DEPARTMENT OF THE AIR FORCE
JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 1995

APPROPRIATION

MILITARY CONSTRUCTION, AIR NATIONAL GUARD

SECTION 1

For construction, acquisition, expansion, rehabilitation, and conversion of facilities for the training and administration of the Air National Guard, and contribution therefor, as authorized by Chapter 133 of Title 10, United States Code, and military construction authorization Acts, \$122,770 to remain available until September 30, 1999. (September 30, 1998)

() Individual FY 95 Appropriation Language

SPECIAL PROGRAM CONSIDERATIONS

Pollution Abatement

The military construction projects proposed in this program will be designed to meet environmental standards. Military construction projects proposed primarily for abatement of existing pollution problems at installations have been reviewed to ensure that corrective design is accomplished in accordance with specific standards and criteria.

Energy Conservation

Military construction projects specifically for energy conservation at installations have been developed, reviewed, and selected with prioritization by energy savings versus investment cost. Projects include improvements to existing facilities and utility systems to upgrade design, eliminate waste, and install energy saving devices. Projects are designed for minimum energy consumption.

Flood Plain Management and Wet Land Protection

Proposed land acquisitions, disposals, and installation construction projects have been planned to allow the proposed management of flood plains and the protection of wet lands by avoiding long and short-term adverse impacts, reducing the risk of flood losses, and minimizing the loss of degradation of wet lands. Project planning is in accordance with the requirements of Executive Order Nos. 11988 and 11900.

Design for Accessibility of Physically Handicapped Personnel

In accordance with Public Law 90-400, provisions for physically handicapped personnel will be provided for, where appropriate, in the design of facilities included in this program.

Preservation of Historical Sites and Structures

Facilities included in this program do not directly or indirectly affect a district, site, building, structure, object or setting listed in the National Register of Historic Places, except as noted on DD Form 1391.

Environmental Protection

In accordance with Section 102(2) (c) of the Environmental Policy Act of 1969 (PL 91-190), the environmental impact analysis process has been completed or is actively underway for all projects in the Military Construction Program.

Economic Analysis

Economics are an inherent aspect of project development and design of military construction projects. Therefore, all projects included in this program represent the most economical use of resources. Actual economic analysis have been or will be prepared for all projects over \$2,000,000.

SPECIAL PROGRAM CONSIDERATIONS

(continued)

Reserve Manpower Potential

The reserve manpower potential to meet and maintain authorized strengths of all reserve flying/non-flying units in those areas in which these facilities are to be located has been reviewed. It has been determined, in coordination with all other Services having reserve flying/non-flying units in these areas, that the number of units of the reserve components of the Armed Forces presently located in those areas, and those which have been allocated to the areas for future activation, is not and will not be larger than the number that reasonably can be expected to be maintained at authorized strength considering the number of persons living in the areas who are qualified for membership in those reserve units.

Potential Use of Vacant Schools and Other State and Local Facilities

The potential use of vacant schools and other state and local owned facilities has been reviewed and analyzed for each facility to be constructed under this program.

Construction Criteria Manual

Unless otherwise noted, the projects comply with the scope and design criteria prescribed in Part II of Military Handbook 1190, "Facility Planning and Design Guide".

10. Description of Proposed Construction: Concrete apron with taxi lanes. All utility systems to include hydrant pits and apron/taxiway lighting and drainage. Demolish Building 111 (11,200 SF), sound suppressor foundation and 48,500 SY of substandard apron.					
11. REQUIREMENT: 98,000 LS ADEQUATE: 0 SUBSTANDARD: 48,500 LS PROJECT: Aircraft Parking Apron and Hydrant Refueling System (New Mission). REQUIREMENT: This project supports the conversion from 18 RF-4C aircraft to 10 KC-135 aircraft in 1995. An adequately sized aircraft parking apron with the proper strength and a hydrant refueling system are required to operate a squadron of KC 135 aircraft. CURRENT SITUATION: The concrete apron designed for fighter aircraft is not strong enough nor properly configured to accommodate the weight and clearances of the KC-135 aircraft. Airfield clearance criteria precludes the use of much of the existing area due to the increased size and parking requirements of the KC-135 aircraft. A hydrant refueling system does not exist. The taxiway is not wide enough or strong enough to support the much heavier aircraft. In the interim, the aircraft will be parked on the opposite side of the runway on the airport authority ramp. There is no support on the commercial side. This will require refueler trucks to transit from the fuel storage area to the far side of the field creating the potential for accidents and/or fuel spills. This will also interfere with civilian operations on the far side of the field. It will cause the maintenance functions to transit from their facilities to perform tests, repairs and maintenance remote from the normal work areas. IMPACT IF NOT PROVIDED: Unable to properly beddown the KC-135. Potential for environmental problems due to long hauls of fuel. Delayed maintenance

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab, masonry walls, concrete floor, built-up roof, tile flooring, gypsum ceilings, lighting, heating, cooling, and secure areas. Demolish Building 301 (2,250 SF). Another 4 existing buildings will be altered to support other base functions.
Air Conditioning: 20 Tons.

11. REQUIREMENT: 8,000 SF ADEQUATE: 0 SUBSTANDARD: 5,429 SF
PROJECT: Communications Facility (New Mission).
REQUIREMENT: This project supports the conversion from 18 RF-4C to 10 KC-135 in 1995. The base requires Secure AUTODIN and vault, telephone switching, data automation center, equipment maintenance area, and office space for supervision and customer service.
CURRENT SITUATION: The communications center is housed in a crowded portion of the operations and training facility. The communications function is 67% short of space. The space shortage has become acute by the conversion to the KC-135. Now there is a need for more secure communication space. The communications functions are spread out in four separate buildings. The space in the operations and training facility cannot be expanded without displacing other functions. The operations and training functions need to remain as they are related. Space within the other buildings creates an inadequate situation. All functions need to be consolidated and expanded such that effective command and control can be maintained. The communication facility does not present a quality work place. There is insufficient storage space. Command, control and supervision are poor. One building, a 1942 vintage facility, will be demolished.
IMPACT IF NOT PROVIDED: Lack of centralized information systems

10. Description of Proposed Construction: Addition: Reinforced concrete foundation and floor slab, masonry walls, steel structure, metal pan roof, and roofing membrane. Alteration: Relocate walls and utilities. Exterior of building to match existing. Provide utilities, pavements and site improvements. Provide systems furniture. Air Conditioning: 5 Tons.					
11. REQUIREMENT: 24,000 SF ADEQUATE: 0 SUBSTANDARD: 23,600 SF PROJECT: Add to and Alter Squadron Operations Facility (New Mission). REQUIREMENT: This project supports the conversion from 18 RF-4C aircraft to 10 KC-135 aircraft in 1995. An adequately sized and properly configured squadron operations facility is required for aircrew members, flight planning and management, operations office, contingency operations, combat crew navigators, boom operators, and training. CURRENT SITUATION: The squadron operations building is configured to support RF-4C aircraft. It does not have a vault and classified information cannot be stored in the building. It is not configured for the KC-135 mission which is much different than the existing mission. The building requires interior reconfiguration since some rooms are too small while others are too large to meet the needs of the new functions. Provisions for classified briefings are not adequate. There are no rooms for navigators and boom operators. IMPACT IF NOT PROVIDED: The mission cannot be accomplished without violating the security of classified plans. Unable to reach full operational capability. Severely crowded space impact negatively on training and readiness. Inefficient operations. Loss of training opportunities.

10. Description of Proposed Construction: Upgrade concrete storm drain culvert. Construct a series of flood control ponds and piping to contain, divert, and meter storm water. Extend and relocate utilities and make site improvements.

11. REQUIREMENT: As required.
PROJECT: Upgrade Drainage System (Current Mission).
REQUIREMENT: This is a level II environmental compliance project. A properly sized and environmentally correct controlled storm water containment and disposal system is required to prevent the flooding of the base facilities, including the aircraft apron, and the pollution of the base and the adjacent canals that could happen during a flood.
CURRENT SITUATION: The storm water collection system was constructed prior to World War II and has deteriorated beyond repair. The concrete culvert structures have spalled to the extent that the reinforcing rods are exposed. This accelerates the deterioration and leads to a rapid loss of strength in the concrete structures. Some of the concrete structures are braced with wood timbers to prevent collapse. Storm water retention/flood control ponds and storm water pipes are not correctly sized due to increased development over the years which has resulted in increased runoff. Oil/water separators are being bypassed due to excessive flows resulting in environmental problems. The larger aircraft parking ramp, that will be constructed to support the conversion from RF-4C to KC-135 aircraft will result in a much larger storm water flow that will further overtax the existing storm water control system. Should a 100 year flood occur, the large majority of the base flight line areas would be under water.
IMPACT IF NOT PROVIDED: Flooding of facilities will become more frequent.

10. Description of Proposed Construction: Replace 17 tanks (including 4 at Hall Air National Guard Station) and remove only 9 others. Excavate and remove the tanks. Dispose of the tanks, tank residue, and the contaminated soil. Restore the sites.						
11. REQUIREMENT: As required. <u>PROJECT:</u> Replace Underground Fuel Storage Tanks (UST) (Current Mission). <u>REQUIREMENT:</u> This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. <u>CURRENT SITUATION:</u> The tanks have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the bases are subject to Notice of Violations by the Federal and/or State EPA. <u>IMPACT IF NOT PROVIDED:</u> Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Replace 8 tanks and remove one only. Excavate and remove the tanks. Dispose of the tanks, tank residue, and the contaminated soil. Restore the sites.					
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST) (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to notice of violation by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage could have the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Replace sewage trunk line and laterals to buildings and extend system toward proposed construction. Connect water system to city water. Alter drainage system and provide four oil/water separators and integrate the system with airport drainage system. Provide new pavements, site improvements, utilities, and demolition. Remove four oil/water separators and alter water well.

11. REQUIREMENT: As required.

PROJECT: Site Restoration (Current Mission).

REQUIREMENT: This is a level II environmental compliance project. Base requires infrastructure systems that will serve the existing base and provide for future relocation and do not endanger the environment nor the base and local population. A sewage system that is properly sized and does not pollute; a domestic water system that is not dependent on a water well that has recently been capped because of a plume of off base pollution; a drainage system that properly collects and treats storm water and is integrated with the airport system are also required.

CURRENT SITUATION: The modernization of the base through construction guided by the Master Plan forces the relocation and displacement of several operational and environmental facilities and systems. Coupled with the systems age, new environmental regulations and local conditions, the existing drainage, sewage and water systems are inadequate, undersized and in danger of polluting the local environment and endangering the health of the base personnel. The systems are approximately 40 years old and in constant need of repair due to deterioration of the laterals and trunk line settlement. Leaks have been kept to a minimum but a major leak could happen at any time in this earthquake prone area. The water system is based on a well and an emergency city connection. A plume of

3. INSTALLATION AND LOCATION FRESNO AIR TERMINAL (ANG) CALIFORNIA		
4. PROJECT TITLE SITE RESTORATION	5. PROJECT NUMBER HAYW000581	
<p>underground pollution has reached the well from airport property. Contamination of the well has now put an unacceptable demand on the city connection. Both systems are inadequate in size and need to be expanded to meet the requirements of construction envisioned by the Master Plan. The drainage system collects storm water and processes some of it through oil/water separators; these do not meet current regulations. The existing drainage has storm water retention basins. One such basin is in the path of Master Plan directed construction and must be relocated. The entire drainage system must be designed and incorporated into the total airport system. Utilities and pavements must be removed and replaced to accommodate the environmental systems and site restoration.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Environmental systems in need of repair will fail and leak causing soil contamination, water pollution and health hazards. Master Plan of base through the short and long term will not be possible. Mission of unit is affected. Possible shut down of the base water system. Violation of State and Federal EPA regulations. The ANG could receive adverse publicity.</p> <p><u>ADDITIONAL:</u> An exception to the economic analysis requirement has been prepared. It presents the rationale for only one alternative which is to rehabilitate the infrastructure in one project rather than the piecemeal upgrade in multiple projects.</p>

10. Description of Proposed Construction: Addition: Reinforced concrete footings/floor slab, structural steel framing system, concrete walls and insulated metal roof system. Alteration: Alter interior floor plan, upgrade utilities and ventilation system and drainage system. Provide exterior utilities, pavements and support. Air Conditioning: 20 Tons.					
11. REQUIREMENT: 17,000 SF ADEQUATE: 0 SUBSTANDARD: 11,000 SF PROJECT: Add to and Alter Fuel Systems Maintenance Facility (Current Mission). REQUIREMENT: This is a level II environmental compliance project. The base requires an environmentally safe fuel cell and corrosion control hangar for the training of personnel and the day to day operational requirements of the assigned F-16 aircraft. The facility must be properly sized with the proper environmental controls, safety features, and the correct ventilation system. Safety features including explosion proof fixtures and fire detection/suppression systems are required. Environmental systems including an environmentally safe exhaust system and an oil/water separator are required to prevent air, soil and water pollution. CURRENT SITUATION: The existing facility has only one bay. Two bays are required, one for fuel cell maintenance and repair, and one for corrosion control. The existing facility does not have the proper environmental and safety controls required of a fuel cell dock and is not large enough to accommodate fuel cell and corrosion control functions. The building requires an addition and the upgrade of the interior utilities and fire protection/suppression systems. The heating and ventilation is inadequate. The addition will allow proper phasing of both fuel cell and

10. Description of Proposed Construction: Fuel Hydrant and Consolidated Aircraft Support System (CASS) pits for the apron maintenance as well CASS system in hangar aircraft maintenance. Includes all utilities, pavement, tiedowns, lighting, and support facilities for the CASS and fuel systems.

11. REQUIREMENT: As required.
PROJECT: B-1 CASS and Hydrant Fuel Systems (New Mission).
REQUIREMENT: The 116 FW at Dobbins AFB is moving to Robins AFB and converting from F-15 aircraft to B-1 aircraft. During a Joint Site Survey by Robins AFB, ACC, Air Staff, and NGB personnel during August 1993, this project requirement was identified. This project supports the beddown of B-1 Bomber aircraft. The base requires an adequate apron to park, maintain, refuel, and operate the aircraft. The apron must be sized and configured to allow taxiing aircraft, refueling operations, access to maintenance facilities, and parking for the aircraft. Three aircraft will be in hangar facilities.
CURRENT SITUATION: The CASS system does not exist. This system provides compressed air, air conditioning and power to the B-1 on the ramp. The CASS is needed each time the aircraft are powered. The apron is of sufficient size and strong enough to support the B-1 weight.
IMPACT IF NOT PROVIDED: The ANG will be unable to properly maintain the aircraft. Training opportunities will be lost. They will not be able to fly.
ADDITIONAL: Due to operational reasons, an economic analysis has not been accomplished.

10. Description of Proposed Construction: Alteration of Building 44: Upgrade heating, ventilation and electrical systems. Relocate walls. Provide insulation and corrosion prevention. Includes all utilities, fire protection and necessary support. Remove asbestos. Upgrade latrines.

11. REQUIREMENT: 31,000 SF ADEQUATE: 0 SUBSTANDARD: 31,000 SF
PROJECT: Alter B-1 Maintenance Hangar and Shops (New Mission).
REQUIREMENT: The 116 FW at Dobbins is moving to Robins AFB and converting from F-15 aircraft to B-1 aircraft. During a Joint Site Survey by Robins AFB, ACC, Air Staff, and ANG personnel the project requirements were validated. This project supports the beddown of the B-1 Bomber aircraft. An energy efficient aircraft maintenance shop and control complex is required for aircraft repair, fabrication, calibration, and servicing.
CURRENT SITUATION: The base has an excess hangar that can be modified and upgraded to support the B-1. The hangar was constructed in 1956. The facility is structurally sound but not properly configured to support the B-1. Some shops are too small while others are too large. The facility does not meet energy standards and must be upgraded to meet DoD goals for energy conservation. The electrical system needs to be upgraded. The heating and ventilation systems also require modification to meet the new shop configuration. The fire suppression system is undersized and is not compatible with the B-1 aircraft configuration.
IMPACT IF NOT PROVIDED: Unable to properly beddown the aircraft. Unable to properly accomplish maintenance. Without fire suppression, the aircraft are at risk and violate OSHA regulations. Training opportunities will be lost. The aircraft can be parked but not flown.
ADDITIONAL: Due to operational requirements, an economic analysis was not performed.

10. Description of Proposed Construction: Reinforced concrete foundations and floor slab. Structural steel with masonry partitions and roof structure. Mechanical ventilation system, drainage with oil-water separator, fire suppression, equipment storage and all utilities and support. Air Conditioning: 40 Tons.				
11. REQUIREMENT: 49,600 SF ADEQUATE: 0 SUBSTANDARD: 0 PROJECT: B-1 Hangar Complex (New Mission). REQUIREMENT: The 116 FW at Dobbins AFB is moving to Robins AFB and converting from F-15 aircraft to B-1 aircraft. During a Joint Site Survey by Robins AFB, ACC, HQ USAF and ANG personnel this project requirement was identified. This project is required for the beddown of the B-1 bomber aircraft. It provides an adequately sized and properly engineered facility for engine maintenance and storage, aircraft maintenance management, survival equipment shop, and general phase/regular aircraft maintenance. CURRENT SITUATION: There are no excess facilities available at Robins AFB to satisfy the maintenance space requirements for the B-1 Bomber aircraft. IMPACT IF NOT PROVIDED: The ANG will be unable to beddown the aircraft. Training opportunities will be lost. Fuel cell maintenance and corrosion control will have to be performed on the ramp restricted by weather and safety factors, with no environmental controls. ADDITIONAL: Due to operational considerations, an economic analysis was not accomplished.

10. Description of Proposed Construction: Replace 12 tanks in the Hawaiian islands. Excavate and remove the tanks. Dispose of the tanks, tank residue and contaminated soil. Restore the sites.					
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST) (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab with masonry/insulated metal panel walls. Utilities, access pavements, site improvements, an oil/water separator, and fire suppression system shall be provided. Upgrade water supply for fire suppression. Demolish Buildings 755 (1,300 SF) and 716 (125,000 SF) for a total of 126,300 SF. Air Conditioning: 15 Tons.					
11. REQUIREMENT: 27,600 SF ADEQUATE: 0 SUBSTANDARD: 126,300 SF PROJECT: Fuel Systems Maintenance and Corrosion Control Facility (New Mission). REQUIREMENT: This project supports the conversion from 18 F-16 to 8 KC-135 aircraft. This is also a category II environmental compliance project. The base requires a facility for the environmentally safe repair of aircraft fuel cells and for the performance of corrosion control on aircraft parts both on and off the aircraft. Functional areas include fuel cell/corrosion control bay, fuel cell repair shop, support shop space, provisions for washing, paint spray area for painting large and small parts, training and administration areas. Apron access to the facility is necessary. Environmentally safe exhaust systems to prevent air pollution and an oil/water separator to prevent corrosion contaminants or fuel spills from entering the soil/aquifer or waste water system will be required. CURRENT SITUATION: The F-16 fuel cell is undersized and cannot be used by the larger KC-135. Due to space limitation it cannot be altered or expanded. The exhaust systems in the facility do not meet environmental air pollution standards. The present oil/water separator does not meet environmental standards and a large fuel spill would exceed the capacity

3. INSTALLATION AND LOCATION SITE 94-03		
4. PROJECT TITLE FUEL SYSTEMS MAINTENANCE AND CORROSION CONTROL FACILITY	5. PROJECT NUMBER ATOZ909914	
<p>of the existing system and damage the environment. The facility was built in 1977 and is structurally sound. It will be reused for supply storage during the conversion and converted to AGE and equipment storage eliminating the need to build one to satisfy this requirement. The proposed location for the new facility requires the demolition of two old, antiquated and excess warehouse storage facilities which are in the way of construction.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Fuel cell repair and training will have to be done outside on the ramp in an unsafe manner and in violation of technical orders. Maintenance will be delayed especially during the winter months. Inefficient training. Poor working conditions. The mission capability of the corrosion control shop and the health and welfare of its personnel will be adversely affected. Environmental statutes will be violated through air pollution, water pollution and soil contamination. Unable to reach full operational capability.</p> <p><u>ADDITIONAL:</u> Due to operational requirements, an economic analysis was not accomplished.</p>

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab. Walls of masonry with steel frame and roof structure. All utilities, pavements and site improvements. Alter existing building for aircraft ground equipment (AGE) shop. Relocate walls and utilities. Air Conditioning: 15 Tons.							
11. REQUIREMENT: 14,900 SF ADEQUATE: 0 SUBSTANDARD: 4,300 SF PROJECT: Fire Station and AGE Shop (New Mission). REQUIREMENT: This project supports the conversion from 18 F-16 to 8 KC-135 aircraft. An adequately sized and properly configured facility is required for operational and training purposes to support the crash rescue and training mission of the KC-135 aircraft. A secondary benefit is the mutual response agreement with the Municipal Airport Authority. The facility must contain adequate space for eight vehicle bays, control room, training, administrative functions, kitchen, dining, bunk rooms, locker rooms, bath/shower rooms, fire extinguisher maintenance area, and storage. Space must be adequate and properly arranged for both male and female fire fighters. CURRENT SITUATION: As a result of the KC-135 conversion, larger fire station and AGE facilities are required. The existing facility was constructed as a fire station/motor pool and can only accommodate four of the eight assigned vehicles. The kitchen, dining room and bunk room are combined into one room. Sleeping is impossible as part of the building is still utilized as an aircraft ground equipment (AGE) maintenance shop. There is no classroom available for training. The facilities are incompatible with a male/female fire fighting operation. The existing facility is structurally sound and free of asbestos. The vacated fire station area will be renovated to alleviate the space deficiencies

4. PROJECT TITLE FIRE STATION AND AGE SHOP	5. PROJECT NUMBER ATOZ909768	
<p>associated with the KC-135 aircraft ground equipment shop.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Training is hampered. Response to unit and airport emergencies will not be responsive. Equipment exposed to the elements suffers accelerated deterioration. Overall efficiency and morale continue to be affected. The mission of the fire fighters is compromised. The increased fire danger that accompanies a tanker aircraft, hydrant fuel supply system and the large quantities of fuel increases the chances of a disaster with the current situation. Unable to reach full operational capabilities.</p>

10. Description of Proposed Construction: Demolition of POL lab, pump houses and hydrant refueling system. Excavate and replace/remove thirty tanks and tank residue (26 each 50,000 gal and 4 each 2,000 gal). Cleanup the contaminated soil and restore site. All utilities and support.					
11. REQUIREMENT: As required. PROJECT: Site Restoration and Fuel Storage Tank Removal (Current Mission). REQUIREMENT: This is a level II environmental compliance project. The base requires an adequate site for the operation of the 10 KC-135 aircraft, training of personnel and a clean site for the construction of additional facilities. CURRENT SITUATION: A FY 93 MILCON project currently under construction provides for a new jet fuel storage complex. After that project is completed there is the need to clean up the old site and remove the unused hydrant refueling system and pumphouses. This project demolishes the old tanks, reconfigures the roads and utilities, replaces and upgrades the other appurtenances, removes the contaminated soil and restores the site to acceptable standards so it can be reused to construct follow-on facilities. The present area is contaminated. The empty tanks and other underground POL systems must be removed to comply with the State and Federal EPA requirements. IMPACT IF NOT PROVIDED: Non-compliance with statutes. The State and County may issue restraints and/or Notice of Violations and fines. Unable to reuse the area for other facilities. Adverse publicity for the ANG if the area is not cleaned up.

10. Description of Proposed Construction: Upgrade by replacement the existing sanitary sewer system. Upgrade sewer lines and manholes. Repair or replace sewage lift stations. Redirect some storm water and foundation drainage into the sanitary sewer. Restore site and modify underground utilities as required.

11. REQUIREMENT: As required.
PROJECT: Upgrade Sanitary Sewer System (Current Mission).
REQUIREMENT: This is a level II environmental compliance project. The base requires an environmentally safe and functional sanitary sewer system to support operations and to comply with environmental and health regulations.
CURRENT SITUATION: The infiltration of storm water into the sanitary sewer system has been recorded at nearly 2000% above the acceptable design level of 1980. The situation has become worse since that time. Manholes and sewer lines have continued to deteriorate. This level of infiltration is overloading the existing sewage treatment facility. Much of the infiltration is from foundation drains, roof drains and yard drains which discharge directly into the sanitary sewer. This is in violation of current Clean Water Act regulations. The City of Forbes sanitary system cannot accept and treat the extra water. The city has directed the ANG to insure no water infiltration enters the system.
IMPACT IF NOT PROVIDED: The City of Topeka will complete a new sewer line within a year to serve Forbes. The new fee schedule will not only charge Forbes for the infiltration/inflow, but will also impose a penalty for exceeding acceptable infiltration/inflow rates. The base will continue to be in violation of Federal Clean Water Act regulations. The potential will remain for the sanitary sewer to leach into surrounding soil and to

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab with masonry/insulated metal panel walls. Structure shall be steel frame with standing seam metal roof. Utilities, access pavements, site improvements, an oil/water separator, and fire suppression. All utilities and support.

Air Conditioning: 10 Tons.

11. REQUIREMENT: 14,500 SF ADEQUATE: 0 SUBSTANDARD: 0
PROJECT: Fuel Cell and Corrosion Control Facility (Current Mission).
REQUIREMENT: This is a level II environmental compliance project. A facility for the environmentally safe repair of aircraft fuel cells and bladders and for performing corrosion control on aircraft parts both on and off the aircraft is required. Functional areas include fuel cell/corrosion control dock, bladder repair shop, support shop space, paint spray area for painting large and small parts, training and administration areas. Environmentally safe exhaust systems to prevent air pollution and an oil/water separator to prevent corrosion contaminates or fuel spills from entering the soil/aquifer or waste water system are required.
CURRENT SITUATION: The base does not have a facility for accomplishing fuel cell and corrosion control on C-130 aircraft. The work is accomplished outdoors in violation of technical orders and environmental regulations. The facility utilized for these functions prior to converting to cargo aircraft was designed for fighter aircraft and cannot be economically added to or altered to provide the necessary support for the C-130 aircraft. This existing facility is being utilized for other requirements. Interim solutions are costly and extreme care must be taken so as not to create an unsafe or environmentally dangerous work place.

1. COMPONENT ANG	FY 1995 MILITARY CONSTRUCTION PROJECT DATA (computer generated)	2. DATE
3. INSTALLATION AND LOCATION STANDIFORD FIELD ANG KENTUCKY		
4. PROJECT TITLE FUEL CELL AND CORROSION CONTROL FACILITY	5. PROJECT NUMBER WEAS929862	
<p>Continued use of interim measures will lead to air and/or water pollution and soil contamination. As part of an approved agreement between the Air Force and the Standiford Field Airport authority, the ANG base will relocate from the present site to another area of the base. The airport authority is responsible for relocating the existing facilities on a square foot per square foot basis. The Air National Guard is responsible for programming additional facilities for the authorized and minimum required scope. This is one of the projects.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Maintenance is delayed especially during the winter months. Inefficient training results from the poor working conditions. The mission capability of the corrosion control shop and the health and welfare of its personnel is adversely affected. The unit will not be able to support the corrosion control and fuel cell functions. Environmental statutes will be violated through air pollution, water pollution and soil contamination.</p> <p><u>ADDITIONAL:</u> An exception to the economic analysis requirement has been prepared. The paper presents the rationale for only one alternative which is to construct the fuel cell and corrosion control dock.</p>

10. Description of Proposed Construction: Excavate and remove 15 tanks. Replace 14 tanks. Dispose of the tanks, tank residue, and the contaminated soil. Restore the sites.				
11. REQUIREMENT: As required. <u>PROJECT:</u> Replace Underground Fuel Storage Tanks (UST) (Current Mission). <u>REQUIREMENT:</u> This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. <u>CURRENT SITUATION:</u> The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. <u>IMPACT IF NOT PROVIDED:</u> Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Standard burn and draft pit, block building, all necessary utilities, and burn equipment.					
11. REQUIREMENT: As required. <u>PROJECT:</u> Regional Firemen Training Facility (Current Mission). <u>REQUIREMENT:</u> This is a level II environmental compliance project. Alpena serves as a regional training site for the total Force. The training facility is used by ground and air forces of the active and reserve components. The base requires a properly designed, correctly configured and environmentally safe fire training facility to support units who deploy there for training. <u>CURRENT SITUATION:</u> The base does not have an environmentally approved fire training pit to accomplish the training. Personnel must now accomplish training in a makeshift or simulated environment that does not properly satisfy the training experience. Due to environmental considerations, the ANG has been forced to close the firemen training facilities. The concept of operation is to train at regional centers in conjunction with other deployments at one of the Combat Training Centers such as Alpena. <u>IMPACT IF NOT PROVIDED:</u> Unable to properly train. Increased operating costs and decreased readiness. <u>ADDITIONAL:</u> There are numerous ANG locations that have the requirement for this type of training. This project will serve as a regional training center for other ANG locations.

10. Description of Proposed Construction: Demolition of the existing steam distribution system serving 13 of 23 buildings on the East side of the base. Installation of packaged heating systems in each affected building. All utilities and support. Demolish Building 123 (600 SF).				
11. REQUIREMENT: As required. PROJECT: Upgrade Heating Systems (Current Mission). REQUIREMENT: This is a level II environmental compliance project. The base requires an adequate heating system which is economical to maintain, operate and does not pollute the air and ground water. This project includes Buildings 3, 5, 7, 9, 15, 17, 18, 24, 25, 32, 33, 34, and 50. CURRENT SITUATION: The base has an antiquated central heating plant which serves in excess of 30 buildings through a system of approximately six miles of underground and above ground high temperature hot water lines. The central plant has old boilers which are uneconomical to operate. The plant emissions do not meet Federal and State air quality standards. There are numerous health and safety violations. The lines serving the buildings are old and poorly insulated. They need immediate replacement. There are numerous and substantial losses of energy through leaks. The pipes have asbestos insulation. The electrical connections are old and corroded. The plant uses coal and the coal storage piles cause pollution of the groundwater. It is uneconomical to upgrade the heating plant to meet air quality standards. Similarly, it is uneconomical to provide an impervious surface such that the coal piles do not pollute the groundwater. The plant must be operated throughout the year to allow for the supply of hot water to the various buildings. This project will provide smaller energy efficient heating units that will be more economical to operate and maintain. The grouping/phasing was determined

4. PROJECT TITLE UPGRADE HEATING SYSTEMS	5. PROJECT NUMBER VGLZ929901	
<p>by an extensive study and economic analysis.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Large energy losses. Inadequate heating for over 30 buildings. Health and safety hazards. Increasing operating costs. Violation of the Federal and State environmental laws. Possible shut down of the system with partial shut down of the base.</p> <p><u>ADDITIONAL:</u> A life cycle economic analysis has been prepared comparing all reasonable options for accomplishing this project. The analysis indicates that the grouping of the boilers into packaged units is the most economical alternative.</p>

10. Description of Proposed Construction: Install emergency back-up power generators and appurtenances. Replace pumps and motors.					
11. REQUIREMENT: As required. PROJECT: Upgrade Storm Drainage System (Current Mission). REQUIREMENT: The base has to plan for the strong possibility of partial flooding and severe environmental contamination of large areas of the base. Water must be continuously pumped from the base because the base surface level is about two feet below the adjacent level of Lake Huron. If pumping does not occur, the water table will rise on base and cover a large portion of the land and the airfield similar to the flooding that occurred along the Mississippi and Missouri rivers in the summer of 1993. CURRENT SITUATION: Storm pumps operate on commercial power. This is insufficient and has been a major concern due to the potential for a major disaster and is part of the base environmental compliance plan. During severe storms and especially during non-duty hours, personnel are recalled and portable generator units must be connected when a commercial power loss occurs. Many close calls to disastrous flooding have occurred. This project will install automatic starting generators with an alarm capability in case the generators do not start. The pumps and motors are old and do not work properly. Spare parts are not available. IMPACT IF NOT PROVIDED: Large areas of the base may become flooded, including one third of the base where the ANG cantonment area is located. Potential for flooding of the airfield exists. Potential shut down of operations. Serious damage to facilities and extreme damage to the environment may result because the base hazardous materials and storage areas will become flooded.

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab. Masonry walls and roof structure including mechanical and electrical systems. Concrete pavements all utilities and support. Demolish building 6906 at 4,400 SF. Air Conditioning: 8 Tons.						
11. REQUIREMENT: 14,700 SF ADEQUATE: 0 SUBSTANDARD: 8,900 SF PROJECT: Fire Station and Aircraft Support Equipment Shop (New Mission). REQUIREMENT: This project supports the conversion of A-37 to A-10 aircraft. An adequately sized and properly configured facility to support crash/fire/rescue operations is required. Adequate space is also required for the aircraft ground equipment shop. Includes apparatus bays, storage space, extinguisher maintenance shop, kitchen and dining area, control room, classroom, administrative areas and bunkrooms for fire fighters. CURRENT SITUATION: The conversion of A-37 to A-10 increased the numbers of support equipment requiring the need for a larger facility. The ground support equipment shop is an old building that needs to be demolished. An addition would not be the prudent thing to do. In accordance with the approved master development plan, a fire station is to be built and the existing fire station converted into the support equipment shop. The existing fire station is too small to properly support the fire protection and crash/rescue operations. Only four of the seven fire vehicles fit into the undersized fire station bays. Vehicles are stored and maintained outside and are subject to extensive corrosion. The bunk rooms, locker rooms and kitchen are currently located next to the fire station in a rented trailer. The support equipment shop is short of space. There is not enough space to maintain and store the equipment. It remains exposed to the weather even during the extreme cold winter weather of northern

10. Description of Proposed Construction: Replace 2 tanks. Excavate and remove the tanks. Dispose of the tanks, tank residue and the contaminated soil. Restore the sites. Alter Building 52 to house a paint spray booth and the refueling vehicle shop. Site work and utilities as required.

11. REQUIREMENT: As required.
PROJECT: Replace Fuel Tanks (UST) and Upgrade Refueling Vehicle/Paint Booth (Current Mission).
REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. A facility is required to accomplish corrosion control for government vehicles and equipment in a safe, efficient, and environmentally acceptable manner. An environmentally safe facility is also needed to maintain the refueling vehicles.
CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring, and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notices of Violations by the Federal and State EPA. The existing paint spray booth has been condemned due to non-compliance with EPA and OSHA requirements. It is stored and cannot be used. The base has an existing building that is vacant and can be modified to fit the vehicle

<p>paint booth at one end and the refueling vehicle maintenance bay at the other end. The building has no environmental controls to contain fuel spills and air emissions. It has no explosion proof fixtures, inadequate ventilation, no floor drain, and no fume extraction system. The refueling vehicles are being maintained in an outdoor parking lot in an unsafe manner with no environmental controls and in violation of technical orders.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Non-compliance with statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage could have the potential to contaminate the soil and aquifer. Vehicle/equipment corrosion control is not being accomplished efficiently. Refueling vehicles are being maintained in an unsafe and environmentally deficient manner. Continue to live with the risk. Training could be curtailed and the ANG could receive unfavorable publicity.</p> <p><u>ADDITIONAL:</u> All buildings at Jefferson Barracks are on the National Historic Register and must be upgraded to standards set by law.</p>

10. Description of Proposed Construction: Replace 8 tanks. Excavate and remove the tanks. Dispose of the tanks, tank residue and the contaminated soil. Restore the sites.					
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST) (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Concrete slab floor, apron, foundations and footings, insulated pre-engineered metal building with masonry walls. Ventilation system, oil/water separator, fire suppression and personnel breathing apparatus. All necessary utilities and support.						
11. REQUIREMENT: 17,000 SF ADEQUATE: 0 SUBSTANDARD: 11,000 SF PROJECT: Add to and Alter Fuel Cell and Corrosion Control Hangar (Current Mission). REQUIREMENT: This is a level II environmental compliance project. The base requires an adequate facility for performing both fuel cell maintenance and corrosion control with proper environmental controls. An environmentally safe facility is required to perform washing and solvent cleaning of the aircraft as well as painting of small aircraft parts. CURRENT SITUATION: The existing facility cannot accommodate the corrosion control function. This function is being performed outside, in violation of technical orders, safety and environmental compliance or inside where both functions must share the same hangar space. This results in unacceptable delays in both corrosion control and fuel systems maintenance. During the winter months the temperatures frequently drop to as low as -20 Degrees F making work on the ramp impossible. Inside only one of these functions can take place at a time. This project will expand the existing facility to allow for a second aircraft space and makes minor modifications to the existing bay to make both bays compatible. IMPACT IF NOT PROVIDED: Degraded training and maintenance delays due to the dual use of the hangar. Violations of technical orders, compromising both health and safety requirements and environmental requirements. Possible Notice Of Violations from the State or Federal EPA. Loss of training opportunities. Unable to reach full operational capability.

10. Description of Proposed Construction: Concrete apron including ramp lights; relocate and upgrade taxiway with lights; install fuel lines/hydrants, fill stands and entry road. Two 7,500 barrel fuel storage tanks and operations facility. A wash rack with deice pad. All utilities and support including parking for refuelers and other vehicles. Demolish old facilities and fuel tanks. All utilities and support. Air Conditioning: 5 Tons.				
11. REQUIREMENT: As required. <u>PROJECT:</u> Parking Apron and Hydrant Refueling System (New Mission). <u>REQUIREMENT:</u> The project supports the conversion from 18 RF-4 to 10 KC-135 aircraft in January 1994 and is also a level II environmental compliance project. Larger sized aircraft require additional parking ramp area, taxiway lanes and delivery of fuel through a hydrant system. Replacement of the jet fuel storage facility is required to support the new hydrant system. Exterior wash and deicing apron to clean aircraft in an environmentally safe manner. <u>CURRENT SITUATION:</u> The aircraft parking ramp, sized for RF4-C's, is inadequate for KC-135's. No hydrant system exists. The underground fuel storage tanks are undersized and cannot be upgraded. They are inadequate to support the new hydrant system. The tanks will be in violation of Federal and State EPA statutes which requires these tanks to be replaced with above ground tanks by 1998. The jet fuel storage cannot be upgraded to meet the constant pressure requirement of an hydrant refueling system. There is no wash and deice area. The taxiway must be relocated to provide adequate clearance for aircraft movement. Until this project is completed the KC-135 aircraft will be parked, on a temporary basis, on the opposite side of the runway, on the commercial ramp. This is not an ideal

3. INSTALLATION AND LOCATION LINCOLN MUNICIPAL AIRPORT (ANG) NEBRASKA		
4. PROJECT TITLE PARKING APRON AND HYDRANT REFUELING SYSTEM	5. PROJECT NUMBER NGCB909793	
<p>solution, but it is the only solution. The aircraft will be parked approximately 2 miles from the hangar/shops and the rest of the ANG area. The pavements on the commercial side have been temporarily upgraded to accommodate a short term use. The pavement will fail if the use is extended. In addition, the pavement will be needed by the expanding commercial operation. Refueling will have to be done by trucks. Temporary buildings have been leased from the commercial airport authority.</p> <p><u>IMPACT IF NOT PROVIDED:</u> Unable to permanently beddown the KC-135 aircraft at this location. Loss of training opportunities. If the pavement fails, the aircraft will have to be relocated to another location within the state. Unable to reach full operational capabilities.</p> <p><u>ADDITIONAL:</u> An exception to the economic analysis has been prepared. The paper presents the rationale that due to operational reasons there is only one alternative which is to construct the required facilities. A full economic analysis was not accomplished.</p>

10. Description of Proposed Construction: Replace 9 tanks. Excavate and remove the tanks. Dispose of the tanks, tank residue and the contaminated soil. Restore the sites.					
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST) (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. In addition, the State of Nebraska regulates also heating oil tanks. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Reinforced concrete foundation and floor slab. Structural steel framing with masonry walls to match existing construction. Interior alteration to provide a functional layout compatible with the addition. Fire protection and utilities and support. Air Conditioning: 5 Tons.					
11. REQUIREMENT: 17,000 SF ADEQUATE: 0 SUBSTANDARD: 11,000 SF PROJECT: Add to and Alter Fuel Cell and Corrosion Control Facility (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Increased requirements in both fuel cell maintenance and corrosion control require dedicated areas for the performance of each function. The corrosion control section requires an area to wash the aircraft and areas to safely store and mix paints, sandblast and paint small parts and perform limited aircraft painting. Additional personnel require more administrative, training and latrine space. CURRENT SITUATION: The F-16 aircraft is more fuel cell maintenance intensive. Both fuel cell maintenance and corrosion control work are being accomplished in a single open bay. Only one of these functions can take place at a time, which leads to unacceptable delays in required maintenance and training. There are no areas for the storage and mixing of small quantities of paint which meet standards, nor are there available areas for sandblasting and the painting of small parts. Administrative and latrine areas are undersized for the number of assigned personnel. The facility out of compliance with EPA air/water standards. IMPACT IF NOT PROVIDED: Maintenance delays. Mission degradation. Unable to achieve full operational capability. Environmental contamination of the water, ground, and air.

10. Description of Proposed Construction: Replace 12 tanks and remove only 7 others. Excavate and remove the tanks. Dispose of tanks, tank residue and contaminated soil. Restore the sites.					
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST) (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Construct new and rerouted roads, parking areas, concrete curbs/gutters, storm drainage, sewer laterals, street lights, comm, and gas distribution lines. Regrade, seed and landscape areas to be restored. Develop central core area consistent with Master Plan. Integrate storm water and sewer systems into airport and local systems. Demolition as required to provide site restoration.

11. REQUIREMENT: As required.

PROJECT: Site Restoration (Current Mission).

REQUIREMENT: This is a category II environmental compliance project. The base requires a properly sized and environmentally correct base infrastructure that will meet Federal, State, and Local environmental regulations and that will provide for future expansion and not endanger the environment nor the base and local population. In addition, properly sized and located utility systems are required to conform to the Master Plan that is currently being accomplished through the construction of several new facilities and the demolition of old facilities.

CURRENT SITUATION: The execution of the modernization of the base through construction guided by the Master Plan has forced the relocation of several of the base's environmental systems. The modernization has forced the resizing of the systems and the upgrading of their interconnections with the city systems as they exit the base. The age of the systems requires that they be updated to meet current and the more stringent requirements of modern environmental regulations. Current systems are inadequate, undersized and in danger of polluting the local environment and endangering the health of base and local populations. The existing infrastructure system does not meet the requirements. They are old, undersized and poorly arranged. They do not integrate into the ANG master

TOTAL REQUEST (ROUNDED)				1,800
10. Description of Proposed Construction: Replace 41 tanks. Excavate and remove the tanks. Dispose of the tanks, tank residue and the contaminated soil. Restore the sites.				
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST) (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Replace 7 tanks and remove only 4 others. Excavate and remove the tanks. Dispose of the tanks, tank residue and the contaminated soil. Restore the sites.						
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST)(Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Federal Environmental Protection Agency (EPA) has set standards that require each regulated UST to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at this base have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the base is subject to Notice of Violations by the Federal and/or State EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. The State and County may issue restraints and/or Notices of Violations and fines. Any leakage has the potential to contaminate the soil and aquifer. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Demolition of the existing hot water distribution system serving 7 buildings. Installation of packaged heating systems in each affected building. All utilities and support. Demolish a portion of Building 104 (600 SF), the central heating plant attached to the hangar.					
11. REQUIREMENT: As required. PROJECT: Replace Central Heat Plant (Current Mission). REQUIREMENT: This is a level II environmental compliance project. The base requires an adequate heating system which is economical to operate and maintain and does not pollute the air and ground water. This project includes Buildings 104, 105, 106, 107, 108, 109, and 112. CURRENT SITUATION: The base has an antiquated central heating plant which serves seven buildings through a system of approximately 1 mile of underground and above ground high temperature hot water lines. The central plant has old boilers which are uneconomical to operate. The plant emissions do not meet Federal and State air quality standards. There are numerous health and safety violations. The pipes have asbestos insulation. The lines serving the buildings are old and poorly insulated. There are numerous and substantial losses of energy through leaks. They need immediate replacement. The electrical connections are old and corroded. It is uneconomical to upgrade the heating plant system. The plant must be operated throughout the year to allow the production of hot water to the various buildings. This project will provide smaller energy efficient easier to maintain heating units that do not pollute. IMPACT IF NOT PROVIDED: Large energy losses. Health and safety hazards. Violation of the federal and state environmental laws. Higher operating costs.

10. Description of Proposed Construction: A four story brick and block smoke training building, a burn/draft pit with large and small aircraft mock ups and a metal/masonry observation tower. Provide for utilities, pavements, and site improvements. Provide environmental controls.						
11. REQUIREMENT: As required. PROJECT: Regional Firemen Training Facility (Current Mission). REQUIREMENT: A regional fire training facility is required at Volk Field Combat Readiness Training Center. The base requires a properly designed, correctly configured, and environmentally safe fire training facility to support training for visiting units, base auxiliary fire fighters, and deployed fire-fighters. CURRENT SITUATION: Volk Field is an ANG operated regional training base used by the total force. Rather than construct a training facility at each base, the ANG has elected to locate the fire training facilities at regional training bases. Volk Field does not have an adequately sized, properly equipped, or environmentally approved fire training pit to accomplish the required training of the units that deploy to Volk Field. Personnel accomplish the mission essential training in a makeshift or simulated environment that does not properly satisfy the training required to learn and to perform properly in real life situations. IMPACT IF NOT PROVIDED: Unable to provide realistic training to the deployed units. Decreased experience and readiness. Potential environmental problems. Increased operating costs. ADDITIONAL: There are numerous ANG locations that have the requirement for this type of training. This project will serve as a regional training center for other ANG locations.

10. Description of Proposed Construction: Replace 11 tanks (8 tanks at the air base, 1 tank at Punta Salinas, and 2 tanks at St Croix). Remove only 1 tank at Punta Borinquen. Excavate and remove the tanks. Dispose of the tanks, tank residue and contaminated soil. Provide new above ground tanks. Provide utilities, pavements and site restoration.						
11. REQUIREMENT: As required. PROJECT: Replace Underground Fuel Storage Tanks (UST) (Current Mission). REQUIREMENT: This is a level II environmental compliance project. Upgrade all USTs regulated by 40 CFR 280 to new construction standards. The Environmental Protection Agency (EPA) has set standards that require that all regulated USTs to have leak detection, corrosion protection, and spill/overflow prevention systems by December 1998. If USTs are to be replaced, it is Air Force policy to replace them with above ground tanks or to relocate them into underground vaults if possible. CURRENT SITUATION: The USTs at these bases have exceeded their design lives and are in need of replacement. All tanks are out of compliance with the 1998 EPA standards. All the regulated USTs require annual tightness testing, daily fluid level monitoring and monthly inventory reconciliation and control. If these tasks are not performed, the bases are subject to Notice of Violations from Federal and/or Commonwealth EPA. IMPACT IF NOT PROVIDED: Non-compliance with Statutes. Authorities may issue restraints and/or Notices of Violations and fines. Any leakage could have the potential to contaminate the soil, aquifers and ocean. The ANG training could be curtailed and the ANG could receive unfavorable publicity.

10. Description of Proposed Construction: Add to and alter Building 19 to provide a Corrosion Control Facility. Project includes hangar doors and construction of rear wall, installation of ventilation system, <u>oil/water separator, fire protection, and necessary utilities.</u>					
11. REQUIREMENT: 7,000 SF ADEQUATE: 0 SUBSTANDARD: 5,600 SF PROJECT: Add to and Alter Aircraft Corrosion Control Facility (Current Mission). REQUIREMENT: This is a category II environmental compliance project. A corrosion control facility is required to properly maintain the F-16 aircraft. CURRENT SITUATION: Corrosion control and fuel system maintenance are performed together under waivers in an open shelter with none of the required ventilation, drainage, air emission controls or fire detection/suppression system. Fuel cell operations occupy most of the facility. The F-16 aircraft requires increased fuel cell maintenance, which impacts the corrosion control activities. Puerto Rico IAP has a severely corrosive environment due to close proximity to the ocean. The aircraft require frequent washings. The facility does not have the proper environmental controls to meet air and water quality regulations. It does not have proper drainage with capability to separate oil and fuel from water and the washing chemicals. The system drains improperly and could contaminate off base areas. IMPACT IF NOT PROVIDED: Inability to perform corrosion control on the new aircraft will result in mission degradation, insufficient mission sorties, and loss of training. Possible contamination of the ground and negative publicity.

10. Description of Proposed Construction: The funds requested will provide for the final design of facilities and achieve full evaluation for each project in terms of technical adequacy and estimated cost. In addition, the funds are required to prepare working drawings, specifications, and project reports for the design of construction projects to be included in future Military Construction Programs.						
11. REQUIREMENT: As required. <u>REQUIREMENT:</u> The FY 95 design funds are needed to design projects for the FY 96 and 97 MILCON program. <u>CURRENT SITUATION:</u> The SECDEF bottom up review and the downsizing of the Air Force has resulted in the transferring of additional missions such as the B-1, KC-135, C-130, and others to the ANG. The MILCON for these aircraft conversions are included in the FY 96-97 programs. The ANG requires the design money in FY 95 to insure the design milestones for FY 96 and FY 97 of 65% and 35% as mandated by DODI 1225.7 are met. The ANG design dollars have been totally depleted. This is the result of past congressional MILCON adds to the program without a corresponding increase in design money. For example, in FY 93 Congress added \$150 million in construction dollars and only \$5 million in design. This left a shortfall of approximately \$13 million in design. <u>IMPACT IF NOT PROVIDED:</u> The ANG will not be able to execute the FY 96 and FY 97 design programs. Since the majority of the programs are in support of new missions, conversions, and environmental compliance, the projects cannot be included in the MILCON programs and submitted to Congress. Conversions will be delayed; high risk and costly workarounds will occur. Inability to program environmental compliance projects will result in violation of County, State, and Federal statutes. The ANG may receive

<p>ines and the DoD, AF, and ANG may receive adverse publicity. It will be hard to explain that this was caused by insufficient planning and design.</p>		

DEPARTMENT OF THE AIR FORCE
JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 1995

APPROPRIATION: MILITARY CONSTRUCTION -- AIR NATIONAL GUARD
PROGRAM 313: PLANNING AND DESIGN \$11,532,000

PART I -- PURPOSE AND SCOPE

The funds estimated in this program are to provide financing for project planning and design of the construction requirements for the Air National Guard.

PART II -- JUSTIFICATION OF FUNDS REQUESTED

The funds required for Planning and Design will provide for establishing project construction design of facilities and for achieving a full evaluation of each designed project in terms of technical adequacy and estimated costs.

10. Description of Proposed Construction: Provides a lump sum for construction projects not otherwise authorized by law, having a funding of \$400,000 or less, including construction, alteration, or conversion of permanent or temporary facilities. The Secretary of the Air Force has the authority to approve projects of this nature under the provisions of 10 U. S. C. 2233a.					
11. REQUIREMENT: As required. <u>REQUIREMENT:</u> This program provides the means of accomplishing projects not exceeding \$400,000 that are not now identified, but which are anticipated to arise during FY 94 and early FY 95 to satisfy critical, unforeseen mission requirements. These projects cannot wait for inclusion in the FY 96 MILCON. <u>CURRENT SITUATION:</u> During this period, as the AF is cutting back, ANG will undergo numerous aircraft conversions and beddowns. Many urgent facility requirements not now identified may need to be done on an urgent basis to support the arrival of new aircraft and equipment. Past records indicate that additional conversion projects are identified by the Site Activation Task Force. This is a management team that arrives on base and conducts a program review to insure a successful and on time aircraft conversion. Unforeseen and urgent environmental requirements to meet the State and Federal laws are also typical projects that must be accomplished.					

DEPARTMENT OF THE AIR FORCE
JUSTIFICATION OF ESTIMATES FOR FISCAL YEAR 1995

APPROPRIATION: MILITARY CONSTRUCTION -- AIR NATIONAL GUARD
PROGRAM 341: UNSPECIFIED MINOR CONSTRUCTION \$4,000,000

PART I -- PURPOSE AND SCOPE

The funds estimated in this program are to provide financing for new construction and alteration projects having cost estimates not exceeding \$400,000 which are not otherwise authorized by law.

PART II -- JUSTIFICATION OF FUNDS REQUESTED

The funds required for Minor Construction will finance projects for which the justification is such that they should not be included in the regular Military Construction Program for the Air National Guard and such that they exceed the minor construction work authorization in the Operations and Maintenance Appropriation.
