19. ABSTRACT (Continue on reverse if necessary and identify by block number) This report presents supplementary tabulations of youth respondents in the officer recruiting markets. Interviews were conducted from October 1986 through June 1987. Samples were drawn monthly by random digit dialing (RDD) procedures and were weighted to the eligible U.S. population on a quarterly basis. Household screenings to identify eligible respondents were completed in 83.4% of sampled households. Interviews were then completed for 76.3% of eligible youth identified in the completed screenings. The combined response rate was 63.3%, yielding a total of 6,774 youth interviews. The Army Communications Objectives Measurement System (ACOMS) was a multiyear telephone survey of a nationally representative sample of 16- to 24-year-old American youth and their parents. The survey tracked changes in perceptions, attitudes, and behaviors relevant to Army advertising. Data was collected continuously through the year, using computer-assisted-telephone-interviewing (CATI) technology. Random digit-dialing (RDD), involving a modified Waksberg method, was used to identify eligible respondents. The 30-minute interview asked (Continued)

## FOREWORD

---

The U.S. Army uses advertisements to affect the knowledge, attitudes, and behavioral intentions of youth and such significant influencers as parents to effectively recruit manpower. Army advertising development and execution is guided by a positioning statement and by specific, measurable objectives. This report documents findings from the main survey conducted to measure the achievement of those objectives under the Army Communications Objectives Measurement System (ACOMS), which supports Army assessments of advertising program strategies and effectiveness. ACOMS also supports both planning for future strategy and increasing the operational efficiency of Army advertising programs.

ACOMS was developed to meet the needs of Army policy makers and operational managers through a cooperative effort with a Special Advisory Group (SAG) of representatives from the staffs of the Office of the Deputy Chief of Staff for Personnel, the U.S. Army Recruiting Command, the U.S. Army Reserve Officers' Training Corps Cadet Command, and the Office of the Chief of the Army Reserve. These offices have also provided the funding.

The participation of the U.S. Army Research Institute in this cooperative effort is part of an on-going research program designed to enhance the quality of Army personnel. This work is an essential part of the mission of ARI's Manpower and Personnel Policy Research Group (MPPRG) to conduct research to improve the Army's capability to effectively and efficiently recruit its personnel. Specific efforts on ACOMS were undertaken at the direction of the Deputy Chief of Staff for Personnel (references: Message 2614317 NOV 84, subject: "Operation Image-Watchdog," and Memorandum for Record, ODCSPER, DAPE-ZXA, 3 Feb 86, subject: Army Communications Objectives Survey (ACOMS)). Results were briefed to the SAG on 2 September 1987 and 23 November 1987. Highlights were also briefed to the Deputy Chief of Staff for Personnel on 21 September 1987.

EDGAR M. JOHNSON  
Technical Director

## ACKNOWLEDGEMENTS

Gay, James B. Greenlees, Edward Hoke, Catherine C. Howard, Jan Hull, Linda J. Keil, Dori Driesberg, David Lincoln, Robin McEntire, Leyla Mohadjer, Karen Molloy, Carin N. Rauch, Steve Roey, Jeannie Whalen, Data Preparation Staff, Secretarial Staff, Telephone Center Management and Interviewers.

## PREFACE

---

This report documents the results of survey data collected for Project Image Watch-Dog, "Army Communications Objectives Measurement System (ACOMS)." The project addresses the personnel accessioning system that is responsible each year for obtaining from the non-prior-service youth market over 200,000 volunteers for the Army enlisted and warrant officer force. The U.S. Army Reserve Officers' Training Corps (ROTC) Cadet Command is responsible for attracting over 37,000 high-quality youth as college freshmen at 4-year colleges. To effectively recruit in the youth market, various components of the U.S. Army use advertisements to produce changes in the knowledge, attitudes, and behavioral intentions of youth and such significant influencers as peers and parents. ACOMS provides a measurement and analysis system to support Army

- (1) assessments of advertising program effectiveness;
- (2) assessments of advertising strategy efficiencies;
- (3) management of the advertising program; and
- (4) planning and development of new marketing strategies and segmentation.

The planning for this research was initiated in 1984. ACOMS developed out of work performed for a series of advertising effectiveness conferences directed by the U.S. Army Recruiting Command (USAREC) at the request of the Deputy Chief of Staff for Personnel (DCSPER), who met with the Commander of USAREC, the Chief of the Army Reserve, the Director of the Army National Guard, and the Deputy Chief of Staff of Training and Doctrine Command for ROTC in November 1984 to review the results of these conferences. These officers approved the mission requirements for ACOMS prepared by their staffs as well as the basic research plan prepared by ARI. The DCSPER directed ARI to develop and monitor research plans and necessary contract efforts for ACOMS with guidance from a Special Advisory Group (SAG) from the involved Army offices. The Defense Manpower Data Center was added in a special technical advisory capacity before the first meeting of the SAG.

The SAG was intimately involved in refining the mission requirements for ACOMS throughout the procurement process that led to the selection in 1985 of Westat, Inc., as the ACOMS contractor. Scientists from Westat and the Army community, together with a multitude of advisors, developed and refined the research plans for the ACOMS Survey Design (Nieva & Elig, 1988), and the ACOMS Survey Analysis Plan (Gaertner & Elig, 1988). In addition to guidance from the SAG, plans for ACOMS benefited from advice concerning sampling, weighting, and estimation from a Statistical Advisory Panel.

Supplementary tabulations of recruitment markets are intended to further familiarize Army manpower policy makers and researchers with the content of the ACOMS main youth interview. As reference books, these reports should serve to provide information on what youth in the recruitment markets believe about the Army and are intended to stimulate interest in detailed analyses of specific policy and operational concerns.

The basic plan for reporting on ACOMS interviews is based on the school year (July through June). This reporting schedule supports the Army's advertising planning cycle. This report is on an incomplete year of data (October 1986 through June 1987), since the ACOMS main interview data collection did not begin until October.

THE 1986/87 ARMY COMMUNICATIONS OBJECTIVES MEASUREMENT  
SYSTEM: SUPPLEMENTARY TABULATIONS OF OFFICER MARKETS

1. INTRODUCTION

The Army Communications Objectives Measurement System survey has been designed to provide timely information to Army policymakers and advertising planners regarding key market responses that are expected to be sensitive to changes in the Army's advertising plans. The ACOMS supplementary tabulations of the enlisted markets provide summary tables of the data collected from 13 October 1986 through 30 June 1987. During that time 6774 youth, ages 16 through 24, completed the 30 minute ACOMS youth interview. A similar volume is also available for the enlisted markets (Rhoads, Elig, McEntire, & Hoke, In preparation). Interpretive analyses appear in The Army Communications Objectives Measurement System (ACOMS): Annual report, school year 86/87 (Nieva, Gaertner, Elig, & Benedict, 1988). Quarterly reports are also available (Gaertner, Nieva, Elig, & Benedict, 1988).

The major portion of this volume consists of summary tables. To provide a means of better interpreting the tabulations, this volume also contains chapters explaining the survey design, and showing the layout of the tables.

Chapter 2 provides a brief overview of the major elements of the ACOMS project. It discusses the basic objectives of the project, the major design elements of the ACOMS survey, and the structure of the youth and parental questionnaires.

Chapter 3 discusses the structure of the tables and how to interpret them and to estimate populations and markets.

Appendix A contains the supplementary tabulations for the officer markets. The tabulations are indexed in two ways. Index A is alphabetical by variable name. Index B is by order of presentation.

Appendix B contains the ACOMS annotated questionnaire for Spring 1987 and an introductory guide to the questionnaire. The annotated questionnaire documents all items used during the interviews, along with instructions for question sequencing and skip patterns. The extensive annotation accompanying the questionnaire items makes this an important document for readers. Readers of this volume can use the annotated questionnaire to understand the survey instrument, as well as who was asked different sets of questions.

Appendix C contains the ACOMS change forms and a guide to the change forms. The cumulative change forms document how the survey instrument has been amended from one quarter to the next. Because a few of the tables contain data from two different wordings of a

question, the change forms are an important source of information.  
See the ACOMS users' manuals (Westat, Inc., 1987, 1988) for the first  
two versions of the questionnaire.

## 2. AN OVERVIEW OF ACOMS

### ACOMS Objectives

In an era when manpower experts are predicting increased difficulties for recruiting into military service, it becomes increasingly important for the U.S. Army to improve understanding and management of the factors that enable it to meet its manpower goals. Advertising communications represent one such factor.

Advertising is used extensively by the various Army components--the active Army, the U.S. Army Reserve (USAR), the Army Reserve Officers' Training Corps (ROTC), and the Army National Guard (ARNG)--to induce changes in the knowledge, attitudes, and behaviors of youth and their parents. Each year, the Army makes a sizable investment in the development and exposure of advertising communications intended to disseminate favorable Army images and to increase the enlistment propensity of eligible youth.

While inhouse assessments have been conducted by the Army's main advertising contractor, and advertising has been touched upon by other youth surveys such as the Youth Attitude Tracking Survey (YATS), there had been no indepth, independent examination of the effectiveness of Army communications prior to the Army Communications Objectives Measurement System (ACOMS) effort. ACOMS was designed to help the Army monitor and evaluate its advertising communications program and to provide ongoing measurement of the extent to which Army communications meet the communications objectives for different target groups (Nieva & Elig, 1988).

The objectives of ACOMS are:

- (1) To support Army assessments of advertising program effectiveness in a timely fashion;
- (2) To support Army assessments of advertising strategy in an integrated framework; and
- (3) To support Army advertising management and planning for future strategy.

ACOMS was designed to monitor and assess the effectiveness of the Army's advertising communications program. Data collections were designed to track changes over time in levels of advertising recall, and subsequent effects on the knowledge, attitudes, intentions, and actions of youth and their parents. In addition, a longitudinal survey was designed to be part of ACOMS to further the understanding of the lagged and cumulative effects of advertising and of the relationships between advertising and other factors that influence the eventual enlistment decision.

Thus, ACOMS was designed to contribute to the development of behavioral and economic models of enlistment decisionmaking currently being developed by the Army Research Institute. As better models of the enlistment decision process are developed, more effective marketing strategies can be applied to help the Army attain its annual recruiting goals.

A second set of goals for ACOMS involved the use of ACOMS data to assess the Army's advertising strategy. ACOMS was designed to be used to examine the extent to which the Army's intended messages are actually exposed to, and perceived by, their target audiences. Advertising strategy can be supported by the analysis of ACOMS data to refine the definitions of the Army's major market segments. Reactions to advertising, media habits, and other variables can be analyzed for the major demographic segments of interest to the Army's recruiting categories, broken down by major regions. In addition, ACOMS was designed to support the identification and validation of new segments defined in both attitudinal and demographic terms. This information is important in determining the nature and extent of advertising to be directed at each segment.

ACOMS was designed so that the data would be useful in examining brand differentiation, for example, comparison of image elements--at several levels: differentiation among the active Army, Reserve, National Guard, and ROTC attributes; differentiation between the Army and other services' attributes; and differentiation between the Army's position and distinctive advantages vis-a-vis civilian alternatives (i.e., college and civilian employment). This information helps the Army make decisions on relative emphasis of various communications about different attributes and offers of the Army components. See Gaertner & Elig (1988) for details on the possible utilizations of the data that guided the development of the ACOMS survey effort.

#### The ACOMS Survey Overview

The following discussion provides sufficient detail for an understanding of the ACOMS survey effort. However, readers who need detailed information on the methodology are referred to Nieva & Elig (1988) for the survey design and to Nieva, Rhoads, & Elig (1988) for the survey execution.

The ACOMS survey was designed as a continuous data collection effort to monitor the Army's advertising program over time. A national probability sample of youth and their parents was interviewed using computer-assisted telephone interviewing (CATI) technology. The Waksberg Random Digit Dialing (RDD) method was used to locate households with eligible youth.

Respondents were questioned regarding a variety of issues related to advertising and the enlistment decision process, e.g., their media habits, knowledge about various Army components and

offers, perceptions of various Army attributes, and enlistment intentions and behaviors. Survey instruments for the youth and parental respondents are divided into a number of topical modules, the majority of which are parallel in form and content for the two groups. Because of the nature of the survey objectives and pragmatic limitations on respondent burden, the instruments have complex structures involving branching, random allocation of questions to subpopulations, and randomized ordering of list presentations. To a great extent, such a degree of instrument complexity was made possible by the sophistication of Westat's CATI technology.

#### The Population Sampled for ACOMS

Telephone interviews with youth were conducted for ACOMS on a continuing basis from 13 October 1986 through December 1987. Eligibility criteria for the youth sample consists of 16- to 24-year-olds, living in the contiguous 48 states, who have no prior military service nor contractual commitment to serve, who are not institutionalized, and who are not graduates of four-year colleges. Sampling and weighting procedures make the ACOMS sample a nationally projectable sample of this population (Mohadjer & Waksberg, 1988).

There are two major categorizations made within the overall sample frame. First is a gender distinction of the Male Sample (MS) and Female Sample (FS). Because the major requirements for personnel for military service are set by Congress for males, and because the requirements for males are harder to fill than the smaller requirements for females, sampling is was designed to obtain a sufficient number of males for analysis, with females being subsampled. While the sample of females is sufficient for national analysis, it is not sufficient for very many subgroups.

The second major categorization is based on education. In fact the overall sampling requirements for military service eligibility were set to obtain a sufficient sample of higher priority males, rather than just of males in general. The priority on education and thus for sampling were set by the finding that recruits with regular traditional high school diplomas (or if without a diploma, they have obtained at least one semester of college credit through college attendance, 15 semester hours or 20 quarter hours) have much lower attrition rates than do those recruits without these credentials. The Department of Defense (DOD) study (cited in Reynolds, 1987) found that alternative credential holders had an attrition rate almost as high as (75% of rate) those with no credentials. The ACOMS Primary Sample (PS) consists of those respondents expected to be able to enlist in the military in the priority education group (Tier 1). The ACOMS Secondary Sample (SS) are respondents whose eligibility is limited by either being in DOD Tier 2 (Adult Basic Education (ABE) certificate holders or General Educational Development (GED) holders or attendees) or Tier 3 (high school non-completers without an ABE or GED who are not enrolled in regular high school or college).

Combining these two major categorizations yields four primary samples within the total ACOMS sample: (a) Primary Male Sample (PMS); (b) Secondary Male Sample (SMS); (c) Primary Female Sample (PFS); and (d) Secondary Female Sample (SFS).

Other major analytic categorizations: PMAS and YATS. These major categorizations are too all-inclusive for some purposes. In particular, the market for enlisted personnel is rarely considered to include youth with more than two years of college, or youth who have taken a college ROTC course. These youth are excluded from the Enlisted Recruiting Market, a grouping created for the tabulations in Appendix A of the Supplementary Tabulations of Enlisted Markets (Rhoads, Elig, McEntire, & Hoke, 1988). For even more refined targeting of male enlisted market groups, a subset of the males in the Enlisted Recruiting Market who are also in the Primary Sample is defined as the Primary Male Analytic Sample (PMAS), consisting of PMS members who have not yet begun their junior year in college and have never taken a college ROTC course. A parallel definition can be made of the Primary Female Analytic Sample (PFAS).

Neither these sample groups nor any other sample group reported for ACOMS parallels exactly the sample definition of the Youth Attitude Tracking Study II (YATS II), although the respondents in the ACOMS Enlisted Recruiting Market subset is close to the definition of the YATS II sample. See Research Triangle Institute (1987) for supplementary tabulations similar to the ones reported here. Note that no group reported in the YATS II supplementary tabulations parallels any group reported in the ACOMS Supplementary Tabulations. However, because the ACOMS sample is inclusive of anyone eligible for YATS II and the ACOMS data files contain a designator of YATS II eligibility, analysts can do analyses with parallel groups from both surveys.

Officer markets and college influencers for enrollment in the college Reserve Officers' Training Corps are special groupings of ACOMS respondents created for tabulation in Appendix A. The Total Market Group for the ROTC Cadet Command is the PMAS market further restricted to exclude students in two-year colleges and high school students who are either work oriented (not reporting that they plan to attend college), or who are not high school juniors or seniors. A College-influencer group is also of interest to the Cadet Command. This influencer group is composed of four-year college junior and senior males in the ACOMS sample.

Supplementation for Hispanic males. Because the Army wishes to continue fostering equal opportunity, and because the Congress has directed that certain advertising funds should be set aside for minority advertising, special care was taken in ACOMS to assure that there would be sufficient samples of Black and Hispanic males for analysis. Because the screening for the main youth sample was not expected to yield a sufficient number of male Hispanics for analytical purposes, additional Hispanic males were interviewed in areas of telephone exchanges known to have high densities of Hispanics.

The parental-linked sample. One youth was designated to have a parent also interviewed in each household with a Primary Sample youth in the age range of 16 to 20. "Parent" did not necessarily imply biological parent, but could include stepparents, foster parents, guardians, or adult relatives. The youth respondent was allowed to self-define the parent, where appropriate. For a randomly chosen half of the respondents, the eligible parent was a female; for the other half the parent was a male. Eligible parents did not have to live in the same household as the youth. Note that certain questions on social influence were asked only of parental-linked youth and that these questions cannot be generalized to all youth interviewed for ACOMS.

Eligibility requirements. While the definition of eligibility requirements is apparently straightforward, the operational definition of the sample is a bit more complex. Age is defined by the date of birth rather than self-reported year of age. Each potential respondent between 16 and 24 years of age was asked whether he/she had served in the military (Army, Navy, Air Force, Marines, the Reserve, or the National Guard), or was currently in the Delayed Entry Program. These persons were excluded. Finally, youth were asked the highest level of education they had completed and for which they received credit. Those persons indicating they had graduated from four-year college were excluded.

In addition to the age and prior service qualifications of the overall sample, eligibility for PMS/PFS requires an assessment of educational attainment. High school diploma graduates are defined as those earning a regular high school diploma, thus excluding those with GED and other certificates (classified as SMS/SFS unless they are enrolled in a two- or four-year college). Current enrollment during the school year was ascertained directly, and as above, required enrollment in a regular high school or a two- or four-year college, thus excluding enrollment in training and vocational/technical non-degree programs (considered SMS/SFS if they did not complete a regular high school diploma).

#### Sampling Procedures and Characteristics

Sample selection. The sample was selected using the Waksberg Random Digit Dial (RDD) procedure, which provides an unbiased representative sample of eligibles in telephone households. The method involves the identification of eligible respondents within households from randomly selected clusters of telephone numbers.

The household screening and sample selection process was carried out as a single, integrated operation for all population subgroups. As households were screened, those with any eligible persons were identified and a subsampling operation carried out to select the desired number of sample persons in each of the various subgroups.

This basic RDD approach was expected to yield the required sample sizes for most population groups of interest, with the exception of Hispanic male youth. In order to obtain the required sample numbers of this relatively rare group, a supplemental sample was drawn from telephone exchanges known to have high Hispanic density. The supplementation method is discussed further by Mohadjer & Waksberg (1988).

ACOMS as a complex sample. A simple random sample is a sample in which every individual in the population has an equal probability of selection, and their selection is independent of each other. ACOMS does not have a simple random sample. Several features of the ACOMS sample design classify it as a complex sample. One important feature of the ACOMS sample design is that females were sampled at a much lower rate than males; also Hispanic males were sampled at a much higher rate than the rest of the population. That is, females had a smaller chance of selection than males, and Hispanic males had a higher chance of selection than other males. Therefore, different weights are needed to adjust for the different rates at which sub-groups have been sampled. The sample weights are used with ACOMS data to provide estimates of statistics (means, proportions, etc.) that would have been obtained if the entire population had been surveyed. The weights also include adjustments for various other factors in the ACOMS sample design, e.g., multiple telephone numbers in a household, non-response and clustering effects. Details of the ACOMS weights are provided by Mohadjer & Waksberg (1988).

#### ACOMS Questionnaires

Three survey instruments were used for ACOMS: the household screener, the youth questionnaire, and the parent questionnaire. The screener and youth instruments are presented in Appendix B. Parental data is not covered in this report, see Nieva & Elig (1988) for the parental instruments.

The household screener. The household screener is a brief (three-minute) instrument, and the screening interview was conducted with any knowledgeable household member in order to locate youth who were eligible for the full ACOMS interview. Since telephone numbers were contacted at random, the screener interview was used to identify and eliminate non-household telephone numbers (e.g., business and institutional telephone numbers) as well as households that did not have youth that fulfilled ACOMS age, education, and prior-service requirements.

The youth and parental questionnaires: the underlying conceptual model. The youth and parental interviews were designed with parallel modules that provide various measures of a modified Hierarchy of Effects model (Fishbein & Azjen, 1975) of Army advertising effectiveness. In brief, the model suggests that advertising affects multiple criteria of advertising effectiveness (i.e., recall

of Army advertisements, positive perceptions about the Army, positive attitudes towards Army enlistment, intentions to enlist, and actual enlistment-related behaviors) in a stepwise process. That is, advertising affects recall, which in turn affects attitudes toward the Army, which then influences actual behaviors related to enlistment.

The model also posits the importance of social influence, especially parental influence, on the youth's attraction to the Army. Parental attitudes towards the Army are affected by advertising in a stepwise process that parallels that found in youth. Eventually these attitudes are manifested in actual attempts to influence their sons and daughters to join the Army. Further discussion of the model is found in The ACOMS Survey Design (Nieva & Elig, 1988) and The ACOMS Survey Analysis Plan (Gaertner & Elig, 1988).

The youth questionnaire modules. The youth interview provides the major measures of the dynamics and effects of Army advertising available in ACOMS. In accordance with the Hierarchy of Effects model, the youth interview is divided into 14 modules. In order to achieve a 30-minute average interview, a complex questionnaire structure was developed: eight questionnaire modules are "core" (i.e., asked of all respondents), and six are "rotating" (i.e., asked of a subset of respondents). Further, as described further below, the Perceptions module is divided into sections that are allocated to subsamples in conformance with the target markets of the various Army components.

The core modules are:

- (1) Education and Employment which elicits employment history and measures of course content and school performance useful for assessing quality.
- (2) Intentions and Propensity which asks for the respondent's plans for the next few years, constructed to parallel and supplement measures of Army propensity in YATS.
- (3) Behaviors which elicits information on the respondent's activities relative to enlistment, employment and/or college enrollment.
- (4) Importance of Attributes which assesses the importance to the respondent of attributes defined by the Army's communications objectives. These items correspond to the evaluation component of the Hierarchy of Effects model.
- (5) Knowledge-Recall which asks for unaided and aided recall of Army (by component) and other service advertising, presented in random order. The

respondent was also asked where the advertising was seen or heard, what its main message was, and whether he/she believed and/or liked it.

- (6) Attitude Toward Army Advertising which ascertains how much the youth likes and believes the advertisements he/she has seen or heard.
- (7) Perceptions/Beliefs which asks whether the Army (by component), other services, military service in general and/or college and civilian employment offer the attributes defined by the Army's communications objectives presented in random order. These items correspond to beliefs in the Hierarchy of Effects model.
- (8) Demographics which elicits information on respondent's ethnicity, marital status, social security number, socioeconomic background, and current residence location.

It should be noted that although the Perceptions/Beliefs module is "core" (i.e., all youth respondents received questions from this module) and is central to ACOMS' concerns, not all questions in the module are asked of all respondents. The Perceptions/Beliefs module contains questions regarding a list of attributes which correspond to the main copy points or communications objectives of Army advertising. Respondents were asked whether these attributes are descriptive of 10 referents (Army, Army ROTC, ARNG, USAR, Navy, Marines, Air Force, Military Service generally, College, and Work) that may be perceived by the youth as future options. Since asking any single individual to respond to the attribute list for all 10 referents would have been an intolerable burden, sections of the Perceptions/Beliefs module were asked of different groups of respondents, defined in terms of educational attainment and career plans. The allocation plan reflects the market priorities of each of the Army components and was devised in collaboration with the Army's Special Advisory Group.

The noncore modules are:

- (1) Media Habits which elicits information on the amounts of television, radio, and print material the respondent is regularly exposed to, and his/her favorite programs and print vehicles (asked only of a randomly selected half of all youth respondents).
- (2) Knowledge-Slogan Recognition which asks whether the respondent can identify slogans utilized in Army, other services, and joint-service advertising presented in random order (asked only of a randomly selected half of all youth respondents).

- (3) Knowledge-Awareness which asks for the respondent's level of knowledge concerning Army offers (asked only of a randomly selected half of all youth respondents).
- (4) Parental Location Information which elicits information required to contact parents (asked only of parental-linked target youth).
- (5) Social Influences which asks for the respondent's assessments of the attitudes of friends, parents, and others toward enlistment (asked only of parental-linked target youths).
- (6) Tracking Information which elicits information required to trace youth selected for possible inclusion in a longitudinal sample. Information requested includes anticipated changes in telephone number, names and phone numbers of employer and two others likely to know respondent's whereabouts (asked only of longitudinal sample).

Thus, the noncore modules were asked of particular groups of respondents. Tracking and Social Influence were only asked of target youths in the parental-linked sample, because these respondents allow the fullest test of the social/normative aspects of the conceptual model. In addition, Slogan Recognition, Knowledge-Awareness, and Media Habits modules were asked of only a randomly selected half of all youth respondents, resulting in substantial saving of time.

The parental questionnaire. The parental interview, which was conducted with a predesignated parent of target youths 16 to 20 years of age, was constructed in parallel with the youth interview. It contains eight modules in the following order:

- (1) Parental Influence which probes whether the parent has discussed military service with the target youth, parental expectations for the youth, and beliefs that military service is a good or bad idea for most young men and women.
- (2) Importance of Attributes repeats the items in the youth version which assess the importance of attributes, this time asking the parent about the importance of these attributes for the target youth.
- (3) Media Habits items are identical to those asked of the youth and focus on the amounts of television, radio and print material the parent is regularly exposed to, and his/her favorite programs and print vehicles.

- (4) Knowledge-Recall questions are also identical to those in the youth questionnaire and ask for unaided and aided recall of Army and other service advertising with questions in random order.
- (5) Attitudes Toward Army Advertising items address how much the parent likes and believes the advertisements he/she has heard or seen using the same items as those in the youth interview.
- (6) Perceptions are probed with the identical questions asked of the target youth regarding the extent to which the Army (by component), other services, military service in general, college and civilian employment offer the attributes defined by the Army's communications objectives.
- (7) Knowledge-Awareness items assess the parent's knowledge, as in the youth interview, of Army benefits and programs.
- (8) Demographics items elicit information on the parent's ethnicity, marital status, socioeconomic background, and military experience.

In essence, the parental interview adds one module to the youth questionnaire (Parental Influence), and drops Education and Employment, Intentions/Propensity, Behaviors, Social Influences, Slogan Recognition, and the Parental Location and Tracking modules from the youth interview.

Structural features of ACOMS questionnaire. It has been noted previously that some questionnaire modules and sections within the Perceptions module were asked only of particular groups of respondents. This feature of the ACOMS questionnaires, adapted largely to maintain an acceptable total questionnaire length, resulted in differences in the number of respondents to various parts of the questionnaire.

In addition to the rotating modules and planned subsample allocation to the Perception sections, the ACOMS questionnaires are characterized by extensive branching and skip patterns. Skip patterns or question branching are built-in questionnaire instructions that steer respondents to other questions based on their responses. Thus, they skip respondents past questions which, for them, are irrelevant. Skip patterns allow all interviews to be tailored to individual respondents. Figure 1 is an example of a series of questions without skip patterns. Figure 2 is an example of a series of questions with one skip pattern which prevents respondents not intending to attend college from receiving college-oriented questions.

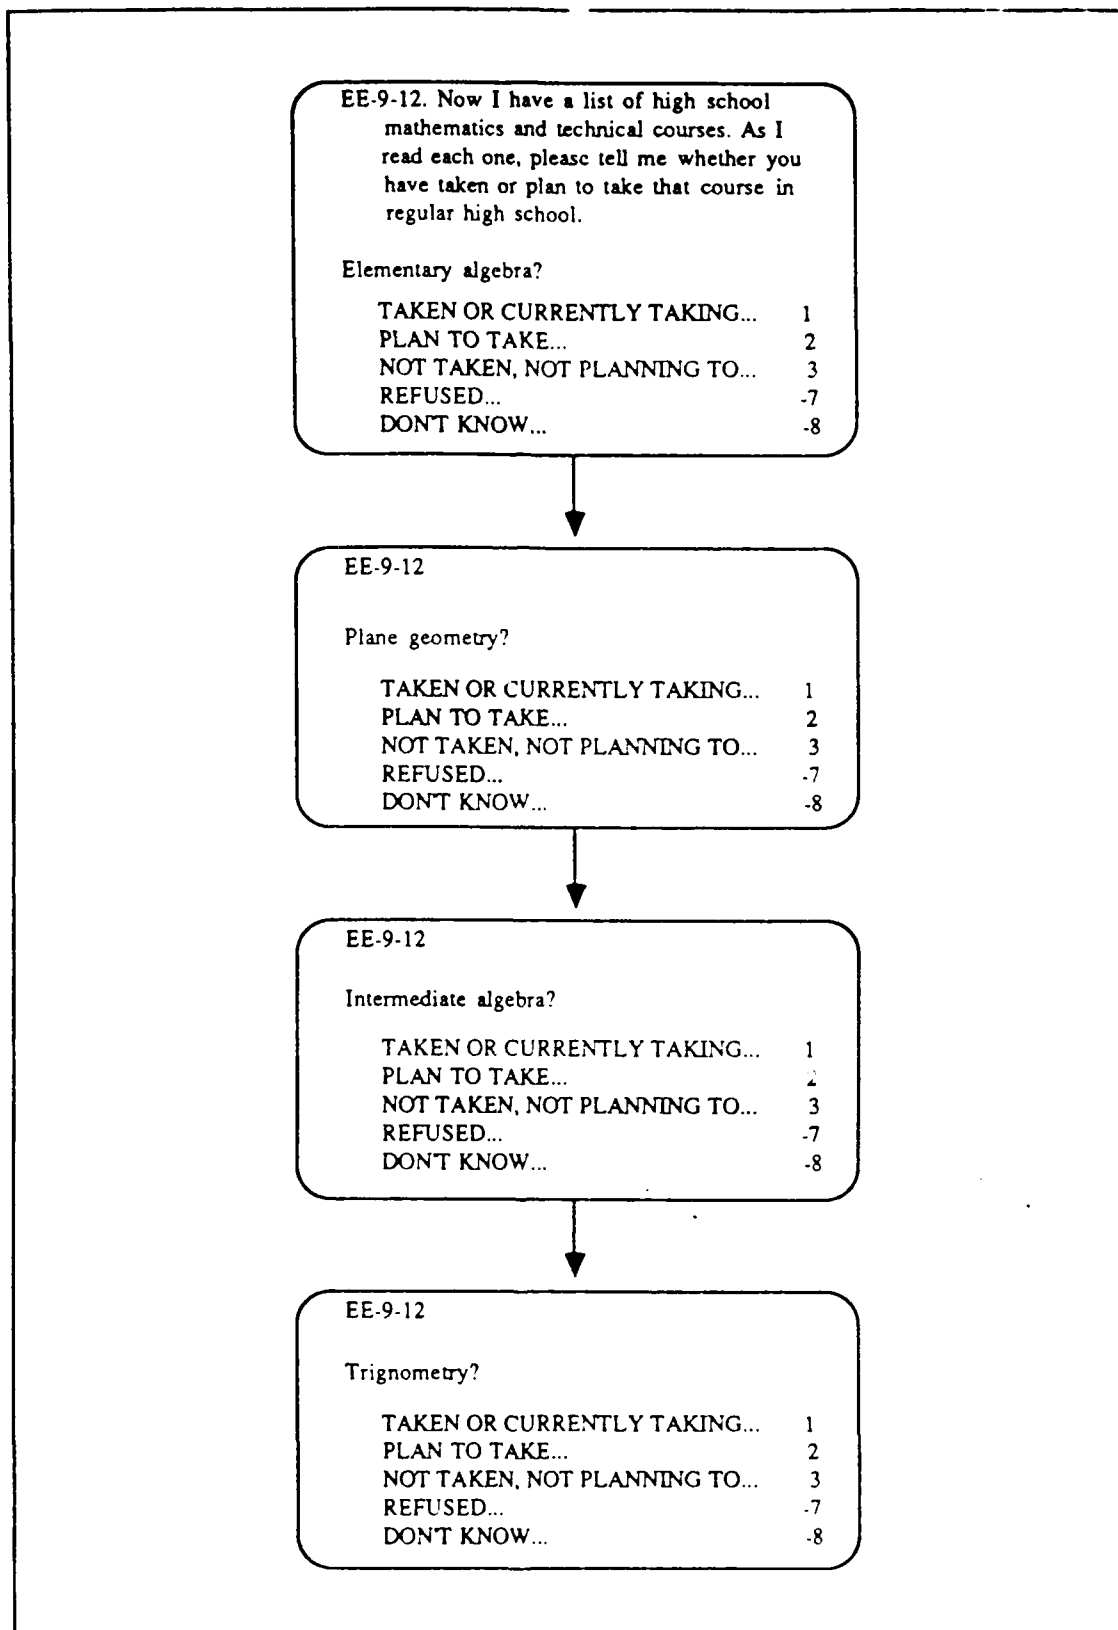

Figure 1. Example of questionnaire section without skip patterns.

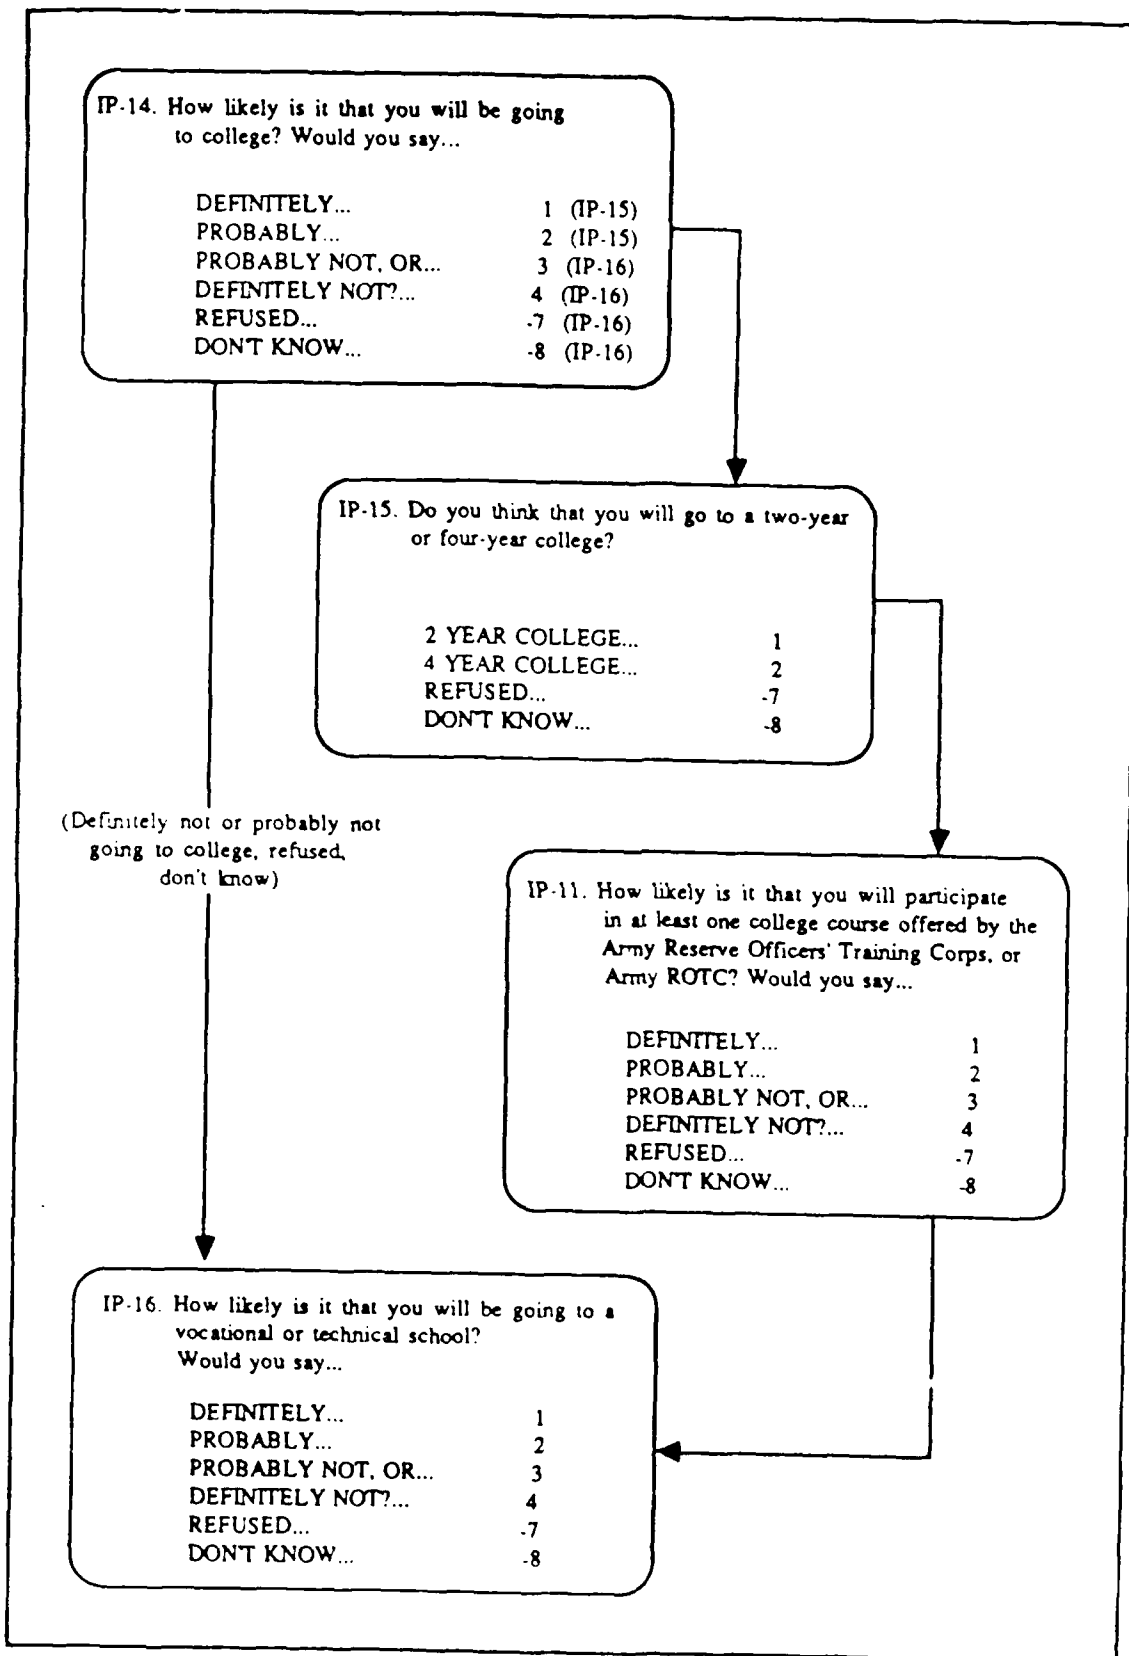

Figure 2. Example of questionnaire with skip pattern.

The combined effects of the rotating modules and embedded skip patterns make it essential for readers of ACOMS tabulations to become highly familiar with the questionnaire structure. To assist readers, documentation provided in the annotated questionnaire (Appendix B) describes the subpopulation which received each question.

### 3. DATA TABULATION CONTENTS AND CONVENTIONS

This chapter provides information for use by readers when interpreting the tabulations in Appendix A.

These tabulations are based on interviews conducted with subsamples of 2,152 respondents from the total of 6,774 16- to 24-year olds who were interviewed between 13 October 1986 and 30 June 1987. The 30-minute interviews were conducted by phone. Interviewers were assisted by computers that selected the order of questions and recorded the responses, i.e., Computer Assisted Telephone Interviewing (CATI). Samples were drawn monthly by random-digit-dialing procedures. Household screenings to identify eligible respondents were completed in 83.4% of sampled households. Interviews were then completed with 76.3% of eligible youth identified in the completed screenings. The combined response rate was 63.6%.

Respondents were selected and the samples were weighted to the eligible U.S. population defined as 16- to 24-year-old youths who live in the contiguous 48 states; who had no prior military service nor contractual commitment to serve; who were not institutionalized; and who were not graduates of 4-year colleges. The U.S. population eligible to be in the Total ACOMS Sample is estimated to be 30,954,838, based on data from the Census Bureau's Current Population Survey of March 1986 (Bureau of the Census [producer and distributor], 1986). The 2,152 respondents reported in this volume represent 5,383,115 youth based on the same Census Bureau data.

#### Groups and Subgroups Used for Tabulations

Demographic information collected from the Total ACOMS Sample was used to group respondents for further analysis. Tabulations are presented in Appendix A for three major groups: (a) College Influencers (college juniors and seniors); (b) College Market (freshmen and sophomores in four-year colleges); and (c) High School Market (juniors and seniors in regular high schools who report that they are definitely or probably going to go to college). These groups are defined briefly on each page of Appendix A, and details of why these segmentations are important are discussed in Chapter 2.

All three groups are reported at the national level. As well, the total national market (college market plus high school market) and the total four-year college sample are reported at the national level. Table 1 presents counts of respondents within categories, both weighted and unweighted.

Within the Officer Markets, two different breakdowns of information are presented: ROTC Course Propensity, and ROTC Region by educational group.

Table 1

## Sample Groups Within the ACOMS Total Youth Sample

Population	Count	Weighted Count	Weighted Percentage
NATIONAL SAMPLES:			
Total National Samples	2,152	5,383,115	100.0
Total College	913	2,859,968	53.1
College Influencers	449	1,540,701	28.6
College Market	464	1,319,267	24.5
High School Market	1,239	2,523,147	46.9
OFFICER MARKETS (HSM + CM):			
Total Officer Market	1,703	3,842,414	100.0
ROTC Course Propensity			
Definitely	84	200,151	
Probably	354	732,708	
Probably not	881	1,993,315	
Definitely not	339	820,919	
Total Propensity Answers	1,658	3,747,094	
ROTC Region I			
Total	485	1,147,633	29.9
High School Market	353	747,757	19.5
College Market	132	399,875	10.4
ROTC Region II			
Total	493	965,579	25.1
High School Market	341	578,086	15.0
College Market	152	387,493	10.1
ROTC Region III			
Total	378	953,243	24.8
High School Market	281	653,129	17.0
College Market	97	300,114	7.8
ROTC Region IV			
Total	347	775,960	20.2
High School Market	264	544,175	14.2
College Market	83	231,785	6.0

Youths who said that they are DEFINITELY or PROBABLY going to college were asked "How likely is it that you will participate in at least one college course offered by the Army Reserve Officers' Training Corps, or Army ROTC?" (Question IP11). The definite answers to this question are tabulated under ROTC Course Propensity. Youth who answered don't know or refused and youth who didn't know if they were going to college were not tabulated in these columns.

The other breakdown of Officer Markets is by ROTC Region and market within ROTC Region. The ROTC Regions are shown in Appendix D.

These groups differ from the ROTC Male Sample reported in Table 6 of the ACOMS quarterly reports (Keil, Gaertner, Nieva, & Gay, 1987; Keil, Gay, Nieva, & Gaertner, 1987). A total of 314 youth in junior college or newly graduated from junior college have been deleted. These tabulations also exclude 12 youth newly graduated from high school who are planning to attend a two-year college in the future. In addition, 335 youth in eighth, ninth, or tenth grade have been deleted. Thus a total of 661 males has been deleted from the three quarter count of 2813, to produce a National Sample of 2152 males.

#### Tabulation Format

The tabulations provide information about the distribution of responses for the combined three quarters (October - June) of data collected for the ACOMS questions (Appendix B) during School Year 86/87. Tabulations are made of percentages based on the sample data weighted to yield population counts. The bottom row of the tabulations lists the actual number of respondents on which the weighted estimates in the columns are based. These numbers can be used to judge the relative reliability of the estimates. The larger the number of respondents, the more reliable, in general, are estimates based on the responses.

As is the case with the Supplementary Tabulations of YATS II results (Research Triangle Institute, 1987), it is not appropriate to use these data to make comparison statements about significant differences. Because of considerable variation in survey design effects on the estimates, generalized standard errors cannot be provided. Some estimates may be very precise with errors of plus or minus 1% while other estimates on the same page of tabulations may be plus or minus 20%. Number of respondents is only one contributing factor to the size of the error estimate.

Data from the tables should be used for determining how respondents reacted to questions and for framing questions about issues that may be of further analytical interest.

### Reading the Tabulations

The percentages in the tabulations are column percentages, not row percentages. For example, in the table for YEDPLAN on page A-23, responses are presented for question EE3 "What is the highest grade you plan to complete?" In the total College sample, 0.2% said two years of college, 44.7% said four years of college, and 2.5% said they didn't know. It is possible to compare the subgroups. For example, 51.9% of the Officer Market in the 2nd ROTC Region plan to complete four years of college, and 49.2% of the Officer Market in the 3rd ROTC Region have such plans. However, one cannot read in the tabulations what percentage of the youth who plan to complete four years of college are in each ROTC Region. However, as explained below, the row percentages can be estimated if the reader does not have access to the data files for easy calculation.

### Estimating Populations from the Tabulations

Table 1 lists the weighted counts represented by the respondents in each column of the tabulations. These weighted counts are estimates of the U.S. population in the subgroups presented in the columns. Continuing with our example of YEDPLAN, we can estimate that there are 501,136 youth in the Officer Market in the 2nd ROTC Region who plan to complete four years of college. This estimate is made by multiplying the percentage from the tabulation of YEDPLAN (51.9% for Officer Market youth in the 2nd ROTC Region) by the population estimate in Table 1 (965,579 for Officer Market youth in the 2nd ROTC Region). Similarly an estimate can be made of 468,995 for Officer Market youth in the 3rd ROTC Region who plan to complete four years of college, and an estimate can be made of 1,994,213 for the total Officer Market.

These estimates can be made for each region and the percentages estimated for the composition of the total Officer Market who plan to go to four-year colleges by ROTC Region. Based on estimates of 965,579 for the 2nd ROTC Region Officer Market and 1,994,213 for the total Officer Market, respectively, the percentage of youth planning to go to four-year colleges who are in the 2nd ROTC Region is 48.4% ( $100 \times 965,579/1,994,213$ ).

Note that items in the Social Influences (SI) and Parental Location (PL) modules were only asked of younger (16- to 20-year-old) respondents. For these items, population estimates from Table 2 should be used. These are the only items for which the populations in Table 1 are not estimated in the tabulations. Other items asked of only some of the respondents were asked of a random sample of respondents. Therefore, the estimates are made for the entire population, but based on fewer respondents. Some items were only asked in certain quarters of the year. These items were still weighted up to the populations so that Table 1 is the appropriate table to use for population estimates. The only other set of items in the questionnaire that were not asked of all respondents is the

Table 2

## Sample Groups Within the Parental-Linked Sample

Population	Count	Weighted Count	Weighted Percentage
YOUNG NATIONAL SAMPLES			
Total Young National Sample	1,526	4,026,461	100.0
Total College	457	1,529,579	38.0

Total	310	927,444	25.4
High School Market	240	652,605	17.9
College Market	70	274,839	7.5
ROTC Region IV			
Total	301	772,549	21.2
High School Market	236	554,254	15.2
College Market	65	218,295	6.0

set of items that involve skip patterns. Because all respondents are included in the tabulations whether they were asked the question or not, the percentages are still based on the populations estimated.

Table 2 presents population estimates for respondents asked about social and parental influence. These items and the linked parental interviews were asked of only part of the population of youth. Compared to other tabulations in this report, responses to these items cannot be generalized to 21- to 24-year-old youth.

In summary, the tabulations can be read for percentages of the subgroups who responded in particular ways. These percentages can be used with the population estimates in Table 1 (or in Table 2 for items from the SI and PL modules) to estimate population sizes and to estimate the relative sizes of the subgroups as parts of the population who answered the questions in certain ways (row percentages).

#### Conventions Adopted for the Tabulations

Each tabulation page in Appendix A contains the responses for one variable in the ACOMS main interview data files (Westat, 1987a, 1987b, 1987c). These variables are either survey items or variables derived from the survey items. The derived variables used for grouping subjects into analytical categories are presented first, before the survey items. Most variables are in the order of the survey items in the final quarter of the school year (see Appendix B), but items which were added after the first quarter of data collection are at the end of the tabulations, rather than in the order of the questionnaire.

Table 3 lists the variable order numbers for all survey items by the questionnaire module. These variable numbers indicate the relative order of variables in the data file and thus in the tabulations. Note that all variables in the data file are not of analytical interest when tabulated separately, so not all variables appear in the tabulations.

At the top of each tabulation page is information that identifies the variable tabulated: (a) the variable name (e.g., YEDPLAN), (b) screen number (e.g., EE3), (c) a short description of the question (e.g., HIGHEST GRADE PLAN TO COMPLETE), and (d) the data file order number (e.g., 125). The screen number contains a two-letter code that indicates the questionnaire module (such as EE for education and employment). Table 3 lists the module codes, module names, and order numbers of the variables in each module. The order numbers, variable names, and screen numbers can all be used to cross-reference the tabulations (Appendix A) to the annotated questionnaire (Appendix B).

Two indexes are provided to help locate items in Appendix A. Index A is an alphabetical listing by variable name. Index B is in the order of presentation in Appendix A.

Table 3

## ACOMS Questionnaire Modules and Variable Order Numbers

---

Module Code, Name	Order Number
EE Education and Employment	115-140, 582-584 695, 711-724
IP Intentions and Propensity	141-175
BE Behaviors	176-240, 725-727
SI Social Influences	241-270
IA Importance of Attributes	272-289, 696-697
MH Media Habits	290-349
KR Knowledge-Recall of Advertisements	351-395
AT Attitude toward Army Advertising	399, 400
KS Slogan Recognition	402-409
PE Perceptions	420-553, 703, 704
KA Knowledge-Awareness of Army Offers	554-569
DE Demographics	19, 570, 574-581 705, 706
PL Parental Location	589

---

Note: Order numbers listed are ranges. A number of variables were not tabulated for this volume.

Selection of items for tabulation. All questionnaire items that appeared on the instrument for analytic reasons and that could be sensibly generalized to the population in question are included in the data tables. Items were excluded: (a) if they appeared for operational/screening reasons; (b) if they were asked only during particular seasons (such as some of the education items); or (c) some items that duplicated the crossing variables.

Items that were dropped from the instrument after only one quarter of data collection have been excluded. These items were dropped either because they were of less interest to the ACOMS audience or because more refined questions were introduced to get the same information. Items added to the instrument in later quarters have been included, even though data are not available for the full year. Note that such items have been weighted to the entire population.

Collapsing categories. For the most part, each row in a data table represents a single distinct response. However, continuous variables with a large number of categories have been collapsed for the tabulations. The questions that require such treatment, and the schemes that have been used, are listed in Table 4. Note that only the first mentioned magazine in question MH32 has been tabulated.

Derived variables. Certain tabulations are made of variables that cannot be found in the annotated questionnaire. The variable ECALCAGE (order number 14) represents the best available information from the screener and extended interview about the youth's date of birth or age in years. The variable ELIGTYPM (order number 10) provides a way to separate youth into Primary and Secondary sample groups based on education status. See discussions of the Primary Sample in Chapter 2. The variable YATSFLG (order number 12), was designed to allow a comparison between ACOMS data and data from the YATS II survey. Both ELIGTYPM and YATSFLG are derived from education information collected in the EE section of the youth main interview, age, and sex.

Several new variables have been derived from questionnaire variables for use in the ACOMS quarterly reports and are included on the quarterly ACOMS datasets. A description of the variables follows. More detailed explanations of the derivations can be found in the quarterly reports. (Keil, Gaertner, Nieva, & Gay, 1988; Keil, Gay, Nieva, & Gaertner, 1988).

The first set of derived variables combines the unaided recall of advertising with the aided recall of advertising from the KR section of the questionnaire. The variable names are YXAD12AR, YXAD12RO, YXAD12NG, YXAD12RV, YXAD12AF, YXAD12NA, YXAD12MC, YXAD12CG, YXAD12AL. The derived variables have order numbers 659 through 667. The source variables have order numbers in the range 351 through 385. These variables mirror the calculations used for quarterly report Table 9.

---

The second set of derived variables recodes the questions about knowledge of Army attributes into codes of KNOWS ANSWER and INCORRECT ANSWER. These variables mirror the calculations used for quarterly report Table 10. The new variables are YXKAEARN, YXKAEDBN, YXKASAME, YXKAGIAR, YXKAGIAF, YXKAGINA, YXKAGIMA, YXKAYRS, YXKADEP, YXKARGJN, YXKARGHS, YXKAWARD, YXKARGCL, YXKARGGI. The derived variables have order numbers 668 through 681. The source variables have order numbers 554 through 569.

The third set of derived variables is the Propensity to Enlist variables. They mirror the calculations used for quarterly report table one. The new variables are YXPRUNAC, YXPRAIAC, YXPRUNRV, YXPRAIRV, YXPRUNNG, YXPRAING, YXPRAIRO, YXPRUNGI, YXPRAIGI. The new variables are order numbers 682 through 690. They are derived from variables in the Intentions and Propensity section of the, questionnaire, order numbers 144, 147, 148, 162, 163, 164, 165.

Missing data summaries. At the bottom of each tabulation page is a box labeled MISSING DATA SUMMARY. In this box are unweighted counts of respondents who were not administered the question for reasons other than a skip pattern within a module. These counts are for the total ACOMS sample. For every table, there are three categories of missing data: (a) Randomization/rotation, (b) Instrument change, and (c) Other. Tables for variables from the PI and SL modules have a fourth missing data category for respondents not in the sample.

A number of tables have data missing because the questionnaire was designed to reduce respondent burden and only a fraction of the youth were asked questions from a particular module. Such counts appear in the Randomization/rotation line. Chapter 2, An Overview of ACOMS, describes the modules within the questionnaire. Data tables which present information from the Media Habits, Knowledge-Awareness of Army Offers, or Knowledge of Slogans modules show approximately one-half of the respondents as missing data in the Randomization/rotation line. Tables presenting data from various Perceptions modules also have fairly large counts of respondents with missing data because of the experimental design.

A few tables have missing data because the questionnaire was changed from one quarter to the next. Such counts are reported in the line labeled Instrument change. For example, in the Demographics module, the question "Do you live in the same household as one or both of your parents?" was changed to two questions in the second version of the questionnaire: "Do you live in the same household as your father or your step-father?" and "Do you live in the same household as your mother or your step-mother?" Thus, the tables for DE14 (Variable #705, YDSAMEPA) and DE14A (Variable #706, YDSAMEMA) show missing data counts of 2084 on the line labeled Instrument change.

The Other missing data line gives counts for a few individuals who were supposed to receive the question, but for some reason did not. It was decided to leave such counts out of the column percentages. (On the ACOMS data files, the special code .N is used to indicate such situations.)

Tables from the Social Influences and Parental Location modules only present data for Target youth, males and females, ages 16-20, who were part of the Primary Sample. Each of these tables lists 626 respondents as not in the sample because they were not drawn from the population for these items.

Weighting issues. Each quarter, weights were assigned to respondents to provide unbiased estimates of national counts. The national counts were taken from the Census Bureau's Current Population Survey of 1986. In each of three quarters of data collection the ACOMS respondents were assigned weights to sum to the CPS counts.

The weights used for the data tables in this volume were derived from weights on the quarterly ACOMS datasets. As each of the three quarters was originally weighted up to reflect the total population, the weights from the quarterly dataset were divided by three.

There were special weights used for the following questions: "Have you heard of the United States Army National Guard?", "Have you heard of the United States Army Reserve?", and "Have you heard of the Army Reserve Officers' Training Corps on a college campus?". These questions were asked only of a randomly-selected subsample of youth in the first version of the questionnaire. In later versions, all youth received these questions. Thus, in combining three quarters of data, the appropriate PE component weight was used for respondents who had been administered the first version of the questionnaire, while the core weight was used for later respondents.

#### Skip Patterns and Imputed Responses

There are several reasons why a question might be skipped for some respondents. The answer to a preceding question may indicate the question is irrelevant to a particular respondent, or answers to preceding questions may provide the information requested in later questions. An example of skipping because of irrelevance is that the question "Are you planning to attend a two- or four-year college?" is not asked of youth who have said they probably will not attend college. An example of skipping because previous answers provided the information is that if the youth said he had never submitted a college application, he would not be asked the question "In the past six months have you submitted a college application?" Such skip patterns allow the interviewer to collect more information in the time allotted and to avoid offending the respondent by asking what the respondent considers to be a question already answered.

For tabulations included in this report, every respondent who was skipped out of a question was assigned a response of NOT APPLICABLE (SKIPPED OUT). Thus the percentages reported in every table estimate the entire population named in the column heading. No attempt was made to impute a meaning for the inapplicables.

Readers who want to know what the NOT APPLICABLE (SKIPPED OUT) means for a particular variable will need to trace the possible reasons for skipping an item. Please see the annotated questionnaire in Appendix B for the information on skip patterns in the interview. Annotations for the questionnaire in Appendix B indicate the sub-population for which the questions were applicable. For example, perceptions of the Army National Guard are only asked of respondents who have heard of it, so the NOT APPLICABLE (SKIPPED OUT) respondents are those respondents who have not heard of the Army National Guard.

The meaning of the NOT APPLICABLE (SKIPPED OUT), that is, of how respondents would have answered if they had been asked the question, is not always clear. Readers will have to decide if the respondents who were skipped out of the perceptions of the National Guard are closer in meaning to "refused" or "don't know" or "neither agree nor disagree".

The meaning of NOT APPLICABLE (SKIPPED OUT) for some items can be known exactly from the data files but not from the tabulations. For example, a series of items might determine if the respondent was ever in the military; and if so, if it was the Army; and if so, if it was the Army National Guard. When the item on Army National Guard is tabulated in this report, all possible reasons for skipping the item are collapsed into the one response NOT APPLICABLE (SKIPPED OUT). If the different possible reasons for being skipped on an item are of importance to the reader, the data files would have to be used to reconstruct the reasons for being skipped. Tabulations in Appendix A only estimate what percentage of the population would have been skipped out of the question if they had been given the survey.

#### Effect of Questionnaire Changes on Interpretations of the Tabulations

##### Quarterly Questionnaire Changes

The ACOMS questionnaire was allowed to change on a quarterly basis. It was necessary that the contemporary and trend data from ACOMS be relevant to evolving Army advertising objectives and practices, yet maintain continuity of purpose and measurement. In addition, with experience with the questionnaire, better ways of asking items were discovered. However, to maintain continuity, most questions in ACOMS remained fixed and provided benchmark measures of change and impact.

With only a few exceptions, changes made in the ACOMS instrument during the first three quarters were all made to improve the instrument based on experience, rather than to reflect changes in the Army's advertising objectives or practices.

Substantive changes were made in certain attributes for which youth were asked to rate their importance to the youth and to rate their perceptions that the attribute was offered by the Army Reserve and Army National Guard. One attribute was dropped (serving your own community) and one was added (working part-time).

Appendix C contains Instrument Change Forms for the second and third quarters of the survey. These tables indicate how the youth instrument changed through the three quarters to the form printed in Appendix B for the Spring (third) quarter. The instruments for the Fall and Winter Quarters are available in the Users' Manuals (Westat Inc., 1987a, 1987b).

#### Impact of Changes

Some changes were so minor that the data were easily combined across quarters for the tabulations. For other items, the changes were significant and the treatment of the item problematical. The following description of how changes were handled is organized by the type of change.

Additions (change code A) and deletions (change code D). The major impact of this type of change is that estimates for these items are less precise because of being based on fewer respondents. These items may also be less accurate in reflecting respondents' views across the year if there were seasonal or incidental changes across the sampling period.

Note that regardless of where items were added to the questionnaire during the second or third quarter, they are presented at the end of the tabulations. Questions that were deleted before the Spring quarter have not been tabulated.

Location (change code L) and predecessor (change code P). A question may be interpreted differently by a respondent depending on the flow of questions leading to the item. Predecessor questions are known to influence at least some types of questions, particularly attitudinal questions where the previous questions set a context. Items are listed in the Change Tables in Appendix C with codes "L" and "P" as a warning.

For example, three items asking respondents if they had ever heard of (respectively) the Army Reserve, the Army National Guard, and the Army Reserve Officers' Training Corps (PE1A, PE4A, PE15A) were moved because it was possible that respondents would answer "no" to such a question to avoid answering a long list of questions about the component.

Also in the Perceptions module, the sequence of attribute questions was changed from Fall to Winter quarter. In the Fall quarter most respondents were first asked about their perceptions of the active Army, and then asked about their perceptions of some other Army component or some other service, college, or a civilian job. In later quarters, the respondent was asked about an attribute of the active Army and immediately about the same attribute of some other component or service.

To address the issue of whether changes in the administration of perceptions and importance questions resulted in systematic changes in responses, a special study was undertaken by Westat (Wilson, 1988). This study addressed the advisability of combining Fall and Winter quarter data files for analysis and scaling purposes. It concluded that, for present analysis, these files can be meaningfully combined and analyzed as a single data set (some caveats are made regarding combined importance data). For Army perceptions, inspection of frequencies, means, correlations, and factor analyses across quarters all lead to the same conclusion--no significant overall change in the structure of perceptions occurred between Fall and Winter quarters. The analysis of items in the Importance module produced more ambiguous findings.

Wording (change code W). Like location and predecessor changes, wording changes can be expected to affect responses. When a change was substantial, new variables were added to the data set. Old variables continued in use, however, if changes in wording were not extreme. The analyst should read the change forms in Appendix C carefully and make his or her own decision about willingness to accept a collapse of information over three quarters of data. The quarterly ACOMS data sets contain a variable, MVERSION, which allows the analyst to differentiate data between versions of a question. In general, wording changes have not been found to have a significant effect on responses.

Response codes (change code R). Response code changes were of two types: modification in wording, and addition and deletion of categories. For the first type of change, involving a modification in wording, data were combined across quarters. In one example, question EE9\_12, math courses taken or currently taking, interviewers were instructed to make the response code change from the beginning, even though the CATI screen continued to list a slightly different first response. For another example, the response code wording in the Perceptions section was changed from Fall to Winter quarter.

For the second type of change, where codes were added and deleted, categories were combined. For example, after the first three months of data collection, codes for Brother and Sister were added to DE17 (Variable #579, YDOWNREL) to replace the previous single code for Sibling. Since the brother/sister distinction cannot

be made for data collected during the first quarter, all three categories have been collapsed into the single category Sibling for the tabulation volumes.

Sub-population (change code S). Changes in sub-populations are changes in which respondents are skipped out of an item. Special coding has been applied to allow combination of data across three quarters for some of these changes.

During the second quarter of data collection, question DE36 (participation in ROTC, Variable #582) was skipped for those respondents who had never heard of ROTC. For the tabulation volumes, these respondents are treated as if they had answered "no," they had never participated in ROTC, so that these data are consistent with that collected in prior and subsequent quarters, when the question was asked of everyone.

Questions BE12, BE21, and BE24 concern whether or not the respondent has taken certain tests (Armed Services or college admission) or applied to a college during the previous six months. During the first six months of data collection, these items were asked of all respondents. At this point, the instrument was changed so that these questions were skipped for those respondents indicating (in response to newly-added questions) that they had never taken the action in question. In order to make the data consistent across all three quarters for these tabulations, these individuals (who had never taken the action in question) are tabulated as if they provided an answer of "no" to the six-month questions.

#### Summary of the Effects of Changes

A number of quarterly change tables have been produced for the ACOMS quarterly reports (Keil, Gaertner, et al., 1988; Keil, Gay, et al., 1988) comparing responses on selected questions from one quarter to the next using the Balanced Repeated Replication technique. Each table required computations of hundreds of differences. For nearly all tables which involved question changes, the number of significant differences found in each table was approximately 5% of the number of differences computed, or well within the realm of statistical chance. However, the change tables seem to suggest that care should be taken in interpreting data across three quarters for two questions, IA1 and BE12. The importance of having an experience you can be proud of was more important for college students in the second quarter than the first. The question about taking the Armed Services Vocational Aptitude Battery (ASVAB) in the past six months, BE12, had a lower number of "yes" answers in the third quarter than the second. A new precursor question about ever taking the ASVAB had been added.

In conclusion, the ACOMS Tabulation Volumes provide a great deal of information about youth in the United States. Interpretation of the tables, however, should be done while looking at the actual questionnaire in Appendix B and remembering the complex process used to collect and weight the data.

NATIONAL SAMPLES  
 16- to 24-year-old males living in continental US, who are NPS, not in service or DEP, non-institutionalized, not 4-year college graduates, have never taken a college ROTC course, are qualified for enlistment as a high school diploma graduate (Tier I), and who are in one of the following groups:  
 CI -- College Influencers: college juniors and seniors  
 CM -- College Market: freshmen and sophomores in 4-year colleges  
 HSM --- High School Market: college-oriented high school juniors and seniors

OFFICER MARKETS (HSM + CM)  
 Officer Markets are reported by Army ROTC administrative Regions (see map in Appendix D) and by ROTC Course Propensity -- reported intention to enroll in at least one college course offered by Army ROTC:  
 + = Definitely  
 \* = Probably  
 - = Definitely not  
 -- = Probably not

16- to 24-year-old males living in continental US, who are NPS, not in service or DEP, non-institutionalized, not 4-year college graduates, have never taken a college ROTC course, are qualified for enlistment as a high school diploma graduate (Tier 1), and who are in one of the following groups:

CI --- College Influencers: college juniors and seniors  
 CM --- College Market: Freshmen and sophomores in 4-year colleges  
 HSM --- High School Market: college-oriented high school juniors and seniors

OFFICER MARKETS (HSM + CM)

Officer Markets are reported by Army ROTC administrative Regions (see map in Appendix D) and by ROTC Course Propensity -- reported intention to enroll in at least one college course offered by Army ROTC:

++ = Definitely      - = Probably not  
 + = Probably        -- = Definitely not

NATIONAL SAMPLES

16- to 24-year-old males living in continental US, who are NPS, not in service or DEP, non-institutionalized, not 4-year college graduates, have never taken a college ROTC course, are qualified for enlistment as a high school diploma graduate (Tier I), and who are in one of the following groups:

CI -- College Influencers: college juniors and seniors  
 CM -- College Market: freshmen and sophomores in 4-year colleges  
 HSM -- High School Market: college-oriented high school juniors and seniors

OFFICER MARKETS (HSM + CM)

Officer Markets are reported by Army ROTC administrative Regions (see map in Appendix D) and by ROTC Course Propensity -- reported intention to enroll in at least one college course offered by Army ROTC:

++ = Definitely -- = Probably not  
 + = Probably --- = Definitely not

YWMENTAL -- PE7 MENTALLY CHALLENGING: JOB (Variable 528)

NATIONAL SAMPLES

16- to 24-year-old males living in continental US, who are NPS, not in service or ROTC, non-institutionalized, not 4-year college graduates, have never taken a college ROTC course, are qualified for enlistment as a high school diploma graduate (Tier 1), and who are in one of the following groups:

CI -- College Influencers: college juniors and seniors  
 CM -- College Market: freshmen and sophomores in 4-year colleges  
 HSM -- High School Market: college-oriented high school juniors and seniors

OFFICER MARKETS (HSM + CM)

Officer Markets are reported by Army ROTC administrative Regions (see map in Appendix D) and by ROTC Course Propensity -- reported intention to enroll in at least one college course offered by Army ROTC:

++ = Definitely - = Probably not  
 + = Probably -- = Definitely not

YPERGRADE -- PEI3 ARMY % PAST YEAR UPPER HALF IQ (Variable 542)

OFFICER MARKETS (HISM + CM)  
 Officer Markets are reported by Army ROTC administrative Regions (see map in Appendix D) and by ROTC Course Propensity -- reported intention to enroll in at least one college course offered by Army ROTC:  
 + = Definitely - = Probably -- = Indefinitely not

NATIONAL SAMPLES  
 16- to 24-year-old males living in continental US, who are NPS, not in service or DEP, non-institutionalized, not 4-year college graduates, have never taken a college ROTC course, are qualified for enlistment as a high school diploma graduate (Tier 1), and who are in one of the following groups:  
 CI -- College Influencers: college juniors and seniors  
 CM -- College Market: freshmen and sophomores in 4-year colleges  
 HISM -- High School Market: college-oriented high school juniors and seniors

## APPENDIX B. ANNOTATED QUESTIONNAIRE CONTENTS AND CONVENTIONS

The Annotated Questionnaire provides supplementary information for each item included in the Spring '87 instrument for the Army Communications Objectives Measurement System (ACOMS) survey. The Annotated Questionnaire is intended to be the primary reference document for use during planning and execution and interpretation of the analysis. The Annotated Questionnaire is composed of the questionnaire instruments on the right side of the page, and the annotation information on the left side of the page.

### The Questionnaires

The questionnaire instruments provide: (a) specific question wording used in the interviews, and (b) information regarding the flow and control of the instruments administered to respondents. Questionnaire wording includes screen name, complete question text, optional text, word choices, response categories and response codes. Information regarding the flow of the interview includes skip pattern information, and consistency checks. Figure B-1 is an example page of the questionnaire, with a table of key features. Since the questionnaire formats used in a Computer Assisted Telephone Interview (CATI) context differ somewhat from those used in traditional self-administered or paper and pencil telephone surveys, a description of the questionnaire presentation follows.

### Screen Name

(Figure B-1, #1) The screen name corresponds to the screen name in the CATI programming and is composed of the two character prefix referring to the questionnaire module and an order number. The order of presentation of screens in the Annotated Questionnaire corresponds to the order of presentation during the interview. Question numbers are not always sequential.

Occasionally the screen name also contains a suffix, for example, "EE-6A." The "A" suffix indicates that the item was inserted after "EE-6." A "VER" following the order number in the screen name (for example, "EE-1VER") indicates that the screen verifies information obtained or calculated during the interview.

### Question Text

(Figure B-1, #2, #6) Each item in the questionnaire contains the complete question wording. The presentation of the question items follows a number of conventions:

- (1) Text with normal capitalization is read to the respondent.

**ACOMS Annotated Questionnaire**  
**Quarter 87-3 (Apr, May, & June 87)**  
**Module: Behaviors**

BE-16. In the past six months, have you given any thought to going to college?

- YES ..... 1 (BE-17)
- NO ..... 2 (CATI CHECK #BE4)
- REFUSED ..... -7 (BE-17)
- DON'T KNOW ..... -8 (BE-17)

BE-17. In the past six months, have you talked to anyone about going to college?

- YES ..... 1 (BE-18)
- NO ..... 2 (BE-21)
- REFUSED ..... -7 (BE-21)
- ③ DON'T KNOW ..... -8 (BE-21)

BE-18. With whom have you talked? ④

[RECORD ALL THAT APPLY. ENTER CTRL/P TO EXIT.]

- FRIENDS ..... 01
- MOTHER ..... 02
- FATHER ..... 03
- A BROTHER OR SISTER ..... 04
- SOME OTHER RELATIVE ..... 05
- BOY/GIRL FRIEND OR SPOUSE ..... 06
- A TEACHER ..... 07
- A COUNSELOR AT SCHOOL ..... 08
- A RECRUITER ..... 09
- CO-WORKER ..... 10
- EMPLOYER ..... 11
- OTHERS ..... 12
- REFUSED ..... -7
- DON'T KNOW ..... -8

- ① Screen name
- ② Question text
- ③ Response categories
- ④ Response codes
- ⑤ Skip patterns
- ⑥ Message to interviewer

**Figure B-1.** Example of ACOMS questionnaire page.

- (2) Text in all caps within brackets is a message to the interviewer, not to be read to the respondent.
- (3) Normal text within brackets indicates optional wording to be read to the respondent at the discretion of the interviewer.
- (4) Text within brackets separated by a slash (/) indicates a CATI-programmed word choice.

The question text often includes CATI programmed word choices. Word choices alter the text of the question by displaying different text within a question item. During the interview, the CATI System selects the appropriate wording according to respondent characteristics or previous responses.

Word choices can be used to tailor the question to the respondent. For example, the question "Does (he/she) have a high school diploma" would be displayed "Does he" if the question refers to a male, and "Does she" if the question refers to a female.

Word choices can also be used to create variations for a basic question, thus altering the meaning of the question itself. For example, the CATI system randomly selects from Navy, Air Force, Marines, etc. to display the result where (SERVICE) appears in the following question, "What was the main message you got from (SERVICE) advertising?".

#### Response Categories and Codes

(Figure B-1, #3, #4) Response categories and codes follow the question text. Response categories presented in normal text are always read to the respondent, while those in all caps are read to the respondent only after several probe attempts have failed to elicit a valid response from the respondent. The numbers to the right of the response categories are the numeric codes entered by the interviewers.

#### Skip Patterns

(Figure B-1, #5) Another way in which the CATI technology allows for more respondent-tailored interviews than traditional interviewing technologies is through skip patterns. For many questions in the ACOMS interviews, certain responses lead to a specified set of followup questions and to skipping other sets of questions.

Skip patterns appear directly to the right of the response category on which the subsequent skips are based. Skip pattern information is composed of the screen name of the next screen administered to the respondent if that response is chosen. For example, if the respondent answers "yes" to "...have you talked to anyone about going to college" then the next question asked will be, "With whom have you

talked?". With any other answer, the respondent would be asked, "Have you ever taken any college admissions test...?"

### CATI Checks

(Figure B-2) CATI checks steer the flow of the interview based upon answers to previous questions, or predetermined selection criteria. Like skip patterns, CATI checks control the flow of the interview. However, CATI checks can be used anywhere in the interview to check logical relationships among previously collected information while skip patterns are bound to the response category where they appear. A CATI check is composed of a statement or question followed by corresponding logical statements. The interview is then controlled based upon the CATI system's answer to the "question."

Figure B-2 is an example of a CATI check. CATI Check #AT1 checks the values entered from a previous module to steer the next series of questions. If the respondent had recalled hearing or seeing Army advertising, then he received questions about his opinions about army advertising. Otherwise, the section was skipped.

### The Annotation

Annotation information not usually incorporated with questionnaire documentation is provided to facilitate the planning of specific analyses. The Annotated Questionnaire allows the analyst to read a question item as it appears during the interview, and, using annotation information, determine the variable name, the range of valid responses, and the subpopulation receiving that question, without referring to multiple documents. The annotation contains screen name, order number, all variables associated with that item, the variables' valid ranges, and a description of the subpopulation receiving that item.

Figure B-3 is an example page of annotation, with a table of key features.

### Screen Name

(Figure B-3, #1) The screen name corresponds to the screen name found in the questionnaire and the CATI programming. Again, the order corresponds to the order of administration.

### Order Number

(Figure B-3, #2) The order number indicates the position of the variable in the ACOMS data files. The variables in the tabulations appear in the same order, and the order number appears as part of the title on each page. Note, however, that not all variables on the data files appear in the tabulations.

ACOMS Annotated Questionnaire  
 Quarter 87-3 (Apr, May, & June 87)  
 Module: Attitudes Toward Army Ads

```

CATI CHECK #AT1: DID RESPONDENT RECALL SEEING OR HEARING
ARMY ADS?
[KR-1 = 2 OR KR-6 = 1]

YES ..... 1 (AT-1)
NO ..... 2 (SLOGAN MODULE)
  
```

AT-1. Use a scale of "1" to "5" where "1" means you do not like the advertising and "5" means you like the advertising very much.

Overall, how much do you like the Army ads you have seen or heard over the past year?

```

DO NOT LIKE ..... 1
SOMEWHAT DISLIKE ..... 2
NEUTRAL ..... 3
LIKE SOMEWHAT ..... 4
LIKE VERY MUCH ..... 5
REFUSED ..... -7
DON'T KNOW ..... -8
  
```

AT-2. Use a scale of "1" to "5" where "1" means you do not believe what the ads say and "5" means you believe what the ads say.

How much do you believe what the ads say?

```

DO NOT BELIEVE ..... 1
SOMEWHAT DISBELIEVE ..... 2
NEUTRAL ..... 3
BELIEVE SOMEWHAT ..... 4
STRONGLY BELIEVE ..... 5
REFUSED ..... -7
DON'T KNOW ..... -8
  
```

[GO TO SLOGAN RECOGNITION MODULE]

	⑤		

- ① Screen name
- ② Order number
- ③ Variables
- ④ Ranges
- ⑤ Sub-Population

Figure B-3. Example of annotation page in the ACOMS survey.

### Variable Names

(Figure B-3, #3) The variable names correspond to the variable names which appear in the data files. The variable name begins with a single letter which corresponds to the type of respondent. Variable names beginning with the letter "Y" indicate youth respondents while the letter "P" indicates parental respondents. The remainder of the variable name represents the essence of the variable's contents. For example, the variable "YTVWATCH" contains a code for whether or not the youth watches TV.

Many questions contain more than one variable. Questionnaire items which could elicit more than one valid response require more than one variable. For example, BE-18 asks "With whom have you talked?". One variable is required for each person with whom the youth might have spoken. This situation is analogous to the "Mark all that apply" question found in paper and pencil surveys. All variables corresponding to a particular screen are listed in the annotation.

### Valid Ranges

(Figure B-3, #4) Valid ranges encompass all possible responses for a particular variable. With few exceptions, variables coded from survey responses always include "refused" and "don't know" as valid responses, although these response options are never read to the respondent.

### Subpopulation

(Figure B-3, #5) Because of the complex instrument structure that includes rotating modules, skip patterns, and other programmed means of question allocation to respondents, many questions in the ACOMS surveys are asked only of a subsection of the respondent population. During analyses, the subpopulation that receives a particular question determines the types of analyses that can be performed as well as the interpretation of the results. The subpopulation descriptions facilitate analyses by summarizing all skip pattern and interview flow information into one statement describing all respondents for a variable or set of variables.

Subpopulation descriptions are composed of a text description of the respondents, and a pseudocode representation of the respondents. The text description uses terms found within the question items which define the respondent population.

The pseudocode enclosed in brackets is composed of:

- (1) The variable name(s) of the defining variable(s);

- (2) The screen name of the screen from which the defining variable was coded;
- (3) The logical operator(s); and
- (4) The defining values of the variables.

The logical operators used within the pseudocode are:

- (1) EQ equal
- (2) NE not equal
- (3) GT greater than,
- (4) LT less than,
- (5) AND and (both conditions must be met for the respondent to be included in the subpopulation)
- (6) OR or (either condition must be met for the respondent to be included in the subpopulation).

Figure B-3 is an example of a subpopulation description. BE-17 will be asked if the youth is not currently enrolled in college, and the youth has thought about going to college. The pseudocode indicates that these conditions will be met if the variable YBCTHOT from screen BE-16 is equal to 1, -7, or -8. (Values separated by commas imply an OR condition.)

#### Change Code

(Figure B-4) Change codes are included to alert the analyst to changes made during the analytic year since any changes in the questionnaire item could have an impact upon analytic interpretations. The change codes correspond to these types of changes:

- (1) W - Wording
- (2) R - Response Codes
- (3) P - Position Within the Questionnaire

ACOMS Annotated Questionnaire  
 Quarter 87-3 (Apr, May & June 87)  
 Module: Household Screener

SC-1. Hello, this is (YOUR NAME).  
 I am calling from Westat, a research firm near Washington, D.C.  
 We are conducting a survey for the United States Government about  
 people's plans for the future and their reaction to  
 Armed Forces advertisting.

First, I'd like to make sure I've dialed correctly. Is this  
 area code (AREA CODE AND NUMBER)?

[ASK TO SPEAK WITH ADULT HOUSEHOLD MEMBER IF PERSON ANSWERING  
 TELEPHONE SOUNDS LIKE A YOUTH.]

YES ..... 1 (SC-2)  
 NO ..... 2 (TERM1, MAX OF 2 CALLS)  
 GO TO RESULT ..... 3

SC-2. We are calling a random sample of telephone numbers  
 in connection with this study, and we need to know  
 what type of number this is.

Is this phone number for...

home use, ..... 1 (SC-4D)  
 business and home use, or. 2 (SC-3)  
 business use only? ..... 3 (TERM346, CODE NON-  
 RESIDENTIAL)  
 REFUSED ..... -7 (TERM2, CODE INITIAL  
 REFUSAL)  
 DON'T KNOW ..... -8 (SCKNOW)

SC-3. Is this phone located in a home or in a business?

HOME ..... 1 (SC-4D)  
 BOTH ..... 2 (SC-4D)  
 BUSINESS ..... 3 (TERM346, CODE NON-  
 RESIDENTIAL)  
 REFUSED ..... -7 (TERM2, CODE INITIAL REFUSAL)  
 DON'T KNOW ..... -8 (SCKNOW)

ACOMS Annotated Questionnaire  
Quarter 87-3 (Apr, May, & June 87)  
Module: Household Screener

-----  
Screen Name: SC-4D  
Variables: Ranges: Order #:  
RESPINHH 1,2,-7,-8 73  
Sub-Population: Correct phone numbers for home or both home  
and business use  
[PHONUSE (SC-2) EQ 1] OR  
[PHONLOC (SC-3) EQ 1,2]  
-----

-----  
Screen Name: SC-5  
Variables: Ranges: Order #: Change Code:  
ADULTTOT 1-10,-7,-8 693 (87-2) A, W  
YOUTHTOT 1-10,-7,-8 74 (87-3) W  
Sub-Population: Correct phone numbers with household  
member on the line  
[RESPINHH (SC-4D) EQ 1]  
-----

ACOMS Annotated Questionnaire  
 Quarter 87-3 (Apr, May & June 87)  
 Module: Household Screener

SC-4D. Are you a member of this household?

- YES ..... 1 (SC-5)
- NO ..... 2 (SCKNOW)
- REFUSED..... -7 (TERM2, CODE INITIAL  
REFUSAL)
- DON'T KNOW ..... -8 (SCKNOW)

SC-5. We have a few questions to see if anyone in your household will be included in this study. Including yourself...

how many people aged 25 or older  
live in your household?

NUMBER OF PEOPLE .....\_\_\_\_\_

how many people between the ages of 13 and 24  
live in your household?

- NUMBER OF PEOPLE.....\_\_\_\_\_ (CATI CHECK #SC1)
- NONE ..... 00 (SC-4B)
- REFUSED ..... -7 (TERM7, CODE  
INITIAL REFUSAL)
- DON'T KNOW ..... -8 (SCKNOW)

```

-----
| CATI CHECK #SC1: IS THERE MORE THAN ONE HOUSEHOLD |
| MEMBER 13 THROUGH 24?                               |

ACOMS Annotated Questionnaire  
 Quarter 87-3 (Apr, May, & June 87)  
 Module: Social Influence

SI-0. Now I am going to ask you a few questions about the attitudes of your family and friends about the military.

SI-1. For each of the following people, please tell me how you think they would feel about your enlisting in the Army. Use a scale of 1 to 5 where a 1 means they would think it is a very bad idea, 2 means it's a bad idea, 3 means it's neither a good nor a bad idea, 4 means it's a good idea, and 5 means they would think your enlisting would be a very good idea.

[CODE 6 IF NOT APPLICABLE, PERSON DECEASED, OR DOES NOT EXIST]

ACOMS Annotated Questionnaire  
 Quarter 87-3 (Apr, May, & June 87)  
 Module: Perceptions

PE-INTRO1. Earlier I asked how important it was for you to have a number of opportunities. Now I'm going to ask your opinion about two specific ways you might get each of those opportunities. Your opinions in this section are very valuable to this study.

PE-INTRO. When you give your opinion, please use a scale of one to five where "1" means you strongly disagree with the statement, "2" means you disagree, "3" means you neither disagree nor agree, "4" means you agree, and "5" means you strongly agree with the statement.

	DS						AG	REF	DK
The (SERVICE/CAREER OPTION) offers... (ATTRIBUTE - Random Start)?	1	2	3	4	5			-7	-8

How about the (SERVICE/CAREER OPTION)...

[The (SERVICE/CAREER OPTION) offers... (ATTRIBUTE)]?	1	2	3	4	5			-7	-8
---	---	---	---	---	---	--	--	----	----

PE-INTRO2. [When you give your opinion, please use a scale of one to five where "1" means you strongly disagree with the statement, "2" means you disagree, "3" means you neither disagree nor agree, "4" means you agree, and "5" means you strongly agree with the statement.]

ACOMS Annotated Questionnaire  
 Quarter 87-3 (Apr, May, & June 87)  
 Module: Perceptions

PE-12. Of the people who joined the Army in the last year, what proportion do you think are high school diploma graduates? Would you say...

- less than one quarter, ..... 1
- about one quarter, ..... 2
- about one half, ..... 3
- about three quarters, or ..... 4
- almost all? ..... 5
- REFUSED ..... -7
- DON'T KNOW ..... -8

PE-13. Of the people who joined the Army last year, what proportion do you think would score in the upper half of an intelligence test? Is it...

- all of them, ..... 1
- three quarters of them, ..... 2
- half of them, ..... 3
- one quarter of them, or ..... 4
- none of them? ..... 5
- REFUSED ..... -7
- DON'T KNOW ..... -8

PE-14. Of the people who joined the Army in the last year, what proportion do you think will get a college diploma either while they are in the Army or after they complete their Army service? Would you say...

- less than one quarter, ..... 1
- about one quarter, ..... 2
- about one half, ..... 3
- about three quarters, or ..... 4
- almost all? ..... 5
- REFUSED ..... -7
- DON'T KNOW ..... -8

PE-15. Do you think very many young (men/women) with backgrounds and plans for the future like yours are joining the Army?

- YES ..... 1
- NO ..... 2
- REFUSED ..... -7
- DON'T KNOW ..... -8

## APPENDIX C. CUMULATIVE SURVEY CHANGES

### ACOMS Quarterly Change Forms and Cumulative Change Tables

The Change Form is a cumulative document that contains all of the questionnaire items that have been changed in any way. It serves as the documentation of questionnaire changes and contains all of the necessary information to communicate these changes in the questionnaire to the user of the tabulations. In order to analyze the data tabulated for a given variable, it is essential to know whether there were any changes to that particular question that may be a factor.

#### Change Form Layout

Each entry on the Change Form includes the variable name, order number, the quarter the change was implemented, old screen name, new screen name, a one-letter change code, the question before the change was implemented, and the question after the change. Figure C-1 is a sample page from the Change Form. The layout of the Change Form is described below.

Variable name. (Figure C-1, #1) Variable names appear in the first column of the Change Form for all items which have been altered in the ACOMS instrument. The variable names correspond to the variable names which appear in the tabulations (Appendix A) and the ACOMS questionnaire (Appendix B). Variable names beginning with the letter "Y" indicate items contained in the youth questionnaire while the letter "P" indicates those in the parental questionnaire.

Many Change Form entries contain more than one variable. If an identical question exists in both the youth and parental questionnaires, both variables will be indicated. Many questions are constructed to permit more than one response to the question; for example, BE-2: "With whom have you talked?" may contain up to six separate responses.

Order number. (Figure C-1, #2) The order number corresponds to the order of the variable on the SAS data file. This number is also contained in the tabulations and in the questionnaire.

Quarter number. (Figure C-1, #3) The quarter number indicates the quarter that the change was implemented.

Old screen. (Figure C-1, #4) The screen name from the previous quarter will appear here. If the question is a new one which is being added, this column will be blank.

New screen. (Figure C-1, #5) The screen name for the new quarter is listed in this column.

Change code. (Figure C-1, #6) One or more of the following codes are listed in this column indicating the type of change that took place.

- A Addition - Addition of a question.
- C CATI Programming - Any change to the CATI code.
- D Deletion - Deletion of a question.
- L Location - Question moved to a different location within the questionnaire.
- P Predecessor - Question preceded by different question as a result of the addition, deletion, or change in location of another question
- R Response Codes - Change or redefinition of response codes.
- S Subpopulation - Change in definition of appropriate respondents as a result of the addition, deletion, or change in location of another question.
- W Wording - Wording of the question.
- X Cosmetic - Text change that is not read to respondent and is not part of the question, e.g., interviewer instructions.

Change from. (Figure C-1, #7) The information in this column reflects the item as it existed in previous quarters before the change was implemented.

Change to. (Figure C-1, #8) Information in this column reflects the item as it will appear in subsequent quarters.
