Environmental Review Guide for Operations (ERGO)

*A Compliance Assessment Manual for Use at All USACE
Civil-Funded Projects and Facilities*

The number of environmental laws and regulations have continued to grow in the United States, making compliance with these regulations increasingly difficult. Environmental assessments became a way to determine operational consistency and compliance with current environmental regulations. The U.S. Army Corps of Engineers (USACE) has adopted an environmental compliance assessment program, based on the Environmental Review Guide for Operations (ERGO) that identifies and corrects current and potential compliance problems.

Beginning in 1989, the U.S. Army Construction Engineering Research Laboratories (USACERL) and a USACE steering committee began the research that led to the publication of the ERGO. The concept was to combine Code of Federal Regulations (CFRs), Department of Defense (DOD) regulations, Department of the Army and Engineer Regulations (ERs), along with documentation of good management practices, into a series of checklists for use by compliance assessment personnel. The ERGO checklists are specifically designed for application to the hydroelectric plants, flood control dams, navigation locks, public recreation facilities, floating plant, maintenance yards, laboratories, and other facilities related to the Army's Civil Works mission.

The ERGO manual is updated annually to address new environmental laws and regulations.

Environmental Stewardship/Investing in the Future

Approved for public release; distribution is unlimited.

This manual is printed on recycled paper.

FOREWORD

This research was performed for the Headquarters, U.S. Army Corps of Engineers (HQUSACE) Directorate of Civil Works, under FAD Number 93-08292, dated March 1993. The HQUSACE technical director is Jim Wolcott, CECW-OA.

The research was performed by the Environmental Compliance Modeling and Systems Division (EC) of the Environmental Sustainment Laboratory (EL), U.S. Army Construction Engineering Research Laboratories (USACERL). The Principal Investigator was Donna J. Schell, Environmental Protocol Team, CECER-ECP. Tina M. Hurt, CECER-ECP, was Associate Investigator. Dr. Diane K. Mann, CECER-ECP is Acting Team Leader. Dr. John T. Bandy is Acting Chief, CECER-EC, and William D. Goran is Acting Chief, CECER-EL.

LTC David J. Rehbein is Commander, USACERL, and Dr. L. R. Shaffer is Director.

PROGRAM BACKGROUND

APPLICABILITY

The 1994 *Environmental Review Guide for Operations (ERGO)* applies to all USACE Civil Works activities, operating projects, facilities, and floating plant. Outgranted lands and concessions are also included.

The ERGO is concerned with environmental compliance, not restoration activities. Environmental assessment manuals have also been developed for other military programs. The ERGO is designed as a reference for office and field managers to use along with the appropriate technical experts and the Office of Counsel to determine if USACE activities are being conducted in compliance with Federal environmental laws and regulations. It can also be used as a formal environmental audit program.

The Operations, Construction, and Readiness Division of the Civil Works Directorate initiated the ERGO as a comprehensive self-evaluation and program management system for achieving, maintaining, and monitoring compliance with environmental laws and regulations at USACE facilities and operating projects. Objectives of an environmental review are to:

- enhance USACE environmental compliance at Federal, state, and local levels
- improve USACE environmental management
- build supporting financial programs and budgets
- assure supervisors their environmental programs are being implemented effectively in accordance with USACE goals and objectives.

Periodic environmental compliance evaluations are invaluable to managers. The evaluations assess environmental compliance and provide necessary feedback to supervisors for organizing, directing, and controlling compliance and protection activities.

The updating and revision of the ERGO manual is overseen by a steering committee. Mr. Lloyd Williamson (CESAW-CO-RK) is the chairman of the steering committee that includes Deborah Chenoweth (CEMRD-CO-R), Jimmie Brown (CENPW-OP-RM), Dr. Loren M. Mason (CESWT-OD-RR), and Dr. Diane K. Mann (CECER-ECP).

The contents of this manual are up-to-date as of 22 February 1994. It includes provisions of Executive Order (EO) 12856, *Federal Compliance with Right-to-Know Laws and Pollution Prevention Requirements*.

MANUAL OBJECTIVES

The ERGO is intended to serve as the primary tool for conducting environmental compliance evaluations. The objectives of the manual are to:

- compile applicable Federal, Department of Defense (DOD), and Army Regulations (ARs) associated with USACE operations and activities
- synthesize environmental regulations, good management practices (GMPs), and risk management issues into consistent and easy-to-use checklists
- serve as a reference document and educational tool for daily operations
- serve as a standard for evaluation of environmental compliance
- serve as a guide for implementing the U.S. Army Environmental Strategy Into The 21st Century, which emphasizes environmental stewardship as an integral part of everything USACE does.

MANUAL ORGANIZATION

Many operations and activities at USACE facilities can affect public health and the environment if not controlled or properly managed. A number of these activities and operations are regulated by Federal, state, and local regulations, as well as Engineer Regulations (ERs), and USACE directives and policies.

After reviewing activities at USACE facilities, it was apparent that most environmental regulations and facility activities could be grouped into major categories of environmental compliance.

This manual is divided into 13 major sections that correspond to the following compliance categories:

Section	Compliance Category	Page
1	Air Emissions Management	1-1
2	Cultural and Historic Resources Management	2-1
3	Hazardous Materials Management	3-1
4	Hazardous Waste Management	4-1
5	Natural Resources Management	5-1
6	Pesticide Management	6-1
7	Petroleum, Oil, and Lubricant (POL) Management	7-1
8	Solid Waste Management	8-1
9	Special Pollutants Management (Radon, Asbestos, PCBs, Noise, and Lead)	9-1
10	Underground Storage Tank (UST) Management	10-1
11	Wastewater Management	11-1
12	Water Quality Management	12-1
13	Floating Plant Management	13-1

Each section is organized in the same format:

A. Applicability

Provides guidance on the major activities and operations that are included in the section and a brief description of the major application.

B. Federal Legislation

Identifies, in summary form, key regulatory issues associated with the specific compliance area in Federal law.

C. State/Local Regulations

Identifies particular state and/or local regulations that address requirements associated with the specific compliance category.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

Identifies ERs and DOD directives or regulations that address requirements associated with the specific compliance category.

E. Key Compliance Requirements

Identifies the most common areas that require permits and monitoring activities.

F. Key Compliance Definitions

Presents definitions for those key terms associated with each compliance category.

USACE REGULATIONS

ER 1130-2-400, *Management of Natural Resources and Outdoor Recreation at Civil Works Water Resource Projects*, 1 June 1986, sets forth the policies and procedural guidance for the administration and management of Civil Works water resource projects. This regulation establishes the USACE policy on solid waste disposal, water, air, noise, visual pollution control, and pest control. The regulation states that the ultimate responsibility for the project's natural resources rests with the USACE. The management of fish and wildlife resources in cooperation with state and Federal agencies is also addressed.

Additional information can be found in the following ERs and engineer manuals (EMs):

Points of Contact (POCs)

To facilitate an ERGO evaluation, guidance is provided on the department or location at the facility, district, or division where action items are applicable. The following are used with their assigned numbers throughout the manual and are referred to in a legend at the bottom of each checklist page. This list is only a general guide and should be adapted to fit the functional organization of a division or district. Because of the complexity of environmental compliance issues facing USACE facilities, the Office of Counsel should be considered an integral component of the compliance assessment process.

Division Office

- (1) Natural Resources Management
- (2) Engineering
- (3) Safety and Occupational Health Office
- (4) Operations

District Office

- (5) Environmental Compliance Coordinator (ECC)
- (6) Natural Resources Management
- (7) Engineering
- (8) Safety and Occupational Health Office
- (9) Logistics
- (10) Operations
- (11) Cultural/Historic Resources
- (12) Real Estate
- (13) Planning
- (14) Emergency Management

Project

- (15) Project Resource Manager
- (16a) Facility Manager, Engineer Yards
- (16b) Facility Manager, Maintenance Yards
- (16c) Powerhouse Superintendent
- (16d) Facility Manager, Locks
- (16e) Facility Manager, Dams
- (17) Lab Manager

[illegible]

(NOTE: Office of Counsel and Division ECCs should be considered POCs for all compliance requirements and violations.)

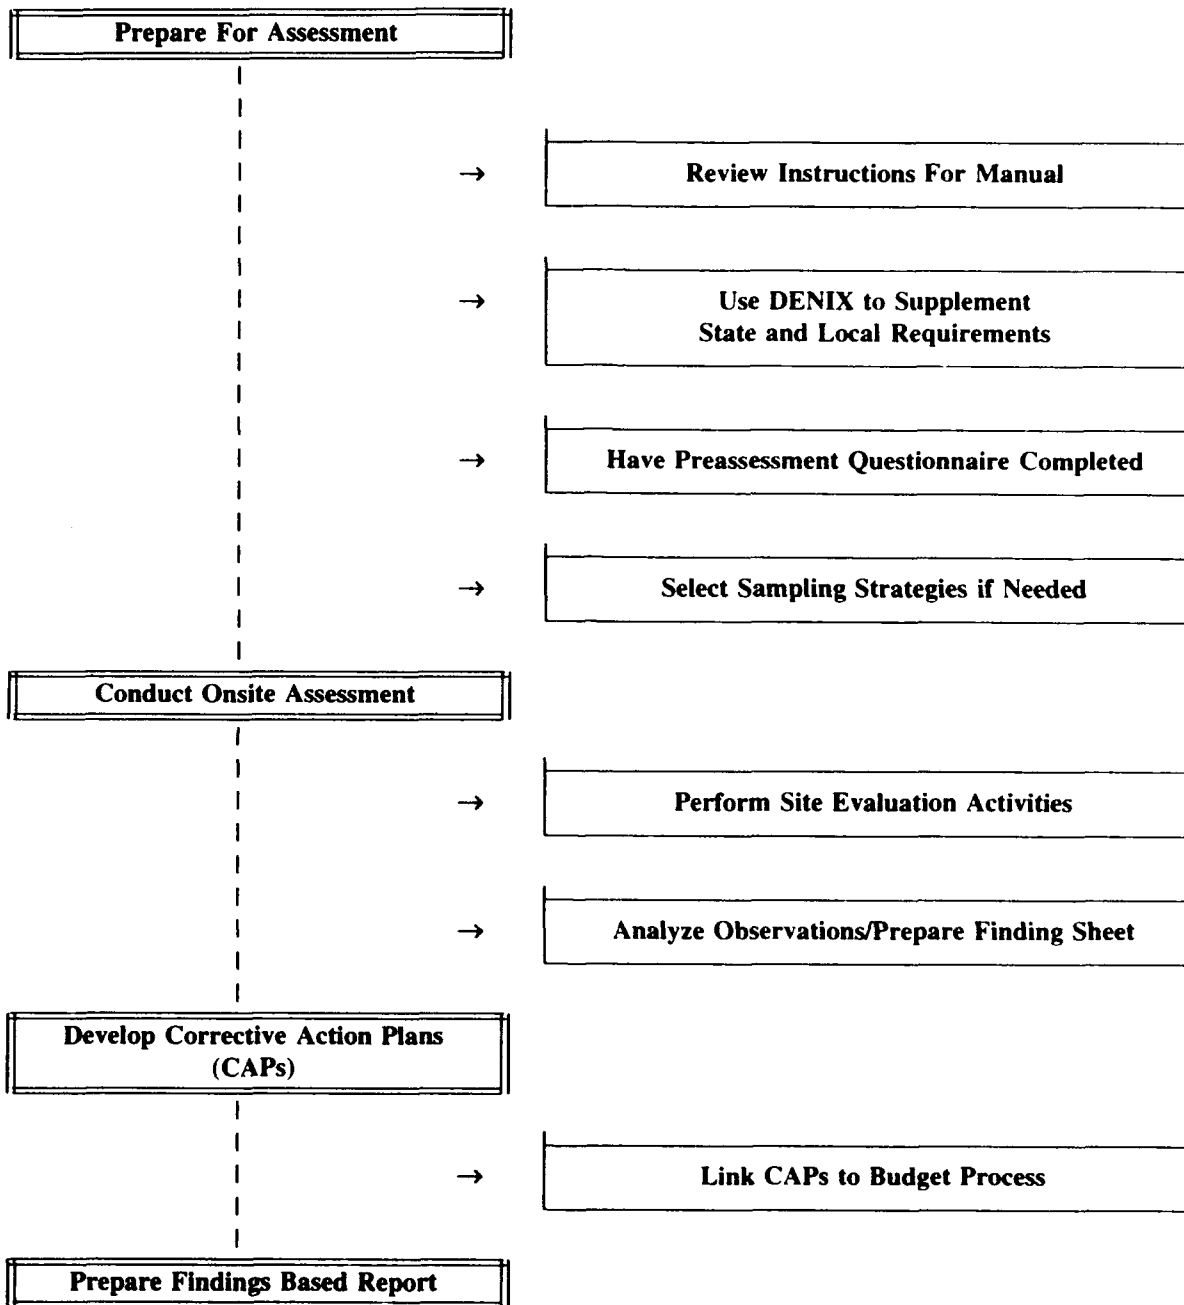

- (1) **Division Natural Resources Management** reviews and provides guidance to the districts for all aspects of administration of the natural resource management program, including recreation and natural resources. Ensures that activities are conducted in accordance with applicable environmental laws and USACE regulations and policies.
- (2) **Division Engineering** plans, coordinates, supervises, or directs the regulation of flood control reservoirs and power plants within its geographical boundaries. Exercises staff supervision over the districts for technical matters pertaining to all aspects of engineering and ensures adequacy of design and compliance with Federal, state, and local environmental laws and USACE regulations and policies.
- (3) **Division Safety and Occupational Health Office** provides guidance and direction to the division and districts on all aspects of the safety and occupational health program. Ensures that adequate standards are incorporated into operating procedures, manuals, directives, and other instructions. Ensures compliance with all *Occupational Safety and Health Act (OSHA)* requirements as well as all USACE safety regulations and policies.
- (4) **Division Operations** reviews and provides guidance to the districts for all aspects of administration relating to the operation and maintenance of multipurpose dams, flood control structures, locks, power plants, and other operating facilities. Ensures compliance with applicable USACE regulations and policies.
- (5) **ECC** ensures timely and consistent notification actions, reports, and guidance on environmental laws and regulations. Supports action to ensure timely and appropriate compliance at facilities.
- (6) **District Natural Resources Management** provides guidance and direction to the projects for all aspects of the administration of the Natural Resources Management Program, including recreation and natural resources. Directs project activities in accordance with applicable environmental laws and USACE regulations and policies.
- (7) **District Engineering Division** plans, coordinates, and directs the regulation of flood control reservoirs and power plants within responsible geographical boundaries. Exercises control over technical matters pertaining to engineering design and ensures compliance with applicable environmental laws and USACE regulations and policies.

- (8) **District Safety and Occupational Health Office** provides guidance and direction to the district and field offices on all aspects of the Safety and Occupational Health Program. Inspects for compliance with all *OSHA* requirements as well as all USACE safety regulations and policies.
- (9) **District Logistics** manages and administers logistical programs, such as office building maintenance and motor pools. Provides guidance on the disposal of excess property and materials.
- (10) **District Operations** provides guidance and direction to the district and field projects. Supervises and directs all aspects of the district programs relating to the operation and maintenance of multipurpose dams, flood control structures, locks, power plants, and other operating facilities. Ensures compliance with applicable USACE regulations and policies.
- (11) **District Cultural/Historic Resources Coordinator** has oversight responsibilities for all aspects of planning, coordination, and execution of archaeological and historical work in compliance with environmental laws and USACE policies and regulations. Job titles may vary.
- (12) **District Real Estate** is responsible for real estate programs and activities, including acquisition, outgrants, and disposal. Ensures that activities are conducted in accordance with appropriate environmental laws and USACE policies and regulations for district civil works and, where appropriate, military lands.
- (13) **District Planning** has oversight responsibilities for the preparation of master plans and supplements and is generally the POC for consultation with the U.S. Fish and Wildlife Service (FWS) and other agencies for compliance with requirements from the *National Environmental Policy Act (NEPA)*. Ensures that activities are in compliance with appropriate environmental laws and USACE policies and regulations.
- (14) **District Emergency Management** plans, coordinates, and directs activities related to flood and coastal storm emergencies and disaster relief assistance within responsible geographical boundaries. Exercises control over operating procedures and policies pertaining to authorized disaster activities or emergency declarations in accordance with applicable environmental laws and USACE regulations and policies.
- (15) **Project Resource Manager** has oversight responsibilities for aspects of operations, maintenance, and administration of a water resource project and its

natural and historic resources. Ensures that project stewardships, maintenance, and operations activities are conducted in accordance with applicable environmental laws, regulations, and guidance.

- (16a) **Facility Manager, Engineer Yard** has the oversight responsibilities for all aspects of operations and maintenance conducted at the facility's engineer yard. Ensures that daily activities are conducted in accordance with applicable environmental laws, regulations, and guidance.
- (16b) **Facility Manager, Maintenance Yard** has the oversight responsibilities for all aspects of operations and maintenance conducted at the facility's maintenance yard. Ensures that daily activities are conducted in accordance with applicable environmental laws, regulations, and guidance.
- (16c) **Powerhouse Superintendent** has oversight responsibilities for all aspects of operations, maintenance, and administration of the project powerhouse, dam, and all connected or associated structures. Ensures that all project maintenance and operations activities are conducted in accordance with applicable environmental laws, regulations, and guidance.
- (16d) **Facility Manager, Locks and Dams** has oversight responsibilities for all aspects of operations, maintenance, and safety conducted at the District Civil facility. Ensures that daily activities are conducted in accordance with applicable environmental laws and USACE policies and regulations.
- (16e) **Facility Manager, Dams** has oversight responsibilities for all aspects of operations, maintenance, and safety conducted at the District Civil facility. Ensures that daily activities are conducted in accordance with applicable environmental laws and USACE policies and regulations.
- (17) **Lab Manager** has oversight responsibility for all aspects of environmental compliance, operations, maintenance, and safety at district and division USACE laboratories. Ensures that daily activities are conducted in accordance with applicable environmental laws and USACE policies and regulations.

STEPS FOR ENVIRONMENTAL ASSESSMENT

PREPARING FOR AN ASSESSMENT

Before conducting the actual assessment of a facility, the evaluator will want to review the *Instructions for Using the Manual* that begin following this section. In addition, before the assessment, a preassessment questionnaire should be sent to the facility. This questionnaire indicates to the assessment team what types of activities are performed at the facility. A sample page from a completed preassessment questionnaire is included on the following page. The blank questionnaire itself is provided, in its entirety, at the end of the introductory section. Facility personnel are to complete this questionnaire and return it to the evaluator.

In addition to sending the preassessment questionnaire, the assessment team must incorporate applicable state regulations prior to arrival at the assessment site. Methods to use in reviewing state regulations are further discussed in the *Instructions for Using the Manual*.

ERGO

Environmental Review Guide for Operations

PREASSESSMENT ENVIRONMENTAL MANAGEMENT QUESTIONNAIRE

This questionnaire will provide background information necessary to plan and conduct an environmental compliance assessment. References provided in this questionnaire are to assist in answering the questionnaire and are not intended to be all-inclusive. Refer to the Major Activities/Operations Table to determine where activities/operations overlap into several different areas.

Name of Facility: Lees Ferry Dam 270

QUESTION/DESCRIPTION	RESPONSE	REFERENCE
----------------------	----------	-----------

SECTION 1. Air Emissions Management:

1. Does the facility operate a fuel burner (central steam plant, or hot water or hot water steam boiler)?

Yes

If **YES** how large and what fuel is used? See ERGO items 1-4 through 1-7.

Size

Fuel

500 Btu heating oil #2

2. Does the facility operate an incinerator? How large? _____

No

If **YES** see ERGO item 1-3.

3. Does the facility dispense, store, or transfer gasoline?

Types: Diesel

Yes

If **YES** see ERGO items 1-8 through 1-13.

4. Does the facility operate printing presses?

No

If **YES** see ERGO item 1-14.

INSTRUCTIONS FOR USING THE MANUAL

Using the ERGO manual is actually a four-step process. It begins with the preassessment questionnaire (see page lxiii), then the Major Activity tables (page lxxxv), then the guidance page immediately preceding the checklist portion of each section (see page xxiv), and finally the checklist itself for each section. The following is an example of how this process works in practice:

Step 1. You find, from reviewing the preassessment questionnaire, that the facility has polychlorinated biphenyl (PCB) Transformers.

QUESTION/DESCRIPTION

RESPONSE REFERENCE

SECTION 9, Special Pollutants Management:

1. Does facility have PCBs of any kind?

Type Transformers
Quantities 5

Yes

If YES, see ERGO
items 9-4 through 9-11

2. Does facility have PCB Transformers?

Yes

If YES, see ERGO
items 9-12 through 9-19

Step 2. Go to the Major Activities tables that begin on page lxxxv. There you will find row 15, *PCB Electrical Equipment*. Follow that row through the table and you'll come to a bullet (•) under column 9, *Special Pollutants Management*.

Major Activities/Operations at USACE Projects and Related Sections					
SECTIONS					
Major Activities/ Operations	9 Special Pollutants Mgmt.	10 UST Mgmt.	11 Wastewater Mgmt.	12 Water Quality Mgmt.	13 Floating Plant Mgmt.
15. PCB Electrical Equipment	•				•
16. Pesticide/ Herbicide Use					•
17. Environmental Noise	•				•
18. Emergency Planning					
19. Asbestos Removal	•				
20. Underground Storage Tanks		•			

Step 3. Turn to page 9-17, which contains the guidance sheet for section 9, and you will notice that items 9-1 through 9-3 apply to all facilities.

**SPECIAL POLLUTANTS MANAGEMENT
GUIDANCE FOR WORKSHEET USERS**

	REFER TO WORKSHEET ITEMS:	CONTACT THESE PERSONS OR GROUPS:(a)
All Facilities	9-1 through 9-3	(1)(5)(6)(8)(15)(16)

Next you'll see that if the facility has items with PCBs, you must review items 9-4 through 9-8.

**SPECIAL POLLUTANTS MANAGEMENT
GUIDANCE FOR WORKSHEET USERS**

	REFER TO WORKSHEET ITEMS:	CONTACT THESE PERSONS OR GROUPS:(a)
All Facilities	9-1 through 9-3	(1)(5)(6)(8)(15)(16)
PCBs	9-4 through 9-8	(5)(8)(15)(16)
Records	9-9 through 9-11	(5)(8)(15)
PCB Transformers	9-12 through 9-19	(3)(5)(8)(10)(15)(16)
PCB Spills	9-20 through 9-22	(3)(5)(8)

Notice that POCs are also shown in the third column of this page. They are also listed within each item in the section.

**SPECIAL POLLUTANTS MANAGEMENT
GUIDANCE FOR WORKSHEET USERS**

	REFER TO WORKSHEET ITEMS:	CONTACT THESE PERSONS OR GROUPS:(a)
All Facilities	9-1 through 9-3	(1)(5)(6)(8)(15)(16)
PCBs	9-4 through 9-8	(5)(8)(15)(16)
Records	9-9 through 9-11	(5)(8)(15)
PCB Transformers	9-12 through 9-19	(3)(5)(8)(10)(15)(16)

 - (9) District Office - Logistics
 - (10) District Office - Operations
 - (11) District Office - Cultural/Historic Resources
 - (12) District Office - Real Estate
 - (13) District Office - Planning
 - (14) District Office - Emergency Management
 - (15) Project - Project Resource Manager
 - (16) Facility Manager
 - (17) Lab Manager

(NOTE: Office of Counsel should be considered a POC for all compliance requirements and violations.)
DEFINITIONS: NA - Not Applicable to the Facility; RMA - Requires Management Action; C - In Compliance

Before moving on to the checklist within the section, it would be a good idea to review the introductory information at the beginning of the section if you haven't already done so. This will provide you with detailed information on the governing regulations, key compliance requirements, and key compliance definitions. Throughout the introductory information and the checklist you will find that some conversions are in brackets [], indicating that they were done by USACERL. If the conversions are in parentheses (), then they were provided by the regulations themselves.

Step 4. In this example, question 9-17 illustrates a typical checklist question:

REGULATORY REQUIREMENTS:	REVIEWER CHECKS:
<p>9-17. Inspections must be performed once every 3 mo for all in-service PCB Transformers with greater than 500 ppm PCB (40 CFR 761.30(a)(1)(ix) and 761.30(a)(1)(xii) through 761.30(a)(1)(xiv)).</p>	<p>Verify that applicable transformers are inspected at least once every 3 mo by reviewing inspection records. (8)(15)(16)</p> <p>Determine if any PCB Transformers have been leaking. (8)(15)(16)</p> <p>Verify that, if any leaking transformers have been discovered, proper reporting procedures have been followed. (8)(15)(16)</p> <p>Verify that the following information is recorded for each PCB Transformer inspection: (8)(15)</p> <ul style="list-style-type: none"> - location of transformer - dates of each visual inspection - date when any leak was discovered - name of person conducting inspection - location and estimate of the dielectric fluid quantity for any leaks - data and description of any cleanup, containment, or repair performed - results of any daily inspections for transformers with uncorrected active leaks. <p>(NOTE: Reduced visual inspections of at least once every 12 mo are allowed for PCB Transformers with impervious, undrained secondary containment capacity of 100 percent of dielectric fluid and for PCB Transformers tested and found to contain less than 60,000 ppm PCB.)</p> <p>(NOTE: Increased visual inspections of once per week are required for any PCB Transformer in use or stored for reuse that poses an exposure risk to food or feed.)</p> <p>Verify that records of inspection and maintenance are kept for 3 yr after disposal. (8)(15)</p>

DIVISION: (1) Natural Resources Management (3) Safety and Occupational Health Office DISTRICT: (5) Environmental Compliance Coordinator (ECC) (6) Natural Resources Management (7) Engineering (8) Safety and Occupational Health Office (10) Operation PROJECT (15) Project Resource Manager (16) Facility Manager

The checklist portion of ERGO is divided into two columns, the first of which is a statement of a requirement. This may be a strict regulatory requirement, in which case the citation is given, or it may be considered a good management practice (GMP), a practice that helps maintain compliance but is not specifically covered by regulation.

The second column provides instructions for conducting the compliance evaluation. These instructions are intended to be specific action items that should be accomplished by the assessment team. Some instructions may be simple documentation checks that take only a few minutes, while others may require physical inspection of a facility. The contact/location information in parentheses is intended as guidance for determining to which departments or locations at the facility action items are applicable. Each contact/location code is referenced in a legend at the bottom of the page.

Following the checklist in each section is a worksheet that can be photocopied for field work. This sheet is divided into two columns. The first column is a checklist for items that are not applicable (NA) to the facility, items with which the facility is complying with (C), or items requiring management action (RMA). The second worksheet column allows room for more detailed notations or comments.

PROJECT OR FACILITY:		COMPLIANCE CATEGORY: SPECIAL POLLUTANTS MANAGEMENT USACE ERGO	DATE:	REVIEWER(S):
STATUS	NA C RMA	REVIEWER COMMENTS:		

DEFINITIONS: NA - Not Applicable to the Facility; RMA - Requires Management Action; C - In Compliance

To use the manual as a field tool, needed sections can be removed from the manual and placed in a binder alongside the worksheet; each checklist page in a section should have a worksheet placed beside it for notations, references, and locations.

SPECIAL POLLUTANTS MANAGEMENT USACE ERGO		DATE:	REVIEWER(S):
STATUS	NA C RMA	REVIEWER COMMENTS:	

These notations will provide a record for use in preparing the final report and should include both situations of substandard operation that require attention and those operations that exceed requirements or provide examples of good programs. For future reference and clarity, it is essential to identify the location being reviewed by building number or other reference.

PROJECT OR FACILITY:		COMPLIANCE CATEGORY: SPECIAL POLLUTANTS MANAGEMENT USACE ERGO	DATE:	REVIEWER(S):
STATUS NA C RMA		REVIEWER COMMENTS:		
✓		3 transformers in storage building Building 2000 not registered with fire department		

DEFINITIONS: NA - Not Applicable to the Facility; RMA - Requires Management Action; C - In Compliance

The evaluation procedures are designed as an aid and should not be considered exhaustive. Use of the guide requires the evaluator's judgment in determining the focus and extent of further investigation. Appropriate state regulations must be reviewed and the substantive requirements of state/local regulations pertinent to individual facilities incorporated in the assessment process. Findings relating to state and local issues can be written up under check-list item 3 in each section. The Office of Counsel should be consulted regarding the legal effects of state regulations.

Previously, the Computer-Aided Environmental Legislative Data System (CELDS) could be consulted for information on state environmental laws and regulations. CELDS has been replaced with the *Defense Environmental Network and Information Exchange (DENIX)*.

The goal of DENIX is to provide DOD personnel in the environmental arena with a central communications platform from which to obtain timely access to environmental legislative, compliance, restoration, cleanup, and DOD guidance information.

All districts should obtain and maintain access to DENIX, in conjunction with ERGO, from environmental compliance management down to the project/site manager level. If you have previously had access to CELDS, you also have access to DENIX.

For further information concerning the content or functionality of DENIX, or to inquire about obtaining a system login and password, call the DENIX Hotline 1-800-642-3332.

SELECTING SAMPLING STRATEGIES

A. INTRODUCTION

A fundamental component of any assessment involves the review of a facility's environmental internal controls and activities to determine compliance or noncompliance with environmental regulations. Because assessments are a check of the *overall* compliance status of a facility, and are conducted over a relatively short period of time, assessors generally do not examine entire populations of records, documents, or employees. Instead, assessors sample populations in order to draw conclusions regarding compliance with performance standards.

To help ensure the gathering of appropriate sampling information, the following process is typically used by assessors:

1. Determine objective of protocol.
2. Identify population for review.
3. Select sampling method.
4. Determine sample size.
5. Document results of sampling.

B. BASIC SAMPLING PROCESS

1. *Determine Objective of Protocol*
 - Specify what is being confirmed.
 - Consider the nature of the regulatory or internal standard to accurately identify the boundaries of the population under review.
2. *Identify Population for Review*
 - Estimate size of population with:
 - a review of selected documents
 - observations made during step one.
 - Pay attention to major subsets or key segments of population that need to be included in review.
 - Define population before starting to sample.
3. *Select Sampling Method*
 - *Random*: selecting items by chance. If done properly, each item in the population should have an equal chance of being selected and there should be no subjective determinations to bias the sample.
 - *Block*: analyzing certain segments of records or areas of the facility. For example, if files are arranged alphabetically, in numerical order, or chronologically, one or more blocks (e.g., all the E's, records numbered 51 through 75, or January and June files) could be selected. While the block method is easy to use, it neglects entire segments of the population.

- *Stratification*: arranging items by categories (e.g., high versus low effluent volumes) based on assessor's judgement of risk. Higher risk categories then receive greater review and testing.
- *Interval*: selecting samples at specific intervals (e.g., every *n*th segment of the population is analyzed) with the first item being selected at random. Increased confidence is achieved where several intervals with different starts are used.

4. *Determine Sample Size*

- Two ways to determine sample size:
 - statistically
 - using assessor's judgement.
- In most environmental assessment situations, it is appropriate and adequate to develop sample sizes based on professional judgement.
- Be sure that sample size is adequate to represent total population.

5. *Document Results of Sampling*

- State the rationale for selecting sample.
- Describe how the sample was selected.
- Include the following in working papers:
 - population under review
 - how and why population was selected
 - type of sampling method employed
 - reasons sampling method was used
 - potential bias in sample
 - sample size and reasons for selecting sample size.

6. *Guideline for Selection of Sample Size*

Size of Population	Suggested Minimum Size of Sample		
	A*	B*	C*
2-10	100%	100%	30%
11-25	100%	40%	20%
26-50	50%	20%	15%
51-100	25%	15%	10%
101-250	15%	10%	5%
251-500	10%	5%	3%
501-1000	5%	3%	2%
over 1000	3%	2%	1%

A* Suggested minimum sample size for a population(s) being reviewed that is considered to be extremely important in terms of verifying compliance with applicable requirements and/or is of critical concern to the organization in terms of potential or actual impacts associated with noncompliance.

B* Suggested minimum sample size for a population(s) being reviewed that will provide additional information to substantiate compliance or noncompliance and/or is of considerable importance to the organization in terms of potential or actual impacts associated with noncompliance.

C* Suggested minimum sample size for a population(s) being reviewed that will provide ancillary information in terms of verifying overall compliance with a requirement.

CONDUCTING ONSITE ASSESSMENTS

Site Evaluation Activities

Onsite, the evaluator will conduct record searches, interviews, and site surveys to determine the compliance status of the installation or facility. Operations are compared with environmental standards and any deficiencies are written up as findings. The data collected should be sufficient, reliable, and relevant to provide a sound basis for evaluating findings and recommendations. Typically, evaluators will complete a worksheet in the field to the best of their abilities and, at a later time, prior to leaving the facility, complete the Finding Summary. Figure 1 (page xxxvii) is a sample worksheet and a worksheet is located at the beginning of each chapter in this manual.

Analyze Observations/Prepare Finding Summaries

A Finding Summary will be completed for each finding noted on the worksheet. In instances where multiple Finding Summaries could be filled out for a single observation, only the most significant finding should be documented on a Finding Summary. All other related findings should be referenced on the same summary.

The information contained on these sheets will make up the basis of the ERGO report for each completed assessment. Figure 2 (page xxxix) shows a blank Finding Summary form.

All fields on the ERGO Finding Summary must be filled out, up to **SAMPLING RESULTS** for negative findings and **CRITERIA** for positive findings. The **CONDITION** is a factual statement describing the status of the process, permit, or situation under investigation, and the **CRITERIA** is the environmental standard (Federal, state, local, DOD, Army, GMP) the facility is being measured against. A condition may be positive if the facility is going above and beyond the requirements. **SUGGESTED SOLUTIONS** is an optional entry and may include easily identifiable solutions to the deficiency. **COMMENTS** may include any corrective actions already taken or scheduled, or any other appropriate information pertaining to the finding.

Figure 3 (page xli) shows a sample completed Finding Summary. A copy of each Finding Summary is to be left with the facility with the understanding that findings may be changed or dismissed as further identification/verification is made.

DEVELOPING A CORRECTIVE ACTION PLAN (CAP)

Every Finding Summary completed for the facility should be incorporated in a Corrective Action Plan (CAP). The CAP describes the actions to be taken to correct deficiencies. Descriptions should be all-inclusive, including schedule, budget, responsible parties, and any other pertinent information. An assessment is not complete until a CAP is done, so CAPs must be implemented in a timely fashion.

Link CAPs to Civil Works O&M General Budget Processes

All unanticipated environmental compliance deficiencies, identified by a CAP, that are not budgeted and require immediate correction will be addressed by appropriate reprogramming actions.

CAP items that require out-year funding will be identified in the R-18 and R-22 Work Function Categories, consistent with guidance in EC 11-2-161.

Environmental compliance budget requests must also be included in the Report on Prevention, Control, and Abatement of Environmental Pollution at Federal Facilities (based on Office of Management and Budget (OMB) Circular A 106).

PREPARING A FINDINGS BASED REPORT

The guidance provided here for a Findings Based Report is general in context and can be modified or adapted to suit specific needs. The basic report should include:

1. Executive Summary

The executive summary is a brief overview of the assessment, which should include the following information:

- date and location of the assessment
- identification of the evaluation team
- purpose/objective of the evaluation
- table of compliance status.

2. Background

This section should include:

- brief description of project
- any unique features of its management structure
- USEPA region
- discussion of sampling techniques used, if any.

3. Environmental Compliance Status

This section should include the completed Finding Summaries and the corresponding CAP.

COMMENTS:

FINDING CATEGORIES

Significant:

A problem categorized as significant requires immediate attention. It poses, or has a high likelihood to pose, a direct and immediate threat to human health, safety, the environment, or the mission. A leaking PCB Transformer that is located next to a dining facility, for example, would most likely be a significant deficiency.

Major:

A major deficiency requires action but not necessarily immediate action. Major deficiencies may pose a threat to human health, safety, or the environment. Any immediate threat, however, must be categorized as significant.

Minor:

Minor deficiencies are usually administrative in nature, even though those findings might result in a notice of violation. This category may also include temporary or occasional instances of noncompliance.

Good Management Practice (GMP):

GMP items are those for which there is no specific regulatory requirement but are considered necessary to achieve compliance with those requirements. This category also includes practices that are known to be required in regulations currently in preparation at regulatory agencies but have not been published. There may be both *positive* or *negative* good management practice findings.

<i>Offers assistance in hazardous materials incidents involving railroads and is often contacted through CHEMTREC.</i>		<i>An electronic bulletin board for recyclers.</i>		<i>Information on ozone protection regs and requirements under Title VI of the Clean Air Act Amendments of 1990 and other general aspects of stratosphere ozone depletion/protection.</i>	
Cancer Information Service Hotline	800-422-6237	Florida Leak Reporting Hotline	904-488-3935	Superfund Site Cleanup	800-533-3508
<i>Provides information on cancer risk and referrals to proper sources for local support services.</i>		<i>For timely reporting of release of petroleum products into the soil (72 hrs).</i>		<i>For questions on status of Superfund sites within Region VI (AR, LA, OK, NM, & TX).</i>	
CHEMTREC Hotline	800-424-9300	National Pesticide Telecommunications Network Hotline	800-858-7378	Superfund Technical Information	800-346-5009
<i>The Chemical Transportation Emergency Center will identify unknown chemicals, advise on response methods and procedures for chemicals and situations, provide help in contacting shippers/carriers/manufacturers/product response teams.</i>		<i>Information regarding all aspects of pesticide handling.</i>		<i>Superfund message center allowing caller to leave message.</i>	
Consumer Product Safety Commission	800-638-2772	Plastics Recyclers Information Line	800-243-5790	Toxic Substances (Asbestos)	800-462-6706
<i>Information on consumer safety and guidelines on what to do if you come in contact with formaldehyde, asbestos, lime, and air pollutants. Also provides product recall information.</i>		<i>Information regarding plastic recycling locations according to area.</i>		<i>Information on funding for asbestos cleanup projects.</i>	
Control Technology Center for Air Toxics	919-541-0800	Poison Control Center (National Capital)	202-625-3333	Toxic Substances Control Act Hotline	202-554-1404
<i>Provides information to state and local pollution control agencies on sources of emissions of air toxics.</i>		<i>Provides info on exposure to chemicals, poisons, or drugs. (Operated by Georgetown Univ. Hospital. Collect calls accepted.)</i>		<i>Information on Toxic Substance Control Act & Asbestos Technical Info & Referral.</i>	
Department of Transportation Hotline	202-366-4488	Public Information Hotline, EPA	202-260-2080	Hazardous Materials & Oil Spills, EPA	800-424-8802
<i>Information assistance pertaining to Federal regulations for transportation of hazardous materials, CFR 49.</i>		<i>Will answer inquiries from the public about EPA and offers a variety of general, nontechnical information materials.</i>		<i>National Response Center in the vent of hazardous materials spills.</i>	
Emergency Plan & Community Right-To-Know Hotline, EPA	800-535-0202	RCRA/Superfund, EPA	800-231-3075	Waste Reduction Assistance Program OER (FL)	904-488-0300
<i>EPA Title III requirements information.</i>		<i>Right-to-know information for California, Arizona, Hawaii, & Nevada.</i>		<i>Advice, information, and counseling services for pollution prevention.</i>	
Environmental Defense Fund Recycling Hotline	212-505-2100	RCRA/Superfund/UST Hotline	800-424-9346	Wetlands Protection Hotline, EPA	800-832-7828
<i>Recycling information and locations.</i>		<i>Answers questions concerning the Resource Conservation and Recovery Act, Superfund, Underground Storage Tanks and hazardous waste regulations.</i>		<i>Information regarding values of wetlands and efforts for wetlands protection.</i>	
		Safe Drinking Water Hotline	800-426-4791	Whistle Blower Hotlines, EPA	800-424-4000
		<i>Information on policy and regulations regarding public water supply programs.</i>		<i>Allows for reporting of fraud, waste, and abuse in EPA programs.</i>

ERGO

Environmental Review Guide for Operations

PREASSESSMENT ENVIRONMENTAL MANAGEMENT QUESTIONNAIRE

This questionnaire will provide background information necessary to plan and conduct an environmental compliance assessment. References provided in this questionnaire are to assist in answering the questionnaire and are not intended to be all-inclusive. Refer to the Major Activities/Operations Table to determine where activities/operations overlap into several different areas.

Name of Facility: _____

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

SECTION 1. Air Emissions Management:

1. Does the facility operate a fuel burner (central steam plant, or hot water or hot water steam boiler)?

If **YES** how large and what fuel is used? See ERGO items 1-4 through 1-7.

Size

Fuel

2. Does the facility operate an incinerator? How large? _____

If **YES** see ERGO item 1-3.

3. Does the facility dispense, store, or transfer gasoline?

Types: _____

If **YES** see ERGO items 1-8 through 1-13.

4. Does the facility operate printing presses?

If **YES** see ERGO item 1-14.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

5. Does the facility store petroleum in aboveground storage tanks (ASTs)? What is the size of the largest tank? _____

_____ If **YES** see ERGO items 1-15 and 1-16.

6. Does the facility store volatile organic liquids in ASTs?

_____ If **YES** see ERGO items 1-17 and 1-18.

7. Does the facility conduct open burning (i.e., burn trash, plant waste or other solid waste)?

_____ If **YES** see ERGO item 1-19.

8. Does the facility have fugitive emissions from volatile hazardous air pollutant (VHAP) equipment (currently VHAPs include vinyl chlorides and benzene)?

_____ If **YES** see ERGO items 1-20 through 1-26.

9. Does the facility use volatile organic compound (VOC) based solvent degreasers?

_____ If **YES** see ERGO item 1-3.

10. Does the facility procure/use chlorofluorocarbon (CFC) or halon based substances?

_____ If **YES** see ERGO items 1-27 and 1-28.

11. Does the facility repair any units containing refrigerant?

_____ If **YES** see ERGO items 1-29 through 1-48.

12. Does the facility recycle/reclaim CFCs or halons?

_____ If **YES** see ERGO items 1-35, 1-39, and 1-40.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

SECTION 2. Cultural and Historic Resources Management:

1. Does the facility have any properties under its jurisdiction?

_____ If **YES** see
ERGO items 2-1
through 2-10.

2. Does the facility have cultural resources? List the facility's
cultural resources below:

_____ If **YES** see
ERGO items 2-7
through 2-10.

3. Is the facility's master plan or operational management
plan (OMP) a public document?

_____ If **YES** see
ERGO item 2-11
through 2-14.

4. Does the facility have an operational project?

_____ If **YES** see
ERGO item 2-
15.

5. Does the facility have any Native American graves or artifacts, or
have any been discovered during an operation?

_____ If **YES** see
ERGO item 2-
17.

6. Does the facility have an archeological or historical collection?

_____ If **YES** see
ERGO items 2-
18 through 2-29.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

SECTION 3. Hazardous Materials Management:

1. Does the facility store any hazardous materials such as paints, solvents, and pesticides? Please list types below.

Types: _____

_____ If **YES** see ERGO items 3-4 through 3-10 and 3-17 through 3-22.

2. Have there been any releases or spills of hazardous substances at the facility?

_____ If **YES** see ERGO items 3-11 through 3-13.

3. Are there any extremely hazardous substances at the facility?

_____ If **YES** see ERGO item 3-14.

4. Does the facility: have extremely hazardous substances in excess of 500 lb or the threshold planning quantity (TPQ) (see Appendix 3-1); have cumulative use of hazardous chemicals in excess of 10,000 lb annually?

_____ If **YES** see ERGO items 3-16.

5. Does the facility store flammable/combustible liquids (i.e., paints, solvents) in lockers, storage sheds, tanks, or industrial areas?

_____ If **YES** see ERGO items 3-27 through 3-49.

6. Does the facility store compressed gases (i.e., oxygen, acetylene)?

_____ If **YES** see ERGO items 3-50 through 3-53.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

7. Does the facility store acids?

If **YES** see
ERGO item 3-
54.

8. Does the facility store hazardous materials in laboratories?

If **YES** see
ERGO items 3-
23 through 3-26.

9. Does the facility transport hazardous material, or offer such materials for transport?

If **YES** see
ERGO item 3-
55.

SECTION 4. Hazardous Waste Management:

1. Is the facility a generator of hazardous waste?

If **YES** see
ERGO items 4-5
through 4-11.

a. Is the facility a small quantity generator (SQG) (i.e., generates less than 1000 kg [2204.62 lb] of hazardous waste but more than 100 kg [220.46 lb] in 1 mo)?

If **YES** see
ERGO items 4-
19 through 4-34.

b. Is the facility a conditionally exempt small quantity generator (CESQG) (i.e., generates less than 100 kg [220.46 lb] of hazardous waste in 1 mo)?

If **YES** see
ERGO item 4-15
through 4-18.

c. Is the facility a generator which generates more than 1000 kg [2204.63 lb] of waste in 1 mo)?

If **YES** see
ERGO item 4-35
through 4-71.

Complete the following section before proceeding.

Any waste listed in 40 CFR 261, which is not excepted or exhibits any of the following characteristics, is considered to be a hazardous waste:

- Ignitability (flashpoint less than 140 °F)
- Corrosivity (pH less than 2 or greater than 12.5)
- Toxicity Characteristic Leaching Procedure (TCLP) Toxicity (for As,Ba,Cd,Cr,Pb,Hg,Se,Ag, and selected pesticides)
- Reactive.

The following are hazardous wastes typically found at a facility:

CHECK IF USED AT THIS FACILITY	Generated Volume/month		Accumulated Volume	
	lb	kg	lb	kg
<input type="checkbox"/> * Solvents	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>	<input type="checkbox"/>

Other _____	_____	_____	_____	_____
Other _____	_____	_____	_____	_____
TOTAL	_____	_____	_____	_____

* e.g., Trichlorethane, Methylene, chloride, Tetrachloroethylene, 1,1,1 Trichloroethane, Carbon Tetrachloride, Chlorinated Fluorocarbons, Toluene, MEK, Break-free in liquid form, Mineral Spirits, Xylene

QUESTION/DESCRIPTION	RESPONSE	REFERENCE
3. Does the facility transport hazardous waste?	_____	If YES see ERGO items 4-72 through 4-76.
4. Does the facility have a treatment, storage, or disposal facility (TSDF)?	_____	If YES see ERGO items 4-77 through 4-143.
a. Does the facility have a permitted TSDF?	_____	If YES see ERGO item 4-144 through 4-156.
b. Does the facility have an interim status TSDF?	_____	If YES see ERGO items 4-157 through 4-164.
5. Does the facility incinerate hazardous waste?	_____	If YES see ERGO items 4-165 through 4-168.
14. Does the facility generate or dispose of restricted wastes?	_____	If YES see ERGO items 4-174 through 4-183.

QUESTION/DESCRIPTION**RESPONSE****REFERENCE****SECTION 5. Natural Resources Management:**

1. Does the facility have any construction projects (or had in previous 5 yr?

_____ If **YES** see
ERGO items 5-
16 through 5-20.

2. Does the facility operate a water resource project?

_____ If **YES** see
ERGO item 5-5.

3. Does the facility have land management responsibilities?

_____ If **YES** see
ERGO items 5-7
through 5-9.

4. Does the facility have floodplains or wetlands?

_____ If **YES** see
ERGO item 5-
10.

5. Does the facility have a forest?

_____ If **YES** see
ERGO items 5-
11 and 5-12.

6. Does the facility contain a shoreline?

_____ If **YES** see
ERGO item 5-
13.

7. Does the facility have endangered or threatened species?

_____ If **YES** see
ERGO items 5-
14 and 5-15.

SECTION 6. Pesticide Management:

1. Do facility personnel engage in the application of pesticides?

_____ If **YES** see
ERGO items 6-8
through 6-14.

2. Does the facility use contractor personnel in the application of pesticides?

_____ If **YES** see
ERGO item 6-8
through 6-12.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

3. Does the facility store, mix, or formulate pesticides?

If **YES** see
ERGO item 6-15
through 6-22.

4. Does the facility store/use pesticides classified highly toxic or moderately toxic (bearing **DANGER**, **POISON**, **WARNING**, or the skull and crossbones symbol)?

If **YES** see
ERGO items 6-
23 through 6-30.

5. Does the facility dispose of pesticides?

If **YES** see
ERGO items 6-
31 through 6-36.

SECTION 7. POL Management:

1. Does the facility have a current spill prevention, control, and countermeasure (SPCC) Plan?

If **YES** see
ERGO item 7-
13.

2. Have there been any discharges of oil at the facility?

If **YES** see
ERGO items 7-
14 and 7-15.

3. Does the facility have spill/discharge cleanup equipment on hand?

If **YES** see
ERGO item 7-
16.

4. Does the facility have any bulk storage tanks over 660 gal [2498.37 L]?

If **YES**, see
ERGO item 7-17
and 7-20.

5. Does the facility use dikes as a means of containment for petroleum storage tanks?

If **YES** see
ERGO items 7-
17 through 7-19.

QUESTION/DESCRIPTION**RESPONSE****REFERENCE**

6. Does the facility have any pipelines?

If **YES** see
ERGO items 7-
21 through 7-31.

7. Does the facility dispense gasoline and/or operate a service station?

If **YES** see
ERGO items 7-
32 through 7-35.

8. Does the facility have used oil?

If **YES**, see
ERGO item 7-37
through 7-79.

SECTION 8. Solid Waste Management:

1. Does the facility collect or store solid waste onsite?

If **YES**, see
ERGO items 8-4
through 8-16.

2. Does the facility contract out the collection of its solid waste?

If **YES**, see
ERGO items 8-6
through 8-13.

3. Does the facility recycle and reduce solid waste?

Types of recycling _____

If **YES** see
ERGO item 8-
17.

a. Does the facility have over 100 office workers?

If **YES** see
ERGO item 8-
18.

b. Do more than 500 families reside at the facility?

If **YES** see
ERGO item 8-
19.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

c. Does the facility generate waste corrugated containers?

Approximately how much per month? _____

_____ If **YES** see
ERGO item 8-
20.

4. Does the facility have land disposal onsite?

_____ If **YES** see
ERGO items 8-
21 through 8-43.

a. Does the facility dispose of water treatment plant sludges?

_____ If **YES** see
ERGO item 8-
23.

b. Does the facility dispose of incinerator or air pollution control residues?

_____ If **YES** see
ERGO item 8-
24.

c. Does the facility accept bulky wastes?

_____ If **YES** see
ERGO item 8-
22.

d. Does the facility accept special wastes?

_____ If **YES** see
ERGO items 8-
21, 8-26, and 8-
27.

5. Does the facility have a closure site?

_____ If **YES**, see
ERGO items 8-
44 and 8-45.

6. Does the facility have a construction debris landfill?

_____ If **YES**, see
ERGO items 8-
25 through 8-45.

7. Does the facility have a new landfill site?

_____ If **YES**, see
ERGO items 8-
46 through 8-47.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

8. Does the facility handle or dispose of medical waste?

If **YES** see
ERGO item 8-49
through 8-54.

SECTION 9. Special Pollutants Management:

1. Does the facility have polychlorinated biphenyls (PCBs) of any kind?

If **YES**, see
ERGO items 9-4
through 9-11.

Types

Quantities

2. Does the facility have PCB Transformers?

If **YES**, see
ERGO items 9-
12 through 9-19.

4. Does the facility have PCB Items (PCB-contaminated heat transfer or hydraulic systems, electromagnets, switches, voltage regulators, capacitors, circuit breakers, reclosers, or cables)?

If **YES** see
ERGO items 9-
23 through 9-26.

5. Does the facility use PCBs in research?

If **YES** see
ERGO item 9-
27.

6. Has the facility had a PCB spill?

If **YES**, see
ERGO items 9-
20 through 9-22.

7. Does the facility store PCBs?

If **YES** see
ERGO items 9-
28 through 9-32.

8. Does the facility transport PCBs or PCB Items?

If **YES** see
ERGO items 9-
33 and 9-34.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

9. Does the facility dispose of PCBs or PCB Items?

If **YES** see
ERGO items 9-
35 through 9-46.

10. Has the facility been surveyed for asbestos?

If **YES** see
ERGO item 9-
47.

11. Does the facility demolish, renovate, or strip components from
structures containing friable asbestos?

Is sampling done? _____
Current concerns? _____

If **YES** see
ERGO items 9-
48 through 9-57.

12. Does the facility dispose, or transport for disposal, asbestos
or asbestos-containing waste?

If **YES** see
ERGO items 9-
58 through 9-61.

13. Is the facility located in an area with a potential radon problem?

If **YES** see
ERGO items 9-
62 through 9-64.

14. Does the facility have any possible sources of noise pollution, or
have a noise hazardous area?

If **YES** see
ERGO items 9-
65 and 9-66.

SECTION 10. Underground Storage Tank (UST) Management:

1. Does the facility have any substandard USTs?

If **YES**, see
ERGO item 10-
4.

2. Does the facility have any new or upgraded USTs (after May 1986)?

If **YES** see
ERGO item 10-5
through 10-9.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

3. Has the facility repaired, or is it planning to repair, a UST?

If **YES** see
ERGO item 10-
14 and 10-15.

4. Does the facility have hazardous substance USTs?

If **YES** see
ERGO item 10-
26.

5. Does the facility have a deferred UST?

If **YES** see
ERGO item 10-
27.

6. Does the facility have a metallic UST?

If **YES** see
ERGO items
10-10.

7. Have facility USTs undergone a change of service, or closure?

If **YES** see
ERGO items
10-30 through
10-36.

8. Does the facility have any USTs that were emptied of their contents and abandoned in place?

If **YES** see
ERGO item 10-
32.

9. Does the facility have any heating oil USTs?

If **YES** see
ERGO item 10-
11.

QUESTION/DESCRIPTION

RESPONSE

REFERENCE

SECTION 11. Wastewater Management:

1. Does the facility have any point source discharges?

If **YES** see
ERGO item 11-
5.

2. Does the facility have a national pollutant discharge elimination system (NPDES) or state pollutant discharge elimination system (SPDES) permit?

If **YES** see
ERGO items
11-5 through
11-9.

3. Does the facility have stormwater discharge not covered by a NPDES permit?

If **YES** see
ERGO item 11-
10.

4. Does the facility discharge to a wastewater treatment plant?

If **YES** see
ERGO items
11-11 through
11-13.

5. Does the facility operate a wastewater treatment plant?

If **YES** see
ERGO items
11-14 through
11-16.

6. Does the facility have electroplating operations?

If **YES** see
ERGO item 11-
17 through 11-
23.

7. Does the facility operate metal finishing operations?

If **YES** see
ERGO items
11-24 through
11-28.

8. Does the facility operate any washracks?

If **YES** see
ERGO item 11-
12.

QUESTION/DESCRIPTION**RESPONSE****REFERENCE**

9. Does the facility conduct or issue permits for dredging operations?

If **YES** see
ERGO items
11-29 through
11-35.

10. Does the facility do land application of sludge?

If **YES** see
ERGO item 11-
36 through 11-
75.

11. Does the facility incinerate sludge?

If **YES** see
ERGO items
11-76 through
11-83.

SECTION 12. Water Quality Management:

1. Does the facility treat, store, and distribute its own drinking water?

If **YES** see
ERGO item
12-11 through
12-63.

2. Does the facility perform contaminant monitoring on its water supply?

If **YES** see
ERGO items
12-20 through
12-39.

3. Does the facility provide disinfection/filtration for water?

If **YES** see
ERGO items
12-40 through
12-47.

4. Is the facility located near a sole source aquifer?

If **YES** see
ERGO item 12-
64.

5. Does the facility have recreational potable water sources?

If **YES** see
ERGO item 12-
65.

QUESTION/DESCRIPTION**RESPONSE****REFERENCE**

6. Does the facility have swimming beaches?

If **YES** see
ERGO item 12-
66.

7. Does the facility have swimming pools?

If **YES** see
ERGO items
12-67.

8. Is the facility authorized to provide emergency drinking water?

If **YES** see
ERGO item 12-
68.

SECTION 13. Floating Plant Management

1. Does the facility have or operate any floating plant?

What types? _____

If **YES** see
ERGO items
13-1 through
13-51.

2. Does the facility accept hazardous waste from floating plant?

If **YES** see
ERGO item 13-
51.

Signature of individual completing this form: _____

Date completed: _____

ATTENTION: The following records should be available for review by the assessment team either prior to the assessment or immediately upon arrival at the facility.

(NOTE: Not all facilities will have, or are even required to have, all of the following documents.)

General

1. Detailed maps of the facility indicating street names and building numbers. Enough for one for every member of the assessment team.
2. A phone list.
3. Copies of notices of violation (NOVs) issued to the facility in any of these areas.

Air Emissions Management

1. Air emissions inventory.
2. All air related permits.
3. A list of steam generating units and boilers and their size, fuel used, and locations.

Cultural and Historic Resources Management

1. Any cultural or archeological resources surveys.
2. Management plans for cultural and archeological resources.
3. A list of properties nominated for the National Register.

Hazardous Materials Management

1. A list of hazardous material storage/use areas.
2. A waste minimization plan.
3. MSDSs.
4. Documentation of personnel training.
5. The OHSPC Plan.
6. A copy of any reports of spills.
7. Copies of the Tier I or Tier II reports.
8. Documentation on contaminated sites.
9. Copies of the USEPA Form R, *Toxic Chemical Release Inventory Reporting Form*.

Hazardous Waste Management

1. The Hazardous Waste Management Plan.
2. A list of hazardous wastes generated at the facility.
3. A list of waste generation/storage areas.
4. USEPA ID No.
5. Manifests.
6. Any permits.
7. The biennial report.
8. Personnel training records.

Natural Resources Management

1. The endangered species survey.
2. The Natural Resources Management Plan.
3. Any land management plans
4. Recent EAs, EISs, FNSIs or Notices of Intent (NOIs).

Pesticide Management

1. The Pesticide Management Plan.
2. A list of pesticide storage sites.
3. Application records.
4. MSDSs for pesticides.
5. Personnel Certifications for applicators.
6. Contracts for pesticide application.

POL Management

1. The SPCC plan.
2. A list of POL storage areas.

Solid Waste Management

1. Any contracts with waste haulers.
2. Any recycling plans.
3. All documentation pertaining to landfill operation or closure.
4. Records on groundwater sampling resulting from monitoring wells.
5. Records of sludge testing prior to land application of sludge.

Special Pollutants Management

1. The PCB inventory.
2. The PCB annual report.
3. The results of the asbestos survey.
4. The Asbestos Management Plan.
5. Noise complaints.
6. Radon survey results.

Underground Storage Tank (UST) Management

1. Upgrading and/or closure plans.
2. A list of all USTs and their locations.
3. Release detection documentation.
4. Integrity test results.
5. Site contamination reports after tank removals.

Wastewater Management

1. All NPDES/SPDES permits.
2. Maps of the storm, sanitary, and industrial sewers.
3. A copy of pretreatment standards imposed on the facility.
4. A list of maintenance shops/operations to include wash facilities.
5. Locations of holding ponds, sedimentation pits, and open/end-of-pipe discharge points.

Water Quality Management

1. Copies of drinking water test results.
2. Copies of reports to the state.

Floating Plant Management

1. Copies of the Operations Manuals.
2. MSDSs.
3. Spill Plans.
4. Training Records.

Section 1

Air Emissions Management

SECTION 1

AIR EMISSIONS MANAGEMENT

A. Applicability

This section includes regulations, responsibilities, and compliance requirements associated with air pollution emissions from equipment and vehicles at Corps facilities. The major sources of air pollution emissions at Corps facilities are:

- Particulates, SO₂, and NO_x from fuel burning at steam and hot water generation plants and boilers.
- Particulates and gases produced by maintenance operations such as controlled burns, debris removal, and spill cleanup.
- The emission of volatile organic compound (VOC) vapors from the storage and transfer of certain petroleum fuels and chemicals (solvents), and the operation of degreasers and other processes (paint stripping and metal finishing) that use solvents.
- The emission of CO from vehicles operated on the facility.

Most Corps facilities have air emissions sources in one or more of these categories. Therefore, this section is applicable to some extent at all Corps facilities and projects.

Additional sources of air emissions such as steam generating units with greater than 29 MW (100 million British thermal units (MBtu)) heat input are not included in this manual due to the minimal number of such facilities on Corps property. If the facility being assessed has air emissions sources that fall within this range, refer to the U.S. Environmental Compliance Assessment System (ECAS) manual for pertinent checklist items.

B. Federal Legislation

- *The Clean Air Act Amendments of 1990*. This Act, Public Law (PL) 101-549 (42 U.S. Code (USC) 7401-7671q), is currently the effective, comprehensive

Federal legislation regulating the prevention and control of air pollution. The purposes of this Act are to:

1. protect and enhance the quality of the nation's air resources so as to promote the public health and welfare and the productivity of its population
2. initiate and accelerate a national research and development program to achieve the prevention and control of air pollution
3. provide technical and financial assistance to state and local governments regarding the development and execution of their air pollution prevention and control efforts
4. encourage and assist the development and operation of regional air pollution prevention and control programs (42 USC 7401(b))
5. achieve a substantial reduction in emission of hazardous air pollutants from area sources and an equivalent reduction in the public health risks associated with such sources including a reduction of not less than 75 percent in the incidence of cancer attributable to emissions from such sources (42 USC 7412(k)(1))
6. reduce the adverse effects of acid deposition through reductions in annual emissions of SO₂ from 1980 emission levels, and of NO_x emissions from 1980 emission levels, in the 48 contiguous states and the District of Columbia and to bring about such reductions by requiring affected sources to comply with prescribed emission limitations by specified deadlines. Limitations may be met through alternative methods of compliance provided by an emission allocation and transfer system
7. encourage energy conservation, use of renewable and clean alternative technologies, and pollution prevention as a long-range strategy, consistent with the provisions of this Act, for reducing air pollution and other adverse impacts of energy production and use (42 USC 7651(b)).

A primary goal of this Act is to encourage or otherwise promote reasonable Federal, state, and local government actions for pollution prevention (42 USC 7401(c)).

Each department, agency, and instrument of the executive, legislative, and judicial branches of the Federal government, and each officer, agent, or employee of such a unit must comply with all Federal, state, interstate, and local requirements, administrative authority, processes, and sanctions respecting the control and abatement of air pollution in the same manner, and to the same extent, as any nongovernment entity. This applies to (42 USC 7418(a)):

1. any requirement, whether substantive or procedural (including record-keeping, reporting, and emission)
2. any requirement to pay a fee or charge imposed by any state or local agency to defray the costs of its air pollution regulatory program

3. the exercise of any Federal, state, or local administrative authority, and
4. any process and sanction, whether enforced in Federal, state, or local courts or in any other manner.

Each department, agency, or instrument of the Federal government must not engage in, support in any way, provide financial assistance for, license, permit, or approve, any activity that does not conform to an implementation plan after it has been approved or passed under this Act. Any Federal agency may not approve, accept, or fund any transportation plan, program, or project unless such plan, program or project has been found to conform to any applicable implementation plan in effect (42 USC 7506(c)(1)(2)).

If the President determines it to be in the paramount interest of the United States, he may exempt from compliance, with the requirements of this Act, any weaponry, equipment, aircraft, vehicles, or other classes or categories of property that are owned or operated by the Armed Forces of the United States and that are uniquely military in nature (42 USC 7418(b)).

C. State/ Local Regulations

The primary mechanisms regulating air pollutant emissions are the state or air quality control region (AQCR) regulations. These regulations will normally follow the Federal guidelines for state programs and will have many similar features. However, depending on the type and degree of air pollutant problems within the state/region, the individual regulations will vary. For example, photochemical oxidant (ozone) problems are widespread in California; therefore, the individual AQCRs in that state have stringent VOC emission requirements. The state of North Dakota has no such problem and, therefore, has fewer and less stringent VOC regulations.

New source performance standards (NSPSs) are established for particular pollutants in industrial categories based upon adequately demonstrated control technology. A permit is normally required for new, expanded, or modified sources of air pollutants.

Some state regulations apply directly to some facilities and operations without requiring a permit. At a minimum, state regulations should be reviewed for the following activities:

1. fugitive dust emissions
2. control of particulate emissions from the transportation of refuse or materials in open vehicles
3. certification requirements for boiler operators
4. emissions and emission control requirements for the operation of existing fossil fuel-fired steam generators
5. open burning
6. vehicle exhaust emissions testing
7. spray painting of vehicles, buildings, and/or furniture
8. certification of vehicles transporting VOC liquids
9. paving of roads and parking lots
10. toxic air pollutants
11. operation of cold cleaners, degreasers, and open top vapor degreasers
12. vapor control requirements for fuel pumps.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, lands, and waters at Civil Works Projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.
- Engineering Manual (EM) 385-1-1, *Safety and Health Requirements*. Although this is a manual and not an ER, the contents are applicable to all missions under the command of the Chief of Engineers, whether accomplished by military, civilian, or contractor forces. In relation to air quality, it prohibits specific types of materials for use as dust suppressants.
- DOD Directive 6050.9, *Chlorofluorocarbons (CFCs) and Halons*. This directive instructs DOD facilities that procure CFCs and halons to submit the annual CFC and Halon Report.

E. Key Compliance Requirements

- **Steam Generating Units** - Steam generating units that started construction, modification, or reconstruction after 3 June 1989 with a maximum design heat input capacity of greater than or equal to 2.9 MW (10 MBtu/h), but less than 29 MW (100 MBtu/h), are required to limit emissions of SO₂ and particulates. Discharge rates are to be monitored and, if there is no monitoring system, fuel

is required to be sampled prior to combustion. Facilities are required to submit excess emission reports for any calendar quarter in which it exceeds opacity limits. If a facility does not exceed the limits in a given year, it is required to file semiannual reports confirming this fact. Facilities required to meet SO₂ emission limits are also required to submit quarterly reports (40 Code of Federal Regulations (CFR) 60.40c, 60.42c, 60.43c, and 60.46c through 60.48c).

- Gasoline Dispensing - Leaded gasoline shall not be introduced into any motor vehicle that is labeled UNLEADED GASOLINE ONLY, or that is equipped with a gasoline tank filler inlet designed for introduction of unleaded gasoline. Fuel pumps are required to display signs stating the type of fuel in each pump and that only unleaded gas can be introduced into labeled vehicles. The nozzles of the pumps are required to be properly sized. Depending on whether the oxygenated gas is still in the control period, or the area has an oxygenated gasoline program with a credit program, pumps dispensing oxygenated gasoline are required to be labeled. During 1992 and later high ozone seasons and regulatory control periods, gasoline that exceeds the Reid vapor pressure standards outlined in Appendix 1-1 shall not be sold, offered for sale, imported, dispensed, supplied, or transported. No diesel fuel shall be distributed, transported, offered for sale, or dispensed for use in motor vehicles unless it is free of the dye 1,4-dialkylamino-antraquinone and has an acetane index of at least 40, or a maximum aromatic content of 35 volume percent and a sulfur percentage of less than 0.05 percent (40 CFR 80.22(a), 80.22(d), 80.22(e), 80.24(a)(1), 80.27(a)(2), 80.35, 80.80(d), and 80.29(a)).
- Bulk Gasoline Terminals - Bulk gasoline terminals with greater than 75,700 L [19,997.82 gal] gasoline throughput per day that deliver liquid product into greater tank trucks, and that started construction or modification after 17 December 1980 are required to ensure that vapor tightness documentation is available for each gasoline tank truck, and that the tank ID No. is recorded as each gasoline tank truck is loaded (40 CFR 60.500 through 60.506).
- Rotogravure Printing Presses - Publication rotogravure printing presses, except for proof presses, that started construction or modification after 28 October, are required to ensure that gases are not being discharged containing VOC equal to more than 16 percent of the total mass of VOC solvent and water used at that facility during any one performance averaging period (40 CFR 60.430 through 60.435).
- Petroleum Storage Vessels - Storage vessels for petroleum liquids with a storage capacity greater than 151,416 L (40,000 gal) but less than 246,052 L (65,000 gal), that started construction or modification after 8 March 1974 but before 19 May 1978, or with a capacity greater than 246,052 L (65,000 gal) that started construction or modification after 11 June 1973 but before 19 May 1978, are required to meet specific standards for emissions and monitoring. These

standards vary depending upon whether the true vapor pressure of the petroleum liquid is greater or less than 11.1 psia. Storage vessels with a storage capacity greater than 151,416 L (40,000 gal) constructed after 18 May 1978 are required to ensure that the vessel has an external floating roof, or a fixed roof with an internal floating type cover, and a vapor recovery system. (40 CFR 60.110 through 60.113 and 60.110(a) through 60.115(a)).

- Volatile Organic Liquid (VOL) Storage Vessels - Storage vessels for VOLs, which have a capacity of greater than or equal to 40 m³ [10566.88 gal], for which construction, reconstruction, or modification started after 23 July 1984 are required to meet specific inspection, documentation, and notification requirement standards. These include ensuring that certain inspections are made, notifying the U.S. Environmental Protection Agency (USEPA) in advance of performing gap measurements, and providing it certain records upon request (40 CFR 60.110b through 60.115b).
- Open Burning - All open burning must be coordinated with agencies responsible for monitoring fire protection in the area (EM 385-1-1 para 09.A.13).
- Fugitive Emissions - The emission of volatile hazardous air pollutants (VHAPs) (vinyl chlorides and benzene) is required to be managed, monitored, and controlled according to specific requirements. These include taking certain actions when a leak is detected, ensuring that certain records are maintained, ensuring that pumps and compressors meet certain standards, and that pressure relief devices in gas/vapor service have no detectable emissions except during pressure releases. Valves and lines in VHAP service are required to be monitored monthly and repairs done within 15 days of leak detection. Systems and devices used to control VHAP emissions must recover vapors with 95 percent efficiency or greater. Enclosed combustion devices will be designed and operated to reduce VHAP and benzene emissions and closed-vent systems will have no detectable emissions (40 CFR 61.240 through 61.242-10, 61.246, and 61.247).
- CFCs and Halons - Facilities that procure CFCs and halons must do a CFC and Halon Annual Report. If a facility uses CFCs and halons, it is required to reduce dependence of CFCs and halons, minimize emissions, and implement conservation practices. To protect the ozone, no person repairing or servicing motor vehicles for payment can service a motor vehicle air conditioner (MVAC) in any way that affects the refrigerant unless they have been trained and certified and are using approved equipment. As of 15 November 1992, no Class I or Class II substances suitable for use in motor vehicles as a refrigerant can be sold or distributed in any container that is less than 20 lb [9.07 kg] to any person unless that person is trained and certified. Facilities that sell Class I or Class II substances suitable for use as a refrigerant in containers of less than 20 lb [9.07 kg] are required to display a sign with certain wording. Servicing

of appliances containing CFCs and halons is required to prevent emissions (40 CFR 82.34(a), 82.34(b), 82.42(a) through 82.42(c), and 80.150 through 80.166; DOD Directive 6050.9, para D and E).

- **Additional Issues** - Many other types of sources have regulated air emissions. The following sources are regulated, but rarely found at Corps facilities; nonetheless, assessors must review the regulations for these sources if they are found at a Corps facility:
 - steam generators with greater than 29 MW (100 MBtu/h), but less than 73 MW (250 MBtu/h), heat input capacity, that were under construction or modification after 19 June 1984
 - fuel burning facilities constructed or modified after 17 August 1971 with greater than 73 MW (250 MBtu/h) heat input
 - municipal waste combustors with a capacity greater than 225 Mg (250 tons) per day that started construction or modification after 20 December 1989
 - incinerators with greater than 45 metric tons (50 tons) per day charging rate that started construction or modification after 17 August 1971
 - sewage sludge incinerators that combust greater than 1000 kg (2205 lb) per day which were constructed or modified after 11 June 1973
 - incinerators for beryllium containing waste
 - stationary gas turbines with a heat input greater than or equal to 10.7 gJ/h [10.17 MBtu/h] that were constructed or modified after 3 October 1977
 - sulfuric and nitric acid plants.

F. Key Compliance Definitions

These definitions were obtained from the previously listed regulations.

- **Annual Capacity Factor** - the ratio between the actual heat input to a steam generating unit from an individual fuel or combustion of fuels during a period of 12 consecutive calendar months and the potential heat input to the steam generating unit from all fuels, had the steam generating unit been operated for 8700 h during that 12-mo period at the maximum design heat input capacity (40 CFR 60.41c).
- **Appliance** - any device which contains and uses a Class I or Class II substance as a refrigerant and which is used for household or commercial purposes, including any air conditioner, refrigerator, chiller, or freezer (40 CFR 82.152(a)).

- *Approved Equipment Testing Organization* - any organization which has applied for and received approval from the Administrator pursuant to 40 CFR 82.160 (40 CFR 82.152(b)).
- *Benzene Service* - a piece of equipment that either contains or contacts a fluid (liquid or gas) that is at least 10 percent benzene by weight (40 CFR 61.111).
- *Bulk Gasoline Terminal* - any gasoline facility that receives gasoline by pipeline, ship, or barge, and has a throughput greater than 75,700 L [19,997.82 gal] per day (40 CFR 60.501).
- *Bulk Gasoline Plant* - any gasoline distribution facility that has a throughput less than or equal to 75,700 L [19,997.82 gal] per day (40 CFR 60.111b).
- *Cartridge Filter* - discrete filter unit containing both filter paper and activated carbon that traps and removes contaminants from petroleum solvent, together with the piping and ductwork used in installing this device (40 CFR 60.621).
- *Certified Refrigerant Recovery or Recycling Equipment* - equipment certified by an approved equipment testing organization to meet the standards in 40 CFR 82.158(b) or (d), equipment certified pursuant to 40 CFR 82.36(a), or equipment manufactured before 15 November 1993, that meets the standards in 40 CFR 82.158(c), (e), or (g) (40 CFR 82.152(c)).
- *Closed-vent System* - a system that is not open to the atmosphere and is composed of piping, connections, and, if necessary, flow-inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device (40 CFR 61.241).
- *Coal Refuse* - any waste products of coal mining, cleaning, and coal preparation operations (e.g., culm, gob, etc.) containing coal, matrix material, clay, and other organic and inorganic material (40 CFR 60.41a).
- *Cofired Combustor* - a unit that burns municipal-type solid waste or refuse-derived fuel with a nonmunicipal solid waste fuel and that is subject to a Federally enforceable permit limiting the unit to combusting a fuel feed stream, 30 percent or less of the weight of which is comprised, in aggregate, of municipal-type solid waste or refuse-derived fuel as measured on a 24-h basis (40 CFR 60.51a).
- *Cogeneration Steam Generating Unit* - a steam-generating unit that simultaneously produces both electrical (or mechanical) and thermal energy from the same primary energy source (40 CFR 60.41c).

- *Commercial Refrigeration* - means, for the purposes of 40 CFR 82.156(i), the refrigeration appliances utilized in the retail food and cold storage warehouse sectors. Retail food includes the refrigeration equipment found in supermarkets, convenience stores, restaurants, and other food service establishments. Cold storage includes the equipment used to store meat, produce, dairy products, and other perishable goods. All of the equipment contains large refrigerant charges, typically over 75 lb [34.02 kg] (40 CFR 82.152(d)).
- *Commercial/Retail Waste* - material discarded by stores, offices, restaurants, warehouses, nonmanufacturing activities at industrial facilities, and other similar establishments or facilities (40 CFR 60.51a).
- *Continuous Emissions Monitoring System (CEMS)* - a monitoring system for continuously measuring the emissions of a pollutant from an affected facility (40 CFR 60.51a).
- *Designated Volatility Nonattainment Area* - any area designated as being in nonattainment with the National Ambient Air Quality Standard (NAAQS) for ozone pursuant to rulemaking under Section 107(d)(4)(A)(ii) of the *Clean Air Act (CAA)* (40 CFR 80.2).
- *Designated Volatility Attainment Area* - an area not designated as being in nonattainment with the NAAQS for ozone (40 CFR 80.2).
- *Diesel Fuel* - any fuel sold in any state and suitable for use in diesel motor vehicles and diesel motor vehicle engines, and which is commonly or commercially known or sold as diesel fuel (40 CFR 80.2).
- *Disposal* - the process leading to and including the (40 CFR 82.152(e)):
 1. discharge, deposit, dumping or placing of any discarded appliance into or on any land or water
 2. disassembly of any appliance for discharge, deposit, dumping, or placing of its discarded component parts into or on any land or water
 3. disassembly of an appliance for reuse of its component parts.
- *Duct Burner* - a device that combusts fuel and that is placed in the exhaust duct from another source (such as a stationary gas turbine, internal combustion engine, kiln, etc.) to allow the firing of additional fuel to heat the exhaust gases before the exhaust gases enter a steam generating unit (40 CFR 60.41c).
- *Dryer* - a machine used to remove petroleum solvent from articles of clothing or other textile or leather goods, after washing and removing excess petroleum solvent, together with the piping and ductwork used in the installation of this device (40 CFR 60.621).

- *Federally Enforceable* - all limitations and conditions enforceable by the Administrator, including those requirements developed pursuant to 40 CFR 60 and 61, requirements within any applicable state implementation plan, and any permit requirements established pursuant to 40 CFR 52.21 or under 40 CFR 51.18 and 40 CFR 51.24 (40 CFR 60.41b).
- *Fossil Fuel* - natural gas, petroleum, coal, and any form of solid, liquid, or gaseous fuel derived from such materials for the purpose of creating useful heat (40 CFR 60.41a).
- *Fuel Pretreatment* - a process that removes a portion of the sulfur in a fuel before combustion of the fuel in a steam generating unit (40 CFR 60.41c).
- *Fugitive Emissions* - air pollutants entering into the atmosphere from other than a stack chimney, vent, or other functionally equivalent opening. Examples: vapors, dust, and fumes (40 CFR 51.301(j)).
- *Gasoline Carrier* - any distributor who transports or stores, or causes the transportation or storage of, gasoline or diesel fuel without taking title to or otherwise having any ownership of the gasoline, and without altering either the quality or quantity of the gasoline or diesel fuel (40 CFR 80.2).
- *Gasoline Distributor* - any person who transports or stores, or causes the transportation or storage of, gasoline or diesel fuel at any point between any gasoline refinery or importer's facility and any retail outlet or wholesale purchaser consumer facility (40 CFR 80.2).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Heat Input* - heat derived from combustion of fuel in a steam generating unit; this does not include the heat derived from preheated combustion air, recirculated flue gases, or exhaust gases from other sources (40 CFR 60.41c).
- *High-Pressure Appliance* - an appliance that uses a refrigerant with a boiling point between -50 and 10 °C [-46 and 50 °F] at atmospheric pressure (29.9 in. (75.95 cm) Hg). This definition includes, but is not limited to, appliances using refrigerants -12, -22, -114, -500, or -502 (40 CFR 82.152(f)).
- *Household Waste* - includes material discarded by single and multiple residential dwellings, hotels, motels, and other similar permanent or temporary housing (40 CFR 60.51a).

- *Incinerator* - any furnace used in the process of burning solid waste for the purpose of reducing the volume of the waste by removing combustible matter (40 CFR 60.51).
- *Industrial Process Refrigeration* - means, for the purposes of 40 CFR 82.156(i), complex customized appliances used in the chemical, pharmaceutical, petrochemical and manufacturing industries. This sector also includes industrial ice machines and ice rinks (40 CFR 82.152(g)).
- *Institutional Waste* - includes materials discarded by hospitals, schools, non-manufacturing activities at prisons, and government facilities (40 CFR 60.51a).
- *Large Municipal Waste Combustor (MWC)* - an MWC plant with a capacity of greater than 225 Mg (250 tons) per day of municipal solid waste (40 CFR 60.51a).
- *Lignite* - coal that is classified as lignite A or B according to American Society for Testing and Materials (ASTM) standards (40 CFR 60.41a).
- *Low-Loss Fitting* - any device that is intended to establish a connection between hoses, appliances, or recovery or recycling machines, and that is designed to close automatically or to be closed manually when disconnected, minimizing the release of refrigerant from hoses, appliances, and recovery or recycling machines (40 CFR 82.152(h)).
- *Low-Pressure Appliance* - an appliance that uses a refrigerant with a boiling point above 10 °C [50 °F] at atmospheric pressure (29.9 in. (75.95 cm) Hg). This definition includes, but is not limited to, equipment utilizing refrigerants -11, -113, and -123 (40 CFR 82.152(i)).
- *Major Maintenance, Service, or Repair* - any maintenance, service, or repair involving the removal of any or all of the following appliance components (40 CFR 82.152(j)):
 1. compressor
 2. condenser
 3. evaporator
 4. auxiliary heat exchanger coil.
- *Medical Waste* - when defined as applicable to municipal waste combustors, it is any solid waste generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in production or testing of biologicals. Medical waste does not include any hazardous waste identified under the *Resource Conservation and Recovery Act, Subtitle C (RCRA-C)* nor any household waste as defined in *RCRA-C* (40 CFR 60.51a).

- *Modification* - in relation to New Source Performance Standards (NSPS), any physical or operational change to an existing facility which results in an increase in the emission rate to the atmosphere of any pollutant to which a standard applies except:
 - maintenance, repair and replacement which the Administrator determines to be routine for a source category
 - an increase in production rate of an existing facility, if that increase can be accomplished without a capital expenditure on that facility
 - an increase in the hours of operation
 - use of an alternate fuel or raw material if, prior to the date any standard under this part becomes applicable to that source type, the existing facility was designed to accommodate that alternate use. A facility will be designed to accommodate an alternative fuel an alternative fuel or raw material if that use could be accomplished under the facility's construction specifications as assessed prior to the change (40 CFR 60.14).
- *Motor Vehicle Air Conditioner (MVAC)* - any appliance that is a motor vehicle air conditioner as defined in 40 CFR 82, subpart B (40 CFR 82.152(k)).
- *Municipal Type Solid Waste* - household, commercial/retail, and/or institutional waste. Household, commercial/retail, and institutional wastes do not include sewage, wood pallets, construction and demolition wastes, or industrial process or manufacturing wastes. Municipal type solid waste does include motor vehicle maintenance materials, which are limited to vehicle batteries, used motor oil, and tires. Municipal solid waste does not include wastes that are solely segregated medical wastes. However, any mixture of segregated medical wastes and other wastes which contains more than 30 percent medical waste is considered to be municipal type solid waste (40 CFR 60.51a).
- *Municipal Waste Combustor (MWC)* - any device that combusts solid, liquid, or gasified municipal solid waste including, but not limited to, field-erected incinerators, modular incinerators, boilers, furnaces, and gasification/combustion units. This does not include combustion units, engines, or other devices that combust landfill gases collected by landfill gas collection systems (40 CFR 60.51a).
- *MVAC-Like Appliance* - mechanical vapor compression, open-drive compressor appliances used to cool the driver's or passenger's compartment of a nonroad motor vehicle. This includes the air conditioning equipment found on agricultural or construction vehicles. This definition is not intended to cover appliances using HCFC-22 refrigerant (40 CFR 82.152(l)).
- *Nitric Acid Production Unit* - any facility producing nitric acid which measures 30 to 70 percent in strength by either the pressure or atmospheric pressure process (40 CFR 60.70).

- *Normally Containing a Quantity of Refrigerant* - containing the quantity of refrigerant within the appliance or appliance component when the appliance is operating with a full charge of refrigerant (40 CFR 82.152(m)).
- *Opacity* - the degree to which emissions reduce the transmission of light and obscure view of an object in the background (40 CFR 60.2).
- *Opening an Appliance* - any service, maintenance, or repair on an appliance that could be reasonably expected to release refrigerant from the appliance to the atmosphere unless the refrigerant was previously recovered from the appliance (40 CFR 82.152(n)).
- *Particulate Matter Emissions* - any airborne, finely divided solid or liquid material, except uncombined water, emitted to the ambient air (40 CFR 60.2).
- *PM₁₀* - particulate matter with an aerodynamic diameter less than or equal to a nominal 10 μm (40 CFR 58.1).
- *Process Stub* - a length of tubing that provides access to the refrigerant inside a small appliance or room air conditioner and that can be resealed at the conclusion of repair or service (40 CFR 82.152(p)).
- *Publication Rotogravure Printing* - any number of rotogravure printing units capable of printing simultaneously on the same continuous web or substrate and includes any associated device for continuous cutting and folding the printed web, where the following sellable paper products are printed: catalogs; direct mail advertisements; display advertisements; magazines; miscellaneous advertisements including brochures, pamphlets, catalogue sheets, circular folders, and announcements; newspapers; periodicals; and telephone and other directories (40 CFR 60.431).
- *Reclaim Refrigerant* - to reprocess refrigerant to at least the purity specified in the Air Conditioning and Refrigeration Institute (ARI) Standard 700-1988, *Specifications for Fluorocarbon Refrigerants* (Appendix A to 40 CFR 82, subpart F) and to verify this purity using the analytical methodology prescribed in ARI Standard 700-1988. In general, reclamation involves the use of processes or procedures available only at a reprocessing or manufacturing facility (40 CFR 82.152(q)).
- *Recover Refrigerant* - to remove refrigerant in any condition from an appliance without necessarily testing or processing it in any way (40 CFR 82.152(r)).
- *Recovery Efficiency* - the percentage of refrigerant in an appliance that is recovered by a piece of recycling or recovery equipment (40 CFR 82.152(s)).

- *Recycle Refrigerant* - to extract refrigerant from an appliance and clean refrigerant for reuse without meeting all of the requirements for reclamation. In general, recycled refrigerant is refrigerant that is cleaned using oil separation and single or multiple passes through devices, such as replaceable core filter-driers, which reduce moisture, acidity, and particulate matter. These procedures are usually implemented at the field job site (40 CFR 82.152(t)).
- *Refuse Derived Fuel* - combustible or organic portion of municipal waste that has been separated out and processed for use as fuel (40 CFR 60.51(a)).
- *Reid Vapor Pressure* - the absolute vapor pressure of volatile crude oil and volatile nonviscous petroleum liquids, except liquefied petroleum gases, as determined by the ASTM, Part 17, 1973, D-323-72 (reapproved 1977) (40 CFR 60.111(a)).
- *Self-Contained Recovery Equipment* - refrigerant recovery or recycling equipment that is capable of removing the refrigerant from an appliance without the assistance of components contained in the appliance (40 CFR 82.152(u)).
- *Small Appliance* - any of the following products that are fully manufactured, charged, and hermetically sealed in a factory with 5 lb [11.02 kg] or less of refrigerant (40 CFR 82.152(v)):
 1. refrigerators designed for home use
 2. freezers designed for home use
 3. room air conditioners (including window air conditioners and packaged terminal air conditioners)
 4. packaged terminal heat pumps
 5. dehumidifiers
 6. under-the-counter ice makers
 7. vending machines
 8. drinking water coolers.
- *Stationary Gas Turbines* - any simple cycle gas turbine, regenerative cycle gas turbine, or any gas turbine portion of a combined cycle steam/electric generating system that is not self-propelled. It may be mounted on a vehicle for portability (40 CFR 60.331).
- *Steam Generating Unit* - any furnace, boiler, or other device used for combusting fuel for the purpose of producing steam (including fossil fuel-fired steam generators associated with combined cycle gas turbines; nuclear steam generators are not included) (40 CFR 60.41a).
- *Sulfuric Acid Production Unit* - any facility producing sulfuric acids by the contact process by burning elemental sulfur, alkylation acid, hydrogen sulfide, organic sulfides and mercaptans, or acid sludge, but does not include facilities

where conversion to sulfuric acid is used primarily as a means of preventing emissions to the atmosphere of SO₂ or other sulfur compounds (40 CFR 60.81).

- *System-Dependent Recovery Equipment* - refrigerant recovery equipment that requires the assistance of components contained in an appliance to remove the refrigerant from the appliance (40 CFR 82.152(w)).
- *Technician* - any person who performs maintenance, service, or repair that could reasonably be expected to release Class I or Class II substances from appliances into the atmosphere, including, but not limited to, installers, contract employees, in-house service personnel, and, in some cases, owners. Technician also means any person disposing of appliances except for small appliances (40 CFR 82.152(x)).
- *True Vapor Pressure* - the equilibrium partial pressure exerted by a petroleum liquid as determined in accordance with methods described in American Petroleum Institute (API) Bulletin 2517, *Evaporation Loss From Floating Roof Tanks*, 1962 (40 CFR 60.111a).
- *Very High-Pressure Appliance* - an appliance that uses a refrigerant with a boiling point below -50 °C [-58 °F] at atmospheric pressure (29.9 in. [75.946 cm] Hg). This definition includes, but is not limited to, equipment utilizing refrigerants -13 and -503 (40 CFR 82.152(y)).
- *Very Low Sulfur Oil* - an oil that contains no more than 0.5 weight percent sulfur or that, when combusted without SO₂ emission control, has an SO₂ emission rate equal to or less than 215 ng/J (0.5 lb/ MBtu) heat input (40 CFR 60.41(b)).
- *Volatile Hazardous Air Pollutant (VHAP)* - a substance regulated under 40 CFR 61, subpart V for which a standard for equipment leaks of the substance has been proposed and promulgated. Benzene and vinyl chloride are VHAPs (40 CFR 61.241).
- *VHAP Service* - a piece of equipment that either contains or contacts a fluid (liquid or gas) that is at least 10 percent by weight a VHAP (40 CFR 61.241).
- *Volatile Organic Compound (VOC)* - any compound of carbon, excluding CO, CO₂, carbonic acid, metallic carbides or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions (40 CFR 51.100).
- *VOC Service* - in relationship to fugitive emissions, when a piece of equipment contains or contacts a process fluid that is at least 10 percent VOC by weight (40 CFR 61.241).

- *Volatile Organic Liquid (VOL)* - any organic liquid that can emit VOCs into the atmosphere except for VOLs which emit only those compounds which the Administrator has determined do not contribute appreciably to the formation of ozone. These compounds are identified in USEPA statements on the ozone abatement policy for state implementation plan (SIP) revisions (40 CFR 60.111b(k)).

- (13) District Office - Planning
- (14) District Office - Emergency Management
- (15) Project - Project Resource Manager
- (16) Project - Facility Managers (See Descriptions in POC Section of Introduction at beginning of manual)
- (17) Lab Manager

(NOTE: Office of Counsel should be considered a point of contact for all compliance requirements and violations)

DEFINITIONS: NA - Not Applicable to the Facility; RMA - Requires Management Action; C - In Compliance

AIR EMISSIONS MANAGEMENT

Records to Review

- State and local air pollution control regulations
- Agency air pollution control regulations
- Emissions inventory
- All air pollution source permits
- Plans and procedures applicable to air pollution control
- Emission monitoring records
- Opacity records
- Notices of violation (NOVs) to regulatory authorities
- Instrument calibration and maintenance records
- Reports/complaints concerning air quality
- Air Emergency Episode Plan
- State and/or Federal regulatory inspections
- Regulatory inspection reports
- Documentation of preventive measure or action
- Results of air sampling at the conclusion of response action

Physical Features to Inspect

- All air pollution sources (fuel burners, incinerators, VOC sources, etc.)
- Air pollution monitoring and control devices
- Air emission stacks
- Air intake vents

People to Interview

- Environmental Compliance Coordinator (ECC)
- Safety and Occupational Health Office
- Operations
- Project Resource Manager
- Facility Managers
- Lab Manager

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. The chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Checklist Item Numbers in the April 1993 ERGO Manual	Corresponding Checklist Item Numbers in the 1994 ERGO Manual
1-1 through 1-19	1-1 through 1-19
1-20	deleted
1-21 through 1-32	1-20 through 1-31

Appendix 1-2

Formula for Calculating SO₂ Emissions Limitations (40 CFR 60.42c(e)(2))

The following applies to steam generating units for which construction, modification, or reconstruction started after 9 June 1989 with a maximum design heat input capacity of 29 MW (100 MBtu/ h) or less, but greater than or equal to 2.9 MW (10 MBtu/ h).

$$E = \frac{(K_a H_a + K_b H_b + K_c H_c)}{H_a + H_b + H_c}$$

where:

E = the SO₂ emission limit expressed in ng/J or lb/ MBtu
heat input

K_a = 520 ng/J (1.2 lb/ MBtu)

K_b = 260 ng/J (0.60 lb/ MBtu)

K_c = 215 ng/J (0.50 lb/ MBtu)

H_a = the heat input from the combustion of coal, except coal
combusted in a facility that combusts only coal and
uses emerging technology, in J (MBtu)

H_b = the heat input from the combustion of coal, except coal
combusted in a facility that combusts only coal and
uses emerging technology, in J (MBtu)

H_c = the heat input from the combustion of oil, in J (MBtu).

Appendix 1-3

DOD Goals for Reduction, Releases, Procurement, and Use of Ozone-Depleting Substances

Phase I	Phase II	Phase III	Phase IV	Phase V
Institute plans to reduce unnecessary releases during operation, maintenance, and training.	Institute plans to eliminate procurement and use.	Stop use in new procurements.	Phaseout of current applications to 50 percent of 1986 levels.	Reduce use in all applications to zero.

Goals for CFCs

	Phase I	Phase II	Phase III	Phase IV	Phase V
³ Category III	Oct. '90	Oct. '92	Oct. '96	Oct. '96	Oct. 2000
² Category II	Oct. '90	Oct. '93	Oct. '97	Oct. '97	Oct. 2000*
¹ Category I	Oct. '90	Oct. '93	Oct. '98	Oct. '98	Upon available substitutes

Goals for Halons

Category III	Oct. '90	Oct. '90	Oct. '90	---	Oct. '95
Category II	Oct. '90	Oct. '90	Oct. '90	Oct. '95	Oct. 2000*
Category I	Oct. '90	Oct. '90	Oct. '95	Oct. '95	Upon available substitutes

*Meets requirement from recycle or inventory.

(NOTE: All phaseout goals are dependent on the timely development of suitable substitutes for ozone-depleting substances. To prevent interruption of supplies for mission-critical uses (Category I), these uses will be identified and plans initiated not later than October 1990 to recycle existing stocks and to initiate stockpiling of sufficient quantities of ozone-depleting substances to allow operation for the useful life of the weapons system.)

¹Category I: *Mission-Critical Uses* - The highest priority uses will be those that are mission critical. Mission-critical uses have a direct impact on combat mission capability and include uses that are integral to combat mission assets or that affect operability of these assets. Mission-critical uses include cooling operational suppression systems in tactical vehicle crew compartments to protect the lives of mission-critical personnel.

²Category II: *Essential Uses* - Essential uses include those applications that have an indirect effect on combat mission assets and play an auxilliary role in ensuring the operability of those assets. Essential uses include process cooling applications and charging portable fire extinguishers for electronic area protection.

³Category III: *NonEssential Uses* - This category includes all nonessential uses. Nonessential uses include methods of comfort cooling in family housing and installation support activities.

Appendix 1-4

Controlled Substances and Ozone Depletion Weights (40 CFR 82, Appendix A and Appendix B)

Controlled Substance	Ozone Depletion Weight
<i>Class I</i>	
Group I	
CFC-1 ₃ - Trichlorofluoromethane (CFC-11)	1.0
CF ₂ Cl ₂ - Dichlorodifluoromethane (CFC-12)	1.0
C ₂ F ₃ Cl ₃ - Trichlorotrifluoroethane (CFC-113)	0.8
C ₂ F ₄ Cl ₂ - Dichlorotetrafluoroethane (CFC-114)	1.0
C ₂ F ₅ Cl - (Mono)chloropentafluoroethane (CFC-115)	0.6
All isomers of the above chemicals	
Group II	
CF ₂ ClBr - Bromochlorodifluoromethane (Halon 1211)	3.0
CF ₃ Br - Bromotrifluoromethane (Halon 1301)	10.0
C ₂ F ₄ Br ₂ - Dibromotetrafluoroethane (Halon 2402)	6.0
All isomers of the above chemicals	
Group III	
CF ₃ Cl - Chlorotrifluoromethane (CFC-13)	1.0

Very High-pressure appliance	0	0
Low-pressure appliance	25	25 mm Hg absolute

Section 2

Cultural and Historic Resources Management

SECTION 2

CULTURAL AND HISTORIC RESOURCES MANAGEMENT

A. Applicability

This section applies to any U.S. Army Corps of Engineers (USACE) facility with owned or controlled property. Plans and programs for protection and management of cultural resources that include historic and prehistoric properties are contained in this section.

B. Federal Legislation

There are many Federal statutes and regulations concerning the preservation of historic and prehistoric properties. The provisions of the following statutes and their implementing regulations outline a comprehensive assertion of national preservation policy and the means to reach the goal of that policy.

- *Antiquities Act of 1906*. This Act, (Public Law (PL) 59-209; 16 U.S. Code (USC) 431-433), provides for the protection of historic and prehistoric ruins and objects of antiquity on Federal lands and authorizes scientific investigation of antiquities on Federal lands that are subject to permits and other regulatory requirements. Paleontological resources are covered by this Act.
- *Historic Sites Act of 1935*. This Act, (PL 74-292; 16 USC 470-470w-6), authorizes the designation of national historic sites and landmarks, authorizes interagency efforts to preserve historic resources, and establishes a maximum fine of \$500 for violations of the Act.
- *National Historic Preservation Act (NHPA) of 1966*. This Act, (PL 89-665; 16 USC 470-470w-6), establishes historic preservation as a national policy and defines it as the protection, rehabilitation, restoration, and reconstruction of districts, sites, buildings, structures, and objects significant in American history, architecture, archeology, or engineering. The amendments of 1980 establish guidelines for: the preservation of nationally significant properties, curation of artifacts, data documentation of historic properties, and preservation of Federally owned historic sites; designation of a Preservation Officer in each Federal agency; authorization of the inclusion of historic preservation costs in project planning costs; and authorization of the withholding of sensitive data on historic properties when necessary.

Section 106 provides Federal agencies with direction for undertakings that affect properties listed, or eligible for listing, on the National Register. The

section is implemented by regulations issued by the Advisory Council (36 Code of Federal Regulations (CFR) 800). Section 110 makes Federal agencies responsible for preservation of historic properties they own or control and requires Federal agencies to locate, inventory, and nominate all properties that may qualify for the National Register.

- *National Environmental Policy Act (NEPA) of 1969*. This Act, (PL 91-190; 42 USC 4321-4347) states the policy of the Federal government to preserve important historical, cultural, and natural aspects of our national heritage and requires consideration of environmental concerns during project planning and execution. This act requires Federal agencies to prepare an Environmental Impact Statement (EIS) for every major Federal action that significantly affects the quality of the human environment, including both cultural and historic resources. It is implemented by regulations issued by the Council on Environmental Quality (CEQ) (40 CFR 1500-08) and Army Regulation (AR) 200-2.
- *Executive Order (EO) 11593*. This EO, *Protection and Enhancement of the Cultural Environment*, 13 May 1971 (reprinted as a note at 16 USC 470) directs Federal agencies to: provide leadership in preserving, restoring, and maintaining the historical and cultural environment of the Nation; ensure the preservation of historic resources; locate, inventory, and nominate to the National Register all properties under their control that meet the criteria for nomination; and ensure that historic resources are not inadvertently damaged, destroyed, or transferred before the completion of inventories and evaluation for the National Register.
- *Archeological and Historic Preservation Act of 1974*. This Act, (PL 93-291 (amends PL 86-523); 16 USC 469-469c), directs Federal agencies to notify the Secretary of the Interior (SOI) when they find that any Federal construction project or Federally licensed activity or program may cause irreparable loss or destruction of significant scientific, prehistoric, historical, or archeological data. It also provides criteria for funding historical and archeological protection for such projects.
- *Public Buildings Cooperative Use Act of 1976*. This Act, (PL 95-541; 40 USC 490, 601a, 606, 611 and 612a), encourages adaptive reuse of historical buildings as administrative facilities for Federal agencies or activities.
- *American Indian Religious Freedom Act of 1978*. This Act, (PL 95-341; 42 USC 1996), states the policy of the United States to protect and preserve for American Indians their inherent rights of freedom to believe, express, and exercise the traditional religions of the American Indian, Eskimo, Aleut, and native Hawaiian. These rights include, but are not limited to, access to sites, use and possession of sacred objects, and the freedom to worship through ceremony and traditional rites.

- *Native American Graves Protection and Repatriation Act of 1990*. This Act, (PL 101-601), requires Federal agencies to establish procedures for identifying Native American groups associated with cultural items on Federal lands, to inventory human remains and associated funerary objects in Federal possession, and to return such items upon request to the affiliated groups. The law also requires that any discoveries of cultural items covered by the Act shall be reported to the head of the Federal entity, who shall notify the appropriate Native American tribe or organization and cease activity in the area of discovery for at least 30 days.
- *Archeological Resources Protection Act (ARPA) of 1979*. This Act, (PL 96-95; 16 USC 470aa-11), prohibits the removal, sale, receipt, and interstate transportation of archeological resources obtained illegally (without permits) from public or Indian lands and authorizes agency permit procedures for investigations of archeological resources on public lands under the agency's control. PL 100-555 amends *ARPA* by addition of Section 14 which states that the Secretaries of the Interior, Agriculture, and Defense (and their respective employees and agents) shall: develop plans for surveying the lands under their control to determine the nature and extent of archeological resources; prepare a schedule for surveying those lands that are likely to contain the most scientifically valuable archeological resources; and develop documents for reporting suspected violations of the *ARPA*. *The Protection of Archeological Resources: Uniform Regulations*, 18 CFR 1312, 32 CFR 229, 36 CFR 296, and 43 CFR 7, implements the *ARPA*.
- *Abandoned Shipwreck Act of 1987*. This Act, PL 100-298, defines and clarifies access and ownership rights and directs the Director of the National Park Service to prepare guidelines, in consultation with appropriate public and private section interests, to administer and manage underwater resources.

C. State/ Local Regulations

At the state level, the State Historic Preservation Officer (SHPO) provides assistance in determining cultural significance and eligibility for the National Register, but may also nominate properties, irrespective of ownership. The SHPO must be consulted during all cultural resources planning.

States may also issue regulations designating state historical sites.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- ER 1130-2-433, *Collection Management and Curation of Archeological and Historical Data*. This regulation provides guidance concerning the storage and curation of archeological and historic data, materials, and records recovered in conjunction with Corps Civil Works activities.
- ER 1130-2-438, *Historic Preservation Program*. This regulation establishes the Corps of Engineers Historic Preservation Program for construction, operations, and maintenance activities at Civil Works projects.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- **Historical Properties** - All Federal Agencies are required to establish a program to locate, inventory, and nominate to the SOI all properties under the agency's control that qualify for inclusion on the National Register of Historic Places. Historic properties held in fee by the Federal government, and under the jurisdiction of the Corps, are required to be protected and managed and to have damage mitigated. These requirements also apply to property held in less than fee by the Federal government, whenever Corps activities have an adverse impact on the property. Facilities are required to take into account the effects of a new undertaking on property listed in the National Register before beginning an undertaking. The facility is required to consult the SHPO during identification, location, and evaluation of historic properties and in assessing the effect of an undertaking on historic property (36 CFR 60.9(7)(f), 60.13, 800.1, 800.4, and 800.5; 32 CFR 229.4(a) and 229.5(b)).
- **Archeological Requirements** - When unrecorded historic property is discovered during construction or other undertakings, work must halt until the situation is properly evaluated. Archeological resources on either public or Indian lands cannot be excavated, removed, damaged, or otherwise altered without permit (ER 1130-2-438 para 3, 32 CFR 229.4(a), and 229.5(b)).
- **Plans and Documentation** - The master plan is required to include the management of cultural resources. The operational management plan (OMP) is required to address all operational projects concerning cultural resources in the master plan. If the master plan and/or the OMP are released to the public, they shall not contain the exact location of historic properties. The Cultural

Resources Coordinator should be involved with the master plan and in the preparation, updating and implementation of the OMP. Corps Districts will have a Historic Properties Management Plan (HPMP) for each operation project (ER 1130-2-435, para 7c, ER 1130-2-438, para 7a, ER 1130-2-400, para 9 and Appendix B, ER 1130-2-438, para 7g and para 11).

- Native American Graves and Artifacts - Federal law protects Native American graves and artifacts. Corps facilities are required to take measures to identify and protect them, and to cooperate with Native American groups in returning such items to their rightful owners (PL 101-601, Section 3d, Section 5, and Section 6).
- Collection Management and Curation - Archeological and historic collections owned or controlled by the Corps are required to be assessed and evaluated. Facilities responsible for long-term management and preservation of collections are covered by regulations dealing with curation, recordkeeping, long-term curatorial services, repository security, curatorial staff qualifications, use of collections, and conduct of inspections and inventories of the collections. Collection management centers are also required to write annual reports updating the status of their collections (ER 1130-2-433, para 8 and para 12b; 36 CFR 79; and ER 1130-2-433, para 10 and para 12a).

F. Key Compliance Definitions

- *Advisory Council on Historic Preservation (ACHP)* - the Council established by Title II of the *NHPA* to advise the President and Congress, encourage private and public interest in cultural preservation, and comment on Federal agency action under Section 106 of the *NHPA* (36 CFR 65.3).
- *Archeological Resource* - any material remains of prehistoric or historic human life or activities. Such resources include, but are not limited to: pottery, basketry, bottles, weapons, weapon projectiles, tools, structures or portions of structures, pit houses, rock paintings, rock carvings, intaglios, graves, human skeletal materials, or any portion or piece of any of the foregoing items (16 USC 470bb).
- *Associated Funerary Objects* - objects that, as a part of the death rite or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later, and both the human remains and associated funerary objects are presently in the possession or control of a Federal agency or museum, except for other items exclusively made for burial purposes or to contain human remains, shall be considered as associated funerary objects (PL 101-601, Section 2).

- *Associated Records* - original records, or copies thereof, that are prepared or assembled and document efforts to locate, evaluate, record, study, preserve, or recover materials from a prehistoric or historic resource (36 CFR 79.4 and ER 1130-2-433, para 4a).
- *Building* - a structure created to shelter any form of human activity, such as a house, barn, church, hotel, or similar structure. *Building* may refer to a historically related complex such as a courthouse and jail, or a house and barn (36 CFR 60.3).
- *Burial Site* - any natural or prepared physical location, whether originally below, on, or above the surface of the earth, into which, as a part of the death rite or ceremony of a culture, individual human remains are deposited (PL 101-601, Section 2).
- *Collection* - material remains that are excavated or removed during a survey, excavation, or other study of a prehistoric or historic resource, and associated records that are prepared or assembled in connection with the survey, excavation, or other study (36 CFR 79.4).
- *Cultural Affiliation* - a relationship of shared group identity which can be reasonably traced historically or prehistorically between a present day Indian tribe or Native Hawaiian organization and an identifiable earlier group (PL 101-601, Section 2).
- *Cultural Items* - associated and unassociated funerary objects, sacred objects, and cultural patrimony (PL 101-106, Section 2(3)(a-d)).
- *Cultural Patrimony* - an object having ongoing historical, traditional, or cultural importance central to a Native American group or culture itself, rather than property owned by an individual Native American, and which, therefore, cannot be alienated, appropriated, or conveyed by any individual regardless of whether or not the individual is a member of the Indian tribe or Native Hawaiian organization (PL 101-601, Section 2).
- *Curatorial Services* - managing and preserving a collection according to professional museum and archival practices (36 CFR 79.4).
- *Determination of Eligibility* - a decision by the Department of the Interior (DOI) that a district, site, building, structure, or object meets the National Register criteria for evaluation although the property is not formally listed in the National Register (36 CFR 60.3).

- *Effect* - direct effects are caused by the undertaking and occur at the place and time of the undertaking. Indirect effects are those caused by the undertaking that are later in time or further removed in distance, but are still reasonably foreseeable (50 CFR 1508.8).
- *Endangered Property* - a historic property that is, or is about to be, subjected to a major impact that will destroy or seriously damage the qualities of significance that make it eligible for National Historic Landmark or National Register of Historic Places designation (36 CFR 65.3).
- *Federal Agency Official* - any officer, employer, or agent officially representing the secretary of the department or the head of any other agency or instrumentality of the United States having primary management authority over a collection that is subject to 36 CFR 79 (36 CFR 79.4).
- *Federal Lands* - any land other than tribal lands which are controlled or owned by the United States, including lands selected by, but not yet conveyed to, Alaska Native corporations and groups pursuant to the *Alaska Native Claims Settlement Act* of 1971 (PL 101-601, Section 2).
- *Historic Preservation* - identification, evaluation, documentation, curation, acquisition, protection, rehabilitation, restoration, management, stabilization, maintenance, recording, and reconstruction of cultural resources, and any combination of the foregoing (16 USC 470w(8)).
- *Historic Property or Resource* - any prehistoric or historic district, site, building, structure, or object included in, or eligible for inclusion on the National Register; such term includes artifacts, records, and remains which are related to such a district, site, building, structure, or object (16 USC 470W).
- *Indian Lands* - all lands under the jurisdiction or control of an Indian tribe (36 CFR 800.2).
- *Indian Tribe or Tribe* - any Indian Tribe, band, nation, or other organized group or community including a Native village, Regional corporation or Village Corporation, as those terms are defined in Section 3 of the *Alaska Native Claims Settlement Act* (42 USC 1602), which is recognized as eligible for the special programs and services provided by the United States to Indians because of their status as Indians (*NHPA*, Section 301(4)).
- *Inventory* - an itemized list of human remains and funerary objects along with their geographical and cultural affiliations (PL 101-601, Section 5(a) and (e)).

- *Landmark* - a National Historic Landmark is a district, site, building, structure, or object, in public or private ownership, judged by the SOI to possess national significance in American history, archeology, architecture, engineering, and culture, and is so designated by the Secretary (36 CFR 65.3).
- *Material Remains* - artifacts, objects, specimens, and other physical evidence that are excavated or removed in connection with efforts to locate, evaluate, document, study, preserve, or recover a prehistoric or historic resource. Classes of material remains that may be in a collection include, but are not limited to (36 CFR 79.4):
 1. components of structures and features (such as houses, mills, piers, fortifications, earthworks, and mounds)
 2. intact or fragmentary artifacts of human manufacture
 3. intact or fragmentary natural objects used by humans (such as rock crystals, feathers and pigments)
 4. byproducts, waste products, or debris resulting from manufacture or use of manmade or natural materials
 5. organic materials (such as vegetable and animal remains)
 6. human remains
 7. components of petroglyphs, pictographs, intaglios or other works of artistic or symbolic representation
 8. components of shipwrecks
 9. environmental and chronometric specimens
 10. paleontological specimens that are found in direct physical relationship with a prehistoric or historic resource.
- *Museum* - any institution or state or local government agency (including any institution of higher learning) that receives Federal funds and has possession of, or control over, Native American cultural items. Such term does not include the Smithsonian Institution or any other Federal agency (PL 101-601, Section 2).
- *National Historic Landmarks Program* - the program that identifies, designates, recognizes, lists, and monitors National Historic Landmarks, conducted by the Secretary through the National Park Service (36 CFR 65.3).
- *National Register of Historic Places (National Register)* - the listing of districts, sites, buildings, structures, and objects of national, state, or local significance in American history, architecture, archeology, or culture, which is maintained by the SOI (Keeper of the Register) (36 CFR 65.3).
- *Native American* - of, or relating to, a tribe, people, or culture that is indigenous to the United States (PL 101-106, Section 2).

- *Native Hawaiian* - any individual who is a descendent of the aboriginal people who, prior to 1778, occupied and exercised sovereignty in the area that now constitutes the state of Hawaii (PL 101-106, Section 2).
- *Nominate* - to complete and submit a National Register of Historic Places form proposing that a resource be included in the National Register. Nominations can be made for individual resources, multiple resources, or thematic groups (36 CFR 60.4).
- *Preservation* - identification, evaluation, recordation, documentation, curation, acquisition, protection management, rehabilitation, restoration, stabilization, maintenance, and reconstruction of any constituents of the foregoing activities (16 USC 470W).
- *Property* - a site, building, object, structure, or a collection of the foregoing, that forms a district (36 CFR 65.3).
- *Qualified Museum Professional* - a person who possesses knowledge, experience, and demonstrable competence in museum methods and techniques appropriate to the nature and content of the collection under the person's management and care and commensurate with the person's duties and responsibilities (36 CFR 79.4).
- *Religious Remains* - material remains that a Federal Agency official has determined are of traditional, religious, or sacred importance to an Indian tribe or other group because of customary use in religious rituals or spiritual activities. This determination is made in consultation with appropriate Indian tribes or other groups (36 CFR 79.4).
- *Repository* - a facility such as a museum, archeological center, laboratory, or storage facility managed by a university, college, museum, other educational or scientific institution, a Federal, state, or local government agency, or Indian tribe that can provide professional, systematic, and accountable curatorial services on a long-term basis (36 CFR 79.4).
- *Restoration* - the act or process of accurately recovering the form and details of property and its setting as it appeared at a particular period of time by means of the removal of later work or by the replacement of missing earlier work (36 CFR 68.2).
- *Sacred Objects* - specific ceremonial objects which are needed by traditional Native American religious leaders for the practice of their traditional Native American religions by their present day adherents (PL 101-601, Section 2).

- *Section 106 Consultation* - a compliance procedure in which an agency requests the comments of the SHPO and/or the ACHP when an undertaking may affect a property listed on, or eligible for, the National Register (36 CFR 800.3 through 800.9).
- *Significant* - having a characteristic that makes a property eligible for listing on the National Register (DOD Directive 4710.0).
- *State Historic Preservation Officer (SHPO)* - the official who is responsible for administering the *NHPA* within the state of jurisdiction, or a designated representative authorized to act for the SHPO (36 CFR 60.3).
- *Tribal Official* - the chief executive officer or any officer, employee, or agent officially representing an Indian tribe (36 CFR 79.4).
- *Unassociated Funerary Objects* - objects that, as a part of the death rites or ceremony of a culture, are reasonably believed to have been placed with individual human remains either at the time of death or later, where the remains are not in the possession or control of the Federal agency or museum and the objects can be identified by a preponderance of the evidence as related to specific individuals or families or to known human remains or, by a preponderance of the evidence, as having been removed from a specific burial site of an individual culturally affiliated with a particular Indian tribe (PL 101-106, Section 2).
- *Undertaking* - a project , activity, or program funded in whole or in part under the direct or indirect jurisdiction of a Federal agency, including those (*NHPA* Section 301(7)):
 1. carried out by, or on behalf of, the agency,
 2. carried out with Federal financial assistance,
 3. requiring a Federal permit, license, or approval
 4. subject to state or local regulations administered pursuant to a delegation of approval by a Federal agency.

- (15) Project - Project Resource Manager
- (16) Project - Facility Managers (See Descriptions in POC Section of Introduction at beginning of manual)
- (17) Lab Manager

(NOTE: Office of Counsel should be considered a point of contact for all compliance requirements and violations.)

DEFINITIONS: NA - Not Applicable to the Facility; RMA - Requires Management Action; C - In Compliance

CULTURAL AND HISTORIC RESOURCES MANAGEMENT

Records to Review

- For construction activities: documentation of finding of no adverse effect, finding of adverse effect, or Memorandum of Agreement (MOA) with the SHPO; or requests for comment when there is no agreement on historic properties.
- Cultural Resources Inventory/Survey
- Master Plan
- Land Use Plan
- Land Management Plan
- Environmental Assessments
- Environmental Impact Documentation
- Grounds Maintenance Contracts
- Historic Preservation Plan

Physical Features to Inspect

- Sites of historic, archeological, or Native American interest (designation, protection, and interpretation)
- Buildings and structures of potential historical significance (National, state, or local)

People to Interview

- Natural Resources Manager (Division, District)
- Engineering
- Operations (Division, District)
- Environmental Compliance Coordinator (ECC)
- Cultural/Historic Resources
- Planning
- Project Resource Manager
- Facility Managers

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. The chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Checklist Item Numbers in the April 1993 ERGO Manual	Corresponding Checklist Item Numbers in the 1994 ERGO Manual
2-1 through 2-28	2-1 through 2-15, 2-17 through 2-29

Section 3

Hazardous Materials Management

SECTION 3

HAZARDOUS MATERIALS MANAGEMENT

A. Applicability

This section primarily addresses the proper storage and handling of chemicals and the spill contingency and response requirements related to hazardous materials. Oil, pesticides, and asbestos are hazardous materials that require special management practices at Corps facilities, and are addressed in separate sections. Radioactive substances and the general category of hazardous wastes are also not included in this section. This section does not focus on individual hazardous chemicals or substances used, but deals with the generic requirements and good management practices (GMPs) associated with minimizing impacts on the environment from spills or releases of hazardous materials because of improper storage and handling.

All underground storage tank (UST) regulations that apply to hazardous materials have been consolidated into Section 10, *Underground Storage Tank (UST) Management*.

B. Federal Legislation

- *The Hazardous Materials Transportation Act*. This Act, administered by the U.S. Department of Transportation (DOT), regulates the shipping, marking, labeling, placarding, and recordkeeping requirements for hazardous materials listed in 49 Code of Federal Regulations (CFR) 172.101. Since most Corps facilities are not shippers of hazardous materials, but rather use commercial transportation firms for this purpose, the requirements of these DOT regulations may not be applicable. However, those facilities that do ship hazardous materials are responsible for complying with the DOT regulations.
- *Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA) of 1980*. This Act was amended by the *Superfund Amendments and Reauthorization Act (SARA)* of 1986, 42 U.S. Code (USC) 9601-11050, 10 USC 2701-2810 et. al. *CERCLA/SARA* regulates the prevention, control, and compensation relating to environmental pollution.
- The U.S. Environmental Protection Agency (USEPA) also regulates some special hazardous materials under the *Toxic Substances Control Act (TSCA)*, particularly polychlorinated biphenyls (PCBs) (40 CFR 761) and asbestos (40 CFR 763). However, these are covered in a separate section (Section 9, *Special Pollutants Management*) and will not be discussed here.

- *The Occupational Safety and Health Act (OSHA)*. The general purpose of this Act is to assure, as much as possible, safe and healthful working conditions for every individual working in the United States.
- *The Emergency Planning and Community Right-to-Know Act of 1986 (EPCRA)*. This Act was designed to promote emergency planning and preparedness at both the state and local level. It provides citizens and local governments with information regarding the potential hazards in their community. *EPCRA* requires the use of emergency planning and designates state and local governments as recipients for information regarding chemicals and toxins used in the community.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO, published 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements and for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- EO 12856, *Federal Compliance With Right-to-Know Laws and Pollution Prevention Requirements*. This EO requires the heads of Federal agencies to develop a written pollution prevention strategy for their agencies. Military departments are covered under the auspices of the Department of Defense (DOD). The head of each agency shall ensure that each of its covered facilities develops a written pollution prevention plan no later than the end of 1995. Federal agencies are required to conduct assessments of their facilities as necessary to ensure development of these plans and of the facilities' pollution prevention programs. Each Federal agency will also develop voluntary goals to reduce its total releases of toxic chemicals to the environment, and offsite transfers of such chemicals for treatment and disposal are publicly reported. Under this EO Federal facilities are required to comply with *EPCRA*.
- The National Fire Code, the *Flammable and Combustible Liquids Code*, National Fire Protection Association (NFPA) 30, prohibits the storage of Class I and Class II liquids (see *Key Compliance Definitions*) in plastic containers in general purpose warehousing.

C. State/ Local Regulations

Hazardous materials may be regulated on the state level as well as by local agencies (county/city fire departments) that require flammable/combustible materials to meet certain storage requirements. Usually, these local ordinances will follow the NFPA *Fire Protection Guide on Hazardous Materials* (Pamphlets 325A, 325M, 49, 491F, and 704M).

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- DODR 4145.19-1, *Storage and Materials Handling*. This regulation details storage procedures for hazardous materials, including compressed gases, acids, and flammable/combustible liquids.
- Engineering Manual (EM) 385-1-1, *Safety and Health Requirements*. Although this is a manual and not an ER, the contents are applicable to all missions under the command of the Chief of Engineers, whether accomplished by military, civilian, or contractor forces. In relation to hazardous materials, it regulates storage and handling practices.
- ER 1130-2-434, *Response to Oil and Hazardous Incidents*. This regulation provides guidelines for oil and hazardous substance contingency plans.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- Planning and Documentation - Facility and district offices should maintain a master listing of hazardous materials storage sites, and the Safety Officer should inspect these sites. The facility should have a written Oil and Hazardous Substances Pollution Contingency (OHSPC) Plan for spill events. When the facility needs outside fire protection help, it is required to tell the local fire department what types of hazardous chemicals it uses, the areas where it uses them, what it uses them for, and the amount it uses. The facility is required to have Material Safety Data Sheet (MSDS) files for each hazardous chemical it stores and uses, not including such items as hazardous waste, tobacco, or drugs and cosmetics meant for personal use (ER 1130-2-434, para 7c(1); EM 385-1-1, para 06.B.01, para 09.A.16; 40 CFR 300.105(a); 29 CFR 1910.1200(b) and 1910.1200(g)).

- Personnel Training - Facilities are required to provide all employees with written information about hazardous chemicals to which they are exposed. Personnel who work with hazardous materials are required to be trained in the use and potential hazards of such materials. All employees and supervisors working on sites exposed to hazardous materials or other hazards must be trained before engaging in these activities (29 CFR 1910.1200).
- Hazardous Substance Release Reporting - U.S. Army Corps of Engineers (USACE) facilities are required to notify the National Response Center (NRC) immediately if they release hazardous substances in excess of or equal to reportable quantities. Facilities with continuous and stable releases have limited notification requirements. If a facility produces, uses, or stores extremely hazardous chemicals, and has a reportable release of these substances, it must notify the community emergency coordinator or local planning committee, or Governor if there is no planning committee (40 CFR 302.1 through 302.6, 302.8, and 355.40).
- Emergency Planning - A facility with extremely hazardous substances in amounts equal to or greater than the limits found in Appendix 3-1 are required to notify the emergency response commission and designate a representative to participate in local emergency planning (40 CFR 355.10 through 355.30 and 355 Appendix A).
- Right-to-Know Requirements - Facilities required by OSHA to have an MSDS for a hazardous chemical are required to submit MSDSs to the emergency commission and fire department with jurisdiction over the facility. MSDSs will be updated within 3 mo after discovery of significant new information (40 CFR 370.20 through 370.28).
- Hazardous Materials Storage - Containers for hazardous chemicals are required to be labeled or tagged with the identity of the substance and appropriate warning markings. Areas where hazardous materials are stored or used around the facility are required to be kept free from accumulations of materials that create a hazard, such as leaking containers or the placement of containers in a manner that would create hazards such as tripping, fire, and pests. Substances that together can create a fire hazard must be separated. A qualified person is required to supervise use of poisons, acids, caustics, and toxic chemicals. Disposal procedures for surplus materials must prevent contamination of water supplies (29 CFR 1910.176(c), 1910.1200(b) and 1200(f); EM 385-1-1, para 09.E.08 and para 06.B.03).
- Hazardous Materials in Laboratories - Facilities that use hazardous chemicals in laboratories are required to have a Chemical Hygiene Plan which is reviewed annually. Such facilities must provide employees with information and training

about the hazardous chemicals in their work areas. Records about the exposure of employees are to be kept along with medical records (29 CFR 1910.1450(e), 1910.1450(f), 1910.1450(h), and 1910.1450(j)).

- **Storage of Flammable/Combustibles** - All tanks, containers, and pumping equipment, portable or stationary, used for the storage and handling of flammable and combustible liquids, are required to be listed by a nationally recognized laboratory for use in hazardous areas. Flammable and combustible liquids in quantities greater than those required for one day's use will not be stored in buildings under construction, and not more than two day's supply of such liquids will be stored on paint barges. Dispensing systems for flammable or combustible liquids are to be electrically bonded and grounded. Hoses, containers, and tanks of 5 gal [18.93 L] or less are to be kept in metallic contact during the transfer of flammable liquids. In general, containers of flammable/combustible liquids are to be stored and handled so as to not damage the container or label, block exits, or create a fire hazard (EM 385-1-1, para 09.B.10, 09.B.25; 29 CFR 1910.106(d)).
- **Flammable/Combustible Storage Cabinets** - No more than 25 gal [94.64 L] of flammable or combustible liquid can be stored in a room outside of an approved metal storage cabinet unless it is an approved flammable material storage room. Storage cabinets are to be fire resistant and labeled FLAMMABLE - KEEP FIRE AWAY. No more than 60 gal [227.12 L] of Class I or Class II liquids and no more than 120 gal [454.23 L] of Class III liquids can be stored in a cabinet (EM 385-1-1, para 09.B.16(a); 29 CFR 1910.106(d)(3)).
- **Flammable Combustible Storage Rooms** - Storage rooms inside a building are to be fire resistant and have a raised sill or ramp to prevent the flow of spilled material from exiting the room. Ventilation and clear aisles must be provided, and dispensing must be done by an approved pump or self-closing faucet (29 CFR 1910.106(d)(4)).
- **Flammable/Combustible Warehouses or Storage Buildings** - These structures will have 3 ft [0.91 m] wide aisles for access to doors, windows, or standpipe connections. Materials will be stacked using pallets or dunnage when needed for stabilization, and fire protection must be provided (29 CFR 1910.106(d)(5)(iv)).
- **Outside Storage of Flammable Combustible Liquids** - Containers of flammable/combustible liquids can be stored outside if no more than 1100 gal [4163.95 L] of liquid are stored adjacent to a building. More than 1100 gal [4163.95 L] can be stored if there are 10 ft [3.05 m] or more between buildings and the nearest flammable container. The storage area must either be graded to divert spill or surrounded by a curb (29 CFR 1910.106(d)(6)).

- **Storage of Flammable/Combustibles in Industrial Areas** - Specific guidelines, requirements, or operating standards apply wherever flammable/combustible materials are stored, dispensed, or used in industrial plants, are in incidental storage, or are used in unit operations. This includes availability of portable fire extinguishers, the practice of precautions to prevent ignition, and the use of maintenance and operating practices to control leakage and prevent accidental escape of flammable/combustible liquids (29 CFR 1910.106(e)(2) through 1910.106(e)(9)).
- **Flammable/Combustible Liquid Storage Tanks** - Storage tanks that hold flammable/combustible liquids must not be below ground or inside buildings. They are to be built of steel except in specific circumstances. Outside aboveground tanks for flammable liquids are to meet requirements for distance between tanks, firefighting access, and containment. When flammable vapor from storage tanks might be present, heat sources will be kept from the tanks. Tanks are required to have been strength-tested before use (29 CFR 1910.106(b)).
- **Compressed Gases** - When compressed gases are stored in roofed, open-sided sheds, the sheds are to be located on concrete slabs and in secured areas. When gases are stored in an enclosed storage facility, the building is to be no more than one story high with separate storage compartments available. Regardless of where the cylinders are stored, NO SMOKING signs will be posted and actions taken to prevent fire (29 CFR 1910.101; DODR 4145.19-1, para 5-405d(2), 5-405c; EM 385-1-1, para 20.D.03, para 20.D.08, para 20.D.05 through para 20.D.10, and para 20.D.15).
- **Acid Storage** - Bulk storage of acids must be done in buildings that are one story high and ventilated. Safety equipment and fire protection must be available. The building must be labeled NO SMOKING and heated to prevent freezing (DODR 4145.19-1, para, 5-406).
- **Hazardous Materials Transportation** - The regulations in Title 49, Subchapter C of the CFR details requirements for the transportation of hazardous materials. 49 CFR 171.1(c) stipulates that these requirements apply when materials are being transported in *commerce*. According to a representative from the DOT, *commerce* is defined, in this instance, in terms of making a profit; therefore, Subchapter C does not apply to Federal agencies.

F. Key Compliance Definitions

These definitions were obtained from the regulations previously cited in this section.

- *Aerosol* - a material dispensed from its container as a mist, spray, or foam by a propellant under pressure (29 CFR 1910.106(a)(1)).
- *Approved* - listed or approved by Underwriter's Laboratories, Inc., Factory Mutual Engineering Corporation, The Bureau of Mines, National Institute of Occupational Safety and Health (NIOSH), the American National Standards Institute (ANSI), the NFPA, or other nationally recognized agencies that list, approve, test, or develop specifications for equipment to meet fire protection, health, or safety requirements (29 CFR 1910.106(a)(35)).
- *Atmospheric Tank* - a storage tank designed to operate at pressures from atmospheric through 0.5 psig (29 CFR 1910.106(a)(2)).
- *Automotive Service Station* - that portion of property where flammable or combustible liquids used as motor fuels are stored and dispensed from fixed equipment into the fuel tanks of motor vehicles; it shall include any facilities available for the sale and service of tires, batteries, and accessories, and for minor automotive maintenance work. Major automotive repairs, painting, and body and fender work are excluded (29 CFR 1910.106(a)(3)).
- *Barrel* - a volume of 42 gal [0.16 m³] (29 CFR 1910.106(a)(33)).
- *Basement* - a story of a building or structure having one-half or more of its height below ground level and to which access for firefighting purposes is unduly restricted (29 CFR 1910.106(a)(4)).
- *Boiling Point* - the temperature at which a liquid starts to boil at atmospheric pressure (14.7 psia [760 mm]), as determined by the American Society for Testing Materials (ASTM) Test D-86-72) (29 CFR 1910.106(a)(5)).
- *Bulk Plant* - that portion of the property where flammable or combustible liquids are received by tank vessels, pipelines, tank cars, or tank vehicles, and are stored or blended in bulk for the purpose of distributing such liquids by tank vessel pipeline, car, tank vehicle, or container (29 CFR 1910.106(a)(7)).
- *Closed Container* - a container sealed with a lid or other closing device so that neither liquid and/or vapor will escape from it at ordinary temperatures (29 CFR 1910.106(a)(9)).

- **Combustible Liquid** - a liquid having a flashpoint at or above 100 °F (37.8 °C). Combustible liquids are categorized as Class II or Class III liquids and are further subdivided as follows (29 CFR 1910.106(a)(18)):
 1. Class II are liquids with a flashpoint at or above 100 °F (37.8 °C) and below 140 °F (60 °C), except for any mixture having components with flashpoints of 200 °F (93.3 °C) or higher, the total volume of which makes up 99 percent or more of the total volume of the mixture
 2. Class III A are liquids with a flashpoint at or above 140 °F (60 °C) and below 200 °F (93.3 °C), except for any mixture having components with flashpoints of 200 °F (93.3 °C) or higher, the total volume of which makes up 99 percent or more of the total volume of the mixture
 3. Class III B are liquids with a flashpoint at or above 200 °F (93.3 °C).
- **Extremely Hazardous Substances** - all substances listed in Appendices A and B in 40 CFR 355 (see the column labeled Extremely Hazardous Substances in Appendix 3-1) (40 CFR 355.20).
- **Fire Area** - that portion of a building separated from the remainder by construction having a rated fire resistance of at least 1 h and having all communicating openings properly protected by an assembly having a fire resistance rating of at least 2 h (29 CFR 1910.106(a)(12)).
- **Flammable Aerosol** - an aerosol that is required to be labeled FLAMMABLE under the *Federal Hazardous Substance Labeling Act* (15 USC 1261). These aerosols are considered Class IA liquids (29 CFR 1910.106(a)(19)).
- **Flammable Liquid** - a liquid with a flashpoint below 100 °F (37.8 °C), except any mixture having components with flashpoints of 100 °F (37.8 °C) or higher, the total of which makes up 99 percent or more of the total volume of the mixture. Flammable liquids are categorized as Class I liquids and are further subdivided as follows (29 CFR 1910.106(a)(19)):
 1. Class I A are liquids with a flashpoint below 73 °F (22.8 °C) and boiling point below 100 °F (37.8 °C)
 2. Class I B are liquids with a flashpoint below 73 °F (22.8 °C) and boiling point at or above 100 °F (37.8 °C)
 3. Class I C are liquids with a flashpoint at or above 73 °F (22.8 °C) and below 100 °F (37.8 °C).
- **Flashpoint** - the minimum temperature at which a liquid gives off vapor in sufficient concentration to form an ignitable mixture with air near the surface of the liquid. Flashpoints are established using several standard closed cup test methods (29 CFR 1910.106(a)(14)).
- **Good Management Practice (GMP)** - practices that, although not mandated by law, are encouraged to promote safe operating procedures.

- *Hazardous Chemical* - in relationship to laboratories, a chemical for which there is statistically significant evidence, based on at least one study conducted in accordance with established scientific principles, that acute or chronic health effects may occur in exposed employees (29 CFR 1910.1450(b)).
- *Hazardous Substance* - any substance designated pursuant to 40 CFR 302 (see the column titled Hazardous Substance RQ in Appendix 3-1) (40 CFR 302.3).
- *Institutional Occupancy* - the occupancy or use of a building or structure, or any portion thereof, by persons harbored or detained to receive medical, charitable, other care or treatment, or by persons involuntarily detained (29 CFR 1910.106(a)(16)).
- *Laboratory* - a facility where the laboratory use of hazardous chemicals occurs. It is a workplace where relatively small quantities of hazardous chemicals are used on a nonproduction basis (29 CFR 1910.1450(b)).
- *Laboratory Scale* - work with substances in which the containers used for reactions, transfers, and other handling of substances are designed to be easily and safely manipulated by one person (29 CFR 1910.1450(b)).
- *Laboratory Use of a Hazardous Chemical* - handling or use of such chemicals in which all of the following conditions are met (29 CFR 1910.1450(b)):
 1. chemical manipulations are carried out on a laboratory scale
 2. multiple chemical procedures or chemicals are used
 3. the procedures involved are not part of a production process, nor in any way simulate a production process
 4. protective laboratory practices and equipment are available and in common use to minimize the potential for employee exposure to hazardous chemicals.
- *Liquid* - any material with a fluidity greater than that of 300 penetration asphalt when tested in accordance with ASTM Test D-5-73. When not otherwise identified, the term *liquid* will include both flammable and combustible liquid (29 CFR 1910.106(a)(17)).
- *Low Pressure Tank* - a storage tank designed to operate at pressures above 0.5 psig but not more than 15 psig (29 CFR 1910.106(a)(21)).
- *Material Safety Data Sheet (MSDS)* - written or printed material which contains information on hazardous chemicals such as common name, physical hazards, and health hazards (29 CFR 1200(c)).

- *Office Occupancy* - the occupancy or use of a building or structure, or any portion thereof, for the transaction of business or the rendering or receiving of professional services (29 CFR 1910.106(a)(24)).
- *Portable Tank* - a closed container with a liquid capacity over 60 gal [227.12 L] and not intended for fixed installation (29 CFR 1910.106(a)(25)).
- *Pressure Vessel* - a storage tank or container designed to operate at pressures above 15 psig (29 CFR 1910.106(a)(29)).
- *Protection for Exposure* - adequate fire protection for structures on property adjacent to tanks where employees of the establishment are located (29 CFR 1910.106(a)(27)).
- *Safety Can* - an approved flammable liquid container with a spring-closing lid, spout cover, and other features designed to safely relieve internal pressure and provide safe storage for the liquid (29 CFR 1910.106(a)(29)).
- *Select Carcinogen* - any substance that meets one of the following criteria (29 CFR 1910.1450(b)):
 1. regulated by *OSHA* as a carcinogen
 2. listed under the category "known to be carcinogens" and in the *Annual Report on Carcinogens* published by the National Toxicology Program (NTP)
 3. listed under Group 1 (carcinogenic to humans) by the International Agency for Research on Cancer Monographs (IARC)
 4. listed in either Group 2A or 2B by IARC or under the category "reasonably anticipated to be carcinogens" by the NTP, and causes statistically significant tumor incidences in experimental animals under specific situations.
- *Toxic Chemical* - a chemical or chemical category listed in 40 CFR 372.65 (see the column titled Toxic Chemicals in Appendix 3-1) (40 CFR 372.3).
- *Vapor Pressure* - the pressure, measured in pounds per square inch absolute (psia) exerted by a volatile liquid (29 CFR 1910.106(a)(30)).

Appendix 3-1

Consolidated List of Chemicals Covered in Title III of Superfund Amendments and Reauthorization Act (SARA)

This consolidated chemical list includes chemicals subject to reporting requirements under Title III of SARA of 1986. This consolidated chemical list does not contain all chemicals that are subject to reporting requirements in Section 311 and 312 of SARA Title III. These hazardous chemicals, for which MSDSs must be developed under *OSHA Hazard Communication Standards*, are identified by broad criteria, rather than enumeration. There are over 50,000 such substances that meet the criteria. The consolidated list has been prepared to help determine whether there is a need to submit reports under Section 304 or 313 of Title III and, for a specific chemical, which reports need to be submitted.

The list includes chemicals referenced under the four following Federal statutory provisions:

1. SARA Section 302, Extremely Hazardous Substances - The presence of which, in sufficient quantities, requires certain emergency planning activities to be conducted. Releases of these substances are also subject to reporting under Section 304 of Title III. The final rule listing the extremely hazardous substances and their TPQs, is found in 40 CFR 355.
2. CERCLA Hazardous Substances Chemicals - Releases of which are subject to reporting under the *Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA or Superfund)* of 1980. Such releases are also subject to reporting under Section 304 of Title III. CERCLA hazardous substances, and their reportable quantities (RQs), are listed in 40 CFR Part 302, Table 302.4.
3. SARA Section 313 Toxic Chemicals - Emissions or releases of which must be reported annually as part of SARA Title III's community right-to-know provisions. A list of these toxic chemicals is found in 40 CFR 372.65.
4. RCRA Hazardous Wastes - from the "P" and "U" lists (40 CFR 261.33) of specific chemicals. RCRA hazardous wastes from the "F" and "K" lists are not included here; such waste streams are also CERCLA hazardous substances. This listing is provided as an indicator that you may already have data on a specific chemical that can be used for Title III reporting purposes.

There are four columns in the consolidated list corresponding to these four statutory provisions. If a chemical is listed as an extremely hazardous substance under Section 302, its TPQ is given in the extremely hazardous substance column. Similarly, the CERCLA RQ is given for those chemicals that are listed as hazardous substances. A key to the symbols used in the Section 302 and CERCLA columns precedes the list. An "X" in the column for Section 313 indicates that the chemical is subject to reporting under Section 313.

The letter-and-digit code in the column for 40 CFR 261.33 is the chemical's RCRA hazardous waste code. A blank in any of these columns indicates that the chemical is not subject to the corresponding statutory authorities.

The Chemical Abstract Service (CAS) registry number is provided for each chemical on the list.

Appendix 3-1 (continued)

Key to Symbols in the Consolidated Chemical List

- # - Indicates that the RQ is subject to change when an assessment of potential carcinogenicity and/or chronic toxicity is completed; until then, the statutory RQ applies.
- ## - Indicates that an adjusted RQ has been proposed, though a final judgment has not been made.
- + - EPA has proposed to adjust the RQ for radionuclides by establishing RQs in units of curies; until then, the 1-lb RQ applies.
- * - Indicates that the chemical is proposed for deletion from the list of extremely hazardous substances.
- ** - Indicates that no RQ is assigned to this generic or broad class.

Appendix 3-1 (continued)

SARA TITLE III CONSOLIDATED CHEMICAL LIST

This is an alphabetical listing of the consolidated list of chemicals.
Numbered chemicals are listed first.

Chemical Name	Extremely Haz Sub 40 CFR 355 (lb)	Haz Sub RQ 40 CFR 302.4 (lb)	Toxic Chemicals 40 CFR 372.65(a)	Haz Mat which are RCRA wastes	CAS No.

Appendix 3-3

Storage in Inside Rooms

(29 CFR 1910.106(d)(4), Table H-13)

<i>Fire Protection¹ Provided</i>	<i>Fire Resistance</i>	<i>Maximum Size</i>	<i>Total Allowable Quantities² (gal/ft² floor area)</i>
Yes	2 h	500 ft ² [46.45 m ²]	10 [37.85 L]
No	2 h	500 ft ² [46.45 m ²]	4 [15.14 L]
Yes	1 h	150 ft ² [13.94 m ²]	5 [18.93 L]
No	1 h	150 ft ² [13.94 m ²]	2 [7.57 L]

-
- ¹ Fire protection system will be sprinkler, water spray, or other approved method.
² If metric containers are being stored, use the nearest metric equivalent.

Appendix 3-4

Flammable/Combustible Materials

(29 CFR 1910.106(d)(5) and 1910.106(d)(6), Tables H-14 through H-17)

Indoor Container Storage

Class Liquid	Storage Level	Protected Storage (Maximum per Pile)	Unprotected Storage (Minimum per Pile)
A	Ground and upper floors	2750 gal [10,409.88 L] (50)	600 gal [2271.25 L] (12)
	Basement	Not permitted	Not permitted
B	Ground and upper floors	5500 gal [20,819.77 L] (100)	1375 gal [5204.94 L] (25)
	Basement	Not permitted	Not permitted
C	Ground and upper floors	16,500 gal [62,459.30 L] (300)	4125 gal [15,614.82 L] (25)
	Basement	Not permitted	Not permitted
II	Ground and upper floors	16,500 gal [62,549.30 L] (300)	4125 [15,614.82 L] (75)
	Basement	5500 gal [20,819.77 L] (100)	Not permitted
II*	Ground and upper floors	55,000 gal [20,8197.66 L] (1000)	13,750 gal [52,049.42 L] (250)
	Basement	8250 gal [31,229.65] (450)	Not permitted

Numbers in parentheses indicate corresponding number of 55-gal [208.20 L] drums.

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gal-lonage permitted in that pile will be the smallest of the two or more separate maximum gal-lonages.

NOTE 2: Aisles will be provided so that no container is more than 12 ft [3.66 m] from an aisle. Main aisles will be at least 8 ft [2.44 m] wide and side aisles at least 4 ft [1.22 m] wide. (Numbers in parentheses indicate corresponding number of 55-gal [208.20 L] drums.)

NOTE 3: Each pile shall be separated from the others by at least 4 ft [1.22 m].

Outdoor Container Storage

Class	Maximum per pile (gal) [L]	Distance be- tween piles (ft) [m]	Distance to property line that can be developed (ft) [m]	Distance to street, alley or public way (ft) [m]
IA	1100 [4163.95]	5 [1.52]	20 [6.10]	10 [3.05]
IB	2200 [8327.91]	5 [1.52]	20 [6.10]	10 [3.05]
IC	4400 [44,003.79]	5 [1.52]	20 [6.10]	10 [3.05]
II	8800 [33,311.63]	5 [1.52]	10 [3.05]	5 [1.52]
III	22,000 [83,279.06]	5 [1.52]	10 [3.05]	5 [1.52]

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate gallonages.

NOTE 2: Within 200 ft [60.96 m] of each container, there will be a 12 ft [3.66 m] wide accessway to allow approach of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures, and such protection for exposures does not exist, the distances in column 3 will be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not less than 3 ft [0.91 m].

Indoor Portable Tank Storage

Class Liquid	Storage Level	Protected Storage (Maximum per Pile) (gal) [L]	Unprotected Storage (Minimum per Pile) (gal) [L]
IA	Ground and upper floors Basement	Not permitted Not permitted	Not permitted Not permitted
IB	Ground and upper floors Basement	20,000 [75,708.24] Not permitted	2000 [7570.82] Not permitted
IC	Ground and upper floors Basement	40,000 [151,420.48] Not permitted	5500 [20,820.32] Not permitted
II	Ground and upper floors Basement	40,000 [151,420.48] 20,000 [75708.24]	5500 [20,820.32] Not permitted
III	Ground and upper floors Basement	60,000[227,124.72} 20,000 [75,708.24]	22,000 [83,279.06] Not permitted

NOTE 1: When one or more classes of materials are stored in a single pile, the maximum gal-
lonage permitted in that pile will be the smallest of the two or more separate maximum gal-
lonages.

NOTE 2: Aisles will be provided so that no container is more than 12 ft [3.66 m] from an aisle.
Main aisles will be at least 8 ft [2.44 m] wide and side aisles at least 4 ft [1.22 m] wide.

NOTE 3: Each pile shall be separated from each other by at least 4 ft [1.22 m].

Outdoor Portable Tank Storage

Class	Maximum per pile (gal) [L]	Distance between piles (ft) [m]	Distance to property line that can be developed (ft) [m]	Distance to street, alley public way (ft) [m]
IA	2200 [8327.95]	5 [1.52]	20 [6.10]	10 [3.05]
IB	4400 [44,003.79]	5 [1.52]	20 [6.10]	10 [3.05]
IC	8800 [33,311.63]	5 [1.52]	20 [6.10]	10 [3.05]
II	17,600 [66,623.25]	5 [1.52]	10 [3.05]	5 [1.52]
III	44,000 [166,558.12]	5 [1.52]	10 [3.05]	5 [1.52]

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate gallonages.

NOTE 2: Within 200 ft [60.96 m] of each container, there will be a 12 ft [3.66 m] wide accessway to allow approach of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures, and such protection for exposures does not exist, the distances in column 3 will be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not less than 3 ft [0.91 m].

Appendix 3-5

Potentially Incompatible Hazardous Materials

*(Law, Regulations, and Guidelines for Handling of Hazardous Waste, California Department of Health, February 1975
(40 CFR 264, Appendix V))*

Below are examples of potentially incompatible wastes, waste components, and materials, along with the harmful consequences that result from mixing materials in one group with materials in another group. The list is intended as a guide to indicate the need for special precautions when managing these potentially incompatible waste materials or components. This list is not intended to be exhaustive. Operators must, as the regulations require, adequately analyze their wastes to avoid creating uncontrolled substances or reactions of the type listed below, whether listed below or not.

In the lists below, the mixing of a *Group A* material with a *Group B* material may have the potential consequences as noted.

Group 1-A	Group 1-B
Acetylene sludge Alkaline caustic liquids Alkaline cleaner Alkaline corrosive liquids Alkaline corrosive battery acid Caustic wastewater Lime sludge and other corrosive alkalies Lime wastewater Lime and water Spent caustic	Acid sludge Acid and water Battery acid Chemical cleaners Electrolyte, acid Etching acid liquid or solvent Pickling liquor and other corrosive acids Spent acid Spent mixed acid Spent sulfuric acid

Potential Consequences: Heat generation, violent reaction.

Appendix 3-5 (continued)

Group 2-A	Group 2-B
Aluminum Beryllium Calcium Lithium Magnesium Potassium Sodium Zinc powder Other reactive metals and metal hydrides	Any waste in Group 1-A or 1-B

Potential Consequences: Fire or explosion, generation of flammable hydrogen gas.

Group 3-A	Group 3-B
Alcohols Water	Any concentrated waste in Groups 1-A or 1-B Calcium Lithium Metal hydrides Potassium SO_2Cl_2 , SOCl_2 , PCl_3 , CH_3SiCl_3 Other water-reactive waste

Potential Consequences: Fire, explosion, or heat generation; generation of flammable or toxic gases.

Group 4-A	Group-4-b
Alcohols Aldehydes Halogenated hydrocarbons Nitrated hydrocarbons Unsaturated hydrocarbons Other reactive organic compounds and solvents	Concentrated Group 1-A or Group 1-B wastes Group 2-A wastes

Potential Consequences: Fire or explosion, violent reaction.

Appendix 3-5 (continued)

Group 5-A	Group 5-B
Spent cyanide and sulfide solutions	Group 1-B wastes

Potential Consequences: Generation of toxic hydrogen cyanide or hydrogen sulfide gas.

Group 6-A	Group 6-B
Chlorates Chlorine Chlorites Chromic acid Hypochlorites Nitrates Nitric acid, fuming Perchlorates Permanganates Peroxides Other strong oxidizers	Acetic acid and other organic acids Concentrated mineral acids Group 2-A wastes Group 4-A wastes Other flammable and combustible wastes

Potential Consequences: Fire, explosion, or violent reaction.

Appendix 3-6

Placarding Guidelines

The following table specifies placards that should be used for the transportation of *any quantity* of the listed hazardous material.

Hazardous Materials

<i>Classed or Described As</i>	<i>Placards</i>
Class A Explosives	EXPLOSIVES A
Class B Explosives	EXPLOSIVES B
Poison A	POISON GAS
Flammable Solid	FLAMMABLE SOLID

(NOTE: Any of the above substances that are dangerous when wet should also have the placard: DANGEROUS WHEN WET, along with their primary placard.)

The following table specifies placards that should be used for the transportation of 1000 lb [453.59 kg] or more of the listed hazardous materials.

Hazardous Materials

<i>Classed or Described As</i>	<i>Placards</i>
Class C Explosives	FLAMMABLE
Nonflammable Gas	NONFLAMMABLE GAS
Nonflammable Gas (Chlorine)	CHLORINE
Nonflammable Gas (Fluorine)	POISON
Nonflammable Gas (Oxygen, pressurized liquid)	OXYGEN
Flammable Gas	FLAMMABLE GAS
Combustible Liquid	COMBUSTIBLE
Flammable Liquid	FLAMMABLE
Flammable Solid	FLAMMABLE SOLID
Oxidizer	OXIDIZER
Organic Peroxide	ORGANIC PEROXIDE
Poison B	POISON
Corrosive Material	CORROSIVE
Irritating Material	DANGEROUS

Appendix 3-6 (continued)

1. Placards should be affixed on both sides, rear, and front of the motor vehicle.
2. Place placards clear of ladders, pipes, and tarps.
3. Placards should be at least 3 in. [7.62 cm] away from advertising and markings.
4. The DANGEROUS placards may be used when a motor vehicle contains two or more classes of hazardous materials requiring different placards. The DANGEROUS placard may be used in place of the separate placards for each class.
5. Portable tanks having a rated capacity of 1000 gal [3785.412 L] or more must be placarded.
6. Cargo tanks having any quantity of hazardous material must be placarded.

Section 4

Hazardous Waste Management

SECTION 4

HAZARDOUS WASTE MANAGEMENT

A. Applicability

This section applies to U.S. Army Corps of Engineers (USACE) facilities that generate, store, transport, treat, or dispose of any type of hazardous waste. Federal regulations establish different regulatory requirements based on the amount of hazardous waste generated.

This section and its associated evaluation checklists are more complex than other sections in this volume. Not all evaluation items will be applicable to a facility. Guidance is provided on the checklists to direct the evaluator to the regulations concerning the type of hazardous waste activities/facilities on the facility.

B. Federal Legislation

- *The Resource Conservation and Recovery Act (RCRA), Subtitle C*, as amended. This law, Public Law (PL) 98-616 (42 U.S. Code (USC) 6921-6939b) establishes standards and procedures for the handling, storage, treatment, and disposal of hazardous waste. Specifically, *RCRA* prohibits the placement of bulk or noncontainerized hazardous waste or free liquids containing hazardous waste into a landfill. It also prohibits the land disposal of specified wastes and disposal of hazardous waste through underground injection within 1/4 mi [0.40 km] of an underground source of drinking water.
- *The Federal Facilities Compliance Act (FFCA) of 1992*. This act provides for a waiver of sovereign immunity with respect to Federal, state, and local procedural and substantive requirements relating to the *RCRA* solid and hazardous waste laws and regulations. Additionally, it defines hazardous waste in relation to public vessels, expands the definition of mixed waste, addresses the issue of munitions, and discusses waste discharges to Federally owned treatment works (FOTWs).

C. State/Local Regulations

Many states have met the U.S. Environmental Protection Agency (USEPA) requirements in 40 CFR 271 and have been authorized to manage their own state programs. The *RCRA* encourages states to develop their own hazardous waste statutes and to operate regulatory programs. Many states have adopted the USEPA regulations by reference or have promulgated regulations that are

identical to the USEPA regulations, while other states have promulgated stricter regulations than the Federal RCRA. These differences between individual state regulations and the Federal program require that evaluators check the status of the state's authorization and then determine which regulations apply. Since the section worksheets are based exclusively on the requirements of the Federal RCRA/USEPA program, it is necessary to determine in what ways the applicable state program differs from the RCRA/USEPA program.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- ER 385-1-92, *Safety and Occupational Health Document Requirements for Hazardous, Toxic, and Radioactive Waste (HTRW) Activities*. This regulation identifies the safety and occupational health documents and procedures required to be developed and implemented by USACE elements and their contractors responsible for executing HTRW activities.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve these objectives.

E. Key Compliance Requirements

- Generator Requirements - Responsibilities of Corps facilities are based on the amount of waste being generated in 1 mo. Typical wastes include solvents, paint, contaminated antifreeze or oil, and sludges. In some states, waste oil and other substances have been classified as a hazardous waste and therefore need to be included in the total amount of waste being generated. Within Federal regulations there are three classifications:
 1. A Conditionally Exempt Small Quantity Generator (CESQG) produces no more than 100 kg [220.46 lb] of hazardous waste or 1 kg [2.20 lb] of acutely hazardous waste in a 1 mo time period. They also do not accumulate onsite more than 1000 kg [2204.62 lb] of waste at any one time. When either the volume of waste produced in 1 mo exceeds 100 kg [220.46 lb] or more than 1000 kg [2204.62 lb] of waste has accumulated onsite, the facility is required to comply with the more stringent standards applicable to a Small Quantity Generator (SQG).
 2. An SQG produces between 100 [220.46 lb] and 1000 kg [2204.62 lb] of hazardous waste in a month. The waste cannot accumulate onsite for more than 180 days unless the waste is transported more than 200 mi

[321.87 km] to a treatment, storage, and disposal facility (TSDF). In that situation, the waste can accumulate for 270 days. But at no time is there to be more than 6000 kg [13,227.73 lb] of waste accumulated at the facility. When the volume of waste generated in 1 mo exceeds 1000 kg [2204.62 lb], the accumulation time onsite is exceeded, or more than 6000 kg [13,227.73 lb] of waste is onsite, the facility is required to comply with the standards for a Generator.

3. A Generator produces more than 1000 kg [2204.62 lb] of hazardous waste in a month.

(NOTE: Using water, which weighs approximately 8 lb/gal [3.63 kg/gal] as a basis of measurement, 100 kg [220.46 lb] would equal about 28 gal [105.99 L] [one-half of a 55-gal [208.20-L] drum], and 1000 kg [2204.62 lb] would equal about 273 gal [1036.15 L] (almost five, 55-gal [208.20-L] drums).)

Whether the facility is a CESQG, an SQG, or a Generator determines the type of records the facility is required to keep and design standards for storage areas. Small storage areas connected to generation points are often referred to as accumulation points.

Regardless of the amount of hazardous waste generated, every Corps facility is required to test or use prior knowledge of its solid waste to determine if it has hazardous characteristics. Every Corps facility must also store and/or accumulate hazardous waste in undamaged containers that are compatible with the waste and labeled to indicate their contents.

Comparison of RCRA Generator Requirements

Requirement	CESQG	SQG	Generator
Identify HW	Yes	Yes	Yes
Quantity Limits	<or= 100 kg/mo [220.46 lb/mo]	100 - 1000 kg/mo [220.46 - 2204.62 lb/mo]	>1000 kg/mo [2204.62 lb/mo]
Acute Waste Limits	<or= 1 kg/mo [2.20 lb/mo]	None	None
Management of Waste	State-approved or RCRA-permitted	RCRA-permitted facility	RCRA-permitted facility
USEPA ID No.	Not Required	Required	Required
RCRA Personnel Training	Not Required	Basic Training Required	Required
DOT Training	Required	Required	Required
Exception Report	Not Required	Required > 60 days	Required > 45 days
Biennial Report	Not Required	Required	Required
Onsite Accumulation Limits (without permit)	<or= 1000 kg [2204.62 lb]	<or= 6000kg [13227.73 lb]	Any quantity
Accumulation Time Limits (without permit)	None	<or= 180 days or <or= 270 days (> 200 mi [321.87 km])	<or= 90 days + 30 days granted by the USEPA
Storage Requirements	None	Basic requirements with technical standards for containers or tanks	Full compliance with management of containers or tanks
Use Manifests	Yes	Yes	Yes

- Transport Requirements - Containers of hazardous waste shipped offsite must be labeled to identify the waste and its hazard class.
- Accumulation Point Management - An accumulation point is an area in or near the workplace where hazardous waste is accumulated or stored before being turned in for disposal. Storage in these areas is temporary and the permissible length of time for accumulation depends on the size of generator the facility is.
- Satellite Accumulation Point Management - A satellite accumulation point is an area in which no more than 55 gal [208.20 L] of a hazardous waste or 1 qt [0.95 L] of acute hazardous waste is accumulated at or near the point of generation. The satellite accumulation point is under the control of one operator. When the 55-gal [208.20-L] limit is reached, the operator has 3 days to move the waste to a 90-day storage area or a permitted TSDF.

- **Permitted TSDF Requirements** - The operation of a TSDF is subject to regulation and permitting under Federal and state regulations. These regulations are both administrative as well as technical in nature. The administrative standards require that various plans be developed to ensure that emergencies can be dealt with, waste received is properly identified, and operating personnel are adequately trained to operate the facility and respond to emergencies. These administrative standards also include requirements that the facility be inspected routinely, records of operations are compiled and maintained, and reports of both routine and contingency operations are made to the applicable regulatory agency. The administrative standards also require that a plan for ceasing operations and closing the facility be developed, kept on-hand, and updated frequently.

The technical standards which are applicable to TSDFs fall into two classes: general standards which apply to all TSDFs and specific standards which apply to various types of facilities; specifically, container storage areas, tanks, containment buildings, surface impoundments, waste piles, land treatment facilities, incinerators, landfills, thermal treatment facilities, and chemical, physical, and biological treatment facilities.

Administrative and technical facility standards are applied to a particular facility through a *RCRA* permit issued to a facility. Existing facilities which have applied for a permit but not yet been issued a *RCRA* permit are considered to be in interim status if they applied for a part A and part B permit and can continue to operate if they comply with the *RCRA* mandated Interim Status Standards (ISS) of 40 CFR 265 (Interim status standards for owners and operators of hazardous waste TSDFs).

F. Key Compliance Definitions

These definitions were obtained from the regulations previously cited in this section.

- ***Aboveground Tank*** - a device that meets the definition of a tank in 40 CFR 260.10 and that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface, and the entire surface area of the tank (including the bottom) can be visually inspected (40 CFR 260.10).
- ***Active Life*** - the period from the initial receipt of hazardous waste at the facility until the Regional Administrator receives certification of final closure (40 CFR 260.10).

- *Active Portion* - that portion of a facility where treatment, storage, or disposal operations are being, or have been, conducted and which is not a *closed portion* (40 CFR 260.10).
- *Acute Hazardous Waste* - any waste listed under 40 CFR 261.31 through 261.33(c) with a hazard code of *H*. These include USEPA hazardous waste numbers F020, F021, F022, F023, F026, and F027 (40 CFR 261.31 through 261.33).
- *Ancillary Equipment* - any device including, but not limited to piping, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of hazardous waste from its point of generation to a storage or treatment tank(s), between hazardous waste storage and treatment tanks to a point of disposal onsite or point of shipment offsite (40 CFR 260.10).
- *Aquifer* - a geologic formation, group of formations, or part of a formation capable of yielding a significant amount of groundwater to wells or springs (40 CFR 260.10).
- *Boiler* - an enclosed device using controlled flame combustion and having the following characteristics (40 CFR 260.10):
 1. physical provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases
 2. the combustion chamber and primary energy recovery section(s) must be of integral design
 3. maintains a thermal energy recovery efficiency of at least 60 percent while in operation
 4. has been approved by the Administrator.
- *Certification* - a statement of professional opinion based upon knowledge and belief (40 CFR 260.10).
- *Characteristics of Hazardous Waste* - the characteristics of ignitability, corrosivity, reactivity, and toxicity that identify hazardous waste (40 CFR 261.20 through 261.24).
- *Closed Portion* - the portion of a facility that has been closed in accordance with the approved closure plan and all applicable closure requirements (40 CFR 260.10).
- *Component* - refers to either the tank itself or the ancillary equipment of the tank system (40 CFR 260.10).
- *Consignee* - the ultimate TSDF in a receiving country to which the hazardous waste will be sent (40 CFR 262.51).

- *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled (40 CFR 260.10).
- *Containment Building* - a hazardous waste management unit that is used to store or treat hazardous waste under 40 CFR 264.1100 through 264.1103 and 265.1100 through 1103 (40 CFR 260.10).
- *Contingency Plan* - a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents that could threaten human health or the environment (40 CFR 260.10).
- *Corrective Action Management Unit (CAMU)* - an area within a facility that is designated by the Regional Administrator under part 264 subpart S, for the purpose of implementing corrective action requirements under 264.101 and RCRA section 3008(h). A CAMU shall only be used for the management of remediation wastes pursuant to implementing such corrective action requirements at the facility (40 CFR 264.10).
- *Corrosion Expert* - a person who, by reason of knowledge of the physical sciences and the principles of engineering and mathematics, acquired by a professional education and related practical experiences, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be certified by the National Association of Corrosion Engineers (NACE) or be a registered professional engineer who has certification and licensing that includes education and experience in corrosion control and/or buried or submerged metal piping systems or tanks (40 CFR 260.10).
- *Designated Facility* - a hazardous waste TSDF that is identified on a manifest as the destination of a hazardous waste shipment. The facility must have an appropriate permit or interim status, or be regulated under specific recycling requirements (40 CFR 260.10).
- *Dike* - an embankment or ridge of either natural or manmade materials used to prevent the movement of liquids, sludges, solids, or other materials (40 CFR 260.10).
- *Discharge or Hazardous Waste Discharge* - the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water (40 CFR 260.10).

- *Disposal* - the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste, or any constituent thereof, may enter the environment, be emitted into the air, or discharged into any waters, including groundwaters (40 CFR 260.10).
- *Elementary Neutralization Unit* - a device used for neutralizing only those hazardous wastes that exhibit corrosivity (as defined in 40 CFR 261.22), or are listed in Subpart D of 40 CFR 261 only because of corrosivity, and meet the definition of *tank*, *tank system container*, *transport vehicle*, or *vessel* in 40 CFR 261.10 (40 CFR 260.10).
- *EPA Acknowledgement of Consent* - the cable sent to the USEPA from the U.S. Embassy in a receiving country that acknowledges the written consent of the receiving country to accept the hazardous waste and describes the terms and conditions of the receiving country's consent to the shipment (40 CFR 262.51).
- *EPA Hazardous Waste Number* - the number assigned by the USEPA to each hazardous waste listed in 40 CFR 261, Subpart D and to each characteristic identified in 40 CFR 261, Subpart C (40 CFR 260.10).
- *EPA Identification Number* - the number assigned by the USEPA to each generator, transporter, and TSDF (40 CFR 260.10).
- *Existing Hazardous Waste Management (HWM) Facility or Existing Facility* - a facility that was in operation, or for which construction commenced, on or before 19 November 1980 (40 CFR 260.10).
- *Existing Portion* - the land surface area of an existing waste management unit, included in the original Part A permit application, on which wastes have been placed before the issuance of a permit (40 CFR 260.10).
- *Existing Tank System or Existing Component* - a tank system or component that is used for the storage or treatment of hazardous waste and that is in operation, or for which installation has commenced, on or before 14 July 1986. Installations are considered to be commenced if the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system and if either (40 CFR 260.20):
 1. a continuous onsite physical construction of the site or installation program has begun
 2. the owner or operator has entered into contractual obligations that cannot be canceled or modified without substantial loss for physical construction of the site or installation of the tank system to be completed within a reasonable time.

- *Facility* - all contiguous land and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combination of them) (40 CFR 260.10).
- *Final Closure* - the closure of all hazardous waste management units at the facility in accordance with all applicable closure requirements so that hazardous waste management activities under 40 CFR 264 and 265 are no longer conducted at the facility unless subject to the provisions of 262.34 (40 CFR 260.10).
- *Food-Chain Crops* - tobacco, crops grown for human consumption, and crops grown for feeding animals whose byproducts are consumed by humans (40 CFR 260.10).
- *Free Liquids* - liquids that readily separate from the solid portion of a waste under ambient temperature and pressure (40 CFR 260.10).
- *Freeboard* - the vertical distance between the top of a tank or surface impoundment dike and the surface of the waste contained within it (40 CFR 260.10).
- *Generator* - any person, by site, whose act or process produces hazardous waste identified or listed in 40 CFR 261, or whose act first causes a hazardous waste to become subject to regulation (40 CFR 260.10). (NOTE: This typically refers to an installation producing hazardous waste in quantities greater than 1000 kg/mo [2204.62 lb/mo].)
- *Good Management Practice (GMP)* - schedules of activities, prohibitions of practices, maintenance procedures, and other management procedures designed to prevent or reduce hazards to the environment.
- *Groundwater* - water below the land surface in a zone of saturation (40 CFR 260.10).
- *Halogenated Organic Compounds (HOC)* - those compounds having a carbon-halogen bond (40 CFR 268.2).
- *Hazardous Waste* - a solid waste identified as a characteristic or listed hazardous waste in 40 CFR 261.3 (40 CFR 260.10).
- *Hazardous Waste Constituent* - a constituent that causes a hazardous waste to be listed in 40 CFR 261, Subpart D (lists of hazardous wastes from nonspecific

and specific sources, and listed hazardous wastes), or a constituent listed in the table of maximum concentrations of contaminants for the toxicity characteristic (40 CFR 260.10).

- *Hazardous Waste Management Unit* - a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area. Examples are a surface impoundment, waste pile, treatment area, landfill cell, incinerator, tank and its associated piping and underlying containment system, and container storage area. A container alone does not constitute a unit; the unit includes containers and the land or pad upon which they are placed (40 CFR 260.10).
- *HTRW Activities* - those activities undertaken for the USEPA Superfund program, Defense Environmental Restoration Program (DERP), Formerly Used Defense Sites (FUDS), and Installation Restoration Program (IRP) sites at active DOD facilities, HTRW actions associated with Civil Works projects, and any other mission or nonmission work performed at HTRW sites.
- *Incinerator* - an enclosed device using controlled flame combustion that neither meets the criteria for classification as a boiler nor is listed as an industrial furnace (40 CFR 260.10).
- *Incompatible Waste* - a hazardous waste that is unsuitable for (40 CFR 260.10):
 1. placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., container liners or tank walls)
 2. co-mingling with another waste or material under uncontrolled conditions because the co-mingling conditions produce heat or pressure, fire or explosion, violent reaction, toxic dusts, mists, fumes, gases, or flammable fumes or gases.
- *Individual Generation Site* - the contiguous site at or on which one or more hazardous wastes are generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste, but is considered a single or individual generation site if the site or property is contiguous (40 CFR 260.10).
- *Industrial Furnace* - any of the following enclosed devices that are integral components of manufacturing processes and that use controlled flame devices to accomplish recovery of materials or energy: cement kilns; lime kilns; aggregate kilns; phosphate kilns; coke ovens; blast furnaces; smelting, melting and refining furnaces; titanium dioxide chloride process oxidation reactors; methane reforming furnaces; pulping liquor recovery furnaces; combustion devices used in the recovery of sulfur values from spent sulfuric acid; halogen acid furnaces; and other devices designated by the Administrator (40 CFR 260.10).

- *Inground Tank* - a device meeting the definition of *tank* in 40 CFR 260.10 whereby a portion of the tank is situated to any degree within the ground, thereby preventing visual inspection of that external surface area of the tank that is in the ground (40 CFR 260.10).
- *Injection well* - a well into which fluids are injected (40 CFR 260.10).
- *Inner Liner* - a continuous layer of material, placed inside a tank or container, that protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste (40 CFR 260.10).
- *Installation Inspector* - a person who, by means of his/her knowledge of the physical sciences and the principles of engineering, acquired by a professional education and related practical experience, is qualified to supervise the installation of tank systems (40 CFR 260.10).
- *International Shipment* - the transportation of hazardous waste into or out of the jurisdiction of the United States (40 CFR 260.10).
- *Land Disposal* - includes, but is not limited to, any placement of hazardous waste in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt dome formation, underground mine, or cave, or placement in a concrete vault or bunker intended for disposal purposes (40 CFR 268.2).
- *Land Treatment Facility* - a facility or part of a facility at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure (40 CFR 260.10).
- *Landfill* - a disposal facility or part of a facility where hazardous waste is placed in or on land and which is not a land treatment facility, a surface impoundment, an underground injection well, a salt bed formation, an underground mine, or a cave (40 CFR 260.10).
- *Landfill Cell* - a discrete volume of a hazardous waste landfill that uses a liner to provide isolation of wastes from adjacent cells or wastes (e.g., trenches and pits) (40 CFR 260.10).
- *Large Quantity Generator* - see *Generator*.
- *Leachate* - any liquid, including any suspended components in the liquid, that has percolated through or drained from hazardous waste (40 CFR 260.10).
- *Leak Detection System* - a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary structure. Such a

system must employ operational controls (i.e., daily visible containment for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to continuously and automatically detect the failure of the primary or secondary containment structure or the presence of a release of hazardous waste into the secondary containment structure (40 CFR 260.10).

- *Liner* - a continuous layer of natural or manmade materials, beneath or on the sides of a surface impoundment, landfill, or landfill cell, that restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate (40 CFR 260.10).
- *Management or Hazardous Waste Management* - the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste (40 CFR 260.10).
- *Manifest* - the shipping document originated with and signed by the Generator, containing the information required by 40 CFR 262, Subpart B (40 CFR 260.10).
- *Manifest Document Number* - the USEPA 12-digit number assigned to the manifest of the generator plus a unique 5-digit number assigned to the manifest by the generator for recording and reporting purposes (40 CFR 260.10).
- *Miscellaneous Unit* - a hazardous waste management unit where hazardous waste is treated, stored, or disposed of and that is not a container, tank, surface impoundment, pile, land treatment unit, landfill, incinerator, boiler, industrial furnace, underground injection well with appropriate technical standards under 40 CFR 146, containment building, or unit eligible for a research development and demonstration permit under 40 CFR 270.65 (40 CFR 260.10).
- *Movement* - hazardous waste transported to a facility in an individual vehicle (40 CFR 260.10).
- *New Hazardous Waste Management Facility* - a facility that began operation, or for which construction commenced, after 21 October 1976 (40 CFR 260.10).
- *New Tank System or New Component System* - a tank system or component used for the storage and treatment of hazardous waste and for which installation has commenced after 14 July 1986; however, for the purposes of 264.193(g)(2) and 265.193(g)(2), a new tank system is one for which construction commenced after 14 July 1986 (see also *existing tank system*) (40 CFR 260.10).
- *Nonwastewaters* - wastes that do not meet the criteria for wastewaters (40 CFR 268.2).

- *Onground Tank* - a device that meets the definition of *tank* in 40 CFR 260.10 and that is situated in such a way that the bottom of the tank is on the same level as the adjacent surrounding surface so that the external tank bottom cannot be visibly inspected (40 CFR 260.10).
- *Onsite* - the same or geographically continuous property that may be divided by a public right-of-way, provided the entrance and exit between the properties is at a cross-roads intersection and access is by crossing as opposed to going along the right-of-way (40 CFR 260.10).
- *Open Burning* - the combustion of any material without the following characteristics (40 CFR 260.10):
 1. control of combustion air to maintain adequate temperature for efficient combustion
 2. containment of the combustion-reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion
 3. control of emission of the gaseous combustion products.
- *Partial Closure* - the closure of a hazardous waste management unit in accordance with the applicable closure requirements of 40 CFR 264 and 265 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank (including its associated piping and underlying containment systems), while other units of the same facility continue to operate (40 CFR 260.10).
- *Pile* - any noncontainerized accumulation of solid, nonflowing hazardous waste that is used for treatment or storage and that is not a containment building (40 CFR 260.10).
- *Point Source* - any discernible, confined, and discrete conveyance, including, but not limited to, any pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, vessel, or floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture (40 CFR 260.10).
- *Primary Exporter* - any person who is required to originate (40 CFR 262.51):
 1. the manifest for a shipment of hazardous waste in accordance with 40 CFR 262, Subpart B, or an equivalent state provision, that specifies a TSDF in a receiving country as the facility to which the hazardous waste will be sent
 2. any intermediate arranging for export.
- *Publicly Owned Treatment Works (POTW)* - any device or system, used in the treatment (including recycling and reclamation) of municipal sewage or industrial wastes of a liquid nature, that is owned by a *state* or *municipality* (as

defined by Section 502(4) of the *Clean Water Act (CWA)*). This definition includes sewers, pipes, or other conveyances only if they convey wastewater to a POTW providing treatment (40 CFR 260.10).

- *Pump Operating Level* - a liquid level proposed by the owner or operator and approved by the Regional Administrator based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump (40 CFR 264.226(d)(3)).
- *Qualified Groundwater Scientist* - a scientist or engineer who has received a baccalaureate or postgraduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields, as may be demonstrated by state registration, professional certification, or completion of accredited university courses that enable that individual to make sound professional judgements regarding groundwater monitoring and contaminant fate and transport (40 CFR 260.10).
- *Receiving Country* - a foreign country to which a hazardous waste is sent for the purpose of treatment, storage, or disposal (except for short-term storage incidental to transportation) (40 CFR 262.51).
- *Replacement Unit* - a landfill, surface impoundment, or waste pile unit (40 CFR 260.10):
 1. from which all or substantially all of the waste is removed
 2. that is subsequently reused to treat, store, or dispose of hazardous waste. This does not apply to a unit from which waste is removed during closure if the subsequent reuse solely involves the disposal of waste from that unit and other closing units or corrective action areas at the facility, in accordance with an approved closure plan or USEPA- or state-approved corrective action.
- *Representative Sample* - a sample of a universe or whole (e.g., waste pile, lagoon, groundwater) that can be expected to exhibit the average properties of the universe or whole (40 CFR 260.10).
- *Restricted Wastes* - those categories of hazardous wastes that are prohibited from land disposal either by regulation or by statute, in other words, a hazardous waste that is restricted no later than the date of the deadline established in *RCRA* Section 3004 (40 CFR 268).
- *Runoff* - any rainwater, leachate, or other liquid that drains over land from any part of a facility (40 CFR 260.10).
- *Run-on* - any rainwater, leachate, or other liquid that drains over land onto any part of a facility (40 CFR 260.10).

- *Sludge* - any solid, semisolid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility exclusive of the treated effluent from a wastewater treatment plant (40 CFR 260.10).
- *Small Quantity Generator (SQG)* - a generator who generates less than 1000 kg [2204.62 lb] of hazardous waste in a calendar month, but more than 100 kg [220.46 lb] (40 CFR 260.10).
- *Storage* - the holding of hazardous wastes for a temporary period, at the end of which the hazardous wastes are treated, disposed of, or stored elsewhere (40 CFR 260.10).
- *Sump* - any pit or reservoir that meets the definition of *tank* and those troughs/trenches connected to it that serve to collect hazardous waste for transport to hazardous waste TSDFs; except that as used in the landfill, surface impoundment, and waste pile rules, *sump* means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system, or leak detection system, for subsequent removal from the system (40 CFR 260.10).
- *Surface Impoundment* - a facility, or part of a facility, that is a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials, designed to hold an accumulation of liquid wastes, or wastes containing free liquids, and that is not an injection well (40 CFR 260.10).
- *Tank* - a stationary device, designed to contain an accumulation of hazardous waste, that is constructed primarily of nonearthen materials (e.g., wood, concrete, steel, plastic) that provide structural support (40 CFR 260.10).
- *Tank System* - a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system (40 CFR 260.10).
- *Thermal Treatment* - the treatment of hazardous waste in a device that uses elevated temperature as the primary means to change the chemical, physical, or biological character or composition of the hazardous waste (40 CFR 260.10).
- *Transfer Facility* - any transportation-related facility, including loading docks, parking areas, storage areas, and other similar areas, where shipments of hazardous wastes are held during the normal course of transportation (40 CFR 260.10).
- *Transit Country* - any foreign country, other than a receiving country, through which a hazardous waste is transported (40 CFR 260.10).

- *Transport Vehicle* - a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle (40 CFR 260.10).
- *Transporter* - a person engaged in the offsite transportation of hazardous wastes by air, rail, highway, or water (40 CFR 260.10).
- *Treatability Study* - a study in which a hazardous waste is subjected to a treatment process to determine (40 CFR 260.10):
 1. whether the waste is amenable to the treatment process
 2. what pretreatment (if any) is required
 3. what optimal process conditions are needed to achieve the desired treatment
 4. how efficient a treatment process is for a specific waste or wastes
 5. what the characteristics and volumes of residuals are from a particular treatment process.

Also included in this definition for the purpose of 40 CFR 261.4(e) and (f) exemptions are liner compatibility, corrosion, and other material compatibility studies and toxicological and health effects studies. A *treatability study* is not a means to commercially treat or dispose of hazardous waste.

- *Treatment* - any method, technique, or process, including neutralization, designed to change the physical, chemical, or biological character or composition of any hazardous waste so as to neutralize such waste, recover energy or material resources from the waste, or render such waste: nonhazardous or less hazardous; safer to transport, store, or dispose of; amenable for recovery or storage; or reduced in volume (40 CFR 260.10).
- *Treatment Zone* - a soil area of the unsaturated zone of a land treatment unit within which hazardous constituents are degraded, transformed, or immobilized (40 CFR 260.10).
- *Underground Injection* - the subsurface emplacement of fluids through a bored, drilled, driven, or dug well, where the depth of the dug well is greater than the largest surface dimension (40 CFR 260.10).
- *Underground Tank* - a device meeting the definition of *tank* in 40 CFR 260.10, whose entire surface area is totally below the surface and covered by the ground (40 CFR 260.10).

- *Unfit-for-Use Tank System* - a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment (40 CFR 260.10).
- *Unsaturated Zone or Zone of Aeration* - the zone between the land surface and the water table (40 CFR 260.10).
- *United States* - the 50 states, District of Columbia, Commonwealth of Puerto Rico, U.S. Virgin Islands, Guam, American Samoa, and Commonwealth of the Northern Mariana Islands (40 CFR 260.10).
- *Uppermost Aquifer* - the geologic formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer within the facility's property boundary (40 CFR 260.10).
- *Wastewater Treatment Unit* - a device that is part of a wastewater treatment facility, subject to regulation under Section 402 or 307 of the CWA, and that receives and treats or stores an influent wastewater that is a hazardous waste (as defined in 40 CFR 261.3), generates and accumulates a wastewater treatment sludge that is a hazardous waste, or treats or stores a wastewater treatment sludge, and meets the definition of *tank* or *tank system* (40 CFR 260.10).
- *Wastewaters* - wastes that contain less than 1 percent, by weight, total organic compounds (40 CFR 268.2).
- *Zone of Engineering Control* - an area under the control of the owner/operator that, upon detection of a hazardous waste release, can be readily cleaned up before the release of hazardous waste or hazardous constituents to groundwater or surface water (40 CFR 260.10).

HAZARDOUS WASTE MANAGEMENT

Records to Review

Generator (including TSDFs if they are also generators):

- Notification (USEPA ID No.)
- Hazardous waste manifests
- Manifest exception reports
- Biennial reports
- Delistings
- Speculative accumulation records
- Land disposal restriction certifications
- Employee training documentation
- Hazardous waste tank integrity assessments
- Contingency plan (large quantity generators only)
- Notifications of hazardous waste oil fuel marketing or blending activity

In addition to the above, TSDFs would require:

- Unmanifested waste reports
- Facility audit reports (Inspection log)
- Waste analysis plan(s)
- Operating record
- Groundwater monitoring records and annual reports (where required)
- Facility biennial reports
- Closure/postclosure plans
- Closure/postclosure notices (where applicable)
- Other documents as required by the permit

Physical Features to Inspect

- Disposal sites
- Accumulations points
- Incinerators
- Vehicles used for transport
- Storage facilities (including drums)
- Surface impoundments

People to Interview

- Natural Resources Manager (Division, District)
- Engineering (Division, District)
- Environmental Compliance Coordinator (ECC)
- Safety and Occupational Health Office (Division, District)
- Operations (District)
- Planning
- Project Resource Manager
- Facility Managers
- Lab Manager

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. This chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Checklist Item Numbers in the April 1993 ERGO Manual	Corresponding Checklist Item Numbers in the 1994 ERGO Manual

Appendix 4-1

40 CFR 261 Identification and Listing of Hazardous Waste

TABLE I

Hazardous Waste from Nonspecific Sources

(40 CFR 261.30 through 261.31)

Industry and USEPA Hazardous Waste No.	Hazardous Waste	Hazard Code*
	<u>Generic</u>	
F001	The spent halogenated solvents used in degreasing: Trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and the chlorinated fluorocarbons; all spent solvent mixtures/blends used in degreasing containing, before use, a total of ten percent or more (by volume) of one or more of the above halogenated solvents listed in F002, F004, and F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(t)
F002	The following spent halogenated solvents: Tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,1,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume), of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(t)
F003	The spent nonhalogenated solvents, Xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; and the still bottoms from the recovery of these solvents and spent solvent mixtures.	(i)
	<u>* HAZARD CODES (Column 3)</u> t = toxic waste i = ignitable waste r = reactive waste h = acute hazardous waste ** (except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: As a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.	

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste No.	Hazardous Waste	Hazard Code*
F004	The spent nonhalogenated solvents, cresols and cresylic acid, and nitrobenzene; and the still bottoms from the recovery of these solvents.	(t)
F005	The following spent nonhalogenated solvents: Toluene, methyl ethyl ketone, carbons disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures/blends containing, before use, a total of ten percent or more (by volume) of one or more of the above nonhalogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these solvents.	(i,t)
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning stripping associated with tin, zinc and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	(t)
F007	Spent cyanide plating bath solution from electroplating operations.	(r,t)
F008	Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.	(r,t)
F009	Spent stripping and cleaning bath solutions from electroplating operations where cyanides are used in the process.	(r,t)
F010	Quenching bath residues from oil baths from metal heat treating operations where cyanides are used in the process.	(r,t)
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.	(r,t)

* HAZARD CODES (Column 3)

t = toxic waste
i = ignitable waste
r = reactive waste
h = acute hazardous waste

** (except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: As a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste No.	Hazardous Waste	Hazard Code*
F012	Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.	(t)
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive conversion coating process.	(t)
F020	Wastes from use of tri-, or tetrachlorophenol, or intermediates used to produce its pesticide derivatives. **	(h)
F021	Wastes of pentachlorophenol, or intermediates used to produce its derivatives. **	(h)
F022	Wastes, of tetra-, penta-, or hexachlorobenzenes under alkaline conditions. **	(h)
F023	Wastes, of tri and tetrachlorophenols. **	(t)
F024	Wastes, including but not limited to distillation residues, heavy ends, tars, and reactor cleanout wastes from the production of chlorinated aliphatic hydrocarbons, utilizing free radical catalyzed processes having carbon chain lengths from one to five. (Omits light ends, spent filters and filter aids, spent desiccants, wastewater, wastewater treatment sludges, spent catalysts and wastes listed in 40 CFR 261.32).	(t)
F025	Condensed light ends, spent filters aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons, by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution.	(t)

*** HAZARD CODES (Column 3)**

t = toxic waste
i = ignitable waste
r = reactive waste
h = acute hazardous waste

** (except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: As a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste No.	Hazardous Waste	Hazard Code*
F026	Wastes of tetra-, penta-, or hexachlorobenzene under alkaline conditions.	(h)
F027	Discarded unused formulations containing tri-, tetra-, or pentachlorophenol or discarded unused formulations containing compounds derived from these chlorophenols (does not include hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component).	(h)
F028	Residues from incineration or thermal treatment of soil contaminated with USEPA hazardous waste No. F020, F021, F022, F023, F026, and F027.	(t)
F032	Wastewaters (except those that have not come into contact with process contaminants), process residues, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with 40 CFR 261.35 and where the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(t)
F034	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use creosote formulations. This listing does not include K001 bottom sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(t)
F035	Wastewaters (except those that have not come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chromium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(t)

*** HAZARD CODES (Column 3)**

t = toxic waste
i = ignitable waste
r = reactive waste
h = acute hazardous waste

** (except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: As a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.

Appendix 4-1 (continued)

Industry and USEPA
Hazardous Waste
No.

Hazardous Waste

Hazard
Code*

F037

Petroleum refinery primary oil/water/solids separation sludge--Any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refiners. This includes, but is not limited to, sludges generated in: Oil/water/solids separators; tanks and impoundments; ditches and other conveyances; sumps; and stormwater units receiving dry weather flow. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated from noncontact once through cooling waters segregated for treatment from other process or oily cooling waters, sludges generated in aggressive biological treatment units*** (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and K051 wastes are not included in this listing.

NOTE:

*hazard code:

t= toxic waste

i= ignitable waste

r= reactive waste

h= acute hazardous waste

c= corrosive waste

e= toxicity characteristic waste

* Note: The listing of wastewaters that have not come into contact with process contaminants is stayed administratively. The listing for plants that have previously used chlorophenolic formulations is administratively stayed whenever these wastes are covered by the F034 or F035 listings. These stays will remain in effect until further administrative action is taken.

** (except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: As a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5- trichlorophenol.

*** Aggressive biological treatment units are defined as units which employ one of the following treatment methods: Activated sludge; trickling filter; rotating biological contactor for the continuous accelerated biological oxidation of wastewaters; or high-rate aeration. High-rate aeration is a system of surface impoundments or tanks, in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity, and (A) the units employs a minimum of 6hp per million gallons of treatment volume; and either (B) the hydraulic retention time of the unit is no longer than 5 days; of (C) the hydraulic retention time is no longer than 30 days and the unit does not generate a sludge that is a hazardous waste by the Toxicity Characteristic.

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste No.	Hazardous Waste	Hazard Code*
----------------------------------------------	-----------------	-----------------

F038	Petroleum refinery secondary (emulsified) oil/water/solids separation sludge--Any sludge and/or float generated from the physical and/or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in: Induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated from noncontact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges and floats generated in aggressive biological treatment units*** (including sludges and floats generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and F037, K048, and K051 are not included in this listing.	(t)
------	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------	-----

NOTE:

*hazard code:

t= toxic waste

i= ignitable waste

r= reactive waste

h= acute hazardous waste

c= corrosive waste

e= toxicity characteristic waste

* Note: The listing of wastewaters that have not come into contact with process contaminants is stayed administratively. The listing for plants that have previously used chlorophenolic formulations is administratively stayed whenever these wastes are covered by the F034 or F035 listings. These stays will remain in effect until further administrative action is taken.

** (except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: As a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5- trichlorophenol.

*** Aggressive biological treatment units are defined as units which employ one of the following treatment methods: Activated sludge; trickling filter; rotating biological contactor for the continuous accelerated biological oxidation of wastewaters; or high-rate aeration. High-rate aeration is a system of surface impoundments or tanks, in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity, and (A) the units employs a minimum of 6hp per million gallons of treatment volume; and either (B) the hydraulic retention time of the unit is no longer than 5 days; or (C) the hydraulic retention time is no longer than 30 days and the unit does not generate a sludge that is a hazardous waste by the Toxicity Characteristic.

Industry and USEPA Hazardous Waste No.	Hazardous Waste	Hazard Code*
----------------------------------------------	-----------------	-----------------

F038 (cont) biological treatment units) and F037, K048, and K051 wastes are not included in this listing.

F039 Leachate (liquids that have percolated through land disposed wastes) (t)
resulting from the disposal of more than one restricted waste classified as hazardous under Subpart D. (Leachate resulting from the management of one or more of the following wastes and no other hazardous waste retains its hazardous waste number(s): F020, F021, F022, F023, F026, F027, and/or F028.)

NOTE:

*hazard code:

t= toxic waste

i= ignitable waste

r= reactive waste

h= acute hazardous waste

c= corrosive waste

e= toxicity characteristic waste

* The listing of wastewaters that have not come into contact with process contaminants is stayed administratively. The listing for plants that have previously used chlorophenolic formulations is administratively stayed whenever these wastes are covered by the F034 or F035 listings. These stays will remain in effect until further administrative action is taken.

** (except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: As a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5- trichlorophenol.

*** Aggressive biological treatment units are defined as units which employ one of the following treatment methods: Activated sludge; trickling filter; rotating biological contactor for the continuous accelerated biological oxidation of wastewaters; or high-rate aeration. High-rate aeration is a system of surface impoundments or tanks, in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity, and (A) the units employs a minimum of 6hp per million gallons of treatment volume; and either (B) the hydraulic retention time of the unit is no longer than 5 days; of (C) the hydraulic retention time is no longer than 30 days and the unit does not generate a sludge that is a hazardous waste by the Toxicity Characteristic.

Appendix 4-1 (continued)

Hazardous Wastes from Organic and Inorganic Chemical Industries

(40 CFR 261.30 through .31)

USEPA Hazardous Waste No.	Hazardous Waste	Hazard Code
Organic Chemicals		
K009	Distillation bottoms from the production of acetaldehyde from ethylene.	(t)
K010	Distillation side cuts from the production of acetaldehyde from ethylene.	(t)
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile.	(r,t)
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile.	(r,t)
K014	Bottoms from the acetonitrile purification column in the production of acrylonitrile.	(t)
K015	Still bottoms from the distillation of benzyl chloride.	(t)
K016	Heavy ends or distillation residues from the production of carbon tetrachloride.	(t)
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.	(t)
K018	Heavy ends from fractionation in ethyl chloride production.	(t)
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.	(t)
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.	(t)
K021	Aqueous spent antimony catalyst waste from fluoromethanes production.	(t)
K022	Distillation bottom tars from the production of phenol/acetone from cumene.	(t)

*** HAZARD CODES (Column 3)**

t = toxic waste

Appendix 4-1 (continued)

USEPA Hazardous Waste No.	Hazardous Waste	Code
K023	Distillation light ends from the production of phthalic anhydride from naphthalene.	(t)
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene.	(t)
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene.	(t)
K026	Stripping still tails from the production of methyl ethyl pyridines.	(t)
K027	Centrifuge residue from toluene diisocyanate production.	(r,t)
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.	(t)
K029	Waste from the product stream stripper in the production of 1,1,1-trichloroethane.	(t)
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.	(t)
K083	Distillation bottoms from aniline production.	(t)
K085	Distillation of fractionation column bottoms from the production of chlorobenzene.	(t)
K103	Process residues from aniline extraction from the production of aniline.	(t)
K104	Combined wastewater streams generated from nitrobenzene or aniline production.	(t)
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.	(t)
K107	Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid	(C,T)
K108	Condensed Column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides	(I,T)

*** HAZARD CODES (Column 3)**

r = reactive waste

t = toxic waste

Appendix 4-1 (continued)

USEPA Hazardous Waste No.	Hazardous Waste	Code
K109	Spent filter cartridges from product purification from production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides	(T)
K110	Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides	(T)
K093	Distillation light ends from the production of phthalic anhydride from orthoxylene.	(t)
K094	Distillation bottoms from the production of phthalic anhydride from orthoxylene.	(t)
K095	Distillation bottoms from the production of 1,1,1-trichloroethane.	(t)
K096	Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.	(t)
K111	Product washwaters from the production of dinitrotoluene via nitration of toluene.	(c,t)
K112	Reaction byproduct water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.	(t)
K113	Condensed liquid light ennation of dinitrotoluene.	(t)
K114	Vicinals from the purification of toluenediamine in the production of toluenediamine.	(t)
K115	Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(t)
K116	Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.	(t)
K117	Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.	(t)
K118	Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(t)

*** HAZARD CODES (Column 3)**

r = reactive waste

t = toxic waste

Appendix 4-1 (continued)

USEPA Hazardous Waste No.	Hazardous Waste	Code
K136	Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(t)
Inorganic Chemicals		
K071	Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.	(t)
K073	Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.	(t)
K106	Wastewater treatment sludge from the mercury cell process in chlorine production.	(t)
Hazardous Waste from Explosives Manufacturing		
K044	Wastewater treatment sludge from the manufacturing and processing of explosives.	(r)
K045	Spent carbon from the treatment of wastewater containing explosives.	(r)
K046	Wastewater treatment sludges from the manufacturing, formulation and loading of lead-based initiating compounds.	(t)
K047	Pink/red water from ammonium nitrate explosive (TNT) operations.	(r)

* HAZARD CODES (Column 3)

r = reactive waste

t = toxic waste

Appendix 4-2

Commercial Chemical Products or Manufacturing Chemical Intermediates Identified as Toxic Wastes

40 CFR 261.33

(COMMENT: Primary hazardous properties of these materials have been indicated by the letter (t) (toxicity), (r) (reactivity), (i) (ignitability), and (c) (corrosivity); absence of a letter indicates that the compound is only listed for acute toxicity.)

USEPA Hazardous Waste No.	Substance
U001	acetaldehyde (i)
U034	acetaldehyde, trichloro-
U187	acetamide, N-(4-ethoxyphenyl)-
U005	acetamide, N-9H-fluoren-2-yl-
U240	acetic acid, (2,4-dichloropheoxy)-, salts and esters
U112	acetic acid, ethyl ester (i)
U144	acetic acid, lead(2+) salt
U214	acetic acid, thallium(1+) salt
see F027	acetic acid, (2,4,5-trichlorophenoxy)-
U002	acetone (i)
U003	acetonitrile (i,t)
U004	acetophenone
U005	2-acetylaminoflourene
U006	acetyl chloride (c, r, t)
U007	acrylamide
U008	acrylic acid (i)
U009	acrylonitrile
U011	amitrole
U012	aniline (i, t)
U136	arsenic acid, dimethyl-
U014	auramine
U015	azaserine
U010	azirino(2,3,3,4(pyrrolo(1,2-a)indole -4,7-dione, 6-amino-8-[(aminocarbonyl) oxy)methyl]-1,1a,2,8,8a,8b- hexahydro-8a-methoxy-5-methyl-,
U157	benz[j]aceanthrylene, 1,2-dihydro-3- methyl-
U016	benza[c]ridine
U017	benzal chloride
U192	benzamide, 3,5-dichloro-n- (1,1-diethyl-2-propynyl-
U018	benz[a]anthracene

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U094	1,2-benzanthracene, 7,12-dimethyl-
U012	benzenamine (i.t)
U014	benzenamine, 4,4-carbonimidoylbis(N,N- dimethyl-
U049	benzenamine, 4-chloro-2-methyl-, hydrochloride
U093	benzenamine, N,N-dimethyl-4- (phenylazo)-
U328	benzenamine, 2-methyl-
U353	benzenamine, 4-methyl-
U158	benzenamine, 4,4-methylenebis(2-chloro-
U222	benzenamine, 2-methyl-, hydrochloride
U181	benzenamine, 2,-methyl-5-nitro
U019	benzene (i, t)
U038	benzeneacetic acid, 4-chloro-alpha- (4-chlorophenyl)-alpha-hydroxy, ethyl ester
U030	benzene, 1-bromo-4-phenoxy-
U035	benzenebutanoic acid, 4-[bis (2-chloroethyl)amino]-
U037	benzene, chloro-
U221	benzenediamine, ar-methyl-
U028	1,2-benzendicarboxylic acid, [bis(2-ethyl-hexyl)]ester
U069	1,2-benzenedicarboxylic acid, dibutyl ester
U088	1,2-benzenedicarboxylic acid, diethyl ester
U102	1,2-benzendicarboxylic acid, dimethyl ester
U107	1,2-benzenedicarboxylic acid, dioctyl ester
U070	benzene, 1,2-dichloro-
U071	benzene, 1,3-dichloro-
U072	benzene, 1,4-dichloro-
U060	benzene, 1,1'- (2,2-dichloroethylidene) bis[4-chloro-
U017	benzene, (dichloromethyl)-
U223	benzene, 1,3-diisocyanatomethyl- (r.t)
U239	benzene, dimethyl-(i,t)
U201	1,3-benzenediol
U127	benzene, hexachloro-
U056	benzene, hexahydro- (i)
U220	benzene, methyl-
U105	benzene, 1-methyl-2,4-dinitro-
U106	benzene, 2-methyl-1,3-dinitro-
U055	benzene, (1-methylethyl)-(i)

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U169	benzene, nitro- (i,t)
U183	Benzene, pentachloro-
U185	benzene, pentachloronitro-
U020	benzenesulfonic acid chloride (c,r)
U020	benzenesulfonyl chloride (c,r)
U207	benzene, 1,2,4,5-tetrachloro-
U061	benzene, 1,1'-(2,2,2-trichloroethylidene)bis[4-chloro
U247	benzene, 1,1'-(2,2,2-trichloroethylidene)[4-methoxy-
U023	benzene, (trichloromethyl)-
U234	benzene, 1,3,5-trinitro-
U021	benzidine
U202	1,2-benzisothiazolin-3-one, 1,1-dioxide and salts
U203	1,3-benzodioxole, 5-(2-propenyl)-
U141	1,3-benzodioxole, 5-(1-propenyl)-
U090	1,3-benzodioxole, 5-propyl-
U064	benzo[rs]pentaphene
U248	2-H-1-benzopyran-2-on2, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, and salts, when present at concentrations of 0.3% or less
U022	benzo[a]pyrene
U197	p-benzoquinone
U023	benzotrichloride (c,r,t)
U085	2,2-bioxirane (i,t)
U021	(1,1-biphenyl)-4,4-diamine
U073	(1,1-biphenyl)-4,4-diamine, 3,3-dichloro
U091	(1,1-biphenyl)-4,4-diamine, 3,3-dimethoxy-
U095	(1,1-biphenyl)4,4-diamine, 3,3-dimethyl-
U225	bromoform
U030	4-bromophenyl phenyl ether
U128	1,3-butadiene, 1,1,2,3,4,4-hexachloro
U172	1-butanamine, N-butyl-N-nitroso-
U031	1-butanol (i)
U159	2-butanone (i,t)
U160	2-butanone peroxide (r,t)
U053	2-butenal
U074	2-butene, 1,4-dichloro- (i,t)

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U143	2-butenic acid, 2-methyl-, 7- [(2,3-dihydroxy-2-(1-methoxyethyl)- -3-methyl-1-oxobutoxy)methyl] -2,3,5,7s-erythro-1- pyrrolizin-1-yl ester, [1S-[alpha(Z),7(2S,3R), 7alpha]]-
U031	n-Butyl alcohol (i)
U136	cadidic acid
U032	calcium chromate
U238	carbamic acid, ethyl ester
U178	carbamic acid, methylnitroso- ethyl ester
U097	carbamic chloride, dimethyl-
U114	carbamodithioic acid, 1,2- ethanedithylbis-, salts and esters
U062	carbamothioic acid, bis(1-methylethyl)-S- (2,3-dichloro-2-propenyl) ester
U215	carbonic acid, dithallium(1+)salt
U033	carbonic difluoride
U156	carbonochlorodic acid, methyl ester (i,t)
U033	carbon oxyfluoride (r,t)
U211	carbon tetrachloride
U034	chloral
U035	chlorambucil
U036	chlordane, alpha and gamma isomers
U026	chlomaphazine
U037	chlorobenzene
U039	p-chloro-m-cresol
U041	1-chloro-2,3-epoxypropane
U042	2-chloroethyl vinyl ether
U044	chloroform
U046	chloromethyl methyl ether
U047	beta-chloronaphthalene
U048	o-chlorophenol
U049	4-chloro-o-toluidine, hydrochloride
U032	chromic acid H ₂ CrO ₄ , calcium salt
U050	chrysene
U051	creosote
U052	cresols (cresylic acid)
U053	crotonaldehyde
U055	cumene (i)
U246	cyanogen bromide

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U197	2,5-cyclohexadiene-1, 4-dione
U056	cyclohexane (i)
U129	cyclohexane 1,2,3,4,5,6- hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 6beta)-
U057	cyclohexanone (i)
U130	1,3-cyclopentadiene, 1,2,3,4,5,5- hexachloro-
U058	cyclophosphamide
U240	2,4-d, salts and esters
U059	daunomycin
U060	ddd
U061	ddt
U062	diallate
U063	dibenz[a,h]anthracene
U064	dibenzo[a,i]pyrene
U066	1,2-dibromo-3-chloropropane
U069	dibutyl phthalate
U070	o-Dichlorobenzene
U071	m-Dichlorobenzene
U072	p-Dichlorobenzene
U073	3,3'-dichlorobenzidine
U074	1,4-dichloro-2-butene (i,t)
U075	dichlorodifluoromethane
U078	1,1-dichloroethylene
U079	1,2-dichloroethylene
U025	dichloroethyl ether
U027	dichloroisopropyl ether
U024	dichloromethoxy ethane
U081	2,4-dichlorophenol
U082	2,6-dichlorophenol
U084	1,3-dichlorpropene
U085	1,2:3,4-diepoxybutane (i, t)
U108	1,4-diethyleneoxide
U028	diethylhexyl phthalate
U086	N,N-diethylhydrazine
U087	O,O-diethyl-s-methyl dithiophosphate
U088	diethyl phthalate
U089	diethylstilbestrol
U090	dihydrosafrole
U091	3,3'-dimethoxybenzidine
U092	dimethylamine (i)
U093	dimethylaminoazobenzene
U094	7,12-dimethylbenz[a]anthracene
U095	3,3-dimethylbenzidine
U096	alpha,alpha-dimethylbenzylhydroperoxide (r)
U097	dimethylcarbamoyl chloride
U098	1,1-dimethylhydrazine

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U099	1,2-dimethylhydrazine
U101	2,4-dimethylphenol
U102	dimethyl phthalate
U103	dimethyl sulfate
U105	2,4-dinitrotoluene
U106	2,6-dinitrotoluene
U107	di-n-octyl phthalate
U108	1,4-dioxane
U109	1,2-diphenylhydrazine
U110	dipropylamine (i)
U111	di-n-propylnitrosamine
U041	epichlorhydrin
U001	ethanal (i)
U174	ethanamine, N-ethyl-N-nitroso-
U155	1,2-ethanediamine, n,n- dimethyl-n'-2-pyridinyl- n'-(2-thienylmethyl)-
U067	ethane, 1,2-dibromo-
U076	ethane, 1,1-dichloro-
U077	ethane, 1,2-dichloro-
U131	ethane, hexachloro-
U024	ethane, 1,1-[methylenebis(oxy)] bis[2-chloro-
U117	ethane, 1,1-oxybis- (i)
U025	ethane 1,1-oxybis[2-chloro-
U184	ethane, pentachloro-
U208	ethane, 1,1,1,2-tetrachloro-
U209	ethane, 1,1,2,2-tetrachloro-
U218	ethanethioamide
U359	ethane, 1,1,2-trichloro-
U173	ethanol, 2,2'-(nitrosoimino)bis-
U004	ethanone, 1-phenyl-
U043	ethene, chloro-
U042	ethene, (2-chloroethoxy-)
U078	ethene, 1,1-dichloro-
U079	ethene, 1,2-dichloro- (e)
U210	ethene, tetrachloro-
U228	ethene, trichloro
U112	ethyl acetate (i)
U113	ethyl acrylate (i)
U238	ethyl carbamate (urethane)
U117	ethyl ether (i)
U114	ethylenebisdithiocarbamic acid, salts and esters
U067	ethylene dibromide
U077	ethylene dichloride
U359	ethylene glycol monoethyl ether

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U115	ethylene oxide (i,t)
U116	ethylenethiourea
U076	ethylidene dichloride
U118	ethyl methacrylate
U119	ethyl methanesulfonate
U120	fluoranthene
U122	formaldehyde
U123	formic acid (c,t)
U124	furan (i)
U125	2-furancarboxaldehyde (i)
U147	2,5-furandione
U213	furan, tetrahydro- (i)
U125	furfural (i)
U124	furfuran (i)
U206	glucopyranose, 2-deoxy-2 (3-methyl-3-nitrosoureido)-
U126	glycidylaldehyde
U163	guanidine, N-methyl-N'-nitro- N-nitroso-
U127	hexachlorobenzene
U128	hexachlorobutadiene
U130	hexachlorocyclopentadiene
U131	hexachloroethane
U132	hexachlorophene
U243	hexachloropropene
U133	hydrazine (r,t)
U086	hydrazine, 1,2-diethyl-
U098	hydrazine, 1,1-dimethyl-
U099	hydrazine, 1,2-dimethyl-
U109	hydrazine, 1,2-diphenyl-
U134	hydrofluoric acid (c,t)
U134	hydrogen fluoride (c,t)
U135	hydrogen sulfide
U096	hydroperoxide, 1-methyl-1-phenylethyl- (r)
U116	2-imidazolidinethione
U137	indeno(1,2,3-cd)pyrene
U190	1,3-isobenzofurandione
U140	isobutyl alcohol (i,t)
U141	isosafrole
U142	kepone
U143	lasiocarpine
U144	lead acetate
U146	lead, bis(acetato-O) tetrahydroxytri-
U145	lead phosphate
U146	lead subacetate
U129	lindane
U163	mnng
U147	maleic anhydride

Appendix 4-2 (continued)

USEPA Hazardous Waste No.

Substance

U148	maleic hydrazide
U149	malononitrile
U150	melphalan
U151	mercury
U152	methacrylonitrile (i,t)
U092	methanamine (N-methyl- (i)
U029	methane, bromo-
U045	methane, chloro- (i,t)
U046	methane, chloromethoxy-
U068	methane, dibromo-
U080	methane, dichloro-
U075	methane, dichlorodifluoro-
U138	methane, iodo-
U119	methanesulfonic acid, ethyl ester
U211	methane, tetrachloro-
U153	methanethiol (i,t)
U225	methane, tribromo-
U044	methane, trichloro-
U121	methane, trichlorofluoro-
U154	methanol (i)
U155	methapyrilene
U142	1,3,4-metheno-2H- cyclobuta[cd]pent-1-one- 1,1a,3,3a,4,5,5a,5b,6 decahydrooctahydro-
U247	methoxychlor
U154	methyl alcohol (i)
U029	methyl bromide
U186	1-methylbutadiene (i)
U045	methyl chloride (i,t)
U156	methyl chlorocarbonate (i,t)
U226	methyl chloroform
U157	3-methylcholanthrene
U158	4,4-methylenebis-(2-chloroaniline)
U068	methylene bromide
U080	methylene chloride
U159	methyl ethyl ketone (mek) (i,t)
U160	methyl ethyl ketone peroxide (r,t)
U138	methyl iodide
U161	methyl isobutyl ketone (i)
U162	methyl methacrylate (i,t)
U161	4-methyl-2-pentanone (i)
U164	methylthiouracil
U010	mitomycin C
U059	5,12-Naphthacenedione, (Bs(cis)8- acetyl-10-[(3-amino-2,3,6-trideoxy- alpha-L-lyxo-hexopyranosyl)oxyl]- 7-8,9,10-tetrahydro-6,8,11- trihydroxy-1-methoxy-

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U167	1-naphthalenamine
U168	2-naphthalenamine
U026	naphthalenamine, N,N'-bis (2-chloroethyl)-
U165	naphthalene
U047	naphthalene, 2-chloro-
U166	1,4-naphthalenedione
U236	2,7-naphthalenedisulfonic acid, 3,3'-[(3,3'-dimethyl-(1,1'-biphenyl)- bis(azo)bis(5-amino-4-hydroxy)-, tetrasodium salt
U166	1,4-Naphthoquinone
U167	alpha-naphthylamine
U168	beta-naphthylamine
U217	nitric acid, thallium(1+) salt (2-chloromethyl)-
U169	nitrobenzene (i,t)
U170	p-nitrophenol
U171	2-nitropropane (i)
U172	n-nitrosodi-n-butylamine
U173	n-nitrosodiethanolamine
U174	n-nitrosodiethylamine
U176	n-nitroso-n-ethylurea
U177	n-nitroso-n-methylurea
U178	n-nitroso-n-methylurethane
U179	n-nitrosopiperidine
U180	n-nitrosopyrrolidine
U181	5-nitro-o-toluidine
U193	1,2-oxathiolane, 2,2-dioxide
U058	2H-1,3,2-Oxazaphosphorine,2[bis(2- chloroethyl)amino]tetrahydro-, 2-oxide.
U115	oxirane (i,t)
U126	oxiranecarboxyaldehyde
U041	oxirane, 2-(chloromethyl)-
U182	paraldehyde
U183	pentachlorobenzene
U184	pentachloroethane
U185	pentachloronitrobenzene
see F027	pentachlorophenol
U161	pentanol, 4-methyl-
U186	1,3-pentadiene (i)
U187	phenacetin
U188	phenol
U048	phenol, 2-chloro-
U039	phenol, 4-chloro-3-methyl-
U081	phenol, 2,4-dichloro-
U082	phenol, 2,6-dichloro-

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U089	phenol, 4,4'-(1,2-diethyl- 1,2-ethenediyl)bis-
U101	phenol, 2,4-dimethyl-
U052	phenol, methyl
U132	phenol, 2,2'-methylenebis [3,4,6-trichloro-
U170	phenol, 4-nitro-
see F027	phenol, pentachloro-
see F027	phenol, 2,3,4,6-tetrachloro-
see F027	phenol, 2,4,5-trichloro-
see F027	phenol, 2,4,6-trichloro-
U150	l-phenylalanine, 4- [bis(2-chloroethyl)amino]-
U145	phosphoric acid, lead salt
U087	phosphorodithioic acid, 0,0-diethyl S-methyl ester
U189	phosphorus sulfide (r)
U190	phthalic anhydride
U191	2-picoline
U179	piperidine, 1-nitroso-
U192	pronamide
U194	1-propanamine (i,t)
U111	1-propanamine, n-nitroso-n-propyl-
U110	1-propanamine, n-propyl- (i)
U066	propane, 1,2-dibromo-3-chloro-
U083	propane, 1,2-dichloro-
U149	propanedinitrile
U171	propane, 2-nitro- (i,t)
U027	propane, 2,2-oxybis[2-chloro-
U193	1,3-propane sultone
see F027	propanoic acid, 2-(2,4,5- trichlorophenoxy)-
U235	1-propanol, 2,3-dibromo-, phosphate (3:1)
U140	1-propanol, 2-methyl- (i,t)
U002	2-propanone (i)
U007	2-propenamide
U084	1-propene, 1,3-dichloro-
U243	1-propene, 1,1,2,3,3,3-hexachloro-
U009	2-propenenitrile
U152	2-propanenitrile, 2-methyl- (i,t)
U008	2-propenoic acid (i)
U113	2-propenic acid, ethyl ester (i)
U118	2-propenoic acid, 2-methyl-, ethyl ester
U162	2-propenoic acid, 2-methyl-, methyl ester (i,t)
U194	n-propylamine (i,t)

Appendix 4-2 (continued)

USEPA Hazardous Waste No.	Substance
U083	propylene dichloride
U148	3,6-pyridazinedione, 1,2-dihydro-
U196	pyridine
U191	pyridine, 2-methyl-
U237	2,4(1H,3H)-pyrimidinedione, 5- [bis(2-chloroethyl)amino]-
U164	4(1H)-pyrimidinone, 2,3-dihydro-6-methyl 2-thioxo-
U180	pyrrolidine, 1-nitroso--
U200	reserpine
U201	resorcinol
U202	saccharin and salts
U203	safrole
U204	selenious acid
U204	selenium dioxide
U205	selenium sulfide
U205	selenium sulfide SeS2 (r,t)
U015	l-serine, diazoacetate (ester)
see F027	silvex (2,4,5-tp)
U206	streptozotocin
U103	sulfuric acid, dimethyl ester
U189	sulfur phosphide (r)
U232	2,4,5-T
U207	1,2,4,5-tetrachlorobenzene
U208	1,1,1,2-tetrachloroethane
U209	1,1,2,2-tetrachloroethane
U210	tetrachloroethylene
see F027	2,3,4,6-tetrachlorophenol
U213	tetrahydrofuran (i)
U214	thallium (i) acetate
U215	thallium (i) carbonate
U216	thallium chloride
U216	thallium chloride TlCl
U217	thallium (i) nitrate
U218	thioacetamide
U153	thiomethanol (i,t)
U244	thioperoxydicarbonic diamide, tetramethyl-
U219	thiourea
U244	thiuram
U220	toluene
U221	toluenediamine
U223	toluene diisocyanate (r,t)
U328	o-toluidine
U353	p-toluidine
U222	o-toluidine hydrochloride
U011	1H-1,2,4-triazol-3-amine
U227	1,1,2-trichloroethane

Appendix 4-2 (continued)

**USEPA Hazardous
Waste No.**

Substance

U228	trichloroethylene
U121	trichloromonofluoromethane
U230	2,4,5-trichlorophenol
U231	2,4,6-trichlorophenol
U234	1,3,5-trinitrobenzene (r,t)
U182	1,3,5-trioxane, 2,4,6-trimethyl-
U235	tris(2,3-dibromopropyl)phosphate
U236	trypan blue
U237	uracil mustard
U176	urea, n-ethyl-n-nitroso-
U177	urea, n-methyl-n-nitroso-
U043	vinyl chloride
U248	Warfarin, when present at concentrations of .3% or less
U239	xylene (i)
U200	yohimban-16-carboxylic acid, 11,17-dimethoxy-18-[(3,4,5- trimethoxy-benzoyl)oxy], methyl ester
U249	Zinc phosphide, when present at concentrations of 10% or less.

Appendix 4-3

Toxicity Characteristics Constituents and Regulatory Levels (40 CFR 261.24)

¹ If o-, m-, and p-cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used.

² Quantitation limit is greater than the calculated regulatory level. Therefore, the quantitation limit becomes the regulatory level.

Land Disposal Restricted Wastes and Their Effective Dates 40 CFR 268, Appendix VII

Part 1--Land Disposal Restricted Wastes and Their Effective Dates

Waste Code	Waste Category	Effective Date
California list	Liquid hazardous wastes, including free liquids associated with solid or sludge, containing free cyanides at concentrations greater than or equal to 1000 mg/L or certain metals or compounds of these metals greater than or equal to the prohibition levels.	8 July 1987
California list	Liquid (aqueous) hazardous wastes having a pH less than or equal to 2.	8 July 1987
California list	Dilute HOC wastewaters, defined as HOC-waste mixtures that are primarily water and that contain greater than or equal to 1000 mg/L but less than 10,000 mg/L.	8 July 1987
California list	Liquid hazardous waste containing PCBs greater than or equal to 50 ppm.	8 July 1987
California list	Other liquid and nonliquid hazardous wastes containing HOCs in total concentration greater than or equal to 1000 mg/L.	8 November 1988

^a The previous table does not include mixed radioactive wastes (from the First, Second, and Third rules) that are receiving a national capacity variance until 8 May 1992, for all applicable treatment technologies. This table also does not include contaminated soil and debris wastes.

^b The standard has been revised in the Third Third Final Rule.

^c No land disposal standard has been revised in the Third Third Final Rule.

Appendix 4-4 (continued)

Part 2--Summary of Effective Dates of Land Disposal Restrictions for Contaminated Soil and Debris (CSD)

Restricted hazardous waste in CSD	Effective date
1. Solvent-(F001-F005) and dioxin-(F020-F023 and F026-F028) containing soil and debris from <i>CERCLA</i> response of <i>RCRA</i> corrective actions.	8 November 1990
2. Soil and debris not from <i>CERCLA</i> response or <i>RCRA</i> corrective actions contaminated with less than 1 percent total solvents (F001-F005) or dioxins (F020-F023 and F026-F028).	8 November 1990
3. Soil and debris contaminated with California list HOCs from <i>CERCLA</i> response or <i>RCRA</i> corrective actions.	8 November 1990
4. Soil and debris contaminated with California list HOCs not from <i>CERCLA</i> response or <i>RCRA</i> corrective actions.	8 July 1989
5. All soil and debris contaminated with First Third wastes for which treatment standards are based on incineration.	8 August 1990
6. All soil and debris contaminated with Second Third wastes for which treatment standards are based on incineration.	8 June 1991
7. All soil and debris contaminated with Third Third wastes or First or Second Third "soft hammer" wastes which had treatment standards promulgated in the Third Third rule, for which treatment standards are based on incineration, vitrification, or mercury retorting, acid leaching followed by chemical precipitation, or thermal recovery of metals; as well as all inorganic solids debris contaminated with D004-D011 wastes, and all soil and debris contaminated with mixed <i>RCRA</i> /radioactive wastes.	8 May 1992

NOTE: 1. Appendix VII is provided for the convenience of the reader. 2. Contaminated Soil and Debris Rule will be promulgated in the future.

Appendix 4-5

Commercial Chemical Products or Manufacturing Chemical Intermediates Identified as Acute Hazardous Waste 40 CFR 261.33(a) through 261.33(e)

(COMMENT: primary hazardous properties of these materials have been indicated by the letters (t) (toxicity), and (r) (reactivity); absence of a letter indicates that the compound only is listed for acute toxicity.)

Hazardous Waste No.	Substance
P023	Acetaldehyde, chloro-
P002	Acetamide, N-(aminothioxomethyl)-
P057	Acetamide, 2-fluoro-
P058	Acetic acid, fluoro-, sodium salt
P002	1-Acetyl-2-thiourea
P003	Acrolein
P070	Aldicarb
P004	Aldrin
P005	Allyl alcohol
P006	Aluminum phosphide
P007	5-(Aminomethyl)-3-isoxazolol
P008	4-Aminopyridine
P009	Ammonium picrate
P119	Ammonium vanadate
P099	Argebtate(1), bisticyno-C)-, potassium
P010	Arsenic acid
P012	Arsenic oxide As ₂ O ₃
P011	Arsenic oxide As ₂ O ₅
P011	Arsenic pentoxide
P012	Arsenic trioxide
P038	Arsine, diethyl
P036	Arsonous dichloride, phenyl
P054	Aziridine
P067	Aziridine, 2-methyl
P013	Barium cyanide
P024	Benzenamine, 4-chloro-
P077	Benzenamine, 4-nitro-
P028	Benzene, (chloromethyl)-
P042	1,2-Benzenediol, 4-[1-hydroxy- 2-(methylamino)ethyl]-
P046	Benzeneethanamine, alpha, alpha- dimethyl-
P014	Benzenethiol
P001	2H-1-Benzopyran-2-one, 4-hydroxy-3- (3-oxo-1-phenylbutyl)-, and salts when present at concentrations greater than 0.3%

Appendix 4-5 (continued)

Hazardous Waste No.	Substance
P028	Benzyl chloride
P015	Beryllium
P016	Bis(chloromethyl)ether
P017	Bromoacetone
P018	Brucine
P021	Calcium cyanide
P021	Calcium cyanide $\text{Ca}(\text{CN})_2$
P022	Carbon disulfide
P095	Carbonic dichloride
P023	Chloroacetaldehyde
P024	p-Chloroaniline
P026	1-(o-Chlorophenyl)thiourea
P027	3-Chloropropionitrile
P029	Copper cyanide
P029	Copper cyanide $\text{Cu}(\text{CN})$
P030	Cyanides (soluble cyanide salts), n.o.s.
P031	Cyanogen
P033	Cyanogen chloride
P033	Cyanogen chloride $(\text{CN})\text{Cl}$
P034	2-Cyclohexyl-4,6-dinitrophenol
P016	Dichloromethyl ether
P036	Dichlorophenylarsine
P037	Dieldrin
P038	Diethylarsine
P041	Diethyl-p-nitrophenyl phosphate
P040	O,O-Diethyl O-pyrazinyl phosphorothioate
P043	Diisopropyl fluorophosphate (DEP)
P004	1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a- hexahydro-, (1alpha,4alpha,4abeta,5alpha, 8alpha,8abeta)-
P060	1,4:5,8-Dimethanonaphthalene, 1,2,3,4,10,10-hexachloro-1,4,4a,5,8,8a- hexahydro-, (1alpha,4alpha,4abeta,5beta, 8beta,8abeta)-
P037	2,7:3,6-Dimethanonaph[2,3b]oxirane, 3,4,5,6,9,9-hexachloro-1a,2,2a,3, 6,6a,7,7a-octahydro-, (1-aalpha, 2beta,2aalpha,3beta,6beta,6aalpha, 7beta,7aalpha)-
P051	2,7:3,6-Dimethanonaph[2,3b]oxirane, octahydro-, (1aalpha,2beta,2abeta, 3alpha,6alpha,6abeta,7beta,7aalpha)-
P044	Dimethoate
P045	3,3-Dimethyl-1-(methylthio)-2-butanone, O-[(methylamino)carbonyl]oxime
P046	alpha, alpha-Dimethylphenethylamine
P047	4,6-Dinitro-o-cresol and salts
P048	2,4-Dinitrophenol

Appendix 4-5 (continued)

Hazardous Waste No.	Substance
P020	Dinoseb
P085	Diphosphoramidate, octamethyl-
P111	Diphosphoric acid, tetraethyl ester
P039	Disulfoton
P049	Dithiobiuret
P050	Endosulfan
P088	Endothall
P051	Endrin
P051	Endrin and metabolites
P042	Epinephrine
P031	Ethanedinitrile
P066	Ethanimidothioic acid, N-[(methylamino)carbonyl oxy]-, methyl ester
P101	Ethyl cyanide
P054	Ethyleneimine
P097	Famphur
P056	Fluorine
P057	Fluoroacetamide
p058	Fluoroacetic acid, sodium salt
p065	Fulminic acid, mercury(2+) salt
P059	Heptachlor
P062	Hexaethyl tetraphosphate
p116	Hydrazinecarbothioamide
P068	Hydrazine, methyl-
P063	Hydrocyanic acid
P063	Hydrogen cyanide
P096	Hydrogen phosphide
P064	Isocyanic acid, methyl ester
P060	Isodrin
P007	3(2H)-Isoxazolone, 5-(aminomethyl)-
P092	Mercury (acetato-O)phenyl-
P065	Mercury fulminate
P082	Methanamine, N-methyl-N-nitroso
P064	Methane, isocyanato-
P016	Methane, oxybis[chloro-
P112	Methane, tetranitro-
P118	Methanethiol, trichloro-
P050	6,9-Methano-2,4,3-benzodioxathlepen, 6,7,8,9,10,10-hexachloro- 1,5,5a,6,9,9a-hexahydro-,3-oxide
P059	4,7-Methano-1H-indene, 1,4,5,6,7,8,8- heptachloro-3a,4,7,7a-tetrahydro-
P066	Methomyl
P068	Methyl hydrazine
P064	Methyl isocyanate
P069	2-Methylactonitrile
P071	Methyl parathion
P072	alpha-Naphthylthiourea
P073	Nickel carbonyl

Appendix 4-5 (continued)

Hazardous Waste No.	Substance
P073	Nickel carbonyl, (T-4)-
P074	Nickel cyanide
P074	Nickel cyanide Ni (CN) ₂
P075	Nicotine and salts
P076	Nitric oxide
P077	p-Nitroaniline
P078	Nitrogen dioxide
P076	Nitrogen oxide NO
P078	Nitrogen oxide
P081	Nitroglycerine
P082	N-Nitrosodimethylamine
P084	N-Nitrosomethylvinylamine
P074	Nickel cyanide
P085	Octamethylpyrophosphoramidate
P087	Osmium oxide
P087	Osmium tetroxide
P088	7-Oxabicyclo[2.2.1]heptane 2,3- dicarboxylic acid
P089	Parathion
P034	Phenol, 2-cyclohexyl-4,6-dinitro
P048	Phenol, 2,4-dinitro
P047	Phenol, 2-methyl-4,6-dinitro- and salts
P020	Phenol, 2-(1-methylpropyl)-4,6-dinitro
P009	Phenol, 2,4,6-trinitro-, ammonium salt
P092	Phenylmercury acetate
P093	Phenylthiourea
P094	Phorate
P095	Phosgene
P096	Phosphine
P041	Phosphoric acid, diethyl 4- nitrophenyl ester
P039	Phosphorodithioic acid, O,O-diethyl S-[2-(ethylthio)ethyl] ester
P094	Phosphorodithioic acid, O,O-diethyl S-[(ethylthio)methyl] ester
P044	Phosphorodithioic acid, O,O-dimethyl S[2-(methylamino)-2-oxoethyl] ester
P043	Phosphorofluoric acid, bis(1-methylethyl) -ester
P089	Phosphorothioic acid, O,O-diethyl O- (4-nitrophenyl) ester
P040	Phosphorothioic acid, O,O-diethyl O- pyrazinyl ester

Appendix 4-5 (continued)

Hazardous Waste No.	Substance
P097	Phosphorothioic acid, O-[4-[(dimethylamino)sulfonyl]phenyl] O,O-dimethyl ester
P071	Phosphorothioic acid, O,O-dimethyl O- (4-nitrophenyl) ester
P110	Plumbane, tetraethyl-
P098	Potassium cyanide
P098	Potassium cyanide K(CN)
P099	Potassium silver cyanide
P070	Propanal, 2-methyl-2-(methylthio)-, O-[(methylamino)carbonyl]oxime
P101	Propanenitrile
P027	Propanenitrile, 3-chloro-
P069	Propanenitrile, 2-hydroxy-2-methyl
P081	1,2,3-Propanetriol, trinitrate
P017	2-Propanone, 1-bromo-
P102	Propargyl alcohol
P003	2-Propenal
P005	2-Propen-1-ol
P067	1,2-Propylenimine
P102	2-Propyn-1-ol
P008	4-Pyridinamine
P075	Pyridine, (S)-3-(1-methyl-2-pyrrolidinyl)-, (S)-, and salts
P103	Selenourea
P104	Silver cyanide
P104	Silver cyanide Ag(CN)
P105	Sodium azide
P106	Sodium cyanide
P106	Sodium cyanide Na(CN)
P108	Strychnidin-10-one, and salts
P018	Strychnidin 10-one, 2,3-dimethoxy-
P108	Strychnine and salts
P115	Sulfuric acid, dithallium(I) salt
P109	Tetraethyldithiopyrophosphate
P110	Tetraethyl lead
P111	Tetraethylpyrophosphate
P112	Tetranitromethane (r)
P062	Tetraphosphoric acid, hexaethyl ester
P113	Thallic oxide
P113	Thallium(III) oxide
P114	Thallium(I) selenite
P115	Thallium(I) sulfate
P109	Thiodiphosphoric acid, tetraethyl ester
P045	Thiofanox
P049	Thiomidodicarbonic diamide
P014	Thiophenol
P116	Thiosemicarbazide
P026	Thiourea, (2-chlorophenyl)-
P072	Thiourea, 1-naphthalenyl-

Appendix 4-5 (continued)

Hazardous Waste No.	Substance
P093	Thiourea, phenyl-
P123	Toxaphene
P118	Trichloromethanethiol
P119	Vanadic acid, ammonium salt
P120	Vanadium oxide V_2O_3
P120	Vanadium pentoxide
P084	Vinylamine, N-methyl-N-nitroso
P001	Warfarin, and salts, when present at concentrations greater than 0.3%
P121	Zinc cyanide
P121	Zinc cyanide $Zn(CN)_2$
P122	Zinc phosphide Zn_3P_2 , when present at concentrations greater than 0.3%

Appendix 4-6

Potentially Incompatible Hazardous Wastes

(*Law, Regulations, and Guidelines for Handling of Hazardous Waste*, California Department of Health, February 1975
(40 CFR 264, Appendix V))

Below are examples of potentially incompatible wastes, waste components, and materials, along with the harmful consequences that result from mixing materials in one group with materials in another group. The list is intended as a guide to indicate the need for special precautions when managing these potentially incompatible waste materials or components. This list is not intended to be exhaustive. Operators must, as the regulations require, adequately analyze their wastes so they can avoid creating uncontrolled substances or reactions of the type listed below, whether listed below or not.

In the lists below, the mixing of a *Group A* material with a *Group B* material may have the potential consequences as noted.

Group 1-A	Group 1-B
Acetylene sludge Alkaline caustic liquids Alkaline cleaner Alkaline corrosive liquids Alkaline corrosive battery acid Caustic wastewater Lime sludge and other corrosive alkalies Lime wastewater Lime and water Spent caustic	Acid sludge Acid and water Battery acid Chemical cleaners Electrolyte, acid Etching acid liquid or solvent Pickling liquor and other corrosive acids Spent acid Spent mixed acid Spent sulfuric acid

Potential Consequences: heat generation; violent reaction.

Appendix 4-6 (continued)

Group 2-A	Group 2-B
Aluminum Beryllium Calcium Lithium Magnesium Potassium Sodium Zinc powder Other reactive metals and metal hydrides	Any waste in Group 1-A or 1-B

Potential Consequences: fire; explosion; generation of flammable hydrogen gas.

Group 3-A	Group 3-B
Alcohols Water	Any concentrated waste in Groups 1-A or 1-B Calcium Lithium Metal hydrides Potassium SO_2Cl_2 , SOCl_2 , PCl_3 , CH_3SiCl_3 Other water-reactive waste

Potential Consequences: fire; explosion; heat generation; generation of flammable or toxic gases.

Group 4-A	Group 4-b
Alcohols Aldehydes Halogenated hydrocarbons Nitrated hydrocarbons Unsaturated hydrocarbons Other reactive organic compounds and solvents	Concentrated Group 1-A or Group 1-B wastes Group 2-A wastes

Potential Consequences: fire explosion; violent reaction.

Appendix 4-6 (continued)

Group 5-A	Group 5-B
Spent cyanide and sulfide solutions	Group 1-B wastes

Potential Consequences: generation of toxic hydrogen cyanide or hydrogen sulfide gas.

Group 6-A	Group 6-B
Chlorates Chlorine Chlorites Chromic acid Hypochlorites Nitrates Nitric acid, fuming Perchlorates Permanganates Peroxides Other strong oxidizers	Acetic acid and other organic acids Concentrated mineral acids Group 2-A wastes Group 4-A wastes Other flammable and combustible wastes

Potential Consequences: fire; explosion; violent reaction.

Appendix 4-7

Constituent Concentrations in Wastes (CCW) 40 CFR 268.43(a)

Waste Codes Regulated Hazardous Constituent with Applicable Chemical Abstract Service (CAS) No.	Concentrations	
	Wastewaters (mg/L) Notes	Nonwastewaters (mg/kg) Notes
D003 (CAS 57-12-5) (reactive cyanides category-- based on 261.23(a)(5))		
Cyanides (Total)	Reserved	590 (3)
Cyanides (Amenable)	0.86	30
D004* (CAS 7440-38-2)		
Arsenic	5.0	NA

1. Treatment standards for this organic constituent were established based upon incineration in units operated in accordance with the technical requirements of 40 CFR 264 Subpart O or 265 Subpart O, or based upon combustion in fuel substitution units operating in accordance with applicable technical requirements. A facility may certify compliance with these treatment standards according to provisions in 40 CFR 268.7.
2. Based on analysis of composite samples.
3. As analyzed using SW-846 Method 9010 or 9012; sample size 10 g; distillation time 1 h and 15 min.

* The treatment standards in this treatability group are based on incineration.

Section 5

Natural Resources Management

SECTION 5

NATURAL RESOURCES MANAGEMENT

A. Applicability

This section applies to all Civil Works facilities. Plans and programs for protection and management of natural resources such as soil, water, plants, and wildlife are included in this section.

This section integrates the requirements of these regulations into a single document that normally will apply to any facility with land management programs.

B. Federal Legislation

- *The National Environmental Policy Act (NEPA) of 1970.* The purpose of this Act, 42 U.S. Code (USC) 4321-4370c, as last amended in November 1990, was to declare a national policy which will encourage productive and enjoyable harmony between man and his environment. Additionally it provides for the promotion of efforts which will prevent or eliminate damage to the environment and biosphere and stimulate the health and welfare of man (42 USC 4321).
- *Endangered Species Act (ESA) of 1973.* The purpose of this Act, (16 USC 1531-1547, et al, last amended in October, 1988), is to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions for protection of endangered species (16 USC 1531(b)).
- *Sikes Act of 1960.* This Act, (16 USC 670a-670o, last amended in November 1989), authorizes the Secretary of Defense to carry out a program of planning, development, maintenance and coordination of wildlife, fish and game conservation and rehabilitation in military reservations in accordance with a cooperative plan mutually agreed upon by the Secretary of Defense, the Secretary of the Interior (SOI), and the appropriate state agency designated by the state in which the reservation is located (16 USC 670a(a)).
- *The Fish and Wildlife Conservation Act (FWCA) of 1980* (Public Law (PL) 96-366; 16 USC 2901 et seq) promotes state programs for the purpose of conserving, restoring, or otherwise benefiting nongame fish and wildlife, their habitats, and their uses.

- PL 86-337 (10 USC 2671) requires that all hunting, fishing, and trapping on USACE facilities be in accordance with the fish and game laws of the state in which the facility is located and that the hunters, fishers, and trappers possess appropriate state licenses.
- 10 USC 2665 provides for sales of forest products on Corps facilities. Funds generated by these sales are used to reimburse the forest management expenses and pay state entitlement (40 percent of facility net proceeds go to the state for county roads and schools).
- *Wild and Scenic Rivers Act of 1986*. This Act, (16 USC 1271-1287, last amended in May 1991), outlines the policy of the United States that certain selected rivers of the Nation which, with their immediate environments, possess outstandingly remarkable scenic, recreational, geologic, fish and wildlife, historic, cultural, or other similar values, must be preserved in free-flowing condition, and that they and their immediate environments must be protected for the benefit and enjoyment of present and future generations. The Congress declares that the established national policy of dam and other construction at appropriate sections of the rivers of the United States needs to be complemented by a policy that would preserve other selected rivers or sections thereof in their free-flowing condition to protect the water quality of such rivers and fulfill other vital national conservation purposes (16 USC 1271).

The purpose of this Act is to implement the declared policy of Congress by instituting a national wild and scenic rivers system, by designing the initial components of that system, and by prescribing the methods by which and standards to which additional components may be added to the system from time to time (16 USC 1272).

- *Farmland Protection Policy Act of 1981*. Within this Act, (7 USC 4201-4209, last amended in December 1991), Congress declares:
 - Federal actions, in many cases, result in the conversion of farmland to nonagricultural uses where alternative actions would be preferred
 - the Department of Agriculture is the agency primarily responsible for the implementation of federal policy with respect to U.S. farmland, assuring the maintenance of the agricultural production capacity of the United States, and
 - the Department of Agriculture and other federal agencies should take steps to assure that the actions of the federal government do not cause U.S. farmland to be irreversibly converted to nonagricultural uses in cases in which other national interests do not override the importance of the protection of farmland nor otherwise outweigh the benefits of maintaining farmland resources (7 USC 4201(a)).

The purpose of this Act is to minimize the extent to which federal programs contribute to the unnecessary and irreversible conversion of farmland to nonagricultural uses, and to assure that federal programs are administered in a manner that, to the extent practicable, will be compatible with state, unit of local government, and private programs and policies to protect farmland (7 USC 4201(b)).

- *Executive Order (EO) 11514*. This EO, issued on 5 March 1970 and amended by EO 11991, is a Presidential order which implements the *NEPA* of 1969. Under this EO, *Protection and Enhancement of Environmental Quality*, the Federal Government must provide leadership in protecting and enhancing the quality of the nation's environment to sustain and enrich human life. Federal agencies must initiate measures needed to direct their policies, plans, and programs so as to meet national environmental goals.
- EO 11987. This EO, *Exotic Organisms*, requires executive agencies to restrict the introduction of exotic species into natural ecosystems which they own or lease, and encourages the states to prevent such introductions.
- *Clean Water Act (CWA)*. Section 404 of the CWA (32 USC 1344) requires the identification, delineation, and protection of wetlands, and permits for actions that affect wetlands.
- EO 11988, *Floodplain Management*, and 11990, *Protection of Wetlands*. These EOs address the actions Federal agencies must take to:
 1. identify and protect wetlands and floodplains
 2. minimize the risk of flood loss and destruction of wetlands
 3. preserve and enhance the natural and beneficial values of both floodplains and wetlands.
- EO 11989. This EO, *Use of Off-Road Vehicles (ORVs) on the Public Lands*, specifies that ORVs may not be used on Federal lands without special use permits and only within specified locations.
- *The Migratory Bird Treaty Act* (PL 65-186; 50 CFR 20) protects migratory birds, their nests, and their eggs. Construction, repairs, and other such actions that can harm nests, eggs, or individual birds are covered under the Act. A depredation permit is required before any person may take, possess, or transport migratory birds, or disturb their nests, eggs, or young.
- EO 12088. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state,

and local environmental requirements and for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency provide sufficient funds for environmental compliance in its budget.

C. State/Local Regulations

States develop lists for their local endangered species.

States develop regulations and good management practices (GMPs) for the protection of surface waters and prevention of nonpoint source pollution. These GMPs primarily apply to agricultural and silvicultural (forestry) activities, but are also to be followed whenever an activity might affect surface waters or contribute to nonpoint source pollution. States establish regulations governing hunting and fishing activities. Special regulations for activities on Corps facilities may be developed in cooperation with the state wildlife management agency.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- Engineering Manual (EM) 385-1-1, *Safety and Health Requirements Manual*. This manual provides for the protection of natural resources through the development of wildfire prevention plan and a wildfire control plan.
- ER 200-2-2, *Procedures for Implementing NEPA*. This regulation provides instructions on the creation of environmental assessment (EA) and environmental impact statement (EIS) documents.
- ER 1130-2-400, *Management of Natural Resources and Outdoor Recreation at Civil Works Water Resource Projects*. This regulation outlines the basic parameters of the Natural Resources Management Program.
- ER 1130-2-406, *Shoreline Management at Civil Works Projects*. This regulation provides policy and guidance on the management of shorelines at Civil Works projects.
- ER 1130-2-435, *Preparation of Project Master Plans*. This regulation outlines the required contents of the Master Plan, which is a vital part of natural resources management.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to

prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

- Supplemental information can be found in the following ERs and manuals:

ER 1110-2-400	<i>Design of Recreation Sites, Areas, and Facilities</i>
ER 1130-2-405	<i>Use of Off-Road Vehicles on Civil Works Projects</i>
ER 1130-2-411	<i>Regulation of Seaplane Operations at Civil Works Water Resource Projects</i>
ER 1130-2-414	<i>Natural Resource Management System</i>
ER 1165-2-400	<i>Recreation, Planning, Development, and Management Policies</i>
EM 1110-1-400	<i>Recreation Planning and Design Criteria.</i>

E. Key Compliance Requirements

- Plans - The facility is required to develop master plans and keep them current for all Civil Works projects and other fee owned lands for which the Corps has administrative responsibility for management. Water resources projects are required to develop and maintain a project operational management plan (OMP) (ER 1130-2-400, para 6 and para 9-11 and ER 1130-2-435 para 5, para 8, and para 9).
- Land Management - A protective vegetative cover or other measure shall be provided to control dust and erosion damage. Known inactive hazardous waste sites should be identified. Facilities and areas with potential exposure to wildfire are required to develop a wildfire prevention plan and a wildfire control plan (EM 385-1-1, para 09.K.01 and para 09.K.02; ER 1110-1-400, para 5-4 and ER 1130-2-400 para 11(c)(1)).
- Floodplains/Wetlands - Floodplains and wetlands should be identified and protected by reviewing the OMP (GMP).
- Forests - Effective forest management will provide for the sustained production of timber and/or be compatible with multiple use resource management objectives. This includes ensuring that volume inventories are kept, and small volume sales are done in accordance with regulations. Emphasis should be placed on the maintenance and restoration of habitat favorable to the production of indigenous fish and wildlife. The fish and wildlife plan should address managing all indigenous species (ER 1130-2-400, para 11(1)).
- Shoreline - Each Corps project where private shoreline use is allowed will have a Lakeshore Management Plan, which will contain an area allocation map.

descriptions of recreational waste management systems, and a plan for managing the lakeshore. The plan is required to be reviewed every 5 yr (ER 1130-2-406, para 4(c)).

- **Endangered/Threatened Species** - Facilities with Federally designated endangered and threatened species must carry out programs for their conservation. A survey will be done to determine if the facility has any such species, and measures taken to maintain them. All facilities must review proposed actions and activities to ensure that they are not likely to jeopardize the continued existence of a listed species or to destroy or adversely modify its critical habitat (40 CFR 1500, 50 CFR 402.01(a), 402.10, and 402.12; ER 200-2-2).
- **EISs/EAs** - A facility must produce an EIS if a proposed action causes potential for significant degradation of environmental quality, significant threat to public health or safety, there is public controversy concerning significance or nature of the biophysical, environmental impact of an action, or potential for significant impact on protected natural or historic sources. An EA may be produced before any contract for action is entered into or action is begun to determine if an EIS is necessary. All EAs must prompt either the preparation of a finding of no significant impact (FNSI) or an EIS. When used, FNSIs must contain certain elements, such as the name of the action, a brief description of the action, a discussion of environmental effects, the conclusions that have led to the FNSI, and the date of approval and Environmental Protection Committee (EPC) chairperson's signature. If an EIS must be prepared, the facility must then follow the directions outlined in 32 CFR 989.12 and supplemented by ER 200-2-2 for preparing and processing an EIS (40 CFR 1502.4, 1502.10 through 1502.13, 1503.4(i), 1508.9, and 1508.13; ER 200-2-2 para 6 and para 10 through para 13).

F. Key Compliance Definitions

- **Action** - all activities or programs of any kind authorized, funded, or carried out, in whole or in part, by Federal agencies in the United States or upon the high seas. Examples include, but are not limited to (50 CFR 402.02):
 1. actions intended to conserve listed species or their habitats
 2. the promulgation of regulations
 3. the granting of licenses, contracts, leases, easements, rights-of-way, permits, or grants-in-aid
 4. actions directly or indirectly causing modifications to the land, water, or air.
- **Action Area** - all areas that will be affected directly or indirectly by a Federal action, not merely the immediate area involved in the action (50 CFR 402.02).

- *Candidate Species* - any species being considered by the SOI for listing as threatened or endangered species (50 CFR 404.02).
- *Critical Habitat* - specific areas within the geographic area commonly occupied by a species which contain features essential to the conservation of the species and which may require special management considerations or protection. Specific areas outside the currently occupied range of a threatened or endangered species may be determined by the SOI as areas essential for the conservation of the species (50 CFR 424.02).
- *Destruction or Adverse Modification* - a direct or indirect alteration that appreciably diminishes the value of critical habitat for both the survival and recovery of a listed species. Such alterations include, but are not limited to, alterations adversely modifying any of those physical or biological features that were the basis for determining the habitat to be critical (50 CFR 402.02).
- *Endangered Species* - any species in danger of extinction throughout all or a significant portion of its range (other than a species of the Class Insect determined to constitute a pest). Federally listed endangered species are officially designated by the Department of the Interior (DOI) (50 CFR 81.1).
- *Environmental Assessment (EA)* - a concise public document for which a Federal agency is responsible that serves to provide sufficient evidence and analysis for determining whether to prepare an EIS or an FNSI (40 CFR 1508.9).
- *Environmental Impact Statement (EIS)* - a detailed statement by the responsible official on: (40 CFR 1508.11)
 1. the environmental impact of the proposed action
 2. any adverse environmental effects which cannot be avoided should the proposal be implemented
 3. alternatives to the proposed action
 4. the relationship between local short-term uses of the environment and the maintenance and enhancement of long-term productivity.
 5. any irreversible and irretrievable commitments of resources which would be involved in the proposed action should it be implemented.
- *FNSI (Finding of No Significant Impact)* - a document that briefly presents the reasons why an action, not otherwise excluded, does not need an EIS (40 CFR 1508.13).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Jeopardize the Continued Existence of* - to engage in an action that reasonably would be expected, directly or indirectly, to reduce appreciably the likelihood

of both the survival and recovery of a listed species in the wild by reducing the reproduction, numbers, or distribution of that species (50 CFR 402.02).

- *NOI (Notice Of Intent)* - a notice that an EIS will be prepared and considered. It should contain (40 CFR 1508.22):
 1. a description of the proposed action and possible alternatives
 2. the proposed scoping process and schedule
 3. the name and address of the person who can give more information.
- *Threatened Species* - any species likely to become an endangered species within the foreseeable future throughout all, or a significant portion, of its range. Federally listed threatened species are officially designated by the DOI (50 CFR 81.21).

DEFINITIONS: NA - Not Applicable to the Facility; RMA - Requires Management Action; C - In Compliance

NATURAL RESOURCES MANAGEMENT

Records to Review

- Environmental Impact Documentation
- Master Plan
- Project Master Plan
- OMP
- Land Use Plan
- Land Management Plan
- Fish and Wildlife Plan
- Fish and Wildlife Cooperative Agreement
- Outdoor Recreation Plan
- Outdoor Recreation Cooperative Agreement
- Cropland and Grazing Plan
- Forest Management Plan
- Grounds Maintenance Contracts
- Agricultural and Grazing Lease Contracts

Physical Features to Inspect

- Construction sites (erosion control, runoff, sedimentation, and landscaping)
- Facilities constructed in the past 2 yr (erosion and landscaping)
- Wildlife containment areas (condition and management)
- Wildlife habitat and land and water resources (condition and management)
- Equipment that could damage wildlife, its habitat, or land and water resources (use and control)
- Grounds maintenance areas (beautification and condition)
- Forest management areas (condition and management)
- Agricultural and grazing lease areas (condition and management)
- Stormwater drainage areas and improvements (condition)
- Erosion sites (condition and erosion)
- Shorelines

People to Interview

- Natural Resources Management (Division, District)
- Environmental Compliance Coordinator (ECC)
- Engineering
- Operations
- Real Estate
- Planning
- Project Resource Manager
- Facility Managers

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. The chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Section 6

Pesticide Management

SECTION 6

PESTICIDE MANAGEMENT

A. Applicability

This section applies to any U.S. Army Corps of Engineers (USACE) Civil Works project, facilities, and activities which use, store, or handle pesticides. Pesticides are regulated on the Federal level by the U.S. Environmental Protection Agency (USEPA), on the state level, and by specific USACE regulations. This section integrates the requirements of these regulations into a single document that will normally apply to any facility that handles pesticides.

B. Federal Legislation

- *The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)*, as amended. This Act, Public Law (PL) 92-516 (7 U.S. Code (USC) 136 et seq.) requires the registration of new pesticides and, when pesticides are reregistered, requires that they will not present any unreasonable risks to human health or the environment if used according to label directions. *FIFRA* regulations apply to people who manufacture, market, formulate, distribute, use, or dispose of pesticides and pesticide containers.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO, of 13 October 1978, requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for ensuring that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements and for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency provide sufficient funds for environmental compliance in its budget.

C. State/ Local Requirements

- State pesticide regulatory programs are to be at least as stringent as the *FIFRA*. State and local programs typically contain regulations that are tailored to an industry or activity that is prevalent or particularly sensitive in a state. State and local pesticide regulations in many cases provide more stringent standards or specifically identify a requirement that may be qualitatively regulated under the Federal program.

State and local pesticide programs generally include regulations that address the following topics:

1. restrictions or requirements for the sale, distribution, or use of selected pesticides
2. disposal requirements for excess pesticides and pesticide wastes such as pesticide containers
3. restrictions on the control of specific animal or insect species
4. specifications for bulk pesticide storage tanks, storage facilities
5. operational requirements for selected application methods
6. recordkeeping and applicator certification requirements.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations.

- ER 1130-2-413, *Pest Control Program for Civil Works Projects*. This regulation sets forth policy and responsibilities and prescribes the procedures for the operation of a pest management program at Corps Civil Works projects. This regulation establishes the Corp's policy to perform integrated pest management in a manner that provides for the safety of the environment, the public, and the pesticide applicator. The regulation also provides for the training and/or certification of personnel in proper and safe methods of applying, storing, and disposing of pesticides.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.
- Supplemental information can be found in Technical Information Memoranda (TIM), published by the Armed Forces Pest Management Board, which provide specific criteria and procedures for the operation of a pest management program. The following TIM are applicable:

TIM No. 14	<i>Protective Equipment for Pest Control Personnel</i>
TIM No. 15	<i>Pesticide Spill Prevention and Management</i>
TIM No. 17	<i>Pest Control Facilities</i>
TIM No. 18	<i>Installation Pest Management Program Guide</i>
TIM No. 21	<i>Pesticide Disposal Guide for Pest Control Shops</i>

E. Key Compliance Requirements

- Pest Management Program (PMP) - Each District is required to implement a PMP with a designated, trained, single point-of-contact (POC) who controls the District pest control (ER 1130-2-413, para 6(a)(2)).
- Pesticide Control Plan - Field offices are required annually to prepare a Pesticide Control Plan that is submitted to the District office (ER 1130-2-413, para 6(b)).
- Pesticide Application - Application of general use pesticides must be conducted by a person trained and/or certified in the application of pesticides. People applying restricted use pesticides must be certified to apply restricted use pesticides. Health monitoring must be provided for government personnel applying pesticides other than bug bombs, space sprays, and no-pest strips. The application of pesticides must not jeopardize the existence of threatened or endangered species. Records of each application will be kept (40 CFR 171.9, 50 CFR 402; ER 1130-2-412, para 6(a) and ER 1130-2-413, para 2(d), para 6(a), para 7(b), and para 8(d)).
- Pesticide Storage, Mixing, and Preparation Facilities - Pesticide storage, mixing, and preparation facilities must provide facilities and procedures to ensure safety of personnel, including proper ventilation and use of appropriate safety equipment. A spill containment system constructed of impervious materials is required to provide containment for pesticide storage, mixing, preparation and management areas. Storage facilities for pesticides are required to have ventilation at a rate of 10 air changes per hour, separate drainage systems, and fire exits. Pesticide storage areas must be inspected quarterly by certified application personnel and a safety and fire prevention officer (29 CFR 1910.133 and ER 1130-2-413, para 9 and Appendix D).
- Highly Toxic Pesticide Storage and Use - Storage facilities for pesticides and excess pesticides classed as highly toxic or moderately toxic that are labeled DANGER, POISON, or with the skull and crossbones symbol, must meet specific structural, operational, and storage requirements. These include pesticides being kept in a dry, separate room with fire protection which is not near food or feed, and in containers in good condition with plainly visible labels. Pest management programs that use pesticides classed as highly or moderately toxic must have decontamination facilities, provide facilities and procedures to ensure the safety of personnel, post signs and safety procedures, and notify local fire departments, hospitals, public health officials, and police departments, in writing, in the event of a fire, that pesticides are being stored (ER 1130-2-413, para 9 and Appendix D).

- **Pesticide Disposal** - Facilities are required to dispose of any pesticide, pesticide container, or pesticide residue in a manner consistent with labeling, not including open dumping or burning. Organic pesticides other than organic mercury, lead, cadmium and arsenic compounds, must be disposed of according to specific procedures; options include incineration at an incinerator that meets air quality standards for gaseous emissions. Metallo-organic pesticides, except organic mercury, lead, cadmium or arsenic compounds, must be disposed of according to specific procedures, including appropriate treatment to recover heavy metals, and the use of an approved incinerator or specially designated landfill for disposal. Containers must be disposed of according to their classification as either a Group I, Group II or Group III container. Pesticide residues and rinse liquids must be added to spray mixtures or disposed of according to their pesticide type (40 CFR 165.7 and ER 1130-2-413, para 10(b)).

F. Key Compliance Definitions

These definitions were obtained from Federal regulations and ERs previously cited in this section.

- **Acute LD₅₀** - a statistically derived estimate of the concentration of a substance that would cause 50 percent mortality to the test population under specified conditions (40 CFR 152.3).
- **Bug Bombs and Space Sprays** - includes all general use insecticides that are packaged by the manufacturer in aerosol containers of small quantities (approximately 16 oz [497.66 g] per container), and are available for over-the-counter purchase by any person without regard to applicator certification status (ER 1130-2-413, Appendix A).
- **Caution** - the human hazard signal word required on the front panel of a pesticide container as determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category III or IV must bear on the front panel the signal word CAUTION (see *Toxicity Category*) (40 CFR 156.10(h)).
- **Commercial Applicator** - a certified applicator, other than a private applicator, who uses or supervises the use of any pesticide, for any purpose, on any property, or who performs other pest control-related activities (40 CFR 171.2).
- **Crisis Exemption** - utilized in an emergency condition when the time from discovery of the emergency to the time when the pesticide use is needed is insufficient to allow for the authorization of a specific *Quarantine Exemption* or *Public Health Exemption* (40 CFR 166.2).

- *Danger* - the human hazard signal word required on the front panel of a pesticide container as determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category I must bear on the front panel the signal word DANGER (see *Toxicity Category*) (40 CFR 156.10(h)).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Group I Containers* - combustible containers which formerly contained organic or metallo-organic pesticides, except for organic mercury, lead, cadmium, or arsenic compounds, and should be disposed of in a pesticide incinerator or buried in a specially designated landfill, in accordance with 40 CFR 165.8(a), except for small quantities of such containers, which may be burned in open fields by the pesticide user when such open burning is permitted by state and local regulations, or buried singly by the user in open fields with due regard for protection of surface and subsurface water (40 CFR 165.8).
- *Group II Containers* - noncombustible containers which formerly contained organic or metallo-organic pesticides, except for organic mercury, lead, cadmium, or arsenic compounds, and should first be triple-rinsed. Containers in good condition may then be returned to the pesticide manufacturer or formulator, or to the drum reconditioner for reuse with the same chemical class of pesticide previously contained, providing such reuse is legal under current applicable U.S. Department of Transportation (DOT) regulations, including those set forth in 49 CFR 173.28. Other rinsed metal containers should be punctured to facilitate drainage prior to transport to a facility for recycling as a scrap metal or for disposal. All rinsed containers may be crushed and disposed of by burial in a sanitary landfill, in conformance with state and local standards, or buried in the field by the pesticide user. Unrinsed containers should be disposed of in a specially designated landfill or incinerated in a pesticide incinerator.
- *Group III Containers* - containers (both combustible and noncombustible) which formerly contained organic mercury, lead, cadmium, arsenic, or inorganic pesticides, and that have been triple-rinsed and punctured to facilitate drainage, and which must be disposed of in a sanitary landfill. Such containers that are not rinsed should be encapsulated and buried in a specially designated landfill.
- *Imminent Hazard* - a situation that exists when the continued use of a pesticide during the time required for cancellation proceedings would likely result in unreasonable adverse effects on the environment or will involve unreasonable hazard to the survival of a species declared endangered by the Secretary of the Interior (SOI) under PL 91-135 (40 CFR 165.1).

- *Pesticide* - any substance, or mixture of substances, intended for preventing, destroying, repelling, or mitigating any pest, or intended for use as a plant regulator, defoliant, or disinfectant and further categorized into the following (40 CFR 165.1):
 1. *Excess pesticides* - pesticides that cannot be legally sold pursuant to the *FIFRA* or that are to be discarded
 2. *Organic pesticides* - carbon-containing substances used as pesticides, excluding metallo-organic compounds
 3. *Inorganic pesticides* - noncarbon-containing substances used as pesticides
 4. *Metallo-organic pesticides* - a class of organic pesticides containing one or more metal or metalloid atoms in the structure.
- *Pesticide Product* - a pesticide in a particular form (including composition, packaging, and labeling) in which the pesticide is, or is intended to be, distributed or sold. This includes any physical apparatus used to deliver or apply the pesticide if distributed or sold with the pesticide (40 CFR 152.3).
- *Public Health Exemption* - authorized in an emergency condition to control a pest that will cause a significant risk to human health (40 CFR 166.2).
- *Quarantine Exemption* - authorized in an emergency condition to control the introduction or spread of any pest new to or not therefore known to be widely prevalent or distributed within and throughout the United States and its territories (40 CFR 166.2).
- *Restricted Use Pesticides* - pesticides designated for restricted use under the provisions of Section 3(d)(1)(c) of the *FIFRA* (40 CFR 171.2).
- *Specific Exemption* - this exemption may be authorized in an emergency condition to avert (40 CFR 166.2):
 1. a significant economic loss
 2. a significant risk to endangered species, threatened species, beneficial organisms, or the environment.
- *Toxicity Category* - serves as the basis for required warnings and precautionary statements for pesticides. The category is assigned on the basis of the highest hazard shown in the table listed in 40 CFR 156.10 (40 CFR 156.10(h)).
- *Warning* - the human hazard signal word required on the front panel of a pesticide container as determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category II shall bear on the front panel the signal word WARNING (see *Toxicity Category*) (40 CFR 156.10(h)).

(NOTE Office of Counsel should be considered a point of contact for all compliance requirements and violations.)

DEFINITIONS: NA - Not Applicable to the facility; RMA - Requires Management Action; C - In Compliance

PESTICIDE MANAGEMENT

Records to Review

- Records of pesticides purchased by the facility (purchase orders, inventory)
- Pesticide application records
- Description of the facility's pest control program
- Certification status of pesticide applicators
- Pesticide disposal manifests
- Contract files
- Any emergency exemption granted to the Federal agency by the USEPA

Physical Features to Inspect

- Personnel protection equipment
- Pesticide application equipment
- Pesticide storage areas, including storage containers

People to Interview

- Natural Resources Manager (Division, District)
- Engineering
- Operations (Division, District)
- Environmental Compliance Coordinator (ECC)
- Safety and Occupational Health Office
- Planning
- Project Resource Manager
- Facility Managers
- Lab Manager

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. The chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Restricted Use Pesticides

(40 CFR 152.175)

The following uses of pesticide products containing the active ingredients specified below have been classified for restricted use and are limited to use by or under the direct supervision of a certified applicator.

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Acrolein	As sole active ingredient. No mixtures registered.	All uses.	Restricted	Inhalation hazard to humans. Residue effects on avian species and aquatic organisms.
Acrylonitrile	In combination with carbon tetrachloride. No registrations as the sole active ingredient.	do*	do	Other hazards-accident history of acrylonitrile and carbon tetrachloride products.
Aldicarb	As sole active ingredient.	Ornamental uses (indoor and outdoor).	do	Other hazards-accident history.
	No mixtures registered.	Agricultural crop uses.	Under further evaluation.	
Allyl alcohol	All formulations.	All uses.	Restricted	Acute dermal toxicity.
Aluminum phosphide	As sole active ingredient. No mixtures registered.	do	do	Inhalation hazard to humans.

*do means same as above

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Azinphos methyl	All liquids with a concentration greater than 13.5 pct.**	do	do	do
	All other formulations.	do	Under further evaluation.	
Calcium cyanide	As sole active ingredient. No mixture registered.	do	Restricted	do
Carbofuran	All concrete suspensions and wettable powders 40% and greater.	do	do	Acute inhalation toxicity.
	All granular formulations.	Rice	Under evaluation.	
	All granular and fertilizer formulations.	All uses except rice.	do	
Chlorfenvinphos	All concentrate solutions or emulsifiable concentrates 21% and greater.	All uses (domestic and non-domestic).	Restricted	Acute dermal toxicity.
Chloropicrin	All formulations greater than 2%.	All uses	Restricted	Acute inhalation toxicity
	All formulations.	Rodent control	Restricted	Hazard to non-target organisms.
	All formulations 2% and less.	Outdoor uses (other than rodent control).	Unclassified	

**pct represents percent

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ⁱ	Criteria Influencing Restriction
Clo nitralid	All wettable powders 70% and greater.	All uses.	do	Acute inhalation toxicity.
	All granulars and wettable powders.	Molluscide uses.	do	Effects on aquatic organisms.
	Pressurized sprays 0.55% and less.	Hospital antiseptics.	Unclassified	
Cyclo-heximide	All formulations greater than 4%.	All uses.	Restricted	Acute dermal toxicity.
	All formulations 0.027% to 4%.	All uses.	Under evaluation.	
	All formulations 0.027% and less.	Domestic uses.	Unclassified	
Demeton	1 pct fertilizer formulation, 1.985 pct granular.	All uses, including domestic uses.	Restricted	Domestic uses: Acute oral toxicity Acute dermal toxicity. Nondomestic outdoor uses. Residue effects on avian and mammalian species.
	All granular formulations, emulsifiable concentrates and concentrated solutions.	All uses.	do	Acute dermal toxicity. Residue effects on mammalian and avian species.
Dicrotophos	All liquid formulations 8% and greater.	All uses.	Restricted	Acute dermal toxicity; residue effects on avian species (except for tree injections).

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Dioxathion	All concentrate solutions or emulsifiable concentrates ² greater than 30%.	All uses	Restricted	Acute dermal toxicity.
	Concentrate solutions or emulsifiable concentrates ² 30% and less and wettable powders 25% and less.	Livestock and agricultural uses (nondomestic uses only).	Unclassified	
	All solutions ² 3% and greater ²	Domestic	Restricted	do
	2.5% solutions ² with toxaphene and malathion.	All uses.	Under evaluation.	
Disulfoton	All emulsifiable concentrates 65% and greater, all emulsifiable concentrates and concentrate solutions 21% and greater with fensulfothion 43% and greater, all emulsifiable concentrates 32% and greater in combination with 32% fensulfothion and greater.	do	Restricted	do Acute inhalation toxicity.
	Non-aqueous solution 95% and greater.	Commercial seed treatment.	Restricted	Acute dermal toxicity.
	Granular formulations 10% and greater.	Indoor uses (greenhouse).	do	Acute inhalation toxicity.

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Endrin	All emulsions, dusts, wettable powders, pastes, and granular formulations 2 pct and above.	All uses.	Restricted.	Acute dermal toxicity. Hazard to nontarget organisms.
	All concentrations less than 2 pct.	do	do	Hazard to non-target organisms.
EPN	All liquid and dry formulations greater than 4%.	All uses.	Restricted	Acute dermal toxicity; acute inhalation toxicity; residue effects on avian species.
		Aquatic uses.	Restricted	Effects on aquatic organisms.
Ethoprop	Emulsifiable concentrates 40% and greater.	do	do	Acute dermal toxicity.
	All granular and fertilizer formulations.	do	Under evaluation.	
Ethyl parathion	All granular and dust formulations greater than 2 pct, fertilizer formulations, wettable powders, emulsifiable concentrates, concentrated suspensions, concentrated solutions.	do	Restricted	Inhalation hazard to humans. Acute dermal toxicity. Residue effects or mammalian, aquatic, avian species.
	Smoke fumigants.	do	do	Inhalation hazard to humans.
	Dust and granular formulations 2 pct and below.	do	do	Other hazards-accident history.

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Fenamiphos	Emulsifiable concentrates 35% and greater.	do	do	Acute dermal toxicity.
Fensulfothion	Concentrate solutions 63% and greater, all emulsifiable concentrates and concentrate solutions 43% and greater with disulfoton 21% and greater, all emulsifiable concentrates 32% and greater in combination with disulfoton 32% and greater.	do	Restricted	do
	Granular formulations 10% and greater.	Indoor uses (greenhouse).	do	do
Fluoroacetamide/1081	As sole active ingredient in baits. No mixtures registered.	All uses.	Restricted	Acute oral toxicity.
Fonofos	Emulsifiable concentrates 44% and greater.	All uses.	do	Acute dermal toxicity.
	Emulsifiable concentrates 12.6% and less with pebulate 50.3% and less.	Tobacco	Unclassified	

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Hydrocyanic acid	As sole active ingredient. No mixtures registered.	do	do	Inhalation hazard to humans.
Methamidophos	Liquid formulations 40% and greater.	All uses	Restricted	Acute dermal toxicity; residue effects on avian species.
	Dust formulations 2.5% and greater.	All uses	Restricted	Residue effects on avian species.
Methidathion	All formulations.	All uses except stock, safflower, and sunflower.	Restricted	Residue effects on avian species.
	All formulations.	Nursery stock, safflower, and sunflower	Unclassified	
Methomyl	As sole active ingredient in 1 pct to 2.5 baits (except 1 pct fly bait).	Nondomestic outdoor agricultural crops, ornamental and turf. All other registered uses.	Restricted.	Residue effects on mammalian species.
	All concentrated solution formulations.	do	do	Other hazards-accident history.
	90 pct wettable powder formulations (not in water soluble bags).	do	do	do
	90 pct wettable powder formulation in water soluble bags.	do	Unclassified	

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Methomyl (continued)	All granular formulations.	do	do	
	25 pct wettable powder formulations.	do	do	
	In 1.24 pct to 2.5 pct dusts as sole active ingredient and in mixtures with fungicides and chlorinated hydrocarbon, inorganic phosphate and biological insecticides.	do	do	
Methyl bromide	All formulations in containers greater than 1.5 lb	All uses.	Restricted	Other hazards-accident history.
	Containers with not more than 1.5 lb of methyl bromide with 0.25 pct to chloropicrin as an indicator.	Single applications (nondomestic use) for soil treatment in closed systems.	Unclassified	
	Containers with not more than 1.5 lb having no indicator.	All uses.	Restricted	do
Methyl parathion	All dust and granular formulations less than 5 pct.	do	do	Other hazards-accident history. All foliar applications restricted based on residue

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Methyl parathion (continued)				effects on mammalian and avian species.
	Microencapsulated. All dust and granular formulations 5 pct and greater and all wettable powders and liquids.	do	do	Residue effects on avian species. Hazard to bees. Acute dermal toxicity. Residue effects on mammalian and avian species.
Mevinphos	All emulsifiable concentrates and liquid concentrates.	do	do	do
	Psycodid filter fly liquid formulations.	do	do	Acute dermal toxicity.
	2 pct dusts.	do	do	Residue effects on mammalian and avian species.
Monocrotophos	Liquid formulations 19% and greater.	do	do	Residue effects on avian species.
	Liquid formulations 55% and greater.	do	do	Residue effects on mammalian species. Acute dermal toxicity. Residue effects on avian species. Residue effects on mammalian species.
Nicotine (alkaloid)	Liquid and dry formulations 14% and above.	Indoor (greenhouse)	Restricted	Acute inhalation toxicity.
	All formulations.	Applications to cranberries	Restricted	Effects on aquatic organisms.

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Nicotine (alkaloid) (Continued)	Liquid and dry formulations 1.5% and less.	All uses (domestic and non-domestic).	Unclassified	
Paraquat (dichloride) and paraquat bis(methyl sulfate)	All formulations and concentrations except those listed below. Pressurized spray formulations containing 0.44 pct Paraquat bis(methyl sulfate) and 15 pct petroleum distillates as active ingredients. Liquid fertilizers containing concentrations of 0.025 pct paraquat dichloride and 0.03 percent atrazine; 0.03 pct paraquat dichloride and 0.37 pct atrazine; 0.04 pct paraquat dichloride and 0.49 pct atrazine.	All uses. Spot weed and grass control.	Restricted do	Other hazards. Use and accident history, human toxicological data
		All uses.	Unclassified	
Phorate	Liquid formulations 65% and greater.	do	Restricted	Acute dermal toxicity. Residue effects on avian

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Phorate (continued)				applications only). Residue effects on mammalian species (applies to foliar application only). Effects on aquatic organisms.
	All granular formulations.	Rice	Restricted	
Phosacetim	Baits 0.1% and greater.	All uses.	Restricted	Hazard to non-target species. Residues effects on mammalian species. Residue effects on avian species.
Phosphamidon	Liquid formulations 75% and greater.	do	do	Acute dermal toxicity. Residue effects on mammalian species. Residue effects on avian species. Residue effects on mammalian species.
	Dust formulations 1.5% and greater.	do	do	
Picloram	All formulations and concentrations except tordon 101R.	do	do	Hazard to non-target organisms (specifically nontarget plants both crop and noncrop).
	Tordon 101 R forestry herbicide containing 5.4 pct picloram and 20.9 pct 2,4-D.	Control of unwanted trees by cut surface treatment.	Unclassified	

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification¹	Criteria Influencing Restriction
Sodium cyanide ³	All capsules and ball formulations.	All uses.	Restricted	Inhalation hazard to humans.
Sodium fluoroacetate	All solutions and dry baits.	do	do	Acute oral toxicity. Hazard to nontarget organisms. Use and accident history.
Strychnine	All dry baits, pellets and powder formulations greater than 0.5 pct.	do	do	Acute oral toxicity. Hazard to non-target avian species. Use and accident history.
	All dry baits, pellets and powder formulations.	All uses calling for burrow builders.	do	Hazard to non-target organisms.
	All dry baits, and pellets and powder formulations 0.5 pct and below.	All uses except subsoil.	do	do
	do	All subsoil uses.	Unclassified	do
Sulfotepp	Sprays and smoke generators.	All uses.	Restricted	Inhalation hazard to humans.
Tepp	Emulsifiable concentrate formulations.	do	do	Inhalation hazard to humans. Dermal hazard to humans. Residue effects on mammalian and avian species.

Appendix 6-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification ¹	Criteria Influencing Restriction
Zinc Phosphide	All formulations 2% and less.	All domestic uses and non-domestic uses in and around buildings.	Unclassified	
	All dry formulations 60% and greater.	All uses.	Restricted	Acute inhalation toxicity.
	All bait formulations	Nondomestic outdoor uses (other than around buildings).	Restricted	Hazard to nontarget organisms.
	All dry formulations 10% and greater.	Domestic uses.	Restricted	Acute oral toxicity.

NOTE:

- ¹ *Under evaluation* indicates that no classification decision has been made and the use/formulation in question is still under active review within the USEPA.
- ² Percentages given are the total of dioxathion plus related compounds.
- ³ M-44 sodium cyanide capsules may only be used by certified applicators who have also taken the required additional training.

This table lists uses of pesticide products containing the active ingredients specified that have been classified for restricted use and are limited to use by or under the direct supervision of a certified applicator.

Section 7

Petroleum, Oil, and Lubricant (POL) Management

SECTION 7

POL MANAGEMENT

A. Applicability

This section applies to U.S. Army Corps of Engineers (USACE) facilities that store, transport, dispose of, or utilize petroleum-based fuels, oil, and lubricants (POL). The section presents review action items that respond to regulations, procedures, and organizational mechanisms designed to prevent or limit the accidental release of POL materials to surface water, groundwater, or soils. Procedures designed to review the control of Volatile Organic Compounds (VOCs) from POL sources are addressed in Section 1, *Air Emissions Management*.

This section covers POL management of bulk storage tanks, organizational tanks, pipeline delivery systems, truck fill stands, and immediate operating storage areas. POL materials addressed include petroleum, diesel fuel, and lubricating oils. The storage of POL materials in Underground Storage Tanks (USTs) is addressed in Section 10, *Underground Storage Tank (UST) Management*. The storage of POL products on floating plants is addressed in Section 13, *Floating Plant Management*.

POL Management is regulated by Federal (U.S. Environmental Protection Agency (USEPA)) and state regulatory agencies. The implementation of the required regulatory responses at the project level are based on Engineer Regulations (ERs) and technical orders (TOs). The primary focus of the review section worksheets is the organizational mechanisms that control or prevent environmental releases at the source.

B. Federal Legislation

- *The Water Quality Improvement Act of 1974*. This law was the primary Federal law governing the discharge of oil into navigable waters. This regulation prohibits the discharge of *harmful* quantities of oil into navigable waters. 40 Code of Federal Regulations (CFR) 110, *Protection of Environment - Discharge of Oil*, defines *harmful* quantities as those discharges that will cause a sheen or discoloration of the surface of the water or a sludge or emulsion to be deposited beneath the surface of the water.

- *The Oil Pollution Act of 1990*. This law, Public Law (PL) 301-308 (33 U.S. Code (USC) 2701-2761, et. al.) as amended, requires the prevention of oil pollution into navigable waters by tank vessels. See Section 13, *Floating Plant Management*, for additional requirements promulgated under this statute.
- Executive Order (EO) 12088. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/ Local Regulations

- Many states and some major metropolitan and regional planning agencies have developed legislation and implemented regulations that closely parallel the Federal requirements. Some, however, may differ in important ways and the evaluator should obtain copies of the state or local requirements for Oil and Hazardous Substances Pollution Contingency (OHSPC) and Spill Prevention Control and Countermeasures (SPCC) Plans, where appropriate, and review them for those differences before conducting the evaluations. In particular, the evaluator should check for differences in the definitions of reportable quantities and the specific procedures for reporting spills that may exist in state/local regulations.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- ER 1130-2-434, *Response to Oil and Hazardous Substance Incidents*. This regulation provides general policy and guidance concerning the response and preparation for response by operations personnel to oil spill incidents.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- **Plans** - Facilities that store, transport, or dispense petroleum products are required to prepare an SPCC Plan, unless certain criteria are met. The SPCC Plan is required to contain general information about the facility, name and title of the designated coordinator, and an inventory of all storage, handling, and transfer facilities. Each SPCC Plan must be reviewed at least once every 3 yr, unless it is an exempted facility. The SPCC Plan must be reviewed and/or amended when there is a material change in facility design, construction, operation, or maintenance that alters potential for an oil spill. Each SPCC Plan and any amendments must be certified by a professional engineer, and the plan and each amendment must be prepared according to sound engineering practices. A copy of the SPCC Plan is required to be available at sites that are normally attended at least 8 h/day where there is a potential for a discharge. All facility personnel involved with the management and handling of oil must take part in periodic training in spill prevention and response. Projects handling oil are required to have and implement an OHSPC Plan and an Action Plan (40 CFR 112.3, 112.5, 112.7(e)(10), 300.105(a); ER 1130-2-434 para 6e and para 7c(1)).
- **Discharges/Spills** - A discharge of oil into navigable waters of the United States, or adjoining shorelines, or into areas that may affect natural resources belonging to or under the exclusive management authority of the United States must be reported to the National Response Center (NRC). Facilities are not allowed to add dispersants or emulsifiers to oils that are discharged. For example, floating plants should not wash down oily/greasy decks with detergents or solvents (33 CFR 153.201 through 153.203 and 40 CFR 110.2 through 110.10; DOD Directive 5030.41 para D5).
- **Discharge Prevention/Cleanup** - Facilities are required to have appropriate containment and/or diversionary structures and cleanup equipment readily available to prevent discharged petroleum products from reaching navigable water courses (40 CFR 112.7(c)).
- **Aboveground Storage Tanks (ASTs)** - All bulk storage tanks are required to be provided with a secondary means of containment for the entire contents of the largest single tank, plus sufficient freeboard to allow for precipitation. ASTs are required to undergo periodic integrity testing, and a written log kept of this testing. Drainage of rainwater from diked areas must be controlled by a valve that is closed when not in active use. Drainage water that is determined to contain petroleum products in harmful quantities must be treated before discharge to meet applicable water quality standards (40 CFR 112.7(e)(1) through 112.7(e)(2)).

- Service Stations - The storage of liquids at service stations, specifically Class I liquids, has to be done in containers that are secure and prevent the excess release of vapors (29 CFR 1910.106(g)).
- Piping Systems - Buried piping at facility transfer operations, pumping activities and in-plant processing is required to have a protective wrapping and coating to be cathodically protected if soil conditions warrant. All Corps-operated aboveground and belowground fuel piping systems at transfer operation, pumping activities, and in-plant processing must be regularly examined, and any suspected leaks should be investigated immediately (40 CFR 112.7(e)(3)(i) and 112.7(e)(3)(iv)).
- Onshore Oil Pipelines - Facilities with onshore oil pipelines that, because of location, could reasonably be expected to cause substantial harm to the environment by discharging oil into navigable waters are required to prepare a response plan. Copies of the response plan are required to be submitted to the USEPA Research and Special Programs Administration (RSPA) for approval. Copies of the response plan are required to be kept at the operator's headquarters, pump stations, and other places where response activities might be conducted. Training is required for the implementation of the response plan. The Response Plan is required to be reviewed every 3 yr from the date of submission and modified to address new or different operating conditions or information (49 CFR 194).
- Used Oil - Although used oil has not been declared a hazardous waste at the Federal level, it does need to be stored and handled in a manner similar to hazardous waste. In order to determine how the used oil produced at your facility has to be handled, see Appendix 7-1.

F. Key Compliance Definitions

These definitions were obtained from the various regulations cited previously in this section.

- *Automotive Service Station* - that portion of property where flammable or combustible liquids used as motor fuels are stored and dispensed from fixed equipment into the fuel tanks of motor vehicles and shall include any facilities available for the sale and service of tire, batteries, and accessories, and for minor automotive maintenance work. Major automotive repairs, painting, body and fender work are excluded (29 CFR 1910.106(a)(3)).
- *Container* - any portable device in which material is stored, transported, treated, disposed of, or otherwise handled (40 CFR 279.1).

- *Contiguous Zone* - the entire zone established or to be established by the United States under article 24 of the Convention on the Territorial Sea and Contiguous Zone (40 CFR 110.1).
- *Continuous Discharge* - a discharge occurring without interruption throughout the operating hours of the facility, except during infrequent shutdowns for maintenance, process changes, or other similar activities (40 CFR 123.3).
- *Daily Discharge* - the discharge of a pollutant measured during a calendar day or any 24-h period that reasonably represents the calendar day for purposes of sampling (40 CFR 122.2).
- *Direct Discharge* - the discharge of a pollutant (40 CFR 122.2).
- *Discharge* - when used in relation to section 311 of the Act, includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying, or dumping, but excludes (40 CFR 110.1):
 1. discharges in compliance with a permit
 2. discharges resulting from circumstances identified and reviewed and made a part of the public record with respect to an issued permit and subject to a condition in the permit
 3. continuous or anticipated intermittent discharges from a point source, identified in a permit application that are caused by events occurring within the scope of relevant operating or treatment systems.
- *Do-It-Yourselfer (DIY) Used Oil Collection Center* - any site or facility that accepts, aggregates, and stores used oil collected only from household DIYs (40 CFR 279.1).
- *Environmentally Sensitive Area* - an area of environmental importance that is in, or adjacent to, navigable waters (49 CFR 194.5).
- *Existing Tank* - a tank that is used for the storage or processing of used oil and is in operation, or a tank for which installation has commenced on or before the effective date of the authorized used oil program of the state where the tank is located (40 CFR 279.1).
- *Good Management Practice (GMP)* - schedules of activities, prohibitions of practices, maintenance procedures, and other management procedures to prevent or reduce the pollution of *water of the United States*. GMPs also include the treatment requirements, operating procedures, and practices to control plant site runoff, spillage or leaks, sludge or waste disposal, or drainage from raw material storage.

- *Household DIY Used Oil* - oil that is derived from households, such as used oil generated by individuals through the maintenance of their personal vehicles (40 CFR 279.1).
- *Navigable Waters* - the waters of the United States, including the territorial seas. Navigable waters do not include prior converted croplands. The term includes (40 CFR 110.2):
 1. all waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters that are subject to the ebb and flow of the tide
 2. interstate waters, including interstate wetlands
 3. all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, and wetlands, the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce, including any such waters:
 - a. that are or could be used by interstate or foreign travelers for recreational or other purposes
 - b. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce
 - c. that are used or could be used for industrial purposes by industries in interstate commerce
 4. all impoundments of waters otherwise defined as navigable waters under this section
 5. tributaries of waters identified above, including adjacent wetlands
 6. wetlands adjacent to waters identified above.
- *New Tank* - in relation to used oil, a tank that will be used to store or process used oil and for which installation has started after the effective date of the authorized used oil program for the state in which the tank is located (40 CFR 279.1).
- *New Tank System or New Component System* - a tank system or component that will be used for the storage and treatment of hazardous waste and for which installation has commenced after 14 July 1986, except however, for purposes of 264.193(g)(2) and 265.193(g)(2), a new tank system is one for which construction commenced after 14 July 1986. (See also existing tank system.) (40 CFR 260.10).
- *Nonwastewaters* - wastes that do not meet the criteria for wastewaters (40 CFR 268.2).
- *Offshore Facility* - any facility of any kind located in, on, or under any of the navigable waters of the United States, and any facility of any kind that is sub-

ject to the jurisdiction of the United States and is located in, on, or under any other waters, other than a vessel or a public vessel (40 CFR 110.2 and 33 CFR 153.103).

- *Off-specification Used Oil* - used oil burned for energy recovery and any fuel produced from used oil that exceeds the following allowable limits (40 CFR 279):

Arsenic	5 ppm maximum
Cadmium	2 ppm maximum
Chromium	10 ppm maximum
Lead	100 ppm maximum
Flash Point	100 °F minimum
Total halogens	4000 ppm maximum

- *Oil* - when used in relation to section 311 of the Act, means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil (40 CFR 110.2 and 33 CFR 153.103).
- *Onshore Facility* - any facility (including but not limited to, motor vehicles and rolling stock) of any kind located in, on, or under any land within the United States, other than submerged land (40 CFR 110.2 and 33 CFR 153.103).
- *Onshore Oil Pipeline Facilities* - new and existing pipe, rights-of-way and any equipment, facility, or building used in the transportation of oil located in, on, or under, any land within the United States, other than submerged land (49 CFR 194.5).
- *Operator* - in relationship to onshore oil pipeline facilities, a person who owns or operates onshore oil pipeline facilities (49 CFR 194.5).
- *Pipeline* - all parts of an onshore pipeline facility through which oil moves, including, but not limited to, line pipe, valves, and other appurtenances connected to the line pipe, pumping units, fabricated assemblies associated with pumping units, metering and delivery stations and fabricated assemblies therein, and breakout tanks (49 CFR 194.5).
- *Point Source* - any discernible, confined, and discrete conveyance, including, but not limited to, a pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural stormwater (40 CFR 122.2 and 401.11(d)).

- *Processing* - chemical or physical operations designed to produce products from used oil or to make used oil more amenable for production of fuel oils, lubricants, or other used oil-derived product. Processing includes, but is not limited to, blending used oil with Virgin petroleum products, blending used oils to meet the fuel specification, filtration, simple distillation, chemical or physical separation, and re-refining (40 CFR 279.1).
- *Public Vessel* - a vessel owned, or bareboat chartered, and operated by the United States, by a state or political subdivision thereof, or by a foreign nation, except when such vessel is engaged in commerce (40 CFR 110.2 and 33 CFR 153.103).
- *Qualified Individual* - an English-speaking representative of an operator, located in the United States, available on a 24-h basis, with full authority to: activate and contract with required oil spill removal organizations; activate personnel and equipment maintained by the operator; act as liaison with the On-Scene Coordinator (OSC); and obligate any funds required to carry out all required or directed oil response activities (49 CFR 194.5).
- *Re-refining Distillation Bottoms* - the heavy fractions produced by vacuum distillation of filtered and dehydrated used oil. The composition of still bottoms varies with column operation and feedback (40 CFR 279.1).
- *Response Activities* - the containment and removal of oil from the water and shorelines, the temporary storage and disposal of recovered oil, or the taking of other actions as necessary to minimize or mitigate damage to the environment (49 CFR 194.5).
- *Response Area* - the inland zone or coastal zone, as defined in the National Contingency Plan, in which response activity is occurring (49 CFR 194.5).
- *Response Plan* - the operator's core plan and the response zone appendices for responding, to the maximum extent practicable, to a worst case discharge of oil or the substantial threat of such a discharge (49 CFR 194.5).
- *Response Zone* - a geographic area, either along a length of pipeline or including multiple pipelines, containing one or more adjacent line sections, for which the operator must plan for the deployment of and provide spill response capabilities (49 CFR 194.5).
- *Sheen* - an iridescent appearance on the surface of the water (40 CFR 110.2).
- *Sludge* - an aggregate of oil, or oil and other matter of any kind, in any form other than dredged spoil, with a combined specific gravity equivalent to or greater than water (40 CFR 110.2).

- *Spill Event* - a discharge of oil into or upon the navigable waters of the United States or adjoining shorelines in harmful quantities (40 CFR 112.3).
- *Spill Prevention, Control, and Countermeasure (SPCC) Plan* - the SPCC Plan shall be a carefully thought-out plan, prepared in accordance with good engineering practices, that has the full approval of management at a level with authority to commit the necessary resources (40 CFR 112.3).
- *Tank* - any stationary device, designed to contain an accumulation of used oil, that is constructed primarily of nonearthen materials that provide structural support (40 CFR 279.1).
- *Used Oil* - any oil that has been refined from crude oil or any synthetic oil that has been used and, as a result of such use, is contaminated by physical or chemical impurities (40 CFR 279.1).
- *Used Oil Aggregation Point* - any site or facility that accepts, aggregates, and/or stores used oil collected only from other used oil generation sites owned or operated by the owner or operator of the aggregation point, from which used oil is transported to the aggregation point in shipments of no more than 55 gal [208.20 L]. Used oil aggregation points may also accept used oil from household DIYs (40 CFR 279.1).
- *Used Oil Burner* - a facility where used oil not meeting the specification requirements is burned for energy recovery (40 CFR 279.1).
- *Used Oil Collection Center* - any site or facility that is registered/licensed/ permitted/recognized by a state/county/municipal government to manage used oil and accepts/aggregates and stores used oil collected from used oil generators who bring used oil to the collection centers in shipments of no more than 55 gal [208.20 L]. Used oil collection centers may accept used oil from household DIYs (40 CFR 279.1).
- *Used Oil Fuel Marketer* - any person who conducts either of the following activities (40 CFR 279.1):
 - directs a shipment of off-specification used oil from the facility to a used oil burner
 - claims that used oil, that is to be burned for energy recovery, meets used oil fuel specifications.
- *Used Oil Generator* - any person, by site, whose act or process produces used oil or whose act first causes used oil to become subject to regulation (40 CFR 279.1).

- *Used Oil Processor/Re-refiner* - a facility that processes used oil (40 CFR 279.1).
- *Used Oil Transfer Facility* - any transportation related facility, including loading docks, parking areas, storage areas, and other areas where shipments of used oil are held for more than 24 h during the normal course of transportation and no longer than 35 days (40 CFR 279.2).
- *Used Oil Transporter* - any person who transports used oil, any person who collects used oil from more than one generator and transports the collected oil, and owners and operators of used oil transfer facilities. Used oil transporters may consolidate or aggregate loads of used oil for purposes of transportation but, with the following exception, may not process used oil. Transporters may conduct incidental processing operations that occur in the normal course of used oil transportation (e.g., settling and water separation) but that are not designed to produce or make more amenable for production of used oil derived products or used oil fuel (40 CFR 279.1).
- *Vessel* - every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on water, other than a public vessel (40 CFR 110.2).
- *Wetlands* - those areas that are inundated or saturated by surface water or groundwater at a frequency or duration sufficient to support and that, under normal circumstances, do support a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include playa lakes, swamps, marshes, bogs, and similar areas such as sloughs, prairie potholes, wet meadows, prairie river overflows, mudflats, and natural ponds (40 CFR 110.2).
- *Worst Case Discharge* - the largest foreseeable discharge of oil, including a discharge from fire or explosion, in adverse weather conditions (49 CFR 194.5).

POL MANAGEMENT

Records to Review

- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Official correspondence with state implementing agency
- Spill Prevention and Response Plan
- Equipment maintenance records
- Records of spill response training programs
- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)

Physical Features to Inspect

- Refueling facilities, including:
 - Aboveground and belowground storage tanks and dikes
 - Venting
 - Fill pipes
 - Gauges
- Washrack areas
- Vehicle maintenance areas
- Oil separators
- Oil and hazardous substance site

People to Interview

- Safety and Occupational Health Office
- Environmental Compliance Coordinator (ECC)
- Natural Resources Manager
- Logistics
- Engineering
- Operations
- Emergency Management
- Project Resource Manager
- Facility Managers
- Lab Manager

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. This chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Appendix 7-1

Used Oil Classifications (40 CFR 279.10 and 279.11)

Used Oils Which Are Required to be Handled According to the Requirements in 40 CFR 279 (40 CFR 279.10(b)(2)(ii), 279.10(b)(2)(iii), 279.10(b)(3), 279.10(c)(2), 279.10(d), 279.10(e)(2), and 279.10(i)).

1. Used oil containing more than 1000 ppm of total halogens when the generator has demonstrated that the used oil does not contain hazardous waste.
2. Used metalworking oils/fluids containing chlorinated paraffins when they are recycled or disposed of and the generator has demonstrated that the used oil does not contain hazardous waste.
3. Used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units and the generator has demonstrated that the used oil does not contain hazardous waste.
4. Materials produced from used oil that are burned for energy recovery.
5. Mixtures of used oil and hazardous waste if the resultant mixture does not exhibit any characteristics of hazardous waste.
6. Mixtures of used oil and a waste that is hazardous solely because it exhibits the characteristic of ignitability and is not a listed waste.
7. Mixtures of used oil and conditionally exempt small quantity generator (CESQG) hazardous waste.
8. Mixtures of used oil and fuels or other fuel products except those marked onsite by the generator for use in the generators own vehicles if the used oil and the diesel fuel have been mixed.
9. Used oil burned for energy recovery and any fuel produced from used oil that exceeds the following allowable limits:

Arsenic	5	ppm maximum
Cadmium	2	ppm maximum
Chromium	10	ppm maximum
Lead	100	ppm maximum
Flash Point	100	°F minimum
Total halogens	4000	ppm maximum
10. Materials containing or otherwise contaminated with used oil that are burned for energy recovery.
11. Used oil drained or removed from materials containing or otherwise contaminated with used oil.
12. Used oil at marketers or burners with any quantifiable level of PCBs (the standards in 40 CFR 761.20(a) must also be met for this type of oil).

Appendix 7-1 (continued)

Used Oil that is Required to be Handled as a Hazardous Waste (40 CFR 279.10(b)).

1. Mixtures of used oil and listed hazardous waste.
2. Used oil containing more than 1000 ppm total halogens.
3. Used metalworking oils/fluids containing chlorinated paraffins if processed through a tolling agreement.
4. Used oil contaminated with CFCs removed from refrigeration units where the CFCs are destined for reclamation.
5. Mixtures of used oil and hazardous waste if the resultant mixture exhibits characteristics of a hazardous waste.

Used Oil that is not Subject to the Requirements of 40 CFR 279, Nor is it to be Handled as a Hazardous Waste Unless Testing Indicates Hazardous Constituents (40 CFR 279.10(c)(1), 279.10(d)(2), 279.10(e)(1), 279.10(e)(3), 279.10(e)(4), and 279.10(f) through 279.10(h)).

1. Mixtures of used oil and diesel fuel mixed onsite by the generator of the used oil for use in the generator's own vehicles.
2. Materials that are reclaimed from used oil that are used beneficially and are not burned for energy recovery or used in a manner constituting disposal.
3. Materials derived from used oil that are disposed of or used in a manner constituting disposal.
4. Used Oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.
5. Wastewater discharges with de minimis quantities of used oil.
6. Used oil within a crude oil or natural gas pipeline.
7. Used oil on vessels.
8. Materials containing or otherwise contaminated with used oil from which the used oil has been properly drained or removed so that no signs of visible free-flowing remains.

Section 8

Solid Waste Management

SECTION 8

SOLID WASTE MANAGEMENT

A. Applicability

This section addresses the collection, storage, and disposal of solid waste at U.S. Army Corps of Engineers (USACE) facilities.

Solid waste is considered to be nonhazardous trash, rubbish, garbage, bulky wastes, liquids, or sludges generated by any Corps facility's operations and activities. The handling and disposal of asbestos waste materials are addressed in Section 9, *Special Pollutants Management*. Recycling and resource recovery activities are included in this section.

This section does not address the requirements for new municipal solid waste landfills because few Corps facilities are operating active landfills. If the facility is operating a municipal solid waste landfill, please refer to the appropriate questions in the *U.S. Environmental Compliance Assessment System (ECAS)* manual.

B. Federal Legislation

- *The Resource Conservation and Recovery Act (RCRA), Subtitle D of 1976*. This subtitle, as amended, Public Law (PL) 98-616 (42 U.S. Code (USC) 6941-6949a), establishes Federal standards for the management of nonhazardous solid wastes. The objectives of this subtitle are to assist in developing and encouraging methods for the disposal of solid waste that are environmentally sound and that maximize the use of valuable resources recoverable from solid waste. This subtitle also establishes the framework for Federal, state, and local government cooperation in controlling the management of nonhazardous solid waste (42 USC 6941).
- *The Solid Waste Disposal Act of 1965*. This law, as amended, requires that Federal facilities comply with all Federal, state, interstate, and local requirements concerning the disposal and management of solid wastes.
- *The Occupational Safety and Health Act (OSHA)*. The general purpose of this Act is to assure, as much as is possible, every individual working in the United States safe and healthful working conditions. The control of medical waste is one aspect of assuring safe and healthy working conditions.
- *Executive Order (EO) 12088*. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities

to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

- EO 12780, *Federal Agency Recycling and the Council on Federal Recycling and Procurement Policy*. This EO requires Federal agencies to promote cost-effective waste reduction and recycling of reusable materials from wastes generated at their activities. Federal agencies are required to initiate a program to promote cost-effective waste reduction through:
 1. practices that reduce waste generation, and
 2. the recycling of recyclable materials such as paper, plastic metals, glass, used oil, lead acid batteries, and tires, and the composting of organic materials such as yard waste.

C. State/Local Regulations

The Federal government set minimum national standards for municipal solid waste disposal in 40 Code of Federal Regulations (CFR) 258, but state and local governments are responsible for implementing and enforcing waste programs. States are required to develop their own programs based on the Federal regulations. Most states and municipalities have already developed their own regulations governing the permitting, licensing, and operations of landfills, incinerators, and source separation/ recycling programs.

States are required to incorporate revised criteria for municipal solid waste landfills (MSWLFs) into their permit programs and gain approval from the U.S. Environmental Protection Agency (USEPA). States that apply for and receive USEPA approval of their programs have the opportunity to provide a lot of flexibility in implementing the regulations. This flexibility allows states to take local conditions into account and gives them the authority to alter some of the requirements. Evaluators will need to determine if a state has been granted approval for the 40 CFR 258 program in order to accurately assess an installation's compliance with the criteria.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- DOD Directive 4165.60, *Solid Waste Management*. This directive outlines the policies and procedures concerning collection, disposal, resource recovery, and recycling of solid waste.

- Engineering Manual (EM) 385-1-1, *Safety and Health Requirements*. Although this is a manual and not an ER, the contents are applicable to all missions under the command of the Chief of Engineers, whether accomplished by military, civilian, or contractor forces. In relation to solid waste, it outlines handling and operating procedures.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- **Storage/Collection** - Facilities are required to store all solid wastes and materials separated for recycling so that it does not cause a fire, safety, or health hazard. All facilities are required to operate their collection systems in a manner to protect the health and safety of personnel associated with the operation. All collection equipment is required to have a suitable cover to prevent spillage, and the equipment is to be constructed, operated, and maintained adequately. All facilities are required to collect solid wastes or materials, separated for recycling, according to a certain schedule, and in a safe, efficient manner (40 CFR 243.200-1, 243.201-1, 243.202-1(a) through 243.202-1(c), 243.203-1, and 243.204-1).
- **Solid Waste Containers** - A separate, covered, self-closing, nonflammable, non-reactive container must be provided for the collection of garbage and oily, flammable, and dangerous wastes, and the contents disposed of daily. Corps facility personnel should be periodically informed about materials that are prohibited from disposal in solid waste receptacles. Household or commercial garbage, trash, rubbish debris, dead animals, or litter should not be brought on the project for dumping or disposal without permission from the District Engineer (EM 385-1-1, para 11.J.07 and GMP).
- **Recycling** - Corps facilities are required to participate in any state or local recycling programs and reduce the volume of solid waste materials at the source whenever practical. Facilities with offices of over 100 office workers are required to recover high-grade paper. Facilities at which more than 500 families reside are required to recycle newspapers. Any facility generating 10 tons [10,160.47 kg] or more of waste corrugated containers per month are required to segregate or collect separately for recycling or alternate energy use (DOD Directive 4165.60 para V; 40 CFR 246.200-1 and 246.202-1).

- **Specific Wastes** - Bulky wastes must be disposed of according to certain methods, which differ depending of the variety of waste (i.e., automobile bodies, furniture and appliances are required to be salvaged, or crushed and pushed onto working face near the bottom of the cell). Water treatment plant sludges, containing no free moisture, and digested or heat treated wastewater treatment plant sludges must be disposed of by covering them with soil or municipal solid wastes. Incinerator and air pollution control residues must be disposed of by covering them as necessary to prevent their becoming airborne (40 CFR 241.200-3 and DOD Directive 4165.60 para V(a)).
- **Land Disposal Site Operations other than MSWLFs** - Facilities are required to place cover material at the end of each operating day. Land disposal sites that accept special wastes must have approval from the responsible agency. Facilities that operate land disposal sites are required to provide a list of excluded materials to regular users, to operate the sites in a manner that will protect water quality and air quality, and control decomposition gases and vectors. Land disposal sites are required to be designed and operated in an aesthetically acceptable manner, and to be designed, constructed and operated to protect the health and safety of personnel. Land disposal site cover material is required to minimize fire hazards, infiltration of precipitation, odors and litter, control gas venting and vectors, discourage scavenging, and provide a pleasing appearance. Municipal solid waste and cover material must be compacted to the smallest practicable volume. The operators of land disposal sites are required to maintain records and monitoring data (40 CFR 241.200-3(a), 241.201-2, 241.201-3, 241.204-3, 241.205-3, 241.206-241.211, and 241.212-3(a)).
- **Land Disposal Site Closure** - Upon closure of a site, a detailed description is required to be recorded with the area's land recording authority. Facilities should survey for and be aware of old disposal sites at the facility (40 CFR 241.212-3(b)).
- **New Landfills other than MSWLFs** - New landfills are required to meet certain location and design criteria, which include evaluation of hydrogeology and on-site soil characteristics, and verification of easy access to vehicles. Plans for the design, construction, and operation of new sites or modification to existing sites are required to be prepared or approved by a professional engineer (40 CFR 241.202-2 and 241.203-1).
- **Medical Waste** - Contaminated reusable sharps and other regulated wastes are required to be placed in puncture-resistant, color-coded, leakproof containers, as soon as possible after use until properly reprocessed. Specimens of blood or other potentially infectious material are required to be placed in a container that prevents leakage during collection, handling, processing, storage, transport, or shipping, and specific labeling and handling requirements are to be followed (29 CFR 1910.1030(d)).

- **Medical Waste Containers** - All bins, cans, and other receptacles intended for reuse that have the likelihood of becoming contaminated with blood or other potentially infectious materials are required to be inspected and decontaminated on a regularly scheduled basis. Labels affixed to containers of regulated wastes, refrigerators and freezers containing blood, and other containers used to store, transport, or ship blood or other potentially infectious materials must meet specific standards, which include the biohazard symbol, and being colored a fluorescent orange with contrasting-colored lettering and symbols (29 CFR 1910.1030(d)(4)(ii)(c) and 1910.1030(g)(1)(i)).

F. Key Compliance Definitions

- *Active Life* - the period of operation beginning with the initial receipt of solid waste and ending with the completion of closure activities (40 CFR 258.2).
- *Active Portion* - that part of a facility or unit that has received, or is receiving, wastes and that has not been closed (40 CFR 258.2).
- *Aquifer* - a geological formation, group of formations, or a portion of a formation capable of yielding significant quantities of groundwater to wells or springs (40 CFR 258.2).
- *Blood* - human blood, human blood components, and products made from human blood (29 CFR 1910.1030(a)).
- *Bottom Ash* - the solid material that remains on a hearth or falls off the grate after thermal processing is complete (40 CFR 240.101(b)).
- *Bulky Wastes* - large items of solid waste such as household appliances, furniture, large auto parts, trees, branches, stumps, and other oversize wastes which large size precludes or complicates their handling by normal solid waste collection, processing, or disposal methods (40 CFR 243.101).
- *Cell* - compacted solid wastes that are enclosed by natural soil or cover material in a land disposal site (40 CFR 241.101).
- *Collection* - the act of removing solid waste (or materials which have been separated for the purpose of recycling) from a central storage point (40 CFR 243.101).
- *Commercial Solid Waste* - all types of solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding residential and industrial wastes (40 CFR 243.101).

- *Construction and Demolition Wastes* - waste building materials, packaging, and rubble resulting from the construction, renovation, repair, and demolition operation on pavements, houses, commercial buildings, and other structures (40 CFR 243.101).
- *Contaminated* - the presence, or the reasonably anticipated presence, of blood or other potentially infectious materials on an item or surface (29 CFR 1910.1030(a)).
- *Contaminated Sharps* - any contaminated object that can penetrate the skin, including, but not limited to, needles, scalpels, broken glass, broken capillary tubes, and exposed ends of dental wires (29 CFR 1910.1030(a)).
- *Corrugated Container Waste* - discarded corrugated boxes (40 CFR 246.101).
- *Cover Material* - soil or other suitable material that is used to cover compacted solid wastes in a land disposal site (40 CFR 241.101).
- *Daily Cover* - cover material that is spread and compacted on the top and side slopes of compacted solid wastes, at least at the end of each operating day, in order to control vectors, fire, moisture, and erosion, and to assure an aesthetic appearance (40 CFR 241.101).
- *Decontamination* - the use of physical or chemical means to remove, inactivate, or destroy bloodborne pathogens on a surface or item to the point where they are no longer capable of transmitting infectious particles and the surface of the item is rendered safe for handling, use, or disposal (29 CFR 1910.1030(a)).
- *Design Capacity* - the weight of solid waste of a specified gross calorific value that a thermal processing facility is designed to process in 24 h of continuous operation (40 CFR 240.101(d)).
- *Existing MSWLF* - any MSWLF unit that is receiving solid wastes as of 9 October 1993 (40 CFR 258.2).
- *Final Cover* - cover materials that serve the same function as daily cover but, in addition, may be permanently exposed on the surface (40 CFR 241.101).
- *Fly Ash* - suspended particles, charred paper, dust, soot, and other partially oxidized matter carried in the products of combustion (40 CFR 240.101).
- *Food Waste* - the organic residues generated by the handling, storage, sale, preparation, cooking, and serving of foods, commonly called garbage (40 CFR 243.101).

- *Garbage* - in relation to solid waste coming from outside the continental United States, it is all waste material derived in whole or in part from fruits, vegetables, meats, or other plant or animal material, and other refuse of any character whatsoever that has been associated with any such material on board any means of conveyance, and including food scraps, table refuse, galley refuse, food wrappers, or packaging materials, and other waste materials from stores, food preparation areas, passengers; or crews quarters, dining rooms, or any other areas or means of conveyance. It also means meals and other food that were available for consumption by passengers and crew on an aircraft, but were not consumed (7 CFR 330.400(b)).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Groundwater* - water present in the unsaturated zone of an aquifer (40 CFR 241.101).
- *High-grade Paper* - letterhead, dry copy papers, miscellaneous business forms, stationary, typing paper, tablet sheets, and computer printout paper and cards, commonly sold as *white ledger computer printout* and *tab card* grades by the wastepaper industry (40 CFR 246.101).
- *Household Waste* - any solid waste, (including garbage, trash, and sanitary waste in septic tanks) derived from households (including single and multiple residences, hotels and motels, bunkhouses, ranger stations, crew quarters, campgrounds, picnic grounds, and day-use-recreation areas) (40 CFR 258.2).
- *Industrial Solid Waste* - the solid waste generated by industrial processes and manufacturing that is not a hazardous waste (40 CFR 243.101).
- *Infectious Waste* -
 1. equipment, instruments, utensils, and fomites of a disposable nature from the rooms of patients who are suspected to have or have been diagnosed as having a communicable disease and must, therefore, be isolated as required by public health agencies
 2. laboratory wastes such as pathological specimens and disposable fomites (any substance that may harbor or transmit pathological organisms)
 3. surgical operating room pathological specimens and disposable fomites attendant thereto and similar disposable materials from outpatient areas and emergency rooms (40 CFR 240.101).
- *Institutional Solid Waste* - solid wastes generated by educational, health care, correctional, and other institutional facilities (40 CFR 243.101).

- *Intermediate Cover* - cover material that serves the same function as daily cover but must resist erosion for a longer period of time because it is applied in areas where additional cells are not to be constructed for extended periods of time (40 CFR 241.101).
- *Leachate* - liquid that has percolated through solid waste and has extracted dissolved or suspended materials from it (40 CFR 241.101).
- *Medical/Pathological Wastes* - any solid waste that is generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals. This does not include hazardous waste or household waste (40 CFR 259.10).
- *Municipal Solid Waste* - residential and commercial solid wastes generated within a community (40 CFR 240.101).
- *Municipal Solid Waste Landfill (MSWLF) Unit* - a discrete area of land or an excavation that received household waste and that is not a land application unit, surface impoundment, injection well, or waste pile. It may also receive other types of RCRA-D wastes, such as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste and industrial solid waste. Such a landfill may be publicly or privately owned. An MSWLF unit may be a new MSWLF unit, an existing MSWLF unit, or a lateral expansion (40 CFR 258.2).
- *New MSWLF* - any MSWLF unit that has not received waste prior to 9 October 1993 (40 CFR 258.2).
- *Open Burning* - burning of solid wastes in the open, such as in an open dump (40 CFR 240.101(r)).
- *Open Dump* - a land disposal site at which solid wastes are disposed of in a manner that does not protect the environment, are susceptible to open burning, and are exposed to the elements, vectors, and scavengers (40 CFR 240.101).
- *Recoverable Resource* - materials that still have useful physical, chemical, or biological properties after serving their original purpose and can, therefore, be reused or recycled for the same or other purposes (40 CFR 245.101).
- *Recycled Material* - a material that is utilized in place of a primary, raw, or virgin material in manufacturing a product (40 CFR 245.101).
- *Recycling* - the process by which recovered materials are transformed into new products (40 CFR 245.101).

- *Regulated Wastes* - liquid or semiliquid blood or other potentially infectious materials, and/or contaminated items that would release blood or other potentially infectious materials in a liquid or semiliquid state if compressed; items that are caked with dried blood or other potentially infectious materials and are capable of releasing these materials during handling contaminated sharps; and pathological and microbiological wastes containing blood or other potentially infectious materials (29 CFR 1910.1030(a)).
- *Residential Solid Waste* - the wastes generated by the normal activities of households, including, but not limited to, food wastes, rubbish, ashes, and bulky wastes (40 CFR 243.101).
- *Resource Recovery Facility* - any physical plant that processes residential, commercial, or institutional solid waste biologically, chemically, or physically, and recovers useful products (40 CFR 245.101).
- *Runoff* - the portion of precipitation that drains from an area as surface flow (40 CFR 241.101).
- *Sanitary Landfill* - a land disposal site employing an engineered method of disposing of solid wastes on land in a manner that minimizes environmental hazards by spreading the solid wastes in thin layers, compacting the solid wastes to the smallest practical volume, and applying and compacting cover material at the end of each operating day (40 CFR 240.101).
- *Separate Collection* - collecting recyclable materials which have been separated at the point of generation and keeping those materials separated from other collected solid waste in separate compartments of a single collection vehicle or through the use of separate collection vehicles (40 CFR 246.101).
- *Sludge* - the accumulated semiliquid suspension of settled solids deposited from wastewaters or other fluids in tanks or basins (40 CFR 240.101).
- *Solid Waste* - garbage, refuse, sludge, and other discarded solid materials resulting from industrial and commercial operations and from community activities. It does not include solids or dissolved materials in domestic sewage or other significant pollutants in water resources (40 CFR 240.101).
- *Source Separation* - the setting aside of recyclable materials at their point of generation by the generator (40 CFR 246.101).
- *Special Wastes* - nonhazardous solid wastes requiring handling other than that normally used for municipal solid wastes (40 CFR 240.101).

- *Thermal Processing* - processing of waste material by means of heat (40 CFR 240.101).
- *Transfer Station* - a station at which solid wastes are concentrated for transport to a processing facility or land disposal site. A transfer station may be fixed or mobile (40 CFR 243.101).
- *Universal Precautions* - an approach to infection control. According to the concept of Universal Precautions, all human blood and certain human body fluids are treated as if known to be infectious for HIV, HBV, and other bloodborne pathogens (29 CFR 1910.1030(a)).
- *Vector* - a carrier, usually an arthropod, that is capable of transmitting a pathogen from one organism to another (40 CFR 240.202).
- *Working Face* - that portion of the land disposal site where solid wastes are discharged and are spread and compacted prior to the placement of cover material (40 CFR 241.101).

SOLID WASTE MANAGEMENT PROTOCOL

GUIDANCE FOR CHECKLIST USERS

	REFER TO CHECKLIST ITEMS:	CONTACT THESE PERSONS OR GROUPS:(a)
All Facilities	8-1 through 8-3	(5)(8)
Storage/Collection	8-4 through 8-16	(5)(8)(15)(16)(17)
Recycling	8-17 through 8-20	(5)(15)(16)(17)
Land Disposal Sites Other Than MSWLFs Specific Wastes	8-21 through 8-24	(5)(8)(15)(16)(17)
Land Disposal Sites Other Than MSWLFs Operations	8-25 through 8-43	(5)(8)(15)(16)(17)
Closure	8-44 and 8-45	(5)(8)(15)(16)(17)
Site Criteria For New Landfills Other Than MSWLFs	8-46 through 8-48	(5)(8)(15)(16)
Medical Waste	8-49 through 8-54	(5)(15)(16)(17)

(a)CONTACT/LOCATION CODE:

- (1) Division Office - Natural Resources Management
- (2) Division Office - Engineering
- (3) Division Office - Safety and Occupational Health Office
- (4) Division Office - Operations
- (5) District Office - Environmental Compliance Coordinator (ECC)
- (6) District Office - Natural Resources Management
- (7) District Office - Engineering
- (8) District Office - Safety and Occupational Health Office
- (9) District Office - Logistics
- (10) District Office - Operations
- (11) District Office - Cultural / Historic Resources
- (12) District Office - Real Estate
- (13) District Office - Planning
- (14) District Office - Emergency Management
- (15) Project - Project Resource Manager
- (16) Project - Facility Managers (See Descriptions in POC Section of Introduction at beginning of manual)
- (17) Lab Manager

(NOTE: Office of Counsel should be considered a point of contact for all compliance requirements and violations.)

DEFINITIONS: NA - Not Applicable to the Facility; RMA - Requires Management Action; C - In Compliance

SOLID WASTE MANAGEMENT

Records to Review

- Record of current nonhazardous solid waste management practices
- Documentation of locations (map) and descriptions of all nonhazardous waste treatment, storage, and disposal facilities (TSDFs)
- Records of operational history of all active and inactive TSDFs
- State and Federal inspection reports
- Environmental monitoring procedures or plans
- Records of resource recovery practices, including the sale of materials for the purpose of recycling
- Solid waste removal contracts and inspection records
- Operating records for onsite landfills

Physical Features to Inspect

- Resource recovery facilities
- Incineration and land disposal facilities (active and inactive)
- Areas where nonhazardous waste is disposed
- Construction debris areas
- Waste receptacles
- Solid waste vehicle storage and washing areas
- Compost facilities
- Transfer stations
- Recycling centers

People to Interview

- Environmental Compliance Coordinator (ECC)
- Safety and Occupational Health Office
- Project Resource Manager
- Facility Managers
- Lab Manager

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. This chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Checklist item numbers in the April 1993 ERGO Manual	Corresponding Checklist Items Numbers in the 1994 ERGO Manual
8-1 through 8-9	8-1 through 8-9
8-10	deleted

Section 9

Special Pollutants Management
(Radon, Asbestos, PCBs, and Noise)

SECTION 9

SPECIAL POLLUTANTS MANAGEMENT

A. Applicability

This section applies to all U.S. Army Corps of Engineers (USACE) Civil Works projects, facilities, and activities. Currently, this section contains sections for polychlorinated biphenyls (PCBs), asbestos, radon gas, and environmental noise. PCBs and asbestos are regulated on the Federal level by the U.S. Environmental Protection Agency (USEPA), though in some cases, states have also promulgated regulations. This section is written in response to the Federal regulations governing activities that involve these four pollutants.

B. Federal Legislation

Noise

- *The Noise Control Act of 1972, as amended.* This law, Public Law (PL) 92-574 (42 U.S. Code (USC) 4901-4918):

1. establishes a means for effective coordination of Federal research and activities in noise control
2. authorizes the establishment of Federal noise emission standards for products distributed in commerce
3. provides information to the public respecting the noise emission and noise reduction characteristics of such products.

The following categories of products that produce noise are covered by this Act:

1. construction equipment
2. transportation equipment (including recreational vehicles and related equipment)
3. any motor or engine (including any equipment of which an engine or motor is an integral part)
4. electrical or electronic equipment.

The following articles are not covered by the Act (42 USC 4902 (3)):

1. any aircraft, aircraft engine, propeller, or appliance
2. any military weapons or equipment designed for combat use

3. any rockets or equipment designed for research, or experimental or developmental work to be performed by the National Aeronautics and Space Administration (NASA)
4. any other machinery or equipment designed for use in experimental work done by or for the Federal Government.

Toxic Substances (including PCBs)

- *The Toxic Substances Control Act (TSCA)*. This Act, as last amended in 1986, 15 USC 2601-2671, is the Federal legislation which deals with the control of toxic substances. The Act consists of three subchapters, one of which regulates the control of toxic substances, another governs asbestos hazard emergency response, and another subchapter regulates indoor radon abatement.

The U.S. policy developed in the *TSCA* on chemical substances is as follows (15 USC 2601(b)):

1. adequate data should be developed with respect to the effect of chemical substances and mixtures on health and the environment, and the development of such data should be the responsibility of those who manufacture and those who process such chemical substances and mixtures
2. adequate authority should exist to regulate chemical substances and mixtures that present an unreasonable risk of injury to health or the environment, and to take action regarding chemical substances and mixtures
3. authority over chemical substances and mixtures should be exercised in such a manner as not to impede unduly or create unnecessary economic barriers to technological innovation while fulfilling the primary purpose of this Act to assure that such innovation and commerce in such chemical substances and mixtures do not present an unreasonable risk of injury to health or the environment.

Upon request by the USEPA, each Federal department and agency is authorized to (15 USC 2625(a)):

1. make its services, personnel, and facilities available (with or without reimbursement) to the USEPA to assist the USEPA in the administration of this Act
2. furnish the USEPA with information, data, estimates, and statistics and allow the USEPA access to all information in its possession as the USEPA may reasonably determine to be necessary for the administration of this Act.

Asbestos

The purpose of the Act, regarding asbestos hazard is to (15 USC 2641(b)):

1. provide for the establishment of Federal regulations that require inspection for asbestos-containing material (ACM) and implementation of appropriate response actions with respect to the nation's schools in a safe and complete manner
2. mandate safe and complete periodic reinspection of school buildings, following response actions, where appropriate
3. require the USEPA to conduct a study to find out the extent of the danger to human health posed by asbestos in public and commercial buildings and to provide the means to respond to any such danger.

The Secretary of Defense, in cooperation with the USEPA, must, to the extent feasible and consistent with the national security, take such action as may be necessary to provide for the identification, inspection, and management (including abatement) of asbestos in any building used by the Department of Defense (DOD) as an overseas school for dependents of members of the Armed Forces. Such identification, inspection, and management (including abatement) must, subject to the preceding sentence, be carried out in a manner comparable to the manner in which a local educational agency is required to carry out such activities with respect to a school building under this Act (15 USC 2643(L)(2)).

Radon

The national long-term goal of the United States, with respect to radon levels in buildings, is that the air within buildings in the United States should be as free of radon as the ambient air outside of buildings (15 USC 2661).

The head of each Federal department or agency that owns a Federal building must conduct a study for the purpose of determining the extent of radon contamination in such buildings. Such study must include, in the case of a Federal building using a nonpublic water source (such as a well or other groundwater), radon contamination of the water. Such a study must be based on design criteria specified by the USEPA.

Such study must be completed and reported by the head of each Federal department or agency to the USEPA no later than 1 June 1990 (15 USC 2669(a)(c)(e)).

Lead-Based Paint

A recent Amendment of TSCA requires the creation of regulations governing lead-based paint activities to ensure that individuals engaged in such

activities are properly trained; that training programs are accredited; and that contractors engaged in such activities are certified. As of the publication of this manual, these regulations have not been finalized (15 USC 2681 though 2692).

- *Occupational Safety and Health Act (OSHA)*. This Act resulted in the Safety and Health Standards specified in 29 CFR 1910. In relation to asbestos it addresses occupational exposure and acceptable levels of exposure to asbestos, tremolite, anthophyllite, and actinolite in general industry and construction. Because these regulations are not considered to be environmental regulations, they are not included in this section.
- *The Hazardous Materials Transportation Act*. This Act was amended in 1978 to regulate the transport of asbestos materials. The regulations are contained in 49 CFR 172-177. In particular, 49 CFR 177 requires that asbestos must be loaded, handled, and unloaded in a manner that will minimize occupational exposure to airborne asbestos. Asbestos wastes that are transported for disposal at a landfill or other disposal facility must meet all applicable requirements.
- *Executive Order (EO) 12088*. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Regulations

- *Noise*

State, regional, and local governmental agencies may develop zoning and planning ordinances that have the potential to effect USACE facilities and their operations. As a general rule, states tend to treat environmental noise as a source specific pollutant whose emissions will be controlled by the locally effected community.

- *PCBs*

Some states have agreements with the USEPA to administer the Federal regulations. According to the general structure of Federal regulatory programs, any state regulations must adopt the Federal regulations as a minimum set of

requirements. In some cases, state regulations have been developed that regulate PCBs more stringently than the Federal program. State PCB regulations may provide additional regulatory requirements beyond the Federal program to address a specific concern or activity sensitive in that state. State regulations may supersede the Federal regulations in areas including the following:

- PCBs may be regulated as a hazardous waste.
 - PCBs may be regulated to a lower concentration. For example, regulated PCBs in a particular state are defined to be materials and fluids that contain PCBs at a concentration greater than 7 ppm.
 - Shipments of PCBs may require manifest documents.
 - Analyses may be required to quantify the PCB concentration in all PCB Items.
 - Additional inspections of select PCB Items and specific disposal requirements for PCBs and PCB Items may also be required.
 - Generators of PCBs and PCB Items may be required to obtain disposal permits.
- *Asbestos*

Many state and local governments have enacted standards more stringent than the Federal requirements. If the facility is engaging in asbestos removal or disposal, contact the appropriate state and local agencies.

• *Radon*

State and local governments may enact radon control standards.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

- PCBs

ER 1130-2-423, *Polychlorinated Biphenyls Use and Disposition*. This regulation provides guidance for the continued use and legal disposal of PCBs.

- Asbestos

Engineer Technical Letter (ETL) 1110-1-118 informs field activities of the hazards involved in the use of ACM and imposes a prohibition on the use of friable asbestos materials. No ERs currently exist concerning policy and procedures for the control of ACM. However, regulations may exist at the division and/or district level.

- Radon

Refer to Memorandum, Subject: *Guidance for Radon Assessment and Mitigation for USACE Civil, Research and Development, and Military Missions*, from CECW-ON and CEEC-S dated 30 January 1989. This memorandum distributed copies of the USACE Radon Program, which is to be used as policy and guidance until an ER is written. The purpose of the of the USACE Radon Program is to identify and eliminate potential health hazards caused by radon in USACE owned or leased structures, and to prevent such hazards from occurring in new structures.

- Noise

ER 1130-2-400, *Management of Natural Resources and Outdoor Recreation at Civil Works Water Resource Projects*. This regulation details policy on controlling the production of excessive noise.

E. Key Compliance Requirements

- Personnel and PCBs - Certain regulations and practices must be followed to ensure the health of personnel who come in contact with PCBs. These include provision of protective work-clothing, shower facilities, and facilities for washing hands during shift. Airborne contaminations of PCBs must be assessed and certain precautionary practices followed to protect personnel, which include the wearing of respirators if contamination is above a certain level. Certain records and practices must be maintained for employees exposed to PCBs, including medical histories and physical examinations emphasizing liver and skin condition.

- PCB Equipment Marking - The following equipment is required to be marked indicating that they contain PCBs (40 CFR 761.40 and 761.45):
 1. PCB Containers with PCBs in concentrations of 50 to 500 ppm
 2. PCB Transformers (500 ppm or greater)
 3. PCB Large High Voltage Capacitors
 4. equipment containing a PCB Transformer (500 ppm or greater) or a PCB Large High Voltage Capacitor at the time of removal from service
 5. PCB Large Low Voltage Capacitors at the time of removal from service
 6. electric motors using PCB coolants with a concentration of 50 to 500 ppm
 7. hydraulic systems using PCB hydraulic fluid with concentrations of 50 to 500 ppm
 8. heat transfer systems (other than PCB Transformers) using PCB concentrations of 50 to 500 ppm
 9. PCB Article Containers containing any of the above
 10. each storage area used to store PCBs and PCB Items for disposal
 11. transport vehicles loaded with PCB Containers that contain more than 45 kg (99.4 lb) of PCBs in the liquid phase with PCB concentrations of 50 to 500 ppm or one or more PCB Transformers with PCB concentrations of greater than 500 ppm: mark on each end and side
 12. vault doors, machinery room doors, fences, hallways, or means of access, other than a manhole or grate cover, to a PCB Transformer (500 ppm or greater).

- Records for PCBs - A written annual document log must be prepared by 1 July of each calendar year, covering the previous year for all facilities that use or store at any time at least 45 kg (99.4 lb) of PCBs contained in PCB Containers, or one or more PCB Transformers. Owners and operators of PCB chemical waste landfills shall keep records on water analysis and operational records, including burial coordinates for 20 yr after disposal has ceased. Storage and disposal facilities for PCBs shall maintain records for 3 yr (40 CFR 761.180(a), 761.180(d), and 761.180(f)).

- PCB Transformers - PCB Transformers with PCBs of 500 ppm or greater that are in use or in storage for reuse must not pose an exposure risk to food and feed and are subject to registration requirements. Combustible materials, including, but not limited to, paints, solvents, plastics, paper, and sawn wood, must not be stored by a PCB Transformer. PCB Transformers are required to be properly serviced, and inspections must be performed once every 3 mo for all in-service transformers. If the transformer is found to be leaking, it must be repaired or replaced to eliminate the source of the leak. When a PCB Transformer is involved in a fire, the facility is required to immediately report the incident to the National Response Center (NRC) (40 CFR 761.120(a), 761.120(b), 761.120(c), 761.123(d)(2), and 761.125).

- PCB Spills - Facilities are required to report spills of more than 10 lb [4.54 kg] of PCBs of concentrations of 50 ppm to the USEPA regional office. Spills of greater than 1 lb [0.45 kg] must be cleaned up. The criteria for cleanup is based on whether the spill is of high or low concentration of PCBs (40 CFR 761.120, 761.123, 761.125).
- PCB Items - The use of PCBs in electromagnetic switches, voltage regulators, capacitors, heat transfer and hydraulic systems, circuit breakers, reclosers, and cable is allowed if applicable restrictions are met and precautions taken (40 CFR 761.30).
- PCB Storage - PCBs and PCB Items at concentrations greater than 50 ppm that are to be stored before disposal must be stored in a facility that will assure the containment of PCBs. Storage prior to disposal is not to exceed 1 yr. Non-leaking and structurally undamaged PCB Large, High-Voltage Capacitors, and PCB-contaminated Electric Equipment that have not been drained of freeflowing dielectric fluid may be stored on pallets next to a storage area that complies with the storage area requirements. Containers used for the storage of PCBs must comply with the shipping container specification of the Department of Transportation (DOT) (40 CFR 761.65 and ER 1130-2-423).
- PCB Transportation - A generator who offers a PCB waste for transport for commercial offsite storage or offsite disposal must prepare a manifest. If the generator does not receive a signed copy of the manifest within 35 days of the date the waste was accepted by the initial transporter, the generator must immediately contact the transporter and/or owner or operator of the designated facility to determine the status of the PCB waste (40 CFR 761.207 through 761.210 and 761.215).
- PCB Disposal - For each shipment of manifested PCB waste that a disposal facility accepts, the owner or operator of the disposal facility must prepare a Certificate of Disposal. PCB contaminated fluids of concentrations greater than 50 ppm, but less than 500 ppm, are required to be disposed of in a USEPA-approved incinerator or chemical waste landfill, or in a high efficiency boiler. PCB liquids and Transformers with concentrations of 500 ppm or greater must be disposed of in a USEPA-approved PCB incinerator. PCB Capacitors must be disposed of in either a solid waste landfill or an approved incinerator depending on the concentration of PCBs. PCB hydraulic machines containing PCBs at concentrations greater than 50 ppm may be disposed of as municipal solid waste when drained. PCB-contaminated Electrical Equipment, except capacitors, shall be disposed of by draining off the free-flowing liquid. PCB Articles and Containers shall be disposed of in a USEPA-approved incinerator or chemical waste landfill if all free-flowing liquids have been removed (40 CFR 761.60, 761.218, and ER 1130-2-423, para 12).

- **Asbestos Identification** - Facility buildings with the potential to be contaminated with asbestos should be tested and surveyed for asbestos and friable materials (GMP).
- **Renovation and Demolition of Asbestos-Containing Structures** - Facilities that demolish structures containing asbestos above certain limits, must meet notification requirements, emission control requirements and wetting requirements. If the concentration of asbestos is less than this level, then the facility must submit notification of demolition. Facilities being demolished under state or local governmental agency orders shall have the portion of the facility containing friable asbestos adequately wetted during the wrecking operation. When a facility is demolished by intentional burning, all regulated asbestos-containing material (RACM) must be removed. No RACM shall be stripped, removed, or otherwise handled or distributed unless at least one onsite representative trained in asbestos removal is present. When air cleaning is used as a method of controlling emissions of asbestos to the outside air, the fabric filter collection systems are required to meet specific standards, unless alternative equipment is authorized for use by the USEPA (40 CFR 61.145 and 61.152).
- **Asbestos Disposal** - Asbestos-containing waste must be wetted or bagged to prevent emissions to the air. Asbestos waste has to be disposed of in landfills that have been approved for the acceptance of asbestos-containing waste (40 CFR 61.150, 61.151, and 61.154).
- **Environmental Noise** - Making continuous or excessive noise at any time or any place by any means is prohibited when it interferes with an authorized use or project purpose. A single facility point of contact (POC) should be identified for noise complaints (GMP and ER 1130-2-400 para 17(e)).
- **Radon**

MITIGATION TIME FRAME
(AR 200-1, Chapter 11-3, Table 11-1)

Radon Level (pCi/L) ⁴	Mitigate
Greater than 200 ¹	1 mo or move the occupants
200-20 ¹	6 mo
20-8 ²	1-4 yr ³
8-4 ²	5 yr
4 or less ¹	No action required

¹Determine by 90-day screen or a 1-yr measurement in the case of Priority 2 and 3 structures

²Annual average determined by 1-yr measurement. Screening measurements in this range will not be used as the basis for initiating mitigation actions

³Depending on the level of the measurement

⁴pCi = picoCurie; L = liters, mo = months

F. Responsibility for Compliance

- *PCBs*

The District Safety and Occupational Health Office through the Project/Facility Manager is responsible for identifying, inspecting, marking (labeling), and properly servicing PCB Electrical Equipment (transformers and capacitors).

Once a PCB Transformer is taken out of service, it is the responsibility of the Project/Facility Manager to ensure that it is located in a licensed and technically adequate PCB storage area. Normally, such areas are located at the project and the responsibility for storage, disposal, transportation, and contracting for disposal are accomplished by the District Safety and Occupational Health Office.

It is the responsibility of the Project/Facility Manager or Powerhouse Superintendent to arrange for chemical analytical support in screening electrical equipment for PCBs and for cleanup verification.

- *Asbestos*

The District Safety and Occupational Health Office appoints an Asbestos Program Officer, to prepare the Asbestos Management Plan, and an Asbestos Operations Officer, to prepare the Asbestos Operating Plan. He also ensures that a sufficient number of in-house technicians and supervisors are trained and equipped to remove, repair, and control ACM.

The Asbestos Program Officer prepares the Asbestos Management Plan, which contains documentation on all asbestos management efforts and the mechanism for oversight of the program.

The Asbestos Operations Officer prepares and implements the Asbestos Operating Plan.

The Project/Facility Manager evaluates ACM for the potential hazard.

- *Radon*

The Project/Facilities Manager is responsible for sampling radon gas levels at facility offices and other enclosed work areas.

G. Key Compliance Definitions

- *Active Waste Disposal Site* - any disposal site other than an inactive site (40 CFR 61.14).
- *Adequately Wetted* - sufficiently mixed or penetrated with liquid to prevent the release of particulates (40 CFR 61.14).
- *Asbestos* - substances comprised of or derived from actinolite, amosite, anthophyllite, chrysotile, crocidolite, or tremolite (40 CFR 61.14).
- *Asbestos-containing Waste Materials* - means mill tailings or any waste that contains commercial asbestos and is generated by a source subject to the provisions of 40 CFR 141. This term also includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. However, as applied to demolition and renovation operations, this term includes regulated ACM waste and materials contaminated with asbestos, including disposable equipment and clothing (40 CFR 61.141).
- *Asbestos Material* - asbestos or any material containing asbestos (40 CFR 61.141).
- *Asbestos Waste from Control Devices* - any waste material that contains asbestos and is collected by a pollution control device (40 CFR 61.141).
- *Capacitor* - a device for accumulating and holding a charge of electricity and consisting of conducting surfaces separated by a dielectric. Types of capacitors are as follows (40 CFR 761.3):
 1. *Small Capacitor* - a capacitor which contains less than 1.36 kg (3 lb) of dielectric fluid
 2. *Large High-Voltage Capacitor* - a capacitor which contains 1.36 kg (3 lb) or more of dielectric fluid and which operates at 2000 V (a.c. or d.c.) or above
 3. *Large Low-Voltage Capacitor* - a capacitor which contains 1.36 kg (3 lb) or more of dielectric fluid and which operates at 2000 V (a.c. or d.c.).
- *Category I Nonfriable Asbestos-Containing Material (ACM)* - asbestos-containing packing, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos (40 CFR 61.141).
- *Category II Nonfriable ACM* - any material including Category I nonfriable ACM containing more than 1 percent asbestos that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure (40 CFR 61.141).

- *Chemical Waste Landfill* - landfill at which protection against risk of injury to health or the environment from mitigation of PCBs to land, water, or the atmosphere is provided from PCBs and PCB Items deposited therein by locating engineering, and operations, the landfill as required (40 CFR 761.3).
- *Commercial Asbestos* - any material containing asbestos that is extracted from ore and has value because of its asbestos content (40 CFR 61.141).
- *Commercial Storer of PCB Waste* - the owner or operator of each facility that is subject to the PCB storage facility standards of 40 CFR 761.65, and who engages in storage activities involving PCB waste generated by others, or PCB waste that was removed while servicing the equipment owned by others and brokered for disposal. The receipt of a fee or any other forms of compensation for services is not necessary to qualify as a commercial storer of PCB waste. It is sufficient under this definition that the facility stores PCB waste generated by others or the facility removes the PCB waste while servicing equipment owned by others. If a facility's storage of PCB waste at no time exceeds 500 gal [1892.71 L] of PCBs, the owner or operator is not required to seek approval as a commercial storer of PCB waste (40 CFR 761.3).
- *Cutting* - to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing, or punching (40 CFR 61.141).
- *dBA* - sound level in decibels, measured using the A-weighting network of a sound level meter.
- *dB(C)* - a sound level in decibels, measured using the C-weighting network of a sound level meter.
- *Decibel (dB)* - sound is measured in decibels. The zero on the decibel scale is based on the lowest sound level that a healthy, unimpaired human ear can hear. Decibels are not linear, but representative points on a sharply rising (exponential) curve.
- *Demolition* - the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations or the intentional burning of a facility (40 CFR 61.141).
- *Disposal* - intentionally or accidentally to discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB Items (40 CFR 761.3).
- *Emergency Renovation Operation* - a renovation operation that was not planned but results from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, is necessary to protect equipment

from damage, or is necessary to avoid imposing an unreasonable financial burden. This term includes operations necessitated by nonroutine failures of equipment (40 CFR 61.141).

- *Emergency Situations* - for continuing use of a PCB Transformer exists when (40 CFR 761.3):
 1. neither a non-PCB Transformer nor a non-PCB-contaminated Transformer is currently in storage for reuse or readily available within 24 h for installation, or
 2. immediate replacement is necessary to continue service for power users.
- *Environmental Noise* - noise sources that interfere with desired activities or cause annoyance. These desired activities include, but are not limited to, sleep, recreation, and speech. Environmental noise also is the outdoor noise environment consisting of the noise, including ambient noise, from all sources that extends beyond the workplace. The noise environment of the workplace is not considered environmental noise.
- *Facility Component* - any part of any facility, including equipment (40 CFR 61.141).
- *Friable Asbestos Material* - any material that contains more than 1 percent asbestos by weight and can be crumbled, pulverized, or reduced to powder, when dry, by hand pressure (40 CFR 61.141).
- *Fugitive Source* - any source of emissions not controlled by an air pollution control device (40 CFR 61.141).
- *Glove Bag* - a sealed compartment with attached inner gloves used for the handling of ACM (40 CFR 61.141).
- *Good Management Practices (GMPs)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *In or Near Commercial Buildings* - within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 m [98.42 ft] of a nonindustrial, nonsubstation building (40 CFR 761.3).
- *In Poor Condition* - the binding of the materials is losing its integrity as indicated by peeling, cracking, or crumbling of the material (40 CFR 61.141).
- *Inactive Waste Disposal Site* - any disposal site or portion of it where additional asbestos-containing waste material will not be deposited and where the surface is not disturbed by vehicular traffic (40 CFR 61.141).

- *Industrial Building* - a building directly used in manufacturing or technically productive enterprises (40 CFR 761.3).
- *Leak or Leaking* - any instance in which a PCB Article, PCB Container, or PCB Equipment has any PCBs on any portion of its external surface (40 CFR 761.3).
- *Mark* - the descriptive name, instructions, cautions, or other information applied to PCBs and PCB Items, or other objects subject to these regulations (40 CFR 761.3).
- *Marking* - the marking of PCB Items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets the requirements of these regulations (40 CFR 761.3).
- *Mineral Oil PCB Transformers* - any transformer originally designed to contain mineral oil as the dielectric fluid and which has been tested and found to contain 500 ppm or greater PCBs (40 CFR 761.3).
- *Non-PCB Transformers* - any transformer that contains less than 50 ppm PCB except that any transformer that has been converted from a PCB Transformer or a PCB-contaminated Transformer cannot be classified as a non-PCB Transformer until reclassification has occurred in accordance with the requirements of 40 CFR 761.30(a)(2)(v) (40 CFR 761.3).
- *Non-scheduled Renovation* - a renovation operation necessitated by the routine failure of equipment, which is expected to occur within a given period based on past operating experience, but for which an exact date cannot be predicted (40 CFR 61.141).
- *Outside Air* - the air outside buildings and structures, including, but not limited to, air under a bridge or an open ferry dock (40 CFR 61.141).
- *PCB or PCBs* - a chemical substance that is limited to the biphenyl molecule which has been chlorinated to varying degrees or any combination of substances which contains such substance (40 CFR 761.3).
- *PCB Article* - any manufactured article, other than a PCB Container, that contains PCBs and whose surface(s) has been in direct contact with PCBs. This includes capacitors, transformers, electric motors, pumps, and pipes (40 CFR 761.3).

- *PCB Article Container* - any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB Articles or PCB Equipment, and whose surface(s) has not been in direct contact with PCBs (40 CFR 761.3).
- *PCB-contaminated Electrical Equipment* - any electrical equipment, including but not limited to transformers, capacitors, circuit breakers, reclosers, voltage regulators, switches, electromagnets, and cable, that contain 50 ppm or greater PCB, but less than 500 ppm PCB (40 CFR 761.3).
- *PCB Equipment* - any manufactured item, other than a PCB Container or a PCB Article Container, which contains a PCB Article or other PCB Equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures (40 CFR 761.3).
- *PCB Item* - any PCB Article, PCB Article Container, PCB Container, or PCB Equipment, that deliberately or unintentionally contains or has as a part of it any PCB or PCBs (40 CFR 761.3).
- *PCB Transformer* - any transformer that contains 500 ppm PCB or greater (40 CFR 761.3).
- *PCB Waste* - those PCBs and PCB Items that are subject to the disposal requirements of Subpart D of 761 (40 CFR 761.3).
- *Particulate Asbestos Material* - finely divided particles of asbestos or material containing asbestos (40 CFR 61.141).
- *Planned Renovation Operations* - a renovation operation, or a number of such operations, in which the amount of friable asbestos material that will be removed or stripped within a given period of time can be predicted. Individual nonscheduled operations are included if a number of such operations can be predicted to occur during a given period of time based on operating experience (40 CFR 61.141).
- *Posing an Exposure Risk to Food or Feed* - being in any location where human food or animal feed products could be exposed to PCBs released from a PCB Item (40 CFR 761.3).
- *Radon-222* - a naturally occurring, inert, radioactive gas that is formed from the radioactive decay of uranium.
- *Regulated Asbestos-Containing Material (RACM)* - includes friable asbestos material; Category I nonfriable ACM that has become friable; Category I non-

friable ACM that has been subjected to grinding, casting, cutting, or abrading; and Category II nonfriable ACM that has a high probability of becoming crumbled, crushed, or pulverized (40 CFR 61.141).

- *Remove* - to take out RACM from any structure (40 CFR 61.141).
- *Renovation* - altering in any way one or more structure components. Operations in which load-supporting structural members are wrecked or taken out are excluded (40 CFR 61.141).
- *Retrofill* - to remove PCB or PCB-contaminated dielectric fluid and replace it with either PCB, PCB-contaminated, or non-PCB dielectric fluid (40 CFR 761.3).
- *Rupture of a PCB Transformer* - a violent or nonviolent break in the integrity of a PCB Transformer caused by an overtemperature and/or overpressure condition that results in the release of PCBs (40 CFR 761.3).
- *Strip* - to take off RACM from any part of a facility (40 CFR 61.141).
- *Structural Member* - any load-supporting member of a structure, such as beams and load-supporting walls; or any nonload-supporting member, such as ceilings and nonload-supporting walls (40 CFR 61.141).
- *Visible Emissions* - any emissions which are visually detectable without the aid of instruments, coming from RACM or asbestos-containing waste material, or from any asbestos milling, manufacturing, or fabricating operation. This does not include condensed water vapor (40 CFR 61.141).

SPECIAL POLLUTANTS MANAGEMENT

Records to Review

- Inspection, storage, maintenance, and disposal records for PCBs/PCB Items
- PCB Equipment inventory and sampling results
- Correspondence with regulatory agencies concerning PCB noncompliance situations
- Annual reports
- Asbestos management plan and operating plan
- Notifications to Regulators concerning asbestos disposal
- Records of onsite disposal and transportation and offsite disposal of asbestos
- Regulatory inspection reports
- Documentation of asbestos sampling and analytical results
- Documentation of preventive measure or action
- Results of air sampling at the conclusion of response action
- Records of asbestos training program
- List of buildings insulated with asbestos or housing ACM
- Record of demolition or renovation projects completed in the past 5 yr that involve friable asbestos
- Decision documents/records of decision
- Administrative Record
- A-106 Pollution Abatement Plan
- Facility Master Plan Document
- Complaint log from local community
- Spill Prevention Control and Countermeasure (SPCC) Plan
- Installation Spill Clean Up Plan (Installation Spill Contingency Plan (ISCP))
- Copies of any state regulations on the use and/or disposal of special pollutants (if applicable).

Physical Features to Inspect

- PCB storage areas
- Equipment, fluids, and other items used or stored at the facility containing PCBs
- Pipe, spray-on, duct, and troweled cementitious insulation and boiler lagging
- Ceiling and floor tiles
- Power generating or other noise
- Emergency generators

People to Interview

- Natural Resources Manager (Division, District)
- Safety and Occupational Health Office (Division, District)
- Environmental Compliance Coordinator (ECC)
- Engineering
- Operations
- Project Resource Manager
- Facility Managers

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. This chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

PCB Label Format

<p>CAUTION CONTAINS PCBs (POLYCHLORINATED BIPHENYLS)</p> <p>A toxic environmental contaminant requiring special handling and disposal in accordance with U.S. Environmental Protection Agency Regulations 40 CFR 761. For Disposal Information contact the _____ or nearest U.S. EPA office.</p> <p>In case of accident or spill, call the _____ or the U.S. Coast Guard National Response Center: 800: 424-8802</p>

Appendix 9-2

Dielectric Fluid Trend Names and Manufacturers

1. U.S. Manufactured Dielectrics:

<i>Name</i>	<i>Manufacturer</i>
Aroclor	Monsanto
Aroclor B	Mallory
Sbestol	American Corporation
Askarel Hevi-Duty	Hevi-Duty Corporation
Askarel *	Ferranti-Packard, Ltd.
Askarel	Universal Mfg. Co.
Chlorextol	Allis-Chalmers
Chlorinol	Sparagoe Electric
Chlorphen	Jard Company
Diacle	Sangamo Electric
Dykanol	Cornell Dubilier
Elemex	McGraw Edison
Eucarel	Electric Utilities Co.
Hyvol	Aerovox
Inerteen	Westinghouse Electric
No-Flamol	Wagner Electric
Pyranol	General Electric
Saf-T-Kuhl	Kuhlman Electric

* Generic name used for insulating liquids in capacitors and transformers.

2. Foreign Manufactured Dielectrics:

<i>Name</i>	<i>Manufacturer</i>
Clophen	Bayer (Germany)
Fenclo	Caffaro (Italy)
Kennechlor	Mitsubishi (Japan)
Phenoclor	Prodelec (France)
DK	Caffaro (Italy)
Pyralene	Prodelec (France)
Solvot	USSR
Santotherm	Mitsubishi (Japan)

3. Transformers that list other dielectrics or do not bear a manufacturer's identification or service plate on the transformer: if the transformer contains any of the dielectrics (commonly referred to as askarels), it is to be certified as a PCB Transformer containing in excess of 500 ppm PCB, and no laboratory testing is necessary.

Section 10

Underground Storage Tank (UST) Management

SECTION 10

UST MANAGEMENT

A. Applicability

This section applies to U.S. Army Corps of Engineers (USACE) facilities that utilize underground storage tanks (USTs) for storage of hazardous materials or petroleum products. The section presents review action items for the proper management of USTs. The evaluation of UST management ranges from the installation of new systems and the maintenance of existing systems, to the repair, replacement, or permanent removal of USTs.

B. Federal Legislation

- *The Resource Conservation and Recovery Act (RCRA), Subtitle I.* This law, Public Law (PL) 99-49 (42 U.S. Code (USC) 6991-6991i), established the standards and procedures for USTs. It required the U.S. Environmental Protection Agency (USEPA) to issue standards on leak detection, record maintenance, release reporting, corrective actions, tank upgrading, and replacement (42 USC 6991b(a)(c)).
- *The Federal Water Pollution Control Act.* This Act, commonly known as the *Clean Water Act (CWA)*, PL 100-4 (33 USC 1251-1387), was last amended 4 February 1987. The Act's intent was to restore and maintain the chemical, physical, and biological integrity of the nation's waters. This is accomplished by regulating wastewater discharged directly into navigable or surface waters and indirectly into POTW. Federal agencies are required to abide by Federal, state, and local water pollution controls both substantively and procedurally (33 USC 1323(a)). Like the *Clean Air Act (CAA)*, the *CWA* also provides for Presidential exemptions for executive branch agencies.
- Executive Order (EO) 12088. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Requirements

- State and local governments have developed regulations specific to the physical environment and the regulated communities' needs. It is important to review regulations at the state and local level to ensure that any differences, such as reporting or notice requirements and monitoring requirements, can be complied with.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, lands, and waters at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- Substandard USTs - Substandard UST systems must be upgraded, closed, or removed from service by 22 December 1998. If a release detection system is not available for the UST, it must be phased out in 1 to 5 yr (40 CFR 280.21(a) through 280.21(c)).
- New or Upgraded USTs - New or upgraded USTs are required to be fitted with spill and overfill prevention equipment. Notice must be given to the appropriate authority within 30 days when a UST system is brought into service after 8 May 1986. If the UST is installed after 22 December 1988, it must be constructed so that it will remain structurally sound for its operating life. Installation of UST must be done by a certified installer, and UST systems must be made of, or lined with, materials compatible with the substance stored (40 CFR 280.20, 280.21(d), 280.22, and 280.32).
- Metallic USTs - Buried metallic storage tanks installed after 1973 must be protected from corrosion by coatings, cathodic protection, or other effective methods. They must also undergo regular pressure testing (40 CFR 112.7(e)(2)(iv)).
- Spill and Overfill Prevention - The filling of a UST must include the prevention of overfilling and spilling of the substance. If a spill does occur, facilities with

UST systems are required to contain and immediately clean up a spill or overfill and report it to the implementing agency within 24 h if (40 CFR 280.30, 280.53):

1. spills or overfills of petroleum that resulted in a release to the environment of more than 25 gal [93.89 L] or that caused a sheen on nearby surface water
 2. spills or overfills of hazardous substances that result in a release to the environment in excess of the reportable quantity.
- Corrosion Protection and Repairs - Corrosion protection on USTs must operate continuously to provide corrosion protection to the metal components that routinely contain regulated substances and are in contact with the ground. UST systems with impressed current cathodic protection are required to be inspected every 60 days by a qualified cathodic protection tester. Repairs to USTs must be performed according to industry code. Tanks and piping that have been replaced or repaired are required to be tested for tightness within 30 days. Records of repairs shall be maintained for the life of the tank (40 CFR 280.31, 280.33, 280.43, and 280.44).
 - Release Detection - Facilities with new and existing USTs are required to provide a method, or combination of methods of release detection. Release detection requirements in 40 CFR 280.40 through 280.45 do not apply to USTs which store fuel solely for use by emergency power generators. Depending on the age, size, and construction of the tank, acceptable methods of release detection include the following:
 1. inventory control
 2. manual tank gauging
 3. tank tightness testing
 4. automatic tank gauging
 5. vapor monitoring
 6. groundwater monitoring
 7. interstitial monitoring.

Existing UST system tanks must implement release detection requirements based on when the system was installed. The table below identifies the deadline for providing release detection:

Deadlines for Release Detection:	
UST System Installation Date:	Leak Detection Required by 22 December of:
All others	1992
1980-December 1988	1993

There are separate release detection requirements for underground piping depending on whether it conveys substances under pressure or suction.

1. Pressurized piping must be equipped with an automatic line leak detector and have an annual line tightness test conducted; or pressurized piping must be equipped with an automatic line leak detector and a permanent release detection system that allows monthly monitoring. Permanent release detection methods acceptable for piping include: vapor monitoring, interstitial monitoring, and groundwater monitoring. Deadline for implementing release detection requirements on pressurized piping is 22 December 1990.
2. Suction piping either must have a line tightness test conducted every 3 yr or must use a permanent release detection system that allows monthly monitoring. Deadlines for implementing release detection requirements on suction piping are based on when the UST system was installed. The foregoing table identifies the deadline for providing release detection. For suction piping constructed to certain standards, no release detection monitoring is required. It must meet five criteria:
 1. Below-grade piping must operate at less than atmospheric pressure.
 2. Below-grade piping must be sloped to drain back into the tank when suction is released.
 3. Only one check valve can be included in each suction line.
 4. Check valve shall be located directly below and as close as practical to the suction pump.
 5. Criteria in paragraphs 2 through 4 must be verifiable.

Release detection records are required to be kept as follows (40 CFR 280.40 through 280.45):

- all written performance claims pertaining to any release detection system used for 5 yr from the date of installation
 - the results of any sampling testing or monitoring for 1 yr
 - the results of tank tightness testing, until the next test is done
 - written documentation of calibration, maintenance, or repair, of release detection equipment permanently located onsite, at least 1 yr after the servicing is done
 - schedules of required calibration and maintenance provided by the release detection equipment manufacturer, 5 yr after the date of installation.
- Hazardous Substance USTs - Existing hazardous substance USTs are required to meet release detection standards for petroleum USTs (40 CFR 280.42).
 - Reporting and Recordkeeping Requirements-Facilities are required to submit the following when applicable: notifications of new USTs, release reports,

planned or complete corrective actions, notice of closure or change-in-service. Records are required to be available at the UST site or at a readily available alternative site. Records are to be kept of the following (40 CFR 280.34, 280.45, and 280.74):

- a corrosion expert's analysis of site corrosion potential if corrosion protection equipment is not used
 - documentation of operation of corrosion protection equipment
 - documentation of repairs
 - closure records
 - results of any site investigations.
- **Change in Service or Closure of USTs** - USTs which are put out of service temporarily, must have continued maintenance. If the UST has been out-of-service for near or over 1 yr. plans must be made for permanent closure. The facility must notify the implementing agency (USEPA) for any closure or change in service 30 days in advance or within a reasonable time frame as determined by the implementing agency. UST closure must be done by either removing the tank from the ground or leaving it in place with the contents removed and filled with an insert solid material and closing it to all future outside access. If a tank is undergoing a change-in-service, it must be emptied and cleaned, and a site assessment conducted. Prior to the completion of permanent closure or change-in-service, measurements must be made for the presence of a release where contamination is most likely to be present at the site. Facilities with UST systems closed prior to 22 December 1988 must assess the excavation zone and close the UST according to current standards if releases from the UST may pose a current or potential threat to human health and the environment (40 CFR 280.70 through 280.73).

F. Key Compliance Definitions

These definitions were obtained from 40 CFR 280 as well as various ERs cited previously in this section.

- ***Aboveground Release*** - any release to the surface of the land or to surface water. This includes, but is not limited to, releases from the aboveground portion of an UST system and aboveground releases associated with overfills and transfer operations as the regulated substance moves to or from UST system (40 CFR 280.12).
- ***Ancillary Equipment*** - any devices including, but not limited to, such devices as pipings, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of regulated substances to and from the UST (40 CFR 280.12).

- *Belowground Release* - any release to the subsurface of the land and to groundwater. This includes, but is not limited to, releases from the belowground portion of a UST system and belowground releases associated with overfills and transfer operations as the regulated substance moves to or from a UST (40 CFR 280.12).
- *Cathodic Protection* - a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell. For example, a tank system can be cathodically protected through the application of either galvanic anodes or impressed current (40 CFR 280.12).
- *Cathodic Protection Tester* - a person who can demonstrate understanding of the principles and measurements of all common types of cathodic protection systems as applied to buried or submerged metal piping and tank systems. At a minimum, such persons must have education and experience in soil resistivity, stray current, structure-to-soil potential, and component electrical isolation measurements of buried metal piping and tank systems (40 CFR 280.12).
- *CERCLA - Comprehensive Environmental Response Compensation and Liability Act of 1980 as amended* (40 CFR 280.12).
- *Compatible* - the ability of two or more substances to maintain their respective physical and chemical properties upon contact with one another for the design life of the tank system under conditions likely to be encountered in the UST (40 CFR 280.12).
- *Connected Piping* - all underground piping, including valves, elbows, joints, flanges, and flexible connectors, attached to a tank system through which regulated substances flow. For the purpose of determining how much piping is connected to any individual UST system, the piping that joins two UST systems should be allocated equally between them (40 CFR 280.12).
- *Consumptive Use* - with respect to heating oil means consumed on the premises (40 CFR 280.12).
- *Corrosion Expert* - a person who, by reason of thorough knowledge of the physical sciences and the principles of engineering and mathematics acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be accredited or certified as being qualified by the National Association of Corrosion Engineers (NACE) or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control of buried or submerged metal piping systems and metal tanks (40 CFR 280.12).

- *Deferred USTs* - USTs which are exempt from meeting the requirements in 40 CFR 280 except those concerning release response and corrective action for UST systems containing petroleum or hazardous substances in 40 CFR 280.60 through 280.67. These tanks include (40 CFR 280.10(e)):
 1. wastewater treatment tank systems
 2. any UST systems containing radioactive material that are regulated under the *Atomic Energy Act of 1954*
 3. any UST system that is a part of an emergency generator system at nuclear power generation facilities regulated by the Nuclear Regulatory Commission under 10 CFR 50, Appendix A
 4. airport hydrant fuel distribution systems
 5. UST system with field-constructed tanks.

- *Dielectric Material* - a material that does not conduct direct electrical current. Dielectric coatings are used to electrically isolate UST systems from the surrounding soils. Dielectric bushings are used to electrically isolate portions of the UST system (e.g., tank from piping) (40 CFR 280.12).

- *Electrical Equipment* - underground equipment that contains dielectric fluid that is necessary for the operation of equipment such as transformers and buried electric cable (40 CFR 280.12).

- *Excavation Zone* - the volume containing the tank system and backfill material bounded by the ground surface, walls, and floor of the pit and trenches into which the UST system is placed at the time of installation (40 CFR 280.12).

- *Excluded USTs* - USTs which are not required to meet the requirements found in 40 CFR 280 and include (40 CFR 280.10(b)):
 1. any UST system holding hazardous wastes listed under Subtitle C of the *Solid Waste Disposal Act*, or a mixture of such hazardous waste and other regulated substances
 2. any wastewater treatment tank system that is part of a wastewater treatment facility regulated under Section 402 or 307(b) of the *Clean Water Act (CWA)*
 3. equipment of machinery that contains regulated substances for operational purposes such as hydraulic lift tanks and electrical equipment
 4. any UST system whose capacity is 110 gal [416.40 L] or less
 5. any UST system that contains a de minimis concentration of a regulated substance
 6. any emergency spill or overflow containment UST system that is expeditiously emptied after use.

- *Existing Tank System* - a tank system used to contain an accumulation of regulated substances or for which installation has commenced on or before 22 December 1988. Installation is considered to have commenced if (40 CFR 280.12):
 1. the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system
 2. a. either a continuous onsite physical construction or installation program has begun, or
 - b. the owner or operator has entered into any contractual obligations
 1. which cannot be canceled or modified without substantial loss
 2. for physical construction at the site or installation of the tank system to be completed within a reasonable time.
- *Flow-through Process Tank* - a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operation of the process. Flow-through process tanks do not include tanks used for the storage of material prior to their introduction into the production process or for the storage of finished products or by-products from the production (40 CFR 280.12).
- *Free-product* - a regulated substance that is present as a nonaqueous phase liquid (e.g., liquid not dissolved in water) (40 CFR 280.12).
- *Gathering Lines* - any pipeline, equipment, facility, or building used in the transportation of oil or gas during oil or gas production (40 CFR 280.12).
- *Hazardous Substance UST System* - any UST system that contains a hazardous substance defined in Sect 101(14) of the *CERCLA* of 1980 (but not including any substance regulated as a hazardous waste under subtitle C) or any mixture of such substances and petroleum, and which is not a petroleum UST system (40 CFR 280.12).
- *Heating Oil* - petroleum that is No. 1, No. 2, No. 4--light, No. 4--heavy, No. 5--heavy, and No. 6 technical grades of fuel oil; other residual fuel oils (including Navy Special Fuel Oil and Bunker C); and other fuels when used as substitutes for one of these fuel oils. Heating oil is typically used in the operation of heating equipment, boilers, or furnaces (40 CFR 280.12).
- *Hydraulic Lift Tank* - a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices (40 CFR 280.12).

- *Liquid Trap* - sumps, well cellars, and other traps used in association with oil and gas production, gathering, and extracting operations (including gas production plants), for the purpose of collecting oil, water, and other liquids. These liquid traps may temporarily collect liquids for subsequent disposition or reinjection into a production or pipeline stream, or may collect and separate liquids from a gas stream (40 CFR 280.12).
- *Maintenance* - the normal operational upkeep to prevent a UST system from releasing product (40 CFR 280.12).
- *Motor Fuel* - petroleum or a petroleum-based substance that is motor gasoline, aviation gasoline, No. 1 or No. 2 diesel fuel, or any grade of gasohol, and is typically used in the operation of motor engines (40 CFR 280.12).
- *New Tank System* - a tank system that will be used to contain an accumulation of regulated substances and for which installation has commenced after 22 December 1988 (40 CFR 280.12).
- *Noncommercial Purposes with Respect to Motor Fuel* - not for resale (40 CFR 280.12).
- *Oil* - oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse (40 CFR 122.2).
- *On the Premises where Stored (heating oil)* - UST systems located on the same property where the stored heating oil is used (40 CFR 280.12).
- *Operator* - any person in control of or having responsibility for the daily operation of the UST system (40 CFR 280.12).
- *Overfill Release* - a release that occurs when a tank is filled beyond its capacity, resulting in a discharge of the regulated substance to the environment (40 CFR 280.12).
- *Person* - an individual, trust, firm, joint stock company, Federal agency, corporation, state, municipality, commission, political subdivision of a state, or any interstate body. *Person* also includes a consortium, joint venture, commercial entity, and the U.S. Government (40 CFR 280.12).
- *Petroleum UST System* - a UST system that contains petroleum or a mixture of petroleum with *de minimis* quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils (40 CFR 280.12).

- *Pipe or Piping* - a hollow cylinder or tubular conduit that is constructed of nonearthen materials (40 CFR 280.12).
- *Pipeline Facilities* - (including gathering lines) are new and existing pipe rights-of-way and any associated equipment, facilities, or buildings (40 CFR 280.12).
- *Recoverable Product* - product which has served its intended purpose or which contains foreign matter which renders it unfit for original or alternate use, but through processing or refining can be reclaimed for other use by the Corps or commercial industry (40 CFR 280.12).
- *Regulated Substance* -
 1. any substance defined in section 101(14) of the CERCLA of 1980 (but not including any substance regulated as a hazardous waste under subtitle C), and
 2. petroleum, including crude oil or any fraction thereof, that is liquid at standard conditions of temperature and pressure (60 °F [15.56 °C] and 14.7 psia).

(NOTE: The term *regulated substance* includes, but is not limited to, petroleum and petroleum based substances comprised of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils (40 CFR 280.12).)

- *Release* - any spilling, leaking, emitting, discharging, escaping, leaching, or disposing from an UST into groundwater, surface water, or subsurface soils (40 CFR 280.12).
- *Release Detection* - determining whether a release of a regulated substance has occurred from the UST system into the environment or into the interstitial space between the UST system and its secondary barrier or secondary containment around it (40 CFR 280.12).
- *Repair* - to restore a tank or UST system component that has caused a release of product from the UST system (40 CFR 280.12).
- *Residential Tank* - a tank located on property used primarily for dwelling purposes (40 CFR 280.12).
- *SARA* - *Superfund Amendments and Reauthorization Act of 1986* (40 CFR 280.12).

- *Septic Tank* - a water-tight covered receptacle designed to receive or process, through liquid separation or biological digestion, the sewage discharged from a building sewer. The effluent from such a receptacle is distributed through the soil and settled solids and scum from the tank are pumped out periodically and hauled to a treatment facility (40 CFR 280.12).
- *Stormwater or Wastewater Collection System* - piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water runoff resulting from precipitation, or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur. The collection of stormwater and wastewater does not include treatment except where incidental to conveyance (40 CFR 280.12).
- *Surface Impoundment* - a natural topographic depression, excavation, or diked area formed primarily of earthen materials (although may be lined with man-made materials), that is not an injection well (40 CFR 280.12).
- *Tank* - a stationary device designed to contain an accumulation of regulated substances and constructed of nonearthen materials (e.g., concrete, steel, or plastic) that provide structural support (40 CFR 280.12).
- *Underground Area* - an underground room such as a basement, cellar, shaft, or vault, providing enough space for physical inspection of the exterior of the tank, situated on or above the surface of the floor (40 CFR 280.12).
- *Underground Release* - any belowground release (40 CFR 280.12).
- *Underground Storage Tank (UST)* - any one or a combination of tanks (including underground pipes connected thereto) used to contain an accumulation of regulated substances, and the volume of which (including the volume of underground pipes connected thereto) is 10 percent or more beneath the surface of the ground. This term does not include any (40 CFR 280.12):
 1. farm or residential tank of 1100 gal [4163.95 L] or less capacity used for storing motor fuel for noncommercial purposes
 2. tank used for storing heating oil for consumptive use on the premises where stored
 3. septic tanks
 4. pipeline facilities (including gathering lines) which are regulated by other acts
 5. surface impoundment, pit, pond, or lagoon
 6. stormwater or wastewater collection system
 7. flow-through process tank
 8. liquid trap or associated gathering lines directly related to oil or gas production and gathering operations

9. storage tank situated in an underground area if the storage tank is situated upon or above the surface of the floor such as basements or tunnels
10. tanks holding 110 gal [106.21 L] or less
11. emergency spill and overfill tanks.

(NOTE: The definition of UST does not include any pipes connected to any tank which is described in paragraphs 1 through 9 of this definition.)

- *Upgrade* - the addition or retrofit of some systems such as cathodic protection, lining, or spill and overfill controls to improve the ability of an underground storage tank system to prevent the release of product (40 CFR 280.12).
- *UST System or Tank System* - UST, connected underground piping, underground ancillary equipment, and containment system, if any (40 CFR 280.12).
- *Wastewater Treatment Tank* - a tank that is designed to receive and treat influent wastewater through physical, chemical, or biological methods (40 CFR 280.12).

UST MANAGEMENT

Records to Review

- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Official correspondence with state implementing agency
- Spill Prevention and Response Plan
- Records of spill response training programs
- Results of all UST testing, sampling, monitoring, inspection, maintenance, and repair work (for 1 yr)
- Registration records for all in-service, temporarily out-of-service, and permanently closed tanks
- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Records for UST disposal, closure, and removal from activity and results of excavation area assessment (for 3 yr)

Physical Features to Inspect

- Refueling facilities, including:
- Belowground storage tanks and dikes
- Venting
- Fill pipes
- Gauges
- Vehicle maintenance areas
- Oil and hazardous substance site

People to Interview

- Natural Resources Manager (Division, District)
- Safety and Occupational Health Office (District)
- Operations (Division, District)
- Environmental Compliance Coordinator (ECC)
- Engineering
- Project Resource Manager
- Facility Managers

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. This chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Checklist Item Numbers in the April 1993 ERGO Manual	Corresponding Checklist Item Numbers in the 1994 ERGO Manual
10-1 through 10-3	10-1 through 10-3

Appendix 10-2

Schedule for Phase-in of Release Detection (40 CFR 280.40(c))

Year system was installed	Year when release detection is required (by 22 December of the year indicated)				
	1989	1990	1991	1992	1993
Before 1965 or date unknown.	RD	P			
1965-69		P/RD			
1970-74		P	RD		
1975-79		P		RD	
1980-88		P			RD

P = must begin release detection for all pressurized piping.

RD = must begin release detection for tanks and suction piping.

Appendix 10-3

Release Detection Options (40 CFR 280.43 and 280.44)

Each method of release detection for tanks and piping used to meet the requirements for petroleum UST systems must be conducted in accordance with the following:

1. Inventory control: Product inventory control must be conducted monthly to detect a release of at least 1.0 percent of flow-through, plus 130 gal [492.10 L] on a monthly basis in the following manner:

- a. inventory volume measurements for regulated substance inputs and withdrawals and the amount still remaining in the tank are recorded each operating day
- b. the equipment used is capable of measuring the level of product over the full range of the tanks height to the nearest 1/8 in. [0.32 cm]
- c. the regulated substance inputs are reconciled with delivery receipts by measurements of the tank inventory volume before and after delivery
- d. deliveries are made through a drop tube that extends to within 1 ft [0.30 m] of the tank bottom
- e. product dispensing is metered and recorded within the local standards of product withdrawn
- f. the measurement of any water level in the bottom of the tank is made to the nearest 1/8 in. [0.32 cm] at least once a month.

2. Manual gauging: Manual tank gauging must meet the following requirements:

- a. tank liquid level measurements are taken at the beginning and end of a period of at least 36 h during which no liquid is added to or removed from the tank
- b. level measurements are based on an average of two consecutive stick readings at both the beginning and end of the period
- c. the equipment used is capable of measuring the level of product over the full range of the tank's height to the nearest 1/8 in. [0.32 cm]
- d. a leak is suspected and subject to the requirements of subpart E if the variation between beginning and ending measurements exceeds the weekly or monthly standards of Table A on the following page
- e. only tanks of 550 gal [2081.98 L] or less nominal capacity may use this as a sole method of release detection. Tanks of 551 gal [2085.76 L] to 2000 gal [7590.82 L] may also use inventory control (see paragraph 1 in this appendix). Tanks of greater than 2000 gal nominal capacity may not use this method to meet release detection requirements.

Appendix 10-3 (continued)

Table A

Nominal Tank Capacity	Weekly Standard (one test)	Monthly Standard (average of four)
550 gal [2081.98 L] or less	10 gal [37.85 L]	5 gal [18.93 L]
551-1000 gal [2085.76-3785.41 L]	13 gal [49.21 L]	7 gal [26.50 L]
1001-2000 gal [3789.20-7570.82 L]	26 gal [98.42 L]	13 gal [49.21 L]

3. Tank tightness testing: Tank tightness testing must be capable of detecting a 0.1 gal/h [0.38 L/h] leak rate from any portion of the tank that routinely contains product while accounting for the effects of thermal expansion or contraction of the product, vapor pockets, tank deformation, evaporation or condensation, and the location of the water table.

4. Automatic tank gauging: Equipment for automatic tank gauging that tests for the loss of product and conducts inventory control must meet the following requirements:

- a. the automatic product level monitor test can detect a 0.2 gal/h [0.75 L/h] leak rate from any portion of the tank that routinely contains product
- b. inventory control is conducted according to requirements (see paragraph 1 above).

5. Vapor monitoring: Testing or monitoring for vapors within the soil gas of the excavation zone must meet the following requirements:

- a. the materials used as backfill are sufficiently porous (e.g., gravel, sand, crushed rock) to easily allow diffusion of vapors from releases into the excavation area
- b. the stored regulated substance, or a tracer compound placed in the tank system, is sufficiently volatile (e.g., gasoline) to result in a vapor level that is detectable by the monitoring devices located in the excavation zone in the event of a release from the tank
- c. the measurement of vapors by the monitoring device is not rendered inoperative by the groundwater, rainfall, soil moisture, or other unknown interferences so that a release could go undetected for more than 30 days
- d. the level of background contamination in the excavation zone will not interfere with the method used to detect releases from the tank
- e. the vapor monitors are designed and operated to detect any significant increase in concentration above background of the regulated substance stored in the tank system, a component or components of that substance, or a tracer compound placed in the tank system
- f. in the UST excavation zone, the site is assessed to ensure compliance with the requirements in paragraph 5, subparagraphs a-d above and to establish the number and positioning of monitor wells that will detect any releases within the excavation zone from any portion of the tank that routinely contains product
- g. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

Appendix 10-3 (continued)

6. Groundwater monitoring: Testing or monitoring for liquids in the groundwater must meet the following requirements:

- a. the regulated substance stored is immersible in water and has a specific gravity of less than 1
- b. groundwater is never more than 20 ft [6.10 m] from the ground surface and the hydraulic conductivity of the soil(s) between the UST system and the monitoring wells or devices is not less than 0.01 cm/s [0.0039 in./s] (e.g., the soil should consist of gravels, coarse to medium sands, coarse silts, or other permeable materials)
- c. the slotted portion of the monitoring well casing must be designed to prevent migration of natural soils or filter pack into the well and to allow entry of regulated substance on the water table into the well under both high and low groundwater conditions
- e. monitoring wells shall be sealed from the ground surface to the top of the filter pack
- f. monitoring wells or devices intercept the excavation zone or are as close to it as is technically feasible
- g. the continuous monitoring devices or manual methods used can detect the presence of at least 1/8 in. [0.32 cm] of free product on top of the groundwater in the monitoring wells
- h. within and immediately below the UST system excavation zone, the site is assessed to ensure compliance with the requirements of paragraphs 6 a-e above and to establish the number and positioning of monitoring wells or devices that will detect releases from any portion of the tank that routinely contains product
- i. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

7. Interstitial monitoring: Interstitial monitoring between the UST system and a secondary barrier immediately around or beneath it may be used but only if the system is designed, constructed and installed to detect a leak from any portion of the tank that routinely contains product and also meets one of the following requirements

- a. for double-walled systems, the sampling or testing method can detect a release through the inner wall in any portion of the tank that routinely contains product
- b. for UST systems with a secondary barrier within the excavation zone, the sampling or testing method used can detect a release between the UST system and the secondary barrier.
 1. the secondary barrier around or beneath the UST system consists of artificially constructed material that is sufficiently thick and impermeable (at least 10^{-6} cm/s [-3×10^{-7} in./s] for the regulated substance stored) to direct a release to the monitoring point and permit its detection
 2. the barrier is compatible with the regulated substance stored so that a release from the UST system will not cause a deterioration of the barrier, allowing a release to pass through undetected
 3. for cathodically protected tanks, the secondary barrier must be installed so that it does not interfere with the proper operation of the cathodic protection system
 4. the groundwater, soil moisture, or rainfall will not render the testing or sampling method used inoperative so that a release could go undetected for more than 30 days
 5. the site is assessed to ensure that the secondary barrier is always above the groundwater and not in a 25-yr flood plain, unless the barrier and monitoring designs are for use under such conditions
 6. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.

Appendix 10-3 (continued)

- c. for tanks with an internally fitted liner, an automated device can detect a release between the inner wall of the tank and the liner. The liner is compatible with the substance stored.

8. Other methods: Any other type of release detection method, or combination of methods, can be used if:

- a. it can detect a 0.2 gal/h [0.75 L/h] leak rate or a release of 150 gal [567.81 L] within a month with a probability of detection of 0.95 and a probability of false alarm of 0.05, or
- b. the implementing agency may approve another method if it can be demonstrated that this method can detect releases as effectively as the methods listed in this appendix.

Each method of release detection for *piping*, used to meet the requirements must be conducted in accordance with the following:

1. Automatic line detectors: Methods that alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping or triggering an audible or visual alarm may be used only if they detect leaks of 3 gal/h [11.36 L/h] at 4.5 kg/cm, or 10 psi line pressure within 1 h. An annual test of the operation of the leak detector must be conducted in accordance with the manufacturer's requirements.

2. Line tightness testing: A periodic test of piping may be conducted only if it can detect a 0.1 gal/h [0.38 L/h] leak once and one-half times the operating pressure.

3. Applicable tank methods: Vapor monitoring, groundwater monitoring, and interstitial monitoring may be used if they are designed to detect a release from any portion of the underground piping that routinely contains regulated substances.

Section 11

Wastewater Management

SECTION 11

WASTEWATER MANAGEMENT

A. Applicability

This section includes regulations, responsibilities and compliance requirements associated with wastewater discharge at U.S. Army Corps of Engineers (USACE) facilities. Wastewater discharge can include any of the following:

- sanitary wastewater discharges directly to a receiving stream or through a Corps treatment facility
- sanitary or industrial wastewater discharge to a Publicly Owned Treatment Works (POTW) or other non-Corps facility
- stormwater runoff from operational areas of the facility to a receiving stream or water body
- industrial or storm wastewater drained to an industrial waste reservoir.

Most Corps facilities have wastewater discharge of one kind or another; therefore, this section will be applicable to most facilities.

B. Federal Legislation

- *The Federal Water Pollution Control Act*. This Act, commonly known as the *Clean Water Act (CWA)*, Public Law (PL) 100-4 (33 U.S. Code (USC) 1251-1387), was last amended 4 February 1987. The Act's intent was to restore and maintain the chemical, physical, and biological integrity of the nation's waters. This is accomplished by regulating wastewater discharged directly into navigable or surface waters and indirectly into POTW. Federal agencies are required to abide by Federal, state, and local water pollution controls both substantively and procedurally (33 USC 1323(a)). Like the *Clean Air Act (CAA)*, the CWA also provides for Presidential exemptions for executive branch agencies.
- Executive Order (EO) 12088. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Regulations

- States normally have wastewater discharge legislation and regulations that require permitting similar to the National Pollution Discharge Elimination System (NPDES) program. A state is often delegated authority to administer the NPDES permits for discharges in the state. These permits are often joint permits issued pursuant to both the Federal CWA and state legislation. In some cases, the state will not administer the NPDES program and will issue a state permit even though a NPDES permit has been issued by the U.S. Environmental Protection Agency (USEPA). This dual permitting is common. The states and the USEPA normally cooperate in the permit issuance process to insure that the two permits are consistent, but there may be differences in monitoring requirements and the number of pollutants limited. These requirements normally do not conflict, but may require additional sampling and dual reporting.

States also have more stringent requirements for wastewater treatment plant operations. Many states have sewage treatment plant (STP) operator licensing and certification programs that require an operator to pass an exam and have a required amount of experience.

- Local entities (counties, cities) may also have enforceable wastewater discharge limitations that regulate discharges to a POTW. Local limitations often include pH, temperature, and concentrations of various organic and inorganic compounds. Major operations which discharge to an off site POTW will be subject to pretreatment permits issued by the POTW, the state, or the USEPA as appropriate. In some cases, another Department of Defense (DOD) activity may stipulate effluent discharge limitations for discharges to the treatment plant if the Corps facility discharges to the DOD facility.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- ER 1130-2-307, *Dredging Policies and Practices*. This regulation sets forth the policies and practices governing dredging operations.
- ER 1130-2-406, *Shoreline Management at Civil Works Projects*. This regulation specifically addresses shoreline dredging.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- NPDES Permits - Corps facilities with point source discharges and/or treatment works treating domestic sewage are required to have a Federal NPDES permit if located in states without a USEPA approved NPDES permit program. Facilities that are dischargers of stormwater associated with an industrial activity are required to apply for an individual permit, apply for a permit through a group application, or seek coverage under a promulgated stormwater general permit. Facilities must meet the sampling requirements stipulated by NPDES permits (40 CFR 122.1(b)(3) and 122.26(c)).
- POTWs - Facilities must not discharge into a POTW any pollutant that would cause *pass through* or *interference*. Facilities shall not introduce pollutants into a POTW that create a fire or explosion hazard, cause corrosive structural damage, have a pH below 5.0, or are solid or viscous enough to cause obstructions. Facilities are required to notify the POTW immediately of any discharge, including any slug loadings, that could cause problems to the POTW (40 CFR 403.5 and 403.12(f)).
- Operation and Maintenance of a POTW/Federally Owned Treatment Works (FOTW) - Personnel engaged or employed in operation and maintenance of water pollution control facilities must be trained in safety and occupational hazards. Treatment plant supervisors are required to maintain operating logs and records that are posted daily and are neat and legible. Treatment plants are required to be operated in accordance with all design parameters (TM 5-660, para 1-17 and para 18-20; 40 CFR 403.12(f)).
- Effluent Limits for Electroplating Point Sources - Facilities that have existing electroplating operations that introduce pollutants into a POTW resulting from the electroplating of common metals are subject to pretreatment standards which vary depending upon the level of discharge and the nature of the metals used (40 CFR 413).
- Effluent Limitation for Metal Finishing Point Sources - Facilities that have shops performing electroplating, electroless plating, anodizing, coating, chemical etching and milling, and printed circuit board manufacturing are subject to certain best available technology point source effluent limitations, which include the self-monitoring of cyanide. Facilities that introduce pollutants from existing metal finishing point sources into POTWs are subject to certain pretreatment standards. Facilities that introduce pollutants from new metal finishing point sources into POTWs are subject to certain performance and pretreatment standards (40 CFR 433).
- Dredging - If the facility conducts any dredging operations in waters of the United States or ocean waters, a permit must be obtained prior to beginning

operations. Before conducting or issuing a permit for dredging, facilities must ascertain the effect of such projects on natural and cultural resources. Federal facilities are prohibited from dredging shoreward of harborlines. Facilities that undertake, or issue permits for, the discharge or dumping of dredged material are required to solicit comments and information by way of public notice, concerning the probable impact of such materials (33 CFR 323.3, 324.3, 325.3, 337.1; ER 1130-2-406, para 66 and 1130-2-307, para 5).

- Land Application of Sludge - 40 CFR 503 details the pollutant concentrations, cumulative loading rates, and other restrictions pertinent to the land application of sludge which is generated during the treatment of domestic sewage in a treatment works.
- Surface Disposal of Sludge - The operation, management, monitoring, and closure of units used for the surface disposal of sewage sludge are outlined in 40 CFR 503.20 through 503.28.
- Incineration of Sewage Sludge - Facilities with incinerators that fire sewage sludge must meet specific emissions standards for beryllium and mercury emissions, and total hydrocarbons. The incinerators are required to have continuous monitoring devices for hydrocarbons and oxygen in the exit gas, and a continuous monitoring for combustion temperature, as specified by the permitting authority. Assorted reports are required to be submitted and records kept (40 CFR 503.40 through 503.48)

F. Key Compliance Definitions

- *Active Sewage Sludge Unit* - a sewage sludge unit that has not closed (40 CFR 503.21 (a)).
- *Aerobic Digestion* - the biochemical decomposition of organic matter in sewage sludge into CO₂ and water by microorganisms in the presence of air (40 CFR 503.31(a)).
- *Agricultural Land* - land on which a food crop, a feed crop, or a fiber crop is grown. This includes range land and land used as pasture (40 CFR 503.11(a)).
- *Agronomic Rate* - the whole sludge application rate (dry weight basis) designed to provide the amount of nitrogen needed by the food crop, feed crop, fiber crop, cover crop, or vegetation grown on the land, and to minimize the amount of nitrogen in the sewage sludge that passes below the root zone of the crop or vegetation grown on the land to the groundwater (40 CFR 503.11(b)).

- *Air Pollution Control Device* - one or more processes used to treat the exit gas from a sewage sludge incinerator stack (40 CFR 503.41(a)).
- *Anaerobic Digestion* - the biochemical decomposition of organic matter in sewage sludge into methane gas and CO₂ by microorganisms in the absence of air (40 CFR 503.31(b)).
- *Annual Pollutant Loading Rate* - the maximum amount of a pollutant that can be applied to a unit area of land during a 365-day period (40 CFR 503.11(c)).
- *Annual Whole Sludge Application Rate* - the maximum amount of sewage sludge (dry weight basis) that can be applied to a unit area of land during a 365-day period (40 CFR 503.11(d)).
- *Apply Sewage Sludge or Sewage Sludge Applied To The Land* - means land application of sewage sludge (40 CFR 503.9(a)).
- *Aquifer* - a geologic formation, group of geologic formations, or a portion of a geologic formation, capable of yielding groundwater to wells or springs (40 CFR 503.21(b)).
- *Auxiliary Fuel* - fuel used to augment the fuel value of sewage sludge. This includes, but is not limited to, natural gas, fuel oil, coal, gas generated during anaerobic digestion of sewage sludge, and municipal solid waste (not to exceed 30 percent of the dry weight of sewage sludge and auxiliary fuel together). Hazardous wastes are not auxiliary fuel (40 CFR 503.41(b)).
- *Base Flood* - a flood that has a one percent chance of occurring in any given year (i.e., a flood with a magnitude equaled once in 100 yr) (40 CFR 503.9(b)).
- *Blowdown* - the minimum discharge of recirculating water for the purpose of discharging materials contained in the water, the further buildup of which would cause concentrations in amounts exceeding limits established by the best engineering practice (40 CFR 401.11(p)).
- *Bulk Sewage Sludge* - sewage sludge that is not sold or given away in a bag or other container for application to the land (40 CFR 503.11(e)).
- *Chemical Metal Cleaning Waste* - any wastewater resulting from the cleaning of any metal process equipment with chemical compounds, including, but not limited to, boiler tube cleaning (40 CFR 423.11).
- *Class I Sludge Management Facility* - any POTW, as defined in 40 CFR 501.2, required to have an approved pretreatment program under 40 CFR 403.8(a) (including any POTW located in a state that has elected to assume local

program responsibilities pursuant to 40 CFR 403.10(e)) and any treatment works treating domestic sewage, as defined in 40 CFR 122.2, classified as a Class I sludge management facility by the USEPA Regional Administrator, or, in the case of approved state programs, the Regional Administrator in conjunction with the state Director, because of the potential for its sewage sludge use or disposal practice to affect public health and the environment adversely.

- *Class A Sludge* - when one of the following method is used, it is considered Class A with respect to pathogens:
 - Alternative 1. Either the density of fecal coliform in the sewage sludge shall be less than 1000 Most Probable Number (MPN)/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The temperature of the sewage sludge that is used or disposed shall be maintained at a specific value for a period of time. When the percent solids of the sewage sludge is seven percent or higher, the temperature of the sewage sludge shall be 50 °C [122 °F] or higher; the time period shall be 20 min or longer; and the temperature and time period shall be determined using the following equation, except when small particles of sewage sludge are heated by either warmed gases or an immiscible liquid.

$$D = \frac{131,700,000}{10^{0.1400t}} \quad \text{Eq. (2)}$$

Where, D = time in days t = temperature in °C

When the percent solids of the sewage sludge is seven percent or higher and small particles of sewage sludge are heated by either warmed gases or an immiscible liquid, the temperature of the sewage sludge shall be 50 °C [122 °F] or higher; the time period shall be 15 s or longer; and the temperature and time period shall be determined using the above equation.

When the percent solids of the sewage sludge is less than 7 percent and the time period is at least 15 s, but less than 30 min, the temperature and time period shall be determined using the above equation.

When the percent solids of the sewage sludge is less than seven percent; the temperature of the sewage sludge is 50 °C [122 °F] or higher; and the time period is 30 min or longer, the temperature and time period shall be determined using the below equation.

$$D = \frac{50,070,000}{10^{0.1400t}} \quad \text{Eq. (3)}$$

Where, D = time in days t = temperature in °C

- Alternative 2. Either the density of fecal coliform in the sewage sludge is less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The pH of the sewage sludge that is used or disposed shall be raised to above 12 and shall remain above 12 for 72 h.

The temperature of the sewage sludge shall be above 52 °C [125.6 °F] for 12 h or longer during the period that the pH of the sewage sludge is above 12.

At the end of the 72-h period during which the pH of the sewage sludge is above 12, the sewage sludge shall be air dried to achieve a percent solids in the sewage sludge greater than 50 percent.

- Alternative 3. Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The sewage sludge shall be analyzed prior to pathogen treatment to determine whether the sewage sludge contains enteric viruses.

When the density of enteric viruses in the sewage sludge prior to pathogen treatment is less than one Plaque-forming Unit per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to enteric viruses until the next monitoring episode for the sewage sludge.

When the density of enteric viruses in the sewage sludge prior to pathogen treatment is equal to or greater than one Plaque-forming Unit/4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to enteric viruses when the density of enteric viruses in the sewage sludge after pathogen treatment is less than one Plaque-forming Unit/4 g of total solids (dry weight basis) and when the values or ranges of values for the operating parameters for the pathogen treatment process that produces the sewage sludge that meets the enteric virus density requirement are documented.

After the enteric virus reduction is demonstrated for the pathogen treatment process, the sewage sludge continues to be Class A with respect to enteric viruses when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented.

The sewage sludge shall be analyzed prior to pathogen treatment to determine whether the sewage sludge contains viable helminth ova.

When the density of viable helminth ova in the sewage sludge prior to pathogen treatment is less than 1 per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to viable helminth ova until the next monitoring episode for the sewage sludge.

When the density of viable helminth ova in the sewage sludge prior to pathogen treatment is equal to or greater than 1 per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to viable helminth ova when the density of viable helminth ova in the sewage sludge after pathogen treatment is less than 1 per 4 g of total solids (dry weight basis) and when the values or ranges of values for the operating parameters for the pathogen treatment process that produces the sewage sludge that meets the viable helminth ova density requirement are documented.

After the viable helminth ova reduction is demonstrated for the pathogen treatment process, the sewage sludge continues to be Class A with respect to viable helminth ova when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented.

- Alternative 4. Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10 (b), (c), (e), or (f).

The density of enteric viruses in the sewage sludge shall be less than one Plaque-forming Unit per 4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10 (b), (c), (e), or (f), unless otherwise specified by the permitting authority.

The density of viable helminth ova in the sewage sludge shall be less than one per 4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10 (b), (c), (e), or (f), unless otherwise specified by the permitting authority.

- Alternative 5. Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or given away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), (c), (e), or (f).

Sewage sludge that is used or disposed shall be treated in one of the Processes to Further Reduce Pathogens described in appendix B of 40 CFR 503.

- Alternative 6. Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage

sludge is used or disposed; at the time the sewage sludge is prepared for sale or given away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), (c), (e), or (f).

Sewage sludge that is used or disposed shall be treated in a process that is equivalent to a Process to Further Reduce Pathogens, as determined by the permitting authority (40 CFR 503.32(a)(3)).

- *Class B Sludge* - when one of the following methods is used, it is considered Class A with respect to pathogens:
 - Alternative 1. Seven samples of the sewage sludge is collected at the time the sewage sludge is used or disposed. The geometric mean of the density of fecal coliform in the samples must be less than either 2 million MPN/g of total solids (dry weight basis) or 2 million Colony Forming Units/g of total solids (dry weight basis).
 - Alternative 2. Sewage sludge that is used or disposed shall be treated in one of the Processes to Significantly Reduce Pathogens described in appendix B of 40 CFR 503.
 - Alternative 3. Sewage sludge that is used or disposed is be treated in a process that is equivalent to a Process to Significantly Reduce Pathogens, as determined by the permitting authority (40 CFR 503.32(b)).
- *Contaminate An Aquifer* - to introduce a substance that causes the maximum contaminant level for nitrate in 40 CFR 141.11 to be exceeded in groundwater or that causes the existing concentration of nitrate in groundwater to increase when the existing concentration of nitrate in the groundwater exceeds the maximum contaminant level for nitrate in 40 CFR 141.11 (40 CFR 503.21(c)).
- *CN,A* - cyanide amenable to chlorination (40 CFR 413.02).
- *CN,T* - cyanide, total (40 CFR 413.02).
- *Control Efficiency* - the mass of a pollutant in the sewage sludge fed to an incinerator minus the mass of that pollutant in the exit gas from the incinerator stack divided by the mass of the pollutant in the sewage sludge fed to the incinerator (40 CFR 503.41(c)).
- *Cover* - soil or other material used to cover sewage sludge placed on an active sewage sludge unit (40 CFR 503.21(d)).

- *Cover Crop* - a small grain crop, such as oats, wheat, or barley, not grown for harvest (40 CFR 503.9(d)).
- *Cumulative Pollutant Loading Rate* - the maximum amount of an inorganic pollutant that can be applied to an area of land (40 CFR 503.11(f)).
- *Density Of Microorganisms* - the number of microorganisms per unit mass of total solids (dry weight) in the sewage sludge (40 CFR 503.31(c)).
- *Discharge of Pollutant* - the addition of any pollutant to navigable waters from any point source and any addition of any pollutant to the waters of the contiguous zone or the ocean zone or the ocean from any point source, other than from a vessel or other floating craft (40 CFR 401.11(h)).
- *Dispersion Factor* - the ratio of the increase in the ground level ambient air concentration for a pollutant at or beyond the property line of the site where the sewage sludge incinerator is located to the mass emission rate for the pollutant from the incinerator stack (40 CFR 503.41(d)).
- *Displacement* - the relative movement of any two sides of a fault measured in any direction (40 CFR 503.21(e)).
- *Domestic Septage* - either liquid or solid material removed from a septic tank, cesspool, portable toilet, Type III marine sanitation device, or similar treatment works that receives only domestic sewage. Domestic septage does not include liquid or solid material removed from a septic tank, cesspool, or similar treatment works that receive either commercial wastewater or industrial wastewater and does not include grease removed from a grease trap at a restaurant (40 CFR 257.2).
- *Domestic Sewage* - waste and wastewater from humans or household operations that is discharged to or otherwise enters a treatment works (40 CFR 503.9(g)).
- *Dredged Material* - any material excavated or dredged from the navigable waters of the United States (33 CFR 323.2).
- *Effluent Limitations* - any restriction established by the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources, other than new sources, into navigable waters, the waters of the contiguous zone, or the ocean (40 CFR 401.11(i)).

- *Excluded Sludge* - The following are types of sludge and activities which are exempted from meeting the requirements outlined in 40 CFR 503:
 1. processes used to treat domestic sewage or processes used to treat sewage sludge prior to final use except for the standards on pathogen and vector reduction in 40 CFR 503.32 and 503.33
 2. sewage sludge co-fired in an incinerator with other wastes or for the incinerator in which sewage sludge and other waste are co-fired
 3. sludge generated at an industrial facility during the treatment of industrial wastewater, including sewage sludge generated during the treatment of industrial wastewater combined with domestic sewage
 4. sewage sludge determined to be hazardous
 5. sewage sludge with a concentration of polychlorinated biphenyls (PCBs) equal to greater than 50 mg/kg of total solids (dry weight basis)
 6. ash generated during the firing of sewage sludge in a sewage sludge incinerator
 7. grit (i.e., sand, gravel, cinders, or other material with high specific gravity) or screenings (e.g., relatively large materials such as rags) generated during preliminary treatment of domestic sewage in a treatment works
 8. sludge generated during the treatment of either surface water or groundwater used for drinking water
 9. commercial septage, industrial septage, a mixture of domestic septage and commercial septage, or a mixture of domestic septage and industrial septage (40 CFR 503.6).
- *Fault* - a fracture or zone of fractures in any materials along which strata on one side are displaced with respect to strata on the other side (40 CFR 503.21(f)).
- *Feed Crops* - crops produced primarily for consumption by animals (40 CFR 503.9(j)).
- *Fiber Crops* - crops such as flax and cotton (40 CFR 503.9(k)).
- *Final Cover* - the last layer of soil or other material placed on a sewage sludge unit at closure (40 CFR 503.21(g)).
- *Fluidized Bed Incinerator* - an enclosed device in which organic matter and inorganic matter in sewage sludge are combusted in a bed of particles suspended in the combustion chamber gas (40 CFR 503.41(e)).
- *Forest* - a tract of land thick with trees and underbrush (40 CFR 503.11(g)).

- *Good Management Practices (GMPs)* - methods, measures, or practices to prevent or reduce water pollution, including, but not limited to, structural and nonstructural controls, and operation and maintenance procedures. GMPs may be applied before, during, or after pollution-producing activities in order to reduce or eliminate the introduction of pollutants into water bodies.
- *Holocene Time* - the most recent epoch of the Quaternary period, extending from the end of the Pleistocene epoch to the present (40 CFR 503.21(h)).
- *Hourly Average* - the arithmetic mean of all measurements, taken during an hour. At least two measurements must be taken during the hour (40 CFR 503.41(f)).
- *Incineration* - the combustion of organic matter and inorganic matter in sewage sludge by high temperatures in an enclosed device (40 CFR 503.41(g)).
- *Indirect Discharge* - the introduction of pollutants into a POTW from any non-domestic source regulated under Section 307(b), (c), or (d) of the CWA (40 CFR 403.3(g)).
- *Industrial Activities* - in relation to stormwater runoff, industrial activities include:
 1. facilities subject to stormwater effluent limitations guidelines, new source performance standards under 40 CFR 122 subchapter N
 2. facilities classified as Standard Industrial Classification 24 (except 2434), 26 (except 265 and 267), 28 (except 283), 29, 311, 32 (except 323) 35, 344, and 373
 3. facilities classified as Standard Industrial Classifications 10 through 14 (mineral industry) including active or inactive mining operations and oil and gas explorations, production, processing, or treatment operations, or transmission facilities that discharge stormwater contaminated by contact with or that has come into contact with, any overburden, raw material, intermediate product, finished products, byproducts or waste products located on the site of such operations
 4. hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under *Resource Conservation and Recovery Act, Subtitle C (RCRA-C)*
 5. landfills, land application sites, and open dumps that receive or have received industrial wastes, including those sites that are subject to Federal regulation
 6. facilities involved in the recycling of materials, including metal scrapyards, battery reclaimers, salvage yards, and automobile junkyards, including but not limited to those classified as Standard Industrial Classification 5015 and 5093

7. steam electric power generating facilities, including coal handling sites
8. transportation facilities classified as Standard Industrial Classifications 40, 41, 42 (except 4221-25, 43, 44, 45, and 5171) that have vehicle maintenance shops, equipment cleaning operations, or airport deicing operations
9. treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludges that are located within the confines of the facility with a design flow of 1.0 mg/day or more, or required to have an approved pretreatment program. Not included are farmlands, domestic gardens, or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA
10. construction activity including clearing, grading, and excavation activities except operations that result in the disturbance of land less than 5 acres [20,232.78 m²] of total land area which are not part of a larger common plan of development or sale
11. facilities under Standard Industrial Classifications 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, and 4221-25, (which are not otherwise included in categories 1 - 10) (40 CFR 122.26(b)(14)(i) through 122.26(b)(14)(xi)).

- *Industrial User* - a source of indirect discharge (40 CFR 403.3(h)).
- *Industrial Wastewater* - wastewater generated in a commercial or industrial process (40 CFR 503.9(n)).
- *Integrated Facility* - a facility that performs electroplating as only one of several operations necessary for manufacture of a product at a single physical location and has significant quantities of process wastewater from nonelectroplating sources (40 CFR 413.02).
- *Interference* - a discharge which, alone or in conjunction with one or more discharges from other sources inhibits or disrupts the POTW and causes a violation of any requirement of the POTW's NPDES permit (40 CFR 403.3(i)).
- *Job Shop* - a facility which owns not more than 50 percent (annual area basis) of the materials undergoing metal finishing (40 CFR 433.11).
- *Land Application* - the spraying or spreading of sewage sludge onto the land surface; the injection of sewage sludge below the land surface; or the

incorporation of sewage sludge into the soil so that the sewage sludge can either condition the soil or fertilize crops or vegetation grown in the soil (40 CFR 503.11(h)).

- *Land With A High Potential For Public Exposure* - land that the public uses frequently. This includes, but is not limited to, a public contact site and a reclamation site located in a populated area (e.g., a construction site located in a city) (40 CFR 503.31(d)).
- *Land With A Low Potential For Public Exposure* - land the public uses infrequently. This includes, but is not limited to, agricultural land, forest, and a reclamation site located in an unpopulated area (e.g., a strip mine located in a rural area) (40 CFR 503.31(e)).
- *Leachate Collection System* - a system or device installed immediately above a liner that is designed, constructed, maintained, and operated to collect and remove leachate from a sewage sludge unit (40 CFR 503.21(i)).
- *Liner* - soil or synthetic material that has a hydraulic conductivity of 1×10^{-7} cm/s [3×10^{-8} in./s] or less (40 CFR 503.21(j)).
- *Lower Explosive Limit For Methane Gas* - the lowest percentage of methane gas in air, by volume, that propagates a flame at 25 °C [77 °F] and atmospheric pressure (40 CFR 503.21(k)).
- *Marine Sanitation Device* - includes any equipment for installation on board a vessel, and which is designed to receive, retain, treat, or discharge sewage and any process to treat such sewage (ER 1125-2-302, para 5b).
- *Metal Cleaning Wastes* - any wastewater resulting from cleaning (with or without chemical cleaning compounds) any metal process equipment, including, but not limited to, boiler tube cleaning, boiler fireside cleaning, and air preheater cleaning (40 CFR 423.11).
- *Monthly Average* - the arithmetic mean of the hourly averages for the hours a sewage sludge incinerator operates during the month (40 CFR 503.41(h)).
- *Monthly Average* - the arithmetic mean of all measurements taken during the month (40 CFR 503.11(i)).
- *Municipality* - a city, town, borough, county, parish, district, association, or other public body (including an intermunicipal Agency of two or more of the foregoing entities: created by or under state law; an Indian tribe or an authorized Indian tribal organization having jurisdiction over sewage sludge management; or a designated and approved management Agency under Section 208 of the

CWA, as amended. The definition includes a special district created under state law, such as a water district, sewer district, sanitary district, utility district, drainage district, or similar entity, or an integrated waste management facility as defined in Section 201(e) of the CWA, as amended, that has as one of its principal responsibilities the treatment, transport, use, or disposal of sewage sludge (40 CFR 503.9(o)).

- *National Pretreatment Standard* - any regulation containing pollutant discharge limits promulgated by the USEPA (40 CFR 403.3(j)).
- *Navigable Waters* - all navigable waters of the United States, tributaries of navigable waters of the United States, interstate waters, intrastate lakes, rivers, and streams which are utilized by interstate travelers for recreational or other purposes, intrastate lakes, rivers, and streams from which fish or shellfish are taken and sold in interstate commerce and intrastate lakes, rivers, and streams which are utilized for industrial purposes by industries in interstate commerce. Navigable waterways do not include prior converted cropland (40 CFR 401.11(l)).
- *New Source* - any building, structure, facility, or installation from which there is or may be the discharge of pollutants, the construction of which is commenced after the publication of proposed regulations prescribing a standard of performance under Section 306 of the CWA, which will be applicable to such source if such standards are thereafter promulgated in accordance with Section 306 of the Act (40 CFR 401.11(e)).
- *Noncontact Cooling Water* - the water that is contained in a leak-free system, i.e., no contact with any gas, liquid, or solid other than the container for transport; the water shall have no net poundage addition of any pollutant over intake water levels (40 CFR 401.44(o)).
- *NPDES Permit* - a permit granted by the USEPA to a direct discharger which permits wastewater discharge to a watercourse in accordance with the conditions of the permit. NPDES means National Pollutant Discharge Elimination System (40 CFR 403.3(l)).
- *Other Container* - either an open or closed receptacle. This includes, but is not limited to, a bucket, a box, a carton, and a vehicle or trailer with a load capacity of 1 metric ton [0.98 long tons] or less (40 CFR 503.11(j)).
- *pH* - the logarithm of the reciprocal of the hydrogen ion concentration (40 CFR 503.31(g)).

- *Pass Through* - a discharge that exits the POTW into waters in quantities or concentrations which, alone or in conjunction with one or more discharges from other sources, is a cause of a violation of any requirement of the POTW's NPDES permit (40 CFR 403.3(n)).
- *Pasture* - land on which animals feed directly on feed crops such as legumes, grasses, grain stubble, or stover (40 CFR 503.11(k)).
- *Pathogenic Organisms* - disease-causing organisms. These include, but are not limited to, certain bacteria, protozoa, viruses, and viable helminth ova (40 CFR 503.31(f)).
- *Person* - an individual, association, partnership, corporation, municipality, state or Federal agency, or an agent or employee thereof (40 CFR 503.9(q)).
- *Person Who Prepares Sewage Sludge* - either the person who generates sewage sludge during the treatment of domestic sewage in a treatment works or the person who derives a material from sewage sludge (40 CFR 503.9(r)).
- *Place Sewage Sludge or Sewage Sludge Placed* - means disposal of sewage sludge on a surface disposal site (40 CFR 503.9(s)).
- *Point Source* - any discernible confined and discrete conveyance, including, but not limited to, a pipe, ditch, channel, or conduit from which pollutants are or may be discharged (40 CFR 401.11(d)).
- *Pretreatment* - the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to, or in lieu of, discharging, or otherwise introducing such pollutants into a POTW (40 CFR 403.3(q)).
- *Process Wastewater* - any water which, during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, or waste product (40 CFR 401.44(q)).
- *Public Contact Site* - land with a high potential for contact by the public. This includes, but is not limited to, public parks, ball fields, cemeteries, plant nurseries, turf farms, and golf courses (40 CFR 503.11(l)).
- *Publicly Owned Treatment Works (POTW)* - a treatment works which is owned by the state or a municipality. This includes any devices and systems used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes, and other conveyances, only if they convey waste to a POTW (40 CFR 403.3(o)).

- *Qualified Groundwater Scientist* - an individual with a baccalaureate or post-graduate degree in the natural sciences or engineering who has sufficient training and experience in groundwater hydrology and related fields, as may be demonstrated by state registration, professional certification, or completion of accredited university programs, to make sound professional judgments regarding groundwater monitoring, pollutant fate and transport, and corrective action (40 CFR 503.21(l)).
- *Range Land* - open land with indigenous vegetation (40 CFR 503.11(m)).
- *Reclamation Site* - drastically disturbed land that is reclaimed using sewage sludge. This includes, but is not limited to, strip mines and construction sites (40 CFR 503.11(n)).
- *Risk Specific Concentration* - the allowable increase in the average daily ground level ambient air concentration for a pollutant from the incineration of sewage sludge at or beyond the property line of the site where the sewage sludge incinerator is located (40 CFR 503.41(i)).
- *Runoff* - rainwater, leachate, or other liquid that drains overland on any part of a land surface and runs off of the land surface (40 CFR 503.9(v)).
- *Seismic Impact Zone* - an area that has a 10 percent or greater probability that the horizontal ground level acceleration of the rock in the area exceeds 0.10 gravity once in 250 yr (40 CFR 503.21(m)).
- *Sewage Sludge* - solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage, scum or solids removed in primary, secondary, or advanced wastewater treatment processes; and a material derived from sewage sludge. Sewage sludge does not include ash generated during the firing of sewage sludges in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewerage in a treatment works (40 CFR 257.2).
- *Sewage Sludge Feed Rate* - either the average daily amount of sewage sludge fired in all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located for the number of days in a 365-day period that each sewage sludge incinerator operates, or the average daily design capacity for all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located (40 CFR 503.41(j)).
- *Sewage Sludge Incinerator* - an enclosed device in which only sewage sludge and auxiliary fuel are fired (40 CFR 503.41(k)).

- *Sewage Sludge Unit* - land on which only sewage sludge is placed for final disposal. This does not include land on which sewage sludge is either stored or treated. Land does not include waters of the United States (40 CFR 503.21(N)).
- *Sewage Sludge Unit Boundary* - the outermost perimeter of an active sewage sludge unit (40 CFR 503.21(o)).
- *Specific Oxygen Uptake Rate (SOUR)* - the mass of oxygen consumed per unit time per unit mass of total solids (dry weight basis) in the sewage sludge (40 CFR 503.31(h)).
- *Stack Height* - the difference between the elevation of the top of a sewage sludge incinerator stack and the elevation of the ground at the base of the stack when the difference is equal to or less than 65 m [213.25 ft]. When the difference is greater than 65 m [213.25 ft], stack height is the creditable stack height determined in accordance with 40 CFR 51.100(i) (40 CFR 503.41(l)).
- *Store or Storage Of Sewage Sludge* - the placement of sewage sludge on land on which the sewage sludge remains for 2 yr or less. This does not include the placement of sewage sludge on land for treatment (40 CFR 503.9(y)).
- *Stormwater* - Stormwater runoff, snow melt runoff, and surface runoff and drainage (40 CFR 122.26(b)(14)).
- *Stormwater Discharge Associated With Industrial Activity* - the discharge from any conveyance which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing, or raw materials storage areas at an industrial plant. This term does not include discharges already excluded from the NPDES permit program. For the categories in 1. through 10. (see definition of Industrial Activities), the term includes, but is not limited to; stormwater discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers or raw materials, manufactured products, waste materials, or byproducts used or created by the facility; material handling sites; refuse sites; sites used for application or the disposal of process waste waters; sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage, or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials and intermediate and finished products; and areas where industrial activity has taken place in the past and significant materials remain that are exposed to stormwater. For category 11., the term only includes stormwater discharges from all the areas (except access roads and rail lines) that are listed above where material handling equipment or activities, raw materials, intermediate products, final products, waste materials, byproducts, or industrial machinery are exposed to stormwater (40 CFR 122.26(b)(14)).

- *Strong Chelating Agents* - all compounds which, by virtue of their chemical structure and amount present, form soluble metal complexes which are not removed by subsequent metals control techniques such as pH adjustment followed by clarification or filtration (40 CFR 413.02).
- *Surface Disposal Site* - an area of land that contains one or more active sewage sludge units (40 CFR 503.21(p)).
- *TTO* - total toxic organics (40 CFR 413.02).
- *Total Hydrocarbons* - the organic compounds in the exit gas from a sewage sludge incinerator stack measured using a flame ionization detection instrument referenced to propane (40 CFR 503.41(m)).
- *Total Metal* - the sum of the concentrations of mass of copper, nickel, chromium, and zinc (40 CFR 413.02).
- *Total Solids* - the materials in sewage sludge that remain as residue when the sewage sludge is dried at 103 to 105 °C [217.4 to 221 °F] (40 CFR 503.31(i)).
- *Treat or Treatment Of Sewage Sludge* - the preparation of sewage sludge for final use or disposal. This includes, but is not limited to, thickening, stabilization, and dewatering of sewage sludge. This does not include storage of sewage sludge (40 CFR 503.9(z)).
- *Treatment Works* - either a federally owned, publicly owned, or privately owned device or system used to treat (including recycle and reclaim) either domestic sewage or a combination of domestic sewage and industrial waste of a liquid nature (40 CFR 503.9(aa)).
- *Type I Marine Sanitation Device (MSD)* - a *nonflow-through* MSD certified by the U.S. Coast Guard and capable of producing an effluent with a fecal coliform bacterial count of not more than 1000/100 mL and no visible floating solids (ER 1125-2-302, para 5d).
- *Type II MSD* - a *flow-through* MSD certified by the U.S. Coast Guard and capable of producing an effluent with a fecal coliform bacterial count of not more than 200/100 mL and total suspended solids of not more than 150 mg/L [(ER 1125-2-302, para 5d).
- *Type III A MSD* - a *nonflow-through* MSD certified by the U.S. Coast Guard and designed to treat and hold the treated sewage. This type includes low volume or recirculating flush devices which ultimately evaporate or incinerate the sewage to a sterile sludge or ash. The coliform bacterial count of recirculated flush media must not exceed 200/mL (ER 1125-2-302, para 5d).

- *Type III B MSD* - a nonflow-through collection, holding and transfer (CHT) system, including piping, holding tanks, pumps, valves, and shoreside connectors. A Type III B device used solely for storage of sewage and flush water at ambient pressure and temperature is considered certified (ER 1125-2-302, para 5d).
- *Unstabilized Solids* - organic materials in sewage sludge that have not been treated in either an aerobic or anaerobic treatment process (40 CFR 503.31(j)).
- *Unstable Area* - land subject to natural or human-induced forces that may damage the structural components of an active sewage sludge unit. This includes, but is not limited to, land on which the soils are subject to mass movement (40 CFR 503.21(q)).
- *Vector Attraction* - the characteristic of sewage sludge that attracts rodents, flies, mosquitos, or other organisms capable of transporting infectious agents (40 CFR 503.31(k)).
- *Volatile Solids* - the amount of the total solids in sewage sludge lost when the sewage sludge is combusted at 550 °C [1022 °F] in the presence of excess air (40 CFR 503.31(l)).
- *Waters of the United States* - this term includes:
 1. all waters which are currently used or were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters which are subject to the ebb and flow of the tide
 2. all interstate waters including interstate wetlands
 3. all other waters such as intrastate lakes, rivers, streams (including intermittent streams), mudflats, sandflats, wetlands, sloughs, prairie potholes, wet meadows, playa lakes, or natural ponds, the use, degradation or destruction of which could affect interstate or foreign commerce including any such waters:
 - a. which are or could be used by interstate or foreign travelers for recreational or other purposes
 - b. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce, or
 - c. which are used or could be used for industrial purposes by industries in interstate commerce
 4. all impoundments of waters otherwise defined as waters of the United States under this definition
 5. tributaries of waters described above
 6. the territorial seas
 7. wetlands adjacent to waters, other than waters that are, in themselves, wetlands, as outlined above in this definition (33 CFR 326).

- *Wet Electrostatic Precipitator* - an air pollution control device that uses both electrical forces and water to remove pollutants in the exit gas from a sewage sludge incinerator stack (40 CFR 503.41(n)).
- *Wetlands* - those areas that are inundated or saturated by surface water or groundwater at a frequency and duration to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas (40 CFR 503.9(bb)).
- *Wet Scrubber* - an air pollution control device that uses water to remove pollutants in the exit gas from a sewage sludge incinerator stack (40 CFR 503.41(o)).
- *Vessel* - includes every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on waters of the United States (33 CFR 153.104).

WASTEWATER MANAGEMENT

Records to Review

- NPDES Permits
- NPDES Permit renewal applications (if expire within 180 days)
- Discharge monitoring reports for the past year
- Laboratory records and procedures and USEPA quality assurance (QA) results
- Monthly operating reports for wastewater treatment facilities
- Flow monitoring calibration certification and supporting records
- Ash pond volume certification and supporting records
- Red water inspection records
- Special reports, certifications, etc., required by NPDES permit
- Spill Prevention Control and Countermeasure (SPCC) Plan
- All records required by SPCC Plan
- Oil transfer manual (33 CFR 154 and 156)
- All notices of noncompliance
- All notices of violations
- NPDES state or Federal inspection reports
- Sewage treatment plant operator certification
- Administrative Orders
- Sewer and storm drain layout
- Local sewer ordinance
- Local service use permit
- Notification to local POTW
- Old Spill Reports
- Repair/Maintenance records for the wastewater treatment system
- As Built drawings
- Federal compliance agreements
- Pretreatment permits

Physical Features to Inspect

- Discharge outfall pipes
- Wastewater treatment facilities
- Industrial treatment facilities
- Streams, rivers, open waterways
- Floor and sink drains (especially in industrial areas)
- Storm water collection points (especially in industrial areas)
- Oil storage tanks
- Oil/water separators

People to Interview

- Environmental Compliance Coordinator (ECC)
- Natural Resources Management
- Operations
- Planning
- Project Resource Manager
- Facility Managers

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. This chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Checklist Item Numbers in the April 1993 ERGO Manual	Corresponding Checklist Item Numbers in the 1994 ERGO Manual

125 to less than 150	62	450	420

¹ Dry weight basis

Appendix 11-9

Lead Concentration in Sewage Sludge Fed to an Incinerator (40 CFR 503.43)

Formula 1

$$C = \frac{0.1 * NAAQS * 86,400}{DF * (1 - CE) * SF}$$

Where:

C = Daily concentration of lead in sewage sludge in mg/kg of total solids (dry weight basis).

NAAQS = National Ambient Air Quality Standard for lead in micrograms per cubic meter.

DF = Dispersion factor in $\mu\text{g}/\text{m}^3/\text{g}/\text{s}$.

CE = Sewage sludge incinerator control efficiency for lead in hundredths.

SF = Sewage sludge feed rate in metric tons per day (dry weight basis).

Formula 2

$$C = \frac{RSC * 86,400}{DF * (1 - CE) * SF}$$

Where:

C = Daily concentration of arsenic, cadmium, chromium, or nickel in sewage sludge in mg/kg of total solids (dry weight basis).

CE = Sewage sludge incinerator control efficiency for arsenic, cadmium, chromium, or nickel in hundredths.

DF = Dispersion factor in $\mu\text{g}/\text{m}^3/\text{g}/\text{s}$.

RSC = Risk specific concentration in $\mu\text{g}/\text{m}^3$.

F = Sewage sludge feed rate in metric tons per day (dry weight basis).

Appendix 11-10

Total Hydrocarbon Operational Standards (40 CFR 503.44)

Formula 1

$$\text{Correction factor (percent moisture)} = \frac{1}{(1 - X)}$$

Where:

X = decimal fraction of the percent moisture in the sewage sludge incinerator exit gas in hundredths.

Formula 2

$$\text{Correction factor (oxygen)} = \frac{14}{(21 - Y)}$$

Where:

Y = Percent oxygen concentration in the sewage sludge incinerator stack exit gas (dry volume/dry volume).

Section 12

Water Quality Management

SECTION 12

WATER QUALITY MANAGEMENT

A. Applicability

This section applies to all water, surface or ground, used or managed by the U.S. Army Corps of Engineers (USACE).

This section identifies rules, regulations, and requirements for any USACE facility that has jurisdiction over any public water supply system. A public water system is defined as a system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. This term includes:

- any collection, treatment, storage, and distribution facilities under control of the operator of such system, and
- any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system.

A public water system is either a *community water system* or a *noncommunity water system* (40 Code of Federal Regulations (CFR) 141.2).

Corps facilities that meet all the criteria listed below are not required to comply with the requirements of the *Safe Drinking Water Act (SDWA)* because, by definition, they are not *public water systems* (42 U.S. Code (USC) 300(g)(g)):

1. system consists only of distribution and storage facilities and does not have any collection and treatment facilities
2. Corps facility obtains all of its water from a public water system that is owned or operated by another party (non-Army)
3. Corps facility does not sell water to any party.

Additionally, systems supplying less than 150 service connections will be treated as complying with sampling regulations if the system provides water samples or the opportunity for sampling by the U.S. Environmental Protection Agency (USEPA) (942 USC 300j-4(7)).

Even though the above criteria may apply to a Corps facility, as a practical matter, Corps regulations require compliance with drinking water standards and monitoring requirements. Therefore, this protocol should be used to determine compliance with drinking water requirements even though some items may be noted as not applicable (N/A) by the evaluator.

B. Federal Legislation

- The *Safe Drinking Water Act (SDWA)*. This Act, Public Law (PL) 99-339, 42 U.S. Code (USC) 201, 300f-300j-25, 6939b, 6979a, 6979b, 7401-742, etc., is the Federal legislation that regulates the safety of drinking water in the country. It specifies a system for the protection of drinking water supplies through establishment of contaminant limitations and enforcement procedures. The USEPA has promulgated contaminant limitations in two phases: primary drinking water standards to protect public health; and secondary drinking water standards affecting the aesthetic qualities of drinking water. In addition, the *SDWA* mandates the regulation of underground drinking wells to protect drinking water sources through the Underground Injection Control (UIC) Program.

The 1986 amendments to the *SDWA* (Section 1428) require states to develop programs to protect wellhead areas. Section 1428(h) requires all Federal agencies with jurisdiction over any potential source of contaminants identified by a state wellhead protection program to be subject to, and comply with, all requirements of the state program "as any other person, including payment of reasonable charges and fees."

National primary drinking water regulations apply to each public water system in each state. However, such regulations do not apply to a public water system that (42 USC 300g):

1. consists only of distribution and storage facilities (and does not have any collection and treatment facilities)
 2. obtains all of its water from, but is not owned or operated by, a public water system to which such regulations apply
 3. does not sell water to any person
 4. is not a carrier which conveys passengers in interstate commerce.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or for correcting situations which are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.

C. State/Local Regulations

- States have primary responsibility to enforce compliance with national primary drinking water standards and sampling, monitoring, and notice requirements in conformance with 40 CFR 141. The USEPA executes the enforcement responsibilities until individual state programs are approved.

States that have primacy may establish drinking water regulations, monitoring schedules, and reporting requirements more stringent than, or in addition to, those in the Federal regulations. Corps public water systems in these states are required to comply with these additional requirements. Generally speaking, most states that have primacy adopt drinking water regulations that closely reflect the Federal requirements. Almost all states have achieved authorization from the USEPA to administer drinking water compliance programs, including UIC programs.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- Engineering Manual (EM) 385-1-1, *Safety and Health Requirements*. Although this is a manual and not an ER, the contents are applicable to all missions under the command of the Chief of Engineers, whether accomplished by military, civilian, or contractor forces.
- ER 1130-2-334, *Reporting of Water Quality Management Activities at Corps Civil Works Activities*. This regulation requires facilities to manage water quality at all Corps projects. Specific water quality objectives and procedures for each project are to be established in division-wide water quality management programs. This regulation also sets forth reporting requirements for water quality at the division and facility level.
- ER 1130-2-407, *Operating and Testing Potable Water Systems in Compliance With the Safe Drinking Water Act*. This regulation requires all Civil Works projects that provide potable water to meet or exceed the standards set forth in the SDWA, 40 CFR 141.
- ER 1130-2-415, *Water Quality Data Collection, Interpretation, and Application Activities*. This regulation requires all Corps projects to establish water quality data collection techniques. These techniques will be unique to each project, and thus are to be determined by specific project conditions.

- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, land, and water at Civil Works projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- Civil Work Facilities Operated by Others - In civil works facilities that are operated by others, the District Engineer is responsible for determining if satisfactory water quality surveillance programs are instituted, including regular testing (ER 1130-2-417, para 9).
- Facilities with Hydrologic Structures - If the facility maintains any hydrologic related structures, or conducts or authorized construction activities pertaining to such structures, certain analyses of water quality and data collection techniques must be followed during preconstruction, construction, and post-construction phases of the operation (1130-2-415, para 4-7).
- Plans and Records - The facility and project manager must keep records of actions taken to correct or repair any part of the treatment and distribution system for at least 3 yr. The Environmental Compliance Manager should review plans for water system modifications. Facilities are required to survey public water systems and maintain records of those reviews (GMP, 40 CFR 141.21(d), and 141.33(b)).
- Physical Requirements for Drinking Water Systems - There will not be any cross-connection, open or potential, between a system furnishing potable water and a system furnishing nonpotable water. All water systems shall install and operate optimal corrosion control treatment and/or comply with corrosion control requirements specified by the state. Containers for drinking water are required to be marked as such (EM 385-1-1 and 40 CFR 141.80(d)).
- Maximum Contaminant Level (MCL) Standards - Drinking water is to be supplied from sources approved by Federal, state, or local health authorities, or treated to specific standards. Community water systems, noncommunity water systems, except as defined under *exempted water systems*, and community and nontransient, noncommunity water systems, are required to meet specific MCLs for organic, inorganic, and microbiological contaminants. These are outlined in Appendices 12-1 and 12-2 (40 CFR 141.11(a) through 141.11(c), 141.12, 141.15, 141.16(a), and 141.60 through 141.63).

- **Monitoring** - the monitoring schedule, and what constituents are to be monitored, is based on the type of facility being operated. Facilities with community water systems and/or nontransient, noncommunity water systems are required to monitor for inorganic contaminants. All public water systems are required to conduct monitoring to determine compliance for nitrate and nitrite levels. Monitoring for Endrin is required to be done according to specific schedules. Community and noncommunity water systems are required to monitor for total coliforms and facilities are required to monitor for radioactivity in community water systems (40 CFR 141.21(a), 141.23, 141.24, and 141.26).
- **Total Coliform and Turbidity Sampling** - Total Coliform samples are required to be collected at regular intervals throughout the month except at systems that use only groundwater and serve 4900 people or fewer. Public water systems that use surface water or groundwater under the direct influence of surface water and do not practice filtration are required to collect at least one total coliform sample near the first service connection each day the turbidity level of the source water exceeds 1 NTU. When a routine sample is total coliform-positive, the public water system must collect a set of repeat samples within 24 h of being notified of the positive result. Sampling for turbidity is required to be done at public water systems that use water obtained in whole or part from surface water sources, according to a specific schedule, and excesses reported (40 CFR 141.21 and 141.22).
- **Water Analysis** - Facilities with community water systems that add a disinfectant to the water are required to analyze for total trihalomethanes. Suppliers of water for community public water systems are required to analyze for sodium, and collect samples from representative entry points to the water distribution system and analyze for corrosivity. Bacteriological analysis of samples used to determine compliance with MCLs must be performed in a state-approved lab or by a state-approved individual (40 CFR 141.28, 141.30, 141.41, and 141.42).
- **Filtration and Disinfection** - Facilities that have a public water system that uses surface water sources or groundwater sources under direct influence of a surface water source must provide filtration as a treatment technique for microbiological contaminants which meets specific standards, provide disinfection treatment by 29 June 1993, and report specific information monthly to the state starting 29 June 1993, or when filtration is installed, unless otherwise exempted. These criteria include a fecal coliform concentration less than or equal to 20/100 mL, a turbidity level below 5 NTU, and maintaining a watershed control program for *Giardia lamblia*. If a facility does not need to provide filtration, it is required to provide disinfection treatment and report monthly to the state. The USEPA has set certain standards for analytic procedures that must be used and followed to demonstrate compliance with disinfection and filtration requirements. Disinfection of Corps water supply systems

with nonpotable water is required under specific circumstances, such as after construction or major repair or flooding (40 CFR 141.71 through 141.75(b) and ER 1130-2-407, para 8).

- **Notification and Reporting Requirements** - Records of chemical analyses are required to be kept for not less than 10 yr. When Primary Drinking Water Standards are exceeded, public notifications must be made. Facilities that operate public water systems must send reports to the state on any failure to comply with applicable biological, turbidity, radioactivity, and chemical standards, and on any failure to comply with monitoring requirements that apply (40 CFR 141.31, 141.32 and 141.33(a)).
- **Lead and Copper in Drinking Water Systems** - Facilities with community or nontransient, noncommunity water systems must notify their users about lead in drinking water systems and must meet specific standards for lead and copper action levels and reporting requirements when these levels are exceeded. Facilities with water systems exceeding the lead action level after implementation of corrosion control and source water treatment requirements are required to replace lead service lines. Monitoring for lead and copper is required to start on a specified date, be done at a specified number of sites, fulfill specific reporting requirements, and retain onsite all the original records of sampling data, analysis, reports, surveys, letters, evaluations, state determinations, and any other pertinent documents for at least 12 yr (see 40 CFR 141.80, 141.84, 141.85, 141.86, 141.90, and 141.91).
- **Recreational Waters** - Recreational potable water sources, such as hand-pumps, are considered to be noncommunity water systems and are required to meet specific monitoring requirements. Appropriate water quality must be maintained at beaches where people swim. Facilities that own or operate swimming pools must maintain and monitor water quality (ER 1110-1-400, para 6 and 1130-2-407, para 5 and 6; EM 1110-1-400, para 7-4; and TM 5-662).
- **Emergency Water Supplies** - Facilities authorized to provide emergency supplies of clean drinking water to localities confronted with contaminated drinking water or those areas that have been designated as drought-distressed must meet specific requirements (33 CFR 203.51 and 203.52).

F. Key Compliance Definitions

These definitions were obtained from the regulations listed previously.

- **Action Level** - the concentration of lead or copper in the water specified in 40 CFR 141.80(c) which determines, in some cases, the treatment requirements that a water system is required to complete (40 CFR 141.2).

- *Best Available Technology (BAT)* - the best technology treatment techniques, or other means which the administrator finds, examined for efficacy under field conditions and not solely under lab conditions, that are available (taking cost into consideration). For the purposes of setting MCLs for synthetic organic chemicals, any BAT must be at least as effective as granular activated carbon (40 CFR 141.2).
- *Coagulation* - a process using coagulant chemicals and mixing by which colloidal and suspended materials are destabilized and agglomerated into flocs (40 CFR 141.2).
- *Community Water System* - a public water system that serves at least 15 service connections used by year-round residents or regularly serves at least 25 year-round residents (40 CFR 141.2).
- *Contaminant* - any physical, chemical, biological, or radiological substance or matter in water (40 CFR 141.2).
- *Conventional Filtration Treatment* - a series of processes, including coagulation, flocculation, sedimentation, and filtration, resulting in substantial particulate removal (40 CFR 141.2).
- *Diatomaceous Earth Filtration* - a process resulting in substantial particulate removal in which (40 CFR 141.2):
 1. a precoat cake of diatomaceous earth filter media is deposited on a support membrane (septum), and
 2. while the water is filtered by passing through the cake on the septum, additional filter media known as *body feed* is continuously added to the feed water to maintain the permeability of the filter cake.
- *Direct Filtration* - a series of processes, including coagulation and filtration, but excluding sedimentation, resulting in substantial particulate removal (40 CFR 141.2).
- *Disinfectant* - any oxidant, including, but not limited to, chlorine, chlorine dioxide, chloramines, and ozone added to water in any part of the treatment or distribution process, that is intended to kill or inactivate pathogenic microorganisms (40 CFR 141.2).
- *Disinfection* - a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents (40 CFR 141.2).

- *Domestic or Other Nondistribution System Plumbing Problem* - a coliform contamination problem in a public water system with more than one service connection that is limited to the specific service connection from which the coliform-positive sample was taken (40 CFR 141.2).
- *Exempted Public Water Systems* - the following are public water systems which are not required to meet the standards outlined in 40 CFR 141 (40 CFR 141.3):
 1. systems that consist only of distribution and storage facilities and do not have any collection and treatment facilities
 2. systems that obtain all of their water from, but are not owned or operated by, a public water system to which 40 CFR 141 applies
 3. systems that do not sell water to any person
 4. systems that are not a carrier which conveys passengers in interstate commerce.
- *Filtration* - a process for removing particulate matter from water by passage through porous media (40 CFR 141.2).
- *Flocculation* - a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical means (40 CFR 141.2).
- *Good Management Practice (GMP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Gross Alpha Particle Activity* - the total radioactivity due to alpha particle emissions as inferred from measurements on a dry sample (40 CFR 141.2).
- *Groundwater Under the Direct Influence of Surface Water* - refers to any water beneath the surface of the ground with:
 1. significant occurrence of insects or other macro-organisms, algae, or large-diameter pathogens such as *Giardia lamblia*, or
 2. significant and relatively rapid shifts in water characteristics, such as turbidity, temperature, conductivity, or pH, which closely correlate to climatological or surface water conditions.

Direct influence must be determined for individual sources in accordance with criteria established by the state (40 CFR 141.2).

- *Halogen* - one of the chemical elements chlorine, bromine, or iodine (40 CFR 141.2).
- *Initial Compliance Period* - the first full 3-yr compliance period which begins at least 18 mo after promulgation, except for Dichloromethane, 1,2,4-Trichlorobenzene, 1,1,2-Trichloroethane, Benzo(a)pyrene, Dieldrin, DDT, and Dieldrin.

ethyhexyl) adipate, Di(2-ethyhexyl) phthalate, Dinoseb, Diquat, Endrin, Endothall, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, Simazine, 2,3,7,8-TCDD (Dioxin), Antimony, Beryllium, Cyanide (as free Cyanide), Nickel, and Thallium; initial compliance period means the first full 3-yr compliance period after promulgation for systems with 150 or more service connections (January 1993 - December 1995), and first full 3-yr compliance period after the effective date of the regulation (January 1996 - December 1998) for systems having fewer than 150 service connections (40 CFR 141.2).

- *Large Water System* - in reference to lead and copper in systems, this refers to a water system that services more than 50,000 people (40 CFR 141.2).
- *Lead Service Line* - a service line made of lead, which connects the water main to the building inlet, and any lead pigtail, gooseneck, or other fitting which is connected to such a lead line (40 CFR 141.2).
- *Legionella* - means a genus of bacteria, some species of which have caused a type of pneumonia called Legionnaires' Disease (40 CFR 141.2).
- *Maximum Contaminant Level (MCL)* - the maximum permissible level of a contaminant in water that is delivered to any user of a public water system (40 CFR 141.2).
- *Maximum Contaminant Level Goal (MCLG)* - refers to the maximum level of a contaminant in drinking water at which no known or anticipated adverse effect on the health of persons would occur, and which allows an adequate margin of safety. MCLGs are nonenforceable health goals (40 CFR 141.2).
- *Maximum Total Trihalomethane Potential* - means the maximum concentration of total trihalomethanes produced in a given water containing a disinfectant residual after 7 days at a temperature of 25 °C [77 °F] or above (40 CFR 141.2).
- *Medium Size Water System* - in reference to lead and copper in systems, this refers to a water system that serves greater than 3300 and less than or equal to 50,000 people (40 CFR 141.2).
- *Near the First Service Connection* - means at one of the 20 percent of all service connections in the entire system that are nearest the water supply treatment facility, as measured by water transport time within the distribution system (40 CFR 141.2).
- *Noncommunity Water System* - a public water system that is not a *community water system* (40 CFR 141.2).

- *Nontransient, Noncommunity Water System (NTNCWS)* - a public water system that is not a *community water system* and regularly serves at least 25 of the same people over 6 mo/yr (40 CFR 141.2).
- *Person* - an individual, corporation, company, association, partnership, municipality, or state, Federal, or tribal agency (40 CFR 141.2).
- *PicoCurie (pCi)* - quantity of radioactive material producing 2.22 nuclear transformations/min (40 CFR 141.2).
- *Point of Disinfectant Application* - the point where the disinfectant is applied, and water downstream of that point is not subject to recontamination by surface water runoff (40 CFR 141.2).
- *Point-of-Entry Treatment Device* - a treatment device applied to the drinking water entering a house or building for the purpose of reducing contaminants in the drinking water distributed throughout the house or building (40 CFR 141.2).
- *Point-of-Use Treatment Device* - a treatment device applied to a single tap used for the purpose of reducing contaminants in drinking water at that one tap (40 CFR 141.2).
- *Public Water System* - a system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. This term includes any:
 1. collection, treatment, storage, and distribution facilities under control of the operator of such system
 2. collection or pretreatment storage facilities not under such control that are used primarily in connection with such system.

A public water system is either a *community water system* or a *noncommunity water system* (40 CFR 141.2).

- *Rem* - the unit of dose equivalent from ionizing radiation to the total body or any internal organ or organ system. A millirem (mrem) is 1/1000 of a rem (40 CFR 141.2).
- *Residual Disinfectant Concentration* - (*C* in CT calculations) is the concentration of disinfectant measured in milligrams per liter in a representative sample of water (40 CFR 141.2).

- *Sanitary Survey* - an onsite review of the water source, facilities, equipment, operation and maintenance of a public water system for the purpose of evaluating the adequacy of such source, facilities, equipment, operation, and maintenance for producing and distributing safe drinking water (40 CFR 141.2).
- *Sedimentation* - a process for removal of solids before filtration by gravity or separation (40 CFR 141.2).
- *Slow Sand Filtration* - a process involving passage of raw water through a bed of sand at low velocity (generally less than 0.4 m/h [1.31 ft/h]) resulting in substantial particulate removal by physical and biological mechanisms (40 CFR 141.2).
- *Standard Sample* - the aliquot of finished drinking water that is examined for the presence of coliform bacteria (40 CFR 141.2).
- *State* - the agency of the state or tribal government that has jurisdiction over public water systems. During any period when a state or tribal government does not have primary enforcement responsibility pursuant to Section 1413 of the SDWA (42 USC 300g-2), the term *state* means the Regional Administrator of the USEPA (40 CFR 141.2).
- *Supplier of Water* - any person who owns or operates a public water system (40 CFR 141.2).
- *Surface Water* - all water that is open to the atmosphere and subject to surface runoff (40 CFR 141.2).
- *System with a Single Service Connection* - a system that supplies drinking water to consumers via a single service line (40 CFR 141.2).
- *Total Trihalomethanes (TTHM)* - the sum of the concentration in milligrams per liter of the trihalomethane compounds rounded to two significant figures (40 CFR 141.2).
- *Trihalomethane (THM)* - one of the family of organic compounds, named as derivatives of methane, wherein three of the four hydrogen atoms in methane are each substituted by a halogen atom in the molecular structure (40 CFR 141.2).
- *Virus* - means a virus of fecal origin which is infectious to humans by water-borne transmission (40 CFR 141.2).

- *Waterborne Disease Outbreak* - the significant occurrence of acute infectious illness, epidemiologically associated with the ingestion of water from a public water system which is deficient in treatment, as determined by the appropriate local or state agency (40 CFR 141.2).

WATER QUALITY MANAGEMENT

Records to Review

- Bacterial and chemical analyses of drinking water, including sampling dates and locations, dates of analyses, analytical methods used, and results of analyses
- Monthly operating reports (flow, chlorine residual, etc)
- State and public notification of noncompliance with primary drinking water regulations
- Action taken by the facility to correct violations of primary drinking water regulations
- Sanitary surveys of the water system conducted by the facility itself, a private consultant or any local, state, or Federal Agency
- Public notification of noncompliance with secondary MCL for fluoride
- Variance or exemption granted to the facility for its water supply system
- Permit authorizing the operation of an underground injection well
- Records of planning and construction of injection wells
- Results of injection well monitoring
- Records, including any petition for review, of facility projects that may potentially cause contamination of a sole source aquifer through its recharge zone
- Waivers from the state

Physical Features to Inspect

- Drinking water collection, treatment, and distribution facilities
- Laboratory analysis facilities
- Underground injection wells
- Swimming pools

People to Interview

- Environmental Compliance Coordinator (ECC) (District)
- Natural Resources Management (District)
- Engineering (District)
- Operations
- Planning
- Project Resource Manager
- Facility Managers

Comparison Chart

This chart indicates checklist item number equivalents between this manual and the manual edition prior to this. The chart does not indicate whether or not changes have been made in individual checklist items that still have the same number, it only indicates where checklist item numbers have changed.

Contaminant	mg/L
Alachlor	0.002
Aldicarb	0.003**
Aldicarb sulfoxide	0.004**
Aldicarb sulfone	0.003**
Atrazine	0.003
Carbofuran	0.04
Chlordane	0.002
Dibromochloropropane	0.0002
2,4-D	0.07
Ethylene dibromide	0.00005
Heptachlor	0.0004
Heptachlor epoxide	0.0002
Lindane	0.0002
Methoxychlor	0.04
Pentachlorophenol	0.001
Polychlorinated biphenyls	0.0005
Toxaphene	0.003
2,4,5-TP	0.05
Benzo(a)pyrene	0.0002*
Delapon	0.2*
Di(2-ethylhexyl) adipate	0.4*
Di(2-ethylhexyl) phthalate	0.006*
Dinoseb	0.007*
Diquat	0.02*
Endothall	0.1*
Endrin	0.002*
Glyphosate	0.7*
Hexachlorobenzene	0.001*
Hexachlorocyclopentadiene	0.05*
Oxamyl (Vydate)	0.2*
Picloram	0.5*
Simazin	0.004*
2,3,7,8,-TCDD (Dioxin)	3 x 10*

* The effective date for these MCLs is 17 January 1994.

** The MCLs for these substances have been postponed by the USEPA.

Appendix 12-2

Primary Drinking Water Standards for Inorganic Contaminants

Table 1: MCLs Applicable to Community Water Systems (40 CFR 141.11, 141.12(c) and 141.62(b)(1))

Contaminant	mg/L
Arsenic	0.05
Fluoride	4.0
Total Trihalomethanes	0.10 *

* This MCL only applies to community water systems which serve a population of 10,000 individuals or more and which add a disinfectant (oxidant) to the water in any part of the drinking water treatment process.

Table 2: MCLs Applicable to Community Water Systems and Nontransient, Noncommunity Water Systems (40 CFR 141.62(b)(2) through 141.62(b)(6) and 141.62(b)(10) through 141.62(b)(15))

Contaminant	mg/L
Asbestos	7 million fibers /liter
Barium	2.0
Cadmium	0.005
Chromium	0.1
Mercury	0.002
Selenium	0.05
Antimony	0.006
Beryllium	0.004
Cyanide (as free Cyanide)	0.2
Nickel	0.1
Thallium	0.002

Coliform Bacteria Sampling Frequency (40 CFR 141.21(a)(2))

Population Served Per Month	Minimum Number of Samples Per Month
25 to 1000	1
1001 to 2500	2
2501 to 3300	3
3301 to 4100	4
4101 to 4900	5
4901 to 5800	6
5801 to 6700	7
6701 to 7600	8
7601 to 8500	9
8501 to 12,900	10
12,901 to 17,200	15
17,201 to 21,500	20
21,501 to 25,000	25
25,001 to 33,000	30
33,001 to 41,000	40
41,001 to 50,000	50
50,001 to 59,000	60
59,001 to 70,000	70
70,001 to 83,000	80
83,001 to 96,000	90
96,001 to 130,000	100
130,001 to 220,000	120
220,001 to 320,000	150
320,001 to 450,000	180
450,001 to 600,000	210
600,001 to 780,000	240
780,001 to 970,000	270
970,001 to 1,230,000	300
1,230,001 to 1,520,000	330
1,520,001 to 1,850,000	360
1,850,001 to 2,270,000	390
2,270,001 to 3,020,000	420
3,020,001 to 3,960,000	450
3,960,001 or more	480

Appendix 12-7

Monitoring and Sampling Parameters for Lead and Copper in Drinking Water (40 CFR 141.86(c) and 141.86(d))

Number of Sampling Sites Required

System Size (people served)	No. of sites (standard monitoring)	No. of sites (reduced monitoring)
> 100,000	100	50
10,001 - 100,000	60	30
3301 - 10,000	40	20
501 - 3300	20	10
101 - 500	10	5
< / = 100	5	5

Dates for the Start of Monitoring

System Size (no. people served)	First 6-mo monitoring period begins on:
> 50,000	1 January 1992
3301 - 50,000	1 July 1992
< / = 3300	1 July 1993

Appendix 12-8

Monitoring Requirements for Water Quality Parameters (40 CFR 141.87)

(NOTE: This table is for illustrative purposes; consult the text of the regulation for actual details.)

Monitoring Period	Parameters ¹	Location	Frequency
Initial Monitoring	pH, alkalinity, orthophosphate or silica ² , calcium, conductivity, temperature	Taps and at entry points in distribution system	Every 6 mo
After Installation of Corrosion Control	pH, alkalinity, orthophosphate, or silica ² , calcium ³ , conductivity, temperature	Taps	Every 6 mo
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual ⁴	Entry points to distribution system.	Biweekly
After State Specifies Parameter Values For Optimal Corrosion Control	pH, alkalinity, orthophosphate, or silica ² , calcium ³	Taps	Every 6 mo
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual ⁴	Entry points to distribution system.	Biweekly

Appendix 12-8 (continued)

Monitoring Period	Parameters¹	Location	Frequency
Reduced Monitoring	pH, alkalinity, orthophosphate or silica ² calcium ³	Taps	Every 6 mo at a reduced number of sites
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual ⁴	Entry points to distribution system.	Biweekly

1. Small and medium size systems have to monitor for water quality parameters only during monitoring periods in which the system exceeds the lead or copper action level.
2. Orthophosphates must be measured only when an inhibitor containing a phosphate component is used. Silica must be measured only when an inhibitor containing silicate compounds is used.
3. Calcium must be measured only when calcium carbonate stabilization is used as a part of corrosion control.
4. Inhibitor dosage rates and inhibitor residual concentrations (orthophosphates or silica) must be measured only when an inhibitor is used.

Section 13

Floating Plant Management

SECTION 13

FLOATING PLANT MANAGEMENT

A. Applicability

This section has been developed to address the unique environmental concerns of floating plant. These concerns include issues relating to hazardous waste management, petroleum, oil, and lubricant (POL) management, solid waste management, and wastewater management. Safety issues, such as how many life jackets are required on a floating plant, and structural issues, such as hull thickness, are not addressed in this section.

Although this section addresses requirements unique to floating plant, the assessor must also review the other sections of the manual for generally applicable requirements.

Types of floating plant covered include: dredges, mat sinking units, tugs, towboats, quarterboats, survey boats, snag boats, crewboats and barges (including tank, cargo, hopper and crane barges), and other Corps vessels. Requirements specific only to ocean-going vessels are not addressed in this section.

B. Federal Legislation

- *The Oil Pollution Act of 1990.* This law, Public Law (PL) 301-308 (33 U.S. Code (USC) 2701-2761, et. al.), as amended, requires the prevention of oil pollution into navigable waters by tank vessels. This includes the preparation of a response plan, construction of oil carriers with double hulls, and inspection of spill response equipment.
- *The Federal Facilities Compliance Act (FFCA) of 1992.* This Act provides for a waiver of sovereign immunity with respect to Federal, state, and local procedural and substantive requirements relating to the *Resource Conservation and Recovery Act (RCRA)*. Additionally, it defines hazardous waste in relation to public vessels.

C. State/Local Requirements

- States and/or local governments may also regulate issues that impact floating plant. These issues include environmental noise impact restrictions, spill cleanup requirements, hazardous waste and solid waste disposal requirements, and incinerator operation restrictions.

D. Engineer Regulations (ERs) and Department of Defense (DOD) Regulations

- Engineering Manual (EM) 385-1-1, *Safety and Health Requirements*. Although this is a manual and not an ER, the contents apply to all missions under the command of the Chief of Engineers, whether accomplished by military, civilian, or contractor forces.
- ER 1125-2-302, *Marine Sanitation Devices and Auxiliary Environmental Equipment*. This regulation outlines the policies and procedures for design and operation of marine sanitation devices and auxiliary environmental equipment on Civil Works Revolving Fund and Project-owned floating plant.
- ER 1165-2-116, *Water Resources Policies and Authorities, Pollution Control at Civil Works Projects*. This regulation prescribes measures to be taken to prevent, control, and abate pollution of air, lands, and waters at Civil Works Projects. It requires cooperation with Federal, state, interstate, and local agencies in order to achieve this objective.

E. Key Compliance Requirements

- POL Management - POL must be managed in such a way that it does not enter the navigable waterways of the United States.
- Solid Waste - floating plant must not dispose of garbage overboard. Overseas discharge of plastic is specifically prohibited.
- Wastewater - all Corps of Engineers (COE) floating plant engaged in civil works activities in the navigable waters of the United States, except those vessels not equipped with installed toilet facilities, must be equipped with Coast Guard approved marine sanitation devices (MSDs).

F. Key Compliance Definitions

- *Accommodation, Control, or Service Spaces* - living quarters, including walkways, dining rooms, galleys, pantries, lounges, lavatories, cabins, staterooms,

offices, hospitals, cinemas, and game and hobby rooms; areas containing controls for equipment and navigation; workshops, other than those forming part of the machinery spaces; and store rooms adjacent to these spaces (46 CFR 147.3).

- *Accommodation Space* - for tankships this means any public space such as a hall, dining room, mess room, lounge, corridor, lavatory, cabin, office, hospital, cinema, game and hobby room, pantry that contains no cooking appliances, and a similar space open to the passengers and crew (46 CFR 10-10-2).
- *Barge* - any nonself-propelled vessel (46 CFR 90.10-3).
- *Cargo* - on tank vessels this means combustible liquid, flammable liquid, or liquified flammable gas unless otherwise stated (46 CFR 30.10-5).
- *Cargo Areas* - on tank vessels, that part of a vessel which includes the cargo tanks and other tanks into which cargo or cargo vapors are intentionally introduced; holds containing these tanks; all intervening spaces within, between, below, or outboard of these tanks or holds; and the deck areas over the length and beam of the vessel above these tanks, holds, or spaces (46 CFR 30.10-5a).
- *Cargo Control Stations* - on tank vessels means a location that is manned during cargo transfer operations for the purpose of directing or controlling the loading or unloading of cargo (46 CFR 30.10-5b).
- *Category A Machinery Space* - for a tank vessel this means any space and trunks and ducts to such a space that contains (46 CFR 30.10-6a):
 1. internal combustion machinery used for main propulsion
 2. internal combustion machinery used for purposes other than main propulsion where the total aggregate power is at least 500 brake horsepower
 3. internal combustion machinery that uses a fuel that has a flashpoint of less than 43.3 °C (110 °F), or
 4. one or more oil fired boilers or oil fuel units.
- *Certificated* - for tank vessels this applies to a vessel covered by a certificate of inspection issued by the Coast Guard; when applied to personnel employed on tank vessels, the term refers to a certificate of ability issued by the Coast Guard (46 CFR 30.10-7).
- *Coastwise* - this includes all tank vessels and vessels normally navigating the waters of any ocean or the Gulf of Mexico at 20 nautical miles [37.04 km] or less offshore (46 CFR 30.10-9 and 90.10-11).

- *Cofferdam* - a void or empty space separating two or more compartments for the purpose of isolation or to prevent the contents of one compartment from entering another compartment in the event of the failure of the walls of one to retain their tightness (46 CFR 30.10-13).
- *Combustible Liquid* - for tank vessels this means any liquid having a flashpoint above 80 °F [26.67 °C] and include (46 CFR 30.10-15):
 1. Grade D, which is any combustible liquid with a flashpoint below 150 °F [65.56 °C] and above 80 °F [26.67 °C]
 2. Grade E which is any combustible liquid with a flashpoint of 150 °F [65.56 °C] or above.
- *Control Space* - an enclosed space in which is located a ship's radio, main navigating equipment, or emergency source of power, or in which is located centralized fire recording or fire control equipment, but not including firefighting apparatus that must be located in the cargo area or individual pieces of firefighting equipment (46 CFR 30.10-19a).
- *Discharge* - any release, however caused, from a ship and includes any escape, disposal, spilling, leaking, pumping, emitting, or emptying (33 CFR 151.05).
- *Domestic Wastes* - all types of wastes generated in the living spaces on board a ship except victual wastes (33 CFR 151.05).
- *Drums, Barrels, or other packages* - this is interpreted to mean portable tanks having a maximum capacity of 110 gal [378.54 L] and Department of Transportation (DOT) specification cylinders having a water capacity of not more 1000 lb [453.59 kg] which are actually loaded and discharged from vessels with their content intact (46 CFR 30.01-20(a) and 90.05-30).
- *Flammable Liquid* - any liquid which gives off flammable vapors at or below a temperature of 80 °F [26.67 °C] (46 CFR 30.10-22).
- *Flame Arrester* - any device or assembly of a cellular, tubular, pressure, or other type used for preventing the passage of flames into an enclosed space (46 CFR 30.10-23).
- *Floating Plant* - includes marine vessels used to transport personnel, work boats, floating cranes and derricks, barges, patrol boats, etc. (EM 385-1-1, Sect 19 Definitions).

- *Garbage* - all kinds of victual, domestic, and operational waste, excluding fresh fish and parts thereof, generated during the normal operation of the ship and liable to be disposed of continuously or periodically, except dishwater, graywater, and those substances that are defined or listed in other Annexes to MARPOL 73/78 (33 CFR 151.05).
- *Graywater* - drainage from the dishwasher, shower, laundry, bath, and washbasin drains, and does not include drainage from toilets, urinals, hospitals, and cargo spaces (33 CFR 151.05).
- *IM 101 or 102 Portable Tank* - a portable tank constructed in accordance with 49 CFR 178.270 through 178.272 and approved under 73.32a (46 CFR 98.30-1(a)).
- *Industrial Vessel* - every vessel which, by reason of its special outfit, purpose, and design for function, engages in certain industrial ventures. Included in this classification are such vessels as drill rigs, missile range ships, dredges, cable layers, derrick barges, pipe lay barges, and construction and wrecking barges.
- *Inflammable or Combustible Liquid Cargo in Bulk* - this is interpreted on tank vessels to include such cargo in portable tanks of a capacity more than 110 U.S. gallons [416.40 L] (46 CFR 30.01-20(b)).
- *Inland Oil Barge* - a tank barge carrying oil in bulk as cargo certificated by the Coast Guard under 46 CFR chapter I, subchapter D for river or canal service or lakes, bays, and sounds service (33 CFR 155.200).
- *Keel Laying Date* - the date upon which progressive construction identifiable with a specific vessel begins, including construction of the first module or pre-fabricated section of the hull that is identifiable with that vessel (46 CFR 30.10-37).
- *Lightweight* - the displacement of a vessel in metric tons without cargo, oil fuel, lubricating oil, ballast water, fresh water, feedwater in tanks, consumable stores, and persons and their effects (46 CFR 30.10-38).
- *Liquefied Flammable Gas* - any flammable gas having a Reid vapor pressure exceeding 40 lb [18.14 kg], which has been liquefied (46 CFR 30.10-39).
- *Machinery Space* - any space that contains machinery and related equipment including Category A machinery spaces, propelling machinery, boilers, oil fuel units, steam and internal combustion engines, generators and centralized electrical machinery, oil filling stations, refrigeration stabilizing, ventilation, and air conditioning machinery, and similar spaces and trunks to such spaces (46 CFR 30.10-42).

- *Marine Portable Tank (MPT)* - a liquid-carrying tank that has a capacity of 110 gal [416.40 L] or more, is designed to be carried on a vessel, can be lifted full or empty onto and off a vessel, can be filled and discharged while on a vessel, is not permanently attached to the vessel, and was inspected by the Coast Guard on or before 30 September 1992 (46 CFR 64.5).
- *Marine Service Station* - that portion of a property where flammable or combustible liquids used as fuels are stored and dispensed from fixed equipment on shore, piers, wharves, or floating docks, into the fuel tanks of self-propelled craft, and shall include all facilities used in connection therewith (29 CFR 1910.106(a)(22)).
- *MARPOL 73/78* - the *International Convention for the Prevention of Pollution from Ships*, 1973 as amended by the Protocol of 1978 (33 CFR 151.05).
- *New Ship* - a ship:
 1. for which the building contract is placed after 31 December 1975, or
 2. in the absence of a building contract, the keel of which is laid or which is at a similar stage of construction after 30 June 1976, or
 3. the delivery of which is after 31 December 1979, or
 4. that has undergone a major conversion:
 - a. for which the contract is placed after 31 December 1979, or
 - b. in the absence of a contract, the construction work of which is begun after 30 June 1975
 - c. that is completed after 31 December 1979.
- *Offshore Oil Barge* - a tank barge carrying oil in bulk as cargo, including dual-mode integrated tug-barges, certificated by the Coast Guard under 46 CFR chapter I, Subchapter D, for navigation in waters outside the Boundary Lines, as defined in 46 CFR 7, in any ocean or the Gulf of Mexico; any tank barge in Great Lakes service; or any foreign flag tank barge (33 CFR 155.200).
- *Oil* - petroleum in any form including crude oil, fuel oil, sludge, oil refuse, and refined products (33 CFR 151.05).
- *Oil Fuel* - oil used as a fuel for machinery in the vessel in which it is carried (46 CFR 30.10-48).
- *Oil Fuel Unit* - the equipment used for the preparation of oil fuel for delivery to an oil fired boiler, the equipment used for the preparation of heated oil fuel for delivery to an internal combustion engine, and any oil fuel pressure pumps, filler, and heater that deal with oil at a pressure of more than 1.8 kg/cm² (25 psig) (46 CFR 30.10-48a).

- *Oil Tanker* - a self-propelled vessel carrying oil in bulk as cargo, including integrated tug-barges designed for push-mode operation (33 CFR 155.200).
- *On-deck Spill* - a discharge of oil on the deck of a vessel during loading, unloading, transfer, or other shipboard operations. An on-deck spill could result from a leaking fitting, an overfill, a bad connection, or similar operational mishap. This is different from spills occurring as a result of a collision or grounding where the hull is punctured and a tank is ruptured, resulting in an uncontrolled discharge of oil into the marine environment (33 CFR 155.200).
- *Portable Tank* - see definitions for *IM 101 Portable Tank*, *IM 102 Portable Tank*, and *Marine Portable Tank*.
- *Pressure Vacuum Relief Valve* - any device or assembly of a mechanical, liquid, weight, or other type used for the automatic regulation of pressure or vacuum in enclosed spaces (46 CFR 30.10-55).
- *Service Space* - spaces that are used for galleys, pantries containing cooking appliances, lockers, storerooms, paint and lamp rooms and similar spaces that contain highly combustible materials, laundries, garbage and trash disposal and stowage rooms, workshops other than those forming part of the machinery spaces and similar spaces and trunks to such spaces (46 CFR 30.10-62a).
- *Ship* - a vessel of any type whatsoever, operating in the marine environment (33 CFR 151.05).
- *Ship's Stores* - materials which are on board a vessel for the upkeep, maintenance, safety, operation, or navigation of the vessel, or for the safety or comfort of the vessel's passengers or crew.
- *Tank Barge* - any tank vessel not equipped with means of self-propulsion (46 CFR 30.10-65).
- *Tankship* - any tank vessel propelled by power or sail (46 CFR 30.10-67).
- *Tank Vessel* - any vessel especially constructed or converted to carry liquid bulk cargo in tanks (46 CFR 30.10-69).
- *Vessel Carrying Oil As Secondary Cargo* - a vessel carrying oil pursuant to a permit issued under 46 CFR 30.01-1, 46 CFR 70.05-30, or 46 CFR 90.05-35 or pursuant to an International Oil Pollution Prevention (IOPP) or Noxious Liquid Substance (NLS) certificate; or any uninspected vessel that carries oil as bulk cargo (33 CFR 155.200).

FLOATING PLANT MANAGEMENT PROTOCOL

GUIDANCE FOR CHECKLIST USERS

REFER TO CHECKLIST ITEMS:

All Floating Plant	
General	13-1 through 13-15
Fuel/Transfer	
Operations	13-16 through 13-18
Solid Waste	13-19
Wastewater	13-20 and 13-21
Hazardous Materials	13-22 through 13-24
POL Management	13-25 through 13-32
 Tank Vessels	
Hazardous Materials	13-33 through 13-44
POL Management	13-45 through 13-47
 Cargo and Miscellaneous Vessels	
Hazardous Materials	13-48
POL Management	13-49 and 13-50
 Public Vessels	
Hazardous Waste	13-51

(NOTE: Office of Counsel should be considered a point of contact for all compliance requirements and violations.)

PROJECT:

Appendix 13-1

List of Flammable and Combustible Bulk Liquid Cargoes (46 CFR 30.25-1)

Cargoes	Pollution Category
Acetone	III
Acetophenone	*D
Acetyl tributyl citrate	#
Acrylonitrile-Styrene copolymer dispersion in Polyether polyol	[D]
Alcohols (C13 and above)	III
Alcoholic beverages, n.o.s.	III
Alcohol(C6 - C17)(secondary) poly(3-6)ethoxylates	A
Alcohol(C6 - C17)(secondary) poly(7-12)ethoxylates	B
Alcohol(C12 - C15) poly(1-3)ethoxylates	A
Alcohol(C12 - C15) poly(3-11)ethoxylates	A
Alkenylsuccinic acid	#
Alkenylsuccinic anhydride	#
Alkyl(C9 - C17) benzenes	D
Alkylbenzenesulfonic acid (4% or less)	#
Alkyl phthalates (n-) <i>see individual phthalates</i>	#
Alkyl succinate formaldehyde hydr- oxyamino condensate (3.2% or less)	#
Aminoethyldiethanolamine, Amino- ethylethanolamine solution	III
Amyl acetate (iso-, n-)	C
Amyl alcohol (iso-, n-, sec-, primary)	D
Amyl alcohol (tert-)	III
Amylene <i>see</i> Pentene (all isomers)	C
Amyl methyl ketone <i>see</i> Methyl amyl ketone	C
Asphalt	I
Asphalt blending stocks:	
Roofers flux	I
Straight run residue	I
Behenyl alcohol	III
Benzene tricarboxylic acid tricetyl ester	III
Benzyl alcohol	C
Bicyclic terpenel polyamine amide salt	#
Brake fluid base mixtures (<i>containing Poly(2-8)alkylene(C2 - C3) glycols, Polyalkylene(C2 - C10) glycol monoalkyl(C1 - C4) ethers, and their borate esters</i>)	D
Butane	D
Butene <i>see</i> Butylene	

Appendix 13-1 (continued)

Cargoes	Pollution Category
Butene oligomer	B
Butyl acetate (sec-)	D
Butyl alcohol (iso-, n-, sec-, tert-)	III
Butyl benzyl phthalate	A
Butylene	LFG
Butylene glycol	D
1,3-Butylene glycol <i>see</i> Butylene glycol	D
Butylene polyglycol <i>see</i> Butylene glycol	*D
iso-Butyl formate	D
n-Butyl formate	*D
Butyl heptyl ketone	[C]
Butyl methyl ketone <i>see</i> Methyl butyl ketone	D
Butyl stearate	III
Butyl toluene	*A
Butyrolactone (gamma)	D
Calcium alkylphenate	#
Calcium alkyl salicylate	C
Calcium amino nonyl phenolate	#
Calcium carboxylate	#
Caprolactam solutions	D
Carbon black base	#
Cetyl alcohol (<i>Hexadecanol</i>), <i>see</i> Alcohols (C13 and above)	*III
Cetyl-Stearyl alcohol	III
Cleaning spirit (unleaded)	#
Coal tar	A
Cumene	B
Cycloaliphatic resins	#
Cyclohexane	C
Cyclohexanol	C
1,3-Cyclopentadiene dimer (molten)	B
Cyclopentadiene polymers <i>see</i> 1,3-Cyclopentadiene dimer (molten)	*B
Cymene (para-)	C
Decahydronaphthalene	D
Decaldehyde (n-)	*B
Decane	D
Decene	B
Decyl alcohol (all isomers)	B
Decyclobenzene (n-)	D
Detergent alkylate	#
Diacetone alcohol	D
Dialkyl(C10 - C14) benzenes	[D]
Dialkyl(C7- C13) phthalates	D

Appendix 13-1 (continued)

Cargoes	Pollution Category
Dibutyl carbinol	#
Dibutyl phthalate (ortho-)	A
Dicyclopentadiene <i>see</i> 1,3-Cyclopentadiene dimer (molten)	B
Diethylbenzene	C
Diethylene glycol	III
Diethylene glycol butyl ether	III
Diethylene glycol butyl ether acetate	D
Diethylene glycol dibutyl ether	D
Diethylene glycol diethyl ether	III
Diethylene glycol ethyl ether	III
Diethylene glycol ethyl ether acetate	D
Diethylene glycol methyl ether	C
Diethylene glycol methyl ether acetate	D
Diethylene glycol phenyl ether	#
Diethylene glycol phthalate	[D]
Di-(2-ethylhexyl)adipate	D
Di-(2-ethylhexyl)phthalate	D
Diethyl phthalate	C
Diglycidyl ether of Bisphenol A	B
Diheptyl phthalate	III
Dihexyl phthalate	III
Diisobutylcarbinol	*C
Diisobutylene	B
Diisobutyl ketone	D
Diisobutyl phthalate	D
Diisodecyl phthalate	D
Diisononyl adipate	D
Diisononyl phthalate	D
Diisooctyl phthalate	III
Diisopropylbenzene (<i>all isomers</i>)	A
Diisopropyl naphalene	D
Dimethyl adipate	B
Dimethylbenzene <i>see</i> Xylenes	C
Dimethyl glutarate	C
Dimethyl phthalate	C
Dimethyl polysiloxane	[III]
2,2-Dimethylpropane-1,3-diol	D
Dimethyl succinate	C
Dinonyl phthalate	D
Di(octylphenyl)amine	#
Dioctyl phthalate	III
Dipentene	C

Appendix 13-1 (continued)

Cargoes	Pollution Category
Diphenyl	A
Diphenyl,Diphenyl ether mixture	A
Diphenyl ether	A
Diphenyl ether, Biphenyl phenyl ether mixtures	A
Dipropylene glycol	III
Dipropylene glycol dibenzoate	[D]
Dipropylene glycol methyl ether	D
Distillates:	
Flashed feed stocks	I
Straight run	I
Ditridecyl phthalate	D
Diundecyl phthalate	D
Dodecane (all isomers)	III
Dodecanol	B
Dodecene (all isomers)	B
Dodecylbenzene	III
Dodecyl phenol	A
Drilling mud (low toxicity) (<i>if flammable or combustible</i>)	[III]
Epoxylated linear alcohols, C11 - C15	#
Ethane	LFG
2-Ethoxyethanol	D
2-Ethoxyethyl acetate	C
Ethoxylated alcohols, C11 - C15 <i>see the Alcohol polyethoxylates</i>	A/B
Ethoxy triglycol (<i>crude</i>)	D
Ethyl acetate	D
Ethyl acetoacetate	D
Ethyl alcohol	III
Ethyl amyl ketone	C
Ethylbenzene	C
Ethyl butanol	@D
Ethyl butyrate	C
Ethyl cyclohexane	C
Ethylene	LFG
Ethylene carbonate	III
Ethylene glycol	D
Ethylene glycol acetate	D
Ethylene glycol butyl ether	III
Ethylene glycol butyl ether acetate	C
Ethylene glycol tert-butyl ether	III
Ethylene glycol diacetate	C
Ethylene glycol dibutyl ether	[D]
Ethylene glycol ethyl ether, <i>see</i> 2-Ethoxyethanol	D

Appendix 13-1 (continued)

Cargoes	Pollution Category
Ethylene glycol ethyl ether acetate, <i>see</i> 2-Ethoxyethyl acetate	C
Ethylene glycol isopropyl ether	D
Ethylene glycol methyl butyl ether	D
Ethylene glycol methyl ether	D
Ethylene glycol methyl ether acetate	D
Ethylene glycol phenyl ether	D
Ethylene glycol phenyl ether, Diethylene glycol phenyl ether mixture	D
Ethylene-Propylene copolymer (<i>in liquid mixtures</i>)	[III]
Ethyl-3-ethoxypropionate	[C]
2-Ethylhexaldehyde <i>see</i> Octyl aldehydes	@ B
2-Ethylhexanoic acid	D
2-Ethylhexanol <i>see</i> Octanol (all isomers)	@ C
Ethylhexoic acid <i>see</i> 2-Ethylhexanoic acid	D
Ethyl hexyl phthalate	C
Ethyl hexyl tallate	#
Ethyl propionate	D
Ethyl toluene	B
Fatty acid (saturated, C13 and above)	III
Fatty acid amides	#
Formamide	D
Furfuryl alcohol	C
Gas oil, cracked	I
Gasoline blending stocks:	
Alkylates	I
Reformats	I
Gasolines:	
Automotive (<i>containing not over 4.23 g lead/gal</i>)	I
Aviation (<i>containing not over 4.86 g lead/gal</i>)	I
Casinghead (<i>natural</i>)	I
Polymer	I
Straight run	I
Glycerine	III
Glycerol <i>see</i> Glycerine	III
Glycerol polyakoxylate	III
Glycerol triacetate	III
Glycidyl ester of tertiary carboxylic acid <i>see</i> Glycidyl ester of tridecyl acetic acid	*B
Glycidyl ester of tridecyl acetic acid	B
Glycidyl ester of versatic acid <i>see</i> Glycidyl ester of tridecyl acetic acid	*B
Glycol diacetate <i>see</i> Ethylene glycol diacetate	C
Glycols, Resins, & Solvents mixture	#

Appendix 13-1 (continued)

Cargoes	Pollution Category
Glycol tiacetate, <i>see</i> Glyceryl triacetate	III
Glyoxal solution (40% or less)	D
Grease	#
Heptadecane	*III
Heptane (all isomers)	C
Heptanoic acid	D
Heptanol (all isomers)	C
Heptene (all isomers)	C
Heptyl acetate	B
Herbicide (C15 -H22 -NO2- Cl) <i>see</i> Metolachlor	*B
Hexaethylene glycol	*
Hexamethylene glycol	III
Hexamethyleneteraamine solutions	D
Hexane (all isomers)	C
Hexanoic acid	D
Hexanol	D
Hexene (all isomers)	C
Hexyl acetate	B
Hexylene glycol	III
Hog grease <i>see</i> Lard	*III
2-Hydroxy-4-(methylthio)butanoic acid	[C]
Hydroxy terminated polybutadiene <i>see</i> Polybutadiene, hydroxyl terminated	
Ispphorone	D
Jet fuels:	
JP-1 (kerosene)	I
JP-3	I
JP-4	I
JP-5 (kerosene, heavy)	I
JP-8	*I
Kerosene	I
Latic acid	D
Lard	III
Latex, liquid synthetic	III
<i>including:</i>	
Styrene-butadiene rubber	III
Carboxylated styrene-butadiene copolymer	III
Magnesium nonyl phenyl sulfide	#
Magnesium sulfonate	#
Maleic anhydride copolymer	#
2-Mercaptobenzothiazol (<i>in liquid mixtures</i>)	#
Methane	LFG

Appendix 13-1 (continued)

Cargoes	Pollution Category
3-Methoxy-1-butanol	III
3-Methoxybutyl acetate	D
1-Methoxy-2-propyl acetate	#
Methoxy triglycol <i>see</i> Triethylene glycol methyl ether	D
Methyl acetate	III
Methyl acetoacetate	D
Methyl alcohol	III
Methyl amyl acetate	C
Methyl amyl ketone	C
Methyl butanol <i>see the</i> Amyl alcohols	D
Methyl butenol	D
Methyl butyl ketone	D
Methyl butynol	D
Methyl butyrate	C
Methyl ethyl ketone	III
Methyl formal (<i>dimethyl formal</i>)	#
Methyl heptyl ketone	B
Methyl isobutyl carbinol <i>see</i> Methyl amyl alcohol	C
Methyl isosbutyl ketone	D
3-Methyl-3-methoxybutyl acetate	III
Methyl naphthalene	A
Methyl pentene	C
N-Methyl-2-pyrrolidone	B
Methyl tert-butyl ether	D
Metolachlor	*B
Mineral spirits	I
Myrcene	[B]
Naphtha:	
Aromatic (<i>having less than 10% benzene</i>)	*I
Cracking fraction	*I
Heavy	*I
Paraffinic	*I
Petroleum	I
Solvent	*I
Stoddard solvent	*I
Varnish makers' and painters' (75%)	*I
Naphthalene sulfonic acid-formaldehyde copolymer, sodium salt solution	D
Naphthenic acid	A
Nonane (all isomers)	C
Nonanoic acid (all isomers)	D
Nonoic, Tridecanoic acid mixture	*D
Nonene	B

Appendix 13-1 (continued)

Cargoes	Pollution Category
Nonyl alcohol (all isomers)	[C]
Nonyl methacrylate <i>monomer</i>	D
Nonyl phenol	A
Nonyl phenol poly(4-12)ethoxylates	B
Nonyl phenol sulfide (90% or less)	#
Noxious liquid, n.o.s. (17) (<i>trade name contains principal components</i>) Category (if flammable or combustible)	D
Non-noxious liquid, n.o.s. (18) (<i>trade name, contains principal components</i>), Appendix III (if flammable or combustible)	III
Octadecene, <i>see the Olefin or alpha-Olefin entries</i>	*III
Octadecenoamide solution (<i>Oleamide</i>)	[D]
Octane (all isomers)	D
Octanoic acid (all isomers)	D
Octanol (all isomers)	C
Octene (all isomers)	B
Octyl acetate	D
Octyl alcohol (iso, n-) <i>see</i> Octanol (all isomers)	C
Octyl aldehydes	B
Octyl decyl adipate	III
Octyl epoxystallate	#
Octyl phthalate <i>see</i> Di-(2-ethylhexyl)phthalate	*D
Oil, edible	
Babassu	D
Beechnut	D
Castor	D
Cacao butter	D
Coconut	D
Cod liver	D
Corn	D
Cottenseed	D
Fish, <i>n.o.s.</i>	D
Grapeseed	#
Groundnut	D
Hazelnut	D
Lard	*III
Maize <i>see</i> Corn oil	D
Mustard seed	#
Nutmeg butter	D
Olive	D
Palm	D
Palm kernel	D
Peanut	D

Appendix 13-1 (continued)

Cargoes	Pollution Category
Poppy	D
Raison seed	D
Rapeseed	D
Rice bran	D
Safflower	D
Salad	D
Sesame	D
Soya bean	D
Sunflower <i>see</i> Sunflower seed	D
Sunflower seed	D
Ticum	D
Vegetable, <i>n.o.s.</i>	D
Walnut	D
Oil, fuel:	
No. 1 (kerosene)	I
No. 1-D	I
No. 2	I
No. 2-D	I
No. 4	I
No. 5	I
No. 6	I
Oil, misc:	
Absorption	*I
Aliphatic	*I
Animal, <i>n.o.s.</i>	D
Aromatic	I
Aviation F2300	*I
Clarified	I
Coal	#
Coconut oil, esterified <i>see</i> Coconut oil, fatty acid methyl ester	#
Coconut oil, fatty acid	[C]
Coconut oil fatty acid methyl ester	D
Coconut oil, methyl ester. <i>see</i> Coconut oil, fatty acid methyl ester	#
Cottenseed, fatty acid <i>see</i> Cottenseed oil, fatty acid	C
Croton	
Crude	I
Diesel	I
Gas, low pour	*I
Gas, low sulfur	*I
Heartcut distillate	I
Lanolin	D
Linseed	D

Appendix 13-1 (continued)

Cargoes	Pollution Category
Lubricating	I
Mineral	I
Mineral seal	*I
Motor	I
Neatsfoot	D
Oiticica	D
Palm oil, fatty acid methyl ester	D
Palm oil, methyl ester, <i>see</i> Palm oil, fatty acid methyl ester	#
Penetrating	I
Perilla	D
Pilchard	D
Pine	[B]
Range	*I
Residual	I
Resin	#
Resinous petroleum	*I
Road	I
Rosin	B
Seal	I
Soapstock	#
Soya bean (epoxidized)	#
Sperm	D
Spindle	I
Spray	B
Tall	C
Tall, fatty acid	C
Tanner's	#
Transformer	I
Tung	D
Turbine	I
Whale	C
White (mineral)	*I
Wood	#
alpha-Olefins (C13 - C18)	III
Olefins (C13 and above, all isomers)	III
Oleyl alcohol (<i>Octadecenol</i>), <i>see</i> Alcohols (C13 and above)	*III
Organic amine 70 <i>see</i> Aminoethyldiethanolamine,	
Aminoethyl-ethanolamine solution	III
Palm stearin	D
n-Parafins (C10 - C20)	III
Pentadecanol, <i>see</i> Alcohols (C13 and above)	*III
Pentaethylene glycol, <i>see</i> Polyethylene glycols	III

Appendix 13-1 (continued)

Cargoes	Pollution Category
Pentaethylenehexamine	D
Pentane (all isomers)	C
Pentanoic acid	D
Pentene (all isomers)	C
Petrolatum	III
1-Phenyl-1-xylyl ethane	C
Phosphosulfurized bicyclic terpene	#
Phthalate plasticizers <i>see individual phthalates</i>	#
Pinene	B
Polyalkenyl succinic anhydride amine	#
Polyalkylene glycols, Polyalkylene glycol monoalkyl ethers mixtures	*D
Polyalkylene oxide polyol	[C]
Polyamine, amide mixture	#
Polybutadiene, hydroxyl terminated	[III]
Polybutene	III
Polydimethylsiloxane	#
Polyethylene glycol	III
Polyethylene glycol dimethyl ether	III
Polyglycerol	[III]
Polyisobutylene, <i>see</i> Polybutene	[III]
Polymerized esters	#
Poly(20)oxyethylene sorbitan monooleate	[B]
Polypropylene	[III]
Polypropylene glycol	D
Polypropylene glycol methyl ether	III
Polysiloxane	III
Polystyrene dialkyl maleate	#
Potassium oleate	[D]
Propane	LFG
n-Propoxypropanol	#
Propyl acetate (iso-)	III
Propyl acetate (n-)	D
Propyl alcohol (iso-)	III
Propyl alcohol (n-)	III
Propylbenzene (iso-) <i>see</i> Cumene	B
iso-Propylcyclohexane	C
Propylene	LFG
Propylene-butyene copolymer	III
Propylene dimer	C
Propylene glycol	III
Propylene glycol monoalkyl ether	D
Propylene glycol methyl ether	D

Cargoes	Pollution Category
Propylene polymer (<i>in liquid mixtures</i>)	#
Propylene tetramer	B
Propylene trimer	B
Pseudocumene <i>see</i> Trimethylbenzenes	B
Rum, <i>see</i> Alcoholic beverages, n.o.s.	*III
Sodium acetate, Glycol, Water solutions	#
Sodium acetate solution	[D]
Sodium benzoate solution	[D]
Sodium sulfonate	#
Stearic acid	*III
Stearyl alcohol (<i>Octadecanol</i>)	III
Sulfolane	III
Tallow	D
Tallow alcohol, <i>see</i> Alcohols (C13 and above)	*III
Tallow fatty acid	D
Tallow <i>alkyl</i> nitrile	#
Tetradecanol	III
Tetradecene, <i>see the Olefin or alpha-Olefin entries</i>	III
Tetracyclobenzene	[C]
Tetraethylene glycol	III
Tetrahydroaphthalene	C
Tetrapropylbenzene <i>see</i> Alkyl(C9-C17) benzenes	*D
Toluene	C
Triarylphosphate	A
Tributyl phosphate	B
Tricresyl phosphate (less than 1% of the ortho isomer)	A
Tridecane	III
Tridecanoic acid	III
Tridecanol, <i>see</i> Alcohols (C13 and above)	III
Tridecene	III
Tridecylbenzene	[C]
Triethylbenzene	A
Triethylene glycol	III
Triethylene glycol butyl ether	III
Triethylene glycol butyl ether mixture	#
Triethylene glycol ethyl ether	D
Triethylene glycol methyl ether	D
Triethyl phosphate	D
Triisocotyl trimellitate	#
Triisopropanolamine	III
Trimethylbenzenes (all isomers)	B

Appendix 13-1 (continued)

Cargoes	Pollution Category
Trimethylol propane polyethoxylate	D
2,2,4-Trimethylpentanediol-1,3-diisobutyrate	#
2,2,4-Trimethyl-3-pentanol-1-isobutyrate	#
Tripropylene <i>see</i> Propylene trimer	*B
Tripropylene glycol	III
Tripropylene glycol methyl ether	D
Trixylenyl phosphate	A
Turpentine	B
Turpentine substitute (White spirit) <i>see</i> White spirit (low(15-20%) aromatic)	*B
Undecenol, <i>see</i> Undecyl alcohol	B
Undecene	B
Undecylbenzene	[C]
Vinyl acetate-fumurate copolymer	#
Waxes	
Candelila	*D
Carnauba	*D
Paraffin	III
Petroleum	#
White spirit <i>see</i> White spirit (low (15-20%) aromatic)	*B
White spirit (low (15-20%) aromatic)	B
Wine, <i>see</i> Alcoholic beverages, n.o.s.	III
Wool grease	#
Xylenes (<i>ortho</i> -, <i>meta</i> -, <i>para</i> -)	C
Zinc dialkyldithiophosphate	#

Explanation of Symbols: As used in this table, the following stand for:

Symbol	Explanation
A, B, C, D	NLS Category of Annex II of MARPOL 73/78.
I	Considered an <i>oil</i> under Annex I of MARPOL 73/78.
III	Appendix III of Annex II (non-NLS cargoes) of MARPOL 73/78.
LFG	Liquified flammable gas.
#	No determination of NLS status. For shipping on an oceangoing vessel, <i>see</i> 46 CFR 153.900(c).
[]	An NLS category in brackets indicates that the product is previously categorized and that further data are necessary.

Appendix 13-2

Classes of Vessels (46 CFR 30.01-5(d))

Classes of vessels (including motorboats) examined or inspected under various Coast Guard regulations ¹					
Method of propulsion	Size or other limitations ¹ under subchapter	Vessels inspected and certificated Passenger D-Tank Vessels ²	Vessels inspected and certificated under either subchapter H-Cargo and Vessels ^{2 3 4 5} or Subchapter T-Small Passenger Vessels ^{2 3 4}	Vessels inspected and certificated under subchapter I-Uninspected Miscellaneous Vessels ^{2 5}	Vessels subject to provisions of subchapter C-Vessels ^{2 3 6 7 8}
Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Steam				All vessels except those covered by columns 3 and 4	None
Motor	Vessels not over 15 gross tons [15,240.71 kg]		All vessels carrying more than 6 passengers ⁷		All vessels except those covered by columns 3, 4, 5, and 7
	Vessels over 15 gross tons except seagoing motor vessels of 300 gross tons and [3048.14 kg] and over		1 All vessels not over 65 ft [19.81 m] in length carrying more than 6 passengers ⁷ 2 All other vessels of over 65 ft [19.81 m] in length carrying passengers for hire except documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew	All vessels carrying freight for hire except those covered by columns 3 and 4	All vessels except those covered by columns 3, 4, 5, and 7
	Seagoing motor vessels of 300 gross tons [3048.14 kg] and over	All vessels carrying combustible or flammable liquid cargo in bulk ⁵	1 All other vessels carrying passengers, ⁷ except a Yachts b Documented cargo or tank vessels issued a permit to carry not more than 16 persons in addition to the crew	All vessels except those covered by columns 3 and 4, and those engaged in the fishing, oystering, clamming, crabbing, or any other branch of the fishery, kelp, or sponge industry	All vessels except those covered by columns 3, 4, 5, and 7

Appendix 13-2 (continued)

Classes of vessels (including motorboats) examined or inspected under various Coast Guard regulations ¹					
Method of propulsion	Size or other limitations ¹ under subchapter	Vessels inspected and certificated Passenger D-Tank Vessels ²	Vessels inspected and certificated under either subchapter H-Cargo and Vessels ^{2,3,4,5} or Subchapter T-Small Passenger Vessels ^{2,3,4}	Vessels inspected and certificated under subchapter I-Uninspected Miscellaneous Vessels ^{2,5}	Vessels subject to provisions of subchapter C-Vessels ^{2,3,6,7,8}
Column 1	Column 2	Column 3	Column 4	Column 5	Column 6
Sail	Vessels over 700 gross tons (406,418.8 kg)		All vessels carrying passengers for hire	Those vessels carrying dangerous cargoes when required by 46 CFR 98 or 146	None
Non-self-propelled	Vessels less than 100 gross tons (101,604.7 kg)	All vessels carrying combustible or liquid cargo in bulk	Those vessels carrying dangerous cargoes when required by 49 CFR 171-179	Those Vessels carrying dangerous cargoes when required by 46 CFR 98 or 49 CFR 171-179	All barges carrying passengers except those covered by column 4
	Vessels 100 gross tons (101,604.7 kg) or over	All vessels carrying combustible or flammable liquid cargo in bulk	All seagoing barges except those covered by columns 3 and 4 and those inland barges carrying dangerous cargoes when required by 49 CFR 171-179	All seagoing barges except those covered by columns 3 and 4 and those inland barges carrying dangerous cargoes when required by 46 CFR 98 or 49 CFR 171-179	All barges carrying passengers except columns 4 and 7

¹Where length is used in this table it means the length measured from end to end over the deck, excluding sheer. This expression means a straight line measurement of the overall length from the foremost part of the vessel to the aftermost part of the vessel, measured parallel to the centerline.

²Subchapter E (Load Lines), F (Marine Engineering), J (Electrical Engineering), and N (Dangerous Cargoes) of this chapter may also be applicable under certain conditions. The provisions of 49 CFR 171-179 apply whenever hazardous materials are on board vessels (including motorboats), except when specifically exempted by law.

³Public nautical schoolships, other than vessels of the Navy and Coast Guard, shall meet the requirements of 46 CFR 167 of subchapter R (Nautical Schools) of this chapter. Civilian nautical schools, as defined by 46 USC 1331, shall meet the requirements of subchapter H (Passenger Vessels) and 46 CFR 168 of subchapter R (Nautical Schools) of this chapter.

⁴Subchapter H (Passenger Vessels) of this chapter covers only those vessels of 100 gross tons (101,604.7 kg) or more. Subchapter T (Small Passenger Vessels) of this chapter covers only those vessels of less than 100 gross tons (101,604.7 kg).

⁵Vessels covered by subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter, where the principal purpose or use of the vessel is not the carriage of liquid cargo, may be granted a permit to carry a limited amount of flammable or combustible liquid cargo in bulk. The portion of the vessel used for the carriage of the flammable or combustible liquid cargo shall meet the requirements of subchapter D (Tank Vessels) in addition to the requirements of subchapter H (Passenger Vessels) or I (Cargo and Miscellaneous Vessels) of this chapter.

⁶Any vessel on an international voyage is subject to the requirements of the *International Convention for Safety of Life at Sea*, 1974.

⁷The meaning of the term *passenger* is as defined in the Act of May 10, 1956 (Sect 1, 70 Stat 151, 46 USC 390). On oceanographic vessels scientific personnel on board shall not be deemed to be passengers or seamen, but for calculations of lifesaving equipment, etc., shall be counted as persons.

⁸Boilers and machinery are subject to examination on vessels over 40 ft (12.19 m) in length.

INDEX

This index indicates checklist item numbers which contain requirements for the listed term.

Accumulation points	4-15 through 4-19, 4-23 through 4-34, 4-36, 4-43 through 4-62
Acid Storage	3-54
Air Conditioners	see CFCs
Asbestos	9-47 through 9-61
Boilers	1-3 through 1-7
Burial Grounds	2-8, 2-16
CFCs	1-27 through 1-47
Compressed Gases	3-50 through 3-53, 13-19
Dumps	8-21 and 8-22, 8-25 through 8-48
Dredging	11-29 through 11-35
Drinking Water	12-3 through 12-64
Electroplating	11-17 through 11-23
Endangered Species	5-3, 5-13, and 5-14
Erosion	5-3, 5-7
Floating Plants	13-3 through 13-51
Fuel pumps	1-8 through 1-13, 7-32 through 7-35
Garbage	8-4 through 8-16
Grazing Lands	5-3
Historic Buildings	2-4 through 2-10
Incinerators	1-3, 4-165 through 173, 8-24, 11-76 through 11-83
Laboratories, material storage	3-23 through 3-26

INDEX (continued)

Landfills	8-25 through 8-48
Medical Waste	8-49 through 8-54
Metal Finishing	11-24 through 11-28
NEPA	5-15 through 5-19
Oil/Gas Drilling	4-5, 5-3
Oil/water separators	4-3, 11-5, 11-12
Open Burning	1-3, 1-19
Paint storage	3-17 through 3-22, 3-27 through 3-41, 13-18, 13-23, 13-33, 13-35, 13-48
PCB Transformers	9-12 through 9-19
Pesticide Storage	6-3, 6-15 through 6-29
Pesticide Use	6-3, 6-5, 6-8 through 6-13, 11-11 through 11-13
Petroleum Storage	7-16 through 7-20, 7-32 through 7-35, 13-10, 13-25 through 13-32, 13-46 through 13-50
Pipelines	7-21 through 7-31
Potable Water	see Drinking Water
Radon	9-62 and 9-64
Recycling	4-4, 6-35, 7-4 and 7-5, 8-17 through 8-20
Sandblasting	1-3, 4-5
Satellite Accumulation Points	4-14
Septic Tanks	11-3
Sludge	4-5, 8-23, 11-36 through 11-83
Spills	3-6, 3-11 through 3-14, 6-14, 7-6 through 7-15, 9-20 through 9-22

INDEX (continued)

Storage Tanks	1-15 through 1-18, 3-45 through 3-49, 4-32 through 4-34, 4-52 through 4-62, 4-98 through 4-108, 7-17 through 7-20, 10-4 through 10-36, 13-30 through 13-32, and 13-49
Stormwater Runoff	11-6 through 11-10
Training	3-9 and 3-10, 4-12 through 4-13, 4-63 and 4-64, 4-87, and 4-88
Transformers	see PCB Transformer
Trash	8-4 through 8-16
Treatment, Storage, and Disposal Facility	4-77 through 4-164
Treatment Works	11-14 through 11-16
Underground Storage Tanks	10-4 through 10-36
Used Oil	4-3, 7-37 through 7-79
Very Small Quantity Generators	4-15 through 4-18
Wastewater Discharges	11-5 through 11-13, 13-20, and 13-21
Wetlands	5-3, 5-9
