20. ABSTRACT (Continue on reverse side if necessary and identify by block number) This is one of eight reports produced to document the 1986 Army Research Institute Survey of U.S. Army Recruits, also known as the New Recruit Survey (NRS). This volume concentrates on the data file documentation and the use of survey data obtained from Army Reserve and National Guard Respondents. A separate volume that documents the survey data files for Active Army respondents is available. A brief project overview is provided, as well as an instructional narrative pertaining to the codebook-based interpretations and use of the 1986 (Continued)

data. Documentation is provided for the development of special variables from Army personnel records and recoding of survey items.

Other reports in this series provide more extensive background documentation of the 1986 New Recruit Survey. Tabular descriptions that present the preliminary results of the 1986 survey separately for each Army component are available.

ARI Research Reports and Technical Reports are intended for sponsors of R&D tasks and for other research and military agencies. Any findings ready for implementation at the time of publication are presented in the last part of the Brief. Upon completion of a major phase of the task, formal recommendations for official action normally are conveyed to appropriate military agencies by briefing or Disposition Form.

This survey research was sponsored by the Directorate of Program Analysis and Evaluation, U.S. Army Recruiting Command, Office of the Deputy Chief of Staff for Personnel. The U.S. Army Recruiting Command provided funding for the survey instrumentation, field administration, database development, documentation, and tabular descriptions produced under the following task and delivery orders of the U.S. Army Research Office, Scientific Services Program, Contract No. DAAG29-81-D-0100:

Task Control No. 86-360, Delivery Order No. 2345;
Task Control No. 86-361, Delivery Order No. 2317;
Task Control No. 86-541, Delivery Order No. 2514.

The U.S. Army Research Institute provided personnel and funding for research planning, design, and analysis, as well as personnel for technical monitoring of the contracts, survey design, field administration and coordination, database development, and documentation. Edward L. Levine has been a sub-contractor for this effort, providing field administrator personnel and training. Data Recognition Corporation has also been a sub-contractor for this research, providing survey forms development, optical mark reading support, database construction, tabular analyses and supporting documentation.

ARI Project Staff:

Michael Benedict, Timothy Elig.

Cathlene Barry, William Brown, Brett Cohen, Debbie Goldsmith, Edward Levine, Peggy McPherson.

DRC Project Staff:

Luaina Hagen, Russell Hagen, David Kopischke, John LaBatte, Deborah Renneke.

FOREWORD

The Army Research Institute (ARI) Enlistment Decision Surveys have become an important source of information to U.S. Army policy makers and planners. Originally developed by ARI in 1982 under a commission by the Deputy Chief of Staff for Personnel, the surveys were intended to provide answers to questions concerning the enlistment motivations and demographic characteristics of incoming U.S. Army recruits. Complementing these original information sources are the surveys' ability to track changes in new recruit characteristics over time, as well as to provide an opportunity for the collection of new, policy-relevant information during each survey administration.

The ARI New Recruit Surveys (NRS) of 1982 and 1983 were conducted at the request of the U.S. Army Deputy Chief of Staff for Personnel. Sponsorship of the 1984, 1985, and 1986 surveys was assumed by the U.S. Army Recruiting Command (USAREC), with the continuing interest of the Office of the Deputy Chief of Staff for Personnel (Memorandum of Agreement Between the U.S. Army Recruiting Command and the U.S. Army Research Institute, signed 16 May 1985 and 22 April 1985, Subject: Sponsorship of ARI Enlistment Decision Surveys; and letter, U.S. Army Recruiting Command, USARCPAE-RS, 7 April 1986, Subject: Direct Fund Authorization For 1986 New Recruit Survey).

Initial results of the 1986 survey have been provided in the form of briefings to the Commander of the U.S. Army Recruiting Command (on 6 Aug and 4 Dec 1986), the Director of Military Personnel Management (ODCSPER) (on 5 Dec 1986), and the Deputy Chief of Staff for Personnel (on 12 Dec 1986).

Specific policy and operational decisions have been made based on these results. For example, USAREC's dual-market recruiting and advertising operational plan was developed and continues to be monitored using analyses of NRS data. In addition, the survey effort has been transferred from a developmental effort at ARI to an operational tool of the Recruiting Command for monitoring recruiting policy and program implementation.

EDGAR M. JOHNSON
Technical Director

ACKNOWLEDGMENTS

The U.S. Army Research Institute wishes to acknowledge the assistance and support of the many individuals who assumed important roles in site preparation, survey instrumentation, field administration, data preparation, data quality assurance, database construction, tabular analyses, and documentation of the 1986 ARI New Recruit Surveys. We especially appreciate the assistance and technical support provided by CPT Gary Pickens of the U.S. Army Recruiting Command. He is commended for his interest in this research effort, his cooperation in problem resolution, and his loyal and continued support.

We are grateful for the cooperation of the officers, enlisted, and civilian personnel at the eight U.S. Army Reception Battalions and acknowledge that this survey research project could not have succeeded without their support. These personnel worked directly with us during the scheduling, survey booklet distribution, and administration of the New Recruit Surveys, often extending their workdays in order to schedule the survey operations into their already hectic Summer "surge" processing of incoming new recruits.

Michael E. Benedict
Timothy W. Elig
David W. Kopischke

**THE 1986 ARI SURVEY OF U.S. RECRUITS:
CODEBOOK FOR ARMY RESERVE/NATIONAL GUARD SURVEY RESPONDENTS**

EXECUTIVE SUMMARY

Requirement:

To obtain information concerning the enlistment motivations, attitudes, knowledge, and demographic characteristics of U.S. Army recruits at the time of initial entry into the service.

Procedures:

The 1986 ARI New Recruit Surveys (NRS-86) is the seventh in a series of survey research projects administered directly by ARI. The 1986 survey retains much of the same item content as presented to respondents in all previous versions while incorporating new questions on U.S. Army recruits' awareness of and interest in the Reserve Officer's Training Corps College programs; awareness, interest, and participation in U.S. Army enlistment incentives programs; new television programming; and intentions for using U.S. Army training to obtain training and skills for future civilian job opportunities.

The NRS data collection was conducted at the eight (8) U.S. Army Reception Battalions during June, July, and August of 1986. A modified Latin-Square design was employed to randomize the selection of survey weeks across all eight Reception Battalions during the field data collection periods. ARI coordinated with Reception Battalion Operations personnel in scheduling the administration dates and times.

Four separate forms of the ARI New Recruit Survey were administered to U.S. Army recruits. Forms "A", "B", and "C" were administered to Active U.S. Army (RA) recruits, and Form "D" was administered to U.S. Army Reserve and National Guard recruits. Active Army recruits had an equal chance of receiving any one of the three RA forms. The survey was self-administered following specific instructions that were provided by on-site contractor personnel. Recruits were instructed to mark the responses that fit them best, directly in the survey booklets.

Survey forms were registered as they were received at the contractor's site. Survey booklets were optically scanned and subjected to a post-edit programming process in which data accuracy was assured through manual verification of all write-in response items as well as investigations of light-mark reading errors for "Mark all that apply" questions. A technical manual, codebooks, tabulation volumes, and a report on the survey methodology, "lessons learned", and recommendations were produced.

Results:

A total of 6,374 Army Reserve and National Guard recruits were administered the 1986 New Recruit Survey. Based on U.S. Army military personnel records, 2,709 enlisted in the Army Reserve and 3,613 enlisted in the National Guard. 5242 had no prior military service, and 1,080 had prior military experience (the status for the remaining 52 was not ascertainable). The sampling plan utilized for this survey imposes restrictions on the generalizability of the survey results to the overall 1986 fiscal year U.S. Army accessions population. However, the survey research process was successful in collecting and providing current information related to new U.S. Army recruits.

Utilization:

The ARI New Recruit Surveys continue to provide information to U.S. Army policy makers and personnel planners about the quantity and quality of U.S. Army accessions. Specifically, information obtained from new recruits about their enlistment motivations, awareness and knowledge of enlistment incentives, and personal characteristics augments the available information on enlistment trends. Awareness of such trends is an integral part of the process of preparing to meet the U.S. Army's projected human resource requirements. Data and information from the 1986 New Recruit Surveys has been and will continue to be used for these purposes, as well as providing assessment information about recruits' media habits and preferences in order to maximize the effects of U.S. Army advertising.

**THE 1986 ARI SURVEY OF U.S. ARMY RECRUITS:
CODEBOOK FOR ARMY RESERVE/NATIONAL GUARD SURVEY RESPONDENTS ARI RP 87-09**

INTRODUCTION

This Codebook is provided as a source of documentation for current and potential analysts and other users of the data collected through the 1986 U.S. Army Research Institute's New Recruit Surveys (NRS-86). This document is one of two codebooks that document the 1986 New Recruit Survey data files. This codebook volume contains information specific to U.S. Army Reserve/National Guard recruit respondents. A companion volume contains information specific to Active U.S. Army recruit survey respondents:

Benedict, M. E., Elig, T. W., & Kopischke, D. W. (1987a).
The 1986 ARI Survey of U.S. Army Recruits: Codebook for
Active Army Survey Respondents Alexandria, VA: U.S. Army
Research Institute for the Behavioral and Social Sciences.
(RP 87-08)

These two volumes provide sources of information that are crucial for the proper analysis of the 1986 New Recruit Survey data. Included in the content of these volumes are: (1) physical locations and labels for all survey variables, (2) frequency distributions for each survey variable, (3) information concerning the capture of data for variables derived from military record files, (4) crosswalks between forms of the 1986 survey, (5) item history information documenting changes in wording and coding among survey years, and (6) discussions of how to use and interpret the information contained in each codebook.

Preliminary results for 1986 New Recruit Survey items are reported in individual cross-tabulation volumes for selected recruit respondent populations by demographic and service-related variables. These tabulation volumes are:

Benedict, M. E., Elig, T. W., & LaBatte, J. A. (1987e).
The 1986 ARI Survey of U.S. Army Recruits: Tabular
Description of NPS Army Reserve Accessions, Volume 1
Alexandria, VA: U.S. Army Research Institute for the
Behavioral and Social Sciences. (RP 87-12)

Benedict, M. E., Elig, T. W., & LaBatte, J. A. (1987f).
The 1986 ARI Survey of U.S. Army Recruits: Tabular
Description of NPS Army Reserve Accessions, Volume 2
Alexandria, VA: U.S. Army Research Institute for the
Behavioral and Social Sciences. (RP 87-13)

Benedict, M. E., Elig, T. W., & LaBatte, J. A. (1987g). The 1986 ARI Survey of U.S. Army Recruits: Tabular Description of NPS National Guard Accessions. Alexandria VA: U.S. Army Research Institute for the Behavioral and Social Sciences. (RP 87-14)

Benedict, M. E., Elig, T. W., & LaBatte, J. A. (1987c). The 1986 ARI Survey of U.S. Army Recruits: Tabular Description of NPS (Active) Army Accessions, Volume 1. Alexandria, VA: U.S. Army Research Institute for the Behavioral and Social Sciences. (RP 87-10)

Benedict, M. E., Elig, T. W., & LaBatte, J. A. (1987d). The 1986 ARI Survey of U.S. Army Recruits: Tabular Description of NPS (Active) Army Accessions, Volume 2. Alexandria, VA: U.S. Army Research Institute for the Behavioral and Social Sciences. (RP 87-11)

Volume One of the U.S. Army Reserve and Active U.S. Army tabulations presents tables of New Recruit Survey items crossed by selected recruit respondent demographics (i.e., sex, high school graduation year, race, etc.). Volume Two presents crossing variables that are descriptive of recruit respondents' enlistment environment (i.e., term of enlistment, recruiting brigade, age at DEP/accessioning, etc.). The U.S. Army National Guard tabulations are limited to a single volume.

One additional report of possible interest to readers who are planning to conduct a similar survey contains the technical methodology used in the planning and execution of the 1986 NRS:

Benedict, M. E. (1987h). The 1986 ARI Survey of U.S. Army Recruits: Technical Manual. Alexandria, VA: U.S. Army Research Institute for the Behavioral and Social Sciences. (TR 735)

This report summarizes the project background and presents the survey methodology used in the design, tasking, administration, data capture, and documentation of the 1986 New Recruit Survey.

Project Background

The Army Research Institute (ARI) Enlistment Decision Surveys have become an important source of information to U.S. Army policy makers and planners. Originally developed by ARI in 1982 under a commission by the Deputy Chief of Staff for Personnel, the 1986 New Recruit Survey is the seventh of a series of survey research projects investigating new U.S. Army recruits. Previous survey research projects conducted in the series include: (1) Summer, 1982; (2) Summer, 1983; (3) Winter, 1983; (4) Summer, 1984; (5) Winter, 1984; and (6) Summer, 1985 (See Figure 1).

NEW RECRUIT SURVEY ARI DATA COLLECTIONS

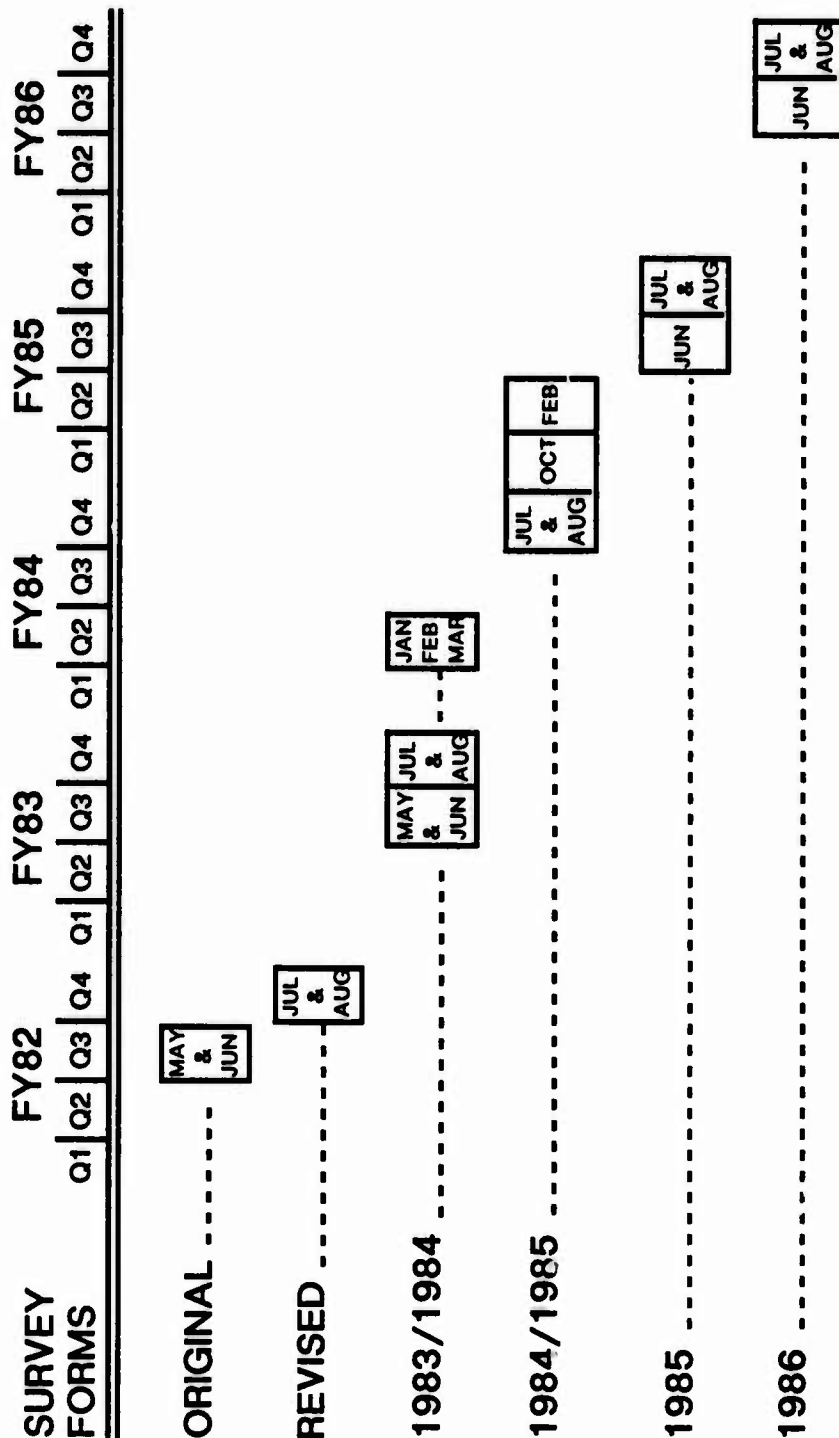

Figure 1. ARI New Recruit Survey data collections

This multi-year survey research endeavor has been conducted to measure the enlistment motivations, attitudes, knowledge, and personal characteristics of new recruits at the time of their initial entry into the U.S. Army. The ability to track changes in new recruit characteristics over time, as well as to provide an opportunity for the collection of new, policy-relevant information during each survey administration has provided an impetus for continuing the survey efforts.

Both the ARI New Recruit Surveys of 1982 and 1983 were conducted at the request of the U.S. Army Deputy Chief of Staff for Personnel. Sponsorship of the 1984, 1985, and 1986 surveys was assumed by the U.S. Army Recruiting Command, with the continuing interest of the Office of the Deputy Chief of Staff for Personnel. Although the sponsorship and specific question content has changed across time, the basic charter for these field research surveys has remained unchanged:

- Determine who is enlisting in the U.S. Army and why.
- Determine how to target recruiting resources to attract high quality recruits.
- Determine why recent recruits joined and their propensity to remain in the service.
- Determine which recruiting and advertising practices are proving the most effective and why.

In addition to addressing these specific objectives, the survey efforts have expanded the availability of research data by which U.S. Army enlistment and reenlistment decision processes can be modeled.

1986 New Recruit Survey Overview

The 1986 New Recruit Survey maintains the continuity of previous new recruit survey research efforts by collecting data from content areas common to all projects while providing a vehicle by which information of a recruiting policy or planning-critical nature could be obtained. The 1986 survey retains much of the same item content as presented to respondents in all previous versions while incorporating new questions on U.S. Army recruits' awareness of and interest in the Reserve Officer's Training Corps College programs and the New G.I. Bill program; awareness, interest, and participation in U.S. Army enlistment incentives programs; new television programming; and intentions for using U.S. Army training to obtain training and skills for future civilian job opportunities.

Dr. Edward L. Levine was contracted to administer the survey data collection at the eight (8) U.S. Army Reception Battalions during June, July, and August of 1986. Data Recognition Corporation was contracted to work with ARI in performing optically-scannable survey booklet design and instrumentation. They also were contracted for data capture, cleaning, database development, documentation, and tabular analyses.

A modified Latin-Square design was employed to randomize the selection of survey weeks across all eight Reception Battalion locations during the field data collection periods. ARI coordinated with Reception Battalion Operations personnel in scheduling the administration dates and times.

Four forms of the ARI New Recruit Survey were administered to U.S. Army recruits. Form "D" was administered to U.S. Army Reserve and National Guard recruits and forms "A", "B", and "C" were administered to Regular U.S. Army (RA) recruits. Regular Army recruits had an equal chance of receiving any one of the three RA forms. The survey was self-administered after specific instructions were provided by on-site contractor personnel. Recruit respondents were instructed to mark the responses that fit them best, directly in the survey booklets.

Survey forms were registered by Data Recognition Corporation personnel as they were received at the contractor's site. Survey booklets were optically scanned and verified through a post-edit programming process in which data accuracy was assured by manual verification of write-in response items and confirmation of optical mark reading errors for "Mark all that apply" questions.

A total of 14,362 U.S. Army recruits were administered the 1986 New Recruit Survey. Based on U.S. Army military personnel records, 13,117 had no prior military service, and 1,172 had prior military experience (the status for the remaining 73 was not ascertainable). The survey respondents were distributed across components as:

<u>Regular U.S. Army</u>	<u>U.S. Army Reserve</u>	<u>Army National Guard</u>
7,988	2,709	3,613

The sampling plan utilized for this survey constrains the generalizability of the survey results to the overall 1986 fiscal year U.S. Army accessions population. However, the survey research process was successful in collecting and providing current information related to new U.S. Army recruits.

GUIDE TO USING THE 1986 NRS CODEBOOK

Codebook Contents

The 1986 ARI New Recruit Survey Codebooks document all survey variables: (a) self-reported, (b) derived from Operations Reporting Master File data, (c) especially created or recoded for tabulation volume production, and (d) editing/data control variables. The separate codebooks document the individual survey item banks respectively for Army Reserve/National Guard and Active Army respondents. The codebooks also provide frequency distributions of response categories for each item by SAS dataset response codes.

Each codebook also contains the physical file location of each survey variable on the "OS" formatted IBM-compatible database tape deliverable as well as the file location on the "SAS" formatted database tape deliverable.

The codebooks also provide users with a reference section for each survey variable generated in 1986 through the use of two tables located at the bottom of each codebook page. One table cross-indexes the variable's survey question number to all four (4) 1986 NRS survey forms. A second table indicates the item history or whether or not the 1986 survey variable was also used in any of the 1982, 1983, 1984, or 1985 NRS survey efforts. When the exact or similar variable was present in a previous NRS administration, an indication is given to the user of what changes have occurred in the variable's questionnaire wording and coding across time.

Presentation of Variables in Codebook

In contrast to the codebooks for 1984 and 1985, the 1986 survey variables appear in the codebook in approximately the same order as they were experienced by the administrators and recruits who participated in the survey process. The first few variables represent administration information originally provided by survey administrators on separate survey "header" answer sheets. These variables are followed by survey self-report items (original and recoded), survey data quality flag variables, ORMF-derived variables, and crossing variables used in the tabulation volumes.

Variable Naming Conventions

Survey data control and administration variables and survey demographic variables were assigned alphabetic names. For example, the identification number automatically assigned to each respondent's survey booklet by the Data Recognition Corporation scanner is named "DRCID" and respondent gender is named "GENDER".

Survey variables that were used in previous ARI surveys and were not significantly altered by the conversion to an optical mark read booklet were assigned their original alphanumeric designations.

Survey variables that were used in all forms of previous ARI surveys but were significantly altered through wording and/or coding changes or by additions to possible response categories were assigned a designation by changing the original alphabetic prefix of the item to an "X". For example, the 1986 variables "X110A through X110M" represent substantial changes in the variables T110A-T110K of previous surveys. In 1985 the survey item allowed for an "Other" category and a response category of "In magazines". The 1986 survey item does not contain an "Other" response category and the response categories have been modified to include "In magazines you subscribe to or buy" and "In magazines you read at school".

Survey variables that were used exclusively in the Army Reserve/National Guard versions of previous ARI surveys but were significantly altered through wording and/or coding changes or by additions to possible response categories were assigned a designation by changing the original alphabetic prefix of the item to a "V" (e.g., U330 became V330).

Variables developed for and having their initial inclusion in the 1986 NRS were assigned sequential alphanumeric designations starting with "Y001".

Recoded survey variables were assigned their original survey item designation preceded by an "R". Those alphabetic variables that contained 8 letters were assigned a shortened version of their original name so as not to exceed eight (8) characters (e.g., the recoded form of variable WKSWORKP is named RWKSWKP).

ORMF-derived variables were assigned descriptive alphabetic and alphanumeric names. For example, educational level was assigned "EDLEV" and component was assigned "COMP".

Response error variables were assigned the names: MISSDOT, MISSA, MISSB, and MISSTOT. This naming convention continues that of 1984 and 1985 such that the names are based on the method by which the variables produced the numerical counts of SAS missing value codes:

MISSDOT	"." (Non-Response)
MISSA	"A" (Multiple Response)
MISSB	"B" (Out of Range)
MISSTOT	Total Missing Values

Those variables extracted for use in creating the cross-tabulation volumes were assigned descriptive alphabetic and alphanumeric names preceded by an "X". For example, educational level was assigned "XEDLEV" and sex was assigned "XSEX".

EXPLANATION OF FIGURE 2

CONTENTS OF A CODEBOOK PAGE FOR AN NRS SURVEY ITEM

- 1 Codebook title.
- 2 Variable name.
- 3 Statement of survey item. In some instances, item wording has been modified to be more interpretable as a stand-alone item on a codebook page. See the actual survey instruments in the User's Manual for exact wording of items. The word, "recoded" precedes the statement of the question for survey items that have been recoded for presentation in the tabulation volumes. A descriptive label is provided for variables which are not survey items.
- 4 Description of the location, i.e., card number, column number, and length of survey item on the OS data file.
- 5 Position of the variable on the SAS data file.
- 6 Counts of responses across response values.
- 7 Percentage of total responses represented by each value.
- 8 Actual (or recoded) response values.
- 9 Explanation of the response value codes. Special codes were used to denote the various types of missing values: Derived values (i.e., ".", "A", "B", "C", "D", "G", "L", "M" and "N") were developed to denote missing values, multiple response errors, out-of-range values, valid skips, non-match with an ORMF record, invalid skips, implied continuation, and inconsistent with an ORMF record.
- 10 Total of response frequencies and percents.
- 11 Crosswalk of survey item across all survey forms of the 1986 NRS.
- 12 Indicator of 1986 NRS item appearance in previous NRS administrations:
 - o "NA" indicates the item did not appear in that survey year.
 - o "Yes" indicates the item's appearance on at least one of the survey forms.
 - o "*" indicates a wording change between how the item text appears in the 1986 instrument and how it appears in previous survey questionnaire(s).
 - o "YES+" indicates differences in response categories between the 1986 and prior NRS.
 - o "YES^" indicates changes in both the 1986 question wording and response categories.
 - o "YES**" indicates a change in question wording between the 1984, 1985, and 1986 NRS (on Form D only).
 - o "YES++" indicates differences in the response categories between the 1984, 1985, and 1986 NRS (on Form D only).
 - o "CHN" indicates a change in a variable name.
 - o "CHN*" indicates a change in 1986 wording or response categories.
 - o "CHN^" indicates a change in 1986 question wording and response category coding.
- 13 Codebook page number.

Example of a 1986 Codebook Page

Figure Two provides an example of the presentation of a 1986 survey item. The illustration is explained and references to page elements are provided in the text that follows.

Variable Labels. The 1986 NRS codebooks include statements of each of the actual survey questionnaire items that conform closely to the exact wording used in the survey booklets. Only a few of the codebook statements do not conform exactly to the original survey wording and in those cases analysts can refer to the actual survey instruments contained in the Appendixes of the 1986 Technical Manual.

Descriptive Variable Information. Information is provided in the 1986 codebooks that is specific to each survey variable. Each variable has codebook entries that (a) direct the user to the variable's file location in both the OS and SAS datasets, (b) list the response alternatives and corresponding SAS values, and (c) provide counts and percentages of responses for each value.

Page Annotations. Some codebook pages have been annotated with information of interest to analysts and other users of the 1986 NRS datasets. Pages have been annotated to provide (a) indications of those response distributions that were too lengthy to be presented in codebook tables, and (b) warnings when percentile totals do not sum to 100% due to rounding errors within the individual cells.

Survey Item History Tables. The 1986 NRS codebooks contain both "Locations in 1986 Survey" and "Item History" tables for individual variables at the bottom of each page. The "Locations in 1986 Survey" table references each item to a specific question number, page number, or header sheet. The individual table entries indicate whether the variable was included or not included in each of the four survey forms.

When variables appeared in any 1986 survey form, their location is entered in the table. Cells are left blank if variables did not appear in one or more of the 1986 survey forms. If variables appeared only on the administrator-completed header sheets, the word "HEADER" appears as the table entry. If variables were not assigned a survey question number, but appeared in the survey booklets (e.g., ROSTER), the page number where the item appeared is entered in the table.

The "Item History" table appears to the right of the "Locations in 1986 Survey" table. This table references 1986 variables to the 1982, 1983, 1984, and 1985 New Recruit Surveys. When variables used in the 1986 survey appeared in earlier surveys the word "YES" or "CHN" appears in the table cell corresponding to the year when it was previously used. The letters "NA" (Not Applicable) appear in those table cells when items were not previously used.

Differences in item wording, response category additions and deletions, and coding between the 1986 survey and previous versions can also be distinguished. Item wording differences are indicated by:

YES*	Changes to Item Wording Only
YES+	Changes in Response Category Wording
YES^	Changes in Both Item Wording and Response Category Wording
YES**	Changes in Item Wording Only in Form D
YES++	Changes in Response Category Wording Only in Form D

"CHN" appears rather than "YES" when the name of the variable changes. See Table 1 for a cross reference of these variables to earlier names. Item coding changes and changes to response category coding are indicated by:

CHN*	Changes to Item Wording and Response Categories (Additions, Deletions)
CHN^	Changes to Item Wording and Response Category Coding

Extreme caution should be used in comparing these variables to other forms of the questions used in prior years. The name of the variable has been changed to indicate that the question and interpretation of responses has changed from previous versions of the survey.

Missing Value Codes. The following missing value codes are used to signify the occurrence of specific data conditions:

"." No Response/Missing on MEPRS/REQUEST (ORMF)

This code for numeric data (or the "Z" for character data) is used to signify that no response was made to a particular survey item or when used in conjunction with MEPRS/REQUEST variable the code signifies that a data field was blank for a particular respondent.

"A" Multiple Response Error

This code for numeric data (or the "X" for character data) signifies the presence of more than one response to an item that requested only a single choice.

"B" Out Of Range

This code for numeric data (or the "Y" for character data) signifies the presence of a response that was made that was outside of the normal range of response alternatives. For example, an individual responding that he/she looked for employment more than 52 weeks in the previous year.

"C" Valid Skip

This code for numeric data (or the " " (blank) for character data) signifies those respondents who were instructed to skip over certain questions, and who correctly followed the instruction.

"D" Question Not On Survey

This code for numeric data (or the "W" for character data) signifies that the survey form administered to certain respondents did not contain a particular item or items.

"G" No Match on MEPRS/REQUEST (ORMF)

This code for numeric data (or the "^" for character data) signifies that particular respondents could not be matched to the ORMF files.

"L" Invalid Skip

This code signifies that a respondent's choice on a skip pattern question should have resulted in his/her skipping to another question but the individual actually responded to an item within a skip pattern. For example, respondents who reported that there was no junior ROTC program at their high school should not have answered questions about their participation in such a program.

"M"

Implied Continuation

This code signifies that a respondent failed to respond to a skip pattern selection question but answered items within the pattern. Therefore, respondents who did not indicate that there was a junior ROTC program at their high school and then answered the junior ROTC items would be assigned an "M" for the "skip" item of whether there was a junior ROTC program at their high school, indicating they answered the following items.

1986 NRS Database Coding Conventions

The two separate types of databases developed for the 1986 NRS do not contain identical missing value data codes. Table 2 compares the missing value codes for each database version.

Table 2
Comparison of 1986 NRS SAS and OS Database
Missing Value Codes

<u>Missing Value Code</u>				<u>Description</u>
<u>Numeric</u>	<u>SAS</u> <u>Alphabetic</u>	<u>Numeric</u>	<u>OS</u> <u>Alphabetic</u>	
.	Z	-9	Z	No Response
A	X	-8	X	Multiple Response
B	Y	-7	Y	Out-of Range
C	" "	-6	" "	Valid Skip
D	W	-5	W	Not on Survey
G	^	-3	^	No Match on MEPRS/REQUEST
L	" "	-4	" "	Invalid Skip
M	" "	-2	" "	Implied Continuation

Codebook Indexing System

The 1986 New Recruit Survey Codebook volume contains a dual indexing system for locating survey variable data. These indexes can be found on pages 37 through 72. The first index listing is sequenced by question number. After the presentation of 12 administration control items, the remaining items are listed in the same order as the questions appear in the original survey booklet (Form D). Each item listing presents the survey question number reference, the variable name, the variable label, and the page number location in the codebook.

The second index listing is sequenced alphabetically and numerically by variable name. Each item listing presents the variable name, the survey question number, the variable label, and the page number location in the codebook.

NON-SURVEY VARIABLE INCLUSION AND DEVELOPMENT CRITERIA

The following sections describe those variables that did not appear in the 1986 New Recruit Survey booklets yet are included in both the OS and SAS databases. Several types of non-survey specific variables are identifiable.

Administrator Header Sheet Variables

The 1986 New Recruit Survey was administered by contract personnel at the eight U.S. Army Reception Battalions. As a means of ensuring the accuracy of certain data, administrators were required to complete an optically scanned header sheet for each scheduled survey administration. The header sheet contained information that appears on the NRS databases as the following variables:

VARIABLE	DESCRIPTION
STATION	Station Where Survey Was Taken
SMO	Month Surveyed
SDAY	Day Surveyed
SYEAR	Year Surveyed
SWEEKDAY	Day of Week Surveyed
SC011A	Time Started Survey: Hour
SC011B	Time Started Survey: Minutes
FORM	Survey Form

Recoded Survey Variables

Five (5) survey variables were recoded for presentation in the tabulation volumes. These variables were generated for the purpose of combining response categories to produce fewer tabular response categories.

Table 3 lists the original and recoded variable names for those survey items with combined response categories that were included in the 1986 NRS database.

Table 3

**Recoded Survey Variables with Combined Response Categories
for Presentation in Tabulation Volumes**

<u>Original Survey Variable</u>	<u>Recoded Survey Variable</u>
WKSNEWK	RWKSNEWK
WKSNEWK	RWKSNEWK
WKSNEWK	RWKSNEWK
WKSNEWK	RWKSNEWK
WKSNEWK	RWKSNEWK

Table 4 documents the logic by which the original variable values and labels were recoded for tabular presentation purposes.

Table 4

**Recoding Logic of Survey Variables with Combined Response
Categories for Presentation in Tabulation Volumes**

Original Format For "WKS" Variables

<u>Value</u>	<u>Value Labels</u>
.	No Response
A	Multiple Response Error
B	Out-of-Range
0	00 Weeks
1	01 Week
.	
.	
52	52 Weeks

Recoded Format For "WKS" Variables

<u>Regrouping of Original Values</u>	<u>Recoded Values/Labels</u>
.,A,B	. = No Response/Missing
0	0 = 0 Weeks
01-04	1 = 1-4 Weeks
05-12	2 = 5-12 Weeks
13-26	3 = 13-26 Weeks
27-52	4 = 27-52 Weeks

MEPRS/REQUEST Derived Variables

Sixteen (16) variables were generated from MEPRS/REQUEST data fields on the ORMF for inclusion on the 1986 NRS database. Nine (9) of these variables were used to produce crossing variables for the tabulation volumes. Some of these variables were regrouped or combined in order to produce fewer tabular response categories. Other variables were combined in order to create a single unique database variable.

One variable was created for the 1986 NRS that does not appear in previous surveys. The variable CONEDRNG was created to document each respondent's educational attainment at the time of original contracting.

Table 5 presents the programming logic by which the MEPRS/REQUEST derived variables were developed. In order to follow the logic, this table presents the MEPRS/REQUEST variable or variables used to generate a new variable, followed by the derived SAS variable. The values and labels (when identifiable) are included for the MEPRS/REQUEST and SAS variables.

Tabulation Crossing Variables

Ten crossing variables were developed from the 1986 NRS data for use in producing the two volume set of Army Reserve tabulations. The Army Reserve crossing variables include gender (XSEX); highest educational attainment (XEDLEV2); test category from the 1980 youth norms original tables (XRMCAT80); marital status (XMARST); ethnic group membership (XPOPGRP); participation in the Split Training/Simultaneous Membership Programs (XPROG); Cash Enlistment Bonus incentive status of male, test category I-IIIB, high school seniors, high school diploma graduates and post-high school attenders only (XINCENT); recruiting brigade (XREGION); rural/urban setting of preenlistment residence (XRURURB); and age at accession (XAGEACC).

One survey crossing variable, XRURURB was developed directly from a survey item. The original variable values for T187 were combined prior to their inclusion in the database and tabulations. Table 6 also includes the logic for the creation of this crossing variable. The remaining Army Reserve crossing variables were created using two strategies. Some crossing variables were directly transcribed from the MEPRS/REQUEST data fields (e.g., gender and reserve incentive program participation). In other instances, MEPRS/REQUEST variables were regrouped or combined with other MEPRS/REQUEST and/or survey variables to produce the final tabulation crossing variables. Table 6 documents the logic used to transform the various data source elements into the 1986 NRS crossing variables.

SAS Variable Name	Original Values and Labels	Crossing Variable Name	Regrouping of Original Values	Collapsed Values/Labels
HISPANIC	1 = Yes All Others:	XGPOPGRP		3 = Hispanic
RACE	1 = American Indian or Alaskan Native 2 = Asian or Pacific Islander 3 = Black 4 = White			4 = Other 4 = Other 2 = Black 1 = White

Crossing Variable: XRURURB Crossing Variable - Rural/Urban

SAS Variable: T187 Which of these best describes the place where you were living when you enlisted?

ORIGINAL FORMAT		RECODED FORMAT		
SAS Variable Name	Original Values and Labels	Crossing Variable Name	Regrouping of Original Values	Collapsed Values/Labels
T187	1 = In a large city (Over 250,000 people) 2 = In a suburb of a large city 3 = In a medium-sized city (50,000 - 250,000 people) 4 = In a suburb of a medium-sized city 5 = In a small city or town (Under 50,000 people) 6 = In a rural area, but not on a farm or ranch 7 = On a farm or ranch	XRURURB	1 3 2,4 5 6,7	1 = Lg_city 2 = Med_city 3 = Suburb 4 = Town 5 = Rural/Farm

Five crossing variables were developed for production of the National Guard tabulation volume. These variables include gender (XSEX); highest educational attainment (XEDLEV2); ethnic group membership (XGPOPGRP); rural/urban setting of pre-enlistment residence (XRURURB); and age at accession (XAGEACC).

Two survey crossing variables, XRURURB and XGPOPGRP were developed directly from survey items. The original variable values for RACE and HISPANIC were combined and T187 was adapted prior to their inclusion in the database and tabulations. Table 7 includes the logic for the creation of these National Guard crossing variables.

Response Error Variables

The potential for errors occurring in the survey data due to the conditions under which the 1986 New Recruit Survey was administered poses a problem to those analysts interested in interpreting the survey responses. Due to the length of the four survey booklets, the complexities of skip patterns and individual decisions that were demanded of participants, it is realistic to believe that some undetected data problems can exist.

Any number of situational factors may have affected individual survey response behavior. The privacy statement that was printed on the front cover of the survey booklets and read to all respondents by the administrators may have influenced some recruits to omit responses to questions. The group administration of the survey could have influenced some recruits not to seek more information, assistance, or clarification for items. Furthermore, the slower reader may have felt internal pressures to skip over longer survey questions in order to join his processing platoon.

Four variables were created to provide a limited accounting of respondent reliability for the 1986 NRS. These variables represent the occurrence of survey item response errors exhibited by the recruits who filled out the surveys and were assigned the names: MISSDOT, MISSA, MISSB, and MISSTOT. This naming convention continues that of 1984 and 1985 such that the names are based on the method by which the variables produced the numerical counts of SAS missing value codes:

MISSDOT	"." (Non-Response)
MISSA	"A" (Multiple Response)
MISSB	"B" (Out of Range)
MISSTOT	Total Missing Values

Frequency distributions of these four variables can be found in the 1986 codebook starting on Page 853.
