UNITED STATES ARMY AVIATION ENGINEERING FLIGHT ACTIVITY
EDWARDS AIR FORCE BASE, CALIFORNIA 93523

84 11 26 054

P R E F A C E

The mission of the US Army Aviation Engineering Flight Activity (USAAEFA) is to conduct airworthiness qualification flight tests of air vehicles developed and/or procured as integrated systems and airworthiness evaluations of those vehicles proposed or considered for Army application or which incorporate advanced concepts having potential military application; produce test data on basic air vehicle performance, handling qualities, system/subsystem interface, and integrated system performance; and conduct a test pilot orientation course to prepare Army aviators for attendance at US Naval Test Pilot School.

This bibliography addendum is listed alphabetically by the author's last name. Each person whose name appeared on the cover or in the listing at the end of the letter report has been considered as an author.

The reports listed are defined as:

Formal Test Report: A report that is formally published for widespread distribution to other DOD agencies and staff, the Defense Technical Information Center (DTIC), appropriate contractors, and other agencies as directed by the US Army Aviation Research and Development Command (AVRADCOM). These reports are identified by only the project number.

Letter Report: A report that is prepared to provide immediate information to the customer for milestone events or for portions of a test in progress. They are also to report on very limited tests or tests where the data have very restricted application or little historical value. These reports are identifiable by the LR with the project number and are identified in the title as a letter report, letter of effort, or memorandum for record.

Formal reports are on file with DTIC or the National Technical Information Service (NTIS). They may be obtained from DTIC by use of the AD Number and from NTIS through their normal procedures. Letter reports are controlled by AVRADCOM and may be obtained by contacting:
