19. ABSTRACT (Continue on reverse if necessary and identify by block number)

For this research, a mission scenario was used to conduct a comprehensive task analysis for MH-60K operations. The analysis used a top-down approach to identify 5 phases, 15 segments, 71 functions, and 230 tasks for the mission. Also, the crewmember performing each task was identified, and estimates of the task durations and the sensory, cognitive, and psychomotor workload associated with the tasks were derived.

The mission/task/workload analysis data were used to develop a computer model of workload for MH-60K crewmembers. The model used a bottom-up approach to build mission functions from tasks and mission segments from functions. Decision rules were written to specify the procedure for combining tasks into functions and functions into segments. The model permitted an analysis of total workload experienced by the pilot and copilot in the performance of both sequential and concurrent tasks. The predicted workload for the MH-60K pilot and copilot was compared to the UH-60A baseline workload prediction to determine the impact of the

MH-60K advanced technology. The comparison indicated very little difference in the predicted workload for the pilot and lower predicted workload for the co-pilot in the MH-60K.

ACKNOWLEDGMENTS

The authors wish to express their appreciation to the following individuals for their contribution to this research effort.

Chief Warrant Officer (CWO) Ernest G. Cooper, 160th Special Operations Aviation Group (SOAG), Fort Campbell, Kentucky, served as subject matter expert for the review of the MH-60K task analysis. The task analysis required in-depth knowledge of the cockpit configuration for the pilot and copilot of the MH-60K aircraft. CWO Cooper's knowledge of the specific tasks performed by the pilot and copilot in the conduct of their mission contributed greatly to the success of the task analysis.

Ms. Laura Fulford and Ms. Cassandra Hocutt, Anacapa Sciences, Inc., spent many hours developing the Task Analysis/Workload (TAWL) Operator Simulation System (TOSS) to provide for the management of the MH-60K and UH-60A mission/task/workload database and the workload prediction models.

The authors especially thank Ms. Nadine McCollim, Anacapa Sciences, Inc., for the speedy and accurate typing of the numerous revisions of the task analysis. Her work significantly enhanced the quality of the final product.

TASK ANALYSIS AND WORKLOAD PREDICTION MODEL OF THE MH-60K MISSION AND A COMPARISON WITH UH-60A WORKLOAD PREDICTIONS VOLUME III: APPENDIXES H THROUGH N

INTRODUCTION

This three-volume report describes the methodology used to conduct a comprehensive task analysis of the MH-60K mission and the results of the analysis. Information provided by the MH-60K mission/task/workload analysis was used to establish a data base and to develop a computer model that predicts workload for the MH-60K pilot and copilot. Assessments of workload produced by the model are compared with the UH-60A baseline model to assess the impact on workload of the high technology modifications made in the MH-60K aircraft. The complete explanation of the Task Analysis/Workload (TAWL) methodology for performing the mission/task/workload analysis is contained in Volume I of this report. Volume II presents the results of exercising the UH-60H workload and the task analysis of the MH-60K mission scenario.

The appendixes in Volume III present the decision rules for construction of the MH-60K workload prediction model and the results from exercising the model. The information presented in Appendixes H through K is specified below:

- Appendix H presents the MH-60K Function Summary Worksheets,
- Appendix I presents the MH-60K Function Decision Rules Worksheets,
- Appendix J presents the MH-60K Segment Summary Worksheets, and
- Appendix K presents the MH-60K Segment Decision Rules Worksheets.

The graphs in Appendixes L and M present the workload predictions for the pilot and copilot for each of the 15 MH-60K mission segments. The graphs present the total workload for each of the six components for all tasks the crewmember is performing during each half-second of the mission segment. The diamond symbol at the end of each graph indicates the average workload of the component for the segment.

The lists of MH-60K and UH-60A segments and functions used for workload comparison are in Appendix N. The results of the comparisons are presented in Volume I of this report.

MH-60K FUNCTION SUMMARY WORKSHEETS

This appendix contains the Function Summary Worksheets for each of the 71 functions. The summary worksheets identify and list the tasks to be performed by the pilot and copilot. For each crewmember, separate columns are used to identify discrete fixed, discrete random, continuous fixed, and continuous random tasks. The spatial arrangement of the tasks on the worksheet corresponds roughly to the temporal arrangement of the tasks within the functions.

MH-60K FUNCTION DECISION RULES WORKSHEETS

Once the Function Summary Worksheets (see Appendix H) were completed for each function, decision rules were written to describe the exact manner in which the tasks are combined to form the function. Decision rules for discrete fixed tasks and continuous fixed tasks simply state the start time and duration of the task on the function timeline. In addition to duration, the decision rules for discrete random and continuous random tasks state the probability and/or frequency of the random task's occurrence within the function. This appendix contains the 71 function decision rules.

MH-60K SEGMENT SUMMARY WORKSHEETS

This appendix contains the Segment Summary Worksheets for each of the 15 segments. The summary worksheets identify and list all of the functions performed by the pilot and copilot during each mission segment. The summary worksheets also identify the type of functions (i.e., discrete fixed, discrete random, or continuous fixed) performed by the crewmember and the approximate temporal arrangement of the functions within the segments.

MH-60K SEGMENT DECISION RULES WORKSHEETS

Once the Segment Summary Worksheets (see Appendix J) were completed for each segment, decision rules were written to describe the exact manner in which the functions are combined to form the segment. The Segment Decision Rules Worksheets in this appendix contain the decision rules defining the sequence of the functions performed by each crewmember and the times on the mission segment timelines at which the functions begin and end. This appendix contains the 15 segment decision rules.

COMPARISON OF MH-60K AND UH-60A SEGMENT AND FUNCTION LISTS

This appendix contains a list of MH-60K and UH-60A segments and functions for comparison. The MH-60K segments and functions are listed in the first column; the comparable UH-60A segments and functions are listed in the second column. Comparable functions are listed side by side. When no comparable function exists, the column is left blank. Functions added for the MH-60K are indicated by an asterisk.
