PREFACE

This report presents the results of a detailed Air Force Occupational Survey of the Logistics Plans Specialty (AFSC 661X0). The project was undertaken at the request of the HQ USAF Functional Manager/LEXX. Priority was established by the Occupational Analysis Program Priorities Working Group (PWG) in accordance with AFR 35-2. Computer printouts from which this report was produced are available for use by operating and training officials.

The survey instrument was developed by Captain Frank Strickland, Inventory Development Specialist. Computer programming support for this project was provided by Mr Wayne Fruge. Lieutenant Cheryl Soat, Occupational Analyst, analyzed the survey data and wrote the final report. Administrative support was provided by Ms Anita R. Carter. This report has been reviewed and approved by Lieutenant Colonel Charles D. Gorman, Chief, Airman Analysis Branch, Occupational Analysis Division, USAF Occupational Measurement Center.

Copies of this report are distributed to Air Staff sections, major commands, and other interested training and management personnel. Additional copies may be obtained on request to the USAF Occupational Measurement Center, Attention: Chief, Occupational Analysis Division (OMY), Randolph AFB, Texas 78150-5000.

Center

SUMMARY OF RESULTS

1. SURVEY COVERAGE: Survey results are based on responses from 695 respondents with DAFSC 661X0. This represents 67 percent of the 1,030 assigned personnel in this career ladder.

2. SPECIALTY STRUCTURE: The study identified 10 major jobs encompassing 74 percent of the total sample. These jobs include: Manpower and Authorizations Personnel, Facilities Managers, Support Agreement NCOs, Financial Management Personnel, Mobility Personnel, War Reserve Materiel Personnel, MAJCOM Functional Managers, COMPES Personnel, Functional Systems Analysts, and Logistics Plans Instructors. The largest job was identified as Mobility Personnel, and represents 28 percent of the sample. The remaining jobs reflect the various areas of specialization within the career ladder. The large percentage of personnel performing jobs so unique they failed to group with any other major job indicates a very high degree of diversity within the specialty.

3. CAREER LADDER PROGRESSION: Both 3- and 5-skill level personnel performed essentially the same job with few exceptions. As AFSC 661X0 personnel progress through the 7-, 9-, and CEM code skill levels, they spend an increasing amount of time on managerial and administrative functions. The normal increase in supervisory functions is not found, as the specialty presents very little supervisory demand.

4. TRAINING: Both the STS and the G3ALR66130 POI, when compared with survey data, showed several items performed by low percentages of respondents. Also, several tasks performed by higher percentages of first-job airmen were not referenced to these training documents, which suggests the need for a thorough review of both the STS and the POI for possible refinements.

5. MAJCOM ANALYSIS: A MAJCOM analysis compared job incumbents from the five major using commands. Very few differences were found.

6. IMPLICATIONS: The Logistics Plans Specialty presents a very diverse career ladder, with a great deal of variation in the jobs being performed at different locations. The impact of the COMPES on the specialty is clear, as it has resulted in the formation of an entirely new job within the career ladder, and 43 percent of the career ladder personnel perform COMPES functions in some capacity.

OCCUPATIONAL SURVEY REPORT
LOGISTICS PLANS SPECIALTY
(AFSC 661X0)

INTRODUCTION

This is an occupational survey report (OSR) of the Logistics Plans specialty (AFSC 661X0) completed by the Occupational Analysis Division, USAF Occupational Measurement Center, in November 1986. The survey was conducted in response to a request from the Air Force functional manager for the Logistics Plans career ladder, to assess current training and examine the impact of the Contingency Operations Mobility Planning/Execution System (COMPES). The last survey of the AFSC 661X0 career ladder was published in December 1979.

Background

The Logistics Plans specialty was created in April 1976 to draw together the logistics planning functions of the supply, transportation, and maintenance career fields and thus, improve overall efficiency of operations planning. This specialty was formed as a lateral career ladder open only to those with prior experience in one of the aforementioned component fields. In October 1978, a CEM code (AFSC 66100) was created as Logistics Plans Manager. In 1983, the career ladder became open to anyone with logistics-related career experience.

Logistics Plans personnel develop, perform, evaluate, monitor, and inspect logistics plans and programs activities. Due to the nature of the planning function, it is necessarily a dynamic specialty, changing with the missions and resources of the units with which it operates. The fairly recent implementation of COMPES may still be generating transitioning activities as the system becomes integrated into the day-to-day job.

Formal training for the AFSC 661X0 career ladder consists of a 30-day course at Lowry AFB, Colorado. This 3-level course trains future logistics planners in such areas as logistics, manpower, facilities and financial management, War Reserve Materiel (WRM) and support agreements management, plans development, mobility functions, and COMPES.

SURVEY METHODOLOGY

Inventory Development

USAF Job Inventory AFPT 90-661-776 (October 1985) was the data collection instrument for this occupational survey. A comprehensive listing of tasks and potential background questions was initially drafted at an initiation conference held at the Occupational Measurement Center and attended

by USAF and MAJCOM functional managers. The developer and 81 subject-matter experts from 14 different organizations then refined and further developed the task list. Interview locations were recommended by functional managers at the initiation conference as representative of the workload and capabilities of the various logistics plans work centers in the Air Force. These locations provided examples of the numerous functions performed by logistics plans personnel, including those which may be command unique. The following bases were visited for interviews:

- Kelly AFB - Electronic Security Command functions
- USAFE - International Agreements unique functions
- Tinker AFB - AWACS support functions
- Grand Forks AFB - SAC Missile and B-52 support functions
- Nellis AFB - Test Range, Thunderbirds, RED HORSE support functions
- McClellan AFB - Rescue and Weather Reconnaissance Activities
- Beale AFB - Special ground support functions
- Plattsburg AFB - Tanker task force functions
- Shaw AFB - Numbered Air Force functions
- Gunter AFS - Data Design Center
- Eglin AFB (Including Duke Field and Hurlburt Field) - Systems Command and Readiness functions
- PACAF - RED HORSE and Army support functions

The resulting job inventory contained a comprehensive listing of 942 tasks under 21 duty headings and a background section requesting information such as grade, duty title, type of work center, and job satisfaction data.

Survey Administration

From November 1985 through April 1986, Consolidated Base Personnel Offices in operational units worldwide administered the survey to Logistics Plans personnel. Participants were selected from a computer-generated mailing list provided by the Air Force Human Resources Laboratory.

All individuals who filled out an inventory first completed an identification and biographical information section and then checked each task performed in their current job. Next, members rated the tasks on a 9-point scale showing relative time spent on each as compared to all other tasks. Ratings ranged from 1 (very small amount of time spent) to 9 (very large amount of time spent). Statistical analysis of these ratings permitted very precise estimates of the percent of time individuals spent on each task.

Survey Sample

Personnel in the survey were carefully selected to ensure an accurate representation across major commands (MAJCOM). Table 1 shows how the final sample compared to the actual population of the career ladder in terms of

TABLE 1

COMMAND DISTRIBUTION OF SURVEY SAMPLE

Total 661X0 Personnel Assigned: 1,030
 Total 661X0 Personnel Eligible for Survey: 829
 Total 661X0 Personnel Sampled: 695
 Percent of Assigned Sampled: 67%
 Percent Eligible Sampled: 84%

NOTE: Manning figures as of September 1985

members' distribution across MAJCOMs. The table clearly shows each MAJCOM was proportionately represented. The 695 respondents included in the final sample represent 84 percent of the AFSC 661X0 career ladder personnel eligible for the survey and 67 percent of the 1,030 personnel assigned to the career ladder. (Personnel awaiting PCS, retirement, or discharge, those with less than 6 weeks on the job, and those in hospital status were not eligible.)

Task Factor Administration

Selected senior personnel in the 661X0 AFSC completed a second booklet in addition to the job inventory booklet. Processed separately, these booklets provide rating information for each task concerning task difficulty (TD) or training emphasis (TE) as perceived by these NCOs. Task difficulty refers to the length of time required for the average job incumbent to learn to perform that task to the required proficiency. Training emphasis refers to the importance of structured training; that is, training provided through an organized training method, such as resident technical training schools, field training detachments, mobile training teams, or formal OJT for first-term personnel.

Task Difficulty (TD). To complete the TD booklet, individuals rated each task in the inventory with which they were familiar on a 9-point scale, ranging from an extremely low relative difficulty (a rating of 1) to an extremely high relative difficulty (a rating of 9). Fifty-four NCOs provided the data, with an interrater reliability (as assessed through components of variance of standardized group means) of .93. This figure indicates high agreement between raters. The TD ratings were adjusted to give a rating of 5.00 to a task of average difficulty, with a standard deviation of 1.00. The data are then used to rank order the tasks in the job inventory in descending values of rated task difficulty.

Job Difficulty Index (JDI). TD is also used to compute a JDI for jobs identified in the survey. To provide a relative measure of the complexity of the jobs in comparison to each other, the JDI is computed based on the number of tasks performed and the average difficulty per unit time spent (ADPUTS). Thus, a group spending more time on difficult tasks and performing more tasks will have a higher JDI. After measurements are standardized, the index ranges from 1.0 for a very easy job to 25.0 for a very difficult job, with an average JDI of 13.0.

Training Emphasis (TE). Individuals completing TE booklets rated tasks they believed required training for first-term personnel on a 10-point scale, ranging from 1 (low training emphasis) to 9 (most training required), with a blank representing no training required at all. TE data were collected from 79 experienced personnel worldwide. Such a high level of disagreement was found among these personnel that no reliable data concerning training emphasis can be reported.

When used in conjunction with other information, such as percent members performing, TD ratings can provide insight into training requirements. Such insight may help validate lengthening or shortening portions of

instruction to fill the actual required needs of the employers of tech school graduates.

SPECIALTY JOBS (Career Ladder Structure)

The structure of jobs within the Logistics Plans career ladder was examined on the basis of similarity of tasks performed and the percent of time spent ratings provided by job incumbents, independent of specialty or other background factors.

For the purpose of organizing individual jobs into similar units of work, an automated job clustering program is used. This hierarchical grouping program is a basic part of the Comprehensive Occupational Data Analysis Program (CODAP) system for job analysis. Each individual job description in the sample is compared to every other job description in terms of tasks performed and the relative amount of time spent on each task in the job inventory. The automated system is designed to locate the two job descriptions with the most similar tasks and percent time ratings and combine them to form a composite job description. In successive stages, new members are added to initial groups or new groups are formed based on the similarity of tasks and percent of time ratings in each individual job description. This procedure is continued until all individuals and groups are combined to form a single composite representing the total sample. The resulting analysis of the variety of groups of jobs serves to identify: (1) the number of characteristics of the different jobs which exist within the career ladder; (2) the tasks which tend to be performed together by the same respondents; and (3) the breadth or narrowness of the jobs which exist within the Logistics Plans career ladder.

The basic identifying group used in the hierarchical job structuring process is the Job Type. A job type is a group of individuals who perform many of the same tasks and spend similar amounts of time performing them. When there is a substantial degree of similarity among different job types, they are grouped together and labeled as Clusters. In many career ladders, there are specialized job types that are too dissimilar to be grouped into any cluster. These unique groups are labeled Independent Job Types.

Based on the similarity of tasks performed and the amount of time spent performing each task, four clusters and six independent job types were identified in the examination of the Logistics Plans career ladder. These major jobs are illustrated in Figure 1 and are described on the following pages. The group (GRP) number shown beside each title is a reference to computer-printed information, and the letter N refers to the number of personnel in the group:

LOGISTICS PLANS SPECIALTY JOBS

 - C. Mobility Planners (GRP316, N=7)
 - D. Mobility Control Personnel (GRP279, N=54)
 - E. Contingency/Exercise Plans NCO (GRP143, N=44)
 - F. Wing Programs and Mobility NCOICs (GRP194, N=5)
- VI. WAR RESERVE MATERIEL (WRM) PERSONNEL (GRP114, N=47)
 - A. WRM Quality Control Personnel (GRP280, N=6)
 - B. Agreements Coordinators/WRM NCOs (GRP313, N=7)
 - C. WRM Financial Management Personnel (GRP225, N=24)
 - D. WRM Program Managers (GRP187, N=5)
 - E. WRM Evaluators (GRP135, N=5)
- VII. MAJCOM FUNCTIONAL MANAGERS (GRP137, N=19)
- VIII. COMPES PERSONNEL (GRP180, N=56)
- IX. FUNCTIONAL SYSTEMS ANALYSTS (GRP272, N=6)
- X. ATC LOGISTICS PLANS INSTRUCTORS (GRP125, N=5)

AFSC 661X0 personnel forming these job types and clusters account for 74 percent of the survey sample. The remaining 26 percent did not group with any of the clusters or job types listed above. Job titles they identified for themselves include: NCOIC Maintenance Logistics, Action Officer Log Plans, Harvest Eagle Supt, NCOIC Site Management Division, Asst NCOIC Phone Control, Bare Base Manager, NCOIC Contracting Division, NCOIC EWO Plans, WRM/NCO Army Liaison, NCOIC Exercise Branch, and many others. These personnel did not group with any cluster or job type because of either the uniqueness of the job

they perform and the manner in which they responded to the tasks listed in the job inventory.

Overview

As evidenced by the large number of jobs identified, as well as by the large percentage of personnel who did not group with any major job, the AFSC 661X0 career ladder is very diverse. Being a lateral career ladder with primarily small shops, no supervisory jobs, and very few purely managerial jobs, were identified.

Each of the clusters and independent job types is described briefly below. Two tables at the end of this section provide additional information about each of these groups. Table 2 provides the relative amount of time spent on each duty by each of the major groups identified. For example, Manpower and Authorizations Personnel spend 48 percent of their time on tasks related to performing manpower and authorizations functions and only 2 percent of their time on financial management functions. Table 3 provides selected background information, such as DAFSC, average months of service (TAFMS), MAJCOM distribution, and average grade, for each of the major groups. For example, there are 192 members of the Mobility Plans Personnel Cluster. Of these, 71 percent hold a DAFSC of 66170, 52 percent are located within the CONUS, and they perform an average of 207 tasks each.

Also included in this report is an appendix concerning the Logistics Plans specialty jobs. Appendix A provides duty and background information for all the major jobs identified in the career ladder structure analysis. This appendix also lists common tasks performed by members of each of the jobs identified.

I. MANPOWER AND AUTHORIZATIONS PERSONNEL (GRP072). These 57 AFSC 661X0 personnel spend 48 percent of their time performing manpower and authorizations-related tasks and another 16 percent of their time on administrative and supply-related tasks. The vast majority of these incumbents (79 percent) are assigned to programs and mobility shops. Differentiating tasks performed by these personnel include:

- administer maintenance management information and control system (MMICS)
- load maintenance inbound into MMICS data base
- distribute manning products
- maintain unit manning documents (UMD)
- maintain manning authorizations

These personnel hold an average paygrade of E-5 and have an average of 47 months in the specialty. The typical incumbent performs approximately 87 tasks, with a fairly low job difficulty index of 9.2.

Four different job types were identified within this cluster. The Maintenance Manning Managers are the most senior group in the cluster. Performing an average of 172 tasks, with a slightly above average JDI (16.2), these personnel are primarily responsible for the manpower requirements aspect of exercise and contingency planning. Manpower and Facilities Management Personnel are performing a core of manpower and authorizations tasks but are also spending 18 percent of their time performing facilities management related functions. The Manpower and Authorizations NCOs form the heart of this cluster, as 70 percent of their time is spent on manpower and authorizations functions. Finally, the Tactical Manpower Resources are primarily responsible for manpower requirements planning for Harvest Bare.

II. FACILITIES MANAGERS (GRP376). Constituting only 1 percent of the survey sample, personnel in this independent job type spend 59 percent of their work time on tasks involved in facilities management. Another 22 percent of their time is spent on administrative and supply tasks. Tasks which differentiate these personnel from other logistics plans personnel include:

- coordinate with work centers and CE on facilities requirements
- determine status of work orders for construction of facilities
- monitor and review CE work requests
- process work order requests
- determine status of requests for modification or repair of existing facilities

These 10 respondents are fairly new to the career ladder, with an average of 32 months TICF. They perform an average of 46 tasks and have an extremely low JDI of 4.9.

III. SUPPORT AGREEMENT NCOs (GRP219). The 42 personnel of this independent job type spend over 53 percent of their time preparing, coordinating, and revising support agreements and performing related tasks. Ninety-one percent are working in Plans (LGX) shops. Tasks performed by these personnel include:

- review interservice, interdepartmental or interagency support agreements
- serve as the interservice support coordinator (ISC)
- maintain or revise support agreements
- prepare host-tenant support agreements

These personnel perform an average of 84 tasks and have a JDI of 11.2. The group averages 45 months in the career ladder.

IV. FINANCIAL MANAGEMENT PERSONNEL (GRP084). The 82 respondents in this cluster comprise 12 percent of the survey sample. These personnel are performing financial management functions as they relate to all other logistics planning activities. Representative tasks which are performed by these personnel include:

- analyze budgeting requirements
- develop budget estimates
- coordinate with cost center managers on financial or budget matters
- allocate or distribute funds
- coordinate with comptrollers or program control on budget or financial matters

These respondents, who average 61 months in the career ladder, perform an average of 152 tasks and have a JDI of 14.4.

Three job types were identified within this cluster. Manpower and Facilities Financial Management Specialists comprise 28 percent of the cluster. These personnel spend significant amounts of time on manpower and authorizations tasks and facilities management tasks, as well as on their primary financial management activities. Mobility Budget NCOs are located primarily overseas (82 percent) and are responsible for the budgeting considerations in exercises and deployments. Financial Resource Advisors spend 63 percent of their time on financial management activities, and as such, comprise the core of the financial management cluster.

V. MOBILITY PERSONNEL (GRP083). The 192 respondents in this cluster comprise 28 percent of the survey sample. This is the largest single cluster identified. Personnel in this cluster are responsible for the various aspects of mobility planning, as well as mobility control center activities. Representative tasks performed by these personnel include:

- resolve problems occurring during exercises
- ensure processing of personnel for deployments or exercises
- monitor mobility progress on MCC status boards
- evaluate mobility taskings, fragmentation, or tasking orders, DMD levies

Personnel in this cluster are fairly senior, perform an average of 207 tasks, and have a job difficulty index of 17.7.

Six job types were identified within this cluster. The most senior group, Staff Level Mobility Personnel (GRP381), comprise only 10 percent of the cluster. These personnel perform an average of 273 tasks and have a JDI of 21.4. The job being performed by these personnel is characterized by staff level mobility functions, such as advising the commander or staff agencies on

logistics program policies or procedures, and interpreting policies, directives, or procedures for subordinates. Flightline Mobility Personnel (GRP209) are directly involved with the flightline mobility activities. These personnel spend a good deal of their time ensuring the processing of personnel, the marshalling of cargo, the loading of aircraft, the manning of mobility control centers, the identification of marshalling areas, and other flightline activities.

A small group of personnel identified as Mobility Planners (GRP316) are spending a good deal of their time on planning-related activities. Comprising only 4 percent of the cluster, these personnel are preparing base mobility plans, requesting logistics inputs from functional areas, providing inputs to base operation plans, and evaluating mobility taskings. Mobility Control Personnel (GRP279) spend a good deal of their time working with the mobility control centers (MCC). These personnel are responsible for coordinating transport for deploying units or equipment, coordinating personnel requirements for exercises or deployments, and acting as a liaison between the deploying unit and the installation mobility officer (IMO).

Relative to other mobility personnel, Contingency/Exercise Plans NCOs (GRP143) are spending twice as much time on contingency and exercise planning functions. Approximately two-thirds of these personnel are located overseas. Finally, a small group of senior personnel have been identified as Wing Programs and Mobility NCOICs (GRP194). These personnel are all working at the wing level and are spending 82 percent of their time on supervisory type tasks, training, and administrative functions.

VI. WAR RESERVE MATERIEL (WRM) PERSONNEL (GRP114). As a group, these personnel spend a greater percentage of their work time performing WRM functions than any other group. Comprising only 7 percent of the survey sample, these 47 respondents are primarily 7-skill level personnel and about 51 percent are assigned to USAFE. Tasks performed by these personnel which differentiate them from others include:

- inspect WRM consumables, equipment, or spares
- coordinate status of WRM assets
- conduct or attend WRM review board meetings
- review WRM review board reports
- review WRM requirements

The average respondent within this group holds a paygrade of E-6 and has been in the Logistics Plans career ladder for about 72 months.

Five component job types were identified within WRM Personnel, all performing different aspects of WRM functions. WRM Quality Control Personnel (GRP280) perform those inspecting, reviewing, and monitoring tasks necessary to ensure the quality of WRM. Meanwhile, a group of personnel identified as Agreements Coordinators/WRM NCOs (GRP313) are spending a good deal of time working on support agreements, along with their WRM duties. WRM Financial Management Personnel (GRP225) comprise 51 percent of the WRM Personnel

cluster. Ninety-two percent of these respondents are located overseas and, on the average, they are spending 43 percent of their time on WRM and financial management functions.

A small group of WRM Personnel were identified as WRM Program Managers (GRP187). This very experienced group is comprised of 7- and 9-skill level personnel with an average of 103 months in the Log Plans specialty. Functions of this group include interacting with MAJCOM and Air Staff personnel on policies and procedures, as well as continually reviewing and updating WRM requirements. Finally, WRM Evaluators (GRP135) distinguished themselves from other WRM personnel by the amount of time they spend inspecting and evaluating WRM activities. Unlike the on-sight Quality Assurance personnel, these respondents plan and conduct staff assistance and surveillance visits and work on related activities.

VII. MAJCOM FUNCTIONAL MANAGERS (GRP137). Nineteen respondents in the survey sample described their job as that of a functional manager. Holding an average paygrade of E-7, and located almost exclusively within the CONUS, these personnel are performing a high-level administrative function and interacting with MAJCOM and Air Staff personnel on a regular basis. A typical day of work would find these individuals performing the following tasks:

- prepare inputs to regulations, directives, manuals, or supplements
- advise subordinate units on changes to regulations manuals or supplements
- coordinate with MAJCOM or Air Staff personnel on logistics policies or procedures
- review results of previous IG inspections or audits

These personnel perform an average of 125 different tasks reflecting a job difficulty index of 15.3.

VIII. COMPES PERSONNEL (GRP180). These 56 respondents are spending 47 percent of their total work time performing COMPES-related functions. With an average of only 34 months in the career field, these personnel perform an average of 72 tasks and have a JDI of 11.8. The specific tasks these personnel perform include:

- coordinate transactions with data processing installation (DPI)
- coordinate with units on part three
- provide packing and load lists
- develop or compile equipment lists for COMPES
- input organization and shop codes to input to the data base

These personnel are relatively junior within the specialty, and 80 percent are located within the CONUS.

IX. FUNCTIONAL SYSTEMS ANALYSTS (GRP272). These personnel are clearly identified by the large amount of time they spend on automated data processing (ADP) functions, as well as by their location at the Data Systems Design Center. Tasks which differentiate these respondents include:

- write users manuals
- design output products, input transactions, or data elements
- determine ADP report formats
- validate user's manuals
- develop data for software tests

The six respondents included here have an average paygrade of E-8, with an average of 79 months in the career field.

X. ATC LOGISTICS PLANS INSTRUCTORS (GRP125). The five personnel identified here are Logistics Plans instructors at the 3440th technical training group at Lowry AFB. These are predominantly 7-skill level personnel with an average of 87 months in the career field. Characteristic tasks of the instructor job include:

- write test questions
- evaluate test results
- procure training aids, space, or equipment
- conduct resident or tech school course classroom training

These personnel perform an average of 32 tasks and have a JDI of 7.5.

Comparison of Specialty Jobs

Descriptions of the four clusters and six independent job types identified in the specialty jobs analysis indicate a very high degree of diversity within the Logistics Plans career ladder. The only tasks common to most Logistics Plans personnel appear to be in the area of administrative and supply functions and a few mobility-related tasks. Commonly performed tasks across most of the jobs include:

- safeguard classified documents
- review results of previous IG inspections or audits
- prepare memoranda for record
- prepare briefings
- conduct unit self-inspections
- direct or serve in mobility control centers (MCC) during exercises or deployments

resolve problems occurring during exercises
monitor mobility progress on MCC status boards

Aside from these tasks, there is very little similarity among any of the major job groups. Further, it is interesting to note that 26 percent of the personnel surveyed described their jobs as being so different they did not fall into any one of the groups identified.

Comparison to Previous Survey Job Structure

In the 1979 occupational survey of the Logistics Plans specialty, seven clusters and eight independent job types were identified. These groups, along with the current specialty jobs, are shown in Table 4. In comparing the 1979 and 1986 job structures, it appears at the outset that fewer jobs were identified in the current study. A closer examination of Table 4, however, shows that several of the previously identified major jobs are now identified as components of a larger job.

All of the previously identified jobs continue to exist in the current job structure. Along with these jobs, three new jobs were identified. Approximately 9 percent of Logistics Plans personnel are now found to be working as COMPES Specialists or Functional Systems Analysts. Another 1 percent have been identified as Logistics Plans Instructors. A comprehensive analysis of tasks being performed by Logistics Plans personnel has identified a total of 10 major jobs and subordinate job types. The largest job, being performed by almost 30 percent of the career ladder personnel, involves mobility activities. The specialty was identified as being very diverse in the 1979 survey, and this diversity still exists today. New jobs identified in the current specialty structure reflect the impact of the Contingency Operations/Mobility Planning and Execution System (COMPES), as well as the growth of the technical instructor role.

ANALYSIS OF DAFSC GROUPS

Along with the analysis of the career ladder structure, an examination of skill level progression gives further insight into the Logistics Plans career ladder. The DAFSC analysis identifies variations in both tasks and jobs performed as one progresses from the 3-skill level up through the 9-skill level. This information is extremely useful not only in giving new members of the career ladder a picture of what to expect as they progress within the Logistics Plans career ladder, but also in determining how accurately AFR 39-1 Specialty Descriptions depict the tasks and jobs actually being performed within the specialty.

Skill Level Descriptions

At the 3- and 5-skill levels, the tasks and jobs performed were so similar that these two skill level groups were combined into one group for purposes of this discussion. These personnel were clearly involved in a large number of diverse jobs. This fact is seen in Table 7, which lists representative tasks performed by these personnel. With the most commonly performed task reflecting only 52 percent of the 3- and 5-skill level personnel performing, it becomes evident that there is very little commonality among jobs held by these incumbents. This fact is further highlighted in Table 6, which lists the distribution of DAFSC group members across career ladder jobs. As seen in Table 6, fairly large percentages of 3- and 5-skill members are working in 6 of the 10 major job groups identified in the Specialty Jobs section of this report. These jobs are Mobility Personnel (16 percent), COMPES Personnel (15 percent), Manpower & Authorizations Personnel (14 percent), Financial Management Personnel (12 percent), War Reserve Materiel Personnel (10 percent), and Support Agreement NCOs (9 percent). To further highlight the amount of diversity found among these skill level members, Table 6 also indicates that 21 percent of these personnel were not grouped in any of the 10 major job groups. This same pattern of diversity can be found when looking at the relative percent time spent on the various AFSC 661X0 duties shown in Table 5. Again, 3- and 5-skill level members were spending time across most duties and were not concentrating on only a few duties.

At the 7-skill level, the degree of diversity noted at the lower skill levels continues to exist. When looking at the list of representative tasks performed by 7-skill level members (Table 8), the top task is only performed by 64 percent of the members, again reflecting the fact that these members are not performing common jobs at this skill level. This fact can be better seen in Table 6, which shows that fairly sizeable percentages of 7-skill level members are found within 6 of the 10 job groups. There are, however, some notable job shifts between the 3- and 5-skill levels and the 7-skill level. At the higher skill level, 36 percent of the members are now performing in the Mobility Personnel job, compared to 16 percent at the lower levels; only 5 percent are performing as COMPES Personnel compared to 15 percent at the lower levels; and only 5 percent are found in the Manpower & Authorizations job group as opposed to 14 percent at the 3- and 5-skill levels. And, as with the lower skill level members, a fairly high percentage of 7-skill level members (22 percent) were not grouped in any of the 10 major job groups, further supporting the diverse nature of 7-skill level jobs. As for time spent on duties (Table 5), few differences were noted between the 3-/5-skill levels and the 7-skill level.

As AFSC 661X0 members move to the 9-skill level, their jobs continue to be as diverse as those at the lower skill levels. The percent members performing tasks is still low (see Table 9) and fairly sizeable percentages were again found in 6 of the 10 major job groups (see Table 6). However, 37 percent of the 9-skill level members were not grouped, the highest percentage of any of the skill levels. The major job shifts seen between the 7-skill level and this level was an increase in the percentage of members found in the MAJCOM Functional Managers group (13 percent versus only 2 percent at the

7-level), and a corresponding drop in the percentages found in the Financial Management (5 percent versus 13 percent) and Mobility Personnel (24 percent versus 36 percent) job groups.

Overall, the results of this DAFSC analysis continue to reflect the diversity found in the Specialty Jobs section. At each skill level, members work in a fairly large number of diverse jobs having very little task overlap. Some shifting in job emphasis was seen as one progressed from the lower skill levels to the 9-skill level.

AFR 39-1 SPECIALTY DESCRIPTIONS

AFR 39-1 Specialty Descriptions are intended to give a very broad description of the responsibilities held by the various skill levels within a career ladder. Survey data were compared to the AFR Specialty Descriptions for Logistics Plans Specialist, Technician, and Superintendent (66130/50, 66170, and 66190/00), all dated April 1983.

The specialty descriptions for the specialist and technician accurately reflect the duties currently being performed by respondents at this skill level. The 9-/00-skill level description also appears complete, as it accurately reflects the full range of managerial as well as technical duties performed by these respondents.

TRAINING ANALYSIS

Occupational survey data provide one of the several resources used by training managers to develop training programs which are relevant to personnel in their first assignments in a career ladder. Specifically, the primary factor used to review training programs is the percent of first-job (1-48 months TICF) personnel performing the various tasks. Other considerations in training decisions include the task difficulty ratings, subject-matter expert input, and the availability of training equipment or instructors. Normally, training emphasis ratings would also be considered; however, when asked about where training emphasis should be placed, senior level personnel showed so much disagreement that no reliable data for this factor could be reported.

This training analysis reviews the current Specialty Training Standard (STS) and Plan of Instruction (POI) for the AFSC 661X0 career ladder. Training management personnel from the Lowry Technical Training Center, Lowry AFB CO, matched tasks from the job inventory to corresponding sections of the STS and POI. Occupational survey data on the matched tasks were then used to assess the appropriateness of the various items in the training documents.

Task Difficulty Data

As previously mentioned in the Task Factor Administration section of this report, Task Difficulty (TD) data provide information on first-term training needs, as perceived by experienced technicians in the field. This information, along with the percent members performing data, can then aid training managers in determining if revisions to the STS or POI are required.

Because the TD ratings are the composite opinion of experienced career ladder personnel on how difficult the tasks are to learn, these data can guide training developers in where to place emphasis in entry-level training. Tasks receiving high TD ratings, as well as moderate to high percent members performing, may warrant formal, resident training. Those tasks assigned high TD ratings, but low percentages of personnel performing, may be more appropriately planned for OJT programs. Low TD ratings may indicate tasks best left out of formalized training for entry-level personnel; however, such a decision must also consider the percentages of personnel performing the specific task, task criticality, command concerns, or safety programs.

First-Job Personnel

Within the Logistics Plans specialty, 336 personnel have between 1 and 48 months TICF. These personnel comprise 48 percent of the survey sample, and, as indicated in Figure 2, are distributed across 8 of the 10 specialty jobs identified. They perform an average of 113 tasks with a job difficulty index of 12.2 and are located primarily in Plans (LGX) or Programs and Mobility shops. Table 10 lists those tasks performed by the greatest percentages of first-job personnel. Noting that the most commonly performed task in this group is performed by only 55 percent of first-job personnel, it becomes obvious that this group is performing very diverse functions. Due to this diversity, it is not appropriate to derive a single job description to describe the job performed by first-job Logistics Plans personnel.

Specialty Training Standard

A comprehensive review of the June 1985 STS 661X0 compared STS elements with occupational survey data. STS elements containing general information or subject-matter knowledge requirements were not reviewed. The remaining elements were reviewed in terms of the percent of first-job personnel performing related tasks. This review found four areas of the STS with elements being performed by less than 20 percent of any skill level group covered by the STS. These elements, along with percent performing data, are shown in Table 11.

Generally, these items would reflect possible unsubstantiated STS requirements in the areas of Facilities Management, Support Agreements, and War Reserve Materiel. When examining these elements to determine the appropriateness of their inclusion in the STS however, career ladder personnel may want to consider another set of performance data. The diversity of the specialty, along with the small amount of overlap among the specialty jobs,

suggests the percent performing data for the functional jobs may give support for retaining these otherwise unsubstantiated elements. These data, as reflected in the 661X0 Training Extract published in conjunction with this report, show that all elements of the current STS are performed by at least 20 percent of one of the major job groups identified.

Several tasks from the job inventory were not matched to the STS. The large majority of unreferenced tasks referred to administrative and supply functions, while several others referred to planning functions, financial management functions and other functions which were performed by 20 percent or more of the personnel in at least one of the referenced groups. Examples of some of these tasks are listed in Table 12. Generally, such tasks not referenced should be covered by some existing element or a new item could be added to the STS.

Plan of Instruction (POI) (G3ALR66130)

Based on assistance from the technical school subject-matter specialists in matching job inventory tasks to the G3ALR66130 POI, dated October 1985, occupational survey data were matched to related training objectives. The specific data examined included percent members performing data for first-job personnel and the TD ratings for the matched task.

Overall, 35 POI objectives were unsupported, as fewer than 30 percent of first-job personnel indicated performing the matched tasks. Examples of these objectives are listed in Table 13, while a composite list is provided in Appendix B. Areas unsupported due to low percentages of personnel performing include: Manpower Management, Facilities Management, Financial Management, WRM Management, Support Agreements, and Mobility Training and Inspections.

In accordance with ATCR 52-22, and in the interest of cost effectiveness, objectives where the probability of first-job performance is less than 30 percent should not be taught in a resident training course without further justification. Although it is apparent that, due to the diversity, a cost effective training course for this specialty may not be possible, it is obvious that some sort of technical training is necessary. Therefore, it is suggested that training management personnel again consider percent members performing data for the major jobs. Examples of these data can be found in Table 14, while a composite listing can be found in the 661X0 Training Extract. Only one objective fails to be supported under this alternative approach. This objective is:

- IV2C. DETERMINE THE SEQUENCE OF EACH PROCEDURE PERTAINING TO TRAINING EFFECTIVENESS, WHEN GIVEN A LIST OF THESE PROCEDURES.

	D95 CONDUCT TRAINING CONFERENCES OR BRIEFINGS	4	14	21	42	34	7

This objective, along with any others which are weakly supported by survey data, should be given serious consideration for deletion by training management personnel.

There were 10 nonsupervisory tasks which were performed by a significant percentage (30 percent or greater) of first-job personnel, remained unreferenced to the POI. These tasks are listed in Table 15. As a general rule, such tasks should be taught in some sort of training program. Those with relatively low task difficulty ratings, however, may be more appropriately taught in OJT or not at all.

JOB SATISFACTION ANALYSIS

By examining general job attitudes of airmen within a given career field, managers may gain a better understanding of factors affecting job performance. Several inventory questions relating to job satisfaction ask about such things as job interest, utilization of training and talents, and plans for reenlistment.

Table 16 lists job satisfaction data gathered for first-job (1-48 mos TICF), second-job (49-96 mos) and career (97+ mos) personnel. The same data collected from the 1979 survey are also shown here. These data reflect an overall trend of decreasing job satisfaction of all experience groups in the past 7 years. The exceptions to this overall trend are found in the expressed job interest and reenlistment intentions of first-job personnel, as well as perceived utilization of training of career personnel. Slight improvements were noted in each of these three areas.

A comparison of job satisfaction indicators across the five major using commands is noted in Table 17. Here we find a fairly consistent level of job satisfaction across the commands. Perceived utilization of training is of particular interest in such a diverse specialty, where it is virtually impossible to train personnel for every possible function. Percentages reflected in this category show that PACAF personnel are able to utilize their training the least, while MAC personnel utilize their training the most.

Another issue in a diverse specialty is relative job satisfaction across the many specialty jobs. Table 18 presents these comparative percentages. Here we find that job satisfaction, although within very acceptable ranges, is as different as the specialty jobs themselves. Among the core Logistics Plans Personnel, Mobility Personnel are the most content with job interest and talent and training utilization. On the other hand, several jobs indicate a substantially lower satisfaction. Support Agreement NCOs report low job interest, Financial Management Personnel indicate relative dissatisfaction with utilization of their training, and both Facilities Managers and Functional Systems Analysts indicate low job satisfaction by all measures.

Write-in comments at the back of the survey booklets indicated several specific areas of dissatisfaction as felt by survey respondents. Following are some examples of the more frequent comments:

- "We have too many unqualified, inexperienced OICs"
- "We're a catch-all AFSC to do all the things no one else wants to do"
- "We are always undermanned"
- "There are too many different jobs with no specific directives"
- "There is no core job -- no similarity from one job to the next"
- "Too broad of a career field - we're expected to be experts at everything"

In sum, it appears that, although job satisfaction measures are not seriously deficient overall, there are some areas for possible concern. Much of the indicated dissatisfaction may be a product of the diversity and dynamic nature of the specialty itself. It may be worthwhile for senior management personnel to take a close look at some of these issues and consider possible improvements.

MAJCOM ANALYSIS

One of the reasons this survey was requested was to examine the differences in the jobs being performed by Logistics Plans personnel across the various major commands. Table 19 reflects the relative percent time spent on the various duties by personnel of all major commands comprising 3 percent or more of the total sample.

Percentages in Table 19 reflect only a few subtle differences between the various commands. These differences exist where USAFE personnel are spending over twice as much time as any other command on WRM functions and slightly less time than the other commands on manpower and authorizations functions. MAC personnel are spending a relatively low percent of their job time on financial management functions.

Table 20 reflects comparative background information on these personnel. Here again, there is very little difference in terms of paygrade, skill level, or experience between any of the commands.

To further examine these differences, Table 21 reflects the distribution of MAJCOM personnel across the jobs identified in the SPECIALTY JOBS section of this report. Once again attesting to the diversity of the specialty, we find large percentages of MAJCOM personnel not performing any of the major jobs, but rather, jobs which are so unique that they failed to group with any of the major jobs. Table 21 also shows large percentages of all MAJCOMs are

OTHER	37	22	19	29	24

working as Mobility Personnel. Differences found in this table reflect higher percentages of USAFE personnel working in support agreements and WRM, and a very low percentage working on COMPES. Meanwhile, MAC has the highest percentage of personnel working on COMPES and the lowest percentage doing support agreements. In PACAF, 25 percent of the respondents identified their job as primarily financial management. SAC personnel also reflect a notable percentage of personnel working on financial management, as well as the largest percentage of all MAJCOMs working on manpower functions. Finally, TAC personnel are distributed across at least 8 major jobs, with the only substantial percentage working in mobility.

The indicated differences are rather subtle, and no functions have been found unique to any major command. The primary differentiating functions appear to be support agreements and WRM, which are performed mainly by the two commands which are located overseas. Smaller differences are found in the areas of financial management, manpower, and COMPES.

IMPLICATIONS

This survey was conducted to assess the impact of COMPES, to examine differences in jobs being performed across the component major commands, and to provide information which may be used to update training programs.

The impact of COMPES could not be comparatively assessed, since implementation has occurred since the last OSR. Its impact can be seen, however, in the two COMPES-related specialty jobs identified in the SPECIALTY JOBS section of this report, as COMPES Personnel, and Functional Systems Analysts. These two jobs comprise approximately 9 percent of the career ladder population, while COMPES and ADP functions occupy approximately 9 percent of the work time of career ladder personnel.

In assessing differences across major commands, very few differences were found in either the job being performed or in the backgrounds of the personnel involved.

In examining training documents, some weaknesses were found. The STS was found to cover a few major areas which were being performed by less than 20 percent of career ladder personnel, and several tasks with relatively high percent performing were not covered. Likewise, the POI reflected many areas with low performance levels; however, only a few higher performance tasks were left unreferenced. An alternative approach for the review of training was suggested.

A review of job satisfaction data shows slight decreases in overall job satisfaction since the last survey. Survey responses, along with write-in comments, indicate dissatisfaction is due to the high number of overseas assignments, a problem with inexperienced supervisors, and a lack of continuity from one job to the next.

In sum, the Logistics Plans specialty is extremely diverse, and this diversity is a potential cause of many of the indicated problems. Career ladder management personnel may consider an effort to further define the scope of career ladder responsibilities.

TABLE A24

GROUP ID NUMBER AND TITLE: WRM EVALUATORS (GRP135)
 NUMBER IN GROUP: 5 PERCENT OF CLUSTER: 11%
 MAJCOM DISTRIBUTION: TAC (40%), USAFE (20%), MAC (20%), PACAF (20%)
 LOCATION: CONUS (60%), OVERSEAS (40%)
 DAFSC DISTRIBUTION: 66150 (20%), 66170 (80%)
 AVERAGE NUMBER OF TASKS PERFORMED: 91 JOB DIFFICULTY INDEX: 10.8
 AVERAGE GRADE: E-7 AVERAGE MONTHS IN SERVICE: 217
 AVERAGE MONTHS IN CAREER FIELD: 30

THE FOLLOWING ARE IN DESCENDING ORDER BY PERCENT MEMBERS PERFORMING:

GROUP DIFFERENTIATING TASKS	PERCENT MEMBERS PERFORMING
G350 INSPECT WRM CONSUMABLES, EQUIPMENT, OR SPARES	100
G376 REVIEW WRM REQUIREMENTS	100
G322 CONDUCT FOLLOW-UP OF WRM REVIEW BOARD FINDINGS	100
E279 SAFEGUARD CLASSIFIED DOCUMENTS	100
G377 REVIEW WRM REVIEW BOARD REPORTS	100
C79 REVIEW UNIT RESPONSES TO INSPECTION REPORTS	100
E167 CONDUCT STAFF ASSISTANCE VISITS	80
G347 EVALUATE WRM PROGRAM	80
G328 COORDINATE STATUS OF WRM ASSETS	80
E281 SCHEDULE INSPECTIONS OR STAFF ASSISTANCE VISITS	80
J542 MONITOR MOBILITY PROGRESS ON MCC STATUS BOARDS	80
G351 INTERPRET AND DISSEMINATE WRM POLICY AND PROCEDURAL GUIDANCE TO BASE LEVEL WRM MANAGERS	80
G323 CONDUCT OR ATTEND WRM REVIEW BOARD MEETINGS	80
G357 PLAN SURVEILLANCE VISITS OF WRM	80
E232 MONITOR SECURITY OR ACCESS CLEARANCES OF UNIT PERSONNEL	80
G361 PREPARE WRM REVIEW BOARD REPORTS/MINUTES	80
E240 PREPARE BRIEFINGS	80
G330 COORDINATE THE APPOINTMENT OF WRM MONITORS/CUSTODIANS WITH WRM PROGRAM ELEMENT MANAGERS	80
J554 REVIEW AND DISPATCH MESSAGES	80
E284 TYPE CORRESPONDENCE, RECORDS, REPORTS, OR FORMS	80
E276 REVIEW RESULTS OF PREVIOUS IG INSPECTIONS OR AUDITS	80
O676 ATTEND EXERCISE PLANNING CONFERENCES	80
P745 EVALUATE UNIT PERSONNEL FOR MOBILITY READINESS, SUCH AS CURRENCY OF IMMUNIZATIONS, PASSPORTS, OR DOG TAGS	60
P742 DIRECT OR SERVE IN MOBILITY CONTROL CENTERS (MCC) DURING EXERCISES OR DEPLOYMENTS	60
G375 REVIEW WRM CONDITION OR QUANTITY REPORTS	60
G353 MONITOR AND CONTROL WPARR AUTHORIZATIONS	60
D97 CONDUCT WAR RESERVE MATERIEL (WRM) TRAINING	60
E239 PREPARE BACKGROUND PAPERS, POINT PAPERS, OR TALKING PAPERS	60
E164 CONDUCT FOLLOW-UP ON STAFF ASSISTANCE REPORT DISCREPANCIES	60
J529 DIRECT MOBILITY WORK CENTERS DURING EXERCISES OR DEPLOYMENTS	60

TABLE A25

GROUP ID NUMBER AND TITLE: MAJCOM FUNCTIONAL MANAGERS (GRP137)
 NUMBER IN GROUP: 19 PERCENT OF SAMPLE: 3%
 MAJCOM DISTRIBUTION: SAC (42%), TAC (21%), MAC (16%), AFLC (11%)
 LOCATION: CONUS (84%), OVERSEAS (0%), NOT REPORTED (16%)
 DAFSC DISTRIBUTION: 66150 (11%), 66170 (42%), 66190 (42%), 66100 (5%)
 AVERAGE NUMBER OF TASKS PERFORMED: 125 JOB DIFFICULTY INDEX: 15.3
 AVERAGE GRADE: E-7 AVERAGE MONTHS IN SERVICE: 198
 AVERAGE MONTHS IN CAREER FIELD: 94

THE FOLLOWING ARE IN DESCENDING ORDER BY PERCENT MEMBERS PERFORMING:

GROUP DIFFERENTIATING TASKS	PERCENT MEMBERS PERFORMING
E247 PREPARE INPUTS TO REGULATIONS, DIRECTIVES, MANUALS, OR SUPPLEMENTS	100
E279 SAFEGUARD CLASSIFIED DOCUMENTS	95
E155 ADVISE SUBORDINATE UNITS ON CHANGES TO REGULATIONS, MANUALS, OR SUPPLEMENTS	95
E178 COORDINATE WITH MAJCOM OR AIR STAFF PERSONNEL ON LOGISTICS POLICIES OR PROCEDURES	89
E167 CONDUCT STAFF ASSISTANCE VISITS	89
E239 PREPARE BACKGROUND PAPERS, POINT PAPERS, OR TALKING PAPERS	89
E180 COORDINATE WITH SUBORDINATE UNIT PERSONNEL ON RESOLUTION OF INSPECTION DISCREPANCIES	84
A28 REVIEW INPUTS TO REGULATIONS, DIRECTIVES, MANUALS, OR SUPPLEMENTS	84
E164 CONDUCT FOLLOW-UP ON STAFF ASSISTANCE REPORT DISCREPANCIES	84
E276 REVIEW RESULTS OF PREVIOUS IG INSPECTIONS OR AUDITS	84
E154 ADVISE COMMANDER OR STAFF AGENCIES ON LOGISTICS PROGRAM POLICIES OR PROCEDURES	84
A7 DEVELOP LOGISTICS POLICIES OR PROCEDURAL GUIDELINES FOR SUBORDINATES	79
E257 PREPARE TRIP REPORTS	79
E246 PREPARE INFORMATION FOR STAFF STUDIES, STAFF SUMMARY SHEETS, OR POSITION PAPERS	79
B46 INTERPRET POLICIES, DIRECTIVES, OR PROCEDURES FOR subordinates	74
E179 COORDINATE WITH OTHER AGENCIES ON RESOLUTION OF INSPECTION DISCREPANCIES	74
C79 REVIEW UNIT RESPONSES TO INSPECTION REPORTS	74
C60 EVALUATE CORRECTIVE ACTIONS TO INSPECTION FINDINGS	74
E248 PREPARE MEMORANDA FOR RECORD	74
E165 CONDUCT LOGISTICS CONFERENCES, MEETINGS, OR WORKSHOP GROUPS	74
0696 PARTICIPATE IN COMMAND POST EXERCISES	74
E240 PREPARE BRIEFINGS	74
E200 EVALUATE REQUESTS FOR WAIVERS TO REGULATIONS, MANUALS, OR SUPPLEMENTS	74
E163 CONDUCT CROSS-STAFF COORDINATION	68
E251 PREPARE POLICY OR PROCEDURE LETTERS OR MESSAGES	68
A8 DEVELOP METHODS OF MANAGEMENT FEEDBACK OR CONTROL	68

TABLE A26

GROUP ID NUMBER AND TITLE: COMPES PERSONNEL (GRP180)

 MAJCOM DISTRIBUTION: TAC (29%), MAC (21%), SAC (16%)
 LOCATION: CONUS (80%), OVERSEAS (20%)
 DAFSC DISTRIBUTION: 66130 (9%), 66150 (57%), 66170 (32%), 66190 (2%)
 AVERAGE NUMBER OF TASKS PERFORMED: 72 JOB DIFFICULTY INDEX: 11.8
 AVERAGE GRADE: E-5 AVERAGE MONTHS IN SERVICE: 122
 AVERAGE MONTHS IN CAREER FIELD: 34

THE FOLLOWING ARE IN DESCENDING ORDER BY PERCENT MEMBERS PERFORMING:

GROUP DIFFERENTIATING TASKS	PERCENT MEMBERS PERFORMING
T895 COORDINATE TRANSACTIONS WITH DATA PROCESSING INSTALLATION (DPI)	98
T897 COORDINATE WITH UNITS ON PART THREE	95
T909 MAINTAIN COPIES OF PART THREE	95
T923 PROVIDE PACKING AND LOAD LISTS	95
T917 PREPARE IAC TRANSACTIONS FOR NON-NSN TRANSACTIONS	89
T931 VERIFY IAC CARDS	88
T903 DEVELOP OR COMPILE EQUIPMENT LISTS FOR COMPES	86
T918 PROCESS SUPPLY IAC TRANSACTIONS TO ENSURE THE LOGMOD-B NSN DATA IS CURRENT	86
T908 INPUT ORGANIZATION AND SHOP CODES TO INPUT TO THE DATA BASE	86
T929 UPDATE DISKETTES	80
T930 UPLOAD UTCs IN ACTIVE FILES	79
J549 PREPARE SCHEDULE OF EVENTS	75
T911 PREPARE AF FORMS 1530 (PUNCH CARD TRANSCRIPT) TO MAINTAIN DATA BASE	73
T907 IMPLEMENT PROCEDURES FOR OPERATING COMPES	73
T902 DEVELOP NONSTANDARD UTCs FROM STANDARD UTCs FOR LOCAL USE	71
T900 DEVELOP AND RETRIEVE UTC ANNEX EXECUTION NETWORKS	71
J542 MONITOR MOBILITY PROGRESS ON MCC STATUS BOARDS	71
J518 AMEND SCHEDULE OF EVENTS	71
D87 CONDUCT CONTINGENCY OPERATIONS MOBILITY PLANNING EXECUTION SYSTEM (COMPES) TRAINING	71
J531 DISSEMINATE SCHEDULES OF EVENTS	70
T927 REVIEW ORGANIZATION AND SHOP CODES TO INPUT TO THE DATA BASE	70
T916 PREPARE UPDATE CARDS	68
T898 COORDINATE WITH WORK CENTER SUPERVISORS TO ENSURE AVAILABILITY OF UTC TASK EQUIPMENT AND PERSONNEL	68
P732 COORDINATE WITH UNITS ON UNIT TYPE CODE (UTC) REQUIREMENTS	68
T926 REQUEST DATA TRANSFER (DT) TAPES	68
T922 PROVIDE INPUTS TO MANPER-B	66
T892 BRIEF SENIOR MANAGEMENT ON COMPES STATUS	66
T915 PREPARE TRANSACTIONS FOR DATA PROCESSING INSTALLATIONS	64
T924 PROVIDE UPDATES TO MAJCOMs	64
P736 DEVELOP MOBILITY SCHEDULE OF EVENTS	64

APPENDIX B

LOW PERFORMANCE OR UNREFERENCED POI G3ALR66130 OBJECTIVES
(Excluding Subject-Matter Knowledge Objectives)

TABLE B1

PO1 OBJECTIVES	PERCENT PERFORMING
I4A Given the steps for developing manpower and facilities operating procedures, arrange these steps in the proper sequence.	23
I4B Given an extract of a unit manpower document (UMD) and a unit personnel management roster (UPMR), determine the unit's status.	22
I4C Given the steps in preparing both a manpower change request and a manning assistance request, arrange these steps in their proper sequence.	19
I4D Given the steps in requesting a management engineering team (MET) study, arrange the steps in the proper sequence.	19
I4E Given an extract of a unit personnel management roster (UMPR) and assignment briefs, verify incoming personnel information.	19
I4F Given AFM 66-278 (Vol II) and AF form 15-30, prepare a load, change, and delete transaction to the maintenance management information and control system (MMICS) - administrative subsystem.	19
I4G Given an extract of maintenance personnel listing (MPL) and personnel resources updates, prepare change requests to update the MPL.	23
I4H Given extracts of a maintenance manning report compare the number of personnel authorized with personnel assigned to determine gains and losses for one year from the report date.	23
I5A List the procedures required to survey facilities, to include conducting evaluations, verifying facilities needed, and maintaining floor plans.	24
I5B Given the steps in maintaining a facility work request priority listing, sequence each in the order accomplished.	23
I5C Given the procedures in monitoring local communications service requests, identify those that apply to your role as the DCM facility manager.	23
I5D Given a list of procedures, identify those that the facility manager performs in consolidating inputs to the military construction program.	22

TABLE B2

POI OBJECTIVES	PERCENT PERFORMING
I5E Given the steps in writing facilities reports, arrange them in the proper sequence.	13
I5F Given the procedures in reviewing facilities utilization reports, identify the sequence the facilities manager will follow.	13
I5G Given the steps in updating the aircraft master parking plan, sequence each in the order accomplished.	18
I6C Given the procedures for determining budgeting requirements, list each procedure in the proper sequence.	23
I6D Given a PFMR/OCCR update and reconciliation list (D11) and a daily document register report (D04), verify item expenditures and unit quarterly funds availability.	21
I6E Identify the steps necessary to brief management on funds status.	27
I6F Outline the procedures necessary to prepare for participation in financial committees.	27
II1B Identify the four elements of communications security (COMSEC) that were developed to prevent security violations.	16
II1C From a list of statements, identify the use of essential elements of friendly information (EEFI).	16
II2B Using a War Plans Additive Requirements Report (WPAPR), a War Consumables Distribution Objective (WCDO), and a Fuel Logistics Area Summary (FLAS), determine selected quantitative requirements for various WRM assets.	16
II2C Identify the relationship of the WRM positioning objectives to the WRM program at base level.	12
II2G Given the steps in conducting the WRM review board, arrange each step in the proper sequence. Steps involved should include preparing the agenda, preparing the board minutes and recommending solutions to deficiencies.	27

TABLE B3

POI OBJECTIVES	PERCENT PERFORMING
II2I Given the steps necessary for establishing a WRM training program, arrange the steps in the proper sequence.	25
II3A Given AFR 11-4, AF Form 149, and statements describing requirements, negotiate and prepare an agreement identifying specific support functions, applicable attachments, and finalization actions.	27
II3B Given DOD 4000.19R, DD Form 1144, and statements describing support requirements, negotiate and prepare an agreement identifying specific support functions, applicable attachments, and finalization actions.	19
II3D Given the steps in conducting a triennial review, arrange these steps in the proper sequence.	25
II3E Identify the steps in terminating an agreement.	13
II3C Given the steps to complete feasibility/capability studies, arrange these steps in the proper sequence. Steps involved include recommending solution for limitations and reporting these findings to the MAJCOM.	27
IV2A Given the mobility training responsibilities, determine the responsibilities of the logistics planner.	24
IV2B Given selected procedures regarding the development of training schedules, arrange each procedure in the proper sequence.	27
IV2C Determine the sequence of each procedure pertaining to effectiveness, when given a list of these procedures.	9
V2A Given a Part 3, Part 4, and an error management listing, analyze the LOGMOD-B output products.	21
V5A Given the steps for providing inputs to LOGMOD-B, arrange these steps in the proper sequence.	24
