20. ABSTRACT

The ARI Survey of Army Recruits (more commonly known as the New Recruits Survey [NRS]) is conducted to obtain information on the characteristics, enlistment motivations, attitudes, and knowledge of recruits at the point of their initial entry into the U.S. Army. The eight reports in the 1985 series include user's manuals, codebooks (which focus on data file documentation, including special variables, and use of the survey data available from respondents) and tables of survey results. They are:

- RN 86-48. The 1985 ARI Survey of Army Recruits:
Codebook for Summer 85 Active Army Survey Respondents.
- RN 86-49. The 1985 ARI Survey of Army Recruits:
Codebook for Summer 85 USAR & ARNG Survey Respondents.
- RN 86-50. The 1985 ARI Survey of Army Recruits:
User's Manual.
- RP 86-14. The 1985 ARI Survey of Army Recruits:
Tabular Description of NPS (Active) Army Accessions, Volume I.
- RP 86-15. The 1985 ARI Survey of Army Recruits:
Tabular Description of NPS (Active) Army Accessions, Volume II.
- RP 86-16. The 1985 ARI Survey of Army Recruits:
Tabular Description of Army National Guard Accessions.
- RP 86-17. The 1985 ARI Survey of Army Recruits:
Tabular Description of NPS Army Reserve Accessions, Volume I.
- RP 86-18. The 1985 ARI Survey of Army Recruits:
Tabular Description of NPS Army Reserve Accessions, Volume II.

A comparison of the methodologies used in the 1984 and 1985 administration of the NRS, together with recommendations for future surveys, appears in:

TR 706. The 1984 and 1985 ARI Survey of Army Recruits:
Methodology and Recommendations for Future Administration.

Reports based on the 1982 and 1983 administration of the NRS are also available.

THE 1985 ARI SURVEY OF ARMY RECRUITS:
CODEBOOK FOR SUMMER 85
USAR & ARNG SURVEY RESPONDENTS

Jeanna F. Celeste
Vivian F. Ramsey

This project was sponsored by the Directorate of Program Analysis and Evaluation, U.S. Army Recruiting Command, Office of the Deputy Chief of Staff for Personnel. The U.S. Army Recruiting Command provided funding for the survey instrumentation, administration, data processing, database preparation, documentation, and tabular descriptions produced under Contract No. MDA903-84-C-0446, expiring 30 September 1986. Westat, Inc. has been the contractor for this effort with Veronica Nieva and Jeanna Celeste serving, respectively, as Principal Investigator and Project Director.

Westat Project Staff:

Jeanna F. Celeste, Jansen B. Davis, Dorrit C. Garver,
Veronica F. Nieva, Vivian F. Ramsey, Carin N. Rauch,
Michael D. Rhoads, Reina C. Sprankle, Mark M. Waksberg,
Michael J. Wilson.

The U.S. Army Research Institute provided funding and personnel for research planning, as well as personnel for technical monitoring of the contract, survey design and administration, and construction of the databases.

ARI Project Staff:

Timothy W. Elig, Rebecca M. Pliske, Allyn Hertzbach,
Michael E. Benedict, Sandra E. Parham, Victoria Peacock.

ACKNOWLEDGEMENTS

Westat wishes to acknowledge the support of the many people who played various important roles in the survey instrumentation, administration, data preparation, entry, tabular analysis, database construction, and documentation of the 1985 Summer ARI Survey of Army Recruits. We especially appreciate all the assistance provided by the U.S. Army Recruiting Command. They are commended for their cooperation in problem resolution, steadfast support, and continued interest in this work.

We gratefully acknowledge that this survey effort could not have succeeded without the cooperation of personnel at the U.S. Army Reception Stations. They worked closely with us in the scheduling and administration of the survey, working survey operations into their already hectic schedules for processing new recruits.

THE 1985 ARI SURVEY OF ARMY RECRUITS:
CODEBOOK FOR SUMMER 85 USAR & ARNG SURVEY RESPONDENTS

EXECUTIVE SUMMARY

Requirement:

To obtain information on the characteristics, enlistment motivations, attitudes and knowledge of recruits at the point of initial entry into the Army.

Procedures:

The Summer 1985 New Recruit Survey (NRS) is the sixth in a series of recruit surveys administered by ARI. It is an expanded version of the 1984 ARI survey incorporating new questions on recruits' prior service experience, college experiences, enlistment duty option preferences, and new occupational and TV programming preferences.

Westat was contracted to work with ARI in performing survey design and instrumentation, taking further responsibility for survey administration, data cleaning and entry, database construction, tabular analysis, and survey documentation. Data were collected in group settings during initial recruit processing at all eight Army Reception Stations during June, July, August, and September of 1985. A modified Latin Square Design was employed to randomize the selection of survey weeks across all eight Reception Stations during the field period for data collection. Westat coordinated with Reception Station personnel in scheduling the survey administrations and supervising survey administration. The NRS was self-administered and recruits were directed to indicate their responses directly on their survey instruments.

Four forms of the NRS were administered to recruits. Forms A, B, and C were administered to Regular Army recruits, and Form D was given to National Guard and Army Reserve recruits. Regular Army (RA) recruits had an equal chance of receiving any one of the three RA forms.

Survey forms were entered into receipt control as they were received from the field sites. Survey data were examined by coding staff and forwarded for key entry. Care was taken to retain answers exactly as provided by respondents. Keyed data were subsequently run through a series of value range and logic checks and corrected as needed. A user's manual, codebooks, tabulation volumes, and a report on the survey methodology, "lessons learned," and recommendations were produced.

Results:

A total of 12,536 Army recruits completed the 1985 Summer NRS. Of these, based upon Army personnel records, 11,213 had no prior military service and 908 had prior service experience (the status for the remaining 415 was not ascertained). The sampling plan employed imposes some restrictions on the generalizability of survey results to the population of FY 85 Army accessions. However, overall the survey effort was successful in obtaining updated information regarding new recruits.

Utilization:

ARI Surveys of Army Recruits provide information to Army personnel planners about the quantity and quality of recruits entering the Army. In particular, information regarding the characteristics, knowledge of enlistment options, and enlistment motivations of new recruits enables Army personnel planners to be cognizant of present enlistment trends. Awareness of these trends is vital, in turn, for preparing for future manpower requirements. The Summer 1985 New Recruit Survey has already been used for these purposes as well as for assessing the media habits of recruits in order to maximize the impact of Army advertising.

THE 1985 ARI SURVEY OF ARMY RECRUITS:
CODEBOOK FOR SUMMER 85 USAR & ARNG SURVEY RESPONDENTS

INTRODUCTION

The purpose of this codebook is to provide documentation for users of the data collected by the 1985 ARI Survey of Army Recruits, or as it is more commonly known, The ARI New Recruit Survey (NRS). This is one of two codebooks developed to document the 1985 NRS data: one codebook pertains to the Regular Active Army (RA); the other pertains to the Reserve components--the U.S. Army Reserve and Army National Guard (USAR & ARNG). This is one of eight reports produced to document the approach, data, and results obtained from the 1985 Summer administration of the NRS. Other reports are available which document survey administrations in 1982, 1983, and 1984.

The codebooks focus on data file documentation and use of the data, rather than on presentation of the methodology or survey results. Preliminary results are reported in separate volumes containing crosstabulations of the survey items by selected demographic and service-related characteristics. These reports include the following:

- Westat, Inc. (1986, May). The 1985 ARI Survey of Army Recruits: Tabular Description of NPS (Active) Army Accessions, Volumes 1 and 2 (Research Products 86-14 and 86-15). Alexandria, VA: US Army Research Institute for the Behavioral and Social Sciences.
- Westat, Inc. (1986, May). The 1985 ARI Survey of Army Recruits: Tabular Description of NPS Army National Guard Accessions (Research Product 86-16). Alexandria, VA: US Army Research Institute for the Behavioral and Social Sciences.
- Westat, Inc. (1986, May). The 1985 ARI Survey of Army Recruits: Tabular Description of NPS Army Reserve Accessions, Volumes 1 and 2 (Research Products 86-17 and 86-18). Alexandria, VA: US Army Research Institute for the Behavioral and Social Sciences.

Volume 1 in each set of tabular descriptions for the RA and USAR components presents tables of NRS items crossed by five different respondent demographics such as gender, ethnic/racial group, highest education level achieved, and marital status. Volume 2 contains five service-related characteristics, such as recruiting brigade, age at contract signing or accession, and term of enlistment crossed with NRS items. The actual crossing variables vary according to component. Due to insufficient

personnel data, the ARNG has a single volume of tabular descriptions, comprised of NRS items crossed by three respondent demographics and two service-related characteristics.

Readers desiring greater detail regarding the project background, sample design, response rates, and 1985 Summer administration procedures are referred to The 1985 ARI Survey of Army Recruits: User's Manual (Research Note 86-50). An additional report is available presenting a comparison of the methodologies used in the 1984 and 1985 administrations of the NRS, and recommendations for future surveys. This report is entitled: The 1984 and 1985 ARI Survey of Army Recruits: Methodology and Recommendations for Future Administrations (Technical Report 706).

The primary audience for this codebook is expected to consist of researchers interested in performing analyses using the 1985 Summer NRS data files. Analysts should review the 1985 User's Manual before beginning work with this volume in order to gain familiarity with the survey content, sample design, survey administration procedures, and database construction.

Organization of the Codebook

This report contains an overview of the 1985 NRS and several chapters designed to aid data analysts in the use of the 1985 Summer NRS codebook for the USAR & ARNG components. The document also contains codebook entries and variable counts for items contained on survey Form D the (USAR & ARNG instrument), as well as other variables included on the survey database. The four chapters of this report are thus of two major types: (1) narrative discussions covering introduction of the report, 1985 NRS project overview, how to use this volume, special variable selection and creation procedures, a codebook index, and a technical appendix; and (2) The 1985 Codebook for Summer 85 USAR & ARNG Survey Respondents.

The first chapter of the codebook introduces the report within the context of the eight-volume series of reports produced to document the 1985 Summer ARI Survey of Army Recruits. The structure and organization of the report is described followed by a brief overview of the 1985 NRS.

The second chapter is a guide to the interpretation of codebook entries. This section explains how to read the codebook pages, provides codebook conventions, and explains how to use the codebook index.

The third chapter documents special variables selected or created for inclusion on the 1985 Summer NRS USAR & ARNG data file which were not original survey items. The discussion encompasses:

- The creation of variables to check both the internal consistency of respondents' answers within serial list questions and across related survey items;
- The creation of variables to calculate the frequency of response errors;
- The procedures used to create recoded versions of survey items for inclusion in the tabular analyses;
- The selection and derivation of data elements from Army personnel records; and
- The development of crossing variables for presentation in the tabulation volumes.

In addition to explaining variable selection and creation procedures, this chapter contains tables documenting the transformation of original survey items and Army data elements into recoded versions of the variables. Included in this chapter is a codebook index which can be used as a table of contents for locating variables from the 1985 Summer NRS USAR & ARNG database in the codebook.

The fourth chapter in this volume is a codebook documenting the data files produced for the 1985 Summer NRS for the USAR & ARNG components. One version of the survey data file was produced using the Statistical Analysis System (SAS). The survey data were also produced in Operating System (OS)¹ format. The SAS and OS files contain: (1) survey responses; (2) data elements merged onto the survey file from Army personnel records; (3) variables created during the data editing stage; and (4) recoded survey items and crossing variables created for use in the tabulation volumes.

The codebook documents the USAR & ARNG data file by providing the location of variables, labels for both variables and values, response frequencies, survey item crosswalks across the four versions of the 1985 instruments, and an indicator of survey item presentation and wording consistency across previous NRS administrations.

¹The OS data file was designed to make the survey data accessible on any IBM-compatible computer system.

The final section in the codebook is a technical appendix which lists the names of survey items for which respondents wrote in the response, "I don't know." The appendix also provides frequency counts of the written-in responses for each item. This information should prove useful to analysts interested in identifying questions which were difficult for some respondents to answer. This information will also provide guidance in future research efforts with respect to both question design and formatting.

Project Overview

The ARI Surveys of Army Recruits, commonly known as the ARI New Recruit Surveys (NRS), are conducted on a regular basis to provide updated information on the characteristics, knowledge of enlistment options, and enlistment motivations of recruits at the point of their initial entry into service. Military personnel planners require such information on a regular basis to monitor current recruiting strategies and to forecast future enlistment trends.

The NRS were begun in the summer of 1982. Expanded versions of the 1982 surveys were created for NRS-83 and were administered in the Summer of 1983 and Winter of 1984. Further revisions and expansions were made in the 1984/85 NRS instruments for administration in the Summer of 1984 and Fall/Winter of FY 85.

Major revisions in methodology were introduced for NRS-85. Questions included on the 1985 NRS were restructured to facilitate provision of answers directly on the survey instrument; all previous NRS used optical scanning answer sheets. New questions regarding recruits' prior service and college experiences were included and other question series were expanded, such as the media habit items used for Army advertising planning. Thus, in addition to the ability to track changes in recruits from year to year, this series of surveys offers the Army an opportunity to gather new information in each year of the survey.

The 1982 and 1983 surveys were directly commissioned by the Deputy Chief of Staff for Personnel. The 1984 and 1985 NRS were sponsored by the U.S. Army Recruiting Command and were undertaken with the continuing interest of the Deputy Chief of Staff for Personnel. While the sponsorship, specific questions, and interests may change from year to year, the charter for these surveys remains the same. The four main research requirements have been to determine: (1) the demographic composition of entering recruits; (2) how to target recruiting resources to attract high quality recruits; (3) new recruits' enlistment motivations and propensity for remaining in service; and (4) which recruiting and advertising practices are proving the most successful and why.

The 1985 Summer NRS is the sixth in the series of recruit surveys conducted by ARI. Survey data were collected in group settings during recruit processing for initial entry training at all eight Army Reception Stations during June, July, August, and September of 1985. ARI and Westat staff worked in conjunction with Reception Station personnel in scheduling survey administrations. Unlike previous NRS administrations which were monitored by Reception Station personnel using instructions prepared by ARI, the 1985 administrations were supervised by Westat NRS staff located on-site. The NRS was self-administered and recruits were directed to indicate their responses directly on the survey instruments.

Four forms of the NRS were administered to recruits. Forms A, B, and C were administered to Regular Army recruits, and Form D was given to National Guard and Army Reserve recruits. Regular Army recruits had an equal chance of receiving any one of the three forms.

A total of 12,536 Army recruits completed the 1985 NRS. The surveys were distributed across components as follows:

<u>RA</u>	<u>USAR</u>	<u>ARNG</u>
7,220	2,265	3,051

The surveys were coded taking care to record responses exactly as provided to the extent possible. Survey data were then keyed to tape and edited for value ranges and logical consistency. User's manuals, codebooks, tabulation volumes, and a report comparing the 1984 and 1985 survey methodologies, "lessons learned," and recommendations were produced.

The sampling plan employed in the NRS-85 imposes some restrictions on the generalizability of survey results to the population of Army accessions entering service during the third and fourth quarters of FY 85 as well as to accessions for the entire fiscal year (FY 85). However, overall, the survey effort was successful in obtaining updated information regarding new recruits.

The 1985 ARI Survey of Army Recruits provides information to Army personnel planners about the quantity and quality of recruits entering the Army. In particular, information regarding the characteristics, knowledge of enlistment options, and enlistment motivations of new recruits enables Army personnel planners to be cognizant of present enlistment trends. Awareness of these trends is vital, in turn, for preparing for future manpower requirements.

HOW TO USE THIS VOLUME

The purpose of this chapter is to provide assistance in reading the 1985 Summer NRS Codebook and performing data analysis. The first section in this chapter briefly reviews the codebook composition. The next sections provide:

- Notations of conventions followed in the development of the codebook, such as order of variable presentation, and variable naming conventions;
- An example of the variable presentation format used in the codebook;
- A table crosswalking the SAS special value codes to OS format; and
- A discussion of the use of the codebook index to locate entries for specific survey items.

Codebook Composition

The purpose of the 1985 Summer NRS Codebook for the USAR & ARNG service components is to document the SAS and OS survey data files produced. The codebook documents all variables produced on the data files including: survey responses, Army personnel data (MEPRS and REQUEST data extracted from the Operations Reporting Master File²), variables produced especially for presentation in the tabulation volumes, and editing/logic variables. The codebook documents the data files by providing the physical locations and labels for all variables. Frequency distributions based on sample counts are also provided. Variable crosswalks are presented at the bottom of each codebook page to identify the location of the survey item on the various 1985 NRS survey forms. In addition, each codebook page indicates whether or not the 1985 NRS survey item was included in the 1982, 1983, and 1984

²The Operations Reporting Master File (ORMF) contains Army personnel records from two sources, MEPRS and REQUEST. The acronyms MEPRS and REQUEST stand for the Military Entrance Processing Reporting System, and Recruit Quota System, respectively. The MEPRS data system contains information about DoD personnel being voluntarily processed into a branch of the Armed Forces; the system is documented in MEPCOM Regulation 18-5. REQUEST is the Army's data system used to record information about enlistees into one of the Army components (Regular Army, Army Reserve, and Army National Guard). The REQUEST system is documented in Army Regulation (AR) 601-210.

instruments and, if so, whether or not the current wording of the question is identical to the earlier versions.

NRS-85 is the first NRS to obtain survey responses directly on the instrument rather than using a separate OPSCAN answer sheet to record respondents' answers. The format of the instrument thus permitted the inclusion of many new survey items in which respondents were requested to provide written responses rather than simply selecting pre-coded answers. Some of these open-ended questions required only a short written response, for example, writing in the name of the post-secondary school most recently attended, major field of study, and type of degree obtained. Other open-ended questions necessitated more lengthy responses, such as explaining one's reasons for enlisting in the Army, and interpreting the intended message of an Army TV commercial.

Open-ended survey items for which brief written responses were obtained were treated in one of two ways: (1) the written responses were retained verbatim (e.g., first 3 characters of the military occupational specialty code), or an abbreviated version of the verbatim response was developed (e.g., name of post-secondary school most recently attended); or (2) the written responses were evaluated and then assigned response value codes. Responses to all of the short-answer open-ended items were included on the survey database. Table 1 contains variable names of the short-answer open-ended items which were entered on the survey data file verbatim or as abbreviated versions of the verbatim response. Table 1 also contains variable names of the short-answer open-ended survey items for which coded values were included on the data file. The latter variables are indicated with an asterisk (*) following the variable name. It should be noted that no inter-rater reliability checks were performed on these data. However, the answers obtained to these questions were straightforward and not particularly difficult to categorize. Thus, it is expected that the coding reliability is high, though the level of reliability has not been ascertained.

Open-ended NRS items which necessitated longer, more complex written responses were not assigned value codes nor were they included in the codebook or on the survey database. A list of these items is provided in Table 2. The written responses to the more complex open-ended questions were keyed verbatim onto a separate data tape for future analysis and are available from ARI.

Table 1

Short Answer Open-Ended Questions
on the 1985 New Recruit Survey

(All items, except T110K1-K2 which were only on Form A, were included on survey forms for the RA, USAR, and ARNG)

Variable Name	Content Area
T110K1-K2*	Locations (other than those listed in T110A-I) in which respondent remembered seeing, hearing, or receiving any advertising or promotional material from all the military services together, prior to enlistment.
T114K1-K2*	Locations (other than those listed in T114A-J) in which respondent remembered seeing, hearing, or receiving any Army advertising or promotional material prior to enlistment.
T655	Name of school most recently attended since leaving high school.
T657*	Major field of study in post-secondary school.
T661B*	Type of degree received from post-secondary school.
T662B*	Type of occupational certificate received from post-secondary school.
T663A-C*	Reasons why respondent did not complete the post-high school program in which enrolled.
T667B*	Branch of military in which respondent served prior to current enlistment.
T767	Respondent's Military Occupational Specialty (MOS).

*Indicates that written responses obtained in answer to the survey item were assigned response value codes during the data coding operation.

Table 2

Complex Open-Ended Questions on the 1985 New Recruit Survey

Variable Name	Component	Content Area
T651D1-D5	RA/USAR/ARNG	Interpretation of Army TV commercial.
T658A-B	RA/USAR/ARNG	Type of post-secondary program in which respondent enrolled.
T668A-E	RA/USAR/ARNG	Personal reasons for enlisting in the Army.
T669A-E	RA/USAR/ARNG	Most important personal reason for enlisting in the Army.
T744A-E	RA	Success that made respondent feel best about him/herself.
T745A1-A5/ T745B1-B5	RA	Respondent's next two biggest successes.
T746A-E	RA	Description of work (or hobbies, sports) respondent likes to do.

Codebook Contents and Conventions

Codebook pages contain considerable descriptive information as well as the file location of each variable. The information provided includes: codebook title, variable name, statement of the original survey question (if applicable), item location on the OS and SAS data files, response values, response frequency and percent distribution, extended value labels, and survey item crosswalks.

Order of Variable Presentation. Variables appear in the codebook in the same order in which they are presented on the 1985 Summer NRS USAR & ARNG database. The first several variables presented are the case ID, the reception station where the survey was administered, and the survey form. Survey items are presented next, followed by logic variables, recoded survey variables used in the tabulations, response error variables, variables extracted or derived from the ORMF, crossing variables used in the tabulation volumes, and finally, WESID, a case identifier assigned by Westat to preserve respondent confidentiality.

Variable Naming Conventions. The process of naming NRS variables proceeded as follows:

- Survey administration/background demographic variables were given short descriptive names, e.g., the Westat respondent identification number was called "WESID", the survey form was called "FORM", respondent sex was named "RSEX", and so on.
- Survey items which had been developed in previous ARI surveys (i.e., the New Recruit Surveys or the MEPS/MEPS Followup Surveys) were given the same "T" number designator (T###) or "U" number designator (originally used to indicate items unique to Form D) as provided in the 1982, 1983, and 1984 ARI NRS data files.
- Original versions of survey items were assigned sequential numbers preceded by the letter "T". Thus, the first new survey item developed for NRS-85 was named "T626"; the second question was given the variable name "T627", and so on. There were some exceptions to this naming convention; for example the variable name "ZIP" was used to label zipcode of teenage household.
- Logic variables were of two types: level 1 and level 2. The level 1 logic variables checked the serial list questions ("mark all that apply") for out-of-range values. The level 2 logic variables compared response values across similar or related survey items for consistency of answers. Level 1 logic variable

names began with "L1" and level 2 logic variable names began with "L2"; in some instances the next character was an alphabet letter. Presence of a letter indicated that there were several related logic variables which checked the consistency of a particular survey item with other survey items. The next character in the logic variable name was an underscore (_) followed by the original variable name. Thus, a logic variable name would look like this: L2A_T001.

- Recoded survey variables were given names that began with the letter "R" followed by the original variable name (or a shortened version of the variable name if the addition of an "R" caused the new name to exceed 8 characters in length). There were only five survey items which were recoded for presentation in the tabulations: "WKSLOOK", "WKSLOOKP", "WKSWORK", "WKSWORKP", and "ZIP". These variables were recoded to develop the variables "RWKSLOOK", "RWKSLKP", "RWKSWORK", "RWKSWRKP", and "RBRIGADE", respectively. The fifth recoded variable, "RBRIGADE" was an exception to this naming convention.
- Response error variables were given the names: MISSDOT, MISSA, MISSB, MISSLOG, and MISSTOT. This naming convention was based on the method of variable construction which produced counts of the numbers of missing value codes across respondents which were represented by the symbols: "." (dot), "A", and "B". MISSLOG and MISSTOT represented the number of "missed" or failed logic checks and the total of all the "missed" responses, respectively.
- Variables derived from the ORMF (MEPRS and REQUEST) were given short descriptive names, e.g., recruiting battalion = BN.
- Crossing variables were given short descriptive names preceded by the letter "X", e.g., sex = XSEX.

Variable Labels. Codebook entries for 1985 NRS survey items include the statement of the actual question (or a reworded statement of the question) as presented in the survey instrument. The exact wording of NRS-85 survey items are contained in the Appendixes to the 1985 User's Manual. Many survey items were reworded in the codebook in order to aid the analyst in interpreting questions without having to reference the survey instruments. For example, lead-in and background statements were repeated for all applicable questions in the codebook even though the actual questionnaire printed the lead-in statement only before the first question in the section. Additional item rewording involved the substitution of variable names in place of

references to specific questions (e.g., see the question above, etc.) which appeared in the actual surveys. Other changes in question wording were performed when the survey items referenced lists of related items. Similar procedures were followed in the 1984 NRS codebooks although to a lesser extent. Question rewording is much more extensive in the 1985 NRS codebooks. Recoded versions of survey items also present the NRS question, preceded by the word "recoded." Variables which were not taken from NRS survey items have explanatory labels in place of the question statement.

Descriptive Variable Information. All codebook entries include information directing the user to the variable's location on both the OS and SAS data files. Response alternatives are listed and labeled for each variable. With a few exceptions, information is provided on the distribution (numbers and percentage) of answers across variable values. For some variables, this information is not provided due to continuous data points (as in listings of zipcodes or case identifiers). In such cases, whenever possible, footnotes are included to provide the range of values obtained.

Footnotes. Footnotes are included on some codebook pages to provide notations of interest to data analysts. A variety of different types of footnotes were included to provide one or more of the following items of information: (1) notation that the distribution of responses were too extensive to be presented in a codebook table; (2) the range of values obtained (if not reported in a frequency table); (3) the names of logic variables which were created to examine the survey item's response consistency with related questions; (4) a listing of the variables checked by a particular logic variable; (5) the names of related variables included in serial list question sets; (6) self-reported information with suspect values; (7) response categories that were developed during the coding stage of the project; (8) identification of "nearly identical" survey items; (9) identification of survey items that were worded or formatted differently across various forms of the survey instruments; (10) the varying meaning of terms as used across different service components; and/or (11) the space provided to record the unique answers of individual respondents to certain open-ended questions exceeded the number of responses per individual that were obtained. Some variables required multiple footnotes. For variables in which none of the above conditions were met, no footnotes appear.

Survey Item Crosswalks. Codebook pages documenting 1985 NRS survey items and background demographics collected by the NRS contain survey item crosswalk tables on the bottom portion of the pages. The first table lists the item's question number as labeled on each of the four forms of the 1985 NRS instrument, i.e., form types A-D. The table cells indicate whether or not the question was included on that particular survey form. The

cell is left blank if the question did not appear on the survey instrument. If the survey item was included on the instrument, this is indicated by printing the question number of the item in the cell. The most common format of the question number was a "Q" followed by three numbers.

A little further to the right on the codebook page is a table crosswalking the appearance of the 1985 NRS question on the 1982, 1983, and 1984 surveys. The three cells are labeled "1982", "1983", and "1984". The word "YES" appears in the cell when the 1985 question was also included on the earlier versions of the NRS. The letters "NA" (not applicable) appear in the cells when the question was not included in the earlier NRS instruments. Differences in question wording between the 1985 items and earlier versions of the survey are indicated by: (1) an asterisk (*) for differences in question wording, (2) a plus sign (+) for differences in the response categories, and (3) a not sign (→) for differences in both question wording and response categories.

In some instances, the question wording, response categories, or both were altered only on the USAR & ARNG survey instrument (Form D) in 1985 and were unchanged on the RA instruments (Forms A, B, and C). Four additional symbols were used to identify such differences between the 1984 and 1985 versions of the survey items as shown below:

- Two asterisks (**) were used to label items for which the 1984 and 1985 question wording differed only on Form D.
- Two plus signs (++) were used to label items for which 1984 and 1985 response categories differed only on Form D.
- An asterisk followed by a plus sign (*+) labeled items for which 1984 and 1985 question wording differed across all forms and for which response categories differed only on Form D.
- A plus sign followed by an asterisk (+*) labeled items for which 1984 and 1985 response categories have been changed across all forms, but question wording differed only on Form D.

Codebook Pagination. Codebook pages are numbered sequentially preceded by the number "4" indicating Chapter 4 of the report.

Missing Value Codes. The following five missing value codes were imputed during processing of the NRS to indicate the occurrence of specific conditions in the data:

- The code "." (or "Z" for character data) was used to indicate the lack of a response to a particular survey item.
- The code "A" (or "X" for character data) indicated the presence of more than one response to a question requesting a single answer (e.g., a response indicating gender as being both male and female).
- The code "B" (or "Y" for character data) was used when a response fell outside the range of "reasonable" response alternatives, e.g., listing one's date of birth as occurring during the same year as one's enlistment. Some respondents wrote "I don't know" in the margins of a number of questions. These responses were coded "B" on the database. Appendix A lists the survey items containing the "I don't know" responses with frequencies of the response. Code "B" was also used in situations in which uninterpretable responses or comments irrelevant to the question were the only answers provided to the question.
- The code "C" (or ' ', blank, for character data) was used to identify respondents who were instructed to skip certain questions.
- The value "D" (or "W" for character data) was developed to identify those respondents who did not have a particular question on the form of the survey instrument they completed; since the RA instrument used multiple forms, not all questions were asked of all Regular Army respondents.
- The value "E" was used to indicate that the respondent completed an early version of the NRS-85 instrument which did not contain the survey item. Note: respondents who took the survey during the first week of the 1985 administration (n=1,139) pilot-tested the instruments before the final copies of the survey forms were printed. In the final version of the questionnaires, which were used starting with the second week of administration, two new items (T656, U238A-E) were added to the survey. In addition, new response categories were included for the following survey items: T177, T651B-C, T652E, T653E, and T654E.

- The code "G" (or "~" for character data) was developed as an indicator of a non-match between a survey respondent and the ORMF file.

Example of a Codebook Page

Figure 1 provides an example of a codebook page for an NRS survey item. The numeric indicators for Figure 1 are identified and their referents described on subsequent pages.

Figure 1. Example of a codebook page.

EXPLANATION OF FIGURE 1

CONTENTS OF A CODEBOOK PAGE FOR AN NRS SURVEY ITEM

- 1 Codebook title.
- 2 Variable name.
- 3 Statement of survey item. In some instances, item wording has been modified to be more interpretable as a stand-alone item on a codebook page. See the actual survey instruments in the User's Manual for exact wording of items. The word, "recoded" precedes the statement of the question for survey items that have been recoded for presentation in the tabulation volumes. A descriptive label is provided for variables which are not survey items.
- 4 Description of the location, i.e., card number, column number, and length of survey item on the OS data file.
- 5 Position of the variable on the SAS data file.
- 6 Counts of responses across response values.
- 7 Percentage of total responses represented by each value.
- 8 Actual (or recoded) response values.
- 9 Explanation of the response value code. Special codes were used to denote the various types of missing values: derived values (i.e., ".", "A", "B", "C", "D", "E", and "G") were developed to denote missing values, multiple response errors, out-of-range values, valid item skipping, absence of item on survey form, absence of item due to early version of instrument, and non-match with an ORMF record.
- 10 Total of response frequencies and percents.
- 11 Special notations pertinent to the variable.
- 12 Crosswalk of survey item across all survey forms of the 1985 NRS.
- 13 Indicator of 1985 NRS item appearance in previous NRS administrations:
 - o "NA" indicates the item did not appear in that survey year.
 - o "Yes" indicates the item's appearance on at least one of the survey forms.
 - o "***" indicates a wording change between how the item text appears in the 1985 instrument and how it appears in previous survey questionnaire(s).
 - o "+" indicates differences in response categories between the 1985 and prior NRS.
 - o "↑" indicates changes in both the 1985 question wording and response categories.
 - o "****" indicates a change in question wording between the 1984 and 1985 NRS (on Form D only).
 - o "++" indicates differences in the response categories between the 1984 and 1985 NRS (on Form D only).
 - o "**+" indicates changes in question wording across all forms between the 1984 and 1985 NRS with differences in response categories on Form D only.
 - o "++*" indicates differences in the response categories across all forms between the 1984 and 1985 NRS with changes in question wording only on Form D.
- 14 Codebook page number.

The SAS and OS data files do not share the same codes for missing data values. Table 3 crosswalks the SAS special value codes presented in the preceding discussion to OS format.

Table 3
Crosswalk of Summer 1985 NRS Missing Value Codes
from SAS to OS Format

<u>Value Designation</u>		Value Description
SAS File	OS File	
.,Z	-9,Z	No response
A,X	-8,X	Multiple response error (single response requested)
B,Y	-7,Y	Out-of-range response
C,' '	-6,' '	Question inapplicable due to skip pattern
D,W	-5,W	Question does not appear on survey instrument form
E	-4,E	Question does not appear on early version of instrument
G,~	-3,~	No match on MEPRS/REQUEST (ORMF)

In general, the ability to distinguish between the different kinds of missing values provides the data analyst with opportunities for exploring problems which specific questions posed for various types of respondents. It also permitted the calculation of several data quality indicators (see next chapter) across all survey respondents: MISSDOT (extent of missing data); MISSA (frequency of multiple response errors); MISSB (frequency of out-of-range responses); MISSLOG (sum of level 2 logic failures); and, MISSTOT (sum of all types of response errors).

Use of Codebook Index

The codebook index, pages 47-55, presents a table of contents for codebook entries. The index provides three pieces of information for each codebook entry listed: variable name, variable label, and page number. An example of the index is shown below:

CODEBOOK INDEX FOR THE SUMMER 1985 ARI SURVEY OF USAR & ARNG SURVEY RESPONDENTS

VARIABLE NAME	LABEL	PAGE
SSN	SOCIAL SECURITY NUMBER	001
STATION	STATION WHERE SURVEY WAS TAKEN	002
FORM	SURVEY FORM	003
SDAY	DAY OF INTERVIEW	004-005
SMO	MONTH OF INTERVIEW	006
SYEAR	YEAR OF INTERVIEW	007
SWKDAY	THE DAY OF THE WEEK IS	008
RSEX	SELF-REPORTED GENDER	009
ETHNIC	ETHNIC GROUP	010
HSGMO	MONTH GRADUATED HIGH SCHOOL	011
HSYEAR	YEAR GRAD. OR LAST YEAR IN HIGH SCHOOL	012
SC011A	TIME STARTED SURVEY:HOURS	013
SC011B	TIME STARTED SURVEY:MINS	014-016
SC012A	TIME FINISHED SURVEY:HOURS	017-018
SC012B	TIME FINISHED SURVEY:MINS	019-021
B178	HOUSEHOLD GROSS INCOME (FORCED CHOICE)	022
T001	EXPECTED SATISFACTION WITH ARMY LIFE	023
T025	FIRST CONTACT WITH ARMY RECRUITER	024
T026	CIRCUMSTANCES OF FIRST CONTACT	025
T031	SERVICE OF FIRST CHOICE	026
T032	SERVICE OF SECOND CHOICE	027

The index listing for each codebook entry is presented in the same sequence as the variables appear on the SAS dataset for USAR & ARNG respondents to the Summer 1985 NRS. Survey administration variables and respondent demographics are presented first, followed by survey items. Following presentation of these variables, the index lists logic variables, recoded survey variables, response error variables, ORMF-derived variables, crossing variables, and finally, the respondent ID assigned by Westat.

The index should be used as one would use a table of contents to locate the codebook entries of particular variables.

SPECIAL VARIABLE SELECTION AND CREATION PROCEDURES

This chapter documents variables which are included on the survey database but which did not appear as survey items on the 1985 Summer NRS. There are five different types of these "special" variables:

- Logic Variables - Numerous variables were created to check the logical consistency of responses across related survey items.
- Response Error Variables - Five variables were created to compute the frequency of response errors (e.g., out-of-range responses, missing data).
- Recoded Survey Items - Recoded versions of selected survey items were created for presentation in the tabulation volumes.
- ORMF/ORMF-Derived Variables - Several variables were either taken directly or were created using ORMF data for inclusion on the NRS data files. Many of these variables were reformatted for use as crossing variables in the tabulation volumes.
- Crossing Variables - Ten crossing variables were created for presentation in the USAR tabulation volumes and five for the ARNG volume using variables taken or derived from the ORMF, as well as recoded survey items.

Each of the five types of special variables is described in a separate subsection of this chapter.

Logic Variables

There were two levels of data editing performed on the 1985 NRS: (1) checking for valid value ranges (see the 1985 NRS User's Manual for a further description of the procedures), and (2) comparing the consistency of responses to related or similar survey items.

Level 1 editing was performed on all survey items to check for valid value ranges. Responses that were erroneous or inapplicable were assigned a missing value code (see Table 3 on page 18). Level 2 editing was also performed on the 1985 Summer NRS data. This editing stage involved comparing individual responses among related survey items which were expected to have similar answers.

Much of the data with out-of-range and inconsistent values were identified and corrected during the coding and editing process. An example of a correction for an out-of-range value is setting the response, "32" for "day of survey" (which can only range from 1 to 31), equal to the special missing value code, "B". Corrections were also made during data coding/editing to correct certain logical inconsistencies, especially within related sets of questions. For example, coders were permitted the discretion to change a response to "Yes" for the question: "Did you ever respond to any of these Army advertisements" if the recruit went on to specify items he/she received in response to the ad. There were only a few instances in which coders were given the leeway to make changes to the data as provided by respondents. The procedure of correcting data values was efficiently carried out at the data preparation stage for out-of-range values and when there were few inconsistency errors detected. In some instances, however, many inconsistent responses were detected among related survey items; in such cases, separate "logic" variables were created to record the logical inconsistencies.

When responses to a group of related survey items were found to be inconsistent, the value "1" was assigned to a corresponding logic variable. For example, a respondent who indicated that s/he never received any material from the Army, in response to a toll-free call or card (T118A=1), should have responded with the same answer (T119A=1) to a subsequent question that asked whether the material (items) received helped her/him make the decision to enlist in the Army. However, some respondents did not select consistent answers to items T118A and T119A. The identification of such a logical inconsistency would be recorded in the logic variable L2_T118.³

³It was standard practice to have the logic variable name include the name of the survey item against which the answers related to questions were compared. In this example, the answer to survey item T118A was used as a basis for comparison of responses against a subsequent, related item, T119A. Thus, the logic variable developed to assess response consistency between items T118A and T119A included variable T118A in its name, L2_T118. There were some exceptions to this naming convention for logic variables. The exceptions occurred when logic variables were created for NRS-85 for the same variables as logics created for NRS-84 but did not perform the same consistency checks. In such instances, the 1985 logic variable was relabeled using the name of one of the other variables being checked for response consistency. For example, the logic variable comparing variables T067 and T068 with T066 for response consistency among RA respondents was given the variable name L2A_T068 rather than L2A_T066 in the 1985 NRS.

In some instances, logic variables checked only one variable against one other variable. In other instances, as in the previous example related to enlistment term, the response consistency among a series of related variables was checked and the results recorded in a single logic variable. Survey items on which internal consistency checks were performed identify the pertinent logic variable name(s) in a footnote on the codebook page. Similarly, codebook pages for logic variables footnote the survey items compared by the logic variable.

Table 4 lists and briefly describes each of the logic variables created to evaluate the internal consistency of survey responses. Codebook entries for the logic variables are presented on pages 4-396 to 4-401.

Response Error Variables

The 1985 Summer NRS was a self-administered survey. The surveys were conducted in group settings at Army reception stations. Some of the conditions of survey administration would lead one to expect some data problems. For example, respondents taking the survey in large groups may not have asked for help in interpreting directions or clarifying the meaning of certain survey items. In addition, the 1974 Privacy Act was printed on the outside cover of each survey. The Privacy Act emphasizes the voluntary nature of answering the survey and any particular survey items. Thus, it is possible that respondents simply skipped over survey items or even sections that they did not wish to complete.

Given these possible sources of faulty data, a series of variables was created to provide an accounting of respondent reliability. Four variables were developed to calculate the occurrence of survey item response errors for each survey respondent. The four types of response errors and their respective variable names are: (1) missing data - MISSDOT; (2) multiple responses provided when a single response was required - MISSA; (3) out-of-range responses - MISSB; and (4) logic failures - MISSLOG. A fifth variable, MISSTOT, summed the four response error counts to provide an overall measure of respondent reliability. The frequency distributions for each of these variables are presented in the codebook, pages 4-407 to 4-417.

Table 4

Descriptions of 1985 Summer NRS Logic Variables
(USAR & ARNG Components)

Logic Variable Name	Description
L2A_T768	If you reported having been a student at a college or junior college for at least one semester (T768 = 1), then you should have indicated that you attended either a 4-year college or university (T654A = 1), a 2-year junior college (T654B = 1), or a 2-year community college (T654C = 1).
L2B_T768	If you have attended either a 4-year college or university (T654A = 1), or a 2-year junior college (T654B = 1), or a 2-year community college (T654C = 1), then you should have indicated that you have been a student at a college or junior college for at least one semester (T768 = 1).
L2C_T768	If you have not been a student at a college or junior college for at least one semester (T768 = 2), then you should not have indicated that you have attended a 4-year college or university (T654A = 0), a 2-year junior college (T654B = 0), or a 2-year community college (T654C = 0).
L2D_T768	If you have not attended either a 4-year college or university (T654A = 0), or a 2-year junior college (T654B = 0), or a 2-year community college (T654C = 0), then you should have indicated that you have not been a student at a college or junior college for at least one semester (T768 = 2).
L2_T118	If you answered "I never received any of this material in response to a toll free call or card" in response to 'Which of these items did you use or appreciate having?' (T118A = 1), then you should have responded with the same answer to 'Did either of these items help you to decide to enlist in the Army?' (T119A = 1).
L2_T524	If you indicated a specific time that you started thinking about enlisting in the Army (0 < T524 < 9) and you indicated a specific time when you had definitely decided to apply for enlistment (0 < T525 < 9), then the time when you decided to apply must have occurred after you first started thinking about enlisting (T525 not > T524).

Recoded Survey Items

New versions of five 1985 NRS items were created in order to enhance their presentation in the tabulations. Recoded versions of original survey items were developed in order to: (1) regroup response alternatives so as to reduce the original number of answer categories; and (2) to construct crossing variables. The five variables recoded for presentation in the analyses are treated below in Tables 5 and 6. Crossing variables are discussed in the next section of this chapter.

Table 5 lists the question number, variable names, and recoded variable names for each of the survey items that were reformatted for presentation in the 1985 NRS tabulations. This is followed by Table 6 which documents the regrouping and collapsing of original variable values and labels into the recoded values.

Table 5

Recoded Variables with Regrouped Response Alternatives
for Tabular Presentation

Survey Item*	Variable Name	Recoded Variable
C114A, D139A	WKSWORK	RWKSWORK
C114B, D139B	WKSWORKP	RWKSWKP
C115A, D140	WKSLOOK	RWKSLOOK
C115B, D141	WKSLOOKP	RWKS LKP
A118, B147, C124, D104	ZIP	RBRIGADE

*Question numbers are preceded by letters designating survey form type.

Table 6

**Documentation of 1985 Summer NRS Item Recoding
for Tabular Presentation (USAR & ARNG Components)**

WKSLOOK During the past year, how many weeks (from 0-52) were you not working full-time and looking for a full-time job?
 RWKSLOOK Recoded - The number of weeks you were not working full-time and were looking for a full-time job in the past year.

ORIGINAL FORMAT			RECODED FORMAT		
Variable Name	Original Values	Value Labels	Recoded Variable Name	Regrouping of Original Values	Recoded Values/Labels
WKSLOOK	.	No response	RWKSLOOK	.,A,B,D	. = No response/missing

ORMF/ORMF-Derived Variables

Fifteen variables were taken directly or were created using data from the ORMF for merging with the NRS data files. Many of these variables were subsequently reformatted for use as crossing variables in the tabulation volumes. This section presents a series of tables (Table 7) documenting the merged variables' original formats as presented on the ORMF (MEPRS and REQUEST formats are both provided where applicable) and the variables' formats and labeling as they appear on the SAS database.

In some instances, the original ORMF variable values were simply regrouped or collapsed into a smaller number of response categories. In other instances, multiple MEPRS and REQUEST variables were used to create a single new SAS variable. When several different ORMF variables were used to create a new SAS variable, the original MEPRS/REQUEST variables are included in the same table with the derived SAS variable; explanations of the variable creation are also provided in the table itself.

Table 7 lays out the values of the SAS variables (always located in the right-most column) adjacent to the original values of the MEPRS/REQUEST variables for ease in interpreting the regrouping and relabeling of value categories. When this was not possible, special notations are included on the table. Tables 8 and 9 in the next section of this chapter document further transformations of the SAS versions of the merged variables to create crossing variables.

Crossing Variables

Thirteen unique crossing variables were created for tabular analyses of the 1985 Summer NRS data for the USAR and ARNG components, although only eleven of these were used to produce the tabulations. Three of the thirteen crossing variables are versions of the AFQT category variable using different norming conventions. Only one AFQT variable, XMCAT80, appears in the 1985 Summer USAR tabulations as a crossing variable. Every NRS respondent for whom AFQT was available (from MEPRS/REQUEST) was given a value on the variable, MCAT. Depending on the form of the AFQT administered to the respondent, the MCAT variable was renormed using either the 1944 WW2 test norms (TESTID=1-4) or the 1980 Youth Norms (TESTID=0 or ≥ 5). All three versions of the AFQT category variable (i.e., MCAT, MCAT80, and MCAT44) are included on the 1985 NRS databases, thus allowing comparable analyses using earlier NRS survey data.

Two-volume sets of tabulations were produced for the RA, and the USAR. A single tabulation volume using five crossing variables was produced for the ARNG. Volume 1 in the USAR tabular descriptions presents tables of 1985 NRS survey responses (for

Army Reservists completing Form D) crossed by respondent gender, highest level of education, self-reported ethnic group, marital status, and AFQT category. Volume 2 crossing variables include participation in split training and/or the ROTC simultaneous membership program, receipt of a cash incentive (GMA⁴ and GMB⁵ responses only), recruiting region, rural/urban nature of preenlistment residence, and age at time of accession. Due to insufficient Army personnel data, a single volume of tabulations was produced for the ARNG component. The ARNG tabulation volume presents survey responses crossed by respondent gender, highest level of education, ethnic group, rural/urban nature of preenlistment residence, and age at accessioning.

Three of the eleven unique crossing variables used for the 1984 Summer NRS USAR and ARNG tabulation volumes are based upon survey items. The other eight were derived from ORMF data elements. Survey items, U224 and U225, were used to construct the crossing variable, XPROG, for the USAR component. Due to insufficient personnel data, the survey variable, ETHNIC, was used to create XGPOPGRP for the ARNG component. (ORMF data was used to create XPOPGRP for the USAR component.) And, finally, XRURURB was constructed for both USAR and ARNG components from survey item T187. The original variable values were regrouped prior to inclusion in the tabulations as shown below.

<u>Survey Item(s)</u>		<u>Crossing Variable</u>		<u>Values and Labels</u>
<u>Form D</u>				
U224	Q039	XPROG	(Split Training/ Simultaneous Membership Program Participation)	1 = Neither
U225	Q043			2 = ST 3 = Both 4 = SMP
ETHNIC	Q153	XGPOPGRP	(Self-Reported Ethnic Group)	1 = White 2 = Black 3 = Hispanic 4 = Other
T187	Q103	XRURURB	(Rural/Urban Nature of Preenlistment Residence)	1 = LG_CITY 2 = MED_CITY 3 = SUBURB 4 = TOWN 5 = RURAL/FARM

⁴GMA refers to male, high school diploma graduates and post-high school graduates in AFQT categories 1-3A.

⁵GMB refers to male, high school diploma graduates and post-high school graduates in AFQT category 3B.

The remaining eight crossing variables were created using ORMF data. In some instances, crossing variables were taken directly as they had appeared on both files which comprise the ORMF, e.g., the SAS variable SEX is the equivalent of the MEPRS variable, MSEX and the REQUEST variable, RSEX. In other instances, the values of ORMF variables were regrouped or were combined with other ORMF variables to create the crossing variable. Table 7, which was discussed earlier in this chapter, documents the original ORMF variables which were used to produce SAS versions of the ORMF variables. Tables 8 and 9 document the transformation of these SAS data elements and NRS items into crossing variables for the USAR and ARNG components, respectively. The values presented in Tables 8 and 9 report the legitimate or allowable ranges, not the actual values reported. Actual frequency counts are reported on the codebook pages documenting the crossing variables.

THE 1985 ARI SURVEY OF ARMY RECRUITS:
CODEBOOK FOR SUMMER 85 USAR & ARNG SURVEY RESPONDENTS

The data presented on the following pages summarize the attitudes of the Army recruits who responded in this research effort. They do not necessarily represent the actual percentages that would have been obtained had the entire population of new Army recruits been surveyed during the survey quarters of interest or across the entire fiscal year.

THE 1985 ARI SURVEY OF ARMY RECRUITS:
CODEBOOK FOR SUMMER 85 USAR & ARNG SURVEY RESPONDENTS

T769 - WHAT ARMY COMPONENT ARE YOU ENTERING ?

RAW DATA

CARD #	COLS	LENGTH
06	119-120	2

SAS DATASET POSITION 343

FREQ	PERCENT	VALUE	MEANING
3	0.1	.	NO RESPONSE
* 4	0.1	* 1	ACTIVE ARMY
2299	43.2	2	ARMY RESERVE
3010	56.6	3	NATIONAL GUARD
5316	100.0	TOTALS	

* THESE 4 RESPONDENTS PROBABLY MISREPORTED THEIR SERVICE COMPONENT AS THE REGULAR (ACTIVE) ARMY. IT IS MORE LIKELY THAT THEY ARE IN THE U.S. ARMY RESERVE OR NATIONAL GUARD SINCE: (1) THEY WERE ABLE TO COMPLETE A SURVEY FORM WRITTEN SPECIFICALLY FOR RECRUITS ENTERING THE USAR OR ARNG, AND (2) THEIR ORMF RECORDS INDICATE THAT THEIR COMPONENT IS EITHER THE USAR OR ARNG.

U242 - ANSWER THE FOLLOWING QUESTION ABOUT THE HOUSEHOLD YOU WERE LIVING IN BEFORE YOUR ENLISTMENT--THE HOUSEHOLD WHERE THE RECRUITER WAS ABLE (OR WOULD HAVE BEEN ABLE) TO CONTACT YOU DURING THE YEAR BEFORE YOUR ENLISTMENT. WHAT IS THE ZIPCODE OF THIS HOUSEHOLD?

RAW DATA

CARD #	COLS	LENGTH
07	060-064	5

SAS DATASET POSITION 373

THIS IS A CONTINUOUS VARIABLE. RESPONSE CATEGORIES ARE TOO NUMEROUS FOR FREQUENCY REPORTING. VALUE RANGES: 00000 - 99998

THE TERM "HOUSEHOLD" IS NOT USED CONSISTENTLY ACROSS ARMY SERVICE COMPONENTS. RA RECRUITS WERE INSTRUCTED TO RESPOND TO SURVEY ITEMS, T175, T176A-T176J, T177, T179-T181, T665, BY REFERRING TO THE HOUSEHOLD IN WHICH THEY SPENT THEIR TEENAGE YEARS. USAR/ARNG RECRUITS WERE REQUESTED TO REFERENCE THE HOUSEHOLD IN WHICH THEY RESIDED AT THE TIME OF THEIR ENLISTMENT WHEN RESPONDING TO T176A-T176J, T177, U242.

THIS IS A CONTINUOUS VARIABLE. RESPONSE CATEGORIES ARE TOO NUMEROUS FOR
FREQUENCY REPORTING.

VALUE RANGES: 0001 - 5316.

APPENDIX A

FREQUENCIES FOR "I DON'T KNOW" RESPONSE CATEGORY
DEVELOPED DURING DATA CODING

APPENDIX A

FREQUENCIES FOR "I DON'T KNOW" RESPONSE CATEGORY DEVELOPED DURING DATA CODING

A separate response category was developed during the coding stage of the project to track the number of "I don't know" responses hand written by respondents on the survey booklets for items that did not include an "I don't know" response as a preprinted response alternative. The frequencies for items with this response category are presented below. These frequencies were combined with other "out-of-range" values and given the value of B in the codebook.

The frequencies presented below need to be considered both by analysts of NRS-84 data and designers of future surveys. Analysts need to consider that large frequencies of "I don't know" responses may indicate lack of knowledge by respondents. Note that many respondents may be uncertain about how to respond but may not take time to write "I don't know" on the survey booklet. Designers of future surveys may want to consider adding a preprinted "I don't know" category for items that have large frequencies. However, they should weigh the benefits of getting information from fewer respondents who are more certain of their responses versus getting information from more respondents, some of whom are uncertain.
