DIE X SCIS 12/18 NUCLEAR POWER PLANTS Nuclear Society of China September 1986 TABLE OF CONTENTS An important source of energy for our time - nuclear energy . . 1 The world's energy sources, make-up and demand . . . . . . . . 2 (Pie charts for the years 1984 and 2000 showing percentages of world energy from various sources, coal, water-power, petroleum, nuclear energy, natural gas, other) (Bar chart showing trend in world demand for energy for the years 1978, 2000, 2100) The development of nuclear energy is a world trend . . 3 (Graph showing the trend in nuclear power capacity as a percent of total power generation for France, U.S., Japan and the entire world) (Bar chart showing the percentages for various countries) Nuclear power plant capacities by country and region (Table 4 showing number of nuclear power plants in operation and under construction (& their capacities) China needs to develop nuclear power . 6 China has already established a rather comprehensive nuclear fuel cycle system . . . . . . . . 7 China has the capability to develop nuclear power . 8 China establishes International Nuclear Safety Agency . 10 Qinshan Nuclear Power Plant under construction . 12 Guangdong-Daya Bay Nuclear Power Plant to be built under joint venture using foleign technology and Hong Kong capital . . . 13

How nuclear energy is released	14
What is a nuclear power plant?	16
The steam generating system of a 900 megawatt pressurized water reactor power plant	18
(Overall diagram of a containment structure)	
Nuclear reactor	19
Nuclear fuel	20
Steam generator	21
Will a nuclear power station explode like a bomb?	22
Three barriers which prevent leakage of radioactive material First barrier - fuel cladding	23 23 24 24
Nuclear power plant safety systems	25
Three processes in nuclear power plants: gas, liquid, solid	28
Nuclear power plants have very little effect on the environment	29
Nuclear power plants are a clean source of energy	30
Amount of fuel transported in comparison with coal-fired plants	32
Nuclear power is cheap compared to coal power	33
Radiation exposure from everday sources	34
Calculating your radiation exposure	36
Radiation effects on living organisms	38
Is there a risk of cancer? (comparison with cigarette smoking)	39
U. S. Three Mile Island accident	40
Chernobyl accident	42
Nuclear power plants and the environment	45

#### CHINA NEEDS TO DEVELOP NUCLEAR POWER

666

China's energy resources ale unequally divided. Most of the coal reserves are in the north and most of the water power resources are in the western part of the country. It is imperative that nuclear power be developed in the energy-poor regions of the east, the south and the northeast where industry and population is rather concentrated.

Should the north's coal be transported to the south?

The amount to transport is immense. This is economically unfeasible.

Should the electric from the west be supplied to the east? This is technologically complicated and very expensive.

Oil is scarce. It's a shame to burn it all up.

CHINA HAS ALREADY ESTABLISHED A RATHER COMPREHENSIVE NUCLEAR FUEL CYCLE COMPLEX

Nuclear fuel cycle

KEY: (1) Uranium mine; (2) Uranium ore; (3) Smelting plant; (4) illegible; (5) (illegiable) uranium (up to  $3\% 235_{U}$ ; (6) Conversion plant; (7) Uranium hexafluoride; (8) Waste storage; (9) Radioactive waste; (10) Aftertreatment plant; (11) Industrial plutonium; (12) Enrichment plant; (13) Radioactive isotopes; (14) Used up (spent) fuel assemblies; (15) Enriched uranium hexa-fluoride; (16) Medical applications; (17) Industrial applications; (18) Agricultural applications; (19) Nuclear power plant; (20) Fuel assemblies; (21) Enriched uranium dioxide; (22) Reconversion plant.

China has already established a rather comprehensive nuclear fuel cycle complex, from geological exploration and mining to elemental processing and aftertreatment, etc. It has been verified that there are adequate uranium ore reserves to supply nuclear power plants with sufficient nuclear fuel.

## CHINA HAS THE CAPABILITY TO DEVELOP NUCLEAR POWER

China's nuclear industry already has a 30-year history of development, has become a fairly comprehensive nuclear industry complex, has

already built many different types of nuclear reactors, and has accumulated 140 reactor years of safe management and operational experience. This industry has a contingent of qualified scientists and technicians who possess the ability to research, design and build nuclear power plant equipment. At the present time they are building the 300-megawatt Qinshan Nuclear Power Plant which they designed themselves.

6

Qinshan Nuclear Power Plant fuel element assembly

High-flux process experimental reactor the reactor was successfully rebuilt. The reactor is still in safe operation and produces radioactive isotopes.

A high-flux process experimental reactor which was Chin-

ese designed and built, went into operatior in 1980.

#### QINSHAN NUCLEAR POWER PLANT UNDER CONSTRUCTION

The Qinshan Nuclear Power Plant is a 300-megawatt pressurized water reactor nuclear power plant (the first Chinese-researched, designed, and built nuclear power plant). It is expected to go into

· . Shanghai Qinshan Nuclear Power Plant site Hangzhou

operation producing electrical power in 1989.

The Qinshan Nuclear Power Plant is located on Hangzhou Bay in Haijian county in Zhejiang Sheng, about 120 kilometers from Shanghai and about 80 kilometers from Hangzhou. The site's geological structure is stable, earthquake intensity is low, and the main plant building will sit directly on bedrock. Three sides are encircled by mountains and the other side overlocks the ocean.

Principal Parameters

No. of reactors	1
Thermal capacity	966 MW
Electrical Power	300 MW
Coolant inlet/outlet temperature	288.8/315.2 <sup>°</sup> C
Coolant pressure	$155 \text{ kg/cm}^2$
Coolant flow	24,000 m <sup>3</sup> /h

GUANGDONG-DAYA BAY NUCLEAR POWER PLANT TO BE BUILT UNDER JOINT VENTURE

The Guangdong-Daya Bay Nuclear Power Plant will be a 2 X 900 megawatt pressurized water reactor nuclear power plant. China is building this power plant using foreign technology and Hong Kong capital.

The Guangdong- Daya Bay Nuclear Power Plant site is located on Daya Bay east of the mouth of the Zhujiang River about 45 kilometers from Shenzhen and about 50 kilometers from Hong Kong. The plant site overlooks the sea to the south and is encircled by mountains on the north. It is located on the northwest side of Daya Bay and situated in an area where the stability of the earth's crust is fairly good.

Principal Parameters

	No. of reactors	2
-	Thermal capacity	2905 MW
	Electrical Power	900 NW
	Coolant inlet/outlet temperature	293/328.3 <sup>0</sup> C
i	Coolant pressure	158 kg/cm <sup>2</sup>
	Coolant flow	68,230 m <sup>3</sup> /h
