This software, developed under the Software Technology for Adaptable, Reliable Systems (STARS) program, is approved for release under Distribution "A" of the Scientific and Technical Information Program Classification Scheme (DoD Directive 5230.24) unless otherwise indicated. Sponsored by the U.S. Defense Advanced Research Projects Agency (DARPA) under contract F19628-88-D-0031, the STARS program is supported by the military services, SEI, and MITRE, with the U.S. Air Force as the executive contracting agent.

Permission to use, copy, modify, and comment on this software and its documentation for purposes stated under Distribution "A" and without fee is hereby granted, provided that this notice appears in each whole or partial copy. This software retains Contractor indemnification to The Government regarding copyrights pursuant to the above referenced STARS contract. The Government disclaims all responsibility against liability, including costs and expenses for violation of proprietary rights, or copyrights arising out of the creation or use of this software.

In addition, the Government, Paramax, and its subcontractors disclaim all warranties with regard to this software, including all implied warranties of merchantability and fitness, and in no event shall the Government, Paramax, or its subcontractor(s) be liable for any special, indirect or consequential damages or any damages whatsoever resulting from the loss of use, data, or profits, whether in action of contract, negligence or other tortious action, arising in connection with the use or performance of this software.

13. ABSTRACT (Maximum 200 words) The Reuse Library Framework (RLF) is an Ada system designed and implemented to support the production and installation of domain-specific software library systems. The RLF is based on two fundamental subsystems: AdaKNET (Ada Knowledge NETwork) and AdaTAU (TAU is an acronym for Think Ask Update) which are knowledge representation and inferencing systems derived from systems previously developed by Unisys in Prolog. These subsystems are supported by an integrating framework to allow them to be used in combination with each other. AdaKNET and AdaTAU are also equipped with interface specification languages (Library Model Definition Language (LMDL) and Rule Base Definition Language (RBDL) respectively) that are used to initialize domain models that describe the library (or application) domain. In addition to the support of library systems, the RLF was used to develop a prototype Ada unit test assistant during the STARS Foundations period and has been applied to the representation of software and reuse process models which are themselves machine processable.

A complete listing of the contents of this distribution is included in Appendix A.

3.1.1 Directory: docs

The two subdirectories of docs contain the RLF manuals and tutorials currently delivered in this RLF release.

3.1.1.1 Subdirectory: manuals

3.1.1.1.1 RLF Administrator's Manual. The *RLF Administrator's Manual* provides the information necessary for an RLF reuse library administrator to install, modify, and maintain a reuse library hosted on RLF.

3.1.1.1.2 RLF Installation Guide. The *RLF Installation Guide* informs the user how to install, build and start up the STARS RLF and its user interface applications, namely the `RLF Graphical Browser` and the `RLF Library Manager`.

3.1.1.1.3 RLF Modeler's Manual. The *RLF Modeler's Manual* provides the information necessary for an RLF reuse library domain modeler to model, encode, and build an RLF reuse library specification and the library itself. It also defines how to model, encode, and install the RLF library advice modules called "inferencers."

3.1.1.1.4 RLF User's Manual. The *RLF User's Manual* describes the use and basic customization of the `Graphical Browser` application. The reader is not expected to be a programmer, but familiarity with the UNIX C shell, and basic X Window System operations using the Motif Window Manager (`mwm`) or some other window manager is assumed. Some explanation of RLF concepts is provided, but only at an elementary level.

3.1.1.2 Subdirectory: tutorials This directory contains three PostScript file representations of the contents of three RLF training packages that will be used as hand-out material in support of the delivery of RLF training sessions. While the documents can be read on their own, and are formatted in an article-style format, they are oriented more for a presentation of the material by a speaker using transparencies. The tutorials are also designed to be supplemented by in-class demonstrations of RLF software and the conducting and monitoring of both in-class and out-of-class student exercises using the software.

3.1.1.2.1 RLF User Tutorial. The *RLF User Tutorial* presents a survey of the usage of the `RLF Graphical Browser` application which will enable new RLF users to quickly learn the user interface and the various RLF features which it presents.

3.1.1.2.2 RLF Administrator Tutorial. The *RLF Administrator Tutorial* provides an introduction to the installation and maintenance of RLF library systems. This tutorial assumes that the user is familiar with the basic RLF interface (for example, as presented in the *RLF User Tutorial*). A survey of the `Library Manager` application is also presented in the tutorial.

3.1.1.2.3 RLF Modeler Tutorial. The *RLF Modeler Tutorial* provides a thorough presentation of RLF modeling capabilities so that attendees can begin the construction of RLF models for application domains of interest to them. Familiarity with the material covered in the *RLF User Tutorial* is assumed. Modeling techniques are discussed and the use of the RLF model specification languages is taught through the use of a detailed example.

3.1.2 Directory: models

Sample libraries and their build scripts are found in the `models` directory, which contains the `ada_x`, `animals`, `asw`, `common_data_model`, `demo_actions`, `window_manager`, `software_technology` and `sort_and_search` subdirectories. The contents of these subdirectories are described in the following sections. This directory also contains the file `library_model_template.lmdl`, which contains an example LMDL specification for a library action subtree.

3.1.2.1 Subdirectory: models/ada_x ...contains the LMDL and RBDL specifications and associated text files for a sample RLF library describing the STARS Ada/Xt system. The specification files must be processed by the LMDL and RBDL translators to build the `ada_x` knowledge base.

3.1.2.2 Subdirectory: models/animals ...contains the LMDL specification and associated text files for a sample knowledge base describing a simple animals taxonomy. The specification files must be processed by the LMDL translator to build the animals knowledge base.

3.1.2.3 Subdirectory: models/asw ...contains the LMDL specification and associated text files for a sample RLF library addressing the anti-submarine warfare (ASW) domain. The specification files must be processed by the LMDL translator to build the `asw` library.

3.1.2.4 Subdirectory: models/common_data_model ...contains the LMDL specification and associated text files for a sample RLF library illustrating how the Common Data Model defined in the STARS ALOAF document can be expressed using RLF. The specification files must be processed by the LMDL translator to build the *Common Data Model* library.

3.1.2.5 Subdirectory: models/demo_actions ...contains the LMDL specification and associated text files for a sample RLF library addressing the modeling of LMDL actions. The sound actions contained in this library only work on a Sun workstation that has a sound board. The specification files must be processed by the LMDL translator to build the *Demo Actions* library.

3.1.2.6 Subdirectory: models/window_manager ...contains the LMDL and RBDL specifications and associated text files for a sample RLF library addressing the SEI's FODA example on move operations in the window manager domain. The specification files must be processed by the LMDL and RBDL translators to build the **Move Domain** library.

3.1.2.7 Subdirectory: models/software_technology ...contains the LMDL specification and associated text files for a sample RLF library providing both a functional- and product-oriented view into the domain and defining numerous attributes for describing software engineering components. The specification files must be processed by the LMDL translator to build the **Software Technology** library.

3.1.2.8 Subdirectory: models/sort_and_search ...contains the LMDL and RBDL specifications and associated text files for a sample RLF library describing a sort and search algorithms domain. The specification files must be processed by the LMDL and RBDL translators to build the **Sort and Search** library.

3.1.3 Directory: Libraries

The **Libraries** directory contains two prebuilt RLF version 4.1 libraries. The subdirectories **Taustuff**, **Text**, **Text/demo_action**, and **Text/sort_and_search** contain text and AdaTAU information for the two libraries.

3.1.4 Directory: unix/bin

The **unix/bin** directory contains the binaries and support files used to execute the UNIX Sun-4 version of the RLF. This directory contains the application resource file **RLF_Browser**, the **Graphical_Browser** start-up script **RLF_GB**, a sample RLF start-up file **.rlfrc**, and the associated bitmaps for the **RLF_Browser** file in the subdirectory **bitmaps**. These items are used with the **Graphical_Browser** application, with the **.rlfrc** also being used for the other RLF applications.

Included in the RLF 4.1 release is a **Sndl_to_Lmdl** translator for the conversion of the old **SNDL** syntax to the **LMDL** syntax for RLF library models.

This directory also contains public-domain executables that are used by the sample models included with this release, which are not part of the standard SunOS or X releases. The executables included are **less** and **xloadimage**. In addition, a script called **view_stp.csh** is provided as an example of an RLF action to view a Software Through Pictures (STP) diagram using STP.

The start-up script **RLF_GB** and the sample start-up file **.rlfrc** are included in this document in Appendix B.

3.1.4.1 Subdirectory: bin/bitmaps ...contains the bitmaps used in the execution of the `Graphical_Browser`.

Δ 3.2 Changes Installed for Version 4.1

The largest changes in RLF 4.1 from RLF 4.0 is the support for the operation of RLF on top of PCTE in addition to UNIX. However, these changes do not affect the UNIX Binary Release. Other changes include documentation updates (including UNIX-style *man* pages) and `Library_Manager` application refinement.

3.2.1 *Library_Manager* Application Refinement

The `Library_Manager` application introduced in RLF 4.0 has been refined in version 4.1 to replace some dynamic menus with scrollable list widgets and to desensitize button choices which would lead to the pop-up of an empty menu. A limit on the number of libraries the `Library_Manager` could process was also removed.

3.2.2 RLF Graphical Browser

No significant changes were made to the UNIX version of the `Graphical_Browser`.

3.2.3 RLF Sample Libraries

The old RLF model `move_domain` has been renamed to `window_managers`.

3.2.4 Installation Script Insertion

An installation script is now provided for the binary release of the RLF. This script installs the `RLF_Browser` resource file and its associated bitmaps in an appropriate directory.

The following files were added or changed to support automated installation:

```
Install_RLF.bin
Install_RLF.csh
Install_RLF.var
```

3.3 Adaptation Data

3.3.1 Operating Environment

Sun workstation with a minimum of 8 MB of main memory

SunOS Version 4.1 or later

X Window System, Version 11, Release 4

3.3.2 Development Environment

Sun-4 workstations with a minimum of 8 MB of main memory

SunOS Version 4.1 or later

SERC Ada/Motif, Version 1.0 for Sun Ada version 1.1

Reusable Graphical Browser, Version 1.0 (*Graphical_Browser* only)

X Window System, Version 11, Release 4

OSF/Motif version 1.1

Sun Ada Version 1.1

3.4 Interface Compatibility

3.4.1 Previously Built RLF Libraries

The 4.1 version of the RLF is compatible with version 4.0 RLF libraries, but is incompatible with pre-4.0 libraries. Post-4.0 versions of the RLF cannot accept RLF libraries built with pre-4.0 versions of RLF. LMDL now supercedes SNDL as the library modeling language.

3.4.2 Libraries Built with Different Compilers

Data representations are different between Ada compilers. As a result, RLF libraries created by old versions of the RLF built with other compilers are not compatible with libraries created by a version of the RLF built with the Sun Ada compiler.

3.5 Installation and Usage Instructions

All the executables for the RLF are located in the `unix/bin` directory. The file `Install_RLF_bin` is an executable UNIX C shell script, which can be used to install the UNIX binary version of the RLF. The complete installation and verification procedures are located in the *RLF Installation Guide*.

NOTE: Appendix C contains a listing of the UNIX installation scripts provided in this distribution.

3.5.1 Invoking RLF Applications

Once the RLF executables have been installed, any of the executables can be run by invoking them by name. Information about invoking the RLF `Graphical_Browser` application is located in the *RLF User's Manual*. Additional information about RLF applications and their uses may be found in the *RLF Modeler's Manual* and the *RLF Administrator's Manual*.

3.6 Potential Problems

3.6.1 Graphical_Browser Known Problems

During the execution of the `Graphical_Browser` a few infrequent errors may occur. The errors listed here are attributed to bugs in Motif version 1.1. It is expected that future versions of Motif will eliminate these errors.

The following is the list of known errors and their descriptions:

1. **Warning: XtRemoveGrab asked to remove a widget not on the list** — This text message, which appears in the originating window, often occurs when a window in the `Graphical_Browser` is exited or canceled.
2. **Menu bar menu relocating to upper left hand corner of the screen** — This event can happen when the Node History menu option, which is in the Navigate View menu bar option, is selected. As the pointer passes over the menu entry the cascading menu may be placed in the upper left hand corner of the screen.
3. **Node menu creation error** — This display alert box randomly appears when a node is selected. If the node is selected again the error usually does not occur. Reselect the node and the correct menu should appear.

3.7 Future Enhancements

For the basic RLF capabilities, future enhancements may include:

1. Additional built-in Ada procedure actions.
2. Performance enhancements for the LMDL translator.
3. Better integration between library models and inferencer advice modules.

In the area of the `Library_Manager`, future enhancements may include:

1. The ability to manipulate several directories containing library model representations.

2. LMDL features to dump and display LMDL for library model entities.
3. Finer control of attribute and inferencer file representations and library representation permissions.
4. Fully implemented import and export capability for assets.
5. Extensive model editing capabilities.

In the area of the `Graphical_Browser`, future enhancements may include:

1. Adding more sophisticated query capabilities to the simple pattern matcher of the Search function.
2. Adding a control panel to modify start-up variables, such as the aggregation view depth, after the application has started.
3. Improved view management, involving such capabilities as dynamic graph relayout, zooming, and more sophisticated filtering flexibility.

4 USER FEEDBACK

This version of RLF is considered an "alpha" release. One of the primary purposes of the release is to encourage experimentation with the software and to solicit feedback from the Ada user community to assist us in improving the product and advancing software reuse. Thus, we would greatly appreciate your comments, suggestions, and criticisms. Although we do not guarantee the applicability of the RLF to particular application needs at this time, we are interested in hearing about successes as well as failures.

We have included three forms in this release which we hope you will use to provide us with needed feedback:

- A registration form (in file `Registration_Form`) that we would like you to fill out and return to us so that we can keep track of our user base and can notify you of product upgrades and other important product news.
- A Program Problem Report (in file `Problem_Report`) that you should use to identify any specific problems you encounter in installing and using the software.
- A New Feature Request (in file `Feature_Request`) that you should use to describe specific enhancements that you believe should be incorporated into the product.

We have established three electronic mailing lists to facilitate RLF usage and feedback:

- **rlf@stars.rosslyn.paramax.com**

This list provides a public forum for discussing RLF issues. If you ask to be included in this list, you will receive all messages sent to the list and may respond accordingly.

- **rlf-request@stars.rosslyn.paramax.com**

You should send your completed registration form to this address, as well as requests to be added to or deleted from the rlf list (NOTE: Do NOT send add or delete requests to the rlf list itself).

- **rlf-bugs@stars.rosslyn.paramax.com**

You should send completed Program Problem Reports and New Feature Requests to this address.

If you do not have electronic mail access or wish to send us printed information, please send mail to:

RLF
Paramax STARS Center
12010 Sunrise Valley Drive
Reston, VA 22091

5 NOTES

Both AdaTAU and AdaKNET were designed for independent use by applications requiring knowledge representation and inferencing capabilities. The specification languages provided for these subsystems foster their transfer to diverse application areas and their programmatic interfaces enable their integration into general Ada applications. Additional applications will help determine system shortcomings and lead to their correction.

C Appendix: UNIX Installation

C.1 Scripts for Installing the UNIX RLF Binary Release

C.1.1 Script: Install_Rlf_bin

```

1  #! /bin/csh -f
2  #-----
3  #
4  # Install_RLF_bin - C Shell script to install RLF v.4.1 Binary Release.
5  #                   This script installs the software.
6  #
7  # Usage: Install_RLF_bin
8  #
9  #-----
10
11 set config_file = "unix/bin/Install_RLF.var"      # name of installation
12                                           # configuration file
13 set interactv_install = "unix/bin/Install_RLF.csh" # name of interactive
14                                           # installation file
15
16 stty ignbrk                # ignore break on input
17 stty -brkint              # don't signal SIGINT on break
18
19 set cmdname = $0
20 if ( $#argv != 0 ) then    # check cmd line usage
21     echo "Usage: $cmdname:t" # print only tail of cmd name
22     exit
23 endif
24
25 /usr/ucb/clear            # clear the screen
26
27                           # Display initial menu
28 cat << X_SCREEN_X
29
30 +-----+
31 |                                             |
32 |                   RLF 4.1 Installation Script |
33 |                   Binary Release             |
34 |                                             |
35 +-----+
36
37     You must choose one of the following installation options:
38
39
40     1) Interactive installation
41
42         * You are prompted for all necessary
43           configuration values (i.e., pathnames).
44
45
46     2) Edit the file that contains the configuration values
47

```

```
48             * You edit the file "Install_RLF.var" and
49             set the configuration values appropriately
50             for your site.
51
52
53             3) EXIT this script.
54
55
56
57             (If you do not edit the "Install_RLF.var" file, or specify
58             invalid values, you will be prompted for the configuration
59             values anyway.)
60
61
62             Which installation option do you prefer?
