Washington, DC 20560**

National Science Resources Center Elementary Science Network

The National Science Resources Center has established an active, nationwide NSRC Elementary Science Network. This network is composed of school districts, science teaching centers, science museums, and professional organizations involved in activities to support and improve the teaching of science in the nation's elementary schools. The primary function of this network is to share and disseminate information about elementary science resource materials and elementary science program implementation strategies.

The NSRC has developed a computer information database of the approximately 4,000 superintendents, science supervisors, teachers, scientists, science museum educators, and officials from professional organizations and associations who are currently participating in the NSRC Elementary Science Network. The NSRC will continue to add school systems and other institutions actively involved in the improvement of elementary science teaching to this network.

The National Science Resources Center was established in 1985 as a joint undertaking of the National Academy of Sciences and the Smithsonian Institution. The NSRC's mission is to contribute to the improvement of science and mathematics teaching in the nation's schools by establishing a science and mathematics curriculum resources center and information database, developing and disseminating resource materials for science and mathematics teachers, and offering a program of outreach and leadership-development activities.
