Section. 1. GENERAL DESCRIPTION

1.1 Purpose

The objective of the Online Exercise Schedule System (ONLEXKED) Terminal Users Guide is to provide the J-3 and specific CINC users with the information necessary to use the system effectively.

1.2 PROJECT REFERENCES

ONLEXKED assists the Joint Exercise Division (JED) of the organization of the Joint Chiefs of Staff (JCS) Director for operations (J-3), in the preparation of 5-year Exercise Schedule reports which are generated and distributed to participating CINCs. ONLEXKED operates using the WWMCCS Honeywell 6000 (H6000) computer.

Related reference documentation includes the following:

- a. Honeywell. 765/775/785 Visual Information Projection (VIP) Systems. AA19, Rev. 1, May 1973.
- b. Honeywell. 7700 Series Visual Information Projection (VIP) Systems Preliminary Edition. A129, August 1973
- c. Honeywell. TSS Terminal/Batch Interface. DD21, April 1974.
- d. Department of Defense, Automated Data Systems Documentation Standards. 7935.1-5, September 1977.
- e. Command and Control Technical Center, CCTC H6000 Programmers Handbook, Procedures Manual, PM 34-79, 15 March 1979.
- f. Command and Control Technical Center, WIN User Handbook, Volume 1, File Transfer Service (FTS), TM 187-78, June 1978.
- g. SM 437-79, dated 17 July 1979, "JCS Directed and JCS Coordinated Exercise Program."

SECTION 2. SYSTEM SUMMARY

2.1 System Application

The purpose of the online 5-year Exercise Schedule (ONLEXKED) is to provide automated support to assist action officers in the exercise program development process. This is accomplished via a conversational question - answer mode between the user and the executing ONLEXKED program. It provides the capability to create exercises, handle periodic updates and retrievals, and print reports by selected fiscal years. Additionally, remote users of this system can maintain their own data base and can send specified exercises to the JCS Directed and Coordinated Exercise Data Base via the WWMCCS Intercomputer Network (WIN).

2.2 System Operations

Transactions are entered via automated preformatted Cathode Ray Tube (CRT) displays which allow the user to input data in prepositioned fields and select various commands to perform functions necessary to maintain the JCS Directed and Coordinated Exercise Data Base. Time sharing programs accept and interpret user inputs to provide the following capabilities:

- (a) Add a new exercise to the data base.
- (b) Update an existing exercise.
- (c) Delete an entire exercise or specific data from a given exercise.
- (d) Transfer specified exercise(s) between a remote user's data base and the JCS resident data base.
- (e) List all exercises currently on the data base.
- (f) Copy information from an existing exercise into an exercise which is being created.
- (g) List all valid terminal commands.
- (h) Print selected reports (from site resident data base)

2.3 System Organization

The ONLEXKED system is comprised of four time-sharing environment modules. Each module performs a specific function. The ONLUPD program is the controller of the system. This module determines, based on user inputs, what ONLEXKED module needs to be called into core for execution. EDIT is called to screen inputs transaction for errors. UPDATE is called to add, change or delete data from the data base. RESE is called to resequence internal line numbers within a given paragraph.

The modules are made available to the terminal through a standard Honeywell TSS command called JDAC (Job Direct Access Communication). This allows a terminal user to directly communicate with an executing program. The relationships and interfaces between the ONLEXKED module are depicted in Appendix A Figure 1.

SECTION 3. GENERAL TERMINAL PROCEDURES

This section will discuss general procedures that are common throughout the ONLEXKED system. Responding to prompt characters, generating NULL responses, the END command, the DONE command, the EXIT command, the HELP command and the LIST command are described. In the examples below, (TX) means depress the transmit key and (NULL) means enter a NULL response. This will apply from here on in throughout the Users Guide.

3.1 RESPONDING TO PROMPT CHARACTERS

When the ONLEXKED system expects the user to respond, it issues double question marks (??). At this time the user moves the cursor to the (??) and enters the appropriate response. The question marks are overwritten.

EXAMPLE

Terminal Output; Header Level
??

User Response; PUR (TX)

This command enters the Purpose paragraph.

NOTE: The PUR command would be written directly over the ??.

If after entering a response, as shown above, the terminal comes back with a -?, always respond with a NULL response. NULL responses for the Honeywell terminal types 786 and 7705 are described as follows;

- a. For terminal 786 depress the following keys in the sequence described; EXT, LR, PRT/TX.
- b. For terminal 7705 depress the CLEAR key, then press the CRT key and hold while pressing the TRANSMIT key.

3.2 DONE EXIT AND END COMMANDS

DONE, EXIT and END commands are used to terminate processing at a given level and return control to the next higher level.

While in the PARAGRAPH LEVEL:

EXIT: Returns control to the HEADER LEVEL
DONE: Returns control to the EXERCISE LEVEL
END: Terminates the ONLEKED program

While in the HEADER LEVEL:

DONE: Returns control to the EXERCISE LEVEL
EXIT: Not a valid command at this level
END: Terminates the ONLEKED program
See appendix E for description of each field in the header screen

While in the EXERCISE LEVEL:

END: Terminates the ONLEKED program

3.3. LIST COMMAND

The LIST command is available at all three levels. If issued at the EXERCISE LEVEL, a list of all the Exercises resident on the data base and the originating CINC, time an exercise was sent from a remote site, and the date and time of the latest update is listed on the screen.

When the LIST command is issued at the HEADER or PARAGRAPH LEVEL, the preformatted displays for the HEADER and selected paragraph is listed with its associated data. This gives the user the capability to review data content within a given exercise item.

3.4 HELP COMMAND

The HELP command is available at all three levels. When issued, it provides a list of all the valid commands that are available in the level in which the command was invoked. (See Appendix C for a listing of the HELP displays.

SECTION 4. ONLEKED OPERATING INSTRUCTIONS

4.1. Computer Log-On Procedure (See Appendix A Figure 2)

- a. Enter \$*\$5,TSS
- b. Display Site Dependent
- c. Display IDENT user dependent

4.1.1 ONLEKED Program Initiation Procedures

- d. Display *
- e. Enter CARD OLD A01IDP00/ONLEKED/JCL/ONLUPD,R
- f. Display *
- g. Enter Run
- h. Display SNUMB 9999t
 #AT this point, ONLEKED is loaded for
 execution and given a system number (9999t)
 where 9999t is system assigned number.
- i. Enter JSTS 9999t
 #This gives the user the status of the job.
- j. Display 9999t-01 EXECUTING
- k. Enter JDAC 9999t
 # Enter JDAC only when JOB status comes back
 with EXECUTING. This sets up the linkage
 with the executing program (ONLUPD) and the
 user terminal.
- l. Display Display line L.
- m. ENTER NULL response.
- n. Display Display line N.
- o. Enter NULL response

Denotes explanatory remarks.

#These two displays initialize internal program functions.

P-Q. Display EXERCISE SCHEDULE UPDATE PROGRAM EXERCISE LEVEL
#The system is now ready to accept user input.
Display line P. gives the day and time user logged-on.
Line Q provides USERID of user and the site which logged on. System will display :Exercise Schedule update program:
#Note: The first level available to the user is the EXERCISE LEVEL.

4.2 EXERCISE LEVEL PROCEDURES

4.2.1 OLD COMMAND (See Appendix A Figure 3)

- a. Display EXERCISE LEVEL
- b. Enter OLD
- c. Display EXERCISE NAME
- d. Enter Name of exercise to be retrieved
#A short form can be used: OLD, Exercise name. This avoids the system prompting the user for the Exercise name

#The system will retrieve the named exercise from the data base and pass control to the HEADER LEVEL.

4.2.2 New Command (See Appendix A Figure 4)

- a. Display EXERCISE LEVEL
- b. Enter NEW
- c. Display EXERCISE NAME

Denotes explanatory remarks.

- d. Enter Name of exercise to be created.

#A short form can be used: NEW, EXERCISE name. This avoids the system prompting the user for Exercise name.

#Control will be passed to the HEADER LEVEL at this time to input header data for the new exercise.

4.2.3 CPY (Copy) Command (See Appendix A Figure 5)

- a. Display EXERCISE LEVEL
- b. Enter CPY, name of exercise to be copied into new exercise being created.
#This is a short form.
- c. Display NEW EXERCISE
- d. Enter Exercise into which exercise name in (b) above is to be copied.
- e. Display Contents of Entry b. were copied into Entry d. 010 records were copied.

#Information display telling user the names of the exercises used in the copy function and the number of records copied.
- f. Display MORE EXERCISES TO COPY (Y or N)
- g. Enter N, to end function
Y, will allow user to copy additional exercises.

4.2.4 DEL (Delete) Command (See Appendix A Figure 6)

- a. Display EXERCISE LEVEL

Denotes explanatory remarks

- b. Enter DEL, name of exercise to be deleted.
#Short form is being used.
- c. Display DELETE EXERCISE: EXERCISE NAME
(Y or N)
- d. Enter Y, Deletes message.
N, Ignores delete request.

#Gives user a second chance before actually deleting exercise.
- e. Display DELETED EXERCISE: Exercise name

#Information display telling the user the message was seleted.
- f. Display MORE EXERCISES TO BE DELETED (Y or N)
- g. Enter N, terminates delete function
Y, allows user to delete additional exercises.

4.2.5 SEN (SEND) COMMAND (See Appendix A Figure 7)

- a. Display EXERCISE LEVEL
- b. Enter Sen
- c. Display EXERCISE NAME TO BE SENT
- d. Enter Exercise name of exercise to be sent to JCS resident data base.
- e. Display MORE EXERCISES TO BE SENT (Y OR N)
- f. Enter Y, to continue
N, terminate send function.

#Exercises are written to a PRMFL. FTS is used to transfer file to a particular CINC or to JCS. A batch program is invoked to add records to the Data Base. See Appendix H for specific instructions.

denotes explanatory remarks.

Denotes explanatory remarks.

4.2.6 REP (REPORT Command) (See Appendix A Figure 8)

- a. Display EXERCISE LEVEL
- b. Enter REP
- c. Display SPECIFY TYPE(S) OF REPORT(S) DESIRED.
1=SIGNIFICANT EXERCISE.
2=JCS DIRECTED & COORDINATED EXERCISE
3=TRANSPORTATION REPORT.
- d. Enter Specify a desired report: "1" or "2" or "3".

**RESPONSE TO "1" (SIGNIFICANT EXERCISES)

#This will be displayed if user desired significant exercises.

- e. Display STARTING DATE (YYMMDD) OF SIGNIFICANT EXERCISES
- f. Enter YYMMDD numeric date
- g. Display ENDING DATE (YYMMDD) OF SIGNIFICANT EXERCISES.
- h. Enter YYMMDD Numeric Date
- i. Display TRANSPORTATION PRINTED TO WHAT YEAR? (YY).
- j. Enter
- k. Display CINC'S

XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX,XXX

Users can select certain cinc's exercides by placing 3-character command codes followed by a comma. The maximum of 20 cincs can be selected in this manner. If users responded null to this display, the program will select exercises from all cincs.

RESPONSE to "2" (JCS DIRECTED AND COORDINATED EXERCISES)

- a. Display STARTING DATE (YYMMDD) OF JCS DIRECTED AND COORDINATED EXERCISE
- b. Enter YYMMDD Numeric Date
- c. DISPLAY ENDING DATE (YYMMDD) OF JCS DIRECTED AND COORDINATED EXERCISE
- d. Enter YYMMDD Numeric Date

4.3. HEADER LEVEL PROCEDURES

The following is an example of adding data at the HEADER LEVEL. There is really no difference in procedures when entering data to create exercise header data or changing a field already existing. The procedure is the same except for the transaction code used.

The field names in the Header format are self-explanatory. Two fields used, however, need to be defined. The DATE MASK is used to print TBD (TO BE DETERMINED) on the Joint Exercise Schedule Report when the employment date is or inclusive date unknown. To use this feature, enter any non-numeric character in the data field. The NATURE field is used to describe the nature of the exercise (amphibious, mobilization, general war, etc). To date, no prescribed entries have been established by the OJCS. Any six character entry will be accepted by the system.

4.3.1 Adding and Changing Header Data (See Appendix A Figure 9)

- a. Display EXERCISE LEVEL
- b. Enter OLD, OLD Exercise name or NEW, New Exercise name.
#OLD retrieves an existing exercise and NEW is used to create an exercise. EXERCISE NAME = displays exercise name used.
- c. Display HEADER LEVEL
- d. Enter LIST
#See discussion of LIST command in Section 3 (paragraph 3.3)
- e. Display Preformatted Header
- f. Enter at Line B A, B001 = J Redcom MAC - To add data: Move cursor to the (*) at Line B. The entry is typed under the formatted fields. Tab to the last character in the line and depress transmit key.

Denotes explanatory remarks.

This particular entry added CINC Code = J, Sponsor -1= US REDCOM, SPONSOR -2=MAC and deleted SPONSOR -3. This same procedure applies to all data entry lines (A,B,C, and D). To change existing data: Move cursor to the line to be changed (Line B) enter A, C at the (*) and tab to the field to be changed. Change the field and TAB to end of the line and transmit. Example: C,B001=_____SAC_____ (TX). This entry changes SPONSOR 2 from MAC to SAC. If the NEW command is used, the data fields displayed will be blank. If the OLD command is used, the contents of the data fields will be displayed.

g. Display FILE UPDATED

#Information display telling user that the file has been updated. 1, 2, 3 are only valid entries for part. Part 3 is for service related exercise only. An Entry must be made in START and END for INCLUSIVE DATE. C, D, N, are only valid entries in type.

4.3.2 CPY (Copy) PARAGRAPH PROCEDURE (See Appendix A Figure 10)

The copy function at this level, allows the user to copy a given paragraph from an existing exercise into the same paragraph of the exercise currently being processed. If the paragraph of the exercise that receives the data already has entries present, they will be overwritten when the CPY command is used.

- a. Display HEADER LEVEL
- b. Enter CPY
- c. Display PARAGRAPH TO BE COPIED

Denotes explanatory remarks.

- d. Enter Paragraph name.
- #See Appendix B for valid HEADER LEVELS commands. DESC is the Description Paragraph.
- e. Display EXERCISE NAME WHERE PARAGRAPH PARAGRAPH NAME is copied from
- f. Enter Exercise name.
- #Paragraph name was replaced by DESCRIPTION, the paragraph requested in Entry d. above.
- g. Display COPIED PARAGRAPH: Paragraph Name
From: Exercise Name
To : Exercise Name
- #Information display telling user that the paragraph requested for copy (DESCRIPTION) was copied from and to the exercises named.
- h. Display MORE PARAGRAPHS TO BE COPIED (Y or N)
- i. Enter N, to terminate copy function
Y, to copy additional paragraphs.

4.3.3 DEL (DELETE) PARAGRAPH PROCEDURE (See Appendix A Figure 11)

This function allows the user to delete selected paragraphs in a given exercise.

- a. Display HEADER LEVEL
- b. Enter DEL
- c. Display PARAGRAPH TO BE DELETED
- d. Enter Paragraph name.

#See Appendix B for a list of valid HEADER LEVEL commands. PUR is the Purpose paragraph.

#Denotes explanatory remarks.

- e. Display DELETE PARAGRAPH Paragraph name
 OF EXERCISE Exercise name
 (Y or N)
- f. Enter Y, Deletes requested paragraph
 N, Ignores delete request.
- g. Display NNN RECORDS WERE DELETED
 # Information display telling user how many
 records were deleted.
- h. Display MORE PARAGRAPHS TO BE DELETED (Y OR N)
- i. Enter N, to terminate delete function
 Y, to delete additional paragraphs.

4.4 PARAGRAPH LEVEL Procedures

The procedures to follow will discuss adding lines, changing lines and deleting lines within a selected paragraph. These rules apply to all the paragraphs except the FUN (FUNDS) paragraph which will be explained separately.

4.4.1. LINE HANDLING

Adding, deleting, changing and inserting, lines.

4.4.1.1. Adding Lines (See Appendix A Figure 12)

- a. Display HEADER LEVEL
- b. Enter PUR
- c. Display Preformatted Purpose Paragraph

Denotes explanatory remarks.

- d. Enter A,999= THE PURPOSE OF THIS EXERCISE---
 #Move the cursor to the first (*)
 Line and enter A (ADD), tab to the
 first position after the = sign
 and begin entering data until the "/" is
 reached. Continue this procedure until the
 last line is complete. Tab to the first pos-
 ition past the "/" and depress the Transmit
 key. Line numbers are automatically generated.
- e. Display FILE UPDATED.
 #Information display telling user the file has
 been updated.

4.4.1.2 Deleting Lines (See Figures 13 & 14)

- a. Enter D, NNN - MMM

- b. Example

D, 002- 005

#To delete lines from a paragraph, all that
 is required is to enter the D, NNN - MMM
 Command. NNN= Starting line number
 MMM= Ending line number.

In this example, lines 2 through 5 would be
 deleted and the paragraph line numbers auto-
 matically resequenced.

4.4.1.3. Changing and Inserting Lines (See Figure 15 & 16)

- a. Enter

C, 001 = CHANGE LINE 1.

#Move the cursor to the (*) of line to be
 changed. Enter the change, tab to the first
 position after the "/" and transmit. In the
 example, line 001 was changed.

Denotes explanatory remarks.

b. Enter A, 002 = INSERT
 THIS LINE AFTER
 PURPOSE - LINE 6 -----
 #Move the cursor to the (*) of the line
 that will precede the line to be inserted.
 Enter the inserted line as shown in (b)
 above, tab to the first position after the "/"
 and transmit.
 In the example, a line was inserted after Purpose
 Paragraph line 02.
 NOTE: In the previous example line 02 through 05
 was deleted and the paragraph was resequenced.
 This is why the data "LINE 6" appears as the second
 line. When more than 10 lines are to added press
 trx key after line 10 is complete. Press Clear Key
 and enter A,011= LINE 11 Data, continue for 10 more
 lines and follow same procedures until desired lines
 are entered.

4.4.2 FUN (FUNDS) Procedures (See Appendix A Figure 17 & 18)

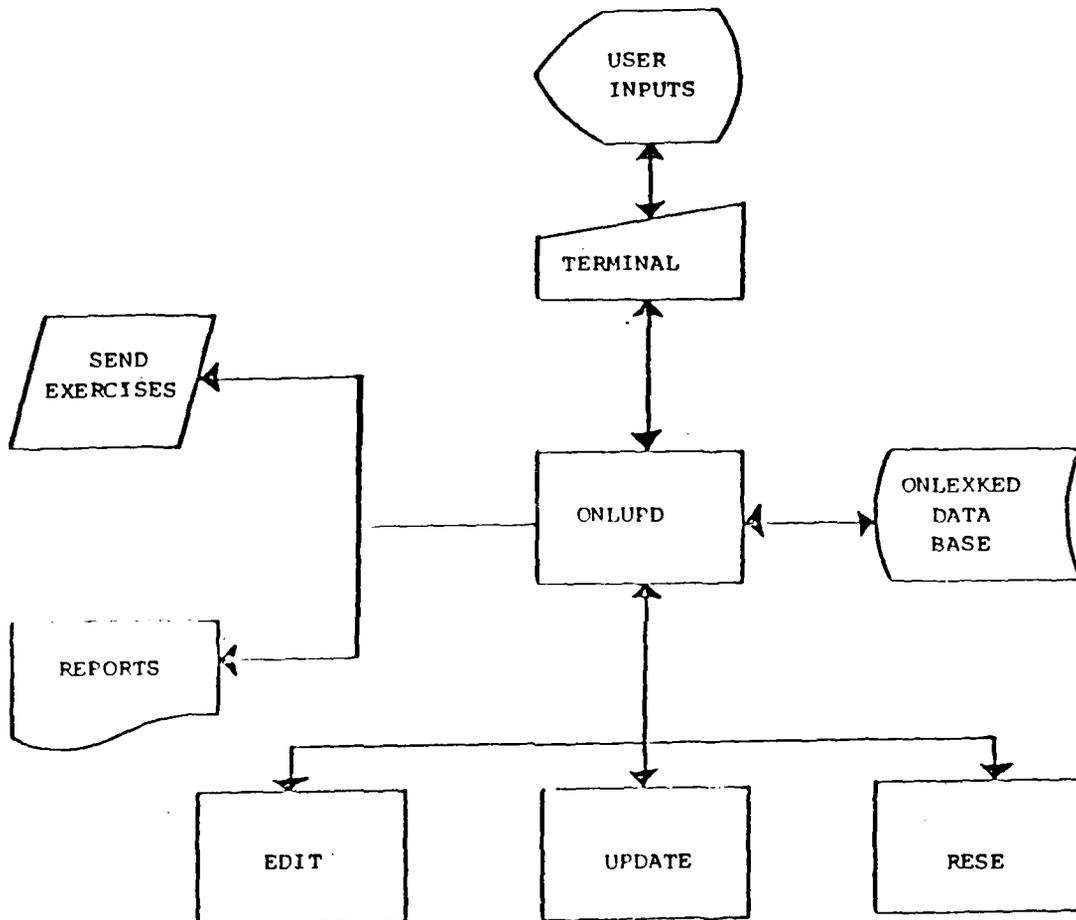

Entering data in the FUN (FUNDS)
 paragraph is similar to making
 entries at the HEADER LEVEL. Entries
 are made sequentially under the pre-
 defined fields. To add data, enter data
 under the fields that apply. To change
 data enter the field that has to be changed

a. Display PREFORMATTED FUN PARAGRAPH
 B. ENTER A,001 = 00052 00056-----
 #Move the cursor to the (*) under the TR field,
 enter A (ADD), tab to the first position
 after the = sign and enter data under the cost
 fields that apply. To change a field, enter a
 C (CHANGE) at the (*), tab to the field that
 needs changing, enter the change, tab to the
 end of the line and transmit.

Denotes explanatory remarks.

**DATA BASE UPDATE REPORT
APPENDIX G**

PRODUCING THE FIVE -YEAR DATA BASE UPDATE REPORT

Using CARDIN, bring the following JCL string into AFT File
A01IDP00/ONLEKED/JCL/PRNT. Check \$IDENT TO INSURE IT CONFORMS TO your
requirements, change if necessary, then execute JCL.

The report generated will provide a listing of all exercises that were
either added, changed or deleted. It should be noted that one of the above
actions has to take place in order for the exercise to be included in the
report.

The report will print in the format described on page G-2.

FIVE YEAR DATA BASE UPDATE REPORT
