13. ABSTRACT (Maximum 200 words)

The objectives of the research supported by this AFOSR grant were to create new knowledge concerning the nature and behavior of high energy content materials adsorbed at the liquid liquid, liquid-solid, and the solid gas interfaces. The strategy employed was to use photochemical reactions and photophysical parameters as probes to characterize the structure and dynamics of high energy species. The reactions of radical pairs produced by photochemical excitation of ketones and the electron transfer process between a metal complex and an electron acceptor were employed as general photochemical probes of a range of interfacial regions. The techniques used were a battery of time resolved spectroscopic methods including optical absorption, optical emission, nuclear magnetic resonance and electron spin resonance. The objects achieved were the development of a framework which now allows both the chemistry of high energy species adsorbed at interfaces to be controlled and manipulated and the structure and dynamics of the interfacial region to be better understood.

COMPLETED PROJECT SUMMARY

Title: Dynamics and Stabilization of Materials Possessing High Energy Content

Principal Investigator: Dr. Nicholas J. Turro

Inclusive Dates: November 1, 1989 to October 31, 1991

Contract Number: AFOSR-90-0049

Senior Research Personnel: Dr. Naresh D. Ghatila

Junior Research Personnel: Ms. Shufang Niu
Mr. Chung-Hsi Wu
Mr. William S. Jenks

Abstract of Objectives and Accomplishments

The objectives of the research supported by this AFOSR grant were to create new knowledge concerning the nature and behavior of high energy content materials adsorbed at the liquid-liquid, liquid-solid, and the solid-gas interfaces. The strategy employed was to use photochemical reactions and photophysical parameters as probes to characterize the structure and dynamics of high energy species. In particular, the reactions of radical pairs produced by photochemical excitation of ketones and the electron transfer process between a metal complex and an electron acceptor were employed as general photochemical probes of a range of interfacial regions. The techniques employed were a battery of time resolved spectroscopic methods including optical absorption, optical emission, nuclear magnetic resonance and electron spin resonance. The objects achieved were the development of a framework which now allows both the chemistry of high energy species adsorbed at interfaces to be controlled and manipulated and the structure and dynamics of the interfacial region to be better understood.

Participating Professionals

Collaborators:

Prof. William J. le Noble, SUNY Stony Brook, New York
Dr. V. Ramamurthy, E.I. duPont de Nemours and Co., Wilmington, DE.
Dr. David R. Corbin, E.I. duPont de Nemours and Co., Wilmington, DE
Dr. Challa Vijay Kumar, University of Connecticut, Storrs, CT
Dr. Donald A. Tomalia, Michigan Molecular Institute, Midland, MI
Dr. Charles E. Doubleday, Jr., Columbia University, New York, NY
Professor Andree Kirsch-De Mesmaeker, Universite Libre de Bruxelles,
Brussels, Belgium
Professor Robert A. Moss, Rutgers University, New Brunswick, NJ
Professor P. Somasundaran, Columbia University School of Engineering
and Applied Science, New York, NY
Professor Heinz D. Roth, Rutgers University, New Brunswick, NJ
Professor Jacqueline K. Barton, Caltech, Pasadena, CA

Professor L.D. Burtonick, University of British Columbia, Vancouver, B.C.
Dr. Ian R. Gould, Eastman Kodak Research Lab, Rochester, NY
Dr. Samir Farid, Eastman Kodak Research Lab, Rochester, NY

Advanced Degrees Awarded:

Jinfang Wang, Ph.D. Columbia University, February, 1990
Thesis Title: Dynamics of Flexible Triplet Biradicals. The Importance of Spin Dynamics and Chain Dynamics.

Nianhe Han, Ph.D. Columbia University, August 1990
Thesis Title: Highly Selective Photochlorination of Long Chain n-Alkanes and Substituted n-Alkanes Adsorbed on Ion-Exchanged ZSM-5 Zeolites. Photochemistry of α -Substituted Large Ring Cycloalkanones.

Wen Sheng Chung, Ph.D. Columbia University, May 1990
Thesis Title: Pressure as a Tool in the Study of Photoinduced Electron-Transfer, Energy Transfer and Cycloaddition Reactions. The Influence of Electronic Effects and Inclusion in Cyclodextrins on the Face Selectivities of Photoinduced Oxetane Formation of 5-Substituted Adamantan-2-ones.

Kuo-Chu Hwang, Ph.D. Columbia University, April 1990
Thesis Title: Effect of Nuclei with a Large Hyperfine Coupling Constant (HFC) on the Pattern and Enhancement of CIDNP of Nuclei with Smaller HFC. CIDNP and Magnetic Isotope Effect in Long Flexible Biradicals: Importance of Chemical Dynamics, Spin Dynamics, Chain Dynamics and Electron Exchange Dynamics.

William S. Jenks, Ph.D. Columbia University, February 1991
Thesis Title: Time Resolved EPR and Photophysical Studies of the Interactions of Doublet and Triplet States with Stable Nitroxides.

Ann Rachel Leheny, Ph.D. Columbia University, August 1991
Thesis Title: Dynamics in Restricted Spaces and Disordered Systems: Investigations of Excitation Relaxation and Molecular Diffusion in Silicalite and Silica Gel.

Coupling Activities

The Principal Investigator met with Dr. Frederick Hedberg at AFOSR offices in Bolling Air Force Base, D.C. in April 1991 to discuss Air Force interests. In August 1991 Dr. Donald Ball and Dr. Frederick Hedberg of AFOSR visited our laboratories and had discussions with the Principal Investigator about his current research activities. The Principal Investigator attended the Air Force Contractors' Meeting in Irvine, CA on October 20-22, 1991 during which time he presented a poster on his work, "Photophysical Investigation of the Comparison between Starburst Dendrimers and Anionic Micelles" and had discussions with Dr. Larry Burggraf of AFOSR.

The Principal Investigator was presented with the Inter-American Photochemistry Award at a meeting in Clearwater Beach, FL, January 1991. He presented lectures on Air Force supported research at the following universities and industrial sites: Ciba-Geigy Company (Ardsley, NY); Mobil Oil Research & Development (Paulsboro, NJ), E.I. duPont Central Research Dept. (Wilmington, DE), E.I. duPont (Towanda, PA), Unilever USA Research (Edgewater, NJ), IBM Almaden Research Labs (San Jose, CA), Hoechst Chemical Company (Frankfurt, Germany), Bowling Green State University (OH), Pennsylvania State University (University Park, PA), SUNY Binghamton, NY, Caltech (Pasadena, CA), Stanford Univ. (CA), Florida State Univ. (Tallahassee, FL), Universitat Mainz (Germany), Universitat Wurzburg (Germany), Michigan State University (East Lansing, MI), Iowa State University (Ames, IA); and at the following scientific meetings: Asilomar Conference on Spectroscopy (Monterey, CA) in February 1991, American Chemical Society's National Meeting (Organic Division) in New York City, August 1991; American Chemical Society's National Meeting (Physical Division) in Washington, D.C. in August 1990, Inter-American Chemical Photochemistry Society, January 1991, Reaction Mechanisms Conference in Boulder, CO in June 1990, International Conference on the Organic Solid State (Vancouver, B.C.) in July 1991, International Conference on Solar Energy (Palermo, Sicily) July 1990, IUPAC meeting on Organic Reactions in Solution (Canterbury, UK) July 1990, Southeast Section Meeting of the ACS in New Orleans, December 1990.
