FOREWORD

The Naval Medical Research Institute is the Navy's largest biomedical research facility. Commissioned in 1942, the Institute's mission is to conduct basic and applied research aimed at the enhancement and protection of the health, safety, and efficiency of naval personnel. Ongoing studies are currently focused in the areas of casualty care, environmental stress, infectious diseases, hyperbaric medicine, and transplantation research.

This issue of the SUMMARIES OF RESEARCH consists of citations to reports of the Naval Medical Research Institute published during the calendar year. Although most of these publications are available in the open literature, copies may also be purchased from:

National Technical Information Service
5285 Port Royal Road
Springfield, Virginia 22161

Federal government agencies and their contractors registered with the Defense Technical Information Center may direct requests for copies of these reports to:
