1.0 INTRODUCTION

This supplement describes the procedures for converting the Universal Documentation System (UDS) horizontal forms to a vertical format more conducive to electronic transmission. This system may be used in conjunction with UDS documents using standard UDS forms or in place of the standard format when automation or electronic processing of UDS documents is desired. The Universal Documentation System Handbook, Document 501-79, Volumes 1, 2, and 3, dated 11-79, should be used for detailed instructions.

(AD-10890D)

These procedures do not address the electronic transmission of classified information.

These procedures were approved by the Documentation Group (DG) of the Range Commanders Council for electronic processing of the Universal Documentation System.

Any corrections, changes, or recommendations should be presented to the Documentation Group at the following address:

Documentation Group
c/o Secretariat
Range Commanders Council
STEWS-SA-R
White Sands Missile Range, New Mexico 88002-5503

1.1 PURPOSE

The purpose of these procedures is to provide a standard vertical format for manual or electronic processing of the UDS forms which will be compatible with typewriters, optical character recognition readers, word processors, high-speed computers, and high-speed printers.

1.2 BACKGROUND

The requirement for electronic transmission and processing of technical requirements and support information has continued to increase yearly due to the need for fast turnaround of requirements. As a result, the manual process is too slow and difficult to use to meet time schedules. The increasing use of traditional missile ranges by aircraft and other nonlaunch programs, along with the increased launch rates and payload carrying capability of some programs, make heavy demands upon existing manual documentation systems. The flexibility to accommodate quickly changing requirements is needed by these programs. An 8-1/2 by 11-inch format was selected which maintains compatibility with the standard forms and instructions contained in the UDS Handbook. The format is designed to permit support by low cost computer systems, word processors, "old" computer peripheral equipment, "old" telecommunications equipment, and conventional office typewriters. The primary consideration for specifying an automated UDS page format is to allow for the use of electronic processing equipment and electronic communications equipment for expediting the processing of UDS documents, reducing reproduction and distribution time for document transactions between users or support organizations,

and easy access to master record storage. Other features include test coding of information, electronic sorting, and automatic data entry expansion capability.

1.3 FORMAT DESCRIPTION

The automated page uses a vertical page format with a 72-column by 60-line character area printed on 8-1/2 by 11-inch paper or displayed on an 80-column CRT. Each page will contain a standard header and paragraph style blocks of text listing each UDS field label found on the respective page of the UDS Handbook.

The sample UDS formats (appendices A and B) and format specifications/load instructions (sections 2.0 and 3.0) in this supplement are based on word processor or data entry by computer program with a 10-pitch type and print capability.

UDS forms containing graphs, charts, maps, photos, etc., which are not readily adaptable to existing electronic storage and transmission equipment, are not covered in this supplement at this time. This information must be transmitted by other means when necessary.

2.0 UDS LEVEL 1 DOCUMENTS

The following automated format specifications and load instructions are applicable to PI and SC documents.

2.1 PAGE DISPLAY

The text space for a page will be a 72-column by 60-line area. This area may be printed on 8-1/2 by 11-inch paper in either 10 or 12 characters-per-inch pitch or displayed on an 80-column CRT. When printed on 8-1/2 by 11-inch paper with 10 pitch at 6 lines per inch, a top and bottom margin of 1/2 inch and a left margin of 3/4 inch (8 blank spaces) is recommended. If 12-pitch print is used, the left-right margin space is larger since only 72 columns may be printed.

2.2 LINE-COLUMN FORMAT - PI

3.0 UDS LEVEL 2 AND 3 DOCUMENTS

The following automated format specifications and load instructions are applicable to PRD/OR and PSP/OD documents.

3.1 PAGE DISPLAY

The automated page format has a 72-column by 60-line character area which can be printed on 8-1/2 by 11-inch paper, or displayed on an 80-column CRT. Page margins will vary depending on the paper, pitch, and printing hardware used. Recommended display standard should be 10 characters-per-inch pitch with 6 lines per inch and printed paper margins as follows:

- a. Top - 1/2 inch
- b. Bottom - 1/2 inch
- c. Left - 3/4 inch
- d. Right - 3/4 inch

3.2 PAGE STANDARDS

As described above, the automated page format is a 72-column by 60-line text area. Each page will contain standard headers (above the double dashed line) and blocks of text with UDS box labels depending on the UDS form represented.

Columns 1 through 19 are reserved for UDS box labels except for the R G/A form where Columns 5 through 70 may be used for text after the first line in Box 10.

The data to be entered following each box label is confined to Columns 21 through 70, again, except for the R G/A form as explained above.

Column 71 is always left blank to allow space between text and an "R", indicating "revised", which is always entered in Column 72 when required.

Refer to Figure 3-1, Sample Page Format, for page layout, and paragraph 3.3 for line-column text placement format.

3.3 LINE-COLUMN TEXT PLACEMENT FORMAT - PRD, PSP, OR, OD

The following standards apply to data entry on 8-1/2 by 11-inch pages:

Data entry or N/A (not applicable) will be entered in each box when another entry is not applicable.

Fifty columns per line are available for text entry on all forms except the R G/A form, where 66 columns per line are available for up to 98 lines.

Page title will be centered on Column 36.

3.3 LINE-COLUMN TEXT PLACEMENT FORMAT (Con.)

Left/right margins will be 3/4 inch. The line and column numbers on the following page format apply after the margins have been set.

Table 3-1. Text Placement Format

NOTE: Quotation marks are not used on actual process material unless needed; their use here is only to emphasize words.

Appendix B

**PRD/OR FORMATS
PSP/OD FORMATS**

(This appendix contains completed automated format samples of selected UDS Level 2 and 3 forms. UDS forms not included will be reformatted similarly.)

1. Classification: UNCLASSIFIED

ADMINISTRATIVE - GENERAL

2. Replaces Pages: N/A 3. Page No.: XX1000.1
Dated: N/A 4. Date:
5. Program Title: L&L PRD-VOL II, ANNEX XX, WIDGET
6. Program No.: 20,000 7. Revision No.: 0

8. ITEM NO.: K1
9. TEST CODE: N/A

10. DESCRIPTION: The John F. Kennedy Space Center (KSC) Shuttle Launch and Landing (L&L) Program Requirements Document (PRD) consists of two volumes.

VOLUME I - SHUTTLE

The L&L PRD - Volume I - Shuttle is prepared by KSC in accordance with the National Aeronautics and Space Administration (NASA) Headquarters document NMI 8610.10 dated May 20, 1977. Requirements for the flight segment are documented in the flight PRD prepared by the Johnson Space Center (JSC).

VOLUME II - CARGO

The Volume II - Cargo - Basic contains management information, a listing of the assigned cargo annexes, and support requirements that are not mission peculiar relating to the Space Transportation System (STS) cargo.

CARGO ANNEX

Each payload assigned a JSC-Payload Integration Plan (PIP) number and a KSC-Launch Site Support Plan (LSSP) number will be assigned a unique L&L PRD annex number. Separate annexes for the payload-unique requirements permit individual preparation, publication, update, and use regardless of the cargo flight assignment. Further, the annex revision cycle can be different and independent from that of the L&L PRD Volume I - Shuttle and Volume II - Cargo.

The total cargo requirements of a particular mission can be developed by combining the annexes for the individual payloads.

8. ITEM NO.: K2
9. TEST CODE: N/A

10. DESCRIPTION: This document is an initial issue of a Launch and Landing PRD utilizing procedures for electronic processing in accordance with UDS Document 501-84, Supplement 2.

Specific document formats and procedures may require revision as implementation of the Launch and Landing automated system matures or Supplement 2 is revised.

8. ITEM NO.: N/A
10. REVISION NOTES: This issue contains Revision 2 pages forming a complete Launch & Landing Program Requirements Document (PRD) and supersedes issue dated December 15, 1981.

Major changes are as follows:

1. Addition of a microabrasion foil experiment
2. Addition of S-band transmission requirement
3. Increase in command/control circuit requirements
4. Deletion of CCTV requirements
5. Deletion of S-band requirements
6. Increase in timing requirements
7. Increase in electrical power requirements
8. Update of:
 - a. Propellants, gases, and chemicals
 - b. Vehicles and Ground Handling Equipment
 - c. Facilities - general
