## FOREWORD

Projected Defense Purchases by Industry and State is issued by the Office of the Secretary of Defense (OSD), Washington Headquarters Services, Directorate of Information Operations and Reports (WHS/DIOR). The estimates were prepared by the Economic Analysis and Resource Planning Division of the Office of Program Analysis and Evaluation of the Office of the Secretary of Defense.

The report provides projections of direct and indirect (or defense-related) purchases from fifty major manufacturing industries, and estimates of direct and indirect defense spending in each state. An Introduction provides a brief overview of the definitions, budgetary concepts, and expenditure categories used in developing the estimates, and offers some guidelines for interpreting them. The tabular material is divided into three sections:

Section I: Summary Tables

Section II: Projections for Selected Industries

Section III: Individual State Projections

Descriptions of table formats accompany the projections.

~~Additional copies of this report may be obtained from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402. A feedback form for comments appears at the end of the report.~~

## INTRODUCTION AND HIGHLIGHTS

This report presents estimates of defense purchases from 50 major Standard Industrial Classification (SIC) industries that are major defense suppliers, of defense-related employment, and of defense and defense-related spending that may occur in each of the 50 states and the District of Columbia during calendar years 1987 through 1992. The estimates are based on the President's budget submission in January 1987, and on the geographic distribution of the major components of defense spending in the recent past. A description of the model and data used to generate the estimates may be found in Defense Purchases: An Introduction to DEIMS, in State-Level Projections of Potential Defense Outlays: An Introduction to RDEIMS and in Defense-Related Employment of Skilled Labor: An Introduction to LDEIMS.<sup>1/</sup>

It must be stressed that the figures reported here are projections; they do not necessarily reflect what actual defense expenditures will prove to be in various industries or states in future years. Purchases from particular industries will depend upon the level and composition of the defense budget enacted by the Congress, and the location of purchases will be determined not only by the level of defense spending, but by the location of industries and by competition among firms within them, both for prime contracts and for subcontracts.<sup>2/</sup> The projections are therefore intended to serve as benchmarks: They describe the future pattern of defense and defense-related expenditures assuming that each state's shares of the various components of defense activity remain what they have been in the recent past.

### Definitions and Coverage

The estimates presented in the following sections consider both "direct" and "indirect" defense expenditures. Direct defense expenditures, as their name implies, are the expenditures that the Department of Defense (DoD) itself makes. These include purchases of goods and services, as well as military and civilian pay.

Indirect (or defense-related) expenditures, in contrast, represent purchases--generated throughout the economy--of items used to produce goods bought by DoD. That is, they reflect the purchases of materials, tools, and parts that prime contractors make from their suppliers in order to perform the work for which DoD has contracted. Those sales, in turn, trigger subsequent rounds of transactions, as subcontractors purchase goods and services from their major suppliers and those firms place orders with companies at lower tiers of the production chain. It is to this sequence of purchases--of goods and services from subcontractors and lower-tier suppliers--that the term "indirect defense purchases" applies.

- 
- <sup>1/</sup> Available from the Office of the Assistant Secretary of Defense for Production and Logistics, Office of Industrial Base Assessment, Two Skyline Place, Suite 1406, 5203 Leesburg Pike, Falls Church, Virginia 22041-3466, telephone number (202)756-2310.
  - <sup>2/</sup> The Directorate of Information Operations and Reports in the Washington Headquarters Services publishes comprehensive data on prime contract awards and personnel expenditures in each state in a volume entitled Atlas/State Data Abstract for the United States. The edition covering the 1985 fiscal year is available from the Superintendent of Documents, Government Printing Office, Washington, D.C. 20402.

"Indirect defense purchases resulting from pay", shown on the individual tables for each state in Section IV, refers to the production of goods and services consumed by DoD's civilian and military employees. Estimates for these expenditures are included in the state-level tables because the concept has been of interest to planning agencies and others concerned with local economic development. The methods used to generate these estimates are viewed as experimental, however, and are still under development. "Indirect purchases resulting from pay" are not included in the industry estimates reported in Section III.

The employment estimates include DoD civilian employment and employment resulting from DoD's direct and indirect purchases of goods and services. Employment resulting from "indirect purchases resulting from pay" or from personal consumption expenditures are not included.

**Budget Concept Employed.** The projections are expressed in terms of outlays. Outlays represent disbursements of funds made during the course of a year. In contrast, budget authority is the amount of money that DoD can commit in any given year. Budget authority differs from outlays in that contractual obligations (which must be within the limits set by budget authority) often call for payments to be spread over a period of years, as the work is completed. (Budget authority for development and procurement projects, in particular, tends to be disbursed over a period of several years.) During periods of budget growth, budget authority tends to be greater than outlays. The preliminary estimates provided in Estimated Defense Expenditures for States, Fiscal Year 1987 were stated in terms of budget authority, and are therefore not directly comparable to the more comprehensive estimates provided here.

**Coverage.** The federal budget is divided into a number of sections (called "functional categories"), each containing programs serving a common purpose. National security-related programs are grouped under Functional Category 050 (National Defense). This category includes all of the Defense Department's military programs and the national security programs administered by other federal departments, such as the Department of Energy. It excludes the costs of nonmilitary programs of the Department of Defense (for example, highway bridge inspection projects conducted by the Army Corps of Engineers).

The projections reported here are based on a narrower budget grouping, Functional Category 051 (Department of Defense, Military). This category includes all of the Defense Department's military programs, but excludes the national security programs administered by other agencies and DoD programs serving civil functions (principally public works projects of the U.S. Army Corps of Engineers).

The defense budget (defined here to include only those programs falling within Functional Category 051) is partitioned into five major accounts: military personnel; operations and maintenance (O&M); procurement; research, development, test, and evaluation (RDT&E); and military construction. The titles of these accounts are reasonably descriptive of the types of expenses they cover:

- o The military personnel account covers the pay of active-duty service members and reservists as well as some other personnel-related expenses, such as permanent change-of-station travel and purchases of military uniforms.
- o The O&M account funds the day-to-day operations of the defense establishment. Money from this account goes to purchase fuel and other consumable items and to pay all but a small share of DoD's civilian work force
- o The procurement account covers purchases of weapons and equipment, and other military capital goods.

- o The RDT&E account pays for the development and testing of new military systems, and for other research activities and associated civilian pay.
- o The military construction account covers the cost of constructing military facilities and of providing housing for military personnel and their dependents.

Military retirement pay is not included in Category 051 as a separate account. Funds representing future military retirement benefits earned during any given year are reflected in the military personnel account but transferred to a trust fund. However, because the geographic distribution of retirement pay is different from the distribution of the rest of the military personnel account, the state-level projections presented here treat military retirement pay as if it were a separate part of Category 051.

### **Highlights of the Projections**

The composition of projected Defense purchases is quite different than the composition of purchases in the more general economy. The top half of Figure 1 presents information on the composition of projected defense and non-defense final purchases in 1987. A large proportion of defense purchases--nearly three quarters--are made from manufacturing industries. In contrast, only about 21 percent of non-defense final purchases are made from the manufacturing sector of the economy. Services make up about 21 percent of defense final purchases, but about 68 percent of non-defense final purchases.

The lower half of the figure presents information on the composition of estimated defense and non-defense indirect purchases--the sales of tools, materials and supplies required as intermediate goods in the production process. The manufacturing intensity of defense purchases is reflected in indirect defense purchases as well. Although indirect defense purchases more nearly resemble their non-defense counterparts than do direct defense purchases, manufacturing accounts for over half of projected defense indirect purchases, but only about 39 percent of projected non-defense indirect purchases.

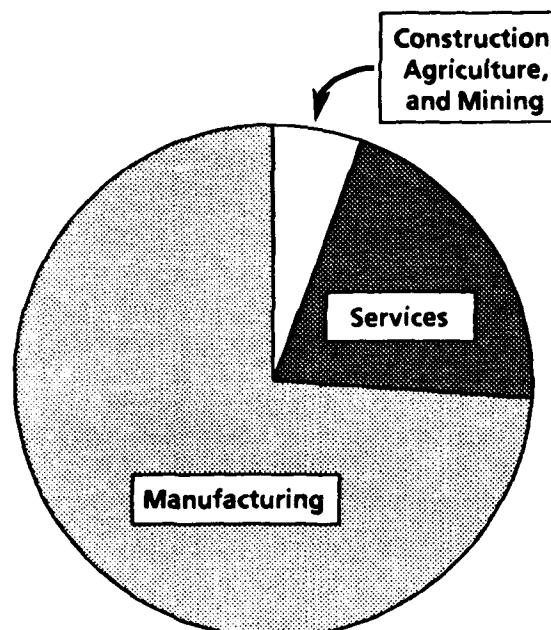

The first table in Section I of this report lists the manufacturing industries with the largest projected defense production (direct and indirect). While some of these industries are armament or defense oriented industries, (shipbuilding, tanks and tank components, aircraft, and complete guided missiles, for example), it is important to note that significant defense purchases are made directly or indirectly from other manufacturing industries not so obviously oriented towards defense activities (electronics, blast furnaces and steel mills, motor vehicle parts, industrial controls, telephone and telegraph equipment) as well.

### **Defense-Related Employment**

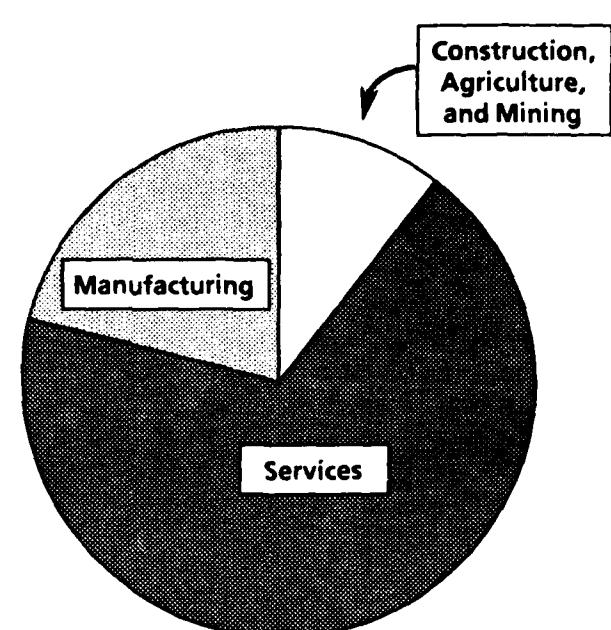

Defense-related civilian employment (including the civilian employees of the Department of Defense) represents about 4 percent of projected total civilian employment. The composition of defense-related civilian employment in 1987 is somewhat different from non-defense employment. The differences reflect the manufacturing intensity of defense purchases, as well as specific employment patterns of the individual industries from which defense purchases are made.

Occupations primarily associated with manufacturing industries, craft workers and operatives, account for a large share of defense-related employment, while service workers account for a large proportion of non-defense employment. (See Figure 2.) Engineering and scientific workers also account for a somewhat larger share of defense-related employment (10 percent) than they do of non-defense employment (3 percent). More detailed tabulations of defense-related employment (including a breakout of engineering and scientific personnel by specialty) may be found in Section I.

### Defense Expenditures By State

Table 1 presents estimates of direct, indirect, and total (direct plus indirect) defense expenditures in 1987 for each of the nine census divisions and for the United States as a whole. For each region and each expenditure category, the table records both a per capita estimate and a range of estimates corresponding to the upper and lower bounds of the estimates for the individual states within the region.

The geographic distribution of defense expenditures reflects both the distribution of military personnel and that of the industries that make defense goods, which is quite different from that of pay. While New England, for example, ranks seventh among the nine regions in defense pay per capita, it ranks first in the level of projected defense purchases, and second only to the Pacific region in projected total direct expenditures. More generally, three of the four regions which rank lowest in pay also rank in the top five in projected direct purchases.

The dispersion within the regions is large relative to the dispersion across regions. For example:

- o Six of the nine regions contain one or more states for which projected total defense expenditures (direct and indirect) are projected to be above the national average.
- o Seven of the nine regions contain at least one state for which projected total defense expenditures are less than 80 percent of the national average.
- o The variation within a region (the difference between the lowest state estimate and the highest state estimate within a region) is greater than the variation among regions (the difference between the lowest regional estimate and the highest regional estimate) in five of the nine regions.

It should be noted that these projections describe the pattern of defense and defense related expenditures assuming that the geographic distribution of the various components of defense activity remains what it has been in recent years. The actual completion for defense contracts, of course, may produce a future geographic pattern that differs from historical distributions.

### **Limitations**

The projections of defense purchases in Section II show direct and indirect purchases from various SIC industries. They attempt to include all defense purchases, whether or not they are made domestically.

By contrast, the state-level projections reported here include only purchases and pay estimated to be made in the 50 states and the District of Columbia. They exclude expenditures made abroad or in U.S. territories, the pay of military personnel stationed on ships in foreign waters, and expenditures for imported goods. In order to factor out such expenditures, historical data showing the distribution of military personnel were used and an assumption was made about the level of defense imports. Specifically, it was assumed that, for the products of any given industry, imports will constitute the same share of defense purchases as they will of civilian purchases. But because the Defense Department is required to channel most of its purchases to domestic firms, and because defense purchases often represent specialized products, the percentage of defense purchases accounted for by imports may be lower than this assumption suggests. To the extent that this is the case, the projections will underestimate the proportion of defense expenditures that will occur in the United States.

West South Central	378 (266-562)	462 (196-554)	840 (556-940)	985 (831-1059)	1825 (1435-1999)
Mountain	447 (227-602)	445 (81-627)	892 (334-1076)	931 (599-1119)	1824 (953-2195)
Pacific	528 (177-1951)	1113 (156-1264)	1641 (333-2409)	1167 (738-1230)	2808 (1132-3147)
United States	357 (68-1807)	612 (81-1705)	969 (207-3234)	1050 (599-1761)	2019 (953-4947)

Note: The numbers in parentheses reflect the lower and upper bounds of the estimates for individual states in the regions.

### **Comparison With Previous Estimates**

The estimates presented here differ from those published in earlier editions of this report for several reasons. First, planned budgets change each year. Second, the data used in making the projections are periodically revised. For example:

- o The estimated shares of particular activities that take place in each state have been revised to reflect more recent data.
- o The proportion of defense and defense-related purchases assumed to be made abroad or representing imported goods are revised annually.
- o New data on purchases made from the operations and maintenance account has been introduced.

Finally, the input/output model used to compute estimates of indirect purchases has been substantially revised to reflect more recent data, affecting the magnitude and distribution of these estimates. Differences between the estimates reported here and those previously reported thus reflect data revisions as well as budgetary changes.

## **SECTION I: SUMMARY TABLES**

The summary tables that follow provide an overview of estimated defense expenditures and employment. The first table presents estimates of total defense purchases for the top fifty manufacturing industries. (429 4-digit Standard Industrial Code industries are included in the projections. A mapping from the industry number shown here to Standard Industrial Codes can be found in Defense Purchases: An Introduction to DEIMS.) The estimates shown include both direct and indirect purchases. The second table presents estimates of defense-related employment by major occupational category, while the third table shows more detailed estimates of defense-related employment of engineers and scientists.

The remaining five tables present state-level information:

- o The first three state-level tables present estimates of direct defense expenditures, first in the aggregate and then by selected budget accounts. The first table records the amount of outlays (for purchases and pay) projected to be made in each state during each year of the forecast period. (The estimates assume that the state shares of underlying components of pay and purchases remain at their recent levels.) The next two tables break out these estimates by budget category, the first showing outlays arising from the procurement and RDT&E accounts and the second showing outlays arising from the remaining accounts.
- o The last two state-level tables present estimates of indirect defense expenditures. The first of these covers indirect expenditures arising from purchases made by the Department of Defense, while the second presents the indirect expenditures arising from the wages and salaries of DoD personnel and military retirement pay.

## **SECTION II: PROJECTIONS FOR SELECTED INDUSTRIES**

These tables present projected purchases for defense and defense-related purchases from selected manufacturing industries. Projections for fifty such industries are included. A separate table is provided for each industry. The industries were chosen on the basis of their projected volume of sales in the defense market over the forecast period.

The upper portion of each table contains projections of direct and indirect defense purchases for Calendar Years 1986 to 1992. The center portion of the table indicates the amount of indirect defense purchases estimated to result from DoD purchases from each of eleven industrial groupings. At the bottom of the table, total purchases resulting from foreign military sales are shown.

The industrial sectors reported in Section II are at the 4-digit SIC level; the industrial sectors shown in the state tables of Section II, however, are aggregates (at the 3-digit level) of the 4-digit SIC industries. Industrial projections are made for 429 separate industries. (A mapping from the industry numbers shown in each table to the corresponding Standard Industrial Code may be found in Defense Purchasing An Introduction to DEIMS, available from the DoD point of contract listed in the front of this volume.) For the purposes of the state-level reports, these are grouped into 79 industrial sectors. Thus, industrial sector 60, "Aircraft and Parts", used in the state tables, includes three industries: industry 351, "Aircraft"; industry 352, "Aircraft Engines and Engine Parts"; and industry 353, "Aircraft Parts and Equipment, NEC."

### **SECTION III: INDIVIDUAL STATE PROJECTIONS**

These tables present state level estimates of defense and defense related expenditures in calendar years 1987 through 1992. A separate table is provided for each of the 50 states and the District of Columbia. Each table is divided into two parts, the first providing a general overview of projected spending trends over the forecast period and the second presenting estimates for the industrial sectors projected to lead in defense or defense related sales statewide.

The first section of each table presents estimates of direct defense purchases and pay and of indirect defense purchases for each year of the projection period. (For purposes of comparison, projections of nondefense expenditures and of total economic activity are also provided.) The second section records estimates of the dollar value of direct and indirect purchases from the eight industrial sectors projected to lead in defense sales, and the eight projected to lead in indirect sales stemming from DoD purchases, statewide over the forecast period.

The industrial sectors reported in Section II are at the 4 digit SIC level, the industrial sectors shown in the state tables of Section II, however, are aggregates (at the 3 digit level) of the 4 digit SIC industries. Industrial projections are made for 429 separate industries. For the purposes of the state level reports, these are grouped into 79 industrial sectors. Thus, industrial sector 60, "Aircraft and Parts", used in the state tables, includes three industries: industry 351, "Aircraft", industry 352, "Aircraft Engines and Engine Parts", and industry 353, "Aircraft Parts and Equipment, NEC".

## **FEEDBACK FORM**

1. Did this publication provide the material you needed to interpret the projections in which you were interested? If not, what were the most important missing items?

---

---

---

2. Did the projections for your industry or state seem to be reasonable?

---

---

---

3. Are there other published forecasts with which the projections for your industry or state can be compared?

---

---

---

4. What parts of the projections were most and least useful to you?

### **MOST**

- \_\_\_\_\_ Projected direct defense purchases for an industry  
\_\_\_\_\_ Projected indirect defense purchases for an industry  
\_\_\_\_\_ Projected direct defense expenditures for a state  
\_\_\_\_\_ Projected indirect defense expenditures for a state  
\_\_\_\_\_ Projected largest sectors  
\_\_\_\_\_ Projected geographic distribution of direct purchases  
\_\_\_\_\_ Projected geographic distribution of indirect purchases  
Other: \_\_\_\_\_  
\_\_\_\_\_
