NEPA," 40 CFR, Parts 1500-1508 (July 1979).

³Environmental Quality: Environmental Effects of Army Actions, AR 200-2 (Department of the Army, October 20, 1980); Environmental Protection and Enhancement, AR 200-1 (Department of the Army, December 1973).

⁴R. L. Welsh, *User Manual for the Computer-Aided Environmental Legislative Data System*, Technical Report E-78/ADA019018 (U.S. Army Construction Engineering Research Laboratory [CERL], 1975).

quickly tell if an action complies with applicable Federal, State, or local land use plans, policies, or controls. A secondary objective is to give the Army installation natural resource managers and other environmental personnel a source of information about how closely resource management activities parallel activities regulated by adjacent governmental bodies.

This document updates information contained in CERL Technical Report N-40, published in July 1978. Users who have the previous edition of CERL TR-N-40 may discard it upon receipt of this edition.

Approach

Many identifiable land use plans, policies, and controls do not result from direct, formal legislation. They change frequently to meet the varying needs of the locality or managing agency. Thus, any attempt to compile all these plans would be impractical, since such a document would need constant updating.

Accordingly, a variety of land use and related program areas was categorized, and the State-level administrator or policy-maker responsible for each area was identified. This Point of Contact (POC) may be asked about the nature of programs within his/her area of responsibility or interest; he/she can provide more information about the status of these plans than a written document can.

Area-wide, regional, or State-level administrators of 28 selected Federal agencies were included as suggested POCs instead of cataloging every Federal land or resource management program. A simple matrix has been included for correlating an action with a plan and helping the Army user make a preliminary determination of which areas or agencies are most likely to have potentially conflicting policies.

Because these POCs change quickly, it would be desirable to have these contacts in an interactive computer system for rapid update and access. Interest in such a system should be directed to the U.S. Army Construction Engineering Research Laboratory (CERL) Environmental Division.

Scope

This report does not contain text of legislation, plans, or policies. It is intended to place the user in telephone or mail contact with a knowledgeable or responsible official having a stated interest in an area of environmental concern. Inevitably, all such POC designations will become outdated. Of the approximately 2067 such designations made in this report, more than

80 percent have been confirmed by personal conversation or mail reply between April 1981 and August 1981.

Federal government and State-level persons were located from a variety of land use and resource categories for the 50 states, Puerto Rico, Guam, American Samoa, District of Columbia, Panama Canal Zone, Virgin Islands, and the Trust Territory of the Pacific Islands. Most Army actions which might be subject to NEPA assessment are believed to be within the scope of this document.

Outline of Report

Chapter 2 describes primary and secondary purposes for which the compendium may be used by Army installation and command personnel. Appendix A provides POCs for Federal agencies. Appendix B provides POCs for State governments.

Mode of Technology Transfer

Army preparers of EAs and EISs may use this information immediately.

2 USER PROCEDURES

Introduction

This chapter summarizes the user procedure, provides guidance on compendium applications, and explains in detail how to access a POC. Figure 1 summarizes the applications and procedural steps for locating a specific POC. Appendices A and B give user procedures for finding the POCs.

Accessing the Compendium

As shown in Figure 1, all Army users of the compendium should use essentially the same procedures to obtain a POC. The basic steps are:

1. Choose between Federal Level Agencies (Table 1) and State Level Programs (Table 2).
2. Determine the category of Army activity (e.g., Construction)
3. Note which agencies are:
 - a. Recommended for coordination only if the Army will use their land or will operate within specified regions (symbolized by "1" in Tables 1 and 2).
 - b. Recommended for examination in every case (symbolized by "2" in Tables 1 and 2).

c. Recommended for examination only if the action is massive (symbolized by "3" in Tables 1 and 2).

4. Determine each applicable POC by:

a. Using Appendix A (Compendium of Federal Agency Points of Contact), and following the directions contained in the Appendix.

b. Using Appendix B (Compendium of State Agency Points of Contact), and following the directions contained in the Appendix.

For certain purposes, the Federal Agency Decision Matrix (Figure A2) or the State Agency POC listings beginning on p 97 can be used directly if the geographic area of interest is known and a specific category of program (State level) or agency (Federal level) is needed. This type of access is most logical in a broad search for information (e.g., when assembling background data for an environmental setting).

Relating Military Activities to Compendium POCs

The Army military installation conducts many activities which may be related to land use plans, programs, and controls. The most obvious of these concern major construction projects, expansion of training activities, and major changes in installation strength and/or mission. These actions may change traffic, noise, and air and water quality, as well as alter land use patterns. More subtle changes, such as those related to timber harvest, agricultural outleasings, or other resource management programs may also be related to land use or associated plans.

The existence of a related land use plan or control policy does not imply that the Army action must always comply with that plan. Possible conflicts with Federal, regional, State, or local land use plans, policies, and controls will be discussed in the Environmental Consequences (1502.16(c)) section of an EA or EIS (AR 200-2).

Nine broad categories of Army installation military activities have been related to the categories of land use program and policy covered in Appendices A and B. Table 1 relates these activity areas to Federal government agency programs; Table 2 relates them to program categories administered or overseen by State governments. The nine areas of Army activities are:

1. Construction. These activities are related largely to major military construction, Army (MCA) and to family housing projects. Routine repairs and minor projects are not implicit.

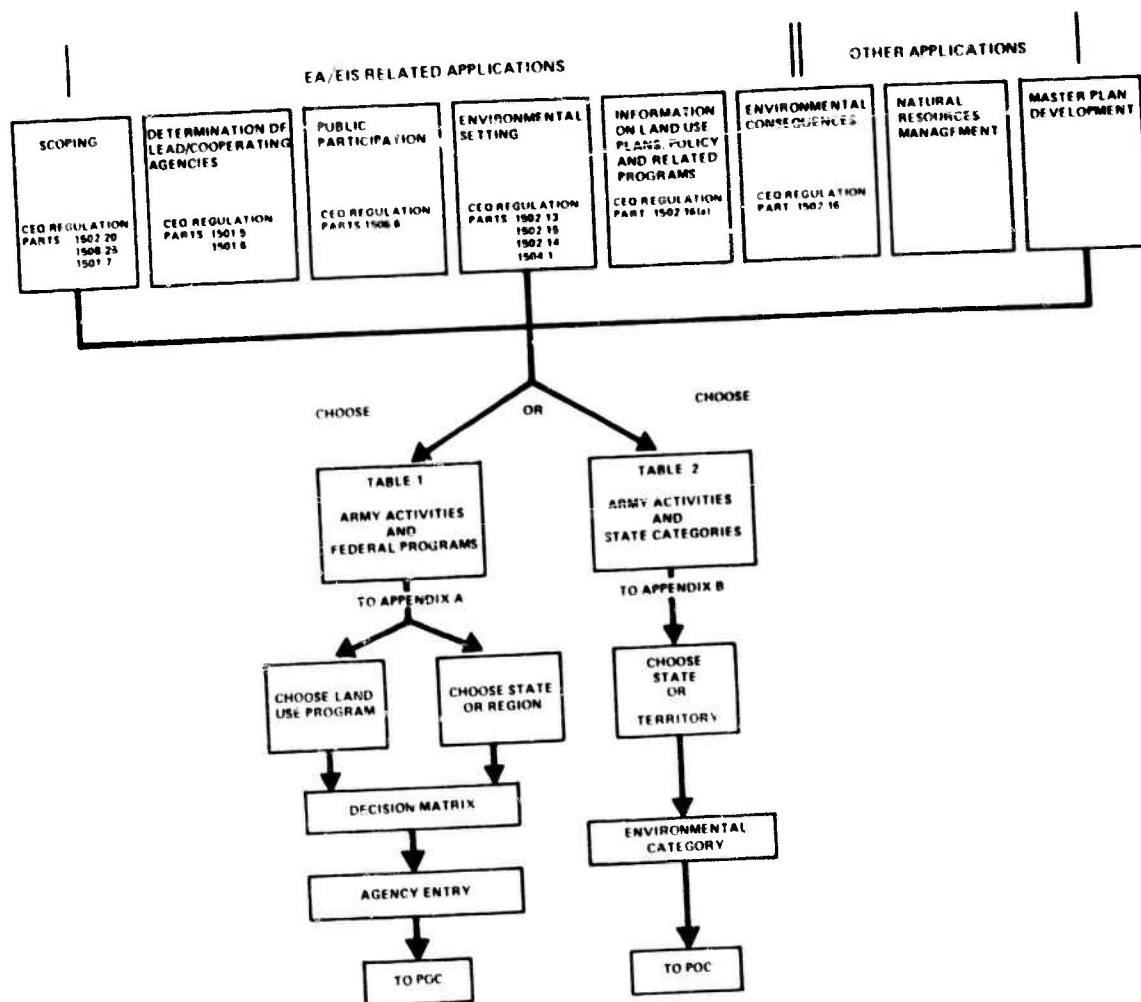

Figure 1. Paths of user access to compendium.

2. Mission Change. These activities deal with major shifts in installation strength or function. Many types of plans apply, especially when strength changes are 25 percent or more; these are indicated in Tables 1 and 2 with a special symbol.

3. Operations and Maintenance. These are the routine daily and annual activities required to maintain the installation. They include, but are not limited to, the Facility Engineer's functions.

4. Training. These activities include routine Training and Doctrine Command (TRADOC) and Forces Command (FORSCOM) troop training of all types.

Large troop movements and joint exercises off-post are most likely to require assessment.

5. Industrial. These activities include the operations of the Army industrial facilities, depots, and arsenals.

6. Procurement. These activities deal with purchases of all types of supplies and material; however, local installation procurements are most likely to relate to State and local land use plans.

7. Research, Development, Test, and Evaluation (RDT&E). Since RDT&E activities vary widely in nature and magnitude, those most likely to require

Key: 1. Recommended for coordination only if the Army will use their land or will operate within specified regions.
 2. Recommended for examination in every case.
 3. Recommended for examination only if the action is massive.

coordination with land use plans involve use of unusual habitats and unconventional equipment and materials.

8. Real Estate. These activities, by definition, add or release land or alter its use. Either major actions or those involving critical areas require closest examination.

9. Administration. Decisions to begin new construction or training, or to otherwise alter installations are the most important in relation to land use policy conflict. Contact with appropriate agencies during administrative activities will help determine what policies and programs are in effect.

For the sake of continuity, these nine areas of Army activity correspond exactly to the nine functional areas of the Environmental Impact Computer System (EICS). The EICS, developed by CERL to help the Army preparer of an EA or EIS,⁵ is a part of the CERL Environmental Technical Information System (ETIS), and deals specifically with Army activities and their potential impacts on the environment.

The categories of programs and agencies shown in Tables 1 and 2 correspond to those included in Appendices A and B. These tables are to be used for initial guidance. The user may determine from them which areas of land-use-related policy should usually be examined for possible conflict. For example, for the Federal level (Table 1), the person assessing a training exercise will find the intersection of "Training" and column 2 (U.S. Forest Service) marked with the symbol (1). Most of the markings on both Tables 1 and 2 are of this type. As stated in the legends of both tables, the symbol (1) indicates that the agency or program must be contacted only when actions are expected to take place on or near land controlled by that agency. In this example, if any of the training exercises will use Forest Service land, the land use policies of the Forest Service must be examined; any conflicts will be dis-

cussed in the EA or in the Environmental Consequences section of the EIS. If there are no conflicts, then liaison and plan examination are not usually needed.

In many cases, the use of the symbol (1) may not be so easily examined. For example, it is used in Table 2 at the intersection of "Training" and category 4--Wetlands Management. Examples of questions which should be asked are: Does your state have any policies and regulations concerning permitted uses of designated wetlands? Will the proposed training exercise utilize such wetlands in any way? The EA/EIS preparer must determine whether such policies exist, and whether the action will use lands covered by the policy. Discussing possible applicable policies with the POC for that category of land use program may be the only way to answer these questions.

Two other symbols are used to mark intersections in Tables 1 and 2. When a search for possible applicable land use regulations is almost always required for an EA/EIS, the symbol (2) is used. For example, every industrial activity large enough to require an EA or EIS should include coordination with the EPA (Federal Agency #23) and discussion of the applicable standards in Part 1502.16 of the document.

When examination of applicable plans and policies is logically required only when the action is very large, the symbol (3) is used. Some examples might be construction projects valued at more than \$250 million; mission changes involving changes of more than 25 percent of present strength (e.g., 5000 military or 1000 civilians to be relocated); and multidivisional training exercises. These will usually have a full-scale EIS prepared, and those areas indicated by the symbol (3) should be examined in addition to the others normally recommended for investigation. The symbols (1) and (3) have been used together in some cases. For these, examination of plans is normally required only if the activity is both massive and takes place on or near the jurisdiction of the agency noted.

Many intersections are blank. This indicates that a routine search for applicable programs in that category is not suggested. It does not mean that no State or Federal agency ever administers a land use related program which could affect those activities; it merely means that it is not normally a related area. Certain special legislation may exist which is unique and/or applies only to small areas; its existence cannot be predicted readily. Using the POCs to discover these special policies is the only way to determine such unusual rules.

Applications

EA/EIS Applications

The inclusion of land use and related plans, policies, and controls as a separate section of an EIS is required by CEQ in Part 1502.16 of its 1979 regulation.⁶ Similar wording is included in AR 200-2. However, neither the Army nor CEQ suggests a source of the content for these plans. In practice, assessments and statements have included only the more accessible and prominent items of legislation in this section. The Clean Air Act and the Federal Water Pollution Control Act Amendments of 1972 are examples of such plans whose relationships to a project are discussed regularly in EAs/EISs.

The requirements clearly call for discussing the relationship of all relevant land use plans to the proposed project. In practice, both Army and other preparers of EAs and EISs have had no source of information which would allow them to comply fully with these requirements. Upon request, the POCs listed in Appendices A and B can inform the Army user about land use and related policies which apply to jurisdictions adjacent to the installation.

CERL's interpretation of the requirements of CEQ's Part 1502.16(c), as included in AR 200-2, may be described for the typical Army user as follows. If planned activities would have been regulated by State and local land use plans if they had not taken place on Federal property, then the Environmental Consequences Section of the EA or EIS should discuss the theoretical conflict between the regulation and the action, if any.

AR 200-2 recognizes that possible lack of Army conformity to a local land use plan or policy is another area of environmental consideration which must be discussed. CERL does not interpret this wording to mean that full conformity to the plan will be required before the EA or EIS will be considered acceptable, but rather that a complete and adequate document must consider this potential area of conflict. If conflicts are left unresolved, however, this paragraph states that a discussion should be included which outlines reasons why full reconciliation was not considered feasible.

Another EIS-related use of the POCs is in completing the discussion of impact relationships called for in CEQ's part 1502.16(c) as found in AR 200-2. Land use

impacts may be considered here, along with other impacts on other aspects of the environment, in a manner parallel to ecology, air quality, or water quality. These land use impacts result from disruption of the environment, regardless of whether any plans or laws are violated. The POCs may be able to answer questions dealing with land use impacts; however, the information in this compendium is not specifically intended to address this question.

Many of the POCs will be able to supply information when the environmental setting section (CEQ's 40 CFR 1502.15) of an EA or EIS is being assembled (AR 200-2). Questions frequently arise which cannot be answered by personnel in the environmental office, or by any installation personnel. Within limits, many of the POCs have specific knowledge of vegetation, wildlife, air quality, water quality, transportation, historic and archaeological sites, and many other topics relevant to the typical EA or EIS.

The final step in processing a formal EIS is its distribution to interested or affected agencies of Federal, State, or local government for comments. Within the Army, this takes place only after Department of the Army Headquarters has determined that the proposed action is a major action with the potential to significantly affect the quality of the human environment, and has determined that the EIS covers the required topics adequately. Even though most proposed actions will not become the subject of EISs which are distributed for comments, the preparer should be ready to supply a list of persons (and their addresses) to whom the document will be sent for comment. The POCs listed may be used for this purpose. The compendium should be used to pinpoint officials who should receive copies of the EIS directly, even though a copy has been routed to the State clearinghouse.

Natural Resource Management

Many Federal- and State-level agencies represented in the compendium are primarily resource management agencies. Continuing liaison with such agencies is authorized by AR 420-70⁷ and DA FAM 420-7⁸ dealing with installation natural resource management. The persons listed as POCs could be valuable sources of information about the potential value of management

⁶Council on Environmental Quality, "Regulations for Implementing the Procedural Provisions of NEPA," 40 CFR, Parts 1500-1502, July 1979.

⁷Natural Resources—Land, Forest, and Wildlife Management, AR 420-74 (Department of the Army, 1 July 1977), p 1-2.

⁸Natural Resources—Land, Forest, and Wildlife Management, DA PAM 420-7 (Department of the Army, 10 May 1977)

policies which they have initiated in areas surrounding the installation. Most installation natural resource managers already are in touch with these POCs, or with other personnel in their agencies. If a user or his/her installation has never established contact with the agency, then the listed POC is a logical first contact with the agency, although another person may eventually be designated to handle an inquiry.

Master Plan Development

The basic information components of the Master Plan for Army Installations (AR 210-20, para. 2, 3) require that POCs be established to acquire information pertinent to the Master Plan.⁹ Many of the compendium's POCs will be able to supply the required information, and all will be able to direct the Army user to more appropriate sources, if necessary. The parameters governing the amount of assistance received and the costs involved parallel those given for the EA/EIS

⁹*Master Planning for Army Installations*, AR 210-20 (Department of the Army, 26 January 1976), p 1-1.

Applications and Natural Resource Management sections above.

3 CONCLUSIONS AND RECOMMENDATIONS

This report provides a methodology for Army military personnel involved in the preparation of EAs and EISs to determine that their projects comply with Federal, State, or local land use plans, policies, and controls. This report makes available to Army military installation personnel a source of information on the degree to which Army activities and resource management programs coincide with the policies of other governmental bodies. The POCs in Federal and State agencies are to be used to help Army personnel coordinate the land use plans, policies, and controls promptly.

It is recommended that this compendium be used to properly coordinate Army military activities dealing with land use plans, policies, and controls for compliance with NEPA requirements.

**APPENDIX A:
COMPENDIUM OF FEDERAL AGENCY
POINTS OF CONTACT**

**USE OF APPENDIX A TO FIND FEDERAL
POINTS OF CONTACT**

Introduction

This appendix contains the names, addresses, and phone numbers of administrative officials and POCs for 26 Federal departments, bureaus, services, agencies, administrations, commissions, etc., responsible for land use or land use programs. (For purposes of this appendix, departments, bureaus, services, agencies, administrations, commissions, etc., will all be called agencies.) Table A1 lists the agencies included in the compendium. There is no standard terminology used by Government agencies to designate their field offices. Therefore, the offices listed for an agency in this appendix may be regional, field, district, area, or state. (For purposes of this appendix, regional, field, district, area, or state offices will be called regional offices.) The administrator of an office is generally listed because of the wide variety of programs the agency may administer.

Following the explanation of how to use the Federal section of the compendium is a brief definition of each agency (pp 21-30). These definitions describe the types of programs, activities, and responsibilities that the agency may administer. These definitions will help the compendium user understand why these agencies should be contacted. The definitions are arranged in numerical order according to numbers in Table A1 and Table A2, and the numbers in the Federal Agency Decision Matrix (Figure A2), Table A2 provides easy reference to agency definitions, listings, and maps. The matrix is to be used to find the appropriate Federal agency POCs which have jurisdiction in a particular geographic area of interest. Use of the matrix is discussed in a step-by-step outline of how to use this appendix.

Following the matrix is a map which delineates the Standard Federal Regions of the United States (Figure A3). The boundaries of jurisdiction for the regional offices of six agencies in this appendix follow the boundaries of the Standard Federal Regions. These six agencies are indicated by a single asterisk in Table A1. The regional office boundaries for the other agencies in this appendix do not follow the boundaries of the Standard Federal Regions.

**Table A1
Federal Agencies Included in the Compendium**

1. Agricultural Stabilization and Conservation Service
- **2. U.S. Forest Service
3. Economic Development Administration
- **4. Regional Action Planning Commissions
5. National Oceanic and Atmospheric Administration
- *6. Dept. of Health and Human Services
- *7. Dept. of Housing and Urban Development
- **8. Bureau of Indian Affairs
9. Bureau of Land Management
10. U.S. Bureau of Mines
- **11. Bureau of Reclamation
12. U.S. Fish and Wildlife Service
13. U.S. Geological Survey Conservation Division
14. U.S. Geological Survey Geologic Division
15. U.S. Geological Survey Regional Headquarters
16. U.S. Geological Survey Water Resources Division
- **17. National Park Service
- **18. U.S. Coast Guard
19. Federal Aviation Administration
- *20. Federal Highway Administration
21. Federal Railroad Administration
- *22. Urban Mass Transportation Administration
- *23. Environmental Protection Agency
- **24. Federal Energy Regulatory Commission
- *25. General Services Administration
- **26. Water Resources Council

*These agencies have regional offices with regional boundaries corresponding to the map of Standard Federal Regions (Figure A3, p 35).

**These agencies have regional offices with regional boundaries corresponding to special maps located in the Compendium of Federal Agency Points of Contact agency listing (see identifying page numbers of Quick Reference Table A2).

NOTE: The agencies not designated by an asterisk have regional offices with regional boundaries which correspond to existing State political boundaries but not to the Standard Federal Regions.

The regional office boundaries for 12 of the remaining agencies do follow exact state political boundaries. Since POCs with jurisdiction in particular geographic areas for these agencies can be found using the matrix, no individual map has been provided to show their regional boundaries.

The remaining eight agencies have regional offices with jurisdictional boundaries which do not correspond to exact state political boundaries. This is common for agencies which administer programs and/or plans for water resources. Generally, these boundaries follow existing drainage basins. In such cases, a special map delineating the geographical boundaries of responsible offices is included before that agency's POC listing. Examination of the map will help determine which office has jurisdiction over a particular part of a state.

Table A2
Quick Reference Table

Agency	Definition Page Number	Agency Listing Page Number	Map Page Number
1. Agricultural Stabilization and Conservation Service	21	36	*
2. U.S. Forest Service	22	43	42
3. Economic Development Administration	22	45	*
4. Regional Action Planning Commission	22	47	46
5. National Oceanic and Atmospheric Administration	23	49	*
6. Dept. of Health and Human Services	23	50	35
7. Dept. of Housing and Urban Development	23	52	35
8. Bureau of Indian Affairs	24	55	54
9. Bureau of Land Management	24	57	*
10. Bureau of Mines	24	59	*
11. Bureau of Reclamation	25	61	60
12. U.S. Fish and Wildlife Service	25	62	*
13. U.S. Geological Survey Conservation Division	26	63	*
14. U.S. Geological Survey Geologic Division	26	64	*
15. U.S. Geological Survey Regional Headquarters	26	65	*
16. U.S. Geological Survey Water Resources Division	26	66	*
17. National Park Service	26	73	72
18. U.S. Coast Guard	27	75	74
19. Federal Aviation Administration	27	77	*
20. Federal Highway Administration	28	79	28
21. Federal Railroad Administration	28	81	*
22. Urban Mass Transportation Administration	28	82	35
23. Environmental Protection Agency	29	84	35
24. Federal Energy Regulatory Commission	29	87	86
25. General Services Administration	29	88	35
26. Water Resources Council	30	91	90

*No map provided. Regional boundaries for these agencies follow exact state political boundaries. Consult Federal Agency Decision Matrix for correct regional office.

If the user's area of interest is on the border of such a jurisdiction, it may be necessary to contact more than one office within an agency. These eight agencies, for which maps are provided, are indicated by a double asterisk in Table A1.

Following the Standard Federal Region Map are the Federal agency listings. The listings for the agencies are arranged in consecutive order according to the numbers assigned in Table A1, and also used in the Federal Agency Decision Matrix (Figure A2) and the Quick Reference Table (Table A2).

How To Use This Appendix

The following is a step-by-step procedure designed to help the user find a Federal agency POC in this appendix. The procedure described is based on the need to find just one POC. To find more than one, the user should simply repeat the procedure for each POC or duplicate the steps for each POC which is needed as he/she proceeds.

Step 1. Determine which state or territory may be affected by the proposed Army activity or action by determining the state or territory in which the activity or action is to be undertaken.

Step 2. Determine which agency should be contacted. Definitions containing the types of programs, activities, and responsibilities of each agency can be found on pp 21-30 of this appendix. Table 1 relates certain Army activities to the Federal agencies listed.

Step 3. With knowledge of the agency and geographical area for which the POC is needed, the user then refers to the Federal Agency Decision Matrix (Figure A2). To find the particular POC, the user can use the matrix in two ways. Figure A1, the Sample Federal Agency matrix, is a portion of Figure A2 and is to be used only as an example.

a. With the predetermined geographical area of interest found in Step 1, the user should follow along the

	Alabama	Alaska	American Samoa	Arizona	Arkansas	California	Colorado	Connecticut	Delaware	District of Columbia	Florida	Georgia	Hawaii	Idaho	Illinois
1. Agricultural Stabilization and Conservation Service	5	5	NA	5	5	5	5	5	5	20	5	5	5	5	5
2. U.S. Forest Service	8	10	11	3	8	5	2	9	9	9	8	8	5,11	1,4	9
3. Economic Development Administration	4	6	6	6	5	6	3	1	1	1	4	4	6	6	2
4. Regional Action Planning Commissions	10	NA	NA	2	5	NA	2	3	NA	NA	NA	1,10	NA	6	NA
5. National Oceanic and Atmospheric Administration	3	5	5	NA	NA	5	NA	1	2	NA	3	2	5	NA	4
6. Dept. of Health and Human Services	4	9	10	9	6	9	8	1	3	3	4	4	10	10	5
7. Dept. of Housing and Urban Development	4	9	10	9	6	9	8	1	3	3	4	4	10	10	5
8. Bureau of Indian Affairs	12	5	NA	8,9	12	11	2	12	12	12	12	12	NA	9,10	12
9. Bureau of Land Management	4	5	NA	4	5	5	4	4	4	4	4	4	NA	5	4
10. Bureau of Mines	4	4	12	NA	14	15	NA	13	13	NA	14	13	NA	15	NA
	5	5	NA	5	5	5	5	5	5	NA	5	5	5	5	5

*The top number for the Bureau of Land Management indicates land offices while the bottom number indicates Outer Continental Shelf Land Offices

Figure A1. Sample Federal Agency Decision Matrix.

top of the matrix until the appropriate heading which corresponds to the geographic area of interest is reached (for example, the State of California, Figure A1). The user would then follow down the column under the appropriate heading to the row which corresponds to the appropriate agency listed on the left of the matrix (for example, the U.S. Forest Service). A number 5 is found in the intersection of the column and row.

b. Knowing that a predetermined agency is to be contacted, the user follows along the left-hand side of the matrix. When the user finds the row which corresponds to the appropriate agency's name (for example, the Bureau of Mines, Figure A1), he/she should follow along that row to the column which corresponds to the appropriate geographical area of interest listed along the top of the matrix (for example, the State of Delaware). The information found in the intersection of that row and column is the letter S.

Step 4. The numbers or letters found in the matrix intersections can be in five forms.

a. If the intersection contains a single number, the user would then go to the appropriate agency listing and find the POC listed under that number (Forest Service Regional Office 5 in the first example).

b. If the intersection contains the letter "S," there is an agency contact for each state or territory for that agency. The POC can be found by looking for the state name in the agency listing (the Delaware office in the second example). In these cases, the states are listed in alphabetical order.

c. If the intersection contains more than one number, the state or territory lies within the geographic boundaries of two (or more) agency offices (for example, the Bureau of Indian Affairs intersection with Idaho, Figure A1). In these cases, the special map accompanying the agency listing should be consulted to determine the POC.

d. If the intersection contains "NA," there is no agency office which has jurisdiction in that state or territory (for example, the National Oceanic and Atmospheric Administration intersection with Arizona, Figure A1).

e. If the agency of interest is the Bureau of Land Management (BLM), special note should be taken of the format of the intersections. The top number indicates land offices of the BLM, while the bottom number indicates a BLM Outer Continental Shelf office (see footnote example in Figure A1).

To help the user find the agency definitions, maps, and listings, Table A2 provides the page numbers for this information for each agency.

FEDERAL AGENCY DEFINITIONS

Federal Agency No. 1—Agricultural Stabilization and Conservation Service¹⁰

The Agricultural Stabilization and Conservation Service (ASCS) within the Department of Agriculture administers specified commodity and related land use programs designed for voluntary production adjustment, resource protection, and price, market, and farm income stabilization.

The ASCS administers many programs which are related to land use and environmental conservation. Four deserve mention here because of their relationship to land use: the Agricultural Conservation Program, the Forestry Incentives Program, the Water Bank Program, and the Experimental Rural Clean Water Program.

The Agricultural Conservation Program provides cost-sharing with farmers to carry out needed conservation and environmental measures. The emphasis of the program is (1) to meet some of the more pressing farm-related conservation and environmental problems, (2) to practice long-range preservation of the environment, which will provide substantial benefits to the public at the least possible cost, and (3) to increase forest production.

The Forestry Incentives Program, authorized in 1973, provides for the cost-sharing of tree planting and timber stand improvement with private landowners. The aims of the program are to increase the production of timber and improve the environment.

The Water Bank Program is designed to compensate participating farmers for maintaining wetlands and providing additional habitat for nesting and brooding places of migratory waterfowl.

¹⁰General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (U.S. Government Printing Office [USGPO], May 1, 1981, pp 117-119; U.S. Department of Agriculture, Agricultural Stabilization and Conservation Service, *Agricultural Stabilization and Conservation Service: Programs and Services* (USGPO, February 1977).

The Experimental Rural Clean Water Program (RCWP), authorized in the Agricultural Appropriations Act for 1979 (92 Stat. 1073), provides cost-sharing and technical assistance for the installation of measures to control non-point source pollution from agricultural lands to improve water quality in rural America. The RCWP funding is available in approved project areas, designated by the Secretary of Agriculture with concurrence of the Environmental Protection Agency, in the Best Management Practices (BMP) to be carried out by the farmers.

The program is administered by the Agricultural Stabilization and Conservation State and county committees, assisted by other USDA agencies, EPA, and State and local conservation and water quality agencies. The activities of the agencies and organizations are coordinated through national, State, and local coordinating committees.

Federal Agency No. 2—U.S. Forest Service¹¹

The U.S. Forest Service within the Department of Agriculture manages, under the principles of multiple use and sustained yield, 154 national forests and 19 national grasslands comprising 188 million acres in 41 states and Puerto Rico. The Service is responsible for protecting these lands from wildfire, epidemics of disease, and insect pests, erosion, floods, and water and air pollution. The Service is also responsible for administering the Department of Agriculture's responsibility under the Wild and Scenic Rivers Act. In addition, the Service provides many facilities for public outdoor recreation with the national forests and grasslands.

The Forest Service cooperates with State and local governments, agencies, and organizations, forest industries, and private landowners in the protection, reforestation, management, and utilization of 631 million acres of forested lands and associated lands vital for watershed protection. The Service also carries on basic research throughout the country in all fields of forestry.

Federal Agency No. 3—Economic Development Administration¹²

The Economic Development Administration within the Department of Commerce was established in 1965 by the Secretary of Commerce to carry out most of

the provisions of the Public Works and Economic Development Act of 1965, as amended.

The primary function of EDA is the long-range economic development of areas with severe unemployment and low family income problems. It aids in the development of public facilities and private enterprise to help create new permanent jobs. The Administration's program includes public works grants and loans; economic adjustment assistance grants; business loans for industrial and commercial facilities and working capital; guarantees of leases for private industry and private loans for industrial and commercial facilities and working capital; and technical, planning, and research assistance for areas designated as Redevelopment Areas by the Assistant Secretary.

Federal Agency No. 4—Regional Action Planning Commissions¹³

The Regional Action Planning Commissions are Federal-State partnerships authorized under title V of the Public Works and Economic Development Act¹⁴ of 1965, as amended (42 USC, 3181, et seq.). The Commissions promote and manage development of multi-state regions designated by the Secretary of Commerce upon a finding of economic and social need.

The Commissions are composed of the governors of the states in the regions and a Federal member. The Commissions are required by statute to develop long-range regional development plans, which serve as a framework for program and project funding. The Commissions set their own program priorities and make their own project decisions in light of regional needs.

Because of differing developmental problems and opportunities among regions, the Commissions' program priorities will vary. In general, principal program categories include: industrial development, human resource development, energy conservation and development, natural resource development, transportation development, and tourism and recreation development.

These Commissions may be able to provide valuable information on the economics of their regions. Any activity which could affect regional and/or local economic situations should be coordinated with the appropriate Commission(s).

¹⁴General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981) p 159.

Federal Agency No. 5—National Oceanic and Atmospheric Administration¹⁵

The National Oceanic and Atmospheric Administration (NOAA) within the Department of Commerce was formed in October 1970. Its principal functions are to administer the National Weather Service, National Ocean Survey, and the National Marine Fisheries Service. The Administration's function and responsibilities regarding land use and environmentally related programs were increased as a result of the Coastal Zone Management Act of 1972, the Marine Mammals Protection Act of 1972, the Marine Protection, Research, and Sanctuaries Act of 1972, the Weather Modification Reporting Act of 1972, the Endangered Species Act of 1973, the Offshore Shrimp Fisheries Act of 1973, and the Fishery Conservation and Management Act of 1976.

NOAA conducts biological research and surveys of the living resources of the sea, analyzes economic aspects of fisheries operations with an eye to improving man's ability to use and conserve those resources, and protects marine mammals. As its primary function in terms of land use responsibilities, NOAA conducts research and development aimed at providing alternatives to ocean dumping and provides Federal leadership in promoting wise and balanced management of the nation's coastal zone; this includes the award of grants to states for developing and carrying out plans for the management of their coastal zones. NOAA also conducts an integrated program of research and services relating to the oceans and inland waters.

Federal Agency No. 6—Department of Health and Human Services¹⁶

The Department of Health and Human Services (HHS) administers and has responsibility for a vast number of Federal programs and activities which are designed to help develop the nation's human resources.

The Department of Health, Education, and Welfare was created in April, 1953. The Department was redesignated as the Department of Health and Human Services by the Department of Education Organization Act (93 Stat. 695; 20 USC 3508) approved in October 1979.

¹⁵General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 151-152.

¹⁶General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 266-268.

The Secretary of HHS directs the staff in carrying out the approved programs and activities of the Department and promotes general public understanding of the Department's goals, programs, and objectives. The Secretary administers these functions through the Office of the Secretary and the four Principal Operating Components (POCs), which include: the Social Security Administration, the Health Care Financing Administration, the Office of Human Development Services, and the Public Health Service.

Of the agencies identified in the compendium, HHS would appear to have the least relationship to land use and environmental aspects of an Army activity or action. However, when proposed Army activities or actions involve or have the potential to affect the development of the human resources of an area, coordination with HHS may provide a useful tool for developing alternatives or possible mitigation programs.

Federal Agency No. 7—Department of Housing and Urban Development¹⁷

The Department of Housing and Urban Development (HUD) administers many Federal programs and agencies, including the New Communities Administration, the Government National Mortgage Association, the Federal Disaster Assistance Administration, the Federal Insurance Administration, and the Office of Consumer Affairs and Regulatory Functions. The HUD-administered programs which are closely related to land use are the community planning and development programs. Most of these programs involve some sort of grant assistance to local municipalities, counties, or State governments.

Community Development Block Grant Assistance was established by Title I of the Housing and Community Development Act of 1974. Activities pursued under this program are aimed at the conservation of existing housing, improvement of public service, improvement in the use of land, and preservation of property with special values. The program also encourages community development activities consistent with local and areawide planning.

HUD provides grant assistance to State and local governments and areawide multijurisdictional organizations under the Comprehensive Planning Assistance program. This program supports an ongoing process in

¹⁷General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 292-293.

which State and local governments and areawide planning organizations formulate and coordinate community strategies and management decisions.

HUD also administers environmental quality and environmental planning activities as a result of the National Environmental Policy Act. Environmental functions of the Department encompass the development of environmental standards, policies, and procedures for energy conservation, codes modernization and administration, and strategies for the amelioration of environmental problems such as natural hazards and air and noise pollution. Emphasis is placed on environmental and land use planning and environmental management practices.

Federal Agency No. 8—Bureau of Indian Affairs¹⁸

The Bureau of Indian Affairs was established in 1824 by the War Department and transferred to the Department of the Interior when it was established in 1849. The principal objectives of the Bureau are to actively encourage and train Indian and Alaskan Native people to manage their own affairs under the trust relationship to the Federal government, and to facilitate, with maximum involvement of Indian and Alaskan Native people, full development of their human and natural resource potentials.

To carry out these objectives, the Bureau works with Indians and Alaskan Native people, other Federal agencies, State and local governments, and other interested groups in developing and implementing effective programs for their advancement. The Bureau also acts as trustee for their lands and monies held in trust by the United States, assisting them to realize maximum benefits from such resources.

As a result of this trusteeship, any activity or action to be performed on land which is on or adjacent to Indian and Alaskan Native holdings should be coordinated with the Bureau.

Federal Agency No. 9—Bureau of Land Management¹⁹

The Bureau of Land Management within the Department of the Interior is responsible for the total man-

agement of the Outer Continental Shelf (OCS) and 341 million acres of public lands. It is also responsible for subsurface resource management of an additional 169 million acres where mineral rights have been reserved to the Federal government. This acreage is located primarily in the far western states and Alaska. However, scattered parcels are located in many of the other states.

The Bureau's duties include classification of the public lands for protection and orderly use and development through multiple use management or disposition. In addition, the Bureau is responsible for providing a nationwide Federal land cadastral survey service and maintaining a nationwide public domain land record system.

The Bureau's programs provide for the management, development, and protection of the public lands for domestic livestock grazing, fish and wildlife development and use, industrial development, mineral protection, wilderness preservation, and preservation of public values. The Bureau also makes land available through sale to individuals, organizations, local governments, and other Federal agencies when such transfer is in the public interest. Many portions of Army installations are leased from the Bureau.

Federal Agency No. 10—U.S. Bureau of Mines²⁰

The Bureau of Mines within the Department of the Interior is primarily a research and fact-finding agency. Typical areas of research conducted by the Bureau are mine health and safety, recycling of solid wastes, improvement of coal production technology, abatement of pollution and land damage caused by mineral extraction and processing operations, and development of ways to use domestic low-grade ores as alternative sources of critical minerals that must currently be imported.

The Bureau also collects, compiles, analyzes, and publishes statistical and economic information on all phases of mineral resource development, including exploration, production, shipments, demand, stocks, prices, imports, and exports. The Bureau can be a valuable source of information, especially in any activity or action undertaken in a mining region or in a region which has a potential for mining operations.

¹⁸General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), p 320.

**Federal Agency No. 11—
Bureau of Reclamation²¹**

The Bureau of Reclamation within the Department of the Interior administers the Secretary of the Interior's responsibility outlined by The Reclamation Act of 1902. The Act authorized the Secretary to locate, construct, operate, and maintain works for the storage, diversion, and development of waters for the reclamation of arid and semiarid lands throughout Hawaii and the 17 contiguous western states not bounded by the Mississippi River.

The basic objectives of the Bureau's programs are to assist the states, local governments, and other Federal agencies in stabilizing and stimulating local and regional economies, enhancing and protecting the environment, and improving the quality of life through development of water and related land resources. To this end, Bureau projects are designed to provide the municipal and industrial water supply, hydroelectric power generation and transmission, irrigation water service, water quality improvement, wind power, and solar power research, fish and wildlife enhancement, outdoor recreation, flood control, navigation, river regulation and control, and related uses.

Major functions of the Bureau include the investigation and development of plans for the regulation, conservation, and use of water and related resources, including basin-wide water studies and new sources of fresh water supplies, power capacity, and energy; research programs to maximize use of resources, including weather modification; design and construction of authorized projects for which funds have been appropriated by the Congress; repair and rehabilitation of existing projects; operation and maintenance of Bureau-constructed facilities which are not transferred to local organizations; review of operation and maintenance of Bureau-built facilities which have been transferred to local organizations; settlement of public or acquired lands or Bureau-built facilities which have been transferred to local organizations; settlement of public or acquired lands on Bureau projects; administration of the Small Reclamation Projects Act of 1956, and of loans for construction or rehabilitation of irrigation systems; and negotiation, execution, and administration of repayment contracts, water-user operation and maintenance contracts, and contracts relating to the irrigation of excess lands.

²¹General Services Administration, Office of the Federal Register, 1981/1982 *United States Government Manual* (USGPO, May 1, 1981), pp 322-323.

The Bureau operates and maintains 50 hydroelectric power plants and constructs hydroelectric power plants on its projects as authorized by Congress. Another important aspect of the Bureau's mission is to review, in cooperation with other agencies, Environmental Impact Statements for proposed Federal water resource projects.

**Federal Agency No. 12—U.S. Fish
and Wildlife Service²²**

The U.S. Fish and Wildlife Service within the Department of the Interior as it presently exists was established in 1974. However, its predecessor agencies have been in existence for more than 100 years within several different departments. The Bureau's initial predecessors were the Bureau of Fisheries, established in 1871 as an independent agency but later placed in the Department of Commerce, and the Bureau of Biological Survey, established in 1885 in the Department of Agriculture.

The objective of the present U.S. Fish and Wildlife Service is to insure maximum opportunity for the American people to benefit from fish and wildlife resources as part of their natural environment. To this end, the Service provides leadership for the protection and improvement of land and water environments (habitat protection). The Service also designates endangered species under the Endangered Species Act.

In addition to biological monitoring activities, the Service is also involved in environmental impact assessment through river basin studies, including hydroelectric dams, nuclear power sites, stream channelization, dredge and fill permits, associated research, and Environmental Impact Statement review. The Service is also active with area planning and preservation involving river basins, wilderness areas, and special studies such as oil shale and geothermal energy.

The Service is not only a valuable source for data concerning fish, wildlife, and habitat preservation, but it should also be contacted for the evaluation of impacts and mitigation procedures when an Army activity or action is to be undertaken on or adjacent to land which could be considered environmentally critical in terms of natural habitat.

²²General Services Administration, Office of the Federal Register, 1981/1982 *United States Government Manual* (USGPO, May 1, 1981), pp 314-316.

**Federal Agencies No. 13, 14, 15, 16—
U.S. Geological Survey²³**

The Geological Survey was established by the Act of March 3, 1879, which provided for "the classification of the public lands and the examination of the geological structure, mineral resources, and products of the national domain." The broad objectives of the Survey are to perform surveys, investigations, and research covering topography, geology, and the mineral and water resources of the United States.

The Survey is divided into five organizational units with interrelated functions. These units are the Topographic Division, the Geologic Division, the Water Resources Division, the Conservation Division, and the Land Information and Analysis Office.

The Topographic Division of the Survey produces maps delineating the physical features and land areas of the United States, its outlying areas, and Antarctica. These maps are components of the National Mapping Program and are an invaluable source of information.

The Geologic Division conducts many research programs concerning geologic processes and their relationship to the availability of mineral and land resources. This information provides a basis for many critical decisions and actions relating to land use, urban planning and development, construction practices, environmental and health problems, and earthquake, volcanic, and other natural hazards.

The Water Resources Division determines the source quantity, quality, distribution, movement, and availability of both surface and ground water. This information is invaluable to the knowledge needed to predict the environmental consequences of alternative plans for developing water resources.

The Conservation Division classifies public lands with respect to leasable minerals for reservoir and waterpower sites. With this information, the Survey supervises the operations of private industry on geothermal, oil shale, mining, and oil and gas leases on public domain, acquired, Indian, Outer Continental Shelf, and certain Naval Petroleum Reserve lands to insure maximum use and prevent waste of the mineral

²³General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 318-319; U.S. Department of the Interior, Geological Survey, *Annual Report: Fiscal Year 1976* (USGPO, 1977).

resources, and to insure the protection of the environment and prevent pollution.

The Land Information and Analysis Office coordinates and administers interrelated, interdisciplinary programs of the Survey, as well as other units of the Department of the Interior. These programs are designed to interpret and display resource information in ways that are readily accessible and understandable to a wide range of potential users, particularly land use planners and decision-makers.

The Geological Survey is therefore a storehouse of information which can be of value to Army personnel and decision-makers when assessing the impacts of activities or actions and developing and evaluating viable alternatives to those actions.

The compendium lists the POCs for the regional and district offices of the Conservation, Geologic, and Water Resources Divisions. To obtain information from the Topographic Division and the Land Information and Analysis office, contact can be made with the headquarters office at the National Center in Reston, VA.

**Federal Agency No. 17—
National Park Service²⁴**

The National Park Service within the Department of the Interior administers an extensive system of national parks, monuments, historic sites, and recreation areas. The Service objectives are to administer these properties for the enjoyment and education of the American people; to protect the environment and historic properties of these areas; and to assist government and private institutions in the development of additional park and recreational areas, protection of the natural environment, and preservation of historic properties.

Among the responsibilities of the Service are the development and implementation of park management plans for the natural, historic, and recreational areas under its administration. The Service is also responsible for staffing these areas.

Effective February 1981, the Secretary of the Interior transferred several major programs formerly administered by the Heritage Conservation and Recreation Service (previously known as the Bureau of Outdoor Recreation) to the National Park Service. Programs

²⁴General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 316-317.

that were transferred included the administration of the state portion of the Land and Water Conservation Fund, the Nationwide Outdoor Recreation Planning, the Urban Park and Recreation Program, Park and Recreation Technical Services, Federal Land Planning, planning for the National Wild and Scenic Rivers System, the National Trails System, Natural Area Programs, the National Register of Historic Places, National Historic Landmarks, Historic Preservation, Technical Preservation Services, National Architectural and Engineering Record, and Interagency Archeological Services.

In addition to preserving, managing, and interpreting to the public the lands and resources under its administration, the Service sponsors programs to identify and recognize natural and historic landmarks, to recover archaeological remains, to record significant architectural and engineering works, and to assist through grants-in-aid the preservation of non-Federal historic properties.

Federal Agency No. 18-- U.S. Coast Guard²⁵

The U.S. Coast Guard, established by the Act of January 28, 1915, became a component of the Department of Transportation on April 1, 1967, pursuant to the Department of Transportation Act of October 15, 1966. The Coast Guard has responsibility for many activities dealing with safety and law enforcement on navigable waterways.

Two of the many programs that the Coast Guard administers deserve brief mention because they should be coordinated with Army activities and actions. The Coast Guard has the major responsibility of implementing the nation's policies for protecting the marine environment. The marine environmental protection program administered by the Coast Guard is aimed at maintaining or improving the quality of the marine environment and minimizing the damage caused by pollutants discharged into the marine environment. Under the aids to navigation program, the Coast Guard establishes and maintains aids to navigation, including light structures, lightships, buoys, daybeacons, long-range electronic aids, short-range radiobeacons, and log sig-

nals. Other functions include administering the alteration of obstructive bridges, approving the location, clearance, and lighting of bridges over navigable waters of the United States, and regulating drawbridge operations.

Federal Agency No. 19--Federal Aviation Administration²⁶

The Federal Aviation Administration (FAA), which is within the Department of Transportation, is charged with regulating air commerce to foster aviation safety; promoting civil aviation and a national system of airports; achieving efficient use of navigable airspace; and developing and operating a common system of air traffic control and air navigation for both civilian and military aircraft. The latter charge is its primary responsibility.

To obtain these objectives, the FAA operates a network of airport traffic control center and flight service stations. It develops air traffic rules and regulations and allocates the use of airspace. It also provides for the security and control of air traffic to meet national defense requirements.

The FAA administers programs to evaluate the development of public airports in conjunction with the national airport system. It provides funds to help the private sector with airport system planning, airport master planning, and public airport development. To help develop the national system of airports and the efficient use of airspace, the FAA also develops specifications for preparing aeronautical charts. It publishes current information on airways and airport service and issues technical publications for improving safety in flight, airport planning and design, and other aeronautical activities.

Much of the information which the FAA can provide will be useful when evaluating Army activities which pertain to airborne operations. A training or mission change activity which involves airborne activities should be coordinated with FAA policies on the use of airspace. Construction of any airport or air navigational aids could also be affected by these policies.

²⁵General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 412-415; U.S. Department of Transportation, *U.S. Department of Transportation--Facts and Functions* (USGPO, January 1, 1971).

²⁶General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 415-416; U.S. Department of Transportation, *U.S. Department of Transportation--Facts and Functions* (USGPO, January 1, 1971).

Federal Agency No. 20--Federal Highway Administration²⁷

The Federal Highway Administration (FHWA) within the Department of Transportation carries out the highway transportation programs of the Department. In this effort, the FHWA seeks to coordinate highways with other modes of transportation to achieve the most effective balance of transportation systems and facilities under cohesive Federal transportation policies.

The primary responsibility for planning, designing, building, maintaining, and operating publicly owned highway facilities lies with the various states and their local subdivisions. Due to the national interest in highway improvement, the Federal government has since 1916 assisted the states through a cooperative road-building partnership. The Federal-Aid Highway Program is the fundamental means of providing this assistance. This program provides for construction of the 42,500-mile national system of Interstate and Defense Highways financed on a 90 percent Federal, 10 percent State basis. The program also provides for the improvement of 870,000 miles of other Federal-Aid primary and secondary roads, with financing on a 75-25 basis. The planning requirements of this program are designed to insure that highway improvements preserve the natural beauty of the countryside, public parks, recreation lands, wildlife and waterfowl refuges, and historic sites; contribute to achieving community goals; and are compatible with planned land use development.

The FHWA is responsible for the design and construction of forest highway system roads, defense highway and access roads, roads in national parks, and other highway related programs. This function of the FHWA is of particular importance to Army personnel. Coordination of major Army activities which may eventually result in additional highway construction or increased use of a roadway network is essential to maintain a planned program for highway improvement.

Federal Agency No. 21--Federal Railroad Administration²⁸

The Federal Railroad Administration (FRA) was

²⁷General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 417-419; U.S. Department of Transportation, *U.S. Department of Transportation--Facts and Functions* (USGPO, January 1, 1971).

²⁸General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 419-420; U.S. Department of Transportation, *U.S. Department of Transportation--Facts and Functions* (USGPO, January 1, 1971).

created as a result of the Department of Transportation Act of 1966. The purpose of the Federal Railroad Administration is to consolidate government support of rail transportation activities; provide a unified and unifying national policy; administer and enforce rail safety laws and regulations; administer financial assistance programs for certain railroads; conduct research and development in support of improved intercity ground transportation and the future requirements for rail transportation; and operate the Alaska Railroad.

As a result of the FRA's responsibility under the Rail Safety Act of 1970, the Administration inspects all railroad and related industry equipment, facilities, and records. The FRA's responsibility under this Act which is closely related to Army activities is the administration and enforcement of regulations pertaining to the rail transportation of explosives and other dangerous articles.

Federal Agency No. 22--Urban Mass Transportation Administration²⁹

The Urban Mass Transportation Administration (UMTA) within the Department of Transportation operates under the authority of the Urban Mass Transportation Act of 1964. The mission of UMTA is to help develop improved mass transportation facilities, equipment, techniques, and methods; to encourage the planning and establishment of areawide urban mass transportation systems; and to provide assistance to State and local governments in financing such systems.

A requirement placed on State, regional, and local governmental bodies which are eligible for UMTA funds is that the area designated to receive those funds must have a program for a unified or officially coordinated urban transportation system as a part of the comprehensive planned development of the area. UMTA can be a valuable source of information when an Army activity requires the evaluation of mass transportation system in the assessment process. This evaluation will most often arise as a result of a mission change which places or displaces many personnel in an urbanized area.

²⁹General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 423-424; U.S. Department of Transportation, *U.S. Department of Transportation--Facts and Functions* (USGPO, January 1, 1971).

Federal Agency No. 23—Environmental Protection Agency³⁰

The Environmental Protection Agency (EPA) was established in the executive branch as an independent agency effective December 2, 1970. The EPA was created to permit coordinated and effective governmental action on behalf of the environment.

The EPA, pursuant to its activities, is designed to serve as the public's advocate for a livable environment. The EPA endeavors to abate and control pollution systematically by proper integration of a variety of research, monitoring, standard-setting, and enforcement activities. The EPA programs for these activities are aimed at abatement and control of air, radiation, solid waste, effluent, water, and toxic substance pollution.

The EPA is responsible for a national research program in pursuit of technological controls of all forms of pollution. To this end, the EPA can be a valuable source of information and possible mitigation techniques.

Contact with the EPA is not only important from the standpoint of data collection, but it is also a requirement of the Council on Environmental Quality regulations. The regulations stipulate that whenever an agency action related to air or water quality, noise abatement and control, pesticide regulation, solid waste disposal, generally applicable environmental radiation criteria and standards, or other provision of the authority of the EPA is involved, Federal agencies are required to submit such proposed actions and their Environmental Impact Statements, if any have been prepared, to the EPA.

Federal Agency No. 24—Federal Energy Regulatory Commission³¹

An independent, five-member commission within the Department of Energy, the Federal Energy Regulatory Commission (FERC) has retained many of the functions of the Federal Power Commission. These include setting rates and charges for the transportation and sale of natural gas and for the transmission and sale of electricity and the licensing of hydroelectric power projects. In addition, the Commission establishes rates

³⁰General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 487-488; Council on Environmental Quality, "Regulations for Implementing the Procedural Provisions of NEPA," *40 CFR*, Parts 1500-1508 (July 1979).

³¹General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), p 254.

or charges for the transportation of oil by pipeline, as well as the valuation of such pipelines.

The FERC has the authority to establish regional districts for the voluntary interconnection and coordination of facilities for generation, transmission, and sale of electric energy. In addition, the FERC collects data and prepares reports on the supply and demand of the nation's electric and natural gas energy resources. For this reason, the FERC can be a valuable data source.

The FERC publishes river basin appraisals for use in licensing projects. It reviews plans for dams proposed by other Federal agencies and makes recommendations concerning facilities for the development of hydroelectric power. In addition, it participates with other agencies in coordinating development and use of the nation's water and related land resources.

Federal Agency No. 25—General Services Administration³²

The General Services Administration (GSA) was established by section 101 of the Federal Property and Administrative Services Act of 1949. The GSA has regional offices located in 11 cities throughout the United States. Within its area of jurisdiction, each regional office is responsible for executing the GSA programs with respect to the procurement and supply of personal property and nonpersonal services, the acquisition of real property and management of Federally owned and leased space and property, the use of available real and personal property, the disposal of surplus real and personal property, and records management telecommunications and management of automatic data processing (ADP).

The primary services of the GSA fall under the jurisdiction of the Federal Supply Service (FSS) and the Public Building Service (PBS). The FSS is responsible for operating a Government-wide service and supply system. Under this system, the FSS supplies Federal agencies with everything from pencils to aircraft. The PBS is responsible for the design, building or leasing, operation, protection, and maintenance of most of the Federal buildings in the nation. To the greatest extent possible, new construction, alteration, and property disposal plans of the PBS are coordinated with State and local governments to promote intergovernmental

³²General Services Administration, Office of the Federal Register, *1981/1982 United States Government Manual* (USGPO, May 1, 1981), pp 539-541.

cooperation and to encourage sound planning, zoning, and land use practices.

The GSA and its offices will be important contacts for developing and evaluating alternative plans to Army activities. These offices will be of special importance if these activities involve any major changes in personnel, mission, or property of an installation.

Federal Agency No. 26—Water Resources Council³³

The United States Water Resources Council (WRC) is an independent Executive Agency of the U.S. Government. The WRC was established by the Water Resources Planning Act of 1965. The council maintains a continuing study of the adequacy of supplies of water needed to meet the requirements in each water resources region in the United States; it also studies the relation of regional or river basin plans and programs to the requirements of larger regions of the nation. The council also studies the adequacy of administrative and statutory means for coordinating the water and related land resources policies and programs of several Federal agencies.

WRC activities encourage the conservation, development, and use of water and related land resources on a

³³Water Resources Council (WRC), *Coordination Directory for Planning Studies and Reports* (WRC, August 1971).

comprehensive and coordinated basis by Federal, State, and local governments and by private enterprise through the review of framework and river basin plans. The council also coordinates schedules, budgets, and programs of Federal agencies for comprehensive framework studies and regional or river basin planning.

The WRC helps operate and terminate Federal-State river basin commissions. The President is authorized to declare the establishment of a river basin commission upon request by the WRC or upon a request addressed to the council by a state within which all or part of the basin or basins concerned are located.

Each of these commissions serves as the principal agency for coordinating Federal, State, interstate, local, and nongovernmental plans for developing water and related land resources in its area, river basin, or group of river basins. These commissions also recommend longer-range schedules of priorities for the collection and analysis of basic data and for investigation, planning, and construction of projects.

Also under the auspices of the WRC are certain inter-agency basin committees. These committees were formed to provide, in their particular areas, improved facilities and procedures for coordinating policies, programs, and activities of their members in the field of water and related land resources investigations, planning, construction, operation, and maintenance.

APPENDIX B: COMPENDIUM OF STATE AGENCY POINTS OF CONTACT

USE OF APPENDIX B TO FIND STATE POINTS OF CONTACT

Introduction

This appendix contains the names, addresses, and phone numbers of administrative officials and POCs for State and territorial offices which administer, regulate, or have interest in various land use or environmentally related plans, policies, or programs. These State and territorial POCs are listed under 20 categories. Each category has been assigned a number from 1 to 20 (see Table B1).

Following the explanation of how to use the state section of the compendium is a list of brief definitions of the categories of the State section. These definitions include laws, programs, regulations, plans, or areas of interest which may be administered by the State or territorial agency listed under that category, as well as types of information which may be obtained from them.

Following the definitions are lists of State and territorial offices and agencies which are POCs for each category presented in the State agency lists. The states

and territories have been arranged in alphabetical order. Entries for each of the 20 categories are arranged in consecutive numerical order for each state, American Samoa, the District of Columbia, Guam, Puerto Rico, the Trust Territory of the Pacific Islands, and the Virgin Islands. POCs for the Panama Canal Zone have also been included, but are not in the same format. (For further explanation and the list of the Canal Zone POCs, see p 219.)

How To Use This Appendix

The following is a step-by-step procedure designed to help the user find a POC in this appendix. The procedure described is based on the need to find just one POC. To find more than one, the user should repeat the procedure.

Step 1. Determine which state or territory may be affected by a proposed Army activity or action. This is done by simply determining the state or territory in which the activity or action will be undertaken.

Step 2. Determine which office or agency for the chosen state or territory should be contacted. Definitions for each category heading under which the agencies are listed have been provided on pp 94-96. To further aid the user, Table 2 relates Army activities to each of the categories.

Step 3. When the state or territory and the correct category under which the POC would be listed are obtained, the user should then refer to the State Agency Lists, which are arranged alphabetically by state and territory.

Step 4. To find the appropriate POC, the user should then find the pages in the State Agency Lists which correspond to the state or territory that he/she is concerned with. To find the POC, simply find the agency listed under the heading which corresponds to the category that most appropriately applies to the plan, program, or policy of interest.

In some states there may be more than one agency listed under a particular category—for example, when two or more agencies are equally important as POCs for a particular policy, program, or plan. These agencies may either share the responsibility, or one may be a policy-making agency while another may be an administrative or regulatory agency.

In many cases there may not be an agency with legal authority to regulate a particular program or policy. In these instances, the listing contains the name, address,

Table B1

20. Environmental Affairs

and phone number of an agency which has some state-wide interest in the programs listed in the definition and can provide information. In cases when there was no State law, policy, program, or plan applicable, or when no agency was found to have interest in any of the programs in the category definition, "Not Applicable" was entered under that category heading.

STATE AGENCY CATEGORY DEFINITIONS

Statewide Planning (Coordination)– State Category No. 1

Statewide Planning Agencies are generally concerned with achieving an overall comprehensive State planning program. Generally, these agencies are operating in response to Section 701 of the Housing and Urban Development Act of 1954. Under this Act, the agencies provide funding or technical assistance to supplement Federal funding for substate and local planning. This Act requires funding recipients to develop a land use planning program. In many states, these agencies formulate policy and make recommendations for statewide planning and land use controls. They also review and analyze State, substate, and local plans and programs for the purpose of coordinating overall planning and development. Many of these agencies do research and can provide information pertaining to demographics, economics, and land use data.

Statewide Planning (A-95 Review)– State Category No. 2

These agencies generally operate under the auspices of the Office of Management and Budget Circular A-95. They are clearinghouse agencies with the authority to review Federal grant applications and Environmental Impact Statements. The agencies generally function to coordinate state growth and development activity and/or policy. These activities or policies quite often involve consideration of land use parameters. Any major Army activity should be coordinated with these clearinghouses, especially those which may induce increases or decreases in employment. Such changes could significantly alter growth and development by affecting local income, housing, services, etc.

Coastal Zone Management– State Category No. 3

These agencies regulate State programs for managing development within the coastal zone. They operate under the Federally funded coastal zone management program authorized by the Coastal Zone Management

Act of 1972. Pursuant to the Act, the State has the authority to plan or review local plans or the ability to control land use in the coastal zone. In certain selected states, these agencies administer legislation authorizing the regulation of shorelands of any significant body of water. They operate under State statute and generally regulate development through zoning regulations. Coordination with these agencies is essential to determine the boundaries of a coastal area under their jurisdiction and what regulations may apply to proposed Army activities.

Wetlands Management– State Category No. 4

These agencies are generally concerned with the management and protection of wetlands. In some cases, they are located in State planning offices. In other cases, they are the responsibility of conservation departments. They are concerned with the protection of fish and wildlife and protection against flooding and erosion. They may operate under the auspices of the Water Resources Development Act of 1974 or State legislation. In most cases, these agencies have the authority to designate wetland areas and directly control development or land use within them. Coordination with these agencies is essential to determine the location of protected wetland areas and what regulations may apply and/or warrant consideration as a result of a proposed Army activity.

Floodplain Management– State Category No. 5

The agencies listed under this heading are charged with the management of floodplain areas. In many states, they operate under State legislation authorizing the regulation of floodplains. Other agencies are operated under the auspices of the Flood Disaster Protection Act of 1973. In most cases, these agencies regulate programs for identifying floodplains, controlling development within them, or providing minimum flood zoning standards which must be adopted by localities. Contact with these agencies is necessary to determine what regulations need to be considered as a result of a proposed Army activity.

Surface Mining Regulations– State Category No. 6

These agencies operate a program to regulate surface mining, including licensing and requiring reclamation. The agencies operate under State authority and may have adopted rules and regulations or technical guidelines for the regulations of surface mines. These agencies are also generally charged with administering Federal and State reclamation laws. When Army activities

require the use of quarried materials, contact with these agencies is necessary to insure proper operating procedures which will reduce environmental impacts. This is necessary in cases when quarries are operated by contractors or by Army personnel.

**Agricultural Lands Classification—
State Category No. 7**

Under this heading, the statewide office of the U.S. Department of Agriculture, Soil Conservation Service (SCS) office will be listed. Most State agriculture departments focus their attention on commodity- and market-oriented regulations and programs. The SCS office will be able to provide agricultural land classification and references to local SCS offices. These offices can provide useful information for determining areas of prime or unique farmland as well as information on soils and soil conservation. Contact with these offices is essential if Army activities may induce erosion or other soil-related problems.

**Forest Lands Management—
State Category No. 8**

These agencies generally operate within conservation departments under the authority of State enabling legislation. They administer and may provide fire protection for forest lands, as well as technical assistance for forest management. They can therefore provide much useful information concerning forest lands.

**Recreation Lands Management—
State Category No. 9**

These agencies generally administer State recreational planning or the management of State recreational lands. Large installations have a definite impact on local recreation supply and demand. For example, an increase in installation personnel may place an additional burden on local recreational facilities, while an increase in on-base recreational facility construction may decrease the need for local facilities. For these reasons, any activity which might affect recreational facility usage on a local or regional level should be coordinated with these agencies.

**Differential Assessment Legislation—
State Category No. 10**

Differential assessment legislation is designed to give property tax relief to owners of agricultural, forest, or open space lands. The agencies which administer this legislation are generally located within State departments of revenue or taxation. This legislation primarily exists to give property owners an incentive to maintain their property in these open space uses. Army activities, such as construction of housing units near these

land uses, may change community attitudes concerning the preservation of open space. Real estate excess of unimproved grounds should be coordinated with local open space preservation policies.

**Historic and Archaeological Sites
Designation—State Category No. 11**

These agencies are generally responsible for determining sites of historic or archaeological significance. They operate under State statute and the National Historic Preservation Act of 1966. The act creates a comprehensive financial assistance program, a protective mechanism for cultural resources of recognized significance, the National Register of Historic Places, and the Advisory Council on Historic Preservation. From this legislation, the agencies are responsible for cultural preservation and historical site preservation. These agencies should always be contacted before any major construction or demolition activity.

**Critical Area Designation—
State Category No. 12**

These agencies are generally concerned with a wide range of land and land uses. Some of these agencies operate under established State rules, regulations, and guidelines for identifying and designating areas of critical environmental concern. This indicates that there is some State control or involvement in development within these areas. Examples of critical areas identified in some states are: solid waste disposal areas, highway interchanges, wildlife habitats, and scenic areas and vistas. While some states may not have enacted legislation, a listing of the most appropriate agency to contact is generally provided. Contact with these agencies is necessary to determine what legislation there is on critical areas and the legislation that may apply to Army activities.

**Water Resources Management—
State Category No. 13**

Army activities which may have an effect on water quality, watershed management, or ground water aquifers should be coordinated with State agencies which administer programs concerned with water resources management. Category 13 lists these agencies. They usually exist within or in conjunction with floodplain management, wetland management, and water quality management agencies. They may operate under the Water Resources Development Act of 1974, the Water Resources Planning Act of 1975, or State conservation regulations. Initial contact with these agencies may be necessary to determine if Army activities are being undertaken in areas which are under a water resource management program.

Air Quality—

State Category No. 14

The agencies which are concerned with regulating air quality control are generally acting in response to the Clean Air Act of 1970. The Act proposes to achieve designated Federal air quality standards through the mandating of extensive State and local air pollution control activities. This Act can control land use activity through its requirement for preconstruction or development review. Many states have enacted legislation which sets higher standards than the Federal government. For this reason, any Army activity which may induce changes in air quality should be coordinated with these State agencies to determine applicable standards.

Water Quality—

State Category No. 15

Agencies which are concerned with regulating water quality control are generally acting in response to the Federal Water Pollution Control Act Amendments of 1972. The key goal of this Act is to restore and maintain the chemical, physical, and biological integrity of the nation's waters. This Act requires areawide waste treatment management plans which set forth procedures that include land use requirements to control point and non-point sources of pollution. The agencies listed under this category generally develop NPDES and Section 208 plans in response to the Act. Contact with these agencies is necessary if a proposed activity may affect water quality. This contact should even be made if the activity will improve the quality of any waters.

Solid Waste Management—

State Category No. 16

These agencies administer rules and regulations pertaining to the disposal of solid waste. They are generally operated under State legislation in accordance with the Solid Waste Disposal Act. They generally have the authority to regulate locations for solid waste disposal systems such as landfills. Proposed Army activities which will generate considerable amounts of solid waste should be coordinated with these agencies to determine applicable regulations which apply to this disposal. Even if disposal is done by contract, it is necessary to determine whether the contractor is operating under proper permits. Disposal of any hazardous materials should always be coordinated with these agencies.

Noise Control—

State Category No. 17

These agencies are responsible for administering regulations concerning noise pollution. They may also administer regulations which control the development

of noise-generating facilities such as airports. These agencies operate under State legislation or the Noise Control Act of 1972. Army activities which will generate considerable amounts of noise should always be coordinated with these agencies.

Power Plant Siting—

State Category No. 18

These agencies operate under State laws and have the authority to determine the siting of power plants and related facilities. More than one-half of the states have instituted some form of statewide facility siting process that requires review by a central authority of plans for location and construction. These agencies also address the identification of unwarranted roadblocks to project implementation and of public service requirements made necessary by large projects. Any major change in the use of electricity by an installation should be coordinated with these agencies.

Transportation Planning—

State Category No. 19

These agencies administer the planning and construction of highway transportation systems. Most of these agencies are also involved in the planning and regulating of all types of transportation, including aviation, mass transit, railroads, and motor vehicles. They are generally operated under the Federal Aid Highway Act of 1962, the National Mass Transportation Assistance Act of 1974, the Airport and Airway Development Act, or State legislative authority. The existence of a suitable transportation network can directly control development and land use. Army activities, such as an increase or decrease in force or the initiation of a large construction project which will directly change traffic volumes, should be coordinated with these agencies so that plans for transportation networks can be adjusted. Transport of any hazardous material and oversized or overweight loads should always be coordinated with State transportation agencies.

Environmental Affairs—

State Category No. 20

These offices and agencies carry out tasks similar to the Federal Environmental Protection Agency, only they do it on a statewide level. Some states call them Environmental Protection Agencies, while others have similar offices, under different names, within another larger organization. These have been listed within the category *Environmental Affairs*.

These offices should be contacted when Army activities are related to air or water quality, pesticide regulation, solid waste disposal, or other related activities.

PANAMA CANAL ZONE

Since the Canal Zone Government and the Panama Canal Company are both aspects of the Canal Zone civil government and are both administered by the Governor of the Canal Zone it is recommended that the Office of the Governor, Balboa Heights, Canal Zone be used as a point of contact if no other contact can be obtained. Before contacting the Office of the Governor, however, it is recommended that the following office be contacted first. This office can provide environmental information within the Canal Zone. This office can also provide more appropriate or specific points of contact to handle more specific questions.

Dr. Paul Campanella
Environmental & Energy Control Coordinator
Panama Canal Company
P. C. Box M
Balboa Heights, Panama Canal Zone
Phone: 52-7830

The U.S. Army has considerable land holding and responsibility in the Canal Zone. It is therefore recommended that the following offices also be used as points of contact.

Juan Diaz
Env. Protection & Energy Control Officer
ATTN: AFZU-FE-E
HDG 193rd Infantry Brigade (CZ)
Ft. Amador, Canal Zone
APO NY 09834
Phone: 85-5550

Master Planner's Office
ATTN: AFZU-FE
HDG 193rd Infantry Brigade (CZ)
Ft. Amador, Canal Zone
APO NY 09834
Phone: 85-4016
