ABSTRACT

This paper provides historical information on Navy Enlisted Classifications (NECs). It details the number of different NEC titles awarded each year as well as the number of individuals who were awarded each title. It was prepared as a background paper for a study of training costs for Navy specialized skills.

INTRODUCTION

Navy Enlisted Classification Codes (NECs) supplement the enlisted rating structure by identifying particular skills in more detail than the occupational or rating structures. There are three basic types of NECs. The first type, Entry Series NECs, consists of Rating Conversion NECs (which, as their name suggests, identify enlisted personnel in training for a change of rating) and Occupational Area or Defense Grouping NECs (which identify enlisted personnel in DOD occupational groups who either have the aptitude for training in that area, have been identified for training in that area, or are in training in that area). Thus, this first type of NEC identifies personnel who are either being trained or are about to be trained. In January of 1986, there were 98 Rating Conversion NECs and 9 Defense Grouping NECs.

The second and third type of NECs, the categories upon which this paper will concentrate, are qualitatively different. Instead of identifying enlisted personnel who will potentially acquire skills, they identify enlisted personnel who have particular skills. In short, the latter two categories of NECs validate earned qualifications or skills rather than noting skills or qualifications that are expected to be learned. The second type of NECs are Rating Series NECs, NECs which are specific to a rating or a group of ratings. The third type, Special Series NECs, are NEC skills that are not rating-specific. NEC 9585, Navy Recruiter Canvasser, is an example of a Special Series NEC; NEC 1157, Improved Point Defense Surface Missile System Technician, is an example of a Rating Series NEC (this NEC is for Fire Controlmen only).

NECs of the second and third type can be earned either through C-school courses, on-the-job-training, or a combination of both. The Manual of Navy Enlisted Manpower Classifications and Standards, Section II: Navy Enlisted Classifications is revised quarterly to include both the current list of NECs and the current procedure for obtaining an NEC [1]. NECs are established, deleted, or revised on a regular basis as the needs of the Navy change. Many of the NECs are equipment-specific and as new equipment is put into use, new NECs are required; when old equipment is retired, NECs are deleted.

The Enlisted Master Record (EMR) File has fields for five different NECs as well as the date each was earned. The NECs are listed in order on the EMR as primary, secondary, etc; the positions are ordered by the sequence codes. Lower sequence codes generally take precedence over higher sequence codes. The only exceptions to this are Special Series NECs that can never be primary NECs. NECs with the same sequence code are ordered by dates, with the NEC most recently acquired appearing first. All Entry Series NECs are sequence code 1 and are thus primary NECs; they are kept on the individual's record until the individual has advanced to petty officer status, becomes an identified striker, or changes rating status.

Although the Naval Military Personnel Command (NMPC) is "responsible for the formulation and implementation of the NEC coding system and for maintaining technical control over the entire NEC system" ([1], p. 4), NECs are managed in a decentralized fashion. Moreover, because NECs are awarded through combinations of on-the-job training (OJT) and C-school courses (and these combinations and courses change over time), it has often been difficult to get an overall picture of the commitment the Navy has made to training for the skills defined by NECs. This paper attempts to fill part of this gap by providing an historical summary of various measures of NEC training.

NEC TRAINING

Specialized Skill Training

NECs awarded through the schoolhouse (or through combinations of schoolhouse training and OJT) are awarded by specialized skill training, in particular by C-school training.¹ There are several ways to measure how the specialized skill training load for NECs has changed over time. The most direct way would be to measure the days spent (or the student load) for NECs. Unfortunately, because there is no reliable historical record of which C-school courses are NEC-related and which are not, it is not possible to measure NEC schoolhouse training in this direct fashion. Because all schoolhouse NEC training is done in C-school, however, C-school training provides at least one proxy for NEC training.²

Figure 1 depicts the active-duty training load for C-school in fiscal years (FYs) 1979 through 1985. Constructed from Student Master Record Files (SMFs), the figure depicts training for all active-duty personnel (USN and Active Mariners or other reservists on active duty).³ The training load is divided into instructional days and supernumerary days (days spent awaiting instruction, in interrupted instruction, and awaiting transit). In FY 1979, the total training load was 10,617 (9,502 instructional); by FY 1985, the load had increased 51 percent to 16,072 (14,584 instructional). During this time, around 500 courses were switched from F-school courses to C-school courses. Figure 2 illustrates how this switch changed the C-school training

1. Specialized skill training is composed of A-school courses (training for a rating), C-school courses (more advanced training), and F-school courses (shorter or non-NEC training courses).

2. While all NEC schoolhouse training is done in C-school, not all C-school courses are NEC-related.

3. See [2] for a more complete description of how the historical C-school data were calculated.

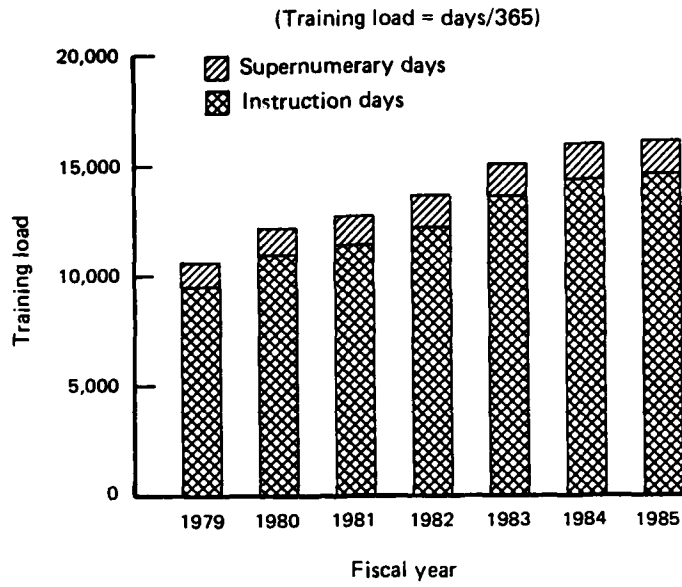

FIG. 1: C-SCHOOL TRAINING (SUPERNUMERARY AND INSTRUCTIONAL DAYS)

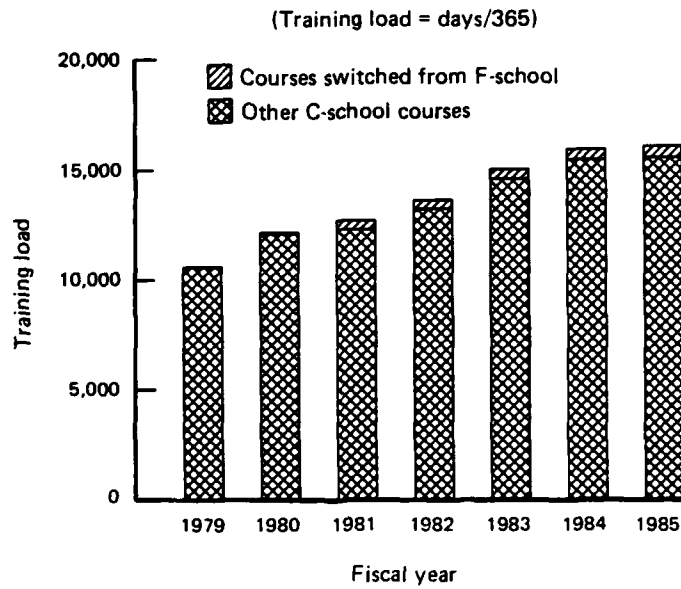

FIG. 2: C-SCHOOL TRAINING LOAD – BREAKDOWN OF C-SCHOOL COURSES WHICH SWITCHED FROM F-SCHOOL

load. In 1985, the load from these courses was 513 or slightly under 4 percent of the C-school training load.¹

Because the NEC component of C-school training is not known and because it may change over time, the C-school training load is, at best, a rough proxy for the NEC training load. Another possible measure is the number of distinct NECs awarded each year.

Number of NEC Titles

Figure 3 details the number of different NECs awarded during FY 1979 through FY 1985. To derive these numbers, a file was constructed from September Enlisted Master Record (EMR) Files. Eight years of the five NEC fields and their associated dates (September 1978 through September 1985) were collected for all enlisted personnel. Within each individual record, the data were sorted by dates so that each individual record was arranged by the earliest NEC to the most recent NEC awarded. After this was done, a computer program was constructed to extract the number of unique NEC titles awarded each year. It is these numbers that are displayed in figure 3. There does not appear to have been any trend in the number of NEC titles awarded from FY 1979 through FY 1985.

Table A-2 in appendix A provides a complete record of these data. In this table, there is a record of each NEC that appeared on the EMRs examined. Since the EMR information contained historical information, the table starts in 1970. (However, it should not be considered completely accurate until 1978 or 1979, because some NECs awarded in the early 1970s might have disappeared by 1978.) The NECs in table A-2 are sorted by the year of award and then by NEC. Thus, the end of table A-2 displays the new NECs that were first awarded in 1985.

Figure 4 illustrates the count of new NECs titles awarded in the FYs 1979 through 1985. In 1983 and 1984, the largest numbers of new NEC titles were awarded. The information provided by figure 4, however, should be interpreted with caution. First, the number of new NEC titles does not directly correspond to the number of new NECs awarded. Second, some new NEC titles are simply updated titles of older NECs. (For example, in January 1986, NEC 0114 was changed to NEC 9570; if fiscal year 1986 data were in the figure, NEC 9570 would be counted as a new NEC.)²

1. Table 1 in appendix A provides a list of the F-school courses that changed to C-school courses. It also lists the year that the change occurred.

2. Work is ongoing to establish an historical dictionary for NEC renumbering.

FIG. 3: NUMBER OF NEC TITLES AWARDED

FIG. 4: NUMBER OF NEW NEC TITLES – FIRST YEAR OF AWARD

Number of NECs Awarded

Perhaps the best available measure of the Navy's commitment to NEC training and how this commitment has changed over time is the number of NECs awarded to enlisted personnel in each year. To obtain these numbers, the Enlisted Master Record File NEC data were again used. Individual entries that were unique (both the NEC field and the date-earned field being the same) were identified and tabulated. Table A-3 in appendix A displays these data, by NEC, for 1979 through 1985. Figure 5 displays the total number of NECs awarded.

The total number of NECs awarded appears from figure 5 to have peaked in 1983. Since this result was unexpected, the data were further examined to see if there was a lag in reporting NECs (e.g., would some NECs awarded in FY 1985 not show up on Enlisted Master Record File data until 1986?).

To investigate this question, the "date awarded" field was examined for individuals whose NEC awards first appeared on the September 1985 EMR (i.e., the NEC was not on the EMR in September 1984 or earlier). Only 80 percent of these September 1985 NECs had FY 1985 award dates (9 percent of the award dates were for FY 1984 and 11 percent were for FY 1983 or earlier). This lag in reporting NECs creates a problem for reconstructing accurate historical records, particularly for the most recent years. (For FY 1983 NEC-dated awards, three EMRs--1983, 1984, and 1985--are available for the count; for FY 1985, however, only the 1985 data are available).

If one assumes, however, that the lag pattern found in the 1985 data will persist into the future, it is possible to construct what the NEC awards data will look like "once all the returns are in." This is illustrated in figure 6. When the data are adjusted for reporting lags, they show a steady increase in the number of NECs awarded each year.

An Aside: Entry Series NECs

Because Entry Series NECs really measure something different from Rating Series or Special Series NECs, it is worthwhile to examine how the counts for these training NECs have moved over time. Figure 7 illustrates the number of Entry Series NECs awarded. Table 1 provides the counts for the first type of Entry Series NECs, Rating Conversion NECs. It should be noted that table 1 may not be a complete list of the Rating Conversion NECs. (The list is complete for January 1986, but it may be missing rating conversion codes from earlier years). The NECs in table 1 are sorted first by the year and then by the NEC to facilitate examination of the more recent NECs.

The number of Rating Conversion NECs peaked in 1981. The numbers, even in that year, however, are quite small. Moreover, the program seems to have declined since 1981 (even if one adjusts for a reporting

FIG. 5: NUMBER OF NECs AWARDED TO ENLISTED PERSONNEL

FIG. 6: NUMBER OF NECs AWARDED TO ENLISTED PERSONNEL (ADJUSTED FOR REPORTING LAG)

FIG. 7: NUMBER OF ENTRY SERIES NECs AWARDED TO ENLISTED PERSONNEL

lag, though not done here). Despite the Navy's current shortage of Machinist Mates (MMs) and Boiler Technicians (BTs), there are no individuals in Rating Conversion NEC 4599 (BT) and only three in Rating Conversion NEC 4299 (MM).

Table 2 provides the counts for the Occupational Area or Defense Grouping NECs. These are the NECs for recruits who are to be rated; they represent almost 99 percent of the individuals with Entry Series NECs.

NECs in the January 1986 NEC Manual

Table A-4 in appendix A contains the NECs enumerated in the January 1986 NEC manual (numeric NEC code, sequence number, NEC title, and ratings (if applicable)). This list of NECs was matched to the listing in table A-2 of appendix A. This matching provides the information for the notes to the appendix table (NECs described, but not yet awarded; NECs awarded, but now discontinued; etc.).

9720	Communications and Intelligence Specialists	OS, SM, RM, IS, AC, AW, OT, OTA, EW, CTI, CTO, CTR, CTT
9730	Medical and Dental Specialists	HM, DT
9740	Other Technical and Allied Specialists	DM, MU, EQ, AG, PH
9750	Functional Support and Administration	PC, YN, PN, DP, SK, DK, JO, AZ, AK, LN, NC, CTA, RP
9760	Electrical/Mechanical Equipment repairman	GM, MN, IM, OM, MM, EN, BT, EM, IC, CM, AD, AO., AB, AE, AM, PR, AS, GS, WT
9770	Craftsmen	LI, MR, HT, PM, ML, CE, EO, BU, SW, UT
9780	Service and Supply Handlers	SH, MA, MS

SUMMARY AND CONCLUSIONS

When the individual data are aggregated and measures of the Navy training commitment to NEC training are calculated, all measures appear to be rising. While all measures of the NEC training load are proxies for the true training load, the measures estimate the training load from quite different directions. The fact that both C-school days and the number of NECs awarded to both first-termers and careerists are increasing convincingly indicates that the Navy, throughout the 1980s, has committed increasing resources to NEC training.
