Environmental Compliance Audit Handbook (ECAH)

U.S. Fish and Wildlife Service

The number of environmental laws and regulations have continued to grow in the United States and worldwide, making compliance with these regulations increasingly difficult. Environmental assessments became a way to determine compliance with current environmental regulations. The Fish and Wildlife Service has adopted an environmental compliance program that identifies compliance problems before they are cited as violations by the U.S. Environmental Protection Agency (USEPA).

Beginning in 1993, the U.S. Army Construction Engineering Research Laboratories (USACERL), in cooperation with the Fish and Wildlife Service, began research on the Environmental Compliance Audit Handbook (ECAH). The concept was to combine Code of Federal Regulations (CFRs) along with good management practices and risk-management issues, into a series of checklists that show legal requirements and which specific items or operations to review.

The handbook is continually updated to address new environmental compliance laws and regulations.

FOREWORD

This research was performed for the Fish and Wildlife Service (FWS), Service Pollution Control Office (SPCO), under order number IA1448001095007, *Fish and Wildlife Service Compliance Manual*, dated November 1994. The FWS technical monitor was Billy Umsted, FWS-SPCO.

The research was performed by the Planning and Management Laboratory, Environmental Processes Division of the U.S. Army Construction Engineering Research Laboratories (USACERL). The Principal Investigator was Donna J. Schell, Environmental Processes Division (PL-N). Jerry Benson is Acting Division Chief (PL-N), David Joncich is Acting Lab Chief (PL),

LTC Rehbein is Commander and Acting Director, USACERL. Dr. Michael J. O'Connor is Technical Director.

ENVIRONMENTAL COMPLIANCE AUDIT PROGRAM (ECAP)

The FWS Environmental Compliance Audit Program (ECAP) U.S. Environmental Compliance Auditing Handbook (ECAH) was developed by USACERL to simplify the environmental evaluation process for the Fish and Wildlife Service (FWS). The objectives of the ECAP program are to:

1. establish FWS-wide standards for environmental compliance audits as a means of ensuring the Services's observance of all applicable environmental laws and regulations
2. thru the auditing process (560 FW4) and the use of ECAH, assure Regional Directors and environmental program managers that environmental programs are effectively addressing environmental problems that could:
 - a. impact FWS mission effectiveness
 - b. jeopardize the health of Service personnel or the general public
 - c. significantly degrade the environment
 - d. expose the FWS to avoidable financial liabilities as a result of noncompliance with environmental requirements
 - e. erode public confidence in the FWS and the U.S. Department of the Interior (DOI)
 - f. expose individuals to civil and criminal liability
3. secure information through auditing processes addressed in the handbook, that will permit FWS Managers to address existing environmental problems and to anticipate and prevent future environmental problems
4. provide data, through the auditing process, for use in identifying, validating, prioritizing, programing, and budgeting environmental requirements.

Any change or suggestion for improving this guidance handbook should be forwarded to Billy Umsted at the FWS, Service Pollution Control Office (SPCO), in Lakewood, CO.

The information in this handbook applies to all FWS facilities in the United States and its territories. The contents of this handbook are up-to-date as of 02 June 1995.

TYPES OF ENVIRONMENTAL AUDITS

The Service's auditing program is covered in 560 FW 4. Audits will be of three types:

1. Individual Audits - Facility Managers will conduct self audits. This type of audit will be documented using the Environmental Compliance Questionnaire (ECQ) (Appendix A, see page A-1), filed locally, and submitted to the SPCO.
2. Internal Audits - Regional offices will conduct audits of their field stations and units. This type of audit will be documented as detailed in the Environmental Compliance Audit Process (see page 7). The results will be filed locally and submitted to the SPCO.
3. External Audits - The SPCO will conduct audits of field stations that are selected annually. The audits will be conducted and reported in accordance with the Environmental Compliance Audit Process.

ENVIRONMENTAL COMPLIANCE AUDIT PROCESS

The environmental audit process can be divided into three distinct phases:

1. pre-audit activities
2. site audit activities
3. post audit activities.

This handbook incorporates the first two phases of the program management process.

Pre-Audit Activities - Six key activities should be completed before an audit team begins the audit activities.

1. **Environmental Compliance Questionnaire (ECQ).** The purpose of the ECQ is to collect information that will familiarize the audit team with the facility and its operations so that they are able to review the applicable regulations and prepare a detailed audit schedule. The ECQ is an essential part of pre-audit activities and is also an excellent tool for ensuring that internal audit team members are starting from the same base of information. Appendix A contains a sample ECQ. Once the activities that occur at a facility are known, Appendix B (see page B-1), a logic table, can be used to identify potentially applicable handbook sections. Appendix B indicates the major environmental operations and activities at a typical FWS facility and the handbook sections within which they are addressed. As shown, many activities and operations cause environmental impacts in more than one area, and are therefore addressed in more than one section.
2. **Define Audit Scope and Team Responsibilities.** The facility or FWS may wish to place special emphasis on certain sections or to review additional areas not covered in the handbook. These goals must be stated clearly so the audit can be planned properly. Additionally, the duration of the audit, appointment of team members, and handling of tenants and off-facility sites must be addressed. Finally, responsibilities for each of the sections must be assigned to team members as appropriate.
3. **Develop Audit Schedule.** The team should develop a detailed schedule that includes the activities planned for each day.
4. **Review Relevant Regulations.** Once the audit scope and responsibilities are known, the auditors should undertake a thorough review of relevant Federal, state, and local regulations affecting the facility. The applicable environmental regulations must be determined before the audit begins. If not already available, checklist items for state and local requirements must be added to the checklists in the audit handbook.

5. Review Audit Sections. Each auditor should know the regulatory requirements, schedule, and be familiar with the audit checklists that will be used.
6. Availability of Records. In addition to completing the ECQ, the Facility Manager should assemble all pollution control records listed in Appendix A prior to the arrival of the team. A list of possible records is listed at the end of the ECQ. Appendix C (see page C-1) provides some useful information as to how environmental records should be organized.

Site Audit Activities - Onsite, the auditors will conduct an inbrief (see Appendix D for a sample inbrief handout), record searches, interviews, and site surveys to identify potential problems or deficiencies at the facility. Operations are compared with environmental standards and any deficiencies are written up as findings. The data collected should be sufficient, reliable, and relevant to provide a sound basis for audit findings and recommendations. A Finding Summary form is available to assist auditors in compiling needed information during an audit. A Finding Summary form should be completed for each finding during the audit. These forms comprise the basis of the audit report. The format and content for audit reports will be in a separate supplement. Appendix E (see page E-1) shows a completed sample Finding Summary form.

All items of the Finding Summary form must be filled in up to Sampling Results for negative findings and up to Criteria for positive findings. The **CONDITION** is a factual statement describing the status of the process, permit, or situation under investigation, and the **CRITERIA** is the environmental standard (Federal, state, local, FWS, Management Practice) the facility is being measured against. A condition may be positive if the facility is going above and beyond the requirements. **SUGGESTED SOLUTIONS** is an optional entry, and may include easily identifiable solutions to the deficiency. **COMMENTS** may include any corrective actions already taken or scheduled, or any other appropriate information pertaining to the finding. Once completed, a finding has to be ranked for the severity of noncompliance. The ranking options are explained on the back of the Finding Summary.

For example, a team member assigned to evaluate the facilities' hazardous waste management program, which is a small quantity generator (SQG), visited the facility's hazardous waste storage area. The auditor noticed some drums were damaged and took a count of the total number of drums and the number of damaged drums to get an accurate description for the finding. Five of the eight drums were rusted and bulging. Checklist item 4-31 in the FWS handbook states that 40 CFR 262.34(d)(2) and 265.171 requires containers to not be leaking, bulging, rusting, or badly dented. The damaged drums were behind the others, so the site manager may have overlooked them during the regular inspections. The site manager immediately put overpack drums on order. The auditor is now ready to fill out a Finding Summary (see Appendix E).

A finding may be positive or negative. A positive finding is for a job, activity, or person who has gone above and beyond the regulatory requirements for protecting the environment. A negative finding is when there is an issue of noncompliance or a poor management practice.

Each finding is then assigned a maximum of 2 universal codes and a maximum of 2 section codes from the list in Appendix E. These codes enable the SPCO to better identify the root causes of noncompliance.

A copy of the Finding Summary forms is to be left at the facility by the audit team. See Appendix F for a sample tally sheet which can be used in the facility outbrief.

Post-audit Activities - The audit team is required to produce a Draft Findings Report within 30 days after the completion of the audit in accordance with the following format.

1. Section One. This contains an executive summary identifying where the audit was done, what was audited, and a list of the members of the audit team. It also provides background information on the site.
2. Section Two. This section contains the details on the regulatory compliance status of the audited facility. An explanation of the finding ratings is provided along with a compliance summary table indicating the number of findings in each category. The core of this section is a reproduction of the finalized draft regulatory findings.
3. Section Three. This section contains the management practice findings that were identified during the audit.

The Draft Findings Report is sent to the Regional Office for distribution and another copy is sent to the SPCO. Upon receipt of the report, the facility has 60 days to develop a reply to each of the regulatory findings (Section Two). A reply can be as simple as "situation corrected on 30 June 1994," "work order request submitted on 30 May 1994 for construction of cement pad," or "plan is scheduled to undergo review and updating in August of 1994." The facility will be required to develop a corrective action for every regulatory finding. The facility is not required to respond to the management practice findings in Section Three but it is strongly urged to do so. If the facility has received a significant finding, this finding will be forwarded to the Directorate level. Other reports without significant findings will be signed at the Division level.

Upon receipt of corrective action replies, the audit team leader will issue a final report within 30 days. If a reply/corrective action is not appropriate to the finding, the audit team leader will contact the facility and resolve the issue. Three copies of the final report will be sent to the SPCO for final signature. The SPCO will forward a copy to the facility and the responsible Region.

The Regional Compliance Coordinator will participate in the tracking of progress on corrective actions. The facility will submit a report to the Region 6 mo after the finalization of the report detailing the status of the corrective actions. Reporting will continue every 6 mo until corrective actions are completed.

HANDBOOK OBJECTIVES AND ORGANIZATION

If not controlled or properly managed, FWS facilities engage in many operations and activities that can cause environmental impacts on public health and the environment if not controlled or properly managed. Many of these activities and operations are regulated by Federal, state, and local regulations, and by FWS regulations/policies.

The contents of this handbook are based on Federal environmental regulations and are to be supplemented locally using state and local environmental regulations that are applicable to FWS facilities and are more stringent than Federal regulations included in this handbook. The handbook is updated annually. This handbook, with local supplements, is intended to serve as the primary tool in conducting an environmental compliance audit. Specifically, this handbook:

1. complies with applicable Federal regulations and FWS and DOI environmental directives applicable to FWS operations and activities (NOTE: Due to extensive revisions currently taking place, FWS manual chapters have not been included in this document but will be included in the next version.)
2. synthesizes environmental regulations, management practices (MPs), and risk management issues into consistent and easy to use checklist
3. serves as an aid in the compliance process and management action development phases of the ECAP.

After a review of these activities at FWS facilities, it is apparent that there are major categories of environmental compliance into which most environmental regulations and FWS activities could be grouped. This handbook is divided into 10 sections that correspond to major compliance categories.

1. Air Emissions Management
2. Drinking Water Quality
3. Hazardous Materials Management
4. Hazardous Waste Management
5. Pesticide Management
6. Petroleum, Oil, and Lubricant (POL) Management
7. Solid Waste Management
8. Special Pollutants Management (includes asbestos, PCBs, radon, and noise)
9. Underground Storage Tank (UST) Management
10. Wastewater Management

Each section is organized in the following format:

- A. Applicability.** This provides guidance on the major activities and operations included in the section and a brief description of the major application.
- B. Federal Legislation.** This identifies, in summary form, the key legislative issues associated with the compliance area in the Federal law.

- C. State/Local Regulations.** This identifies the typical compliance areas normally addressed in state and local regulations. This section does not present individual state/local requirements. An audit of state and local requirements must be conducted and supplemental questions prepared to cover these requirements. The handbook is prepared in loose leaf form to allow state and local requirements to be easily inserted. Checklist item 3 in each section lists issues that are typically regulated by the states.
- D. FWS/DOI Manuals.** This identifies the FWS and DOI manuals which have been finalized as of the publication of this handbook.
- E. Key Compliance Requirements.** This summarizes the significant compliance requirements associated with the regulations included in the checklist. It is a brief abstract summarizing the overall thrust of the regulations for that particular compliance category.
- F. Key Compliance Definitions.** This presents definitions taken from the Code of Federal Regulations (CFRs) for those key terms associated with each compliance category.
- G. Compliance Audit Checklists.** The final portion of each section contains checklists and tables and figures composed of requirements or guidelines that serve as indicators to point out possible compliance problems, as well as practices, conditions, and situations that could indicate potential problems. They are intended to focus attention on the key compliance questions and issues that should be investigated. Instructions are provided to direct the auditor to the appropriate action, references, or activity that corresponds to the specific requirement or guide.

USING THE CHECKLISTS

Understanding the layout and structure of the checklists facilitates their use during the audit.

- **Explanation of Layout/Content.** The checklist portion of each protocol section is divided into two columns. The first of these is a statement of a requirement. This may be a strict regulatory requirement, in which case the citation is given, or it may be a requirement that is considered to be a management practice to maintain compliance, but which is not specifically mandated by regulation. The second column gives instructions to help conduct the compliance audit. These instructions are intended to be specific action items that should be accomplished by the investigator. Some of the instructions may be a simple documentation check taking a few minutes; others may require physical inspection of a facility. In an effort to simplify using the checklists, measurements which were not converted into a metric or English equivalent in the regulations have been converted by USACERL. These conversions done by USACERL appear in []'s while conversions provided in the regulations appear in ()'s.
- **Worksheet.** At the end of each section is an audit worksheet. This worksheet should be reproduced and used during the audit to take notes. It is designed to be inserted between each page of the checklists, allowing the main text to be kept usable for the next audit. The worksheet is divided into two columns. The first column is a quick check for those items that are in compliance (C), not applicable (N/A) to the facility being reviewed, or require management action (RMA). The second column on the worksheet allows for more detailed notations or comments. These notations will provide a record for use in preparing the final report. These notations should include both situations of substandard operation needing attention and those operations that are above requirements or provide examples of good programs. For future reference and clarity, it is essential that a reference to building numbers or locations be made during the review.
- **Standard Checklist Items.** The first four checklist items in each section of the handbook are standardized. The first item requires a review of any previous audit documents. The second item requires a review of state and local regulations as well as indicating issues commonly regulated at the state and local level. The third item provides a place for auditors to write up findings that are based on regulations that have been promulgated since the publication of the handbook or regulations not included in the handbook. The fourth item suggests that copies of notices of violation (NOVs) be forwarded to the Region and the SPCO.

The audit procedures are designed as an aid and should not be considered exhaustive. Use of the checklist requires the auditor's judgment to play a role in determining the focus and extent of further investigation. A review of appropriate

state regulations should be conducted so additional review questions that reflect the substantive requirements of state/local regulations pertinent to individual facilities can be included in the checklists.

COMMON FINDINGS OF NONCOMPLIANCE AT FWS FACILITIES

Some of the most common compliance problems at FWS hatcheries and refuges are listed below. Associated checklist items numbers are listed in parenthesis.

A. HATCHERIES

Air Quality

- Repairing chlorofluorocarbon (CFC)-containing apparatus' without recycling/reclaiming. (1-17, 1-19, 1-20, and 1-24)
- Old refrigerators sitting in the boneyard, increasing the possibility of venting CFCs.(1-20 or 1-27)
- Missing signs from fuel dispensing pumps.(1-8, 1-9)

Drinking Water Management

- Incomplete or no records of testing of drinking water. (Depends on the classification of the system)

Hazardous Materials Management

- No written Hazard Communication Program. (3-12)
- Incomplete file of Material Safety Data Sheets (MSDSs). (3-9)
- No list of hazardous materials or copies of MSDSs submitted to the local emergency response committee or local fire department. (3-7)
- Unlabeled drums and containers. (3-10)
- Lack of correct signs on storage areas.(Depends on type of storage)
- Storage of flammable/combustible materials in cabinets or storage buildings that do not meet regulatory criteria. (3-32, 3-34, and 3-35)
- Compressed gas cylinders stored without being chained or restrained in another manner. (3-46)

Hazardous Waste Management

- Unusable hazardous materials stored with usable hazardous materials when they need to be disposed of as hazardous waste. (4-7)
- Containers of unknown substances stored at facilities.(4-7)

Pesticide Management

- Equipment used for the application of pesticides not clearly identified as such. (5-27)

Petroleum, Oil, and Lubricant (POL) Management

- No Spill Prevention Control and Countermeasure (SPCC) plan. (6-5)
- No spill equipment or containment to prevent petroleum product spills from entering waterways. (6-15)
- No secondary containment for aboveground storage tanks (ASTs) of greater than 660 gal. (6-16)

Solid Waste Management

- Trash piled up in an unauthorized dump site. (7-6 and 7-20)
- No recycling program. (7-14)
- Abandoned landfill sites. (7-2 and 7-40)

Special Pollutants Management

- Personnel repairing water pipes that are asbestos-containing without accredited training. (8-62 and 8-63)
- The facility is unaware as to whether or not transformers at the site are polychlorinated biphenyl (PCB)-contaminated. (8-14)

Underground Storage Tank (UST) Management

- No records of release detection monitoring. (9-16)
- No drawings, schematics, or information as to the type of UST at the facility. • USTs abandoned without correct closure or no documentation of state approved closure. (9-2, 9-29 through 9-31, 9-37)

Wastewater Management

- No National or State Pollution Discharge Elimination System (NPDES/SPDES) Permit for discharge of wastewater. (10-5)

B. REFUGES

Air Quality

- Repairing CFC containing apparatus' without recycling/reclaiming. (1-17, 1-19, 1-20, and 1-24)
- Operation of small incinerators without state approval. (1-2)
- Old refrigerators sitting in the boneyard, increasing the possibility of venting CFCs. (1-20 or 1-27)
- Missing signs from fuel dispensing pumps. (1-8. 1-9)

Drinking Water Management

- Incomplete or no records of testing of drinking water. (depends on classification of system)
- Old wells not capped or closed. (2-2)

Hazardous Materials Management

- No written Hazard Communication Program. (3-12)
- Incomplete file of Material Safety Data Sheets (MSDSs). (3-9)
- No list of hazardous materials or copies of MSDSs submitted to the local emergency response committee or local fire department. (3-7)
- Unlabeled drums and containers. (3-10)
- Lack of correct signs on storage areas. (Depends on type of storage)
- Storage of flammable/combustible materials in cabinets or storage buildings that do not meet regulatory criteria. (3-32, 3-34, and 3-35)
- Compressed gas cylinders stored without being chained or restrained in another manner. (3-46)

Hazardous Waste Management

- Unusable hazardous materials being stored with usable hazardous materials when they need to be disposed of as hazardous waste. (4-7)
- Unknown substances being stored onsite. (4-7)

Pesticide Management

- Equipment used for the application of pesticides is not clearly marked as such. 5-27
- No records are kept of the applications of pesticides. (5-12)

Petroleum, Oils, and Lubricants Management

- No SPCC plan. (6-5)
- No spill equipment or containment to prevent petroleum product spills from entering waterways. (6-15)
- Unlabeled or mislabeled containers of used oil. (6-36)
- ASTs of greater than 660 gal do not have secondary containment. (6-16)

Solid Waste Management

- Trash piled up in an unauthorized dump site. (7-20 or 7-6)
- No recycling program. (7-14)
- Solid waste containers without lids on. (7-2 or 7-40)

Special Pollutants Management

- The facility is unaware as to whether or not transformers at the site are PCB contaminated. (8-14)

Underground Storage Tank (UST) Management

- No records of release detection monitoring. (9-16)
- No drawings, schematics, or information as to the type of UST at the facility.
- USTs abandoned without correct closure.(9-37)

Wastewater Management

- No NPDES/SPDES permit. (10-5)

Appendix A

ENVIRONMENTAL COMPLIANCE QUESTIONNAIRE

Please fill out this questionnaire as completely as possible. It will provide background information necessary to plan and conduct an environmental compliance audit at the facility.

Name of Facility: _____

Location/State: _____

County: _____

Region: _____

Organizational Code: _____

Point of Contact: _____

Phone Number: _____

Date Completed: _____

Appendix A (continued)

QUESTION/DESCRIPTION

RESPONSE

REFERENCE
(If YES, see
checklist
items:)

Section 1. Air Emissions Management

1. Does the facility operate a fuel burner (central steam plant, or hot water steam boiler) or incinerator? _____

1-2, 1-5 and
1-6

If YES for boilers, how large and what fuel is used?

Size

Fuel

_____	_____
_____	_____
_____	_____

If Yes for Incinerators, which of the following is burned (circle the applicable option):

trash

plant waste

animal carcasses

other _____

2. Does the facility dispense, store, or transfer gasoline? _____

1-7 through 1-12

Type: _____

3. Does the facility use any degreasers (solvent baths)? _____

1-36 through
1-55

What is used in the degreasers? _____

4. Does the facility procure/use CFCs or halon substances? _____

1-13 through
1-16

5. Does the facility repair any units containing refrigerant? (circle the applicable options) _____

1-17 through
1-35

motor vehicles air conditioners

refrigerators

freezers

window air conditioning units

building (central) refrigeration

(continued)

Appendix A (continued)

QUESTION/DESCRIPTION	RESPONSE	REFERENCE (If YES, see checklist items:)
Section 2. Drinking Water Management		
1. Does the facility purchase its drinking water from a nearby municipality's water system?	_____	None applicable
2. Does the facility treat and distribute its own drinking water? If yes, answer the following: How many people (family members included) reside year round on the refuge? _____ Does the Visitor's Center have its own drinking water fountain? _____ How many visitors does the facility average in a year? _____ What is typically the largest number of visitors in any one month? _____	_____	2-3 through 2-26
3. Does the facility draw water from its own well?	_____	2-2
4. Has the facility been classified by the state as a community water system?	_____	2-27 through 2-53
5. Has the facility been classified by the state as a noncommunity water system?	_____	2-54 through 2-56
6. Has the facility been classified by the state as a nontransient noncommunity, water system?	_____	2-57 through 2-75
7. Has the facility been classified by the state as a transient noncommunity water system?	_____	2-76
8. Is the facility located near a sole source aquifer?	_____	2-77
Section 3. Hazardous Materials Management		
1. Have there been any spills or releases of hazardous substances such as paints, solvents, acids, fuel, and/or pesticides at the facility?	_____	3-20 through 3-24
2. Does the facility stored onsite more than 1379 gal of fuel at any one time or 1350 lb of formalin?	_____	3-26 through 3-28

(continued)

Appendix A (continued)

QUESTION/DESCRIPTION	RESPONSE	REFERENCE (If YES, see checklist items:)
3. Does the facility operate a laboratory?	_____	3-16 through 3-19
4. Does the facility store any flammable/combustible liquids (i.e., paints, solvents) in lockers, storage sheds, tanks, or industrial areas? (circle applicable types of storage)	_____	3-29 through 3-45
5. Does the facility store compressed gases?	_____	3-46 through 3-47
6. Does the facility store acids?	_____	3-48
7. Does the facility transport or offer for transport hazardous materials?	_____	3-49 through 3-60

Section 4. Hazardous Waste Management

1. Is the facility a producer/generator/creator of hazardous waste?	_____	4-7 through 4- 10
Examples include waste paint, waste solvent, waste paint thinner, waste acids, and waste batteries.		
2. Does the facility generate less than 100 kg [220.46 lb, approx. 26.5 gal] of hazardous waste in 1 mo?	_____	4-11 through 4-21
3. Does the facility generate more than 100 kg [220.46 lb] but less than 1000 kg [2204.62 lb, approx. 265 gal] of hazardous waste in 1 mo?	_____	4-22 through 4-46
4. Does the facility generate more than 1000 kg [2204.62 lb] of hazardous waste in 1 mo?	_____	4-47 through 4-123

The following are hazardous wastes that may typically be found at a facility (check if used
at this facility and indicate amount typically used in a year):

- solvents * _____ liquid paint or spray paint booth air filters _____
- paint stripper or thinner _____ pesticides, insecticides, herbicides _____

QUESTION/DESCRIPTION

RESPONSE

REFERENCE
(If YES, see
checklist
items:)

- ammunition, explosives _____ battery acid/unserviceable batteries _____
- Fluorescent light bulbs _____
- printing ink, ink solvents, and cleaners _____
- absorbent material and soil contaminated with hazardous waste _____
- waste oil (some states consider this a hazardous waste) _____
- other _____
- other _____
- other _____

*This includes trichloroethane, methylene, chloride, tetrachloroethylene, 1,1,1 trichloroethane, carbon tetrachloride, chlorinated fluorocarbons, toluene, MEK, mineral spirits, xylene

5. Does the facility transport hazardous waste in its own vehicles? _____

4-119
through 4-123

6. Is the facility considered a treatment, storage, and disposal facility? If yes, indicate if it is: _____

See the
SPCO Supplement

Interim Status _____
Permitted (Part B Permit) _____

Section 5. Pesticide Management

1. Do facility personnel engage in the application of pesticides? _____

5-2 and 5-7
through 5-13

2. Does the facility use contractor personnel to apply pesticides? _____

5-2 and 5-7
through 5-13

3. Does the facility store, mix, or formulate pesticides? _____

5-14 through
5-20

4. Does the facility store/use pesticides that are labeled DANGER, WARNING, POISON, or with the skull and crossbones? _____

5-21 through
5-28

(continued)

Appendix A (continued)

QUESTION/DESCRIPTION	RESPONSE	REFERENCE (If YES, see checklist items:)
5. Does the facility apply agricultural pesticides?	_____	5-29 and 5-30
6. Does the facility dispose of pesticides?	_____	5-31 through 5-36

Section 6. Petroleum, Oil, and Lubricant (POL) Management

1. Does the facility have a Spill Prevention Control and Counter-measure (SPCC) plan?	_____	6-5 through 6-12
2. Have there been any discharges or spills of petroleum products at the facility of more than 5 gal to the environment?	_____	6-13 and 6-14
3. Does the facility have any aboveground POL storage tanks that are over 660 gal?	_____	6-15 through 6-19
4. Does the facility have any pipelines?	_____	6-20 through 6-30
5. Does the facility generate/store used oil?	_____	6-33 through 6-66

Section 7. Solid Waste Management

1. Does the facility collect or store solid waste onsite?	_____	7-6 through 7-13
2. Does the facility contract out the collection of its solid waste?	_____	7-5
3. Does the facility recycle anything?	_____	7-14 and 7-15

If YES, which of the following is recycled:

paper
glass
beverage cans
cardboard
other? _____

Appendix A (continued)

QUESTION/DESCRIPTION

RESPONSE

**REFERENCE
(If YES, see
checklist
items:)**

4. Does the facility have any dumps/landfills/land disposal sites on the property? _____

7-16 through
7-40

Active? _____

Closed? _____ If closed, when was it closed? _____

If known, what was typically placed in the dump/landfill/disposal site? _____

5. Is the facility planning or operating a new landfill? _____

7-41 through
7-43

6. Does the facility handle or dispose of medical waste such as needles, bloody wastes, pathogenic waste, etc.? _____

7-44 through
7-49

Section 8. Special Pollutants Management

1. Does the facility have any equipment that contains PCBs? _____

8-5 through 8-30

If YES, indicate which of the following are at the facility:

- transformers
- capacitors
- circuit breakers
- electromagnets
- switches
- heat transfer systems
- voltage regulators
- reclosers
- light ballasts
- other _____

2. Does the facility use PCBs in research? _____

8-31

3. Has the facility had a PCB spill? _____

8-24 through
8-26

4. Does the facility store PCBs or PCB items? _____

8-32 through
8-37

5. Does the facility transport or dispose of items containing PCBs? _____

8-38 through
8-50

(continued)

Appendix A (continued)

QUESTION/DESCRIPTION	RESPONSE	REFERENCE (If YES, see checklist items:)
6. Has the facility surveyed its buildings for asbestos? Which sites tested positive for asbestos? _____	_____	8-51 and 8-52
7. Does the facility have personnel that remove asbestos, perform maintenance work on asbestos covered structures, pipes, or insulation?	_____	8-62 and 8-63
8. Have structures at the facility which contain asbestos undergone, or are currently undergoing, renovation, stripping, or demolition?	_____	8-53 through 8-61
9. Do facility personnel transport or dispose of asbestos-containing waste?	_____	8-64 through 8-67
10. Has the facility conducted a radon survey of its buildings?	_____	8-68 through 8-70
11. Has the facility received any noise complaints?	_____	8-71
Section 9. Underground Storage Tank (UST) Management		
1. Does the facility have any USTs in the process of being replaced or upgraded? How many and what are their contents? _____ _____	_____	9-5
2. Has the facility installed any new USTs (after May 1986)? How many and what are their contents? _____ _____	_____	9-5 through 9-10 and 9-16 through 9-20
3. Have any of the facility USTs been closed? How many? _____	_____	9-31 through 9-37
4. Have any of the facility USTs undergone a change in service? How many? _____	_____	9-31 through 9-37

Pollution Control Records

ATTENTION: The following records should be available for review by the audit team either prior to the audit or immediately upon arrival at the facility.

(NOTE: Not all facilities will have, or are even required to have, all of the following.)

General

1. Copies of NOVs issued to the facility in any of these areas and a site map.

Air Emissions Management

1. Air emissions inventory.
2. All air related permits.
3. A list of steam generating units and boilers and their size, fuel used, and locations.

Drinking Water Management

1. Copies of drinking water test results.
2. Copies of reports to the state.
3. Permit
4. Operator certification

Hazardous Materials Management

1. A list of hazardous material storage/use areas.
2. A waste minimization plan.
3. MSDSs.
4. Documentation of personnel training.
5. The Oil and Hazardous Substances Pollution Contingency (OHSPC) Plan.
6. A copy of any reports of spills.
7. Copies of the Tier I or Tier II reports.
8. Documentation on contaminated sites.

Hazardous Waste Management

1. The Hazardous Waste Management Plan.
2. A list of hazardous wastes generated at the facility.
3. A list of waste generation/storage areas.
4. USEPA identification number.
5. Manifests.
6. Any permits.
7. The biennial report.
8. Personnel training records.

(continued)

Appendix A (continued)

Pesticides Management

1. The Pesticide Management Plan.
2. A list of pesticide storage sites.
3. Application records.
4. MSDSs for pesticides.
5. Personnel Certifications for applicators.
6. Contracts for pesticide application.

POL Management

1. The SPCC plan.
2. A list of POL storage areas.

Solid Waste Management

1. Any contracts with waste haulers.
2. Any recycling plans.
3. All documentation pertaining to landfill operation or closure.
4. Records on groundwater sampling resulting from monitoring wells.

Special Pollutants Management

1. The PCB inventory.
2. The PCB annual report.
3. The results of the asbestos survey.
4. The Asbestos Management Plan.
5. Noise complaints.
6. Radon survey results.

Underground Storage Tank (USTs) Management

1. Upgrading and/or closure plans.
2. A list of all USTs and their locations.
3. Release detection documentation.
4. Integrity test results.
5. Site contamination reports after tank removals.

Wastewater Management

1. All NPDES/SPDES permits.
2. Maps of the storm, sanitary, and industrial sewers.
3. A copy of pretreatment standards imposed on the facility.
4. A list of maintenance shops/operations to include wash facilities.
5. Locations of holding ponds, sedimentation pits, and open/end of-pipe discharge points.

Organization of Environmental Records

In order to facilitate environmental compliance audits and management of environmental information it is important to organize pertinent paperwork in a manner that is clear, concise, and helpful. The following are suggestions for organizing files affiliated with environmental compliance issues. These topics are not hard and fast, just suggestions to be adapted to a facilities particular operations, and will enable the auditors/regulators to quickly review the necessary information.

Drinking Water Management

Correspondence/NOVs (includes all correspondence with state or local authorities other than routine submissions of sampling data and any notices of violation).

Inspections (copies of any and all inspection results by the EPA, state/local, and FWS investigation).

Maintenance and repair (includes all receipt, data, schematics etc. of any repair or maintenance work).

Operations (includes logs of water treatment done by the FWS facility staff).

Permit and certification (includes a copy of any permit or authorization to operate a drinking water system, including a copy of the permit application and any water treatment plant operator certifications that are required).

Reports (includes copies of all reports submitted to the state/local authorities on sampling results).

Sampling results (includes the results of all samples analysis, chemical and biological).

Well logs for all active wells (including casing, pump, screen information).

Well closure (create a separate file folder for every well that is closed on the facility).

Hazardous Waste Management

Correspondence/NOVs (includes all correspondence with state or local authorities other than routine submissions of sampling data and any notices of violation).

EPA Identification Number (include the paperwork assigning the facility its EPA Identification Number and hazardous waste generation status).

Inspections (copies of any and all inspection results by the EPA, state/local, and FWS investigation).

(continued)

Appendix C (continued)

Manifests (copies of any and all manifests for hazardous waste).

Training (documentation of training).

Pesticides Management

Application contract.

Application records (what was applied where, when, and by whom).

Correspondence/NOVs (includes all correspondence with state or local authorities other than routine submissions of sampling data and any notices of violation).

Permits/Certification (copies of all permits and the applicator certifications).

Personnel (include training records and health monitoring records).

Storage Tank Management (every separate aboveground storage tank should have a separate set of files)

Correspondence/NOVs (includes all correspondence with state or local authorities other than routine submissions of sampling data and any notices of violation).

Closure records, including history of removal of USTs.

Maintenance and repair (includes all receipts, data, schematics etc., of any repair or maintenance work).

Operations (includes logs of visual inspections, capacity reconciliation records, results of tank tightness inspections or pipeline testing).

Registration (includes a copy of the application for registration and the state registration).

Wastewater Management

Correspondence/NOVs (includes all correspondence with state or local authorities other than routine submissions of sampling data and any notices of violation).

Maintenance and Repair (includes all receipts, data, schematics etc., of any repair or maintenance work on the wastewater treatment works, septic system, or oil/water separators).

Operations (includes logs of activities done to treat the wastewaters).

(continued)

Appendix C (continued)

Permit and Certification (includes a copy of any permit or authorization to operate a wastewater treatment system or septic system, including a copy of the permit application and any water treatment plant operator certifications that are required. If the facility has more than one permit related to wastewater - keep them in separate files).

Pretreatment standards (copy of any pretreatment standards imposed upon the facility by the state/local governments).

Reports (includes copies of all reports submitted to the state/local authorities on sampling results).

Sampling results (includes the results of all samples analysis).

The following are additional files that might be helpful to keep:

Air emissions sources (if you have an air emissions sources that requires emissions testing, create a file for the source include the test data, potential sources requiring emissions testing are incinerators and boiler).

CFC/halons (certification, purchase receipts, records for the quantity of CFCs and halons that were recycled or disposed of).

Chemical Hygiene Plan and training documentation.

Community Right-to-Know (EPCRA) Reports.

Disposal contracts (copy of contracts for pick up and disposal of trash, recyclable, hazardous waste).

Hazardous Communication Program and training documentation.

Material safety data sheets (MSDSs).

Oil/water separators (a separate file for each separator with documentation of its design and when it was last cleaned out).

Open Burning (include any plans, permits, letters of approval, log of burning operations).

Pollution Prevention Plan.

Recycling (includes documentation of quantities of materials being recycled).

Spill Prevention Control and Countermeasure (SPCC) Plan.

Spills/releases (any reports, documentation of spills or releases of any substances).

Used oil (records of the quantity and final disposal site for waste petroleum products, including products that are recycled).

Appendix D

FWS Environmental Compliance Audit Program (ECAP) Inbrief

Purpose

The purpose of this audit is to:

- Identify areas of potential and actual environmental noncompliance that need to be addressed before they are identified by a regulatory agency.
- Establish a FWS-wide standards for environmental compliance audits as a means of ensuring the Services's observance of all applicable environmental laws and regulations
- Assure Regional Directors and environmental program managers that environmental programs are effectively addressing environmental problems that could
 - a. impact FWS mission effectiveness
 - b. jeopardize the health of Service personnel or the general public
 - c. significantly degrade the environment
 - d. expose the FWS to avoidable financial liabilities as a result of noncompliance with environmental requirements
 - e. erode public confidence in the FWS and the U.S. Department of the Interior (DOI)
 - f. expose individuals to civil and criminal liability
- Secure information that will permit FWS Managers to anticipate and prevent future environmental problems
- Provide data for use in identifying, validating, prioritizing, programing, and budgeting environmental requirements.

Scope of the Audit

This audit will cover FWS facilities and activities. It will not address the facilities or activities of tenants occupying FWS property. FWS facilities are divided into primary and secondary facilities. A secondary facility might be a temporary field station or a remote refuge site with one building on the land and no maintenance activities. Only primary sites will be assessed in the audit.

The audit incorporates both a review of paperwork and a physical review of paperwork and structures.

Topics for audit

Air Emissions Management
Drinking Water Quality
Hazardous Materials Management
Hazardous Waste Management
Pesticide Management
Petroleum, Oil, and Lubricants(POL) Management
Solid Waste Management
Special Pollutants Management (includes asbestos, PCBs, radon, and noise)
Underground Storage Tanks(UST) Management
Wastewater Management

(continued)

Appendix D (continued)

Audit Results

Each site audit will result in the creation of "finding sheets" which document both the positive and the negative situations identified at the facility. A copy of all finding sheets will be left at the assessed facility.

Scoring of Findings

Significant: A problem categorized as significant requires immediate attention. It poses, or has a high likelihood to pose, a direct and immediate threat to human health, safety, the environment, or the facilities' mission. A leaking PCB transformer that is located next to a dining facility, for example, would likely be a significant deficiency.

Major: A major deficiency requires action, but not necessarily immediate action. Major deficiencies may pose a threat to human health, safety, or the environment. Any immediate threat, however, must be categorized as significant.

Minor: Minor deficiencies are usually administrative in nature, even though those findings might possibly result in a notice of violation. This category may also include temporary or occasional instances of noncompliance.

Management Practice: Management practice items are those for which there is no specific regulatory requirement.

A finding may be positive or negative. A positive finding is for a job, activity, or person who has gone above and beyond the regulatory requirements for protecting the environment. A negative finding is when there is an issue of noncompliance or a poor management practice.

After the Audit

1. The audit team will send a copy of the Draft findings report to the regional representative who will forward it on to the facility and another copy is sent to the SPCO.
2. Upon receipt of the report, the facility is required to respond to each of the regulatory findings. A response can be as simple as "situation corrected on 30 June 1994," "work order request submitted on 30 May 1994 for construction of cement pad," The facility is required to develop a corrective action for every regulatory finding. The facility is not required to respond to the management practice findings in Section Four of the report but it is strongly urged to do so. If the facility has received a "Significant" finding, this finding will be forwarded to the Directorate level. Replies to the findings will be sent to the Region within 60 days after receipt of the Draft findings Report. If a reply/corrective action is not appropriate to the finding, the audit team will contact the Region who in turn will contact the facility and develop an alternative plan. The region is impose a deadline for receipt of responses.
3. The audit team will produce a final report. Three copies of the final report will be sent to the SPCO which will forward a copy to the facility and the responsible Region.

Appendix E
FINDING SUMMARY

Handbook Edition Date: July 1995

Facility Name: Smiths NWR

Section (Air, etc.): Haz. Waste Question Number: 4-31 Bldg # / Location paint shed

Type of Finding (Pos/Neg): neg Section Code: 9Z Universal Code: HW2

FINDING CATEGORY (circle one): Significant Major Minor Management Practice

Basis of finding (Citation or Regulation): 40 CFR 262.34(d)(2) and 265.171

Is this a repeat finding (NOV, etc.)? No

CONDITION (What did you find?)

5 of the 8 drums of hazardous waste stored in the paint shed were rusted and bulging.

CRITERIA (Enter Checklist Item Number) 4-31

SUGGESTED SOLUTION(S):

Overpack the rusted and bulging drums in containers that are free of rust or other damage.

COMMENTS:

This is an issue that should be inspected during regular storage area inspections.
The facility manager had ordered overpack drums before the audit team left the facility.

PREPARED BY: Larry S. Hall

DATE: July 25, 1995

(continued)

Appendix E (continued)

Explanation of Finding Categories

Deficiencies noted on the Finding Summary are rated as follows:

Significant: A problem categorized as significant requires immediate attention. It poses, or has a high likelihood to pose, a direct and immediate threat to human health, safety, the environment, or the facilities' mission. A leaking PCB Transformer that is located next to a dining facility, for example, would likely be a significant deficiency.

Major: A major deficiency requires action, but not necessarily immediate action. Major deficiencies may pose a threat to human health, safety, or the environment. Any immediate threat, however, must be categorized as significant.

Minor: Minor deficiencies are usually administrative in nature, even though those findings might possibly result in a notice of violation. This category may also include temporary or occasional instances of noncompliance.

Management Practice: Management practice items are those for which there is no specific regulatory requirement.

A finding may be positive or negative. A positive finding is for a job, activity, or person who has gone above and beyond the regulatory requirements for protecting the environment. A negative finding is when there is an issue of noncompliance or a poor management practice.

Findings based on FWS or DOI manuals will only be ranked a minor.

ENVIRONMENTAL INFORMATION HOTLINES

- Air Risk Hotline** 919-541-0888
Information on health, exposure, and risk assessment with regard to toxic air pollutants.
- Bureau of Explosives Hotline** 202-639-2222
Offers assistance in hazardous materials incidents involving railroads and is often contacted through CHEMTREC.
- Cancer Information Service Hotline** 800-422-6237
Provides information on cancer risk and referrals to proper sources for local support services.
- CHEMTREC Hotline** 800-424-9300
The Chemical Transportation Emergency Center will identify unknown chemicals, advise on response methods and procedures for chemicals and situations, provide help in contacting shippers/carriers/manufacturers/product response teams.
- Consumer Product Safety Commission** 800-638-2772
Information on consumer safety and guidelines on what to do if you come in contact with formaldehyde, asbestos, lime, and air pollutants. Also provides product recall information.
- Control Technology Center for Air Toxics** 919-541-0800
Provides information to state and local pollution control agencies or sources of emissions of air toxics.
- Department of Transportation Hotline** 202-366-4488
Information assistance pertaining to Federal regulations for transportation of hazardous materials, CFR 49.
- Emergency Plan and Community Right-To-Know Hotline, EPA** 800-535-0202
EPA Title III requirements information.
- Environmental Defense Fund Recycling Hotline** 212-505-2100
Recycling information and locations.
- Environmental Protection Agency** 900-245-4505
Agency for vendors treating groundwater, soil, sludge, sediments, and solid waste.
- Florida Center for Solid & Hazardous Waste Management** 800-348-1239
An electronic bulletin board for recyclers.
- Florida Leak Reporting Hotline** 904-488-3935
For timely reporting of release of petroleum products into the soil (72 h).
- National Pesticide Telecommunications Network Hotline** 800-858-7378
Information regarding all aspects of pesticide handling.
- National Response Center** 800-424-8802
Spill response reporting

Environmental Information Hotlines (continued)

Plastics Recyclers Information Line	800-243-5790
Information regarding plastic recycling locations according to area.	
Poison Control Center (National Capital)	202-626-3333
Provides info on exposure to chemicals, poisons, or drugs.	
Public Information Hotline, USEPA	202-260-2080
Will answer inquiries from the public about USEPA and offers a variety of general, non-technical information materials.	
RCRA/Superfund, USEPA	800-231-3075
Right-to-know information for California, Arizona, Hawaii, and Nevada.	
RCRA/Superfund/UST Hotline	800-424-9346
Answers questions concerning RCRA, Superfund, USTs, and hazardous waste.	
Safe Drinking Water Hotline	800-426-4791
Information on policy and regulations regarding public water supply programs.	
Small Business and Asbestos Ombudsman's Office, USEPA	800-368-5888
Information on pollution prevention and recycling.	
Stratosphere Ozone Hotline, USEPA	800-296-1996
Information on ozone protection regs and requirements under Title VI of the <i>Clean Air Act</i> Amendments of 1990 and other general aspects of stratosphere ozone depletion/protection.	
Superfund Site Cleanup	800-533-3508
For questions on status of Superfund sites within Region VI	
Superfund Technical Information	800-346-5009
Superfund message center allowing caller to leave messages	
Toxic Substances (Asbestos)	800-462-6706
Information on funding for asbestos cleanup projects.	
Toxic Substance Control Act (TSCA) Hotline	202-554-1404
Information on TSCA and Asbestos Technical Information and Referral	
Hazardous Materials and Oil Spills, USEPA	800-424-8802
National Response Center in the advent of hazardous materials spills	
Waste Reduction Assistance Program OER (FL)	904-488-0300
Advice, information, and counseling services for pollution prevention.	
Wetlands Protection Hotline, USEPA	800-832-7828
Information regarding values of wetlands and efforts for wetlands protection.	
Whistle Blower Hotline, USEPA	800-424-4000
Allows for reporting of fraud, waste, and abuse in USEPA programs.	

SECTION 1

Air Emissions Management

A. Applicability	1
B. Federal Legislation	1
C. State and Local Regulations	2
D. FWS/DOI Manuals	3
E. Key Compliance Requirements	3
F. Key Compliance Definitions	4
Guidance for Checklist Users	13

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 1

AIR EMISSIONS MANAGEMENT

A. Applicability

This section includes regulations, responsibilities, and compliance requirements associated with air pollution emissions from stationary and mobile sources. The significant types and sources of air pollution emissions include:

- Particulates, SO₂, NO_x, VOC, hazardous air pollutants (HAP), and CO from fuel burning at steam and hot water generation plants and boilers.
- Particulates and toxic air emissions from the operation of hazardous waste, general waste, classified material, and medical, pathological, and/or infectious waste incinerators.
- Particulates, CO, metals, and toxic air pollutant emissions from open burning and open detonation operations.
- The emission of volatile organic compound (VOC) vapors from the storage and transfer of certain petroleum fuels and chemicals (solvents), and the operation of degreasers and other processes (paint stripping and metal finishing) that use solvents.
- The emission of CO from vehicles and equipment operated on the facility.
- Fugitive particulate emissions from training activities and construction/demolition operations.

Most facilities have air emissions sources in one or more of these categories. Therefore this section is applicable to some extent at all facilities.

B. Federal Legislation

- *The Clean Air Act* Amendments of 1990 (CAAA90). This act, Public Law (PL) 101-549 (42 U.S. Code (USC) 7401-7671q), is currently the Federal legislation regulating the prevention and control of air pollution. It is composed of seven major titles that address various aspects of the national air pollution control program:
 1. Title I describes air pollution control requirements for geographic areas in the United States with respect to the National Ambient Air Quality Standards (NAAQS).
 2. Title II deals mostly with revised tailpipe emission standards for motor vehicles. These requirements compel automobile manufacturers to improve design standards to limit CO, hydrocarbon, and NO_x emissions. Oxygenated gasoline will be required in cities with the worst ozone and CO nonattainment. Reformulated gasoline and gasoline with reduced Reid vapor pressure is used in ozone nonattainment areas.

3. Title III potentially contains the most costly requirement of the CAAA90. The major elements of Title III deal with hazardous air pollutants through control of routine emissions, and contingency planning for accidental releases.
4. Title IV addresses acid deposition control and applies only to commercial utilities that produce electricity for sale.
5. Title V outlines the requirement of having states issue Federally enforceable operating permits to major stationary sources. The permits are designed to enhance the ability of the U.S. Environmental Protection Agency (USEPA), state regulatory agencies, and private citizens to enforce the requirements of the CAAA90. Permits will also be used to specify operation and control requirements for stationary sources.
6. Title VI limits the emissions of chlorofluorocarbons (CFC), halons, and other halogenated chemicals that contribute to the destruction of stratospheric ozone. These requirements closely follow the control strategies recommended in June 1990 by the second meeting of parties to the Montreal Protocol.
7. Title VII describes civil and criminal penalties that may be imposed for violation of new and existing air pollution control requirements. This title also gives authority to the USEPA to issue field citations for many types of violations.

• Federal regulations used to develop the checklist include:

- 40 CFR 60, *Standards of Performance for New Stationary Sources*.
- 40 CFR 61, *National Emission Standards for Hazardous Air Pollutants*.
- 40 CFR 80, *Regulation of Fuels and Fuel Additives*.
- 40 CFR 82, *Protection of Stratospheric Ozone*.

C. State/Local Regulations

The primary mechanisms regulating air pollutant emissions are the state or air quality control region (AQCR) regulations. These regulations will normally follow the Federal guidelines for state programs and will have many similar features. However, depending on the type and degree of air pollutant problems within the state/region, the individual regulations will vary. As an example, ozone problems are widespread in California and, therefore, the individual AQCRs in that state have stringent VOC emission requirements. The state of North Dakota has no such problem and, therefore, has fewer and less stringent VOC regulations.

New source performance standards (NSPSs) are established for particular pollutants in industrial categories based upon adequately demonstrated control technology. A permit is normally required for new, expanded, or modified sources of air pollutants. These permitted sources could include incinerators, boilers, and open burning activities.

Some state regulations apply directly to some facilities and operations without requiring a permit. At a minimum, state regulations should be reviewed for the following activities:

1. fugitive dust emissions
2. control of particulate emissions from the transportation of refuse or materials in open vehicles
3. certification requirements for boiler operators
4. emissions and emission control requirements for the operation of existing fossil fuel-fired steam generators

5. open burning
6. vehicle exhaust emissions testing
7. spray painting of vehicles, buildings, and/or furniture
8. certification of vehicles transporting VOC liquids
9. paving of roads and parking lots
10. toxic air pollutants
11. operation of cold cleaners, degreasers, and open top vapor degreasers
12. vapor control requirements for fuel pumps.

D. FWS/DOI Manuals

No applicable manuals final as of the publication of this handbook.

E. Key Compliance Requirements

- Gasoline Dispensing - Leaded gasoline shall not be introduced into any motor vehicle that is labeled UNLEADED GASOLINE ONLY, or that is equipped with a gasoline tank filler inlet designed for introduction of unleaded gasoline. Fuel pumps are required to display signs stating the type of fuel in each pump and that only unleaded gas can be introduced into labeled vehicles. The nozzles of the pumps are required to be properly sized. Depending on whether the oxygenated gas is still in the control period, or the area has an oxygenated gasoline program with a credit program, pumps dispensing oxygenated gasoline are required to be labeled. During 1992 and later high ozone seasons and regulatory control periods, gasoline shall not be sold, offered for sale, imported, dispensed, supplied, or transported that exceeds Reid vapor pressure standards in Appendix 1-1. No low sulfur diesel fuel shall be distributed, transported, offered for sale, or dispensed for use in motor vehicles unless it is free of the dye 1,4-dialkylamino-antraquinone and has an acetane index of at least 40, or a maximum aromatic content of 35 volume percent and a sulfur percentage of less than 0.05 percent (40 CFR 80.22(a), 80.22(d), 80.22(e), 80.24(a)(1), 80.27(a)(2), 80.35, 80.80(d), and 80.29(a)).
- Chlorofluorocarbons (CFCs) and Halons - To protect the ozone layer, no person repairing or servicing motor vehicles for payment can service a motor vehicle air-conditioner (MVAC) in any way that affects the refrigerant unless they have been trained and certified and are using approved equipment. Additionally, persons who maintain, service, or repair appliances, except MVACs, and persons who dispose of appliances, except for small appliances, room air conditioners, MVACs, and MVAC-like appliances are required to be certified through an approved technician certification program. As of 15 November 1992, no Class I or Class II substances suitable for use in motor vehicles as a refrigerant can be sold or distributed in any container that is less than 20 lb [9.07 kg] to any person unless that person is trained and certified. Facilities that sell Class I or Class II substances suitable for use as a refrigerant in containers of less than 20 lb [9.07 kg] are required to display a sign with certain wording. The servicing of appliances containing CFCs and Halons is required to be done in a manner to prevent emissions (40 CFR 82.34(a), 82.34(b), 82.42(a) through 82.42(c), and 80.150 through 80.166).
- Degreasing Operations - Batch cold cleaning machines, batch vapor cleaning machines, and in-line cleaning machines have to have tightly fitting covers and assorted emission

control devices in or to prevent excess emissions. Operators of these types of units are also required to submit notifications, operating reports, exceedance reports, and solvent use reports. These regulations specifically apply to each individual batch vapor, in-line vapor, in-line cold, and batch cold solvent cleaning machine that uses any solvent containing methylene chloride, perchloroethylene, trichloroethylene, 1,1,1-trichloroethane, carbon tetrachloride, or chloroform or any combination of these halogenated HAP solvents, in total concentration greater than 5 percent by weight, as a cleaning and/or drying agent.

- **Recordkeeping** - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- **Air Blanket** - the layer of air inside the solvent cleaning machine freeboard located above the solvent/air interface. The centerline of the air blanket is equidistant between the sides of the machine (40 CFR 63.461).
- **Annual Capacity Factor** - the ratio between the actual heat input to a steam generating unit from an individual fuel or combustion of fuels during a period of 12 consecutive calendar months and the potential heat input to the steam generating unit from all fuels, had the steam generating unit been operated for 8700 h during that 12 mo period at the maximum design heat input capacity (40 CFR 60.41c).
- **Appliance** - any device which contains and uses a Class I or Class II substance as a refrigerant and which is used for household or commercial purposes, including any air conditioner, refrigerator, chiller, or freezer (40 CFR 82.152(a)).
- **Apprentice** - any person who is currently registered as an apprentice in service, maintenance, repair or disposal of appliances with the U.S. Department of Labor's Bureau of Apprenticeship and Training (or a State Apprenticeship Council recognized by the Bureau of Apprenticeship and Training). If more than 2 yr have elapsed since the person first registered as an apprentice, the person shall not be recognized as an apprentice (40 CFR 82.152(b)).
- **Approved Equipment Testing Organization** - any organization which has applied for and received approval from the Administrator pursuant to 40 CFR 82.160 (40 CFR 82.152(c)).
- **Automated Parts Handling System** - a mechanical device that carries all parts and parts baskets at a controlled speed from the initial loading of soiled or wet parts through the removal of the cleaned or dried parts. Automated parts handling systems include, but are not limited to, hoists and conveyors (40 CFR 63.461).
- **Batch Cleaning Machine** - a solvent cleaning machine in which individual parts or a set of parts move through the entire cleaning cycle before new parts are introduced into the solvent cleaning machine. An open top vapor cleaning machine is a type of batch cleaning machine. A solvent cleaning machine, such as a ferris wheel cleaner, that cleans multiple batch loads simultaneously and is usually loaded is a batch cleaning machine (40 CFR 63.461).

- *Carbon Adsorber* - a bed of activated carbon into which an air solvent gas vapor stream is routed and which adsorbs the solvent on the carbon (40 CFR 63.461).
- *Cartridge Filter* - a discrete filter unit containing both filter paper and activated carbon that traps and removes contaminants from petroleum solvent, together with the piping and ductwork used in installing this device (40 CFR 60.621).
- *Certified Refrigerant Recovery or Recycling Equipment* - equipment certified by an approved equipment testing organization to meet the standards in 40 CFR 82.158(b) or (d), equipment certified pursuant to 40 CFR 82.36(a), or equipment manufactured before 15 November 1993, that meets the standards in 40 CFR 82.158(c), (e), or (g) (40 CFR 82.152(d)).
- *Clean Liquid Solvent* - fresh, unused solvent, recycled solvent, or used solvent that has been cleaned of soils (e.g., skimmed of oils or sludge and strained of metal chips) (40 CFR 63.461).
- *Cleaning Capacity* - for a cleaning machine without a solvent/air interface, the maximum volume of parts that can be cleaned at one time. In most cases, the cleaning capacity is equal to the volume (length time width time height) of the cleaning chamber (40 CFR 63.461).
- *Closed-Vent System* - a system that is not open to the atmosphere and is composed of piping, connections, and, if necessary, flow inducing devices that transport gas or vapor from a piece or pieces of equipment to a control device (40 CFR 61.241).
- *Cold Cleaning Machine* - any device or piece of equipment that contains and/or uses liquid solvent, into which parts are placed to remove soils from the surface of the parts or to dry the parts. Cleaning machines that contain and use heated, nonboiling, solvent to clean the parts are classified as cold cleaning machine (40 CFR 63.461).
- *Commercial Refrigeration* - means, for the purposes of 40 CFR 82.156(i), the refrigeration appliances utilized in the retail food and cold storage warehouse sectors. Retail food includes the refrigeration equipment found in supermarkets, convenience stores, restaurants, and other food service establishments. Cold storage includes the equipment used to store meat, produce, dairy products, and other perishable goods. All of the equipment contains large refrigerant charges, typically over 75 lb [34.02 kg] (40 CFR 82.152(e)).
- *Continuous Cleaning Machine* - see In-Line Cleaning Machine.
- *Designated Volatility Attainment Area* - an area not designated as being in nonattainment with the NAAQS for ozone (40 CFR 80.2).
- *Designated Volatility Nonattainment Area* - any area designated as being in nonattainment with the National Ambient Air Quality Standard (NAAQS) for ozone pursuant to rule making under Section 107(d)(4)(A)(ii) of the CAAA90 (40 CFR 80.2).
- *Diesel Fuel* - any fuel sold in any state and suitable for use in diesel motor vehicles and diesel motor vehicle engines, and which is commonly or commercially known or sold as diesel fuel (40 CFR 80.2).

- *Disposal* - the process leading to and including (40 CFR 82.152(f)):
 1. the discharge, deposit, dumping, or placing of any discarded appliance into or on any land or water
 2. the disassembly of any appliance for discharge, deposit, dumping, or placing of its discarded component parts into or on any land or water
 3. the disassembly of an appliance for reuse of its component parts.
- *Dwell* - the technique of holding parts within the freeboard area but above the vapor zone of the solvent cleaning machine. Dwell occurs after cleaning to allow solvent to drain from the parts or parts baskets back into the solvent cleaning machine (40 CFR 63.461).
- *Existing* - any solvent cleaning machine the construction or reconstruction of which was commences on or before 29 November 1993 (40 CFR 63.461).
- *Federally Enforceable* - all limitations and conditions enforceable by the Administrator, including those requirements developed pursuant to 40 CFR 60 and 61, requirements within any applicable state implementation plan, and any permit requirements established pursuant to 40 CFR 52.21 or under 40 CFR 51.18 and 40 CFR 51.24 (40 CFR 60.41b).
- *Freeboard Area* - for a batch cleaning machine this is the area within the solvent cleaning machine that extends from the solvent/air interface to the top of the solvent cleaning machine; for an in-line cleaning machine, it is the area within the solvent cleaning machine that extends from the solvent/air interface to the bottom of the entrance or exit opening, whichever is lower (40 CFR 63.461).
- *Freeboard Ratio* - the ratio of the solvent cleaning machine freeboard height to the smaller interior dimensions (length, width, or diameter) of the solvent cleaning machine (40 CFR 63.461)
- *Gasoline Carrier* - any distributor who transports or stores, or causes the transportation or storage of gasoline or diesel fuel without taking title to or otherwise having any ownership of the gasoline, and without altering either the quality or quantity of the gasoline or diesel fuel (40 CFR 80.2).
- *Gasoline Distributor* - any person who transports or stores, or causes the transportation or storage of gasoline or diesel fuel at any point between any gasoline refinery or importer's facility and any retail outlet or wholesale purchaser consumer facility (40 CFR 80.2).
- *Halogenated Hazardous Air Pollutant (HAP) Solvent* - methylene chloride (CAS No. 75-09-2), perchloroethylene (CAS No. 127-18-4), trichloroethylene (CAS No. 79-01-6), 1,1,1-trichloroethane (CAS No. 71-55-6), carbon tetrachloride (CAS No. 56-23-5), and chloroform (CAS 67-66-3) (40 CFR 63.461).
- *High-Pressure Appliance* - an appliance that uses a refrigerant with a boiling point between -50 and 10 ° C [-58 and 50°F] at atmospheric pressure (29.9 in. [75.946 cm] Hg). This definition includes but is not limited to appliances using refrigerants -12, -22, -114, -500, or -502 (40 CFR 82.152(g)).
- *Idling Mode* - the time period when a solvent cleaning machine is not actively cleaning parts and the sump heating coils, if present, are turned on (40 CFR 63.461).

- *Idling Mode Cover* - any cover or solvent cleaning machine design that allows for the cover to shield the cleaning machine openings during the idling mode. A cover that meets this definition can also be used as a working mode cover if that definition is also met (40 CFR 63.461).
- *Immersion Cold Cleaning Machine* - a cold cleaning machine in which the parts are immersed in the solvent when being cleaned. A remote reservoir cold cleaning machine that is also an immersion cold cleaning machine is considered an immersion cold cleaning machine for the purposes of this subpart (40 CFR 63.461).
- *Industrial Process Refrigeration* - means, for the purposes of 40 CFR 82.156(i), complex customized appliances used in the chemical, pharmaceutical, petrochemical, and manufacturing industries. This sector also includes industrial ice machines and ice rinks (40 CFR 82.152(h)).
- *In-Line Cleaning Machine or Continuous Cleaning Machine* - a solvent cleaning machine that uses an automated parts handling system, typically a conveyor, to automatically provide a continuous supply of parts to be cleaned. These units are fully enclosed except for the conveyor inlet and exit portals. In-line cleaning machines can be either cold or vapor cleaning machines (40 CFR 63.461).
- *Lip Exhaust* - a device installed at the top of the opening of a solvent cleaning machine that draws in air and solvent vapor from the freeboard area and ducts the air and vapor away from the solvent cleaning area (40 CFR 63.461).
- *Low-Loss Fitting* - any device that is intended to establish a connection between hoses, appliances, or recovery or recycling machines and that is designed to close automatically or to be closed manually when disconnected, minimizing the release of refrigerant from hoses, appliances, and recovery or recycling machines (40 CFR 82.152(i)).
- *Low-Pressure Appliance* - an appliance that uses a refrigerant with a boiling point above 10 ° C [50° F] at atmospheric pressure (29.9 in. [75.946 cm] Hg). This definition includes but is not limited to equipment utilizing refrigerants -11, -113, and -123 (40 CFR 82.152(j)).
- *Major Maintenance, Service, or Repair* - any maintenance, service, or repair involving the removal of any or all of the following appliance components (40 CFR 82.152(k)):
 1. compressor
 2. condenser
 3. evaporator
 4. auxiliary heat exchanger coil.
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Modification* - in relation to NSPS, any physical or operational change to an existing facility which results in an increase in the emission rate to the atmosphere of any pollutant to which a standard applies except (40 CFR 60.14):
 1. maintenance, repair, and replacement which the Administrator determines to be routine for a source category

2. an increase in production rate of an existing facility, if that increase can be accomplished without a capital expenditure on that facility
 3. an increase in the hours of operation
 4. use of an alternate fuel or raw material if, prior to the date any standard under this part becomes applicable to that source type, the existing facility was designed to accommodate that alternate use. A facility will be designed to accommodate an alternative fuel or raw material if that use could be accomplished under the facility's construction specifications as assessed prior to the change
 5. the addition or use of any system or device whose primary function is the reduction of air pollutants, except when an emission control system is removed or replaced by a system which the Administrator determines to be less than environmentally beneficial
 6. the relocation or change in ownership of an existing facility.
- *Motor Vehicle Air-Conditioner (MVAC)* - any appliance that is an MVAC as defined in 40 CFR 82, subpart B (40 CFR 82.152(l)).
 - *MVAC-Like Appliance* - mechanical vapor compression, open-drive compressor appliances used to cool the driver's or passenger's compartment of a nonroad motor vehicle. This includes the air conditioning equipment found on agricultural or construction vehicles. This definition is not intended to cover appliances using HCFC-22 refrigerant (40 CFR 82.152(m)).
 - *New* - in relation to solvent cleaning machines, any solvent cleaning machine the construction or reconstruction of which is commenced after 29 November 1993 (40 CFR 63.461).
 - *Normally Containing a Quantity of Refrigerant* - containing the quantity of refrigerant within the appliance or appliance component when the appliance is operating with a full charge of refrigerant (40 CFR 82.152(n)).
 - *Opacity* - the degree to which emissions reduce the transmission of light and obscure view of an object in the background (40 CFR 60.2).
 - *Open Top Vapor Cleaning Machine* - a batch solvent cleaning machine that has its upper surface open to the air and boils solvents to create solvent vapor used to clean and/or dry parts (40 CFR 63.461).
 - *Opening An Appliance* - any service, maintenance, or repair on an appliance that would release class I or class II refrigerant from the appliance to the atmosphere unless the refrigerant were previously recovered from the appliance (40 CFR 82.152(o)).
 - *Process Stub* - a length of tubing that provides access to the refrigerant inside a small appliance or room air conditioner and that can be resealed at the conclusion of repair or service (40 CFR 82.152(q)).
 - *Reclaim Refrigerant* - to reprocess refrigerant to at least the purity specified in the Air Conditioning and Refrigeration Institute (ARI) Standard 700-1988, *Specifications for Fluorocarbon Refrigerants* (Appendix A to 40 CFR 82, subpart F) and to verify this purity using the analytical methodology prescribed in the ARI Standard 700-1988. In general, reclamation

involves the use of processes or procedures available only at a reprocessing or manufacturing facility (40 CFR 82.152(r)).

- *Reclaimer* - a machine used to remove perchloroethylene from articles by tumbling them in a heated air stream (40 CFR 63.321).
- *Recover Refrigerant* - to remove refrigerant in any condition from an appliance and to store it in an external container without necessarily testing or processing it in any way (40 CFR 182.52(s)).
- *Recovery Efficiency* - the percentage of refrigerant in an appliance that is recovered by a piece of recycling or recovery equipment (40 CFR 82.152(t)).
- *Recycle Refrigerant* - to extract refrigerant from an appliance and clean refrigerant for reuse without meeting all of the requirements for reclamation. In general, recycled refrigerant is refrigerant that is cleaned using oil separation and single or multiple passes through devices, such as replaceable core filter-driers, which reduce moisture, acidity, and particulate matter. These procedures are usually implemented at the field job site (40 CFR 82.152(u)).
- *Refrigerated Condenser* - a vapor recovery system into which an air-perchloroethylene gas-vapor stream is routed and the perchloroethylene is condensed by cooling the gas-vapor stream (40 CFR 63.321).
- *Remote Reservoir Cold Cleaning Machine* - any device in which liquid solvent is pumped to a sink-like work area that drains solvent back into an enclosed container while parts are being cleaned, allowing no solvent to pool in the work area (40 CFR 63.461).
- *Self-Contained Recovery Equipment* - refrigerant recovery or recycling equipment that is capable of removing the refrigerant from an appliance without the assistance of components contained in the appliance (40 CFR 82.152(w)).
- *Small Appliance* - any of the following products that are fully manufactured, charged, and hermetically sealed in a factory with 5 lb [11.02 kg] or less of refrigerant (40 CFR 82.152(x)):
 1. refrigerators designed for home use
 2. freezers designed for home use
 3. room air conditioners (including window air conditioners and packaged terminal air conditioners)
 4. packaged terminal heat pumps
 5. dehumidifiers
 6. under-the-counter ice makers
 7. vending machines
 8. drinking water coolers.
- *Solvent/Air Interface* - for a vapor cleaning machine, the location of contact between the concentrated solvent vapor layer and the air. This location of contact is defined as the in-line height of the primary condenser coils. For a cold cleaning machine, it is the location of contact between the liquid solvent and the air (40 CFR 63.461).

- *Solvent Cleaning Machine* - any device or piece of equipment that uses halogenated HAP solvent liquid or vapor to remove soils from the surface of materials. Types of solvent cleaning machines include, but are not limited to, batch vapor, in-line vapor, in-line cold, and batch cold solvent cleaning machines (40 CFR 63.461).
- *Superheated Vapor System* - a systems that heats the solvent vapor either passively or actively, to a temperature above the solvents boiling point. Parts are held in the superheated vapor before exiting the machine to evaporate the liquid solvent on them. Hot vapor recycle is an example of a superheated vapor system (40 CFR 63.461).
- *System-Dependent Recovery Equipment* - refrigerant recovery equipment that requires the assistance of components contained in an appliance to remove the refrigerant from the appliance (40 CFR 82.152(y)).
- *Technician* - any person who performs maintenance, service, or repair that could reasonably be expected to release Class I or Class II refrigerants from appliances, except for MVACs, into the atmosphere. Technician also means any person who performs disposal of appliances except for small appliances, MVAC, and MVAC-like equipment that could be reasonably expected to release class I or class II refrigerants from the appliances into the atmosphere. Technician includes but is not limited to installers, contractor employees, in-house service personnel, and in some cases, owners (40 CFR 82.152(z)).
- *Vapor Cleaning Machine* - a batch or in-line solvent cleaning machine that boils liquid solvent generating solvent vapor that is used as a part of the cleaning or drying cycle (40 CFR 63.461).
- *Very High-Pressure Appliance* - an appliance that uses a refrigerant with a boiling point below - 50 ° C [-58 ° F] at atmospheric pressure (29.9 in. [75.95 cm] Hg). This definition includes but is not limited to equipment utilizing refrigerants -13 and -503 (40 CFR 82.152(aa)).
- *Very Low Sulfur Oil* - an oil that contains no more than 0.5 weight percent sulfur or that, when combusted without SO₂ emission control, has a SO₂ emission rate equal to or less than 215 ng/J (0.5 lb/MBtu) heat input (40 CFR 60.41b).
- *Volatile Organic Compound (VOC)* - any compound of carbon, excluding CO, CO₂, carbonic acid, metallic carbides, or carbonates, and ammonium carbonate, which participates in atmospheric photochemical reactions (40 CFR 51.100).
- *VOC Service* - in relationship to fugitive emissions, this is when a piece of equipment contains or contacts a process fluid that is at least 10 percent VOC by weight (40 CFR 61.241).
- *Voluntary Certification Program* - a technician testing program operated by a person before that person obtained approval of a technician certification program (40 CFR 82.1523(bb)).
- *Wholesale Purchaser-Consumer* - any organization that is an ultimate consumer of gasoline or diesel fuel and which purchases or obtains gasoline or diesel fuel from a supplier for use in motor vehicles and receives delivery of that product into a storage tank of at least

550 gal [2081.98 L] capacity substantially under the control of that organization (40 CFR 80.2).

- *Working Mode* - the time period when the solvent cleaning machine is actively cleaning parts (40 CFR 63.461).
- *Working Mode Cover* - any cover or solvent cleaning machine design that allows the cover to shield the cleaning machine openings from outside air disturbances while parts are being cleaned in the cleaning machine. A cover that is used during the working mode is opened only during parts entry and removal. A cover that meets this definition can also be used as an idling mode cover if that definition is also met (40 CFR 63.461).

AIR EMISSIONS MANAGEMENT
GUIDANCE FOR CHECKLIST USERS

	REFER TO CHECKLIST ITEMS:	REFER TO PAGE NUMBER:
All Facilities	1-1 through 1-6	1-17
Petroleum Products	1-7 through 1-12	1-21
CFCs and Halons		
Purchasing/Procurement	1-13 through 1-16	1-25
Repair/Recycling	1-17 through 1-33	1-27
Recordkeeping	1-34 and 1-35	1-35
Degreasing Operations		
Cold Cleaning	1-36 through 1-38	1-37
Vapor Cleaning	1-39 through 1-48	1-39
Reporting	1-49 through 1-55	1-49

AIR EMISSIONS MANAGEMENT

Records To Review

- State and local air pollution control regulations
- FWS air pollution control regulations
- Emissions inventory
- All air pollution source permits
- Plans and procedures applicable to air pollution control
- Emission monitoring records
- Opacity records
- Notices of violation (NOVs) from regulatory authorities
- Instrument calibration and maintenance records
- Reports/complaints concerning air quality
- Air Emergency Episode Plan
- State and/or Federal regulatory inspections
- Regulatory inspection reports
- Documentation of preventive measure or action
- Results of air sampling at the conclusion of response action
- Training records and certificates pertaining to refrigerant reclaiming/recovery

Physical Features To Inspect

- All air pollution sources (fuel burners, incinerators, VOC sources, etc.)
- Air pollution monitoring and control devices
- Air emission stacks
- Air intake vents

**COMPLIANCE CATEGORY:
AIR EMISSIONS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>ALL FACILITIES</p> <p>1-1. The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p>1-2. FWS facilities are required to comply with state and local air quality regulations (CAAA90, 42 USC 7418(a)).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, inter-agency agreements, or equivalent state enforcement actions.</p> <p>Verify that the facility is complying with state and local air quality requirements.</p> <p>Verify that the facility is operating according to permits issued by the state or local agencies.</p> <p>(NOTE: See Appendix 1-1 for a list of Service facilities located in Class I areas.)</p> <p>(NOTE: Issues typically regulated by state and local agencies include:</p> <ul style="list-style-type: none"> - air pollution episode standby plans - permits for construction and operation of sources of emissions - placement of control devices on fuel burning sources - incinerators with less than 45 metric tons/day (50 tons/day) heat input - open burning and detonation - prescribed burning and trash burning - firefighting training - motor vehicle emissions and inspections - use of vapor control systems at gas dispensing facilities - transfer of fuel in tank trucks - solvent metal cleaners such as degreasers and cold cleaners - fugitive dust emissions from sources such as roads, quarries, sand and gravel pits, and construction activities - control of particulate emissions from woodworking shops - transportation of refuse or materials in open vehicles - emissions and emission control requirements for the operation of existing fossil fuel-fired steam generators

REGULATORY REQUIREMENTS:

REVIEWER CHECKS:

July 1995

1-2. (continued)

- the spray painting of vehicles, buildings, and/or furniture
- certification of vehicles transporting VOC liquids
- certification for operators of boilers paving of roads and parking lots
- certification for CFC replacement in vehicle air conditioning units
- toxic air pollutants
- indoor air pollution.)

(NOTE: Under 42 USC 7418(c) and 7418(d), each department, agency, and instrumentality of executive, legislative, and judicial branches of the Federal Government is required to comply with valid vehicle inspection and maintenance programs, except for vehicles that are considered military tactical vehicles. Also, all employees operating vehicles on a property or a facility over which the Federal Government has jurisdiction are required to furnish proof of compliance with applicable requirements of any valid vehicle inspection and maintenance programs. The facility shall use one of the following methods to establish proof of compliance:

- presentation by the vehicle owner of a valid certificate of compliance
- presentation by the vehicle owner of proof of vehicle registration within the geographic area covered by the vehicle inspection and maintenance program (except for any program whose enforcement mechanism is not through the denial of vehicle registration)
- another method approved by the vehicle inspection and maintenance program administrator.)

1-3. Facilities will meet regulatory requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulation as a basis of finding).

Determine if any new regulations concerning air quality have been issued since the finalization of the handbook.

Verify that the facility is in compliance with newly issued regulations.

1-4. FWS facilities should report all NOV's to the Region and the SPCO (MP).

Determine if the facility has received an NOV relating to air quality.

Verify that the NOV was reported to the Region and the SPCO.

Fish and Wildlife Service

REGULATORY REQUIREMENTS:

	<p align="center">REVIEWER CHECKS: July 1995</p>
--	--

1-51. (continued)

Verify that the report includes:

- the name and address of the owner or operator
- the address (i.e., physical location) of the solvent cleaning machine
- a statement signed by the owner or operator stating that the solvent cleaning machine for which the report is being submitted is in compliance
- the compliance approach for each machine.

- Verify that, for existing sources this report is submitted no later than 150 days after 2 December 1997.

1-52. Operators of batch vapor or in-line solvent cleaning machines are required to submit an initial statement of compliance to the Administrator (40 CFR 63.468(d)).

Verify that, for new sources, the report is submitted no later than 150 days after startup or 1 May 1995, whichever is later.

Verify that the report includes:

- the name and address of the owner or operator
- the address (i.e., physical location) of the solvent cleaning machine
- a list of control equipment required to be monitored, a list of the parameters that are monitored and the values of these parameters measured on or during the first month after the compliance date
- conditions to maintain the wind speed requirements
- a test report for machines complying with the idling emission limit standards for tests of idling emissions.

Verify that, if a carbon adsorber is used, the date and results of the weekly measurements of the halogenated HAP solvent concentration is included in the report.

Verify that, for existing sources, this report is submitted no later than 150 days after 2 December 1997.

- Verify that, for new sources, the report is submitted no later than 150 days after startup or 1 May 1995, whichever is later.

Verify that the report includes:

- the name and address of the owner or operator
- the address (i.e., physical location) of the solvent cleaning machine
- the solvent/air interface area for cleaning machines without a solvent/air interface, a description of the method used to determine the cleaning capability and the results
- the results of the first 3 mo average emissions calculation.

Appendix 1-4 (continued)

FIRE SUPPRESSION AND EXPLOSION PROTECTION STREAMING AGENTS				
End use	Substitute	Decision	Conditions	Comments
Halon 1211 Streaming Agents	[CFC Blend]	Acceptable in nonresidential uses only		<p>Use of CFCs are controlled under CAA section 610 which bans use of CFCs in pressurized dispensers, and therefore are not permitted for use in portable for extinguishers. USEPA will list this agent as proposed unacceptable in the next significant new alternatives policy (SNAP) proposed rulemaking. Because CFCs are a Class I substance, production will be phased out by 1 January 1996.</p> <p>See footnotes 1, 2.</p>
	HBFC-22B1		Acceptable in nonresidential uses only.	<p>Proper procedures regarding the operation of the extinguisher and ventilation following dispensing the extinguishant is recommended. Worker exposure may be a concern in small office areas. HBFC-22B1 is considered an interim substitute for Halon 1211. Because the HBFC22B1 has an ozone-depleting potential (ODP) of 0.74, production will be phased out (except for essential uses) on 1 January 1996. This agent was submitted to the agency as a premanufacture notice (PMN) and is presently subject to requirements contained in a <i>Toxic Substance Control Act</i> (TSCA) Consent Order. See footnotes 1, 2.</p>
	C ₆ F ₁₄	<p>Acceptable for nonresidential uses where other alternatives are not technically feasible due to performance or safety requirements:</p> <p>a. due to the physical or chemical properties of the agent, or</p>		<p>Users must observe the limitations on PFC acceptability by making reasonable effort to undertake the following measures:</p> <ul style="list-style-type: none"> (i) conduct an evaluation of foreseeable conditions of end use (ii) determine that the physical or chemical properties or other technical constraints of the other available agents preclude their use and (iii) determine that human exposure to the other alternative extinguishing agents may approach or result in cardiosensitization or other unacceptable toxicity effects under normal operating conditions <p>Documentation of such measures must be available for review upon request.</p>

(continued)

Appendix 1-4 (continued)

FIRE SUPPRESSION AND EXPLOSION PROTECTION STREAMING AGENTS (continued)				
End use	Substitute	Decision	Conditions	Comments
Halon 1211 Streaming Agents (continued)		b. where human exposure to the extinguishing agent may approach cardiotoxicity levels or result in other unacceptable health effects under normal operating conditions.		<p>The principal environmental characteristic of concern for PFCs is that they have high global warming potential (GWP) and long atmospheric lifetimes. Actual contributions to global warming depend upon the quantities of PFCs emitted.</p> <p>For additional guidance regarding applications in which PFCs may be appropriate, users should consult the description of potential uses, which is included in the preamble to this rulemaking.</p> <p>See footnotes 1, 2.</p>
	HCFC-124	Acceptable		This agent is banned in residential applications per section 610(d) of CAAA90.
	[HCFC Blend] C	Acceptable		This agent is banned in residential applications per section 610(d) of CAAA90.
	[HCFC Blend] D	Acceptable		<p>The intended market for this agent is Large, outdoor applications. This agent is banned in residential applications per section 610(d) of CAAA90.</p> <p>This agent was formerly identified as Powdered Aerosol B.</p>
	Gelled Hydrocarbon/Dry Chemical Suspension	Acceptable		

Footnotes:

1. Discharge testing and training should be strictly limited only to that which is essential to meet safety or performance requirements.
2. The agent should be recovered from the fire protection system in conjunction with testing or servicing and recycled for later use or destroyed.

FIRE SUPPRESSION AND EXPLOSION PROTECTION TOTAL FLOODING AGENTS				
End use	Substitute	Decision	Conditions	Comments
	HCFC-22	Acceptable	<p>Until OSHA establishes applicable workplace requirements:</p> <p>Where egress from an area cannot be accomplished within 1 min, the employer shall not use this agent in concentrations exceeding its cardiotoxic NOAEL of 2.5%.</p> <p>Where egress takes longer than 30 s but less than 1 min, the employer shall not use the agent in a concentration greater than its cardiotoxic LOAEL of 5.0%.</p> <p>HCFC-22 concentrations greater than 5.0% are permitted only in areas not normally occupied by employees provided that any employee in the area can escape within 30 s. The employer shall assure that no unprotected employees enter the area during agent discharge.</p>	<p>The comparative design concentration based on cup burner values is approximately 13.9% while its cardiotoxic LOAEL is 5.0%. Thus, it is unlikely that this agent will be used in normally occupied areas.</p> <p>See footnotes 1, 2 3, 4.</p>

(continued)

Appendix 1-4 (continued)

FIRE SUPPRESSION AND EXPLOSION PROTECTION TOTAL FLOODING AGENTS (continued)				
End use	Substitute	Decision	Conditions	Comments
	HCFC-124	Acceptable	<p>Until OSHA establishes applicable workplace requirements:</p> <p>Where egress from an area cannot be accomplished within 1 min, the employer shall not use this agent in concentrations exceeding its cardiotoxic NOAEL of 1.0%.</p> <p>Where egress takes longer than 30 s but less than 1 min, the employer shall not use the agent in a concentration greater than its cardiotoxic LOAEL OF 2.5%.</p> <p>HCFC-123 concentrations greater than 2.5% are only permitted in areas not normally occupied by employees provided that any employee in the area can escape within 30 s. The employer shall assure that no unprotected employees enter the area during agent discharge.</p>	<p>The comparative design concentration based on cup burner values is approximately 8.4%; while its cardiotoxic LOAEL is 2.5%. Thus, it is unlikely that this agent will be used in normally occupied areas.</p> <p>See footnotes 1, 2, 3, 4.</p>
	[HCFC BLEND] A	Acceptable	<p>Until OSHA establishes applicable workplace requirements:</p> <p>Where egress from an area cannot be accomplished within 1 min, the employer shall not use [HCFC Blend] A in concentrations exceeding its cardiotoxic NOAEL of 10.0%.</p> <p>Where egress takes greater than 30 s but less than 1 min, the employer shall not use [HCFC Blend] A in a concentration greater than its cardiotoxic LOAEL of 10.0%.</p> <p>[HCFC Blend] A concentrations greater than 10 percent are permitted only in areas not normally occupied by employees provided that any employee in the area can escape within 30 s. The employer shall assure that no unprotected employees enter the area during agent discharge.</p>	<p>The comparative design concentration based on full-scale testing is approximately 8.6%.</p> <p>The agent should be recovered from the fire protection system in conjunction with testing or servicing, and should be recycled for later use or destroyed.</p> <p>See footnotes 1, 2, 3, 4.</p>

(continued)

Appendix 1-4 (continued)

FIRE SUPPRESSION AND EXPLOSION PROTECTION TOTAL FLOODING AGENTS (continued)				
End use	Substitute	Decision	Conditions	Comments
	HFC-23	Acceptable	<p>Until OSHA establishes applicable workplace requirements:</p> <p>Where egress from an area cannot be accomplished within 1 min, the employer shall not use HFC-23 in concentrations exceeding 30%.</p> <p>Where egress takes greater than 30 s but less than 1 min, the employer shall not use HFC-23 in a concentration greater than 50.0%.</p> <p>HFC-23 concentrations greater than 50 percent are only permitted in areas not normally occupied by employees provided that any employee in the area can escape within 30 s. The employer shall assure that no unprotected employees enter the area during agent discharge.</p> <p>The design concentration must result in an oxygen level of at least 16%.</p>	<p>The comparative design concentration based on cup burner values is approximately 14.4%; while data indicates that its cardiotoxicity NOAEL is 30% without added oxygen and 50% with added oxygen. Its LOAEL is likely to exceed 50%.</p> <p>See footnotes 1, 2, 3, 4.</p>
	HFC-125	Acceptable	<p>Until OSHA establishes applicable workplace requirements:</p> <p>Where egress from an area cannot be accomplished within 1 min, the employer shall not use this agent in concentrations exceeding its cardiotoxic NOAEL of 7.5%.</p> <p>Where egress takes longer than 30 s but less than 1 min, the employer shall not use the agent in a concentration greater than its cardiotoxic LOAEL of 10.0%.</p> <p>HFC-125 concentrations greater than 10.0% are only permitted in areas not normally occupied by employees provided that any employee in the area can escape within 30 s. The employer shall assure that no unprotected employees enter the area during agent discharge.</p>	<p>The comparative design concentration based on cup burner values is approximately 11.3%; while its cardiotoxic LOAEL is 10.0%. Thus, it is unlikely that this agent will be used in normally occupied areas.</p> <p>See footnotes 1, 2, 3, 4.</p>

(continued)

Appendix 1-4 (continued)

FIRE SUPPRESSION AND EXPLOSION PROTECTION TOTAL FLOODING AGENTS (continued)				
End use	Substitute	Decision	Conditions	Comments
	HFC-134a	Acceptable	<p>Until OSHA establishes applicable workplace requirements: Where egress from an area cannot be accomplished within 1 min, the employer shall not use this agent in concentrations exceeding its cardiotoxic NOAEL of 4.0%.</p> <p>Where egress takes longer than 30 s but less than 1 min, the employer shall not use the agent in a concentration greater than its cardiotoxic LOAEL of 8.0% HFC-134a concentrations greater than 8.0% are only permitted in areas not normally occupied by employees provided that any employee in the area can escape within 30 s. The employer shall assure that no unprotected employees enter the area during agent discharge.</p>	<p>The comparative design concentration based on cup burner values is approximately 12.6%; while its cardiotoxic LOAEL is 8.0%. Thus, it is unlikely that this agent will be used in normally occupied areas. See footnotes 1, 2, 3, 4.</p>
	HFC-227ea	Acceptable	<p>Until OSHA establishes applicable workplace requirements: Where egress from an area cannot be accomplished within 1 min, the employer shall not use HFC-227ea in concentrations exceeding its cardiotoxic NOAEL of 9.0%.</p> <p>Where egress takes longer than 30 s but less than 1 min, the employer shall not use the agent in a concentration greater than its cardiotoxic LOAEL of 10.5%.</p> <p>HFC-227ea concentrations greater than 10.5% are only permitted in areas not normally occupied by employees provided that any employee in the area can escape within 30 s. The employer shall assure that no unprotected employees enter the area during agent discharge.</p>	<p>The comparative design concentration based on cup burner values is approximately 7.0%; while data indicate that its cardiotoxicity LOAEL is probably greater than 10.5%. USEPA is accepting 10.5% as its LOAEL. This agent was submitted to the agency as a premanufacture notice (PMN) agent and is presently subject to requirements contained in a TSCA Significant New Use Rule (SNUR). See footnotes 1, 2, 3, 4.</p>

(continued)

Appendix 1-4 (continued)

FIRE SUPPRESSION AND EXPLOSION PROTECTION TOTAL FLOODING AGENTS (continued)				
End use	Substitute	Decision	Conditions	Comments
	[IG-541]	Acceptable	<p>Until OSHA establishes applicable workplace requirements:</p> <p>The design concentration must result in at least 10% oxygen and no more than 5% CO₂.</p> <p>If the oxygen concentration of the atmosphere falls below 10%, personnel must be evacuated and egress must occur within 30 s.</p>	<p>Studies have shown that healthy, young individuals can remain in a 10% to 12% oxygen atmosphere for 30 to 40 min without impairment. However, in a fire emergency, the oxygen level may be reduced below safe levels, and the combustion products formed by the fire are likely to cause harm. Thus, the agency does not contemplate personnel remaining in the space after system discharge during a fire without self Contained breathing apparatus (SCBA) as required by OSHA.</p> <p>See footnotes 1, 2.</p>

Footnotes:

1. Must conform with OSHA 29 CFR 1910 Subpart L Section 1910.160 of the U.S. Code.
2. Per OSHA requirements, protective gear (SCBA) must be available in the event personnel must reenter the area.
3. Discharge testing should be strictly limited only to that which is essential to meet safety or performance requirements.
4. The agent should be recovered from the fire protection system in conjunction with testing or servicing, and recycled for later use or destroyed.

(continued)

Appendix 1-4 (continued)

Fire Suppression And Explosion Protection Total Flooding Agents Substitutes Acceptable Subject to Narrowed Use Limits				
End use	Substitute	Decision	Conditions	Comments
Halon 1301 Total Flood- ing Agents.	C ₄ F ₁₀	Acceptable where other alternatives are not technically feasible due to performance or safety requirements: a. due to their physical or chemical properties, or b. where human exposure to the extinguishing agents may approach cardiosensitization levels or result in other unacceptable health effects under normal operating conditions.	Until OSHA establishes applicable workplace requirement: For occupied areas from which personnel cannot be evacuated in 1 min, use is permitted only up to concentrations not exceeding the cardiotoxicity NOAEL of 40%. Although no LOAEL has been established for this product, standard OSHA requirements apply, i.e., for occupied areas from which personnel can be evacuated or egress can occur between 30 and 60 s, use is permitted up to a concentration not exceeding the LOAEL. All personnel must be evacuated before concentration of C ₄ F ₁₀ exceeds 40%. Design concentration must result in oxygen levels of at least 16%.	The comparative design concentration based on cup burner values is approximately 6.6%. Users must observe the limitations on PFC approval by undertaking the following measures: (i) conduct an evaluation of foreseeable conditions of end use (ii) determine that human exposure to the other alternative extinguishing agents may approach or result in cardiosensitization or other unacceptable toxicity effects under normal operating conditions, and (iii) determine that the physical or chemical properties or other technical constraints of the other available agents preclude their use. Documentation of such measures must be available for review upon request. The principal environmental characteristic of concern for PFCs is that they have high GWPs and long atmospheric lifetimes. Actual contributions to global warming depend upon the quantities of PFCs emitted. For additional guidance regarding applications in which PFCs may be appropriate, users should consult the description of potential uses which is included in the preamble to this rulemaking. Drinking Water Management

A. Applicability	1
B. Federal Legislation	1
C. State and Local Regulations	2
D. FWS/DOI Manuals	3
E. Key Compliance Requirements	3
F. Key Compliance Definitions	4
Guidance for Checklist Users	11

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 2

DRINKING WATER MANAGEMENT

A. Applicability

This section identifies rules, regulations, and requirements for any FWS facility that has jurisdiction over any public water supply system. A public water system is defined as a system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. This term includes:

1. any collection, treatment, storage, and distribution facilities under control of the operator of such system
2. any collection or pretreatment storage facility not under such control that is used primarily in connection with such system.

A public water system is either a community water system or a noncommunity water system (40 CFR 141.2).

FWS facilities that meet all the criteria listed below are not required to comply with the requirements of the *Safe Drinking Water Act* (SDWA) since, by definition, they are not public water systems (40 CFR 141.3):

1. system consists only of distribution and storage facilities and does not have any collection and treatment facilities
2. facility gets all of its water from a public water system that is owned or operated by another party (non-FWS)
3. facility does not sell water to any party.

B. Federal Legislation

- *The Safe Drinking Water Act* (SDWA). This act, Public Law (PL) 99-339, 42 U.S. Code (USC) 201, 300f-300j-25, 6939b, 6979a, 6979b, 7401--742, etc., is the Federal legislation which regulates the safety of drinking water in the country. Each department, agency, and instrument of the executive, legislative, and judicial branches of the Federal Government having jurisdiction over any potential source of contaminants identified by a state program must be subject to and observe all requirements of the state program applicable to such potential source of contaminants, both substantive and procedural, in the same manner, and to the same extent, as any other person, including payment of reasonable charges and fees (42 USC 300h-7(h)).

If a Federal agency has jurisdiction over any Federally owned or maintained public water system, or is engaged in any activity resulting, or which may result in, underground water injection which endangers drinking water, it is subject to, and must observe, any Federal, state, and local regulations, administrative authorities, and process and sanctions respecting the provision of safe drinking water and respecting any underground injection program

in the same manner, and to the same extent, as any nongovernmental entity. This requirement applies (42 USC 300j-6(a)):

1. to any rules substantive or procedural (including any recordkeeping or reporting, permits, and other requirements)
2. to the exercise of any Federal, state, or local authorities
3. to any process or sanction, whether enforced in Federal, state, or local courts or in any other manner.

National primary drinking water regulations apply to each public water system in each state. However, such regulations do not apply to a public water system (42 USC 300g):

1. which consists only of distribution and storage facilities (and does not have any collection and treatment facilities)
2. which obtains all its water from, but is not owned or operated by, a public water system to which such regulations apply
3. which does not sell water to any person
4. which is not a carrier which conveys passengers in interstate commerce.

Each department, agency, or instrument of the executive, legislative, and judicial branches of the Federal Government, and each officer, agent, or employee of such organization, must comply with all Federal, state, interstate, and local requirements, administrative authority, and process and sanctions regarding the control and abatement of water pollution in the same manner and to the same extent as any nongovernmental entity including the payment of reasonable service charges (33 USC 1323(a)).

- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or to correct situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards*.
 - 40 CFR 141, *National Primary Drinking Water Regulations*.
 - 40 CFR 142, *National Primary Drinking Water Regulations Implementation*.
 - 40 CFR 149, *Sole Source Aquifers*.

C. State/Local Regulations

States have primary responsibility to enforce compliance with national primary drinking water standards and sampling, monitoring, and notice requirements in conformance with 40 CFR 141. U.S. Environmental Protection Agency (USEPA) executes the enforcement responsibilities until individual state programs are approved.

States that have primacy may establish drinking water regulations, monitoring schedules, and reporting requirements more stringent than, or in addition to, those in the Federal reg-

ulations. FWS public water systems in these states are required to comply with these additional requirements. Generally speaking, most states who have primacy adopt drinking water regulations which closely reflect the Federal requirements. Almost all states have achieved authorization from USEPA to administer drinking water compliance programs including underground injection control (UIC) programs.

D. FWS/DOI Manuals

- 561 FW 4, *Compliance Requirements, Safe Drinking Water Act*. This chapter, dated 27 February 1995, provides policy and instructions for complying with the SDWA at Service facilities.

E. Key Compliance Requirements

- Service Drinking Water Systems - Service controlled systems serving resident or nontransient populations are required to monitor as if they are classified a nontransient noncommunity water system. Service controlled systems, both public and nonpublic, serving transient populations are required to monitor as if they are classified as a transient noncommunity water system.
- Plans and Records - The drinking water facility manager must keep records of actions taken to correct or repair any part of the treatment and distribution system for at least 3 yr. Records of chemical analyses are required to be kept for not less than 10 yr. Facilities are required to survey public water systems and maintain records of those reviews (MP, 40 CFR 141.21(d) and 141.33(b)).
- Physical Requirements for Drinking Water Systems - All water systems shall install and operate optimal corrosion control treatment and/or comply with corrosion control requirements specified by the state (40 CFR 141.80(d)).
- Maximum Contaminant Level (MCL) Standards - Drinking water is to be supplied from sources approved by Federal, state, or local health authorities, or treated to specific standards. Community water systems, noncommunity water systems, except as defined under exempted water systems, and nontransient, noncommunity water systems are required to meet specific MCLs and action levels for organic, inorganic, turbidity, and microbiological contaminants. These are outlined in Appendices 13-1 and 13-2 (40 CFR 141.11(a) through 141.11(c), 141.12, 141.15, 141.16(a), and 141.60 through 141.63).
- Monitoring - The monitoring schedule and what constituents are to be monitored is based on what type of drinking water facility is being operated. Facilities with community water systems and/or nontransient, noncommunity water systems are required to monitor for inorganic contaminants. All public water systems are required to conduct monitoring to determine compliance for nitrate and nitrite levels. Monitoring for Endrin is required to be done according to specific schedules. Community and noncommunity water systems are required to monitor for total coliforms and facilities are required to monitor for radioactivity in community water systems. Facilities with community water systems that add a disinfectant to the water are required to analyze for total trihalomethanes (TTHM) (40 CFR 141.21(a), 141.23, 141.24, and 141.26).

- **Total Coliform and Turbidity Sampling** - Total coliform samples are required to be collected at regular intervals throughout the month except at systems that use only groundwater and serve 4900 people or fewer. These systems are exempt from sampling at regular intervals but are required to still sample. Public water systems that use surface water or groundwater under the direct influence of surface water and do not practice filtration are required to collect at least one total coliform sample near the first service connection each day the turbidity level of the source water exceeds 1 NTU. When a routine sample is total coliform-positive, the public water system must collect a set of repeat samples within 24 h of being notified of the positive result. Sampling for turbidity is required to be done at public water systems that use water obtained in whole or part from surface water sources according to a specific schedule and any excesses reported (40 CFR 141.21 and 141.22).
- **Water Analysis** - Suppliers of water for community public water systems are required to analyze for sodium and collect samples from representative entry points to the water distribution system and analyze for corrosivity. All analysis of samples used to determine compliance with MCLs must be performed in a state-approved lab or by a state-approved individual (40 CFR 141.28, 141.30, 141.41, and 141.42).
- **Filtration and Disinfection** - Facilities that have a public water system that uses surface water sources or groundwater sources under direct influence of a surface water source, must provide filtration as a treatment technique for microbiological contaminants which meets specific standards, provide disinfection treatment by 29 June 1993, and report specific information monthly to the state starting 29 June 1993, or when filtrating (40 CFR 141.70 and 141.72).
- **Notification and Reporting Requirements** - When primary drinking water standards are exceeded, public notifications must be made. Facilities that operate public water systems must send reports to the state on any failure to comply with the applicable biological, turbidity, radioactivity, and chemical standards, and on any failure to comply with monitoring requirements that apply (40 CFR 141.31, 141.32, and 141.33(a)).
- **Lead and Copper in Drinking Water Systems** - Facilities with community or nontransient, noncommunity water systems must notify their users about lead in drinking water systems and must meet specific standards for lead and copper action levels and reporting requirements when these levels are exceeded. Facilities with water systems exceeding the lead action level after the implementation of corrosion control and source water treatment requirements are required to replace lead service lines. Monitoring for lead and copper is required to start on a specified date, be done at a specified number of sites. The facility is required to fulfill specific reporting requirements and retain onsite all the original records of sampling data, analysis, reports, surveys, letters, evaluations, state determinations, and any other pertinent documents for at least 12 yr (40 CFR 141.80 through 141.90).

F. Key Compliance Definitions

- **Action Level** - the concentration of lead or copper in the water specified in 40 CFR 141.80(c) which determines, in some cases, the treatment requirements that a water system is required to complete (40 CFR 141.2).

- *Best Available Technology (BAT)* - the best technology treatment techniques, or other means which the administrator finds, examined for efficacy under field conditions and not solely under lab conditions that are available (taking cost into consideration). For the purposes of setting MCLs for synthetic organic chemicals, any BAT must be at least as effective as granular activated carbon (40 CFR 141.2).
- *Coagulation* - a process using coagulant chemicals and mixing by which colloidal and suspended materials are destabilized and agglomerated into flocs (40 CFR 141.2).
- *Community Water System* - a public water system that serves at least 15 service connections used by year round residents or regularly serves at least 25 year-round residents (40 CFR 141.2)
- *Contaminant* - any physical, chemical, biological, or radiological substance or matter in water (40 CFR 141.2).
- *Conventional Filtration Treatment* - a series of processes including coagulation, flocculation, sedimentation, and filtration resulting in substantial particulate removal (40 CFR 141.2).
- *Diatomaceous Earth Filtration* - a process resulting in substantial particulate removal in which (40 CFR 141.2):
 1. a precoat cake of diatomaceous earth filter media is deposited on a support membrane (septum)
 2. while the water is filtered by passing through the cake on the septum, additional filter media known as body feed is continuously added to the feed water to maintain the permeability of the filter cake.
- *Direct Filtration* - a series of processes including coagulation and filtration but excluding sedimentation resulting in substantial particulate removal (40 CFR 141.2).
- *Disinfectant* - any oxidant, including but not limited to chlorine, chlorine dioxide, chloramines, and ozone added to water in any part of the treatment or distribution process, that is intended to kill or inactivate pathogenic micro-organisms (40 CFR 141.2).
- *Disinfection* - a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents (40 CFR 141.2).
- *Domestic or Other Nondistribution System Plumbing Problem* - a coliform contamination problem in a public water system with more than one service connection that is limited to the specific service connection from which the coliform-positive sample was taken (40 CFR 141.2).
- *Exempted Public Water Systems* - public water systems which meet all of the following are not required to meet the standards outlined in 40 CFR 141 (40 CFR 141.3):
 1. systems which consist only of distribution and storage facilities and do not have any collection and treatment facilities
 2. systems that obtain all of their water from, but is not owned by or operated by, a public water system to which 40 CFR 141 applies

3. systems that do not sell water to any person
4. systems that are not a carrier that conveys passengers in interstate commerce.

- *Filtration* - a process for removing particulate matter from water by passage through porous media (40 CFR 141.2).
- *Flocculation* - a process to enhance agglomeration or collection of smaller floc particles into larger, more easily settleable particles through gentle stirring by hydraulic or mechanical means (40 CFR 141.2).
- *Gross Alpha Particle Activity* - the total radioactivity due to alpha particle emissions as inferred from measurements on a dry sample (40 CFR 141.2).
- *Groundwater Under the Direct Influence of Surface Water* - refers to any water beneath the surface of the ground with (40 CFR 141.2):
 1. significant occurrence of insects or other macro-organisms, algae, or large-diameter pathogens such as *Giardia lamblia*
 2. significant and relatively rapid shifts in water characteristics such as turbidity, temperature, conductivity, or pH which closely correlate to climatological or surface water conditions.

Direct influence must be determined for individual sources in accordance with criteria established by the state.

- *Halogen* - one of the chemical elements chlorine, bromine, or iodine (40 CFR 141.2).
- *Initial Compliance Period* - the first full 3 yr compliance period which begins at least 18 mo after promulgation, except for Dichloromethane, 1,2,4-Trichlorobenzene, 1,1,2-Trichloroethane, Benzo(a)pyrene, Dalapon, Di(2-ethylhexyl) adipate, Di(2-ethylhexyl) phthalate, Dinoseb, Diquat, Endrin, Endothall, Glyphosate, Hexachlorobenzene, Hexachlorocyclopentadiene, Oxamyl (Vydate), Picloram, Simazine, 2,3,7,8-TCDD (Dioxin), Antimony, Beryllium, Cyanide (as free Cyanide), Nickel, and Thallium, initial compliance period means the first full 3 yr compliance period after promulgation for systems with 150 or more service connections (January 1993 - December 1995, and first full 3 yr compliance period after the effective date of the regulation (January 1996 - December 1998) for systems having fewer than 150 service connections (40 CFR 141.2).
- *Large Water System* - in reference to lead and copper in systems, this refers to a water system that serves more than 50,000 persons (40 CFR 141.2).
- *Lead Service Line* - a service line made of lead which connects the water main to the building inlet and any lead pigtail, gooseneck, or other fitting which is connected to such a lead line (40 CFR 141.2).
- *Legionella* - means a genus of bacteria, some species of which have caused a type of pneumonia called Legionnaires Disease (40 CFR 141.2).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.

- *Maximum Contaminant Level (MCL)* - the maximum permissible level of a contaminant in water that is delivered to any user of a public water system (40 CFR 141.2).
- *Maximum Contaminant Level Goal (MCLG)* - refers to the maximum level of a contaminant in drinking water at which no known or anticipated adverse effect on the health of persons would occur, and which allows an adequate margin of safety. MCLGs are nonenforceable health goals (40 CFR 141.2).
- *Maximum Total Trihalomethane (TTHM) Potential* - means the maximum concentration of TTHM produced in a given water containing a disinfectant residual after 7 days at a temperature of 25 °C or above (40 CFR 141.2).
- *Medium Size Water System* - in reference to lead and copper in systems, this refers to a water system that serves greater than 3300 and less than or equal to 50,000 persons (40 CFR 141.2).
- *Near the First Service Connection* - means at one of the 20 percent of all service connections in the entire system that are nearest the water supply treatment facility, as measured by water transport time within the distribution system (40 CFR 141.2).
- *Noncommunity Water System* - a public water system that is not a community water system (40 CFR 141.2).
- *Nontransient, Noncommunity Water System (NTNCWS)* - a public water system that is not a community water system and that regularly serves at least 25 of the same persons over 6 mo/yr (40 CFR 141.2).
- *Person* - an individual, corporation, company, association, partnership, municipality, or state, Federal, or tribal agency (40 CFR 141.2).
- *PicoCurie (pCi)* - quantity of radioactive material producing 2.22 nuclear transformations/min (40 CFR 141.2).
- *Point of Disinfectant Application* - the point where the disinfectant is applied and water downstream of that point is not subject to recontamination by surface water runoff (40 CFR 141.2).
- *Point-of-Entry Treatment Device* - a treatment device applied to the drinking water entering a house or building for the purpose of reducing contaminants in the drinking water distributed throughout the house or building (40 CFR 141.2).
- *Point-of-Use Treatment Device* - a treatment device applied to a single tap used for the purpose of reducing contaminants in drinking water at that one tap (40 CFR 141.2).
- *Public Water System* - a system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. This term includes (40 CFR 141.2):
 1. any collection, treatment, storage, and distribution facilities under control of the operator of such system

2. any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system.

A public water system is either a community water system or a noncommunity water system.

- *Rem* - the unit of dose equivalent from ionizing radiation to the total body or any internal organ or organ system. A millirem (mrem) is 1/1000 of a rem (40 CFR 141.2).
- *Residual Disinfectant Concentration* - ("C" in CT calculations) is the concentration of disinfectant measured in milligrams per liter in a representative sample of water (40 CFR 141.2).
- *Sanitary Survey* - an onsite review of the water source, facilities, equipment, operation and maintenance of a public water system for the purpose of evaluating the adequacy of such source facilities, equipment, operation and maintenance for producing and distributing safe drinking water (40 CFR 141.2).
- *Sedimentation* - a process for removal of solids before filtration by gravity or separation (40 CFR 141.2).
- *Slow Sand Filtration* - a process involving passage of raw water through a bed of sand at low velocity (generally less than 0.4 m/h [1.31 ft/h]) resulting in substantial particulate removal by physical and biological mechanisms (40 CFR 141.2).
- *Standard Sample* - the aliquot of finished drinking water that is examined for the presence of coliform bacteria (40 CFR 141.2).
- *State* - the agency of the state or tribal government that has jurisdiction over public water systems. During any period when a state or tribal government does not have primary enforcement responsibility pursuant to Section 1413 of the SDWA (42 USC 300g-2), the term state means the Regional Administrator of the USEPA (40 CFR 141.2).
- *Supplier of Water* - any person who owns or operates a public water system (40 CFR 141.2).
- *Surface Water* - all water that is open to the atmosphere and subject to surface runoff (40 CFR 141.2).
- *System with a Single Service Connection* - a system which supplies drinking water to consumers via a single service line (40 CFR 141.2).
- *Total Trihalomethanes (TTHM)* - the sum of the concentration in milligrams per liter of the trihalomethane compounds rounded to two significant figures (40 CFR 141.2).
- *Transient Noncommunity Water System (TWS)* - a noncommunity water system that does not regularly serve at least 25 of the same persons over 6 mo per year (40 CFR 141.2).

- *Trihalomethane (THM)* - one of the family of organic compounds, named as derivatives of methane, wherein three of the four hydrogen atoms in methane are each substituted by a halogen atom in the molecular structure (40 CFR 141.2).
- *Virus* - means a virus of fecal origin which is infectious to humans by waterborne transmission (40 CFR 141.2).
- *Waterborne Disease Outbreak* - the significant occurrence of acute infectious illness, epidemiologically associated with the ingestion of water from a public water system which is deficient in treatment, as determined by the appropriate local or state agency (40 CFR 141.2).

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>2-3. Facilities are required to meet regulatory requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulation as a basis of finding).</p>	<p>Determine if any new regulations concerning water quality have been issued since the finalization of the handbook.</p> <p>Verify that the facility is in compliance with newly issued regulations.</p>
<p>2-4. FWS facilities should report all NOV's to the Region and the Service Pollution Control Office (SPCO) (MP).</p>	<p>Determine if the facility has received an NOV relating to drinking water.</p> <p>Verify that the NOV was reported to the Region and the SPCO.</p>
<p>2-5. Analysis of all samples, except turbidity, free chlorine residual, temperature, and pH, to determine compliance with MCLs must be performed in a state-certified laboratory or by a state-approved individual (40 CFR 141.23(k)(6), 141.24(f)(17), 141.24(h)(19), and 141.28).</p>	<p>Verify that the laboratory is certified by reviewing documentation of state certification for laboratory analysis.</p>
<p>2-6. Service controlled systems serving resident or nontransient populations are required to monitor as if they are classified as a nontransient, noncommunity water system (561 FW 4.7(c)(2)).</p>	<p>Verify that Service controlled systems serving resident or nontransient populations (e.g. hatchery buildings, shops, offices, residences, headquarters buildings, laboratories, etc.) monitor as if they are classified as a nontransient, noncommunity water system</p> <p>(NOTE: See checklist items 2-57 through 2-75.)</p>

COMPLIANCE CATEGORY: DRINKING WATER MANAGEMENT Fish and Wildlife Service	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
PUBLIC WATER SYSTEMS	(NOTE: A public water system is a system for providing piped water to the public for human consumption, if such system has at least 15 service connections or regularly serves an average of at least 25 individuals daily at least 60 days out of the year. This term includes: <ul style="list-style-type: none"> - any collection, treatment, storage, and distribution facilities under control of the operator of such system - any collection or pretreatment storage facilities not under such control that are used primarily in connection with such system. <p>A public water system is either a community water system or a noncommunity water system and must comply with the standards outlined in the applicable sections of this checklist.)</p>
General	
2-8. The facility must keep records of actions taken to correct violations of primary drinking water regulations for at least 3 yr (40 CFR 141.33(b)).	Verify that as-built drawings are updated to reflect changes in water supply. Verify that water system records are maintained for at least 3 yr. Determine if there are recurring work programs, spare parts and supplies list, equipment calibration and maintenance history records.
2-9. Facilities are required to survey public water systems according to a specified schedule and maintain records of those reviews (40 CFR 141.21(d) and 141.33(c)).	Verify that noncommunity water systems which do not collect five or more routine samples per month have undergone an initial sanitary survey by 29 June 1999 and are then surveyed every 5 yr thereafter. Verify that community water systems that collect less than five routine biological samples per month are surveyed every 5 yr since 29 June 1994. (NOTE: Noncommunity water systems using only protected and disinfected groundwater are only required to conduct a survey every 10 yr after the initial survey.) Verify that records of sanitary system surveys are kept for 10 yr. Verify that the results of the sanitary surveys have been submitted to the state and determine whether the state has requested an alternate monitoring frequency.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>PUBLIC WATER SYSTEMS</p> <p>Notification and Reporting Requirements</p> <p>2-24. Public water systems are required to maintain on the premises, or at a convenient location specific records (40 CFR 141.33(a), 141.33(b), and 141.33(d)).</p> <p>2-25. When primary drinking water standards are exceeded, public notifications must be made (40 CFR 141.32).</p>	<p>Verify that records of bacteriological analyses are kept for a minimum of 5 yr.</p> <p>Verify that records of chemical analyses are kept for a minimum of 10 yr.</p> <p>Verify that records concerning a variance or exemption granted to the system are kept for a period ending not less than 5 yr following the expiration of the variance or exemption.</p> <p>Verify that, if there was an exceedance, the following public notification procedures were followed:</p> <ul style="list-style-type: none"> - notices were placed in a daily newspaper of general circulation in the area served by the system as soon as possible, but no later than 14 days after the violation or failure - notices were placed in a weekly newspaper of general circulation if there is no daily newspaper - notices were issued by mail delivery, by direct mail or with the water bill, or by hand delivery within 45 days after the violation or failure. <p>(NOTE: The state may waive mail or hand delivery if it is determined that the violation or failure is corrected within the 45-day period.)</p> <p>Verify that, if it was an acute violation, the public radio and television stations were notified no later than 72 h after the violation.</p> <p>Verify that, if public notification was made, it was made according to USEPA guidelines.</p> <p>Verify that, following the initial notice, additional notice is given at least once every 3 mo by mail delivery, or by hand delivery, for as long as the violation exists.</p> <p>(NOTE: Instead of the requirements outlined here, community water systems in an area that is not served by a daily or weekly newspaper of general circulation must give notice by hand delivery or by continuous posting in conspicuous places within the area served by the system. Notice must be given within 72 h for acute violations and 14 days for other violations.)</p>

**COMPLIANCE CATEGORY:
DRINKING WATER MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

2-26. Facilities that operate public water systems must send reports to the state on any failure to comply with applicable biological, turbidity, radioactivity, and chemical standards, and on any failure to comply with monitoring requirements that apply (40 CFR 141.31).

**REVIEWER CHECKS:
July 1995**

Verify that, in general, reports are sent within the first 10 days following the month in which the result is received or the first 10 days following the end of the required monitoring period whenever standards are not met.

Verify that the facility reported failure to comply with any national primary drinking water regulations to the state within 48 h.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
2-49. (continued)	<p>(NOTE: When multiple family residences comprise at least 20 percent of the structure served by a water system, the system may include these types of structures in its sampling pool.)</p> <p>Verify that, if the facility has insufficient Tier 1 sampling sites, it completes its sampling pool with tier 2 sites that consist of buildings, including multiple family residences, that contain copper pipes with lead solder installed after 1982 or contain lead pipes; and/or are served by a lead service line.</p> <p>Verify that, if the facility has insufficient Tier 1 and Tier 2 sites, the facility completes its sample with Tier 3 sites consisting of single family structures that contain copper pipes with lead solder installed before 1983.</p> <p>Verify that, for the initial tap sample, all large water systems monitor during two consecutive 6 mo periods and all small and medium-size water systems monitor during each 6 mo period until:</p> <ul style="list-style-type: none"> - the system exceeds the lead or copper action levels and is then required to implement corrosion control treatment - the system meets the lead and copper action levels during two consecutive 6-mo monitoring periods. <p>(NOTE: A small or medium-sized water system that meets the lead and copper action levels during each of two consecutive 6-mo monitoring periods can reduce the frequency of sampling to once a year. If action levels are met during 3 consecutive years of monitoring, the frequency may be reduced to once every 3 yr.)</p> <p>Verify that, for monitoring after the installation of corrosion control and source water treatment, large systems with optimal corrosion control by 1 January 1997 monitor during two consecutive 6 mo periods by 1 January 1998.</p> <p>Verify that, for monitoring after the installation of corrosion control and source water treatment, small or medium-size systems that install optimal corrosion control within 24 mo after being required to do so by the state, monitor during two consecutive 6-mo periods within 36 mo after being required to install optimal corrosion control treatment.</p> <p>Verify that, for monitoring after the installation of corrosion control and source water treatment required by the state, all systems that install state required systems monitor during two consecutive months within 36 mo after the initial state requirement.</p> <p>Verify that, after the state has specified water quality parameter values for optimal corrosion control, monitoring is done during each subsequent 6-mo monitoring period beginning when the state specified the optimal values.</p>

**COMPLIANCE CATEGORY:
DRINKING WATER MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>2-50. All large water systems and all small and medium size systems that exceed the lead or copper action level are required to monitor for water quality parameters in addition to lead and copper (40 CFR 141.40(h) and 141.87).</p>	<p>Verify that monitoring for water quality parameters is done according to Appendix 2-8.</p>
<p>2-51. Water systems that fail to meet the lead or copper action levels are required to meet specific monitoring requirements (40 CFR 141.80(h) and 141.88).</p>	<p>Verify that systems that exceed lead or copper action levels at the tap collect one source water sample from each entry point to the distribution system within 6 mo after the exceedence.</p> <p>Verify that systems which install source water treatment as required by the state collect an additional source water sample from each entry point to the distribution system during two consecutive 6-mo monitoring periods.</p> <p>Verify that the system monitors as follows when the state specifies maximum permissible source water levels:</p> <ul style="list-style-type: none"> - once during the 3-yr compliance period for water systems using only groundwater - annually for water systems using surface water or a combination of surface and groundwater. <p>(NOTE: Frequency of monitoring may be reduced by the state upon request.)</p>
<p>2-52. In reference to lead and copper in water systems, all water systems are required to fulfill specific reporting requirements (40 CFR 141.90).</p>	<p>Verify that water systems report sampling results for all tap water samples within the first 10 days following the end of each monitoring period.</p> <p>Verify that water systems report the sampling results for all source water samples within the first 10 days following the end of each source water monitoring period.</p> <p>Verify that the following reports are submitted as applicable:</p> <ul style="list-style-type: none"> - corrosion control treatment - source water treatment - lead service line replacement - demonstration of public education program.

**COMPLIANCE CATEGORY:
DRINKING WATER MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

2-53. All systems subject to the lead and copper requirements are required to retain onsite all the original records of sampling data, analysis, reports, surveys, letters, evaluations, state determinations, and any other pertinent documents for at least 12 yr (40 CFR 141.80(j) and 141.91).

**REVIEWER CHECKS:
July 1995**

Verify that records are kept onsite for 12 yr.

**COMPLIANCE CATEGORY:
DRINKING WATER MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>NONCOMMUNITY WATER SYSTEMS</p> <p>Standards</p> <p>2-54. Noncommunity water systems, except as defined under exempted water systems, will not exceed a MCL for nitrate of 10 mg/L (40 CFR 141.11 (a)).</p>	<p>(NOTE: A noncommunity water system is one which is not a community water system. It is a public water system. Noncommunity water systems are classified as either a nontransient noncommunity (NTNC) water system, or a transient, noncommunity water system.)</p> <p>Verify that the nitrate level at noncommunity water systems does not exceed 10 mg/L.</p>

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

**NONCOMMUNITY
WATER SYSTEMS**

Monitoring/Sampling

2-55. Noncommunity water systems, except as defined under exempted water systems, are required to monitor for total coliforms according to a specific schedule (40 CFR 141.21(a)(3)).

Verify that the noncommunity water systems using only groundwater (except groundwater under the direct influence of surface water) and serving 1000 persons or less, monitors each calendar quarter the system provides water to the public.

Verify that the following noncommunity water systems are monitoring for total coliforms according to the schedule outlined in Appendix 2-6:

- systems using only groundwater (except groundwater under the direct influence of surface water) and serving more than 1000 persons during any month
- systems using surface water, in total or in part
- systems using groundwater under the direct influence of surface water.

2-56. Sampling for turbidity is required to be done at noncommunity water systems which must install filtration according to a specific schedule until the time at which the systems installs filtration (40 CFR 141.22).

Verify that suppliers of water for noncommunity water systems sample for turbidity at a representative entry point to the water distribution system at least once daily.

Verify that, when the turbidity levels are exceeded, immediate resampling is done.

Verify that the state is notified within 48 h.

(NOTE: These systems must monitor for turbidity according to 40 CFR 141.73 and 141.74 after installation of filtration. See checklist item 2-16.)

July 1995**

**NTNC WATER
SYSTEMS**

Lead and Copper

2-66. Facilities with NTNC water systems must notify their users about an exceedence of lead in drinking water systems (40 CFR 141.85 and 141.90(f)).

Verify that public education materials are distributed in the following manner when a water system exceeds the lead action level based on tap water samples:

- the material is in the appropriate languages where languages other than English are spoken by a significant proportion of the population
- within 60 days after exceeding the lead action level:
 - notices are insert in each customer's water utility bill
 - information is provided to the editorial departments of the major daily and weekly newspapers circulated in the community
 - pamphlets or brochures are delivered to pertinent facilities, organizations, schools and medical centers
 - public service announcements are submitted to at least five of the radio and television stations broadcasting to the community.

Verify that the notification tasks are repeated every 6 mo for as long as a community water system exceeds the lead action level.

Verify that an NTNC water system delivers the public education materials by posting informational posters and distributing brochures.

Verify that an NTNC water system repeats distribution of information at least once each calendar year in which the system exceeds the lead action level.

(NOTE: The text of written materials and broadcast materials can be found in 40 CFR 141.85(a) and 141.85(b).)

Verify that, by 31 December, any water system that has had to issue public education materials submits a letter to the state indicating that the system has delivered the public education materials as required each year that the levels are exceeded.

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

**SOLE SOURCE
AQUIFER**

2-77. Projects that may affect the recharge zone or stream flow source zone of a designated sole source aquifer are regulated (40 CFR 149.103 and 149.104).

(NOTE: Currently the only Federally designated sole source aquifers are the Edwards Aquifer in the San Antonio, TX area and the Buried Valley Aquifer System in southwest Ohio.)

Determine if the facility is located near a designated sole source aquifer.

Determine if the facility uses water from the aquifer and what impact water use may have on Federally listed endangered species that are dependent on the aquifer.

Verify that the facility maintains a list of projects for which environmental impact statements will be prepared.

Verify that, if any projects may potentially cause direct or indirect contamination through its recharge zone, a petition has been submitted to the USEPA regional administrator.

Appendix 2-7

Monitoring and Sampling Parameters for Lead and Copper in Drinking Water (40 CFR 141.86(c) and 141.86(d))

Number of Sampling Sites Required

System Size (people served)	No. of sites (standard monitoring)	No. of sites (reduced monitoring)
> 100,000	100	50
10,001 - 100,000	60	30
3301 - 10,000	40	20
501 - 3300	20	10
101 - 500	10	5
≤ 100	5	5

Dates for the Start of Monitoring

System Size (people served)	First 6-mo monitoring period begins on:
> 50,000	1 Jan 1992
3301 - 50,000	1 July 1992
≤ 3300	1 July 1993

Appendix 2-8

Monitoring Requirements for Water Quality Parameters (40 CFR 141.87)

(NOTE: This table is for illustrative purposes, consult the text of the regulation for actual details).

Monitoring Period	Parameters ¹	Location	Frequency
Initial Monitoring	pH, alkalinity, orthophosphate or silica ² , calcium, conductivity, temperature.	Taps and at entry points in distribution system	Every 6 mo
After Installation of Corrosion Control	pH, alkalinity, orthophosphate or silica, calcium ³ .	Taps	Every 6 mo
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual ⁴ .	Entry points to distribution system	Biweekly
After State Specifies Parameter Values for Optimal Corrosion Control	pH, alkalinity, orthophosphate or silica ² , calcium ³ .	Taps	Every 6 mo
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual ⁴ .	Entry points to distribution system	Biweekly
Reduced Monitoring	pH; alkalinity, orthophosphate or silica ² , calcium ³ .	Taps	Every 6 mo at a reduced number of sites
	pH, alkalinity dosage rate and concentration (if alkalinity adjusted as a part of corrosion control), inhibitor dosage rate and inhibitor residual ⁴ .	Entry points to distribution system	Biweekly

1. Small and medium-size systems have to monitor for water quality parameters only during monitoring periods in which the system exceeds the lead or copper action level.
2. Orthophosphates must be measured only when an inhibitor containing a phosphate component is used. Silica must be measured only when an inhibitor containing silicate compounds is used.

(continued)

3. Calcium must be measured only when calcium carbonate stabilization is used as a part of corrosion control.
4. Inhibitor dosage rates and inhibitor residual concentrations (orthophosphates or silica) must be measured only when an inhibitor is used.

SECTION 3

Hazardous Materials Management

A. Applicability	1
B. Federal Legislation	1
C. State and Local Regulations	3
D. FWS/DOI Manuals	3
E. Key Compliance Requirements	3
F. Key Compliance Definitions	5
Guidance for Checklist Users	9

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 3

HAZARDOUS MATERIALS MANAGEMENT

A. Applicability

This section primarily addresses the proper storage and handling of chemicals and the spill contingency and response requirements related to hazardous materials. Oil, pesticides, and asbestos are hazardous materials which require special management practices at FWS facilities, and are addressed in separate sections. Radioactive substances and the general category of hazardous wastes are also not included in this section. This section does not focus on individual hazardous chemicals or substances used, but deals with the generic requirements and management practices (MPs) associated with minimizing impacts on the environment due to spills or releases of hazardous materials because of improper storage and handling.

All underground storage tank (UST) regulations that apply to hazardous materials have been consolidated into Section 9, Underground Storage Tank (UST) Management.

B. Federal Legislation

- *The Occupational Safety and Health Act (OSHA)* of 1970. This act, last amended in November 1990, 29 U.S. Code (USC) 651-678, is a Federal statute which governs the issues related to occupational safety and health. The purpose and policy of this act is to assure every working man and woman in the nation safe and healthful working condition and to preserve our human resources by, among other things, providing for the development and publication of occupational safety and health standards, providing for an effective enforcement program, and providing for appropriate reporting procedures with respect to occupational safety and health which procedures will help achieve the objectives of this Act and accurately describe the nature of the occupational safety and health (29 USC 651(b)(9)(10)(12)).
- *The Hazardous Materials Transportation Act* of 1975. This act, as last amended in November 1990, 49 USC 1801-1819, et al, is the Federal legislation which governs the transportation of hazardous materials in the nation. The policy of Congress is to improve the regulatory and enforcement authority of the Secretary of Transportation to protect the Nation adequately against the risks to life and property which are inherent in the transportation of hazardous materials in commerce (49 USC 1801).
- *Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)* of 1980. This act was amended by the *Superfund Amendments and Reauthorization Act (SARA)* of 1986, 42 USC 9601-11050, 10 USC 2701-2810 et. al. CERCLA/SARA regulates the prevention, control, and compensation relating to environmental pollution.
- *The Emergency Planning and Community Right-to-Know Act (EPCRA)* of 1986. This act was designed to promote emergency planning and preparedness at both the state and local level. It provides citizens and local governments with information regarding the

potential hazards in their community. EPCRA requires the use of emergency planning and designates state and local governments as recipients for information regarding chemicals and toxins used in the community.

- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the Agency funds meet applicable Federal, state, and local environmental requirements and for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- EO 12856, *Federal Compliance With Right-to-Know Laws and Pollution Prevention Requirements*. This EO requires the heads of Federal agencies to develop a written pollution prevention strategy for their agencies. Military departments are covered under the auspices of the Department of Defense (DOD). The head of each agency shall ensure that each of its covered facilities develops a written pollution prevention plan no later than the end of 1995. Federal agencies are required to conduct audits of their facilities as necessary to ensure development of these plans and of the facilities pollution prevention program. Each Federal agency will also develop voluntary goals to reduce the agency's total releases of toxic chemicals to the environment, and offsite transfers of such chemicals for treatment and disposal are publicly reported.
- The National Fire Code, *Flammable and Combustible Liquids Code*, National Fire Protection Association (NFPA) 30, prohibits the storage of Class I and Class II liquids in plastic containers in general-purpose warehousing.
- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards*.
 - EO 12856, *Federal Compliance with Right-To-Know Laws and Pollution Prevention Requirements*.
 - 29 CFR 1910, *Occupational Safety and Health Standards*.
 - 40 CFR 300, *National Oil and Hazardous Substances Pollution Contingency Plan*.
 - 40 CFR 302, *Reportable Quantities of Hazardous Materials (Table 302.4)*.
 - 40 CFR 355, *Emergency Planning and Notification*.
 - 40 CFR 370, *Hazardous Chemical Reporting: Community Right-To-Know*.
 - 40 CFR 372, *Toxic Chemical Release Reporting and Community Right-To-Know*.
 - 49 CFR 171, *General Information, Regulations, and Definitions*.
 - 49 CFR 172, *Hazardous Materials Tables, Hazardous Materials Communications Requirements and Emergency Response Information Requirements*.
 - 49 CFR 173, *Shippers, General Requirements for shipments and Packaging*.
 - 49 CFR 178, *Specifications by Packaging*.
 - 49 CFR 179, *Specifications for Tank Cars*.
 - NFPA, *Fire Protection Guide of Hazardous Materials*.

C. State/Local Regulations

Hazardous materials may be regulated on the state level as well as local agencies (county/city fire departments) who may require flammable/combustible materials to meet certain storage requirements. Usually, these local ordinances will follow the NFPA *Fire Protection Guide on Hazardous Materials* (Pamphlets 325A, 325M, 491, 491F, and 704M).

D. FWS/DOI Manuals

No applicable manuals final as of the publication of this handbook.

E. Key Compliance Requirements

- **Planning and Documentation** - Facilities should maintain a master listing of hazardous materials storage sites. When the facility needs outside fire protection help, it should tell the local fire department the types of hazardous chemicals it uses, the areas where it uses them, what it uses them for, and the amount it uses. Facilities are required to have Material Safety Data Sheet (MSDS) files for each hazardous chemical it stores and uses, not including such items as hazardous waste, tobacco, or drugs and cosmetics meant for personal use (29 CFR 1910.1200(b) and 1910.1200(g)).
- **Personnel Training** - Facilities are required to provide all employees with written information about hazardous chemicals to which they are exposed. Personnel who work with hazardous materials are required to be trained in the use of and potential hazards of such materials. All employees and supervisors working on sites exposed to hazardous materials or other hazards are required to be trained before engaging in these activities (29 CFR 1910.1200).
- **Pollution Prevention** - FWS facilities are required to prepare Pollution Prevention Plans by 31 December 1995. Additionally, it is Service policy that facilities will conduct their activities in a manner to prevent pollution through the use of waste source reduction and waste recycling.
- **Hazardous Substance Release Reporting** - FWS facilities are required to notify the National Response Center (NRC) immediately if it releases hazardous substances in excess of or equal to reportable quantities (RQs) (see Appendix 3-1). Facilities with continuous and stable releases have limited notification requirements. If a facility produces, uses, or stores extremely hazardous chemicals, and has a reportable release of these substances, it is required to notify the community emergency coordinator or local planning committee or Governor if there is no planning committee (40 CFR 302.1 through 302.6, 302.8, and 355.40).
- **Emergency Planning** - A facility with extremely hazardous substances in amounts equal to or greater than the limits found in Appendix 3-1 are required to notify the emergency response commission and designate a representative to participate in local emergency planning (40 CFR 355.10 through 355.40 and 355 Appendix A).
- **Right-to-Know Requirements** - Facilities required by OSHA to have an MSDS for a hazardous chemical are required to submit the MSDSs to the emergency commission and fire

department with jurisdiction over the facility. New MSDSs will be submitted within 3 mo after discovery of significant new information (40 CFR 370.20 through 370.28).

- **Hazardous Materials Storage** - Containers for hazardous chemicals are required to be labeled or tagged with the identity of the substance and appropriate warning markings. Areas where hazardous materials are stored or used around the facility are required to be kept free from accumulations of materials that create a hazard, such as leaking containers, or a placement of containers in a manner that would create hazards such as tripping, fire, or pests. Substances that together may create a fire hazard must be separated (29 CFR 1910.176(c), 1910.1200(b), and 1200(f)).
- **Hazardous Materials in Laboratories** - Facilities that use hazardous chemicals in laboratories are required to have a Chemical Hygiene Plan which is reviewed annually. Such facilities are also required to provide employees with information and training about the hazardous chemicals in their work areas. Records about the exposure of employees are to be kept along with medical records (29 CFR 1910.1450(e), 1910.1450(f), 1910.1450(h), and 1910.1450(j)).
- **Storage of Flammable/Combustibles** - In general, containers of flammable combustible liquids are to be stored and handled so as to not damage the container or label, block exits, or create a fire hazard (29 CFR 1910.106(d)).
- **Flammable Combustible Storage Cabinets** - Storage cabinets are to be fire resistant and labeled **FLAMMABLE - KEEP FIRE AWAY**. No more than 60 gal [227.12 L] of Class I or Class II liquids and no more than 120 gal [454.23 L] of Class III liquids can be stored in a cabinet (29 CFR 1910.106(d)(3)).
- **Flammable Combustible Storage Rooms** - Storage rooms inside a building are to be fire resistant and have a raised sill or ramp to prevent the flow of spilled material from exiting the room. Ventilation and clear aisles must be provided and dispensing must be done by an approved pump or self-closing faucet (29 CFR 1910.106(d)(4)).
- **Flammable/Combustible Warehouses or Storage Buildings** - These structures will have 3 ft [0.91 m] wide aisles for access to doors, windows, or standpipe connections. Materials will be stacked using pallets or dunnage when needed for stabilization and fire protection must be provided (29 CFR 1910.106(d)(5)(iv)).
- **Outside Storage of Flammable Combustible Liquids** - Containers of flammable/combustible liquids can be stored outside if no more than 1100 gal [4163.95 L] of liquid are stored adjacent to a building. More than 1100 gal [4163.95 L] can be stored if there are 10 ft [3.05 m] or more between buildings and the nearest flammable container. The storage area must be graded to divert spill or surrounded by a curb (29 CFR 1910.106(d)(6)).
- **Storage of Flammable/Combustibles in Industrial Areas** - Specific guidelines, requirements, or operating standards apply wherever flammable/combustible materials are stored, dispensed, or used in industrial plants, are in incidental storage, or in use in unit operations. This includes availability of portable fire extinguishers, precautions being taken to prevent ignition, and use of maintenance and operating practices to control leakage and prevent accidental escape of flammable/combustible liquids (29 CFR 1910.106(e)(2) through 1910.106(e)(9)).

- **Flammable Combustible Liquid Storage Tanks** - Storage tanks are to be built of steel except in certain circumstances. Outside aboveground tanks for flammable liquids are to meet requirements for distance between tanks, firefighting access, and containment. When flammable vapor may be present from storage tanks, heat sources will be kept from the tanks. Tanks are required to have been strength-tested before being used (29 CFR 1910.106(b)).
- **Compressed Gases** - Regardless of where the cylinders are stored, NO SMOKING signs should be posted and actions taken to prevent fire. Compressed gases are required to be stored according to the Compressed Gas Association Pamphlet P-1-1965 (29 CFR 1910.101).
- **Acid Storage** - Bulk storage of acids should be done in buildings that are one story in height with ventilation. Safety equipment must be available along with fire protection. The building is to be labeled NO SMOKING and heated to prevent freezing (MP).
- **Hazardous Materials Transportation** - The regulations in Title 49, Subchapter C of the CFR, detail requirements for the transportation of hazardous materials. 49 CFR 171.1(c) stipulates that these requirements apply when materials are being transported in commerce. According to a representative from the Department of Transportation (DOT), commerce is defined in terms of making a profit in this instance, therefore, Subchapter C does not apply to Federal agencies.
- **Recordkeeping** - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- **Aerosol** - a material which is dispensed from its container as a mist, spray, or foam by a propellant under pressure (29 CFR 1910.106(a)(1)).
- **Approved** - listed or approved by Underwriters Laboratories, Inc., Factory Mutual Engineering Corporation, The Bureau of Mines, National Institute of Occupational Safety and Health (NIOSH), The American National Standards Institute (ANSI), NFPA, or other nationally recognized agencies which list, approve, test or develop specifications for equipment to meet fire protection, health, or safety requirements (29 CFR 1910.106(a)(35)).
- **Atmospheric Tank** - a storage tank which has been designed to operate at pressures from atmospheric through 0.5 psig (29 CFR 1910.106(a)(2)).
- **Barrel** - a volume of 42 U.S. gallons (29 CFR 1910.106(a)(33)).
- **Basement** - a story of a building or structure having one-half or more of its height below ground level and to which access for fire fighting purposes is unduly restricted (29 CFR 1910.106(a)(4)).
- **Boiling Point** - the temperature at which a liquid starts to boil when at atmospheric pressure (14.7 psia [760 mm], as determined by ASTM test D-86-72) (29 CFR 1910.106(a)(5)).

- *Bulk Plant* - that portion of the property where flammable or combustible liquids are received by tank vessel, pipelines, tank car, or tank vehicle, and are stored or blended in bulk for the purpose of distributing such liquids by tank vessel pipeline, car, tank vehicle, or container (29 CFR 1910.106(a)(7)).
- *Closed Container* - a container so sealed with a lid or other closing device that neither liquid and/or vapor will escape from it at ordinary temperatures (29 CFR 1910.106(a)(9)).
- *Combustible Liquid* - a liquid having a flashpoint at or above 100 °F (37.8 °C). Combustible liquids are categorized as Class II or Class III liquids and are further subdivided as follows (29 CFR 1910.106(a)(18)):
 1. Class II liquids are those having a flashpoint at or above 100 °F (37.8 °C), and below 140 °F (60 °C) except any mixture having components with flashpoints of 200 °F (93.3 °C) or higher, the volume of which makes up 99 percent or more of the total volume of the mixture.
 2. Class III A liquids are those having flashpoints at or above 140 °F (60 °C), and below 200 °F (93.3 °C) except any mixture having components with flashpoints of 200 °F (93.3 °C) or higher, the total volume of which make up 99 percent or more of the total volume of the mixture.
 3. Class III B liquids are those having flashpoints at or above 200 °F (93.3 °C).
- *Extremely Hazardous Substances* - all substances listed in Appendices A and B in 40 CFR 355 (see the column labeled in Appendix 3-1) (40 CFR 355.20).
- *Fire Area* - that portion of a building separated from the remainder by construction having a rated fire resistance of at least 1 h and having all communicating openings properly protected by an assembly having a fire resistance rating of at least 1 h (29 CFR 1910.106(a)(12)).
- *Flammable Aerosol* - an aerosol that is required to be labeled FLAMMABLE under the *Federal Hazardous Substance Labeling Act* (15 USC 1261). These aerosols are considered Class IA liquids (29 CFR 1910.106(a)(19)).
- *Flammable Liquid* - a liquid with a flashpoint below 100 °F (37.8 °C) except any mixture having components with flashpoints of 100 °F (37.8 °C) or higher, the total of which make up 99 percent or more of the total volume of the mixture. Flammable liquids are categorized as Class 1 liquids, and are further subdivided as follows (29 CFR 1910.106(a)(19)):
 1. Class 1A are those that have a flashpoint below 73 °F (22.8 °C) and boiling point below 100 °F (37.8 °C)
 2. Class 1B are those that have flashpoints below 73 °F (22.8 °C) and boiling points at or above 100 °F (37.8 °C)
 3. Class 1C are those that have flashpoints at or above 73 °F (22.8 °C) and below 100 °F (37.8 °C).
- *Flashpoint* - the minimum temperature at which a liquid gives off vapor in sufficient concentration to form an ignitable mixture with air near the surface of the liquid. Flashpoints are established using several standard closed cup test methods (29 CFR 1910.106(a)(14)).
- *Hazardous Chemical* - in relationship to laboratories, a chemical for which there is statistically significant evidence based on at least one study conducted in accordance with estab-

lished scientific principles that acute or chronic health effects may occur in exposed employees (29 CFR 1910.1450(b)).

- *Hazardous Substance* - any substance designated pursuant to 40 CFR 302 (see the column titled Hazardous Substance Reportable Quantity (RQ) in Appendix 3-1) (40 CFR 302.3).
- *Institutional Occupancy* - the occupancy or use of a building or structure or any portion thereof by persons harbored or detained to receive medical, charitable or other care or treatment or by persons involuntarily detained (29 CFR 1910.106(a)(16)).
- *Laboratory* - a facility where the laboratory use of hazardous chemicals occurs. It is a workplace where relatively small quantities of hazardous chemicals are used on a nonproduction basis (29 CFR 1910.1450(b)).
- *Laboratory Scale* - work with substances in which the containers used for reactions, transfers, and other handling of substances are designed to be easily and safely manipulated by one person (29 CFR 1910.1450(b)). • *Laboratory Use of a Hazardous Chemical* - handling or use of such chemicals in which all of the following conditions are met (29 CFR 1910.1450(b)):
 1. chemical manipulations are carried out on a laboratory scale
 2. multiple chemical procedures or chemicals are used
 3. the procedures involved are not part of a production process, nor in any way simulate a production process
 4. protective laboratory practices and equipment are available and in common use to minimize the potential for employee exposure to hazardous chemicals.
- *Liquid* - any material with a fluidity greater than that of 300 penetration asphalt when tested in accordance with ASTM Test D-5-73. When not otherwise identified, the term liquid will include both flammable and combustible liquid (29 CFR 1910.106(a)(17)).
- *Low Pressure Tank* - a storage tank which has been designed to operate at pressures above 0.5 psig but not more than 15 psig (29 CFR 1910.106(a)(21)).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Material Safety Data Sheet (MSDS)* - written or printed material which contains information on hazardous chemicals such as common name, physical hazards, health hazards (29 CFR 1910.1200(c)).
- *Office Occupancy* - the occupancy or use of a building or structure or any portion thereof for the transaction of business, or the rendering or receiving of professional services (29 CFR 1910.106(a)(24)).
- *Portable Tank* - a closed container having a liquid capacity over 60 gal [227.12 L] and not intended for fixed installation (29 CFR 1910.106(a)(25)).
- *Pressure Vessel* - a storage tank or container designed to operate at pressures above 15 psig (29 CFR 1910.106(a)(29)).

- *Protection for Exposure* - adequate fire protection for structures on property adjacent to tanks, where there are employees of the establishment (29 CFR 1910.106(a)(27)).
- *Safety Can* - an approved container of not more than 5 gal [18.95 L] capacity, having a spring-closing lid, spout cover and so designed that it will safely relieve internal pressure when subjected to fire exposure (29 CFR 1910.106(a)(29)).
- *Select Carcinogens* - any substance that meets one of the following criteria (29 CFR 1910.1450(b)):
 1. it is regulated by OSHA as a carcinogen
 2. it is listed under the category "known to be carcinogens" and the Annual Report on Carcinogens published by the National Toxicology Program (NTP)
 3. it is listed under Group 1 (carcinogenic to humans) by the International Agency for Research on Cancer Monographs (IARC)
 4. it is listed in either Group 2A or 2B by IARC or under the category "reasonably anticipated to be carcinogens" by NTP, and causes statistically significant tumor incidences in experimental animals under specific situations.
- *Toxic Chemical* - a chemical or chemical category listed in 40 CFR 372.65 (see the column titled Toxic Chemicals in Appendix 3-1) (40 CFR 372.3).
- *Vapor Pressure* - the pressure, measured in psia, exerted by a volatile liquid (29 CFR 1910.106(a)(30)).

HAZARDOUS MATERIALS MANAGEMENT

Records To Review

- Hazardous Substance Spill Control and Contingency Plan
- Spill records
- Emergency plan documents
- MSDSs
- Inventory records
- Hazardous substance release reports
- Shipping papers
- Training records
- Placarding of hazardous materials
- Hazardous Communication Program
- Chemical Hygiene Plan (labs)

Physical Features To Inspect

- Hazardous material storage areas
- Shop activities
- Shipping and receiving area

**COMPLIANCE CATEGORY:
HAZARDOUS MATERIALS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>ALL FACILITIES</p> <p>3-1. The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p>3-2. FWS facilities are required to comply with state and local regulations (EO 12088, Section 1-1).</p> <p>3-3. Facilities are required to meet regulatory requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulation as a basis of finding).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, inter-agency agreements, or equivalent state enforcement actions.</p> <p>Verify that the facility is complying with state and local requirements.</p> <p>Verify that the facility is operating according to permits issued by the state or local agencies.</p> <p>(NOTE: Issues typically regulated by state and local agencies include:</p> <ul style="list-style-type: none"> - transportation of hazardous materials - notification requirements - response plan requirements - spill response requirements.) <p>Determine if any new regulations concerning hazardous materials have been issued since the finalization of the handbook.</p> <p>Verify that the facility is in compliance with newly issued regulations.</p>

**COMPLIANCE CATEGORY:
HAZARDOUS MATERIALS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>3-4. FWS facilities should report all NOV's to the Region and the Service Pollution Control Office (SPCO) (MP).</p>	<p>Determine if the facility has received an NOV relating to hazardous materials.</p> <p>Verify that the NOV was reported to the Region and the SPCO.</p>
<p>3-5. A master listing of all hazardous materials storage sites should be maintained at the facility (MP).</p>	<p>Determine the locations of all hazardous materials storage areas on the facility by interviewing staff.</p> <p>(NOTE: Hazardous constituents of expired materials discovered during the inventory process, or at any other time, should be identified prior to disposal, see appropriate checklist item in Hazardous Waste Management.)</p>
<p>3-6. Facilities should be receiving specific information from tenant operations (MP).</p>	<p>Verify that FWS facilities with tenant operations receive the following information from their tenants:</p> <ul style="list-style-type: none"> - information on spills - pesticide application information - copies of permits - EPCRA reports - hazardous waste disposal amounts and destinations - notices of violations - location of hazardous material and hazardous waste storage areas.
<p>3-7. Facilities should coordinate with the local fire department concerning the types of hazardous chemicals used at the facility, the areas where they are used, what they are used for, and the quantities which are used in a given operation (MP).</p>	<p>Determine if the facility has coordinated efforts with the local fire department.</p> <p>Determine if the department is aware of areas that are at high risk for chemical incidents.</p>

**COMPLIANCE CATEGORY:
HAZARDOUS MATERIALS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>3-8. Specific persons should be designated responsible for hazardous materials storage areas, and the precise nature of their responsibilities should be specified (MP).</p> <p>3-9. Facilities are required to have on file an MSDS for each hazardous chemical stored and used at the facility (29 CFR 1910.1200(b)(3)(ii), 1910.1200(b)(4)(ii), 1910.1200(b)(6), 1910.1200(g)(1) and 1910.1200(g)(8)).</p>	<p>Verify that specific individuals have been designated responsible for hazardous materials storage areas.</p> <p>Verify that the individuals designated responsible for hazardous materials storage areas are aware of the precise nature of their responsibilities.</p> <p>Verify that an MSDS is on file and readily accessible to workers on all shifts in the workplace for each hazardous material stored or used.</p> <p>(NOTE: These requirements do not apply to:</p> <ul style="list-style-type: none"> - hazardous waste - tobacco or tobacco products - wood or wood products - articles which are defined as a manufactured item other than a fluid or particle which under normal conditions of use does not release more than very small amounts of a hazardous chemical and does not pose a physical hazard or health risk to personnel and that: <ul style="list-style-type: none"> - is formed to a specific shape or design during manufacture - has end use functions dependent in whole or in part upon its shape or design during end use - food or alcoholic beverages which are sold, used, or prepared in a retail establishment and foods intended for consumption by personnel - any drug as that term is defined in the <i>Federal Food, Drug, and Cosmetic Act</i> when it is in its solid, final form for direct administration - cosmetics which are packaged for sale or intended for personal use - any consumer product or hazardous substance as defined in the <i>Consumer Product Safety Act</i> and the <i>Federal Hazardous Substances Act</i> where the facility can demonstrate that it is used in the workplace in the same manner as normal consumer use, and which use results in a duration and frequency of exposure which is not greater than exposure experienced by consumers - ionizing and nonionizing radiation - biological hazards.) <p>(NOTE: This requirement also applies to work operations where employees only handle chemicals in sealed containers which are not opened under normal conditions of use.)</p>

**COMPLIANCE CATEGORY:
HAZARDOUS MATERIALS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>3-10. Containers of hazardous chemicals in the workplace are required to be labeled, tagged, or marked with specific information (29 CFR 1910.1200(b)(3)(i), 1910.1200 (b)(4)(i), 1910.1200(b)(5), and 1910.1200(f)(5) through 1910.1200(f)(7)).</p>	<p>Verify that all containers of hazardous chemicals in the workplace are labeled with the following information:</p> <ul style="list-style-type: none"> - identity of the hazardous chemical (same as on MSDS) - appropriate hazard warnings. <p>(NOTE: The facility may use signs, placards, process sheets, batch tickets, operating procedures, or other written materials instead of attaching labels to individual stationary process containers as long as the alternate method identifies the containers to which it is applicable.)</p> <p>(NOTE: Portable containers into which hazardous chemicals are transferred from labeled containers and which are intended only for the immediate use of the employee who performs the transfer are not required to be marked.)</p> <p>(NOTE: This requirement also applies to work operations where employees only handle chemicals in sealed containers which are not opened under normal conditions.)</p> <p>(NOTE: These requirements do not apply to:</p> <ul style="list-style-type: none"> - hazardous waste - tobacco or tobacco products - wood or wood products - articles which are defined as a manufactured item other than a fluid or particle which, under normal conditions of use, does not release more than very small amounts of a hazardous chemical and does not pose a physical hazard or health risk to personnel and that: <ul style="list-style-type: none"> - is formed to a specific shape or design during manufacture - has end use functions dependent in whole or in part upon its shape or design during end use - food or alcoholic beverages which are sold, used, or prepared in a retail establishment and foods intended for consumption by personnel - any drug as that term is defined in the <i>Federal Food, Drug, and Cosmetic Act</i> when it is in its solid, final form for direct administration - cosmetics which are packaged for sale or intended for personal use - any consumer product or hazardous substance as defined in the <i>Consumer Product Safety Act</i> and the <i>Federal Hazardous Substances Act</i> where the facility can demonstrate that it is used in the workplace in the same manner as normal consumer use, and which use results in a duration and frequency of exposure which is not greater than exposure experienced by consumers - ionizing and nonionizing radiation - biological hazards.)

**COMPLIANCE CATEGORY:
HAZARDOUS MATERIALS MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

3-11. Specific house-keeping requirements must be met in areas where hazardous materials are stored (29 CFR 1910.176(c)).

**REVIEWER CHECKS:
July 1995**

Verify that areas where hazardous materials are stored and/or used around the facility are free from accumulations of materials that create a hazard from tripping, fire, explosion, or pest harborage.

(NOTE: The following are suggested housekeeping practices:

- drums/containers are not leaking and are tightly sealed
- drip pans and/or absorbent material are placed under containers
- dispensing areas are located away from catch basins and storm drains.)

**COMPLIANCE CATEGORY:
HAZARDOUS MATERIALS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>PERSONNEL TRAINING</p> <p>3-12. Facilities are required to have a written hazard communication program that is designed to provide all employees with information about the hazardous chemicals to which they are exposed (29 CFR 1910.1200 (b)(1) and 1910.1200 (e)(1)).</p>	<p>Verify that there is a written hazard communication program that contains the following:</p> <ul style="list-style-type: none"> - how general training will be done to inform employees of issues such as MSDSs and hazardous material labels and other warning signs - a list of the hazardous chemicals known to be present (can be done for the entire workplace or individual work areas) - the methods the facility will use to inform the employees of the hazards associated with nonroutine tasks and the hazards associated with chemicals contained in unlabeled pipes in their work areas: <ul style="list-style-type: none"> - identity of the hazardous chemicals contained - appropriate hazard warning - details of employee training. <p>Verify that, if the facility is operated such that employees from more than one employer may be exposed (for example, employees of a construction contractor working onsite), the hazard communication program also addresses what the facility will do to:</p> <ul style="list-style-type: none"> - provide the other employees onsite with access to MSDSs for each hazardous chemical the other employer's employees may be exposed to while working - inform the other employers of the labeling system used in the workplace - inform the other employers of any precautionary measures that need to be taken to protect employees during the workplace's normal operating conditions and in foreseeable emergencies. <p>(NOTE: This requirement also applies to work operations where employees only handle chemicals in sealed containers which are not opened under normal conditions.)</p>

Fish and Wildlife Service

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

**POLLUTION
PREVENTION**

3-14. Facilities are required to prepare Pollution Prevention Plans by 31 December 1995 (MP).

Verify that the facility is in the process of preparing a Pollution Prevention Plan that outlines what the facility is going to do to minimize pollution.

(NOTE: This MP is based on guidelines in EO 12856, Section 3-302(d).)

3-15. It is Service policy that, where practicable, will use waste source reduction and waste recycling to minimize production of pollutants (560 FW 2.2).

Verify that the facility has a plan to recycle, reuse material, and substitute less hazardous products to greatest extent possible.

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

3-55. Written hazardous materials incident reports are required to be submitted to the DOT of each hazardous material incident within 30 days of the incident (49 CFR 171.16).

Verify that detailed hazardous materials incident reports (DHMIR) are submitted to the DOT within 30 days if:

- any of the circumstances of 49 CFR 171.15 are met
- there has been an unintentional release of hazardous materials from a package
- any quantity of hazardous materials has been discharged during transportation.

(NOTE: Guidelines for assistance in completing a DHMIR may be obtained free of charge from the Office of Hazardous Materials Transportation, DHM-51, U.S. Department of Transportation, Washington DC 20590.)

Verify that a copy of the report is retained on site for 2 yr (unless written permission has been obtained from the DOT to maintain records elsewhere).

3-56. Facilities are required to train each of its employees involved in the transportation of hazardous materials according to specific requirements (49 CFR 172.704(a), 172.704(b), 172.704(c)(3), 172.704(c)(4), 172.704(e), and 173.1(b)).

(NOTE: Training conducted by facilities to comply with the hazard communication programs required by the Occupational Safety and Health Administration (OSHA) of the Department of Labor (29 CFR 1910.120) or the USEPA (40 CFR 311.1) may be used to satisfy these requirements to the extent that the training addresses the requirements.)

(NOTE: Relevant training received by the employee from a previous employer or other source may be used to satisfy these requirements, provided a current record of the training is obtained from the employee's previous employer.)

Verify that each employee is provided with general awareness/familiarization training designed to do the following:

- provide familiarity with the requirements of 49 CFR 171 through 177
- enable each employee to recognize and identify hazardous materials consistent with the hazard communication standards of 49 CFR 171 through 177.

Verify that each employee is provided with function-specific training concerning those requirements of 49 CFR 171 through 177 that are specifically applicable to the functions the employee performs.

(NOTE: Training related to the requirements of the ICAO Technical Instructions and the IMDG Code may be provided as an alternative to function-specific training on the requirements of 49 CFR 171 through 177 to the extent such training addresses functions authorized by 49 CFR 171.11 and 171.12.)

Appendix 3-1

Consolidated List of Chemicals Covered in EPCRA

(NOTE: This list is constantly changing and the Federal Register should be consulted for the most up-to-date information.)

This consolidated chemical list includes chemicals subject to reporting requirements under EPCRA. This consolidated chemical list does not contain all chemicals that are subject to reporting requirements in Sections 311 and 312 of SARA Title III. These hazardous chemicals, for which MSDSs must be developed under the *Occupational Safety and Health Act*, Hazard Communication Standards, are identified by broad criteria rather than enumeration. There are over 50,000 such substances that meet the criteria. The consolidated list has been prepared to help determine whether there is a need to submit reports under EPCRA and, for a specific chemical, what reports need to be submitted.

The list includes chemicals under the four following Federal statutory provisions:

1. SARA Section 302 Extremely Hazardous Substances - the presence of which, in sufficient quantities, requires certain emergency planning activities to be conducted. Releases of these substances are also subject to reporting under Section 304 of Title III. The final rule listing the extremely hazardous substances and their threshold planning quantities (TPQ) is found in 40 CFR 355.
2. CERCLA Hazardous Substances (RQ) Chemicals - releases of which are subject to reporting under the CERCLA or Superfund of 1980. Such releases are also subject to reporting under Section 304 of Title III. CERCLA hazardous substances, and their RQs, are listed in 40 CFR 302, Table 302.4.
3. SARA Section 313 Toxic Chemicals - emissions or releases of which must be reported annually as part of SARA Title III's community right-to-know provisions. A list of these toxic chemicals is found in 40 CFR 372.65.
4. RCRA Hazardous Wastes - from the "P" and "U" lists (40 CFR 261.33) of specific chemicals. RCRA hazardous wastes from the "F" and "K" lists are not included here; such waste streams are also CERCLA hazardous substances. This listing is provided as an indicator that you may already have data on a specific chemical that can be used for Title III reporting purposes.

There are four columns in the consolidated list corresponding to these four statutory provisions. If a chemical is listed as an extremely hazardous substance under Section 302, its TPQ is given in the extremely hazardous substance column. Similarly, the CERCLA RQ is given for those chemicals that are listed as hazardous substances. A key to the symbols used in Section 302 and CERCLA columns precedes the list. An "X" in the column for Section 313 indicates that the chemical is subject to reporting under Section 313.

The letter-and-digit code in the column for 40 CFR 261.33 is the chemical's RCRA hazardous waste code. A blank in any of these columns indicates that the chemical is not subject to the corresponding statutory authorities.

The Chemical Abstract Service (CAS) registry number is provided for each chemical on the list.

(continued)

Appendix 3-1 (continued)

Key to Symbols in the Consolidated Chemical List

- # Indicates that the RQ is subject to change when an assessment of potential carcinogenicity and/or chronic toxicity is completed; until then, the statutory RQ applies.
- ## Indicates that an adjusted RQ has been proposed, but a final judgment has not been made.
- + USEPA has proposed to adjust the RQ for radionuclides by establishing RQs in units of Curies; until then, the 1 lb RQ applies.
- * Indicates that the chemical is proposed for deletion from the list of extremely hazardous substances.
- ** Indicates that no RQ is assigned to this generic or broad class.

(NOTE: These abbreviations are used below: Haz Sub (hazardous substances), Mat (materials).)

CONSOLIDATED CHEMICAL LIST

This is an alphabetical listing of the consolidated list of chemicals. Numbered chemicals are listed first.

Chemical Name	Extremely Haz Sub 40 CFR 355 (lb)	Haz Sub RQ 40 CFR 302.4 (lb)	Toxic Chemicals 40 CFR 372.65(a)	Haz Mat which are RCRA wastes	CAS No.
1,Amino-2-methyl- anthraquinone			x		82-28-0

Storage in Inside Rooms (29 CFR 1910.106(d)(4), Table H-13)

Fire Protection Provided ¹	Fire Resistance (hours)	Maximum Size	Total Allowable Quantities (gal/ft ² floor area)
Yes	2	500 ft ² [46.45 m ²]	10 [37.85 L]
No	2	500 ft ² [46.45 m ²]	5 [18.93 L]
Yes	1	150 ft ² [13.94 m ²]	4 [15.14 L]
No	1	150 ft ² [13.94 m ²]	2 [7.57 L]

¹Fire protection system will be sprinkler, water spray, or other approved method.

Appendix 3-4

Flammable/Combustible Materials (29 CFR 1910.106(d)(5) and 1910.106(d)(6), Tables H-14 through H-17)

Indoor Container Storage

Class	Liquid Storage Level	Protected Storage Maximum per Pile	Unprotected Storage Minimum per Pile
A	Ground and upper floors	2750 gal [10409.88 L] (50)	600 gal [2271.25 L] (12)
	Basement	Not permitted	Not permitted
B	Ground and upper floors	5500 gal [20819.77 L] (100)	1375 gal [5204.94 L] (25)
	Basement	Not permitted	Not permitted
C	Ground and upper floors	16,500 gal [62459.30 L] (300)	4125 gal [15614.82 L] (25)
	Basement	Not permitted	Not permitted
II	Ground and upper floors	16,500 gal [62459.30 L] (300)	4125 gal [15614.82 L] (75)
	Basement	5500 gal [20819.77 L] (100)	Not permitted
III	Ground and upper floors	55,000 gal [208197.66 L] (1000)	13,750 gal [52049.42 L] (250)
	Basement	8250 gal [31229.65 L] (450)	Not permitted

(NOTE: Numbers in parenthesis indicate corresponding number of 55-gal drums.)

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate maximum gallonages.

NOTE 2: Aisles will be provided so that no container is more than 12 ft [3.66 m] from an aisle. Main aisles will be at least 3 ft [0.91 m] wide and side aisles at least 4-ft [1.22-m] wide.

NOTE 3: Each pile shall be separated from the others by at least 4 ft [1.22 m].

(continued)

Appendix 3-4 (continued)

Outdoor Container Storage

1 Class	2 Maximum per pile (gal) [L]	3 Distance between piles (ft) [m]	4 Distance to property line that can be built upon (ft) [m]	5 Distance to street, alley or public way (ft) [m]
IA	1100 [4163.95]	5 [1.52]	20 [6.10]	10 [3.05]
IB	2200 [8327.91]	5 [1.52]	20 [6.10]	10 [3.05]
IC	4400 [44003.79]	5 [1.52]	20 [6.10]	10 [3.05]
II	8800 [33311.63]	5 [1.52]	10 [3.05]	5 [1.52]
III	22,000 [83279.06]	5 [1.52]	10 [3.05]	5 [1.52]

NOTE 1: When two or more classes of materials are stored in a single pile, the maximum gallonage permitted in that pile will be the smallest of the two or more separate gallonages.

NOTE 2: Within 200 ft [60.96 m] of each container, there will be a 12-ft [3.66-m] wide access way to permit approach of fire control apparatus.

NOTE 3: The distances listed apply to properties that have protection for exposures as defined. If there are exposures and such protection for exposures does not exist, the distances in column 4 will need to be doubled.

NOTE 4: When total quantity stored does not exceed 50 percent of maximum per pile, the distance in columns 4 and 5 may be reduced 50 percent, but not less than 3 ft [0.91 m].

Appendix 3-5

Potentially Incompatible Hazardous Materials (40 CFR 264, Appendix V))

The following are examples of potentially incompatible materials, along with the harmful consequences that result from mixing materials in one group with materials in another group. The list is intended as a guide to indicate the need for special precautions when managing these potentially incompatible waste materials or components. This list is not intended to be exhaustive.

In the following lists, the mixing of a Group A material with a Group B material may have the potential consequences as noted.

Potential Consequences: Heat generation, violent reaction.

Group 1-A	Group 1-B
Acetylene sludge Alkaline caustic liquids Alkaline cleaner Alkaline corrosive liquids Alkaline corrosive battery acid Caustic wastewater Lime sludge and other corrosive alkalies Lime wastewater Lime and water Spent caustic	Acid sludge Acid and water Battery acid Chemical cleaners Electrolyte, acid Etching acid liquid or solvent Pickling liquor and other corrosive acids Spent acid Spent mixed acid Spent sulfuric acid

Potential Consequences: Fire or explosion, generation of flammable hydrogen gas.

Group 2-A	Group 2-B
Aluminum Beryllium Calcium Lithium Magnesium Potassium Sodium Zinc powder Other reactive metals and metal hydrides	Any waste in Group 1-A or 1-B

(continued)

Appendix 3-5 (continued)

Potential Consequences: Fire, explosion, or heat generation; generation of flammable or toxic gases.

Group 3-A	Group 3-B
Alcohols Water	Any concentrated waste in Groups 1-A or 1-B Calcium Lithium Metal hydrides Potassium SO ₂ , Cl ₂ , SOCl ₂ , PCl ₃ , CH ₃ , SiCl ₃ Other water-reactive waste

Potential Consequences: Fire or explosion, violent reaction.

Group 4-A	Group-4-b
Alcohols Aldehydes Halogenated hydrocarbons Nitrated hydrocarbons Unsaturated hydrocarbons Other reactive organic compounds and solvents	Concentrated Group 1-A or Group 1-B wastes Group 2-A wastes

Potential Consequences: Generation of toxic hydrogen cyanide or hydrogen sulfide gas.

Group 5-A	Group 5-B
Spent cyanide and sulfide solutions	Group 1-B wastes

Potential Consequences: Fire, explosion, or violent reaction.

Group 6-A	Group 6-B
Chlorates Chlorine Chlorites Chromic acid Hypochlorites Nitrates Nitric acid, fuming Perchlorates Permanganates Peroxides Other strong oxidizers	Acetic acid and other organic acids Concentrated mineral acids Group 2-A wastes Group 4-A wastes Other flammable and combustible wastes

Appendix 3-6

Placarding Guidelines

The following table specifies placards that should be used for the transportation of ANY QUANTITY of the listed hazardous material.

Hazardous Materials	
Classed or Described As	Placards
Class A Explosives	EXPLOSIVES A
Class B Explosives	EXPLOSIVES B
Poison A	POISON GAS
Flammable Solid	FLAMMABLE SOLID

(NOTE: Any of the above substances that are dangerous when wet should also have the placard: DANGEROUS WHEN WET, in addition to their primary placard.)

The following table specifies placards that should be used for the transportation of 1000 lb [454.55 kg] or more of the listed hazardous materials.

Hazardous Materials	
<i>Classed or Described As</i>	<i>Placards</i>
Class C Explosives	FLAMMABLE
Nonflammable Gas	NONFLAMMABLE GAS
Nonflammable Gas (Chlorine)	CHLORINE
Nonflammable Gas (Fluorine)	POISON
Nonflammable Gas (Oxygen, pressurized liquid)	OXYGEN
Flammable Gas	FLAMMABLE GAS
Combustible Liquid	COMBUSTIBLE
Flammable Liquid	FLAMMABLE
Flammable Solid	FLAMMABLE SOLID
Oxidizer	OXIDIZER
Organic Peroxide	ORGANIC PEROXIDE
Poison B	POISON
Corrosive Material	CORROSIVE
Irritating Material	DANGEROUS

(continued)

Appendix 3-6 (continued)

1. Placards should be affixed on both sides, rear and front, of the motor vehicle.
2. Place placards clear of ladders, pipes, and tarps.
3. Placards should be at least 3 in. away from advertising and markings.
4. The DANGEROUS placards may be used when a motor vehicle contains two or more classes of hazardous materials requiring different placards. The DANGEROUS placard may be used in place of the separate placards for each class.
5. Portable tanks having a rated capacity of 1000 gal [454.55 kg] or more must be placarded.
6. Cargo tanks having any quantity of hazardous material must be placarded.

F. Key Compliance Definitions	5
Guidance for Checklist Users	19

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 4

HAZARDOUS WASTE MANAGEMENT

A. Applicability

This section applies to FWS facilities that generate, store, transport, treat, or dispose of any type of hazardous waste. Federal regulations establish different regulatory requirements based on the amount of hazardous waste generated.

This section and its associated evaluation checklists are more complex than other sections in this volume. Not all evaluation items will be applicable to a facility. Guidance is provided on the checklists to direct the evaluator to the regulations concerning the type of hazardous waste activities/facilities on the facility. This section does not include the requirements which apply to the operation and management of a treatment, storage, or disposal facility since the large majority of FWS facilities do not fall under this classification. But a checklist supplement which covers the requirements for treatment, storage, and disposal facilities (TSDFs) is available from the Service Pollution Control Office (SPCO).

B. Federal Legislation

- *The Resource Conservation and Recovery Act (RCRA)*, Subtitle C. This law, Public Law (PL) 98-616 (42 U.S. Code (USC) 6921-6939b) establishes standards and procedures for the handling, storage, treatment, and disposal of hazardous waste.
- *The Federal Facility Compliance Act (FFCA)* of 1992. This act provides for a waiver of sovereign immunity with respect to Federal, state, and local procedural and substantive requirements relating to RCRA solid and hazardous waste laws and regulations. Additionally, it defines hazardous waste in relation to public vessels, expands the definition of mixed waste, addresses the issue of munitions, and discusses waste discharges to Federally owned treatment works (FOTWs).
- *Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA)* of 1980. This act was amended by the *Superfund Amendments and Reauthorization Act (SARA)* of 1986, 42 USC 9601-11050 and 10 USC 2701-2810 et. al. This act has four basic elements. The first element is the establishment of an information gathering and analysis system for the characterization of contaminated sites. This information is used in the development of the USEPA's National Priorities List (NPL). The second element is the establishment of Federal authority to respond to hazardous substance emergencies and cleanup leaking sites. The third element is the creation of a trust fund to pay for removal and remedial actions. The fourth element makes persons who are responsible for hazardous substance releases liable for cleanup and restitution costs.
- *Community Environmental Response Facilitation Act*. This act, PL 102-426, amends CERCLA. It requires that prior to the termination of federal activities on any real property owned by the Federal Government, agencies must identify real property where no hazardous substance was stored, released, or disposed of. The purpose is to identify property that offers the greatest opportunity for reuse and redevelopment.

- Executive Order (EO) 12580, *Superfund Implementation*. This EO, dated 23 January 1987, mandates the development of the National Response Team (NRT) and redelegates authority for various functions related to Superfund from the President to other Federal agencies.
- Federal regulations used to develop the checklist include:
 - 40 CFR 260, *Hazardous Waste Management System: General*.
 - 40 CFR 261, *Identification and Listing of Hazardous Waste*.
 - 40 CFR 262, *Standards Applicable to Generators of Hazardous Waste*.
 - 40 CFR 263, *Standards Applicable to Transporters of Hazardous Waste*.
 - 40 CFR 264, *Standards for Owners and Operators of Hazardous Waste Treatment, Storage and Disposal Facilities*.
 - 40 CFR 265, *Interim Status Standards for Owners and Operators of Hazardous Waste Treatment, Storage, and Disposal Facilities*.
 - 40 CFR 266, *Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities*.
 - 40 CFR 268, *Land Disposal Restrictions*.
 - 49 CFR 172-179, *Transportation Regulations*.

C. State/Local Regulations

Many states have met the U.S. Environmental Protection Agency (USEPA) requirements in 40 CFR 271 and have been authorized to manage their own state programs. RCRA encourages states to develop their own hazardous waste statutes and to operate regulatory programs. Many states have adopted the USEPA regulations by reference or have promulgated regulations which are identical to the USEPA regulations, while other states have promulgated regulations stricter than the Federal RCRA. These differences between individual state regulations and the Federal program require that evaluators check the status of the state's authorization and then determine which regulations apply. Since the section checklists are based exclusively on the requirements of the Federal RCRA/USEPA program, it is necessary to determine in what ways the applicable state program differs from the RCRA/USEPA program.

D. FWS/DOI Manuals

- 561 FW 6, *Compliance Requirements RCRA - Hazardous Waste*. This chapter, dated 9 July 1995, provides guidance for RCRA hazardous waste management at Service facilities.

E. Key Compliance Requirements

- **Generator Requirements** - Responsibilities of facilities are based on the amount of waste being generated in 1 mo. Typical wastes include solvents, paint, contaminated antifreeze or oil, and sludges. In some states, used oil and other substances have been classified as a hazardous waste and therefore need to be included in the total amount of waste being generated. Within Federal regulations there are three classifications:

1. A conditionally exempt small quantity generator (CESQG) produces no more than 100 kg [220.46 lb] of hazardous waste and no more than 1 kg [2.20 lb] of acute hazardous waste in any calendar month. They also do not accumulate onsite more than 1000 kg [2204.62 lb] of waste at any one time. When either the volume of waste produced in 1 mo exceeds 100 kg [220.46 lb] of nonacutely hazardous waste or more than 1 kg [2.20 lb] of acutely hazardous waste or more than 1000 kg [2204.62 lb] of waste has accumulated onsite, the facility is required to comply with the more stringent standards applicable to a small quantity generator (SQG) or a Generator.
2. An SQG produces between 100 [220.46 lb] and 1000 kg [2204.62 lb] of hazardous waste and no more than 1 kg [2.20 lb] acute hazardous waste in any calendar month. The waste cannot accumulate onsite for more than 180 days unless the waste must be transported more than 200 mi [321.87 km] to a TSDF. In that situation, the waste can accumulate for 270 days. But at no time is there to be more than 6000 kg [13,227.73 lb] of waste accumulated at the facility. When the accumulation time onsite is exceeded, or more than 6000 kg [13,227.73 lb] of waste is onsite, the facility is required to apply for a permit and comply with the standards of 40 CFR 264 and 40 CFR 265.
3. A Generator produces 1000 kg [2204.62 lb] or more of hazardous waste or more than 1 kg [2.20 lb] acute hazardous waste in any calendar month. This classification is sometimes referred to as a large quantity generator.

(NOTE: Using water, which weighs 8.34 lb/gal [3.78 kg/gal] as a basis of measurement, 100 kg [220.46 lb] would equal about 26.5 gal [100.31 L], 1000 kg [2204.62 lb] would equal about 265 gal [1003 L]).

Whether the facility is a CESQG, an SQG, or a Generator determines the type of records the facility is required to keep and design standards for storage areas. Storage areas connected with a generation point are often referred to as accumulation points.

Regardless of the amount of hazardous waste generated, every facility is required to test or use knowledge of materials or processes used to determine if it is a listed hazardous waste or has hazardous characteristics. Every facility is also required to store and/or accumulate hazardous waste in containers that are compatible with the waste, undamaged, and labeled to indicate the contents.

Comparison of RCRA Generator Requirements

Requirement	CESQG	SQG	Generator
Identify HW	Yes	Yes	Yes
Quantity Limits	£100 kg/mo [220.46 lb/m]	100 kg/mo [220.46 lb] - 1000 kg/mo [2204.62 lb]	>1000 kg/mo [2204.62 lb/mo]
Acute Waste Limits	£ 1 kg/mo [2.20 lb/mo]	£ 1 kg/mo [2.20 lb/mo]	any quantity
Facility Receiving Waste	State approved or RCRA permitted	RCRA permitted facility	RCRA permitted facility
USEPA ID Number	Not Required	Required	Required

Comparison of RCRA Generator Requirements

Requirement	CESQG	SQG	Generator
RCRA Personnel Training	Not Required	Basic Training Required	Required
DOT Training	Required	Required	Required
Exception Report	Not Required	Required > 60 days	Required > 45 days
Biennial Report	Not Required	Not Required	Required
Onsite Accumulation Limits (without permit)	£ 1000 kg [2204.62 lb]	£ 6000kg [13,227.73 lb]	Any quantity
Accumulation Time Limits (without permit)	None	£ 180 days or £ 270 days (>200 mi [321.87 km])	£ 90 days + 30 days granted by USEPA
Storage Requirements	None	Basic requirements with technical standards for containers or tanks	Full compliance with management of containers or tanks
Use Manifests	No	Yes*	Yes

* Unless the waste is reclaimed under contractual agreement and properly marked and labeled.

- **Transport Requirements** - Containers of hazardous waste shipped offsite must be labeled to identify the waste and its hazard class. Transporters of hazardous waste required to be manifested must have a USEPA identification number and must comply with manifest management requirements.
- **Accumulation Point Management** - An accumulation point is an area where hazardous waste is accumulated or stored before being turned in for disposal. Storage in these areas is temporary, and the permissible length of time for accumulation depends on what size generator the facility is.
- **Satellite Accumulation Point Management** - A satellite accumulation point is an area at which no more than 55 gal [208.20 L] of a hazardous waste or 1 qt [0.95 L] of an acute hazardous waste is accumulated at or near the point of generation. The satellite accumulation point is under the control of one operator of the process generating the waste. When the 55 gal [208.20 L] limit is reached the operator has 3 days to move the waste to a 90-day or permitted storage area or a permitted TSDF. These standards only apply to an SQG or a Generator.
- **Universal Wastes** - These requirements apply to batteries, pesticides, and thermostats as defined in 40 CFR 273. They are alternate standards for the handling of these wastes instead of the requirements found in 40 CFR part 260 through part 272. Handlers can be classified as either a large quantity handler of universal waste (5000 kg [11,111 lb] or more in 1 yr) or a small quantity handler of universal waste (less than 5000 kg [11,111 lb] in 1 yr). Depending on classification, the handler has to meet requirements concerning management of the waste, marking and labeling, notifications, and transportation. Additionally,

there are standards for universal waste transporters and universal waste destination facilities (40 CFR 273).

- **Recordkeeping** - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- **Aboveground Tank** - a device that meets the definition of a tank in 40 CFR 260.10 and that is situated in such a way that the entire surface area of the tank is completely above the plane of the adjacent surrounding surface and the entire surface area of the tank (including the tank bottom) is able to be visually inspected (40 CFR 260.10).
- **Active Life** - the period from the initial receipt of hazardous waste at the facility until the Regional Administrator receives certification of final closure (40 CFR 260.10).
- **Acute Hazardous Waste** - any waste listed under 40 CFR 261.31 - 261.33(c) with a hazard code of H. These include USEPA Hazardous waste numbers: F020, F021, F022, F023, F026, and F027 (40 CFR 261.31 through 261.33).
- **Aquifer** - a geologic formation or group of formations, or part of a formation, capable of yielding a significant amount of groundwater to wells or springs (40 CFR 260.10).
- **Average Volatile Organic (VO) Concentration** - the mass-weighted average VO concentration of a hazardous waste (40 CFR 265.1081).
- **Battery** - a device consisting of one or more electrically connected electrochemical cells which is designed to receive, store, and deliver electric energy. An electroplating cell is a system consisting of an anode, cathode, and an electrolyte, plus such connections (electrical and mechanical) as may be needed to allow the cell to deliver or receive electrical energy. The term battery also includes an intact, unbroken battery from which the electrolyte has been removed (40 CFR 262.10 and 273.6).

In relation to the concept of universal wastes, this term includes all batteries except the following (40 CFR 273.2(b)):

1. spent lead acid batteries that are managed under 40 CFR part 266, Subpart G [reclamation of spent lead acid batteries that are recyclable]
 2. batteries as defined above that are not yet wastes under Part 261, including those that do not meet the criteria for waste generation (see definition of Waste Battery)
 3. batteries as defined above that are not hazardous waste. A battery is a hazardous waste if it exhibits one or more of the characteristics identified in 40 CFR part 261, Subpart C.
- **Boiler** - an enclosed device using controlled flame combustion and having the following characteristics (40 CFR 260.10):
 1. the unit has physical provisions for recovering and exporting thermal energy in the form of steam, heated fluids, or heated gases

2. the unit's combustion chamber and primary energy recovery section(s) must be of integral design
 3. while in operation, the unit maintains a thermal energy recovery efficiency of at least 60 percent
 4. the unit exports and utilizes at least 75 percent of the recovered energy
 5. the unit has been approved by the Administrator.
- *Certification* - a statement of professional opinion based upon knowledge and belief (40 CFR 260.10).
 - *Characteristics of Hazardous Waste* - the characteristics of ignitibility, corrosivity, reactivity, and toxicity which identify hazardous waste (40 CFR 261.20 through 261.24).
 - *Closed Portion* - the portion of a facility which has been closed in accordance with the approved closure plan and all applicable closure requirements (40 CFR 260.10).
 - *Component* - refers to either the tank or the ancillary equipment of the tank system (40 CFR 260.10).
 - *Consignee* - the ultimate treatment, storage, or disposal facility in a receiving country to which the hazardous waste will be sent (40 CFR 262.51).
 - *Container* - any portable device in which a material is stored, transported, treated, disposed of, or otherwise handled (40 CFR 260.10).
 - *Containment Building* - a hazardous waste management unit that is used to store or treat hazardous waste under 40 CFR 264.1100 through 264.1103 and 40 CFR 265.1100 through 1103 (40 CFR 260.10).
 - *Contingency Plan* - a document setting out an organized, planned, and coordinated course of action to be followed in case of a fire, explosion, or release of hazardous waste or hazardous waste constituents which could threaten human health or the environment (40 CFR 260.10).
 - *Corrosion Expert* - a person who, by reason of knowledge of the physical sciences and the principles of engineering and mathematics, acquired by a professional education and related practical experiences, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be certified as being qualified by the National Association of Corrosion Engineers (NACE) or be a registered professional engineer who has certification and licensing that includes education and experience in corrosion control and/or buried or submerged metal piping systems or tanks (40 CFR 260.10).
 - *Cover* - a device or system which is placed on or over a hazardous waste such that the entire hazardous waste surface area is enclosed and sealed to reduce air emissions to the atmosphere. A cover may have openings, such as access hatches, sampling ports, and gauge wells that are necessary for operation, inspection, and maintenance, or repair of the unit on which the cover is installed provided that each opening is closed and sealed when not in use. Examples include a fixed roof installed on a tank, a floating membrane on a

surface impoundment, a lid installed on a drum, and an enclosure in which an open container is placed during waste treatment (40 CFR 265.1081).

- *Debris* - solid material exceeding a 60 mm particle size that is intended for disposal and that is: a manufactured object; or plant or animal matter; or natural geologic material. The following materials are not debris: any material for which a specific treatment standard is provided; process residuals such as smelter slag and residues from the treatment of waste, wastewater, sludges, or air emissions residues; and intact containers of hazardous waste that are not ruptured and retain at least 75 percent of their original volume (40 CFR 268.2).
- *Designated Facility* - a hazardous waste TSD facility that is identified on a manifest as the destination of a hazardous waste shipment. The facility must have an appropriate permit, interim status, or be regulated under specific recycling requirements (40 CFR 260.10).
- *Destination Facility* - a facility that treats, disposes of, or recycles a particular category of universal waste, small quantity handlers of universal waste batteries and thermostats or a large quantity handlers or universal waste batteries or thermostats. A facility at which a particular category of universal waste is only accumulated is not a destination facility for the purposes of managing that category of universal waste (40 CFR 262.10 and 273.6).
- *Dike* - an embankment or ridge of either natural or manmade materials used to prevent the movement of liquids, sludges, solids, or other materials (40 CFR 260.10).
- *Discharge or Hazardous Waste Discharge* - the accidental or intentional spilling, leaking, pumping, pouring, emitting, emptying, or dumping of hazardous waste into or on any land or water (40 CFR 260.10).
- *Disposal* - the discharge, deposit, injection, dumping, spilling, leaking, or placing of any solid waste or hazardous waste into or on any land or water so that such solid waste or hazardous waste or any constituent thereof may enter the environment or be emitted into the air or discharged into any waters, including groundwaters (40 CFR 260.10).
- *EPA Acknowledgment of Consent* - the cable sent to the USEPA from the U.S. Embassy in a receiving country that acknowledges the written consent of the receiving country to accept the hazardous waste and describes the terms and conditions of the receiving country's consent to the shipment (40 CFR 262.51).
- *EPA Hazardous Waste Number* - the number assigned by USEPA to each hazardous waste listed in Part 261, Subpart D and to each characteristic identified in Part 261, Subpart C (40 CFR 260.10).
- *EPA Identification Number* - the number assigned by USEPA to each generator, transporter, and treatment, storage, or disposal facility (40 CFR 260.10).
- *Exempted Hazardous Waste Management Unit* - in relation to air emissions standards, this is (40 CFR 264.1080(b) and 265.1080(b).):
 1. a waste management unit that holds hazardous waste placed in the unit before 5 June 1995, and in which no hazardous waste is added to the unit on or after 5 June 1995

2. a waste management unit that is used solely for the onsite treatment or storage of hazardous waste that is generated as the result of implementing remedial activities required under corrective action authorities
3. a waste management unit that is used solely for the management of radioactive mixed waste in accordance with all applicable regulations under the *Atomic Energy Act* and the *Nuclear Waste Policy Act*.
4. a container that has a design capacity less than or equal to 0.1 m³
5. a tank in which an owner/operator has stopped adding hazardous waste and the owner operator has begun implementing or completed closure pursuant to an approved closure plan
6. a surface impoundment in which the owner operator has stopped adding hazardous waste (except to implement an approved closure plan) and the owner/operator has begun implementing or completed closure pursuant to an approved closure plan

Additionally, waste management units are exempt from these requirements if all hazardous waste in the unit is determined to meet either of the following conditions (40 CFR 264.1082(c) and 265.1083(c)):

1. the average VO concentration of the hazardous waste at the point of waste origination is less than 100 ppmw
2. the organic content of the hazardous waste has been reduced by an organic destruction or removal process that achieves any of the following conditions:
 - a. a process that removes or destroys the organics to a level such that the average VO concentration of the hazardous waste at the point of waste treatment is less than the exit concentration limit established for the process
 - b. a process that removes or destroys the organics contained in the hazardous waste to such a level that the organic reduction efficiency for the process is equal to or greater than 95 percent, and the average VO concentration of the hazardous waste at the point of waste treatment is less than 50 ppmw
 - c. a process that removes or destroys the organics contained in the hazardous waste to such a level that the actual organic mass removal rate for the process is greater than the required organic mass removal rate established for the process
 - d. a biological process that destroys or degrades the organics contained in the hazardous waste such that either of the following is met:
 - i. the organic reduction efficiency for the process is equal to or greater than 95 percent and the organic biodegradation efficiency for the process is equal to or greater than 95 percent
 - ii. the total actual organic mass biodegradation rate for all hazardous waste treated by the process is equal to or greater than the required organic mass removal rate
 - e. a process that removes or destroys the organics contained in the hazardous waste and meets all the following conditions:
 - i. all the materials entering the process are hazardous wastes
 - ii. from the point of waste origination through the point where the hazardous waste enters the process, the hazardous waste is continuously managed in waste management units which use air emissions controls as applicable to the waste management unit
 - iii. the average VO concentration of the hazardous waste at the point of waste treatment is less than the lowest average VO concentration at the point of waste origination determined for each of the individual hazardous waste streams entering the process or 100 ppmw, whichever value is lower

- f. a hazardous waste incinerator for which the owner/operator has either been issued a final permit or has certified compliance
 - g. a boiler or industrial furnace for which the owner or operator has been issued a final permit or has certified compliance.
- *Existing Hazardous Waste Management (HWM) Facility or Existing Facility* - a facility which was in operation or for which construction commenced on or before 19 November 1980 (40 CFR 260.10).
- *Existing Portion* - the land surface area of an existing waste management unit, included in the original Part A permit application, on which wastes have been placed prior to the issuance of a permit (40 CFR 260.10).
- *Existing Tank System or Existing Component* - a tank system or component that is used for the storage or treatment of hazardous waste and that is in operation, or for which installation has commenced on or before 14 July 1986. Installations will have been considered to be commenced if the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system and if either (40 CFR 260.20):
 1. a continuous onsite physical construction of the site or installation program has begun
 2. the owner or operator has entered into contractual obligations that cannot be canceled or modified without substantial loss for physical construction of the site or installation of the tank system to be completed within a reasonable time.
- *External Floating Roof* - a pontoon or double-deck type floating roof that rests on the surface of a hazardous waste being managed in a tank that has no fixed roof (40 CFR 265.1081).
- *Facility* - all contiguous land and structures, other appurtenances, and improvements on the land, used for treating, storing, or disposing of hazardous waste. A facility may consist of several treatment, storage, or disposal operational units (e.g., one or more landfills, surface impoundments, or combination of them) (40 CFR 260.10).
- *Final Closure* - the closure of all hazardous waste management units at the facility in accordance with all applicable closure requirements so that hazardous waste management activities under 40 CFR 264 and 265 are no longer conducted at the facility unless subject to the provisions of 262.34 (40 CFR 260.10).
- *Fixed Roof* - a rigid cover that is installed in a stationary position so that it does not move with fluctuations in the level the hazardous waste placed in a tank (40 CFR 265.1081).
- *Floating Membrane Cover* - a cover consisting of a synthetic flexible membrane material that rests upon and is supported by the hazardous waste being managed in a surface impoundment (40 CFR 265.1081).
- *Floating Roof* - a pontoon type or double deck type cover that rests upon and is supported by the hazardous waste being managed in a tank, and is equipped with a closure seal or seals to close the space between the cover edge and the wall edge (40 CFR 265.1081).

- *Food-Chain Crops* - tobacco, crops grown for human consumption, and crops grown for feed for animals whose products are consumed by humans (40 CFR 260.10).
- *Free Liquids* - liquids which readily separate from the solid portion of a waste under ambient temperature and pressure (40 CFR 260.10).
- *Freeboard* - the vertical distance between the top of a tank or surface impoundment dike, and the surface of the waste contained within it (40 CFR 260.10).
- *Generator* - any person, by site, whose act or process produces hazardous waste identified or listed in 40 CFR 261, or whose act first causes a hazardous waste to become subject to regulation (40 CFR 260.10). (NOTE: This typically is used to refer to a facility producing hazardous waste in quantities greater than 1000 kg/mo [2204.62 lb/mo].)
- *Groundwater* - water below the land surface in a zone of saturation (40 CFR 260.10).
- *Halogenated Organic Compounds (HOC)* - those compounds having a carbon-halogen bond which are listed in Appendix III or 40 CFR 268 (40 CFR 268.2).
- *Hazardous Debris* - debris that contains a hazardous waste listed in Subpart D or Part 261 or that exhibits a characteristic of hazardous waste (40 CFR 268.2).
- *Hazardous Waste* - a solid waste identified as a characteristic or listed hazardous waste in 40 CFR 261.3 (40 CFR 260.10).
- *Hazardous Waste Constituent* - a constituent that caused the hazardous waste to be listed in 40 CFR 261, Subpart D (lists of hazardous wastes from nonspecific and specific sources, and listed hazardous wastes), or a constituent listed in the table of maximum concentrations of contaminants for the toxicity characteristic (40 CFR 260.10).
- *Hazardous Waste Management Unit* - a contiguous area of land on or in which hazardous waste is placed, or the largest area in which there is significant likelihood of mixing hazardous waste constituents in the same area. Examples are a surface impoundment, a waste pile, a treatment area, a landfill cell, an incinerator, a tank and its associated piping and underlying containment system and a container storage area. A container alone does not constitute a unit; the unit includes containers and the land or pad upon which they are placed (40 CFR 260.10).
- *Incinerator* - an enclosed device that (40 CFR 260.10):
 1. uses controlled flame combustion and neither meets the criteria for classification as a boiler, sludge dryer, or carbon regeneration unit, nor is listed as an industrial furnace
 2. meets the definition of infrared incinerator or plasma arc incinerator.
- *Incompatible Waste* - a hazardous waste that is unsuitable for (40 CFR 280.10):
 1. placement in a particular device or facility because it may cause corrosion or decay of containment materials (e.g., container liners or tank walls)
 2. commingling with another waste or material under uncontrolled conditions because the commingling conditions produce heat or pressure, fire or explosion, violent reaction, toxic dusts, mist, fumes or gases, or flammable fumes or gases.

- *Individual Generation Site* - the contiguous site at or on which one or more hazardous waste(s) is generated. An individual generation site, such as a large manufacturing plant, may have one or more sources of hazardous waste, but is considered a single or individual generation site if the site or property is contiguous (40 CFR 260.10).
- *In-Ground Tank* - a device meeting the definition of tank in 40 CFR 260.10 whereby a portion of the tank is situated to any degree within the ground, thereby preventing visual inspection of that external surface area of the tank that is in the ground (40 CFR 260.10).
- *Inner Liner* - a continuous layer of material placed inside a tank or container which protects the construction materials of the tank or container from the contained waste or reagents used to treat the waste (40 CFR 260.10).
- *Land Disposal* - includes, but is not limited to, any placement of hazardous waste in a landfill, surface impoundment, waste pile, injection well, land treatment facility, salt dome formation, underground mine or cave, or placement in a concrete vault or bunker intended for disposal purposes (40 CFR 268.2).
- *Land Treatment Facility* - a facility, or part of a facility, at which hazardous waste is applied onto or incorporated into the soil surface; such facilities are disposal facilities if the waste will remain after closure (40 CFR 260.10).
- *Large Quantity Generator* - see *Generator*.
- *Large Quantity Handler of Universal Waste* - a universal waste handler who accumulates 5000 kg [11,111 lb] or more total of universal waste (batteries, pesticides, or thermostats, calculated collectively) at any time. This designation as a large quantity handler of universal waste is retained through the end of the calendar year in which 5000 kg [11,111 lb] or more total of universal waste is accumulated (40 CFR 273.6).
- *Leak Detection System* - a system capable of detecting the failure of either the primary or secondary containment structure or the presence of a release of hazardous waste or accumulated liquid in the secondary structure. Such a system must employ operational controls (e.g., visual inspections for releases into the secondary containment system of aboveground tanks) or consist of an interstitial monitoring device designed to detect continuously and automatically the failure of the primary or secondary containment structure or the presence of a release of hazardous waste into the secondary containment structure (40 CFR 260.10).
- *Liner* - a continuous layer of natural or manmade materials, beneath or on the sides of a surface impoundment, landfill, or landfill cell, which restricts the downward or lateral escape of hazardous waste, hazardous waste constituents, or leachate (40 CFR 260.10).
- *Management or Hazardous Waste Management* - the systematic control of the collection, source separation, storage, transportation, processing, treatment, recovery, and disposal of hazardous waste (40 CFR 260.10).
- *Management Practice (MP)* - practices which, although not mandated by law, are encouraged to promote safe operating procedures.

- *Manifest* - the shipping document originated and signed by the generator containing the information required by 40 CFR 262, Subpart B (40 CFR 260.10).
- *Manifest Document Number* - the USEPA 12-digit number assigned to the generator plus a unique 5 digit number assigned to the Manifest by the generator for recording and reporting purposes (40 CFR 260.10).
- *Movement* - that hazardous waste transported to a facility in an individual vehicle (40 CFR 260.10).
- *New Tank System or New Component System* - a tank system or component that will be used for the storage and treatment of hazardous waste and for which installation has commenced after 14 July 1986, except however, for purposes of 264.193(g)(2) and 265.193(g)(2), a new tank system is one for which construction commenced after 14 July 1986 (see also existing tank system) (40 CFR 260.10).
- *No Detectable Organic Emissions* - no escape of organics from a device or system to the atmosphere as determined by an instrument reading less than 500 ppmv above the background level at each joint, fitting, and seal when measured in accordance with the requirements of Method 21 in 40 CFR 60, Appendix A, and by no visible openings or defects in the device or system such as rips, tears, or gaps (40 CFR 265.1081).
- *Nonwastewaters* - wastes that do not meet the criteria for wastewaters (40 CFR 268.2).
- *Onground Tank* - a device meeting the definition of tank in 40 CFR 260.10 and that is situated in such a way that the bottom of the tank is on the same level as the adjacent surrounding surface so that the external tank bottom cannot be visibly inspected (40 CFR 260.10).
- *Onsite* - the same or geographically continuous property which may be divided by a public right-of-way, provided the entrance and exit between the properties is at a cross-roads intersection and access is by crossing as opposed to going along the right-of-way (40 CFR 260.10).
- *Open Burning* - the combustion of any material without the following characteristics (40 CFR 260.10):
 1. control of combustion air to maintain adequate temperature for efficient combustion
 2. containment of the combustion-reaction in an enclosed device to provide sufficient residence time and mixing for complete combustion
 3. control of emission of the gaseous combustion products.
- *Partial Closure* - the closure of a hazardous waste management unit in accordance with the applicable closure requirements of 40 CFR 264 and 265 at a facility that contains other active hazardous waste management units. For example, partial closure may include the closure of a tank (including its associated piping and underlying containment systems) while other units of the same facility continue to operate (40 CFR 260.10).
- *Pesticides* - any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, or intended for use as a plant regulator, defoliant, or desiccant, other than any article that (40 CFR 262.10 and 273.6):

1. is a new animal drug under FFDCA Section 201(w), or
2. is an animal drug that has been determined by regulation of the Secretary of Human Health and Human Services not to be a new animal drug, or
3. is an animal feed under FFDCA section 201(x) that bears or contains any substances described by paragraph 1 or 2 of this definition.

Pesticides which are regulated as universal wastes include recalled pesticides that are (40 CFR 273.3(a):

1. stocks of a suspended and canceled pesticide that are a part of a voluntary or mandatory recall under FIFRA Section 19(b), including, but not limited to, those owned by the registrant responsible for conducting the recall; or
2. stocks of other unused pesticide products that are collected and managed as a part of a waste pesticide collection.

Pesticides which are not universal wastes include (40 CFR 273.3(b):

1. recalled pesticides that are a part of a voluntary or mandatory recall under FIFRA Section 19(b), including, but not limited to, those owned by the registrant responsible for conducting the recall and stocks of other unused pesticide products that are collected and managed as a part of a waste pesticide collections are managed by farmers in compliance with 40 CFR 262.70;
 2. pesticides not meeting the definition of a universal waste
 3. pesticides that are not wastes under Part 261, including those who do not meet the criteria for waste generation or those that are not wastes (see the definition of Waste Pesticide)
 4. pesticides that are not a hazardous waste.
- *Publicly Owned Treatment Works (POTW)* - any device or system used in the treatment (including recycling and reclamation) of municipal sewage or industrial wastes of a liquid nature which is owned by a state or municipality (as defined by section 502(4) of the CWA). This definitions includes sewers, pipes, or other conveyances only if they convey wastewater to a POTW providing treatment (40 CFR 260.10).
 - *Pump Operating Level* - a liquid level proposed by the owner or operator and approved the Regional Administrator based on pump activation level, sump dimensions, and level that avoids backup into the drainage layer and minimizes head in the sump (40 CFR 264.226(d)(3)).
 - *Qualified Groundwater Scientist* - a scientist or engineer who has received a baccalaureate or post-graduate degree in the natural sciences or engineering and has sufficient training and experience in groundwater hydrology and related fields as may be demonstrated by state registration, professional certification, or completion of accredited university courses that enable that individual to make sound professional judgements regarding groundwater monitoring and contaminant fate and transport (40 CFR 260.10).
 - *Representative Sample* - a sample of a universe or whole (e.g., waste pile, lagoon, groundwater) which can be expected to exhibit the average properties of the universe or whole (40 CFR 260.10).
 - *Restricted Wastes* - those categories of hazardous wastes that are prohibited from land disposal either by regulation or by statute, in other words, a hazardous waste that is

restricted no later than the date of the deadline established in RCRA Section 3004 (40 CFR 268).

- *Runoff* - any rainwater, leachate, or other liquid that drains over land from any part of a facility (40 CFR 260.10).
- *Run-on* - any rainwater, leachate, or other liquid that drains over land onto any part of a facility (40 CFR 260.10).
- *Sludge* - any solid, semi-solid, or liquid waste generated from a municipal, commercial, or industrial wastewater treatment plant, water supply treatment plant, or air pollution control facility exclusive of the treated effluent from a wastewater treatment plant (40 CFR 260.10).
- *Small Quantity Generator* - a generator who generates less than 1000 kg [2204.62 lb] or hazardous waste in a calendar month but more than 100 kg [220.46 lb] (40 CFR 260.10).
- *Small Quantity Handler of Universal Waste* - a universal waste handler who does not accumulate more than 5000 kg (11,111 lb) total of universal waste (batteries, pesticides, thermostats calculated collectively) at any time (40 CFR 273.6).
- *Storage* - the holding of hazardous wastes for a temporary period, at the end of which the hazardous wastes are treated, disposed of, or stored elsewhere (40 CFR 260.10).
- *Sump* - any pit or reservoir that meets the definition of tank and those troughs/trenches connected to it that serve to collect hazardous waste for transport to hazardous waste TSDFs except that as used in the landfill, surface impoundment, and waste pile rules, *sump* means any lined pit or reservoir that serves to collect liquids drained from a leachate collection and removal system or leak detection system for subsequent removal from the system (40 CFR 260.10).
- *Tank* - a stationary device designed to contain an accumulation of hazardous waste that is constructed primarily of nonearthen materials (e.g., wood, concrete, steel, plastic) which provide structural support (40 CFR 260.10).
- *Tank System* - a hazardous waste storage or treatment tank and its associated ancillary equipment and containment system (40 CFR 260.10).
- *Thermostat* - a temperature control device that contains metallic mercury in an ampule attached to a bimetal sensing element, and mercury-containing ampules that have been removed from these temperature control devices in compliance with the requirements of 40 CFR 273.12(c)(2) or 273.33(c)(2) (40 CFR 262.10 and 273.6).

The following are exempted from the definition of thermostat in relation to universal waste (40 CFR 273.4(b)):

1. thermostats that are not yet wastes under 40 CFR part 261 (see the definition of Waste Thermostat);
2. thermostats that are not hazardous waste.

- *Transfer Facility* - any transportation related facility including loading docks, parking areas, storage areas, and other similar areas where shipments of hazardous wastes are held during the normal course of transportation (40 CFR 260.10).
- *Transport Vehicle* - a motor vehicle or rail car used for the transportation of cargo by any mode. Each cargo-carrying body (trailer, railroad freight car, etc.) is a separate transport vehicle (40 CFR 260.10).
- *Transporter* - a person engaged in the offsite transportation of hazardous wastes by air, rail, highway, or water (40 CFR 260.10).
- *Treatability Study* - a study in which a hazardous waste is subjected to a treatment process to determine (40 CFR 260.10):
 1. whether the waste is amenable to the treatment process
 2. what pretreatment (if any) is required
 3. the optimal process conditions needed to achieve the desired treatment
 4. the efficiency of a treatment process for a specific waste or wastes
 5. the characteristics and volumes of residuals from a particular treatment process.

Also included in this definition for the purpose of the 261.4(e) and (f) exemptions are liner compatibility, corrosion, and other material compatibility studies and toxicological and health effects studies. A treatability study is not a means to commercially treat or dispose of hazardous waste.

- *Treatment* - any method, technique, or process, including neutralization, designed to change the physical, chemical or biological character or composition of any hazardous waste so as to neutralize such waste, or so as to recover energy or material resources from the waste, or so as to render such waste nonhazardous, or less hazardous; safer to transport, store, or dispose of; or amenable for recovery, amenable for storage, or reduced in volume (40 CFR 260.10).
- *Underground Tank* - a device meeting the definition of tank in 40 CFR 260.10 whose entire surface area is totally below the surface and covered by the ground (40 CFR 260.10).
- *Unfit-for-Use Tank System* - a tank system that has been determined through an integrity assessment or other inspection to be no longer capable of storing or treating hazardous waste without posing a threat of release of hazardous waste to the environment (40 CFR 260.10).
- *Universal Waste* - any of the following hazardous wastes that are managed under the universal waste requirements of 40 CFR part 273 (40 CFR 262.10 and 273.6):
 1. batteries as described in 40 CFR 273.2 (see definition of battery)
 2. pesticides as described in 40 CFR 273.3 (see definition of pesticides), and
 3. thermostats as described in 273.4 (see definition of thermostats).
- *Universal Waste Handler* - this term means (40 CFR 262.10 and 273.6):
 1. a generator of universal waste, or
 2. the owner or operator of a facility, including all contiguous property, that receives universal waste from other universal waste handlers, accumulates universal waste, and

sends universal waste to another universal waste handler, to a destination facility, or to a foreign destination.

It does not mean:

1. A person who treats (except under the provisions of 40 CFR 273.13(a) or (c), or 273.33(a) or (c), disposes of, or recycles universal waste, or
 2. a person engaged in offsite transportation of an universal waste by air, rail, highway, or water, including a universal waste transfer facility.
- *Universal Waste Transfer Facility* - any transportation related facility including loading docks, parking areas, storage areas, and other similar areas where shipments of universal waste are held during the normal course of transportation for 10 days or less (40 CFR 273.6).
 - *Universal Waste Transporter* - a person engaged in the offsite transportation of universal waste by air, rail, highway, or water (40 CFR 260.10 and 273.6).
 - *Uppermost Aquifer* - the geologic formation nearest the natural ground surface that is an aquifer, as well as lower aquifers that are hydraulically interconnected with this aquifer within the facility's property boundary (40 CFR 260.10).
 - *Volatile Organic (VO) Concentration* - the fraction by weight of organic compounds in a hazardous waste expressed in terms of ppmw as determined by direct measurement using Method 25D or by knowledge of the waste (40 CFR 265.1081).
 - *Waste Battery* - a used battery becomes a waste on the date that it is discarded (e.g. when sent for reclamation). An unused battery becomes a waste on the date the handler decides to discard it. See also the definition of Battery (40 CFR 273.2(c)).
 - *Waste Pesticides* - this term applies as follows (40 CFR 273.3(c):
 1. a recalled pesticides becomes a waste on the first date on which both of the following conditions apply:
 - a. the generator of the recalled pesticide agrees to participate in the recall; and
 - b. the person conducting the recall decides to discard (e.g. burn the pesticides for energy recovery) the pesticides
 2. stocks of unused pesticide products that are collected and managed as part of a waste pesticide collection program becomes a waste on the day the generator decides to discard it.

The following pesticides are not waste (40 CFR 273.3(d):

1. recalled pesticides providing the person conducting the recall:
 - a. has not made a decision to discard (e.g. burn for energy recovery) the pesticide; or
 - b. has made a decision to use a management option that, under 40 CFR 261.2, does not cause the pesticide to be a solid waste (i.e. the selected option is use (other than use constituting disposal), or reuse, or reclamation).
2. unused pesticide products that are collected and managed as a part of a waste pesticide collection program if the generator of the unused pesticide product has not decided to discard (e.g. burn for energy recovery) them.

- *Waste Stabilization Process* - any physical or chemical process used to either reduce the mobility of hazardous constituents in a hazardous waste or eliminate free liquids (40 CFR 265.1081).
- *Waste Thermostats* - A used thermostat becomes a waste on the date is discarded (e.g. sent for reclamation). An unused thermostat becomes a waste on the date the handler decides to discard it (40 CFR 273.4(c)).
- *Wastewater Treatment Unit* - a device that is part of a wastewater treatment facility subject to regulation under section 402 or 307(b) of the CWA and receives and treats or stores an influent wastewater that is a hazardous waste (as defined in 40 CFR 261.3), or that generates and accumulates a wastewater treatment sludge that is a hazardous waste, or treats or stores a wastewater treatment sludge and meets the definition of tank or tank system (40 CFR 260.10).
- *Wastewaters* - wastes that contain less than 1 percent by weight total organic compounds and less than 1 percent by weight total suspended solids (TSS) with certain exceptions (40 CFR 268.2).
- *Zone of Engineering Control* - an area under the control of the owner/operator that upon detection of a hazardous waste release, can be readily cleaned up before the release of hazardous waste or hazardous constituents to groundwater or surface water (40 CFR 260.10).

HAZARDOUS WASTE MANAGEMENT

Records To Review

Generator (including TSDFs if they are also generators)

- Notification (USEPA identification number)
- Hazardous waste manifests
- Manifest exception reports
- Biennial reports
- Delistings
- Speculative accumulation records
- Land disposal restriction certifications
- Employee training documentation
- Hazardous waste tank integrity assessments
- Contingency plan (large quantity generators only)
- Notifications of hazardous waste oil fuel marketing or blending activity

Physical Features To Inspect

- Accumulations points
- Vehicles used for transport
- Storage facilities (including drums)

COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>ALL FACILITIES</p> <p>4-1. The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p>4-2. FWS facilities are required to comply with state and local regulations and compliance agreements negotiated with Federal, state, and local governments (EO 12088, Section 1-1; <i>Federal Facilities Compliance Act</i>, Section 102).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, inter-agency agreements, or equivalent state enforcement actions.</p> <p>Verify that the facility is complying with state and local hazardous waste requirements.</p> <p>Verify that the facility is operating according to permits issued by the state or local agencies where approved.</p> <p>(NOTE: Issues typically regulated by state and local agencies include:</p> <ul style="list-style-type: none"> - additional manifesting requirements - more frequent reporting requirements - transportation - identification of special waste or waste categories - regulation of specific substances as hazardous waste such as: medical, pathological, and infectious waste; used oil; explosives; used batteries - small and very small quantity generator requirements - RCRA permitting of oil/water separators - disposal requirements - construction and operation of storage and disposal facilities - satellite accumulation point requirements - container marking and labeling requirements.) <p>Verify that the actions detailed in compliance agreements are being taken according to the schedule established in the agreements.</p>

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>4-3. Facilities are required to meet regulatory and FWS requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulations as a basis of finding).</p>	<p>Determine if any new regulations concerning hazardous waste have been issued since the finalization of the handbook.</p> <p>Verify that the facility is in compliance with newly issued regulations.</p>
<p>4-4. FWS facilities should report all NOV's to the Region and the Service Pollution Control Office (SPCO) (MP).</p>	<p>Determine if the facility has received an NOV relating to hazardous waste.</p> <p>Verify that the NOV was reported to the Region and the SPCO.</p>
<p>4-5. Specific persons should be designated responsible for areas where hazardous waste is stored, and the precise nature of their responsibilities should be specified (MP).</p>	<p>Verify that specific individuals have been designated responsible for hazardous waste storage areas.</p> <p>Verify that the individuals designated responsible for hazardous waste storage areas are aware of the precise nature of their responsibilities.</p>
<p>4-6. FWS facilities should report spills of hazardous waste to the Region and the SPCO (MP).</p>	<p>Verify that FWS facilities report spills of hazardous waste to the Region and the SPCO.</p> <p>(NOTE: Use the reportable quantity (RQ) as the baseline for reporting, see Appendix 3-1 in Hazardous Materials Management.)</p>

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

**ALL SIZES OF
GENERATORS**

4-7. Facilities that generate solid wastes must determine if the wastes are hazardous wastes (40 CFR 261.3, 261.4 (b), 261.21 through 261.24, and 262.11).

(NOTE: Determination of whether or not a waste is a hazardous waste can be done through one of the following:

- knowledge of all the constituents of the waste (MSDSs) and whether it is listed in 40 CFR 261
- laboratory analysis
- knowledge of processes and/or materials used.)

(NOTE: Unidentified waste materials and spilled hazardous materials may have to be disposed of as hazardous waste depending on their constituents or characteristics.)

(NOTE: Some batteries, pesticides, and thermostats may be considered universal wastes instead of hazardous wastes and need to be handled according to the requirements in 40 CFR 273, see the appropriate definitions for clarification.)

Discuss with staff how wastes generated on the facility were identified and classified.

Determine if the facility followed USEPA criteria for identifying the characteristics of hazardous waste and USEPA's listed wastes in 40 CFR 261 (see Appendices 4-1, 4-2, 4-3, and 4-4).

Determine whether the facility generates, transports, treats, stores, or disposes of any hazardous waste (see Appendices 4-1, 4-2, 4-3, and 4-4 for guidance) and the quantity.

(NOTE: The following solid wastes are not considered to be hazardous wastes:

- household waste
- solid wastes that are generated by any of the following and are returned to the soils as fertilizers:
 - growing and harvesting of agricultural crops
 - raising of animals, including animal manures
 - mining overburden returned to the mine site
- fly ash waste, bottom ash waste, and flue gas emission control waste generated primarily from the combustion of coal or other fossil fuels except for facilities that burn hazardous waste
- drilling fluids, produced waters, and other wastes affiliated with the explorations, development, or production of crude oil, natural gas, or geothermal energy

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
4-7. (continued)	<ul style="list-style-type: none"> - wastes which fail the test for the toxicity characteristic because chromium is present or are listed in Subpart D because of the presence of chromium, which do not fail the test for toxicity characteristics for any other constituent or are not listed due to the presence of any other constituent, and which do not fail the test for other characteristics (see 40 CFR 261.4(b) for a listing of types of industries generating this type of waste that receive exclusions) - solid waste from the extraction, beneficiation, and processing of ores and minerals (including coal, phosphate rock, and overburden) from the mining of uranium ore. There is an exception to this for facilities that burn or process hazardous waste. - cement kiln dust waste, except for facilities that burn or process hazardous waste - solid waste that consists of discarded arsenic-treated wood or wood products which fail the test for toxicity characteristics for hazardous waste codes D004 through D017 and which is not a hazardous waste for any other reason if the waste is generated by persons who utilize the arsenic-treated wood and wood products for those materials intended end use - petroleum contaminated media and debris that fail the test for toxicity characteristic (Hazardous Waste Codes D018 through D043 only) and are required to meet the corrective action regulations under 40 CFR 280 - used chlorofluorocarbon refrigerants from totally enclosed heat transfer equipment, including mobile air-conditioning systems, mobile refrigeration and commercial and industrial air-conditioning and refrigeration systems that use chlorofluorocarbons as the heat transfer fluid in a refrigeration cycle, provided that the refrigerant is reclaimed for further use - non-terne plated used oil filters that are not mixed with a listed hazardous waste if these oil filters have been gravity hot-drained using one of the following methods: <ul style="list-style-type: none"> - puncturing the filter antidrain back valve or the filter dome end and hot-draining - hot-draining and crushing - dismantling and hot-draining - any other equivalent hot-draining method that will remove used oil - used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.) <p>Verify that listed wastes are tested for reactivity, corrosivity, ignitability, and toxicity characteristics.</p> <p>Verify that all data used for determination, including quality assurance data, is maintained and kept available for reference or inspection.</p>

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>4-8. Facilities which claim that a particular material is not a solid waste or is conditionally exempt from regulation as a hazardous waste are required to provide specific documentation (40 CFR 261.2(f)).</p>	<p>Determine if the facility has any wastes that are typically handled as hazardous waste that it claims are exempt.</p> <p>(NOTE: This typically includes items that are recycled such as batteries, waste antifreeze, solvents, and in some states used oil.)</p> <p>Verify that, for these wastes, the facility can demonstrate that there is a known market or disposition for the material and that they meet the terms of the exclusion or exemption.</p> <p>Verify that documentation is provided that indicates the material is not a waste, or is exempt from regulation.</p> <p>(NOTE: One example of documentation are contracts showing that a second person uses the material as an ingredient in a production process.)</p> <p>Verify that, if the facility is claiming to recycle material, the equipment for the recycling is actually at the facility and in working order.</p>
<p>4-9. Areas where containers of hazardous waste are stored should have secondary containment (MP).</p>	<p>Verify that the areas where containers of hazardous waste are stored have secondary containment such as a berm, dike, containment pallet, or other facility to prevent leakage to the environment.</p>
<p>4-10. FWS facilities should send the Region copies of documentation as to where waste is going (MP).</p>	<p>Verify that the facility send the Region copies of waste destination documentation.</p>

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

**CONDITIONALLY
EXEMPT SMALL
QUANTITY
GENERATORS
(CESQGs)**

4-11. Generators of no more than 100 kg/mo [220.46 lb/mo] of hazardous waste may qualify as CESQGs when they meet specific requirements (40 CFR 261.5).

Verify that the following quantity and storage limitations are met:

- no more than 100 kg [220.46 lb] of hazardous waste is generated in a calendar month
- total onsite accumulation does not exceed more than 1000 kg [2204.62 lb] of hazardous waste
- no more than 1 kg [2.2 lb] of acute hazardous waste (see Appendix 4-4) is generated in a calendar month
- no more than a total of 100 kg [220.46 lb] of any residue or contaminated soil, waste, or other debris resulting from the cleanup of any acute wastes in a calendar month is generated.

(NOTE: When making quantity determinations, all hazardous waste generated must be included except hazardous waste that is:

- exempt from regulation under 40 CFR 261.4(c) through (f), 261.6(a)(3), 261.7(a)(1), or 261.8
- managed immediately upon generation only in onsite elementary neutralization units, wastewater treatment units, or totally enclosed treatment facilities
- recycled, without prior storage or accumulation, on in an onsite process
- is used oil managed under 40 CFR 261.6(a)(4) and 40 CFR 279
- universal waste managed under 40 CFR 273.)

Verify that wastes are either treated or disposed of in an onsite facility or delivered to an offsite TSDF, either of which is one of the following:

- permitted
- in interim status
- authorized to manage hazardous waste by a state with an approved hazardous waste management program
- permitted, licensed, or registered by a state to manage municipal or industrial solid waste
- a facility that does one of the following:
 - beneficially uses or reuses, or legitimately recycles or reclaims, its waste
 - treats waste prior to beneficial use or reuse, or legitimate recycling or reclamation
- a universal waste handler or a destination facility for universal waste.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>4-11. (continued)</p>	<p>(NOTE: A permitted TSF should be permitted to receive hazardous waste from a CESQG)</p> <p>(NOTE: If a hazardous waste generator meets the requirements for being a CESQG, they are not required to meet any of the standards outlined in 40 CFR 262 through 266, (except 262.11), 268, and 270.)</p> <p>(NOTE: If a facility mixes its waste with used oil, the mixture is subject to the requirements in Subpart G, 40 CFR 279, if it is destined to be burned for energy recovery.)</p> <p>(NOTE: Quantities of acute hazardous waste greater than listed amounts are required to be handled according to the standards in 40 CFR 262 through 266, 268, 270, and 124.)</p> <p>(NOTE: Even though a CESQG is not legally required to use a manifest or obtain a hazardous waste identification number, many hazardous waste haulers will not transport hazardous waste from a facility without a manifest or identification number.)</p>
<p>4-12. CESQG personnel who handle hazardous waste are required to meet certain training requirements (561 FW 6.9C(3)).</p>	<p>Verify that the training program is directed by a person trained in hazardous waste management procedures.</p> <p>Verify that the training program coincides with the hazard communication program and includes the following:</p> <ul style="list-style-type: none"> - response to fire or explosion - response to leaks or spills - waste turn-in procedures - identification of hazardous wastes - container use, marking, labeling, and onsite transportation - manifesting and offsite transportation - personnel health and safety and fire safety - facility shutdown procedures. <p>Verify that new employee training is completed within 6 mo of employment.</p> <p>Verify that an annual review of initial training is provided.</p> <p>Verify that employees do not work unsupervised until training is completed.</p> <p>Verify specifically that accumulation point managers and hazardous waste handlers have been trained.</p>

COMPLIANCE CATEGORY: HAZARDOUS WASTE MANAGEMENT Fish and Wildlife Service	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
4-13. Training records must be maintained for all CESQG staff who manage hazardous waste (MP).	Examine training records and verify they include the following: <ul style="list-style-type: none"> - job title and description for each employee by name - written description of how much training each position will obtain - documentation of training received by name. <p>Determine if training records are retained for 3 yr after employment at the facility terminates or until closure of the facility.</p>
4-14. Empty containers at CESQGs previously holding hazardous wastes must meet the regulatory definition of empty before they are exempted from hazardous waste requirements (40 CFR 261.7).	Verify that, for containers or inner liners holding hazardous wastes, one of the following is done: <ul style="list-style-type: none"> - wastes are removed that can be removed using common practices and no more than 2.5 cm [1 in.] of residue remains. - if the container is less than or equal to 110 gal [416.40 L], no more than 3 percent by weight of total container capacity remains - when the container is greater than 110 gal [416.40 L], no more than 0.3 percent by weight of the total container capacity remains. <p>Verify that, for containers which hold a compressed gas, the pressure in the container approaches atmosphere.</p> <p>Verify that, for containers or inner liners which held an acute hazardous waste listed in Appendix 4-4, one of the following is done:</p> <ul style="list-style-type: none"> - it is triple rinsed - it is cleaned by another method identified through the literature or testing as achieving equivalent removal - the inner liner is removed.
4-15. Containers used to store hazardous waste at CESQGs must be in good condition and not leaking (561 FW 6.7E(2)(b)(iii)).	<p>Verify that containers are not leaking, bulging, rusting, damaged, or dented.</p> <p>Verify that waste is transferred to a new container or managed in another appropriate manner when necessary.</p>

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>4-16. Containers used at CESQGs must be made of or lined with materials compatible with the waste stored in them (561 FW 6.7E(2)(b)(iv)).</p>	<p>Verify that containers are compatible with waste, in particular, check that strong caustics and acids are not stored in metal drums.</p>
<p>4-17. Containers of hazardous waste at CESQGs must be closed during storage and handled in a safe manner (561 FW 6.7E((2)(b)(ii) and 6.7E((2)(b)(v)).</p>	<p>Verify that containers are closed, except when it is necessary to add or remove waste (check bungs on drums).</p> <p>Verify that handling and storage practices do not cause damage to the containers or cause them to leak.</p>
<p>4-18. Containers of hazardous waste are required to be stored in designated storage areas at CESQGs that meet specific parameters (561 FW 6.7E(2)(c)).</p>	<p>Verify that all hazardous waste containers are identified and stored in appropriate areas.</p> <p>(NOTE: Any unidentified contents of solid waste containers and/or containers not in designated storage areas must be tested to determine if solid or hazardous waste requirements apply.)</p> <p>Verify that the storage area has a portable fire extinguisher and special extinguishing equipment is needed for the waste being stored.</p>
	<p>Verify the following by inspecting storage areas:</p> <ul style="list-style-type: none"> - containers are not stored more than two high and have pallets between them - containers are positioned so that the label is clearly visible at all times - containers of highly flammable wastes are electrically grounded (check for clips and wires and make sure wires lead to ground rod or system) - at least 3 ft [0.91 m] of aisle space is provided between rows of containers - there is adequate spill control/containment material on hand.

COMPLIANCE CATEGORY: HAZARDOUS WASTE MANAGEMENT Fish and Wildlife Service	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
4-19. Storage areas are required to be inspected periodically (561 FW 6.7E(2)(d)).	Verify that the storage areas are inspected periodically. Verify that inspection logs are maintained by facility personnel. Verify that the inspection includes the following: <ul style="list-style-type: none"> - condition of drums - compatibility/segregation of wastes - required labels - adequate aisle space - proper safety equipment - adequate spill control materials - storage period compliance.
4-20. CESQGs are required to have a contingency plan (561 FW 6.9B(4) and 6.9B(7)).	Verify that the facility has a contingency plan that is specific to the wastes managed at the facility. Verify that the plan includes: <ul style="list-style-type: none"> - a description of actions to be taken during an emergency - a description of arrangements made with local police departments, fire departments, hospitals, contractors, and state and local emergency response teams as appropriate - names, addresses, and phone numbers of all persons qualified to act as emergency coordinators - a list of all emergency equipment at the facility, its location, and what it looks like - an evacuation plan for facility personnel where there is a possibility that an evacuation would be needed. Verify that the plan is routinely reviewed and updated, especially when emergency coordinators change, the waste being handled changes, and/or the list of emergency equipment changes.
4-21. CESQG facilities are required to have an emergency coordinator on call at all times (561 FW 6.9B(6)).	Verify that there is at least one employee at the facility or on call at all times with the responsibility for coordinating all emergency response measure.

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

4-44. SQGs that are managing hazardous wastes in tanks, containers, or containment buildings and treating the waste to meet applicable treatment standards must develop and follow a written waste analysis plan (40 CFR 268.7(a)(4) and 268.7(a)(10)).

Verify that the plan describes the procedures the generator will carry out to comply with treatment standards.

(NOTE: SQGs treating hazardous debris under the alternative treatment standards in Table 1 of 40 CFR 268.7(a)(4) are not required to conduct waste analysis.)

Verify that the plan is kept onsite and:

- the plan is based on a detailed chemical and physical analysis of representative sample of the prohibited waste being treated
- contains all information necessary to treat the wastes in accordance with regulatory requirements, including the selected testing frequency
- the plan is filed with the USEPA regional administrator or state authorized official at least 30 days prior to the treatment activity, with delivery verified.

(NOTE: SQGs with tolling agreements are required to comply with notification and certification requirements for the initial shipment of waste subject to the agreement. The SQG will retain an onsite copy of the notification and certification along with the tolling agreement for at least 3 yr after the termination or expiration of the agreement.)

4-45. SQGs are required to keep specific documents pertaining to restricted wastes onsite (40 CFR 268.7(a)(5) through 268.7(a)(7) and 268.7(a)(10)).

Verify that, if the facility is using generator knowledge to determine whether a waste meets land disposal restriction requirements, the supporting data used in making this determination is retained onsite in the facility operating files.

Verify that, if the facility has determined whether a waste is restricted using appropriate test methods, the waste analysis data is retained onsite in the files.

Verify that, if the facility has determined it is managing a restricted waste which is excluded from the definition of a hazardous waste or solid waste or exempt from RCRA Subtitle C, a one-time notice is placed in the facilities files stating that the generated waste is excluded.

Verify that a copy of all notices, certifications, demonstrations, waste analysis data, and other documentation is kept for at least 5 yr from the date the waste was last sent to onsite or offsite treatment, storage, or disposal.

Verify that SQGs with a tolling agreement retain the agreement and copies of notification and certification for at least 3 yr after the agreement expires.

**REGULATORY
REQUIREMENTS:**

4-53. Generator storage areas must be designed, constructed, maintained, and operated to minimize the possibility of a fire, explosion, or any unplanned release of hazardous waste (40 CFR 262.34(a)(4) and 265.30 through 265.37).

REVIEWER CHECKS:
July 1995

Determine if the following required equipment is easily accessible and in working condition at the storage area:

- internal communications or alarm system capable of providing immediate emergency instruction to facility personnel
- a telephone or hand-held two-way radio
- portable fire extinguishers and special extinguishing equipment (foam, inert gas, or dry chemicals)
- spill control equipment
- decontamination equipment
- fire hydrants or other source of water (reservoir, storage tank, etc.) with adequate volume and pressure, foam producing equipment, automatic sprinklers, or water spray systems.

Determine if equipment is tested and maintained as necessary to ensure proper operation in an emergency.

Verify that sufficient aisle space is maintained to allow unobstructed movement of personnel, fire protection equipment, spill control equipment, and decontamination equipment to any area of the operation.

Verify that police, fire department, and emergency response teams are familiar with the layout of the facility, properties of the waste being handled, and general operations as appropriate for the type of waste and potential need for such services.

Verify that the hospital is familiar with the site and the types of injuries that could result in an emergency as appropriate for the type of waste and potential need for such services.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>4-65. Containers with design capacities greater than 0.1 m³ [26.4 gal] into which hazardous waste is placed are required to meet specific design and operating standards (40 CFR 262.34 (a)(1)(i), 265.1087(a) through 265.1087 (b)(2)).</p>	<p>(NOTE: The requirements of 40 CFR 265.1087 do not apply to containers in which all the hazardous waste entering the container meets either of the following:</p> <ul style="list-style-type: none"> - the average VO concentration of the hazardous waste at the point of waste origination is less than 100 ppmw - the organic content of the hazardous waste has been reduced by an organic destruction or removal process <p>(NOTE: These requirements do not apply to a container that has a design capacity less than or equal to 0.1 m³ [26.4 gal] (40 CFR 265.1080(b)(2)).</p> <p>Verify that hazardous waste is placed into one of the following containers unless it is used for treatment:</p> <ul style="list-style-type: none"> - a container that is equipped with a cover which operates with no detectable organic emissions when all container openings (i.e. bungs, lids, hatches, and sampling ports) are secured in a closed, sealed position - a container having a design capacity less than or equal to 0.46 m³ [121.4 gal] that is equipped with a cover and complies with all applicable DOT regulations for packaging for transport - a container that is attached to or forms a part of any truck, trailer, or rail-car and that has been demonstrated within the preceding 12 mo to be vapor tight. <p>Verify that, if the facility uses a container that is equipped with a cover which operates with no detectable organic emissions when all container openings are secured in a closed, sealed position, the openings are tested to determine if the container operates with no detectable leaks the first time any portion of the hazardous waste is placed in the container.</p> <p>(NOTE: This check is not required for a DOT approved container.)</p> <p>Verify that the container is not used if a leak is detected.</p>

REGULATORY REQUIREMENTS:

4-65. (continued)

- the container is kept in an enclosure that is vented through a closed vent system to a control device whenever it is necessary for the container to be opened
- the enclosure is designed and opened so that:
 - there is sufficient airflow into the structure to capture the organic vapors emitted from the hazardous waste in the container and vent the vapors through the closed vent system to the control device
 - the pressure drop across each opening in the enclosure is maintained at a pressure below the atmospheric pressure such that whenever an open container is placed inside the enclosure no organic vapors released from the container exit the enclosure through the opening
 - there is an appropriately designed closed vent system and control device.

Verify that, when transfer is done by pumping the following are met:

- a conveyance system with a tube (e.g., pipe, hose) to add the waste into the container is used
- during transfer the cover remains in place
- all container openings are maintained in a closed sealed position except for those through which the tube enters
- the tube is positioned so that either the:
 - tube outlet continuously remains submerged below the waste surface at all time the waste is flowing through the tube
 - lower bottom edge of the tube outlet is located at a distance no greater than two inside diameters of the tube or 15.25 cm [6 in.], whichever is greater, from the bottom of the container at all times waste is flowing through the tube
 - tube is connected to a permanent port mounted on the bottom of the container so that the lower edge of the port opening inside the container is located at a distance equal to or less than 15.25 cm [6 in.] from the container bottom.

Secondary containment on tank systems at generators must meet specific requirements (40 CFR 262.34(a)(1)(ii), 265.190(a), and 265.193(b) through 265.193(d)).</p>	<p>(NOTE: A Generator generates more than 1000 kg [2204.62 lb, 265 gal] of hazardous waste in any one month of a calendar year.)</p> <p>Verify that tanks that store or treat material that becomes hazardous waste after 12 January 1987 have secondary containment as follows:</p> <ul style="list-style-type: none"> - for those existing tank systems of known and documentable age, within 2 yr of the date the material becomes a hazardous waste - for those existing tank systems for which the age cannot be documented, within 8 yr of the date the material becomes a hazardous waste; but if the age of the facility is greater than 7 yr, by the time the facility reaches 15 yr of age or within 2 yr of the date the material becomes a hazardous waste, whichever comes later. <p>(NOTE: The following are exempt from these requirements:</p> <ul style="list-style-type: none"> - tank systems that are used to store or treat hazardous waste that contains no free liquids and are situated inside a building with an impermeable floor - tank systems, including sumps, that serve as part of a secondary containment system to collect or contain releases of hazardous wastes.) <p>Verify that secondary containment meets the following criteria:</p> <ul style="list-style-type: none"> - it is designed, installed, and operated to prevent the migration of liquid out of the system - it is capable of detecting and collecting releases and accumulated liquids until removal is possible - it is constructed of or lined with materials compatible with the wastes - it is placed on a foundation or base that can provide appropriate support and prevent failure due to settlement, compression, or upset - a leak-detection system is present that is designed and operated to detect the failure of either the primary or secondary containment structure or the release of any hazardous waste within 24 h or the earliest practicable time - it is sloped or designed to drain and remove liquids from leaks, spills, or precipitation. <p>Verify that spilled or leaked wastes are removed from secondary containment within 24 h or as timely as possible.</p>

COMPLIANCE CATEGORY: HAZARDOUS WASTE MANAGEMENT Fish and Wildlife Service	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
4-76. (continued)	<p>Verify that secondary containment for tanks includes one or more of the following:</p> <ul style="list-style-type: none"> - a liner (external to the tank) - a vault - a double-walled tank - an equivalent approved device. <p>(NOTE: Tank systems that are used to store or treat hazardous waste that contains no free liquids and are situated inside a building with an impermeable floor are exempt from these requirements.)</p>
4-77. External liners, vaults and double-walled tanks at generators are required to meet specific standards (40 CFR 262.34(a)(1) (ii), 265.190(a), and 265.193(e)).	<p>Verify that external liner systems meet the following requirements:</p> <ul style="list-style-type: none"> - they are designed and operated so that 100 percent of the capacity of the largest tank within the boundary would be contained - they prevent runoff and infiltration of precipitation into the secondary containment unless the collection system has sufficient capacity to handle runoff or infiltration - it is free of cracks or gaps - it surrounds the tank completely and covers all surrounding earth likely to come into contact with the waste if there is a release - capacity is sufficient to contain precipitation from a 25-yr, 24-h rainfall event. <p>Verify that vault systems meet the following criteria:</p> <ul style="list-style-type: none"> - it will contain 100 percent of the capacity of the largest tank within its boundary - it prevents runoff and infiltration of precipitation unless there is sufficient excess capacity - it is constructed with chemical-resistant water stops at all joints - it has an impermeable interior coating that is compatible with the wastes it contains - has a means to protect against the formation and ignition of vapors within the vault if the waste is ignitable or reactive - it has an exterior moisture barrier or otherwise operated to prevent migration of moisture into the vault.

COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service

REGULATORY REQUIREMENTS:

REVIEWER CHECKS:
July 1995

4-77. (continued)

Verify that double-walled tanks meet the following criteria:

- it is designed as an integral structure so that any release is contained by the outer shell
- it is protected from both corrosion of the primary tank and the external surface of the outer shell if constructed of metal
- it has a built-in continuous leak detection system capable of detecting a release within 24 h.

(NOTE: Tank systems that are used to store or treat hazardous waste that contains no free liquids and are situated inside a building with an impermeable floor are exempt from these requirements.)

4-78. Tank ancillary equipment at generators must also be provided with secondary containment (40 CFR 262.34(a)(1)(ii), 265.190(a), and 265.193(f)).

Verify that ancillary equipment, except for the following, has secondary containment:

- aboveground piping that is visually inspected for leaks on a daily basis
- welded flanges, welded joints, and welded connections that are visually inspected for leaks on a daily basis
- sealless or magnetic coupling pumps and sealless valves, that are visually inspected for leaks on a daily basis
- pressurized aboveground piping systems with automatic shutoff valves that are visually inspected for leaks on a daily basis.

(NOTE: Tank systems that are used to store or treat hazardous waste that contains no free liquids and are situated inside a building with an impermeable floor are exempt from these requirements.)

4-79. Existing tank systems that do not have secondary containment are required to meet specific requirements 40 CFR 262.34.(a)(1)(ii), 265.190(a), 265.191(a) through 265.191(c), and 265.193(ii)).

Verify that existing tank systems without secondary containment meet the following:

- for nonenterable underground tanks a leak test is conducted annually
- for other than nonenterable underground tanks either a leak test is done annually or the facility develops a schedule and procedure for an assessment of the overall condition by an independent, qualified, registered, professional engineer.

Verify that the facility maintains a record of the results of testing and assessments.

Verify that tank systems which store or treat materials that become hazardous waste after 14 July 1986 are assessed within 12 mo after the waste becomes hazardous.

**COMPLIANCE CATEGORY:

July 1995**

4-90. Closed vent systems are required to be designed according to 265.1088 as appropriate (40 CFR 262.34(a)(1)(ii) and 265.1085(d)(2)).

(NOTE: These requirements do not apply to a tank in which the owner or operator has stopped adding hazardous waste and the owner or operator has begun implementing or completed closure following an approved closure plan (40 CFR 265.1080(b)(3)).

Verify that closed vent systems:

- route the gases, vapors, and fumes emitted from the hazardous waste to a control device
- are designed according to 265.1033(k) (see checklist item 4-96)
- meet the following if they contains one or more bypass devices that could be used to divert all or a portion of the gases, vapors, or fumes from entering the control device:
 - each bypass device, except for low leg drains, high point bleeds, analyzer vents, open-ended valves or lines, and safety devices meet one of the following:
 - it is equipped with a flow indicator at the inlet to the bypass device that indicates at least once every 15 min whether gas, vapor, or fume flow is present in the bypass device
 - it is equipped with a valve installed at the inlet to the bypass device secured in the closed position using a car-seal or a lock and key type configuration
 - seals or closure mechanism are inspected at least once a month.

Verify that the control device meets the following:

- it is one of the following:
 - a control device designed and operated to reduce the total organic content of the inlet vapor stream vented to the control device by at least 95 percent weight
 - an enclosed combustion device
 - a flare
- it is operating at all times when gases, vapors, or fumes are vented from the waste management unit through the closed vent system to the control device
- all activated carbon in the control device is replaced on a regular basis after start-up if carbon adsorption is used
- operation and maintenance is done in accordance with 265.1033(j) if a control device is used other than a thermal vapor incinerator, flare, boiler, process heater, condenser, or carbon adsorption system

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

4-93. (continued)

Verify that covers and all cover openings are inspected and monitored as follows:

- visually inspected initially and monitored for detectable organic emissions on or before the date that the tank using the cover has to comply with these requirements
- visually every 6 mo after the initial inspection except for the following:
 - a cover opening that is designated as unsafe to inspect and monitor
 - a cover opening on a cover installed and placed in operation before 6 December 1994 that is designated as difficult to monitor and inspect.

Verify that, when a leak is detected, the first attempt at repair is no later than 5 calendar days after detection and repair is completed no later than 15 calendar days after detection.

(NOTE: If a repair cannot be completed within 15 days then no more hazardous waste is to be added to the tank until the repair is complete.)

Verify that closed vent systems and control devices are inspected and monitored in accordance with 265.1033 (see checklist item 4-96).

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

GENERATORS

**Emissions From
Process Vents**

4-95. Generators with process vents associated with distillation, fractionation, thin-film evaporation, solvent extraction, or air or steam stripping operations that manage hazardous wastes with organic concentrations of at least 10 ppmw are required to meet specific standards (40 CFR 262.34(a)(1)(i), 262.34(a)(1)(ii), 265.1030(b), and 265.1032).

4-96. When a generator uses a closed-vent system and control device to meet the standards for total organic emissions, the closed-vent system and control device must meet certain minimum requirements (40 CFR 262.34(a)(1)(i), 262.34(a)(1)(ii), and 265.1033).

(NOTE: A Generator generates more than 1000 kg [2204.62 lb, 265 gal] of hazardous waste in any one month of a calendar year.)

Verify that one of the following is met:

- total organic emissions from the process vents do not exceed 1.4 kg/h (3 lb/h) and 2.8 Mg/yr (3.1 tons/yr)
- total organic emissions are reduced by use of a control device from all process vents by 95 weight percent.

Verify that control devices involving vapor recovery are designed and operated to recover the organic vapors vented to the air with an efficiency of 95 weight percent or greater unless the total organic emission limit can be attained at an efficiency of less than 95 weight percent.

Verify that, if an enclosed combustion device is used (i.e., vapor incinerator, boiler, or process heater), it is designed and operated to reduce the organic emissions vented to it by 95 weight percent or greater, to achieve a total organic compound concentration of 20 ppmv or to provide a minimum residence time of 0.50 s at a minimum temperature of 760 °C [1400 °F].

Verify that, if a boiler or process heater is used as the control device, the vent stream is introduced into the flame zone of the boiler or process heater.

**COMPLIANCE CATEGORY:
HAZARDOUS WASTE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>4-96. (continued)</p>	<p>Verify that; if flares are used:</p> <ul style="list-style-type: none"> - they are designed and operated with no visible emissions except for periods not in excess of 5 min during any 2 consecutive hours - they are operated with a flame present at all times - they are used only if the net heating value of the gas being combusted is 11.2 MJ/scm (300 Btu/scf) or greater if the flare is steam assisted or air assisted - if nonassisted, the net heating value of the gas being combusted is 7.45 MJ/scm (200 Btu/scf) or greater - if nonassisted or steam assisted, have an exit velocity less than 18.3 m/s (60 ft/s) except: <ul style="list-style-type: none"> - when the net heating value of the gas being combusted is greater than 37.3 MJ/scm (1000 Btu/scf) and the exit velocity is equal to or greater than 18.3 m/s (60 ft/s) but less than 122 m/s (400 ft/s). <p>Verify that each monitor and control device is inspected on a routine basis.</p>
<p>4-97. Generators are required to maintain specific records pertaining to process vent emissions (40 CFR 262.34(a)(1)(i), 262.34(a)(1)(ii), and 265.1035).</p>	<p>Verify that the following information is kept in the operating record:</p> <ul style="list-style-type: none"> - an implementation schedule - up-to-date documentation of compliance - the test plan if test data is used to determine the organic removal efficiency or total organic compound concentration achieved by a control device - design documentation - monitoring and inspection results - notations of exceedance - the date of each control startup and shutdown. <p>Verify that records of monitoring operations and inspection information are kept for 3 yr.</p> <p>(NOTE: See 40 CFR 265.1033 for special carbon adsorption system requirements.)</p>

**REGULATORY
REQUIREMENTS:**

4-112. When a containment building is closed, specific requirements must be met (40 CFR 262.34(a)(1)(iv) and 265.1102).

REVIEWER CHECKS:
July 1995

Determine if the facility has closed a containment building recently.

Verify that, at closure, all waste residues, contaminated containment system components, contaminated subsoils, and structures and equipment contaminated with waste and leachate were removed or decontaminated.

Verify that the containment building is closed in accordance with closure and post-closure requirements for TSDFs as outlined in the sections titled Closure and Documentation Requirements.

Verify that, if it is found that not all contaminated subsoils can be practicably removed or decontaminated, the site is closed and landfill postclosure requirements are implemented.

Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

4-166. The administrative record must be made available for public inspection when the engineering evaluation/cost analysis (EE/CA) is made available for public comment (40 CFR 300.815 and 300.820).

(NOTE: This requirement is a part of a one-time critical removal action.)

Verify that, if it is determined that a removal action is appropriate and that a planning period of 6 mo exists before onsite removal action, the following is done:

- the administrative record is made available for public inspection when the EE/CA is made available
- a notice of the availability of the administrative file is published in a newspaper of general circulation
- a public comment period is provided for
- a written response to significant comments is included in the administrative file
- public participation procedures as outlined in 40 CFR 300.415(m) (see checklist item 4-132) are done.

Verify that, if it is determined that a removal action is appropriate and there is not a planning period of 6 mo, the following is done:

- the administrative record file is made public no later than 60 days after the start of onsite removal activity
- a notice of availability is published in a local newspaper of general circulation
- a public comment period of at least 30 days is provided for beginning at the time the administrative record is made available to the public
- a written response to significant comments is placed in the administrative file.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>CLEANUP SITES</p> <p>NPL Sites</p> <p>4-172. Facilities with sites on the NPL are required to appoint a remedial project manager (40 CFR 300.120 (c) and 300.120(d)).</p> <p>4-173. Federal facilities on the NPL are required to have an IAG with the USEPA (CERCLA, Section 120(e)(2) and 120(e)(4)).</p>	<p>Verify that for releases of hazardous substances, pollutants, or contaminants on, or the sole source of the release is from, any FWS facility or vessel, the facility has an appointed remedial project manager and onscene coordinator.</p> <p>Verify that an IAG is in place and contains the following:</p> <ul style="list-style-type: none"> - a review of alternative remedial actions and selection of a remedial action by the head of the relevant department, agency, or instrumentality and the administrator or, if unable to reach agreement on selection of a remedial action, selection of the administrator - a schedule for the completion of the remedial action - arrangements for long term operation and maintenance of the facility. <p>Verify that the terms of the IAG are being met.</p>

Appendix 4-1

Hazardous Waste from Nonspecific Sources and from Specific Sources (40 CFR 261.31 and 261.32)

Table I
Hazardous Waste from Nonspecific Sources

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
	<u>Generic</u>	
F001	The spent halogenated solvents used in degreasing. Trichloroethylene, methylene chloride, 1,1,1-trichloroethane, carbon tetrachloride, and the chlorinated fluorocarbons; all spent solvent mixtures or blends used in degreasing containing before use, a total of 10 percent or more (by volume) of one or more of the above halogenated solvents listed in F002, F004, F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(t)
F002	The following spent halogenated solvents: tetrachloroethylene, methylene chloride, trichloroethylene, 1,1,1-trichloroethane, chlorobenzene, 1,1,2-trichloro-1,1,2-trifluoroethane, ortho-dichlorobenzene, trichlorofluoromethane, and 1,1,2-trichloroethane; all spent solvent mixtures or blends containing, before use, a total of 10 percent or more by volume, of one or more of the above halogenated solvents or those listed in F001, F004, or F005; and still bottoms from the recovery of these spent solvents and spent solvent mixtures.	(t)
F003	The spent nonhalogenated solvents, xylene, acetone, ethyl acetate, ethyl benzene, ethyl ether, methyl isobutyl ketone, n-butyl alcohol, cyclohexanone, and methanol; and the still bottoms from the recovery of these solvents and spent solvent mixtures.	(i)
F004	The spent nonhalogenated solvents, cresols and cresylic acid, and nitrobenzene; and the still bottoms from the recovery of these solvents.	(t)
F005	The following spent nonhalogenated solvents: toluene, methyl ethyl ketone, carbons disulfide, isobutanol, pyridine, benzene, 2-ethoxyethanol, and 2-nitropropane; all spent solvent mixtures or blends containing, before use, a total of 10 percent or more by volume of one or more of the above nonhalogenated solvents or those solvents listed in F001, F002, or F004; and still bottoms from the recovery of these solvents.	(i,t)
F006	Wastewater treatment sludges from electroplating operations except from the following processes: (1) sulfuric acid anodizing of aluminum; (2) tin plating on carbon steel; (3) zinc plating (segregated basis) on carbon steel; (4) aluminum or zinc-aluminum plating on carbon steel; (5) cleaning stripping associated with tin, zinc, and aluminum plating on carbon steel; and (6) chemical etching and milling of aluminum.	(t)
F007	Spent cyanide plating bath solution from electroplating operations.	(r,t)

(continued)

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
F008	Plating bath residues from the bottom of plating baths from electroplating operations where cyanides are used in the process.	(r,t)
F009	Spent stripping and cleaning bath solutions from electroplating operations when cyanides are used in the process.	(r,t)
F010	Quenching bath residues from oil baths from metal heat treating operations when cyanides are used in the process.	(r,t)
F011	Spent cyanide solutions from salt bath pot cleaning from metal heat treating operations.	(r,t)
F012	Quenching wastewater treatment sludges from metal heat treating operations where cyanides are used in the process.	(t)
F019	Wastewater treatment sludges from the chemical conversion coating of aluminum except from zirconium phosphating in aluminum can washing when such phosphating is an exclusive conversion coating process.	(t)
F020	Wastes from use of tri-, or tetrachlorophenol, or intermediates used to produce its pesticide derivatives. **	(h)
F021	Wastes of pentachlorophenol or intermediates used to produce its derivatives. **	(h)
F022	Wastes, of tetra-, penta-, or hexachlorobenzenes under alkaline conditions. **	(h)
F023	Wastes, of tri and tetrachlorophenols. **	(t)
F024	Wastes, including but not limited to distillation residues, heavy ends, tars, and reactor cleanout wastes from the production of chlorinated aliphatic hydrocarbons, utilizing free radical catalyzed processes having carbon chain lengths from one to five (omits light ends, spent filters and filter aids, spent desiccants, wastewater, wastewater treatment sludges, spent catalysts and wastes listed in 40 CFR 261.32).	(t)
F025	Condensed light ends, spent filters aids, and spent desiccant wastes from the production of certain chlorinated aliphatic hydrocarbons, by free radical catalyzed processes. These chlorinated aliphatic hydrocarbons are those having carbon chain lengths ranging from one to and including five, with varying amounts and positions of chlorine substitution.	(t)
F026	Wastes of tetra-, penta-, or hexachlorobenzene under alkaline conditions.	(h)
F027	Discarded, unused formulations containing tri-, tetra-, or pentachlorophenol or discarded, unused formulations containing compounds derived from these chlorophenols (does not include hexachlorophene synthesized from prepurified 2,4,5-trichlorophenol as the sole component).	(h)
F028	Residues from incineration or thermal treatment of soil contaminated with USEPA hazardous waste Nos. F020, F021, F022, F023, F026, and F027.	(t)

(continued)

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
F032	Wastewaters (except those that have not come into contact with process contaminants), process residue, preservative drippage, and spent formulations from wood preserving processes generated at plants that currently use or have previously used chlorophenolic formulations (except potentially cross-contaminated wastes that have had the F032 waste code deleted in accordance with 261.35 and the generator does not resume or initiate use of chlorophenolic formulations). This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(t)
F034	Wastewaters (except those that have come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use cresote formulations. This listing does not include K001 bottom sludge from the treatment of wastewater from wood preserving processes that use creosote and or phentachlorophenol.	(t)
F035	Wastewaters (except those that have come into contact with process contaminants), process residuals, preservative drippage, and spent formulations from wood preserving processes generated at plants that use inorganic preservatives containing arsenic or chormium. This listing does not include K001 bottom sediment sludge from the treatment of wastewater from wood preserving processes that use creosote and/or pentachlorophenol.	(t)
F037	Petroleum refinery primary oil/water/solids separation sludge--any sludge generated from the gravitational separation of oil/water/solids during the storage or treatment of process wastewaters and oily cooling wastewaters from petroleum refiners. This includes, but is not limited to, sludges generated in: oil/water/solids separators; tanks and impoundments; ditches and other conveyances; sumps; and stormwater units receiving dry weather flow. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated from noncontact once through cooling waters segregated for treatment from other process or oily cooling waters, sludges generated in aggressive biological treatment units*** (including sludges generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and K051 wastes are not included in this listing.	(t)

(continued)

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
F038	Petroleum refinery secondary (emulsified) oil/water/solids separation sludge--any sludge and/or float generated from the physical and/or chemical separation of oil/water/solids in process wastewaters and oily cooling wastewaters from petroleum refineries. Such wastes include, but are not limited to, all sludges and floats generated in: induced air flotation (IAF) units, tanks and impoundments, and all sludges generated in DAF units. Sludges generated in stormwater units that do not receive dry weather flow, sludges generated from noncontact once-through cooling waters segregated for treatment from other process or oily cooling waters, sludges, and floats generated in aggressive biological treatment units*** (including sludges and floats generated in one or more additional units after wastewaters have been treated in aggressive biological treatment units) and F037, K048, and K051 wastes are not included in this listing.	(t)
F039	Leachate resulting from the management of one or more of the following wastes and no other hazardous waste retains its hazardous waste number(s): F020, F021, F022, F023, F026, F027, and/or F028.	

* HAZARD CODES (Column 3)

- t = toxic waste
- i = ignitable waste
- r = reactive waste
- h = acute hazardous waste

** (Except wastewater and spent carbon from hydrogen chloride purification); the manufacturing or production use: as a reactant, chemical intermediate, or component in a formulating process. The listing for F020 and F023 does not include wastes from the production of hexachlorophene from highly purified 2,4,5-trichlorophenol.

*** Aggressive biological treatment units are defined as units that employ one of the following treatment methods: activated sludge; trickling filter; rotating biological contactor for the continuous accelerated biological oxidation of wastewaters; or high-rate aeration. High-rate aeration is a system of surface impoundments or tanks, in which intense mechanical aeration is used to completely mix the wastes, enhance biological activity, and (A) the units employ a minimum of 6 hp per million gallons of treatment volume; and either (B) the hydraulic retention time of the unit is no longer than 5 days; (C) the hydraulic retention time is no longer than 30 days and the unit does not generate a sludge that is a hazardous waste by the toxicity characteristic.

NOTE: The listing of wastewaters that have not come into contact with process contaminants is stayed administratively. The listing for plants that have previously used chlorophenolic formulations is administratively stayed whenever these wastes are covered by the F032, F034 or F035 listings. These stays will remain in effect until further administrative action is taken.

(continued)

Appendix 4-1 (continued)

Table 2
Hazardous Wastes from Specific Sources

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
<u>Wood Preservation</u>		
K001	Bottom sediment sludge from the treatment of wastewaters from wood preserving processes that use creosote and /or pentachlorophenol.	(t)
<u>Inorganic Pigments</u>		
K002	Wastewater treatment sludge from the production of chrome yellow and organe pigments.	(t)
K003	Wastewater treatment sludge from the production of molybdate orange pigments.	(t)
K004	Wastewater treatment sludge from the production of zinc yellow pigments.	(t)
K005	Wastewater treatment sludge from the production of chrome green pigments.	(t)
K006	Wastewater treatment sludge from the production of chrome green pigments (anhydrous and hydrated).	(t)
K007	Wastewater treatment sludge from the production of iron blue pigments.	(t)
K008	Oven residue from the production of chrome oxide green pigments.	(t)
<u>Organic Chemicals</u>		
K009	Distillation bottoms from the production of acetaldehyde from ethylene.	(t)
K010	Distillation side cuts from the production of acetaldehyde from ethylene.	(t)
K011	Bottom stream from the wastewater stripper in the production of acrylonitrile.	(r,t)
K013	Bottom stream from the acetonitrile column in the production of acrylonitrile.	(r,t)
K014	Bottoms from the acetonitrile purification column in the production of acrylonitrile.	(t)
K015	Still bottoms from the distillation of benzyl chloride.	(t)
K016	Heavy ends or distillation residues from the production of carbon tetrachloride.	(t)

(continued)

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
K017	Heavy ends (still bottoms) from the purification column in the production of epichlorohydrin.	(t)
K018	Heavy ends from fractionation in ethyl chloride production.	(t)
K019	Heavy ends from the distillation of ethylene dichloride in ethylene dichloride production.	(t)
K020	Heavy ends from the distillation of vinyl chloride in vinyl chloride monomer production.	(t)
K021	Aqueous spent antimony catalyst waste from fluoromethanes production.	(t)
K022	Distillation bottom tars from the production of phenol/acetone from cumene.	(t)
K023	Distillation light ends from the production of phthalic anhydride from naphthalene.	(t)
K024	Distillation bottoms from the production of phthalic anhydride from naphthalene.	(t)
K025	Distillation bottoms from the production of nitrobenzene by the nitration of benzene.	(t)
K026	Stripping still tails from the production of methyl ethyl pyridines.	(t)
K027	Centrifuge residue from toluene diisocyanate production.	(r,t)
K028	Spent catalyst from the hydrochlorinator reactor in the production of 1,1,1-trichloroethane.	(t)
K029	Waste from the product stream stripper in the production of 1,1,1-trichloroethane.	(t)
K030	Column bottoms or heavy ends from the combined production of trichloroethylene and perchloroethylene.	(t)
K083	Distillation bottoms from aniline production.	(t)
K085	Distillation of fractionation column bottoms from the production of chlorobenzene.	(t)
K093	Distillation light ends from the production of phthalic anhydride from ortho-xylene.	(t)
K094	Distillation bottoms from the production of phthalic anhydride from ortho-xylene.	(t)
K095	Distillation bottoms from the production of 1,1,1-trichloroethane.	(t)
K096	Heavy ends from the heavy ends column from the production of 1,1,1-trichloroethane.	(t)
K103	Process residues from aniline extraction from the production of aniline.	(t)

(continued)

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
K104	Combined wastewater streams generated from nitrobenzene or aniline production.	(t)
K105	Separated aqueous stream from the reactor product washing step in the production of chlorobenzenes.	(t)
K107	Column bottoms from product separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid.	(C,T)
K108	Condensed column overheads from product separation and condensed reactor vent gases from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(I,T)
K109	Spent filter cartridges from product purification from production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K110	Condensed column overheads from intermediate separation from the production of 1,1-dimethylhydrazine (UDMH) from carboxylic acid hydrazides.	(T)
K111	Product washwaters from the production of dinitrotoluene via nitration of toluene.	(c,t)
K112	Reaction byproduct water from the drying column in the production of toluenediamine via hydrogenation of dinitrotoluene.	(t)
K113	Condensed liquid light ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(t)
K114	Vicinals from the purification of toluenediamine in the production of toluenediamine.	(t)
K115	Heavy ends from the purification of toluenediamine in the production of toluenediamine via hydrogenation of dinitrotoluene.	(t)
K116	Organic condensate from the solvent recovery column in the production of toluene diisocyanate via phosgenation of toluenediamine.	(t)
K117	Wastewater from the reactor vent gas scrubber in the production of ethylene dibromide via bromination of ethene.	(t)
K118	Spent adsorbent solids from purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(t)
K136	Still bottoms from the purification of ethylene dibromide in the production of ethylene dibromide via bromination of ethene.	(t)
K149	Distillation bottoms from the production of alpha- (or methyl) chlorinated toluenes, ring-chlorinated toluenes, benzoyl chlorides, and compounds with mixtures of these functional groups. (This waste does not include still bottoms for the distillation of benzyl chloride.)	(t)

(continued)

Appendix 4-1 (continued)

Industry and USEPA Hazardous Waste Number	Hazardous Waste	Hazard Code*
K150	Organic residuals, excluding spent carbon adsorbent, from the spent chlorine gas and hydrochloric acid recovery processes associated with the production of alpha- (or methyl) chlorinated toluenes, ring -chlorinated toluenes, benoyl chlorides, and compounds with mixtures of these functional groups.	(t)
K151	Wastewater treatment sludges, excluding neutralization and biological sludges, generated during the treatment of wastewaters from the production of alpha- (or methyl-) chlorinated toluenes, ring-chlorinated toluenes, benzyo; chlorides, and compounds with mixtures of these functional groups.	(t)
<u>Inorganic Chemicals</u>		
K071	Brine purification muds from the mercury cell process in chlorine production, where separately prepurified brine is not used.	(t)
K073	Chlorinated hydrocarbon waste from the purification step of the diaphragm cell process using graphite anodes in chlorine production.	(t)
K106	Wastewater treatment sludge from the mercury cell process in chlorine production.	(t)
<u>Hazardous Waste from Explosives Manufacturing</u>		
K044	Wastewater treatment sludge from the manufacturing and processing of explosives.	(r)
K045	Spent carbon from the treatment of wastewater containing explosives.	(r)
K046	Wastewater treatment sludges from the manufacturing, formulation, and loading of lead-based initiating compounds.	(t)
K047	Pink/red water from TNT operations.	(t)

NOTE: Hazardous waste created from the production of pesticides, petroleum refining, coking, ink formulation, the production of: iron and steel, primary copper, primary lead, primary zinc, primary aluminum, ferroalloys, veterinary pharmaceuticals, and secondary lead are not included in this table due to their nonapplicability at installation/CW facilities.

*** HAZARD CODES (Column 3)**

t = toxic waste
i = ignitable waste
r = reactive waste
h = acute hazardous waste

Appendix 4-2

Commercial Chemical Products or Manufacturing Chemical Intermediates Identified as Toxic Wastes (40 CFR 261.33(f))

(COMMENT: primary hazardous properties of these materials have been indicated by the letter (t) (toxicity), (r) (reactivity), (i) (ignitibility), and (c) (corrosivity); absence of a letter indicates that the compound is only listed for acute toxicity.)

USEPA Hazardous Waste Number	Substance
U394	A2213
U001	acetaldehyde (i)
U034	acetaldehyde, trichloro-
U187	acetamide, N-(4-ethoxyphenyl)-
U005	acetamide, N-9H-fluoren-2-yl-
U240	acetic acid, (2,4-dichloropheoxy)-, salts and esters
U112	acetic acid, ethyl ester (i)
U144	acetic acid, lead(2+) salt
U214	acetic acid, thallium(1+) salt
see F027	acetic acid, (2,4,5-trichlorophenoxy)-
U002	acetone (i)
U003	acetonitrile (i, t)
U004	acetophenone
U005	2-acetylaminoflourene
U006	acetyl chloride (c, r, t)
U007	acrylamide
U008	acrylic acid (i)
U009	acrylonitrile
U011	amitrole
U012	aniline (i, t)
U136	arsenic acid, dimethyl-
U014	auramine
U015	azaserine
U365	H-azepine-1-carbothioic acid, S-ethyl ester

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U010	azirino(2,3,3,4(pyrrolo(1,2-a)indole -4,7-dione, 6-amino-8-[(aminocarbonyl)oxy)methyl]-1,1a,2,8,8a,8b- hexahydro-8a-methoxy-5-methyl-,
U280	barban
U278	bendiocarb
U364	bendiocarb phenol
U271	benomyl
U157	benz[j]aceanthrylene, 1,2-dihydro-3- methyl-
U016	benza[c]ridine
U017	benzal chloride
U192	benzamide, 3,5-dichloro-n- (1,1-diethyl-2-propynyl-
U018	benz[a]anthracene
U094	1,2-benzanthracene, 7,12-dimethyl-
U012	benzenamine (i,t)
U014	benzenamine, 4,4-carbonimidoylbis(N,N-dimethyl-
U049	benzenamine, 4-chloro-2-methyl-,hydrochloride
U093	benzenamine, N,N-dimethyl-4-(phenylazo)-
U328	benzenamine, 2-methyl-
U353	benzenamine, 4-methyl-
U158	benzenamine, 4,4-methylenebis(2-chloro-
U222	benzenamine, 2-methyl-, hydrochloride
U181	benzenamine, 2,-methyl-5-nitro
U019	benzene (i, t)
U038	benzeneacetic acid, 4-chloro-alpha-(4-chlorophenyl)-alpha-hydroxy, ethyl ester
U030	benzene, 1-bromo-4-phenoxy-
U035	benzenebutanoic acid, 4-[bis(2-chloroethyl)amino]-
U037	benzene, chloro-
U221	benzenediamine, ar-methyl-
U028	1,2-benzendicarboxylic acid, [bis(2-ethyl-hexyl)]ester
U069	1,2-benzenedicarboxylic acid, dibutyl ester

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U088	1,2-benzenedicarboxylic acid, diethyl ester
U102	1,2-benzenedicarboxylic acid, dimethyl ester
U107	1,2-benzenedicarboxylic acid, dioctyl ester
U070	benzene, 1,2-dichloro-
U071	benzene, 1,3-dichloro-
U072	benzene, 1,4-dichloro-
U060	benzene, 1,1'- (2,2-dichloroethylidene) bis[4-chloro-
U017	benzene, (dichloromethyl)-
U223	benzene, 1,3-diisocyanatomethyl- (r,t)
U239	benzene, dimethyl-(i,t)
U201	1,3-benzenediol
U127	benzene, hexachloro-
U056	benzene, hexahydro- (i)
U220	benzene, methyl-
U105	benzene, 1-methyl-2,4-dinitro-
U106	benzene, 2-methyl-1,3-dinitro-
U055	benzene, (1-methylethyl)-(i)
U169	benzene, nitro- (i,t)
U183	Benzene, pentachloro-
U185	benzene, pentachloronitro-
U020	benzenesulfonic acid chloride (c,r)
U020	benzenesulfonyl chloride (c,r)
U207	benzene, 1,2,4,5-tetrachloro-
U061	benzene, 1,1'-(2,2,2- trichloroethylidene) bis[4-chloro
U247	benzene, 1,1'-(2,2,2- trichloroethylidene)[4-methoxy-
U023	benzene, (trichloromethyl)-
U234	benzene, 1,3,5-trinitro-
U021	benzidine
U202	1,2-benzisothiazolin-3-one, 1,1-dioxide and salts
U278	1,3-benzodioxol-4-ol, 2,2-dimethyl-, methyl carbam- ate

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U364	1,3-benzodioxol-4-ol, 2,2-dimethyl-,
U203	1,3-benzodioxole, 5-(2-propenyl)-
U141	1,3-benzodioxole, 5-(1-propenyl)-
U090	1,3-benzodioxole, 5-propyl-
U367	benzofuranol, 2,3-dihydro-2,2-dimethyl-
U064	benzo[rs]pentaphene
U248	2-H-1-benzopyran-2-on2, 4-hydroxy-3-(3-oxo-1-phenylbutyl)-, and salts, when present at concentrations of 0.3% or less
U022	benzo[a]pyrene
U197	p-benzoquinone
U023	benzotrichloride (c,r,t)
U085	2,2-bioxirane
U021	(1,1-biphenyl)-4,4-diamine
U073	(1,1-biphenyl)-4,4-diamine, 3,3-dichloro
U091	(1,1-biphenyl)-4,4-diamine, 3,3- dimethoxy-
U095	(1,1-biphenyl)4,4-diamine, 3,3- dimethyl-
U401	bis(dimethylthiocarbamoyl) sulfide
U400	bis(pentamethylene)thiuram tetrasulfide
U225	bromoform
U030	4-bromophenyl phenyl ether
U128	1,3-butadiene, 1,1,2,3,4,4- hexachloro
U172	1-butanamine, N-butyl-N-nitroso-
U031	1-butanol (i)
U159	2-butanone (i,t)
U160	2-butanone peroxide (r,t)
U053	2-butenal
U074	2-butene, 1,4-dichloro- (i,t)
U143	2-butenic acid, 2-methyl-, 7- [(2,3-dihydroxy-2-(1-methoxyethyl) -3-methyl-1-oxobutoxy)methyl] - 2,3,5,7s-rytshyfto-1- pyrrolizin-1-yl ester, [1S-[alpha(Z),7(2S,3R), 7aalpha]]-

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U031	n-Butyl alcohol (i)
U392	butylate
U136	cacodylic acid
U032	calcium chromate
U372	carbamic acid, 1H-benzimidazol-2-yl, methyl ester
U271	carbamic acid, [1-[(butylamino)carbonyl]-1H-benzimidazol-2-yl]-, methyl ester
U375	carbamic acid, butyl-, 3-iodo-2-propynyl ester
U280	carbamic acid, (3-chlorophenyl)-, 4-chloro-2-butynyl ester
U238	carbamic acid, ethyl ester
U178	carbamic acid, methylnitroso- ethyl ester
U373	carbamic acid, phenyl-, 1-methylethyl ester
U409	carbamic acid, [1,2-phenylenebis (iminocarbonothioyl)]bis-, dimethyl ester
U097	carbamic chloride, dimethyl-
U379	carbamodithioic acid, dibutyl, sodium salt
U277	carbamodithioic acid, diethyl, 2-chloro-2-propenyl ester
U381	carbamodithioic acid, diethyl-, sodium salt,
U383	carbamodithioic acid, dimethyl, potassium salt
U382	carbamodithioic acid, dimethyl-, sodium salt
U376	carbamodithioic acid, dimethyl-, tetraanhydrosulfide with orthothioselenious acid
U114	carbamodithioic acid, 1,2- ethanediylbis-, salts and esters
U378	carbamodithioic acid, (hydroxymethyl)methyl-, mono-potassium salt
U384	carbamodithioic acid, methyl-, monosodium salt
U377	carbamodithioic acid, methyl-, monopotassium salt
U062	carbamothioic acid, bis(1-methylethyl)-S- (2,3-dichloro-2-propenyl) ester
U389	carbamothioic acid, bis(1-methylethyl)-S-(2,3,3-trichloro-2-propenyl) ester

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U392	carbamothioic acid, bis(1-methylpropyl)-S-ethyl ester
U391	carbamothioic acid, butylethyl-, S-propyl ester
U385	carbamothioic acid, cyclohexylethyl-, S-ethyl ester
U390	carbamothioic acid, dipropyl-, S-ethyl ester
U387	carbamothioic acid, dipropyl-, S-(phenylmethyl) ester
U385	carbamothioic acid, dipropyl-, S-propyl ester
U279	carbaryl
U372	carbendazim
U367	carbofuran phenol
U215	carbonic acid, dithallium(1+)salt
U033	carbonic difluoride
U156	carbonochlorodic acid, methyl ester (i,t)
U033	carbon oxyfluoride (r,t)
U211	carbon tetrachloride
U034	chloral
U035	chlorambucil
U036	chlordane, alpha and gamma isomers
U026	chlomaphazine
U037	chlorobenzene
U039	p-chloro-m-cresol
U042	2-chloroethyl vinyl ether
U044	chloroform
U046	chloromethyl methyl ether
U047	beta-chloronaphthalene
U048	o-chlorophenol
U049	4-chloro-o-toluidine, hydrochloride
U032	chromic acid H ₂ CrO ₄ , calcium salt
U050	chrysene
U393	copper, bis(dimethylcarbamodithioao-S,S')-
U393	copper, dimethyldithiocarbamate

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U051	creosote
U052	cresols (cresylic acid)
U053	crotonaldehyde
U055	cumene (i)
U246	cyanogen bromide
U386	cycloate
U197	2,5-cyclohexadiene-1, 4-dione
U056	cyclohexane (i)
U129	cyclohexane 1,2,3,4,5,6- hexachloro-, (1alpha, 2alpha, 3beta, 4alpha, 6beta)-
U057	cyclohexanone (i)
U130	1,3-cyclopentadiene, 1,2,3,4,5,5- hexachloro-
U058	cyclophosphamide
U240	2,4-d, salts and esters
U059	daunomycin
U366	dazomet
U060	DDD
U061	DDT
U062	diallate
U063	dibenz[a,h]anthracene
U064	dibenzo[a,i]pyrene
U066	1,2-dibromo-3-chloropropane
U069	dibutyl phthalate
U070	o-Dichlorobenzene
U071	m-Dichlorobenzene
U072	p-Dichlorobenzene
U073	3,3'-dichlorobenzidine
U074	1,4-dichloro-2-butene (i,t)
U075	dichlorodifluoromethane
U078	1,1-dichloroethylene
U079	1,2-dichloroethylene

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U025	dichloroethyl ether
U027	dichloroisopropyl ether
U024	dichloromethoxy ethane
U081	2,4-dichlorophenol
U082	2,6-dichlorophenol
U084	1,3-dichlorpropene
U085	1,2:3,4-diepoxybutane (i,t)
U395	diethylene glycol, dicarbamate
U108	1,4-diethyleneoxide
U028	diethylhexyl phthalate
U086	N,N-diethylhydrazine
U087	O,O-diethyl-s-methyl dithiophosphate
U088	diethyl phthalate
U089	diethylstilbestrol
U090	dihydrosafrole
U091	3,3'-dimethoxybenzidine
U092	dimethylamine (i)
U093	dimethylaminoazobenzene
U094	7,12-dimethylbenz[a]anthracene
U095	3,3-dimethylbenzidine
U096	alpha,alpha-dimethylbenzylhydroperoxide (r)
U097	dimethylcarbamoyl chloride
U098	1,1-dimethylhydrazine
U099	1,2-dimethylhydrazine
U101	2,4-dimethylphenol
U102	dimethyl phthalate
U103	dimethyl sulfate
U105	2,4-dinitrotoluene
U106	2,6-dinitrotoluene
U107	di-n-octyl phthalate

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U108	1,4-dioxane
U109	1,2-diphenylhydrazine
U110	dipropylamine (i)
U111	di-n-propylnitrosamine
U403	disulfiram
U390	EPTC
U041	epichlorhydrin
U001	ethanal (i)
U404	ethanamine, N,N-diethyl-
U174	ethanamine, N-ethyl-N-nitroso-
U155	1,2-ethanediamine, n,n- dimethyl-n'-2-pyridinyl- n'-(2-thienylmethyl)-
U067	ethane, 1,2-dibromo-
U076	ethane, 1,1-dichloro-
U077	ethane, 1,2-dichloro-
U131	ethane, hexachloro-
U024	ethane, 1,1-[methylenebis(oxy)] bis[2-chloro-
U117	ethane, 1,1-oxybis- (i)
U025	ethane 1,1-oxybis[2-chloro-
U184	ethane, pentachloro-
U208	ethane, 1,1,1,2-tetrachloro-
U209	ethane, 1,1,2,2-tetrachloro-
U218	ethanethioamide
U226	ethane, 1,1,1-trichloro
U359	ethane, 1,1,2-trichloro-
U227	ethane, trichloro
U410	ethanimidothioic acid, N,N'-[thiobis[(methylimino)carbonyloxy]]bis-, dimethyl ester
U394	ethanimidothioic acid, 2-(dimethylamino)-N-hydroxy-2-oxo-, methyl ester
U359	ethanol, 2-ethoxy-

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U173	ethanol, 2,2'-(nitrosoimino)bis-
U395	Ethanol, 2,2'poxybis-, dicarbamate
U004	ethanone, 1-phenyl-
U043	ethene, chloro-
U042	ethene, (2-chloroethoxy-)
U078	ethene, 1,1-dichloro-
U079	ethene, 1,2-dichloro- (e)
U210	ethene, tetrachloro-
U228	ethene, trichloro
U112	ethyl acetate (i)
U113	ethyl acrylate (i)
U238	ethyl carbamate (urethane)
U117	ethyl ether (i)
U114	ethylenebisdithiocarbamic acid, salts and esters
U067	ethylene dibromide
U077	ethylene dichloride
U359	ethylene glycol monoethyl ether
U115	ethylene oxide (i,t)
U116	ethylenethiourea
U076	ethylidene dichloride
U118	ethyl methacrylate
U119	ethyl methanesulfonate
U407	ethyl ziram
U396	ferbam
U120	fluoranthene
U122	formaldehyde
U123	formic acid (c,t)
U124	furan (i)
U125	2-furancarboxaldehyde (i)
U147	2,5-furandione

(continued)

Appendix 4-2 (continued)

USEPA Hazardous Waste Number	Substance
U213	furan, tetrahydro- (i)
U125	furfural (i)
U124	furfuran (i)
U206	glucopyranose, 2-deoxy-2 (3-methyl-3-nitroso-ureido)-
U126	glycidylaldehyde
U163	guanidine, N-methyl-N'-nitro- N-nitroso-
U127	hexachlorobenzene
U128	hexachlorobutadiene
U130	hexachlorocyclopentadiene
U131	hexachloroethane
U132	hexachlorophene
U243	hexachloropropene
U133	hydrazine (r,t)
U086	hydrazine, 1,2-diethyl-
U098	hydrazine, 1,1-dimethyl-
U099	hydrazine, 1,2-dimethyl-
U109	hydrazine, 1,2-diphenyl-
U134	hydrofluoric acid (c,t)
U134	hydrogen fluoride (c,t)
U135	hydrogen sulfide
U135	hydrogen sulfide
U096	hydroperoxide, 1-methyl-1-phenylethyl- (r)
U116	2-imidazolidinethione
U137	indeno(1,2,3-cd)pyrene
U375	3-iodo-2-propynyl n-butylcarbamate
U396	iron, tris(dimethylcarbamodithioato-S,S')
U190	1,3-isobenzofurandione
U140	isobutyl alcohol (i,t)
U141	isosafrole
U142	kepone

D043	Vinyl chloride	75-01-4	0.2

¹ If o-, m-, and p-cresol concentrations cannot be differentiated, the total cresol (D026) concentration is used.

² Quantitation limit is greater than the calculated regulatory level. Therefore, the quantitation limit becomes the regulatory level.

Appendix 4-4

Commercial Chemical Products or Manufacturing Chemical Intermediates Identified as Acute Hazardous Waste (40 CFR 261.33(a) through 261.33(e))

(COMMENT: Primary hazardous properties of these materials have been indicated by the letters (t) (toxicity), and (r) (reactivity); absence of a letter indicates that the compound only is listed for acute toxicity.)

Hazardous Waste Number	Substance	
P023	Acetaldehyde, chloro-	
P002	Acetamide, N-(aminothioxomethyl)-	
P057	Acetamide, 2-fluoro-	
P058	Acetic acid, fluoro-, sodium salt	
P002	1-Acetyl-2-thiourea	
P003	Acrolein	
P070	Aldicarb	
P203	Aldicarb sulfone	
P004	Aldrin	
P005	Allyl alcohol	
P006	Aluminum phosphide	(r,t)
P007	5-(Aminomethyl)-3-isoxazolol	
P008	4-Aminopyridine	
P009	Ammonium picrate	(r)
P119	Ammonium vanadate	
P099	Argebtate(1), bis(cyano-C)-, potassium	
P010	Arsenic acid H^3AsO^4	
P012	Arsenic oxide As^2O^3	
P011	Arsenic oxide As^2O^5	
P011	Arsenic pentoxide	
P012	Arsenic trioxide	
P038	Arsine, diethyl	
P036	Arsonous dichloride, phenyl	
P054	Aziridine	
P067	Aziridine, 2-methyl	
P013	Barium cyanide	
P024	Benzenamine, 4-chloro-	
P077	Benzenamine, 4-nitro-	
P028	Benzene, (chloromethyl)-	
P042	1,2-Benzenediol, 4-[1-hydroxy- 2-(methy- lamino)ethyl]-	(r)
P046	Benzeneethanamine, alpha,alpha- dime- thyl-	(r)
P014	Benzenethiol

Hazardous Waste Number	Substance
P104	Silver cyanide
P104	Silver cyanide Ag(CN)
P105	Sodium azide
P106	Sodium cyanide
P106	Sodium cyanide Na(CN)
P108	Strychnidin-10-one, and salts
P018	Strychnidin 10-one, 2,3-dimethoxy-
P108	Strychnine and salts
P115	Sulfuric acid, dithallium(I) salt
P109	Tetraethyldithiopyrophosphate
P110	Tetraethyl lead
P111	Tetraethylpyrophosphate
P112	Tetranitromethane (r)
P062	Tetraphosphoric acid, hexaethyl ester
P113	Thallic oxide
P113	Thallium(III) oxide
P114	Thallium(I) selenite
P115	Thallium(I) sulfate
P109	Thiodiphosphoric acid, tetraethyl ester
P045	Thiofanox
P049	Thiomidodicarbonic diamide
P014	Thiophenol
P116	Thiosemicarbazide
P026	Thiourea, (2-chlorophenyl)-
P072	Thiourea, 1-naphthalenyl-
P093	Thiourea, phenyl-
P185	Tirpate
P123	Toxaphene
P118	Trichloromethanethiol
P119	Vanadic acid, ammonium salt
P120	Vanadium oxide V2O3
P120	Vanadium pentoxide
P084	Vinylamine, N-methyl-N-nitroso
P001	Warfarin, and salts, when present at concentrations greater than 0.3%
P205	Zinc, bis(dimethylcarbamodithioato-S,S')-
P121	Zinc cyanide
P121	Zinc cyanide Zn(CN)2
P122	Zinc phosphide Zn3P2, when present at concentrations greater than 0.10%
P205	Ziram

Appendix 4-5

Potentially Incompatible Hazardous Wastes (40 CFR 264, Appendix V)

Below are examples of potentially incompatible wastes, waste components, and materials, along with the harmful consequences that result from mixing materials in one group with materials in another group. The list is intended as a guide to indicate the need for special precautions when managing these potentially incompatible waste materials or components. This list is not intended to be exhaustive. Operators must, as the regulations require, adequately analyze their wastes so they can avoid creating uncontrolled substances or reactions of the type listed below, whether listed below or not.

In the lists below, the mixing of a Group A material with a Group B material may have the potential consequences as noted.

Potential Consequences: Heat generation, violent reaction.

Group 1-A	Group 1-B
Acetylene sludge	Acid sludge
Alkaline caustic liquids	Acid and water
Alkaline cleaner	Battery acid
Alkaline corrosive liquids	Chemical cleaners
Alkaline corrosive battery acid	Electrolyte, acid
Caustic wastewater	Etching acid liquid or solvent
Lime sludge and other corrosive alkalies	Pickling liquor and other corrosive acids
Lime wastewater	Spent acid
Lime and water	Spent mixed acid
Spent caustic	Spent sulfuric acid

Potential Consequences: Fire or explosion; generation of flammable hydrogen gas.

Group 2-A	Group 2-B
Aluminum	Any waste in Group 1-A or 1-B
Beryllium	
Calcium	
Lithium	
Magnesium	
Potassium	
Sodium	
Zinc powder	
Other reactive metals and metal hydrides	

(continued)

Appendix 4-5 (continued)

**Potential Consequences: Fire, explosion, or heat generation;
generation of flammable or toxic gases.**

Group 3-A	Group 3-B
Alcohols	Any concentrated waste in Groups 1-A or 1-B
Water	Calcium
	Lithium
	Metal hydrides
	Potassium
	SO_2Cl_2 , SOCl_2 , PCl_3 , CH_3SiCl_3
	Other water-reactive waste

Potential Consequences: Fire explosion, or violent reaction.

Group 4-A	Group 4-B
Alcohols	Concentrated Group 1-A or Group 1-B wastes
Aldehydes	Group 2-A wastes
Halogenated hydrocarbons	
Nitrated hydrocarbons	
Unsaturated hydrocarbons	
Other reactive organic compounds and solvents	

Potential Consequences: Generation of toxic hydrogen cyanide, or hydrogen sulfide gas.

Group 5-A	Group 5-B
Spent cyanide and sulfide solutions	Group 1-B wastes

Potential Consequences: Fire, explosion, or violent reaction.

Group 6-A	Group 6-B
Chlorates	Acetic acid and other organic acids
Chlorine	
Chlorites	Concentrated mineral acids
Chromic acid	Group 2-A wastes
Hypochlorites	Group 4-A wastes
Nitrates	Other flammable and combustible wastes
Nitric acid, fuming	
Perchlorates	
Permanganates	
Peroxides	
Other strong oxidizers

Appendix 4-6

Recordkeeping, Notification, and/or Certification Requirements for 40 CFR 268 (40 CFR 268, Appendix X)

Entity	Scenario	Frequency	Recipient of notification	Recordkeeping, notification, and/or certification requirements
Generator	A. Waste does not meet applicable treatment standards, or exceeds applicable prohibition levels (see 268.7(a)(1))	Each shipment	Treatment or storage facility	<p>Notice must include:</p> <ul style="list-style-type: none"> - USEPA hazardous waste number - constituents of concern - treatability group - manifest number - waste analysis data (where avail.)
	B. Waste can be disposed of without further treatment (meets applicable treatment standards or does not exceed prohibition levels upon generation (see 268.7(a)(2))).	Each shipment	Land disposal facility	<p>Notice and certification statement that wastes meets applicable treatment standards or applicable prohibited levels.</p> <p>Notice must include:</p> <ul style="list-style-type: none"> - USEPA hazardous waste number - constituents of concern - treatability group - manifest number - waste analysis data (where avail.) <p>Certification statement required under 268.7(a)(2)(ii) that waste complies with treatment standards and prohibitions.</p>
	C. Waste is subject to exemption from a prohibition on the type of land disposal utilized for the waste, such as a case-by-case extension under 268.5, an exemption under 268.6, or a nation-wide capacity variance (see 268.7(a)(3)).	Each shipment	Receiving facility	<p>Notice must include:</p> <ul style="list-style-type: none"> - statement that the waste is not prohibited from land disposal - USEPA hazardous waste number - constituents of concern - treatability group - manifest number - waste analysis data (where avail.) - date the waste is subject to prohibitions.

Appendix 4-6 (continued)

Entity	Scenario	Frequenc y	Recipient of notification	Recordkeeping, notification, and/or certification requirements
Generator (contin- ued)	D. Waste is being accu- mulated in tanks or con- tainers regulated under 40 CFR 262.34 and is being treated in such tanks or containers to meet applicable treat- ment standards (see 268.7(a)(4)).	Minimum of 30 days prior to treatment activity	USEPA Regional Administrator (or designated representative, or authorized State. Delivery must be veri- fied	Generator must develop, keep onsite, and follow a written waste analysis plan describing procedures used to comply with the treatment standards. If waste is shipped offsite, gen- erator must also comply with notification requirement in 268.7(a)(2).
	E. Generator is manag- ing a lab pack contain- ing certain wastes and wishes to use an alter- native treatment stan- dard (see 268.7(a)(8)).	Each shipment	Treatment facility	Notice in accordance with 268.7(a)(1), (a)(5), and (a)(6), where applicable. Certification in accordance with 268.7(a)(8).
	F. SQGs with tolling agreements	Initial shipment	Treatment facility	Must comply with applicable notification and certification requirements in 268.7(a) Generator must also retain copy of the notification and certifica- tion together with tolling agree- ment onsite for at least 3 yr after termination or expiration of the agreement.
	G. Generator has determined waste is a restricted waste based solely on his knowl- edge of the waste (see 268.7(a)(5)).	NA	Generator's file	All supporting data must be retained onsite in generator's files.
	H. Generator has determine waste is restricted based on testing waste or an extract (see 268.7(a)(5)).	NA	Generator's file	All waste analysis data must be retained onsite in generators files.

Appendix 4-6 (continued)

Entity	Scenario	Frequency	Recipient of notification	Recordkeeping, notification, and/or certification requirements
Generator (continued)	I. Generator has determined that waste is excluded from the definition of hazardous or solid waste or exempt from Subtitle C regulation (see 268.7(a)(6)).	One time	Generator's file	Notice of generation and subsequent exclusion from the definition of hazardous or solid waste, or exemption from Subtitle C regulation, and information regarding the disposition of the waste.
	J. Generator (or treater) claims that hazardous debris is excluded from the definition of hazardous waste under 40 CFR 261.3(f)(1) (see 268.7(d)).	One time	USEPA Regional Administrator or authorized State. notification must be updated as necessary under 268.7(d)(2).	<p>Notice must include:</p> <ul style="list-style-type: none"> - name and address of Subtitle D facility receiving treated debris - USEPA hazardous waste number and description of debris as initially generated - technology used to treat the debris. <p>Certification and recordkeeping is in accordance with 268.7(d)(3).</p>
	K. Generator (or treater) claims that characteristic wastes are no longer hazardous (see 268.9(d)).	One time	Generator's (or treater's) files and USEPA Regional Administrator or authorized State. Notifications must be updated as necessary under 268.9(d).	<p>Notice must include:</p> <ul style="list-style-type: none"> - name and address of Subtitle D facility receiving treated debris - USEPA hazardous waste number and description of debris as initially generated - treatability group - underlying hazardous constituents. <p>Certification in accordance with 268.9(d)(2).</p>

(continued)

Appendix 4-6 (continued)

Entity	Scenario	Frequenc y	Recipient of notification	Recordkeeping, notification, and/or certification requirements
Generator (contin- ued)	L. Other recordkeeping requirements (see 268.7(a)(7)).	NA	Generator's files	Generator must retain a copy of all notices, certifications, dem- onstrations, waste analysis data, and other documentation produced pursuant to 268.7 onsite for at least 5 yr from the date that the waste was last sent to onsite or offsite treat- ment, storage, or disposal. This period is automatically extended during enforcement actions or as requested by the Administra- tor.
Treatment Facility	A. Waste shipped from treatment facility to land disposal facility (see 268.7(b)(4) and (b)(5)).	Each shipment	Land disposal facility	<p>Notice must include:</p> <ul style="list-style-type: none"> - USEPA hazardous waste num- ber - constituents of concern - treatability group - manifest number - waste analysis data (where avail.) <p>Applicable certification in accor- dance with 268.7(b)(5)(i), (ii), or (iii), stating that the waste or treatment residue has been treated in compliance with appli- cable treatment standards and prohibitions.</p>
	B. Waste treatment res- idue from a treatment or storage facility will be further managed at a different treatment or storage facility (see 268.7(b)(6)).	Each shipment	Receiving facility	Treatment, storage, or disposal facility must comply with all notices and certification require- ments applicable to generators.

(continued)

Appendix 4-6 (continued)

Entity	Scenario	Frequency	Recipient of notification	Recordkeeping, notification, and/or certification requirements
Treatment Facility (continued)	C. Where wastes are recyclable materials used in a manner consisting disposal subject to 266.20(b) (see 268.7(b)(7)).	Each shipment	Regional Administrator (or delegated representative)	<p>No notification to receiving facility required pursuant to 269.7(b)(4).</p> <p>Certification as described in 268.7(b)(5) and notice with information listed in 268.7(b)(4), except manifest number.</p> <p>Recycling facility must keep records of the name and location of each entity receiving hazardous waste-derived products.</p>
Land Disposal Facility	A. Wastes accepted by land disposal facility (see 268.7(c)).	NA	NA	Maintain copies of notice and certification specified in 268.7(a) and (b).

Appendix 4-7

Land Disposal Restricted Wastes and Their Effective Dates. (40 CFR 268, Appendix VII)

Part 1--Land Disposal Restricted Wastes and Their Effective Dates

Waste Code	Waste Category	Effective Date
California list	Liquid hazardous wastes, including free liquids associated with solid or sludge, containing free cyanides at concentrations greater than or equal to 1000 mg/L or certain metals or compounds of these metals greater than or equal to the prohibition levels.	8 July 1987
California list	Liquid (aqueous) hazardous wastes having a pH less than or equal to 2.	8 July 1987
California list	Dilute HOC wastewaters, defined as HOC-waste mixtures that are primarily water and that contain greater than or equal to 1000 mg/L but less than 10,000 mg/L.	8 July 1987
California list	Liquid hazardous waste containing PCBs greater than or equal to 50 ppm.	8 July 1987
California list	Other liquid and nonliquid hazardous wastes containing HOCs in total concentration greater than or equal to 1000 mg.	8 Nov 1988

Appendix 4-7 (continued)

Part 2--Summary of Effective Dates of Land Disposal Restrictions for Contaminated Soil and Debris (CSD)

	Restricted hazardous waste in CSD	Effective date
1.	Solvent-(F001-F005) and dioxin-(F020-F023 and F026-F028) containing soil and debris from CERCLA response of RCRA corrective actions.	8 Nov 1990
2.	Soil and debris not from CERCLA response or RCRA corrective actions contaminated with less than 1% total solvents (F001-F005) or dioxins (F020-F023 and F026-F028).	8 Nov 1990
3.	Soil and debris contaminated with California list HOCs from CERCLA response or RCRA corrective actions.	8 Nov 1990
4.	Soil and debris contaminated with California list HOCs not from CERCLA response or RCRA corrective actions.	8 July 1989
5.	All soil and debris contaminated with First Third wastes for which treatment standards are based on incineration.	8 Aug 1990
6.	All soil and debris contaminated with Second Third wastes for which treatment standards are based on incineration.	8 June 1991
7.	All soil and debris contaminated with Third Third wastes or, First or Second Third "soft hammer" wastes which had treatment standards promulgated in the Third Third rule, for which treatment standards are based on incineration, vitrification, or mercury retorting, acid leaching followed by chemical precipitation, or thermal recovery of metals; as well as all inorganic solids debris contaminated with D004-D011 wastes, and all soil and debris contaminated with mixed RCRA/radioactive wastes.	8 May 1993

NOTE:

1. Appendix VII is provided for the convenience of the reader.
2. Contaminated Soil and Debris Rule will be promulgated in the future.

Appendix 4-8

Schedule for Implementation of Air Emissions Standards (40 CFR 265.1082)

Facilities existing on 6 December 1995 which are required to comply with 40 CFR 265, Subparts I, J, and K.

Install and begin operation of all required control equipment by 6 December 1995. If it cannot be installed and operating by 6 December 1995 the owner and operator shall:

- install and begin operation as soon as possible but not later than 8 December 1997
- prepare an implementation schedule which is placed in the operating record by 6 December 1995.

Facilities which are required to comply with 40 CFR 265, Subparts I, J, and K due to a statutory or regulatory amendment shall:

Install and begin operation of all required control equipment by the effective date of the amendment. If it cannot be installed and operating by the effective date of the amendment the owner and operator shall:

- install and begin operation as soon as possible but not later than 30 mo after the amendment effective date
- prepare an implementation schedule which is placed in the operating record no later than the effective date of the amendment.

(NOTE: The Regional Administrator may elect to extend the implementation date at a facility on a case by case basis.)

F. Key Compliance Definitions	3
Guidance for Checklist Users	7

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 5

PESTICIDE MANAGEMENT

A. Applicability

This section applies to FWS facilities which use, store, or handle pesticides. Pesticides are regulated on the Federal level (U.S. Environmental Protection Agency (USEPA)) and the state level. As used in this handbook the terms pesticides encompasses pesticides, herbicides, and fungicides.

It must be noted that pesticides are by nature hazardous materials and are subject to hazardous material regulations.

B. Federal Legislation

- *The Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA)*. This act, as last amended in December 1991, 7 U.S. Code (USC) 136-136y, deals with the sale, distribution, transportation, storage, and use of pesticides. It requires the registration of new pesticides and, when pesticides are reregistered, requires that they will not present any unreasonable risks to human health or the environment, if used according to label directions.
- *The Endangered Species Act (ESA)* of 1973. The purpose of this act, 16 USC 1531-1547, et al, last amended in October 1988, is to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, to provide a program for the conservation of such endangered species and threatened species, and to take such steps as may be appropriate to achieve the purposes of the treaties and conventions for protection of endangered species (16 USC 1531(b)). Under ESA, the policy of Congress is that all Federal departments and agencies must seek to conserve endangered species and threatened species and must use their authorities in furtherance of the purposes of this act. Further, Federal agencies must cooperate with state and local agencies to resolve water resource issues in concert with conservation of endangered species (16 USC 1531(c)).
- Executive Order (EO) 12088. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities it funds meet applicable Federal, state, and local environmental requirements or to correct situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards*.
 - 29 CFR 1910, *Occupational Safety and Health Standards*.

- 40 CFR 152, *Pesticide Registration and Classification Procedures.*
- 40 CFR 165, *Regulations for the Acceptance of Certain Pesticides and Recommended Procedures for the Storage and Disposal of Pesticides and Pesticide Containers.*
- 40 CFR 166, *Exemption of Federal and State Agencies for Use of Pesticides Under Emergency Conditions.*
- 40 CFR 171, *Certification of Pesticide Applicators.*
- 50 CFR 402, *Interagency cooperation - Endangered Species Act of 1973, as amended.*

C. State/Local Requirements

State pesticide regulatory programs are to be at least as stringent as FIFRA. State and local programs typically contain regulations which are tailored to an industry or activity which is prevalent or particularly sensitive in a state. State and local pesticide regulations in many cases provide more stringent standards or specifically identify a requirement which may be qualitatively regulated under the Federal program. State and local pesticide programs generally include regulations which address the following topics:

1. restrictions or requirements for the sale, distribution, or use of selected pesticides
2. disposal requirements for excess pesticides and pesticide wastes such as pesticide containers
3. restrictions on the control of specific animal or insect species
4. specifications for bulk pesticide storage tanks and storage facilities
5. operational requirements for selected application methods
6. recordkeeping and applicator certification requirements.

D. FWS/DOI Manuals

No applicable manuals final as of the publication of this handbook.

E. Key Compliance Requirements

- **Pesticide Application** - People applying restricted-use pesticides must be certified to apply restricted use pesticides. Contractors used for pest management must have current state certification for the types of applications to be performed. The application of pesticides must not jeopardize the existence of threatened or endangered species (40 CFR 171.9 and 50 CFR 402).
- **Pesticide Storage, Mixing, and Preparation Facilities** - Pesticide storage, mixing, and preparation activities must provide facilities and procedures to ensure safety of personnel. Facilities such as a ventilation system for all indoor pesticide mixing/preparation areas and an emergency deluge shower and eyewash station located to provide immediate access to all personnel performing mixing. Personal protective clothing and equipment needs to be provided and used by pest management personnel. (29 CFR 1910.133).

- **Highly Toxic Pesticide Storage and Use** - Storage facilities for pesticides and excess pesticides classed as highly toxic or moderately toxic, that are labeled DANGER, POISON, or with the skull and crossbones symbol, should meet specific structural, operational, and storage requirements. These include pesticides being kept in a dry, separate room with fire protection and not near food or feed, and in containers in good condition with plainly visible labels. There should be a decontamination facility and the local fire department, hospitals, public health officials, and police departments should be notified in writing that the pesticides are being stored (MP).
- **Pesticide Disposal** - Facilities are required to dispose of any pesticide, pesticide container, or pesticide residue in a manner consistent with labeling, not including open dumping or burning. Organic pesticides other than organic mercury, lead, cadmium, and arsenic compounds, must be disposed according to specific procedures. Options include incineration at an incinerator that meets air quality standards for gaseous emissions. Metallo-organic pesticides must be disposed of in a manner that facilitates the recovery of heavy metals (40 CFR 165.7).
- **Recordkeeping** - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- **Acute LD₅₀** - a statistically derived estimate of the concentration of a substance that would cause 50 percent mortality to the test population under specified conditions (40 CFR 152.3).
- **Caution** - the human hazard signal word required on the front panel of a pesticide container determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category III or IV must bear on the front panel the signal word CAUTION (see Toxicity Category) (40 CFR 156.10(h)).
- **Certified Applicator** - any individual who is certified by the USEPA or the state to use or supervise the use of any restricted use pesticide covered by that individual's certification (7 CFR 110.2).
- **Commercial Applicator** - a certified applicator, other than a private applicator, who uses or supervises the use of any pesticide, for any purpose, on any property, or performs other pest control related activities (40 CFR 171.2).
- **Crisis Exemption** - this is utilized in an emergency condition when the time from discovery of the emergency to the time when the pesticide use is needed is insufficient to allow for the authorization of a specific quarantine exemption or public health exemption (40 CFR 166.2).
- **Danger** - the human hazard signal word required on the front panel of a pesticide container determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category I must bear on the front panel, the signal word DANGER (see Toxicity Category) (40 CFR 156.10(h)).

- *Imminent Hazard* - a situation that exists when the continued use of a pesticide during the time required for cancellation proceedings would be likely to result in unreasonable adverse effects on the environment or will involve unreasonable hazard to the survival of a species declared endangered by the Secretary of the Interior under Public Law (PL) 91-135 (40 CFR 165.1).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Pesticide* - any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, or intended for use as a plant regulator, defoliant, or disinfectant; and is further categorized into the following (40 CFR 165.1):
 1. Excess pesticides means all pesticides that cannot be legally sold pursuant to the Act or that are to be discarded.
 2. Organic pesticides means carbon-containing substances used as pesticides, excluding metallo-organic compounds.
 3. Inorganic pesticides means noncarbon-containing substances used as pesticides.
 4. Metallo-organic pesticides means a class of organic pesticides containing one or more metal or metalloid atoms in the structure.
- *Pesticide Product* - a pesticide in the particular form (including composition, packaging, and labeling) in which the pesticide is, or is intended to be, distributed or sold. This includes any physical apparatus used to deliver or apply the pesticide if distributed or sold with the pesticide (40 CFR 152.3).
- *Private Applicator* - a certified applicator who uses or supervises the use of any restricted use pesticide for purposes of producing any agricultural commodity (7 CFR 100.2).
- *Public Health Exemption* - this may be authorized in an emergency condition to control a pest that will cause a significant risk to human health (40 CFR 166.2).
- *Quarantine Exemption* - this may be authorized in an emergency condition to control the introduction or spread of any pest new to or not theretofore known to be widely prevalent or distributed within and throughout the United States and its territories (40 CFR 166.2).
- *Restricted-Use Pesticides* - pesticides designated for restricted use under the provisions of Section 3(d)(1)(c) of FIFRA (40 CFR 171.2).
- *Specific Exemption* - this exemption may be authorized in an emergency condition to avert (40 CFR 166.2):
 1. a significant economic loss
 2. a significant risk to endangered species, threatened species, beneficial organisms, or the environment.
- *Toxicity Category* - required warnings and precautionary statements are based on the Toxicity Category of the pesticide. The category is assigned on the basis of the highest hazard shown in the table listed in 40 CFR 156.10 (40 CFR 156.10(h)).

- *Warning* - the human hazard signal word required on the front panel of a pesticide container determined by the Toxicity Category of the pesticide. All pesticide products meeting the criteria of Toxicity Category II shall bear on the front panel the signal word WARNING (see 40 CFR 156.10 for listing of indicators necessary to meet specific criteria of toxicity categories) (40 CFR 156.10(h)).

PESTICIDE MANAGEMENT

Records To Review

- Records of pesticides purchased by the facility (purchase orders, inventory)
- Pesticide application records
- Description of the facility's pest control program
- Certification status of pesticide applicators
- Pesticide disposal manifests
- Contract files
- Any emergency exemption granted to the FWS by the USEPA

Physical Features To Inspect

- Personnel protection equipment
- Pesticide application equipment
- Pesticide storage areas, including storage containers

**COMPLIANCE CATEGORY:
PESTICIDE MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

ALL FACILITIES

5-1. The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).

Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, inter-agency agreements, or equivalent state enforcement actions.

5-2. FWS facilities are required to comply with state and local pesticide regulations (EO 12088, Section 1-1).

Verify that the facility is complying with state and local requirements.

Verify that the facility is operating according to permits issued by the state or local agencies.

(NOTE: Issues typically regulated by state and local agencies include:

- applicator certification
- restricted-use pesticides
- application procedures
- banned pesticides
- disposal methods
- emergency application of pesticides due to public health threats.)

5-3. Facilities will meet regulatory requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulation as a basis of finding).

Determine if any new regulations concerning pesticides have been issued since the finalization of the handbook.

Verify that the facility is in compliance with newly issued regulations.

**COMPLIANCE CATEGORY:
PESTICIDE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>5-4. FWS facilities should report all NOV's to the Region and the Service Pollution Control Office (SPCO) (MP).</p> <p>5-5. All pesticides present on the facility must be registered or ruled exempt from the registration requirements (40 CFR 152.15 through 152.30).</p>	<p>Determine if the facility has received an NOV relating to pesticides.</p> <p>Verify that the NOV was reported to the Region and the SPCO.</p> <p>Verify that pesticide products at the facility are registered unless the facility or product is considered exempt, such as the following:</p> <ul style="list-style-type: none"> - certain biological control agents - certain human drugs - treated articles or substances such as paint treated with a pesticide - pheromones and pheromone traps - preservatives for biological specimens - vitamin hormone products - pesticide transferred between registered establishments operated by the same producer - a pesticide distributed or sold under an experimental use permit - a pesticide transferred solely for export - a pesticide distributed or sold under an emergency exemption.
<p>5-6. All facilities must comply with pesticide use requirements unless an emergency exemption has been granted by the USEPA (40 CFR 166.1, 166.2, 166.20, 166.28, 166.32, 166.45, and 166.50).</p>	<p>Verify that pesticides are used according to label instructions unless one or more of the following emergency conditions exist:</p> <ul style="list-style-type: none"> - Specific exemptions may be authorized to avoid conditions of: <ul style="list-style-type: none"> - significant economic loss - significant risk to threatened or endangered species - significant risk to beneficial organisms - significant risk to the environment. - Quarantine exemptions may be authorized to control the introduction or spread of any pest new to or unknown to be widespread throughout the United States and its territories. - Public health exemptions may be authorized to control a pest that imposes significant risk to human health. - Crisis exemptions may be utilized when the time constraint between discovery, and implementation of pesticide use will not allow a specific, quarantine, or public health exemption to be issued. <p>Verify that applications for exemptions are submitted to the Regional Administrator in writing and include:</p> <ul style="list-style-type: none"> - a description of the pesticide - the proposed use - any alternative means of control and why those means are not feasible.

COMPLIANCE CATEGORY:
PESTICIDE MANAGEMENT
Fish and Wildlife Service

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

5-6. (continued)

Verify that exemptions are issued for a specific length of time, as follows:

- no more than 1 yr for specific and public health exemptions
- for no longer than 3 yr for a quarantine permit, but it may be renewed
- no longer than 15 days (unless an application for another type of exemption has been submitted) for a crisis exemption.

Verify that any unexpected adverse affects from the use of a pesticide under exemption conditions are being reported to the USEPA.

Verify that a report summarizing the use of a pesticide under an exemption was submitted to the USEPA within 6 mo after the expiration of the exemption (3 mo for a crisis exemption).

**COMPLIANCE CATEGORY:
PESTICIDE MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

**PESTICIDE
APPLICATORS**

5-7. Persons applying restricted-use pesticides must be certified to apply restricted use pesticides (40 CFR 171.9).

Determine if pesticide applicators are trained and/or certified.

Verify that training recertification is scheduled and performed as required to maintain certification and that certification is relevant to the pest management activities undertaken.

Verify the certification status of contractors used for pest management.

(NOTE: Check the list of restricted-use pesticides in Appendix 5-1.)

5-8. Personnel routinely applying any pesticides should be trained in safety procedures and application procedures (MP).

Determine if personnel at the facility routinely apply pesticides.

Verify that personnel are trained in appropriate handling and use procedures.

5-9. Health monitoring should be provided for government personnel applying pesticides other than bug bombs, space sprays, and no-pest strips (MP).

Verify that all pest management personnel have received baseline physical examinations within 30 days of starting pest management work.

Verify that pest management personnel receive additional physical examinations once each year.

Verify that cholinesterase tests are given to pest management personnel working regularly with pesticides which contain organophosphates or N-alkyl-carbamates.

(NOTE: The Safety Office should be consulted about health concerns related to the pesticides in use at the facility..)

**COMPLIANCE CATEGORY:
PESTICIDE MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

**PESTICIDE
APPLICATION**

5-10. Facilities must ensure that the use of pesticides does not jeopardize the existence of threatened or endangered species (50 CFR 402.01 para 2(d)).

5-11. Public safety should be ensured when applying or using pesticides (MP).

5-12. Certified applicators of restricted-use pesticides are required to keep application records (7 CFR 110.3).

Determine if surveys have been conducted to identify the presence of threatened or endangered species in areas where pesticides are used.

Determine what measures are taken to ensure that threatened or endangered species are not impacted.

Verify that applications are made according to label instructions regarding the protection of endangered species.

Verify the elimination of hazardous exposure to the general public by checking for the following:

- appropriate signs for treatment area are posted
- scheduling for low use periods or restricted usage for a number of days
- water use restrictions and reentry times are followed according to the pesticide labels.

Verify that the certified applicators keep records with the following information:

- the brand or product name and the USEPA registration number of the restricted use pesticide that was applied
- the total amount of the restricted-use pesticide that was applied
- the location of the application, the size of the area treated, and the crop, commodity, stored product, or site to which a restricted use pesticide was applied
- the month, day, and year of the application
- the name and certification number of the certified applicator who applied to supervised the application.

Verify that the following information is kept for applications of restricted-use pesticides made on the same day in a total areas of less than one-tenth of an acre:

- brand or product name and USEPA registration number
- total amount applied
- location, designated as spot application followed by a concise description of location and treatment
- the month, day, and year of application.

Verify that the information is recorded within 14 days of the application.

**STORAGE/MIXING/
PREPARATION
AREAS**

5-14. Facilities are required to store any pesticide, pesticide container, or pesticide residue according to specific restrictions (MP).

5-15. Security measures should assure that only authorized persons can access pesticide storage, mixing, and preparation areas (MP).

5-16. Pesticide storage, mixing, and preparation facilities must provide facilities and procedures to ensure safety of personnel (29 CFR 1910.133).

(NOTE: Storage areas must also meet the general requirements for the storage of hazardous materials found in 29 CFR 1910.106, see Section 3, Hazardous Materials Management).

Verify that pesticides, pesticide containers, and/or pesticide residues are stored such that it is not inconsistent with labeling.

(NOTE: This MP is based on recommendations found in 40 CFR 165.7. This recommendation is a requirement under OSHA, see *Hazardous Materials Management*.)

Verify that a climb-resistant fence completely encloses the storage, mixing, or preparation area.

Verify that vehicles used to transport pesticides have locking compartments.

Determine if a ventilation system is specifically provided for all indoor pesticide mixing/preparation areas.

Verify that an emergency deluge shower and eyewash station are located to provide immediate access to all personnel performing mixing.

Verify that personal protective clothing and equipment is provided and used by pest management personnel. The following equipment depends upon magnitude and type of operations:

- respirators
- masks
- gloves
- safety shoes
- coveralls
- specialized personal protective equipment for fumigation.

Verify that operations include health and safety procedures emphasizing good work habits, reduction or elimination of hazards, and use of personal protective equipment.

July 1995**

5-25. Storage of pesticides and excess pesticides that are classed as highly toxic or moderately toxic and are required to be labeled DANGER, POISON, WARNING, or with the skull and crossbones symbol should meet specific requirements (MP).

Verify that the site location, where possible, is in an area where flooding is unlikely and where hydrogeologic conditions prevents contamination of any water system by runoff or percolation by:

- inspecting areas surrounding facilities and determining proximity to surface water
- noting location relative to floodplains, depth of groundwater, and general soil types and typical permeabilities
- verifying that the spill management system is in existence.

Verify that an environmental monitoring system exists for facilities which do not have spill management system when the facility handles large quantities of pesticides and is located near sensitive environmental receptor. The reviewer should:

- note approximate quantity of pesticides and location of sensitive environmental receptors
- check whether groundwater, or surface water, or air monitoring program exists to determine any effects caused by pesticide storage, mixing and preparation
- inspect facility operations and layout to determine if operations are likely to allow runoff of water which may have contacted pesticides.

Verify that, when needed, drainage from the site is contained by natural or artificial barriers or dikes.

(NOTE: These MPs are based on recommendations found in 40 CFR 165.10(b).)

5-26. Facilities which store/use pesticides that are classed as highly toxic or moderately toxic and are required to bear the signal words DANGER, POISON, WARNING, or the skull and crossbones symbol should provide facilities and procedures to ensure the safety of personnel (MP).

Verify that no food consumption, drinking, smoking, or tobacco use is undertaken in any area where pesticides are present.

Verify that the following practices are performed in pest management operations:

- persons handling pesticides keep hands away from mouths and eyes and wear rubber gloves during all pesticide handling
- persons handling pesticides wash hands immediately upon completion of working with pesticides and always prior to eating, smoking, or using toilet facilities
- persons handling concentrated pesticides wear protective clothing which is removed if found to be contaminated
- a stock of protective clothing is available
- self-contained breathing apparatus and impermeable suits are available when handling pesticides which present the potential of being absorbed through the skin
- inspections are made once a month to determine if any pesticide containers are leaking
- pesticide containers are inspected for leakage prior to handling
- unauthorized persons are not allowed in storage areas.

Verify that the following accident prevention measures are done:

- containers are not manhandled
- unauthorized persons are not allowed in the storage area
- pesticides are not stored next to food or feed or other articles intended for consumption by humans or animals
- all vehicles are inspected prior to departure.

(NOTE: These MPs are based on recommendations found in 40 CFR 165.10(e) and 165.10(f).)

**REVIEWER CHECKS:
July 1995**

5-27. Pesticide storage facilities and equipment which contain or use pesticides classed as highly toxic or moderately toxic and are labeled DANGER, POISON, WARNING, or with the skull and crossbones symbol should have signs and safety procedures posted (MP).

5-28. Where large quantities of pesticides classed as highly toxic or moderately toxic and labeled DANGER, POISON, WARNING, or with the skull and crossbones symbol are being stored, or other conditions warrant, the local fire department, hospitals, public health officials, and police department should be notified in writing that pesticides are being stored in the event of a fire (MP).

Verify that signs which read DANGER, POISON, PESTICIDE STORAGE, are placed on or near entries to storage facilities.

Verify that safety precautions and accident prevention measures are posted.

Verify that an inventory of pesticides is displayed outside of the storage facility identifying all chemicals in storage.

Verify that mobile equipment used for pesticide applications is labeled CONTAMINATED WITH PESTICIDES.

(NOTE: These MPs are based on recommendations found in 40 CFR 165.10(c)(2) through 165.10(c)(3), 165.10(e), and 165.10(g)(2).)

Verify that notification has been submitted and includes a statement of the hazards that pesticides may be present during a fire.

Verify that a floor plan of the storage facility indicating the location of the different pesticide classifications has been submitted to the fire department.

Verify that the fire chief has the home telephone numbers of the person(s) responsible for the pesticide storage facility.

(NOTE: These MPs are based on recommendations found in 40 CFR 165.10(g)(1).)

**AGRICULTURAL
PESTICIDES**

5-29. Agricultural pesticides must be applied in a manner that workers or other persons, except those knowingly involved in the application, are not exposed either directly or through drift (40 CFR 170.3(a) and 170.4(c)).

5-30. Workers not wearing protective clothing shall not be allowed to enter a field treated with sprays until specific conditions are met (40 CFR 170.3(b) and 170.4(c)).

Determine if the facility applies agricultural pesticides.

Verify that the area being treated is vacated by unprotected persons.

(NOTE: These requirements do not pertain to:

- mosquito abatement treatment and related public pest control programs
- greenhouse treatments which are applied in accordance with labeling directions and restrictions
- livestock and other animal treatments which are applied in accordance with labeling directions and restrictions
- treatment of golf courses and similar nonagricultural areas which are applied in accordance with labeling directions and restrictions.)

Verify that workers are warned when a field is to be treated and when a field has been treated.

Verify that workers without protective clothing do not enter fields that have been sprayed until sprays have been dried or dusts have settled.

Verify that, if the following pesticides are used, the indicated reentry times are observed:

- ethyl parathion: 48 h
- methyl parathion: 48 h
- guthion: 24 h
- demeton: 48 h
- azodrin: 48 h
- phosalone: 24 h
- carbophenothion: 48 h
- metasystox-R: 48 h
- EPN: 24 h
- bidrin: 48 h
- endrin: 48 h
- ethion: 24 h.

(NOTE: These requirements do not pertain to:

- mosquito abatement treatment and related public pest control programs
- greenhouse treatments which are applied in accordance with labeling directions and restrictions
- livestock and other animal treatments which are applied in accordance with labeling directions and restrictions
- treatment of golf courses and similar nonagricultural areas which are applied in accordance with labeling directions and restrictions.)

DISPOSAL

5-31. Facilities are required to dispose of any pesticide, pesticide container, or pesticide residue according to specific restrictions (40 CFR 165.7).

Verify that pesticides, pesticide containers, and/or pesticide residues are disposed of such that:

- disposal is consistent with labeling
- open dumping of pesticides or pesticide containers is not done
- open burning is not done except when allowed by state and local regulation
- water dumping or ocean dumping does not occur.

5-32. Organic pesticides, except organic mercury, lead, cadmium, and arsenic compounds should be disposed of according to specific procedures (MP).

Determine if the facility uses organic pesticides.

Verify that organic pesticides are disposed of through incineration at an incinerator which meets the air quality standards for gaseous emissions, or in a specially designated landfill if incineration is not available, or by another approved method.

(NOTES: Municipal solid waste incinerators may be allowed to be used to incinerate pesticides and pesticide containers if they meet criteria of the state.)

(NOTE: These MPs are based on guidelines found in 40 CFR 165.8 and 165.9.)

5-33. Metallo-organic pesticides, except organic mercury, lead, cadmium, or arsenic compounds should be disposed of according to specific procedures (MP).

Determine if the facility uses metallo-organic pesticides.

Verify that metallo-organic pesticides are subjected to an appropriate chemical or physical treatment to recover the heavy metals from the hydrocarbon structure prior to disposal.

Verify that metallo-organic pesticides are disposed of through incineration at an approved incinerator, or in a specially designated landfill, or by another approved method.

(NOTE: These MPs are based on guidelines found in 40 CFR 165.8 and 165.9.)

Verify that food services personnel are notified of scheduled applications.

Appendix 5-1

Restricted Use Pesticides (40 CFR 152.175)

The following uses of pesticide products containing the active ingredients specified below have been classified for restricted use and are limited to use by or under the direct supervision of a certified applicator.

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Acrolein	As sole active ingredient. No mixtures registered.	All uses.	Restricted	Inhalation hazard to humans. Residue effects on avian species and aquatic organisms.
Acrylonitrile	In combination with carbon tetrachloride. No registrations as the sole active ingredient.	*do	do	Other hazards-accident history of acrylonitrile and carbon tetrachloride products.
Aldicarb	As sole active ingredient. No mixtures registered.	Ornamental uses (indoor and outdoor). Agricultural crop uses.	do Under further evaluation.	Other hazards-accident history.
Allyl alcohol	All formulations.	All uses.	Restricted	Acute dermal toxicity.
Aluminum phosphide	As sole active ingredient. No mixtures registered.	do	do	Inhalation hazard to humans.
Azinphosmethyl	All liquids with a concentration greater than 13.5%.	do	do	do
	All other formulations.	do	Under further evaluation.	
Calcium cyanide	As sole active ingredient. No mixture registered.	do	Restricted	do
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Carbofuran	All concrete suspensions and wettable powders 40% and greater.	do	do	Acute inhalation toxicity.
	All granular formulations.	Rice	Under evaluation.	
	All granular and fertilizer formulations.	All uses except rice.	do	
Chlorfenvinphos	All concentrate solutions or emulsifiable or concentrates 21% and greater.	All uses (domestic and nondomestic).	Restricted	Acute dermal toxicity.
Chloropicrin	All formulations greater than 2%.	All uses.	Restricted	Acute inhalation toxicity
	All formulations.	Rodent control	Restricted	Hazard to non-target organisms.
	All formulations 2% and less.	Outdoor uses (other than rodent control).	Unclassified	
Clonitralid	All wettable powders 70% and greater.	All uses.	do	Acute inhalation toxicity.
	All granulars and wettable powders.	Molluscide uses.	do	Effects on aquatic organisms.
	Pressurized sprays 0.55% and less.	Hospital antiseptics.	Unclassified	
Cycloheximide	All formulations greater than 4%.	All uses.	Restricted	Acute dermal toxicity.
	All formulations 0.027% to 4%.	All uses.	Under evaluation.	
	All formulations 0.027% and less.	Domestic uses.	Unclassified	
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Demeton	1% fertilizer formulation, 1.985% granular.	All uses including domestic uses.	Restricted	Domestic uses: Acute oral toxicity. Acute dermal toxicity. Nondomestic outdoor uses. Residue effects on avian and mammalian species.
	All granular formulations emulsifiable concentrates and concentrated solutions.	All uses.	do	Acute dermal toxicity. Residue effects on mammalian and avian species.
Dicrotophos	All liquid formulations 8% and greater.	All uses.	Restricted	Acute dermal toxicity; residue effects on avian species (except for tree injections).
Dioxathion	All concentrate solutions or emulsifiable concentrates ² greater than 30%.	All uses.	Restricted	Acute dermal toxicity.
	Concentrate solutions or emulsion concentrates ² 30% and less and wettable powders 25% and less.	Livestock and agricultural uses (nondomestic uses only).	Unclassified	
	All solutions ² 3% and greater.	Domestic	Restricted	do
	3% and greater 2.5% solutions ² with toxaphene and malathion.	All uses.	Under evaluation.	
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Disulfoton	All emulsifiable concentrates 65% and greater, all emulsifiable concentrates and concentrate solutions 21% and greater with fensulfothion 43% and greater, all emulsifiable concentrates 32% and greater in combination with 32% fensulfothion and greater.	do	Restricted	do Acute inhalation toxicity.
	Nonaqueous solution 95% and greater.			
	Granular formulations 10% and greater.	Commercial seed treatment.	Restricted	Acute dermal toxicity.
Endrin		Indoor uses (greenhouse).	do	Acute inhalation toxicity.
	All emulsions, dusts, wettable powders, pastes, and granular formulations 2% and above.	All uses.	Restricted	Acute dermal toxicity. Hazard to nontarget organisms.
EPN	All concentrations less than 2%.	do	do	Hazard to non-target organisms.
	All liquid and dry formulations greater than 4%.	All uses.	Restricted	Acute dermal toxicity; acute inhalation toxicity; residue effects on avian species.
		Aquatic uses.	Restricted	Effects on aquatic organisms.
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Ethoprop	Emulsifiable concentrates 40% and greater.	do	do	Acute dermal toxicity.
	All granular and fertilizer formulations.	do	Under evaluation.	
Ethyl parathion	All granular and dust formulations greater than 2% fertilizer formulations, wettable powders, emulsifiable concentrates, concentrated suspensions, concentrated solutions. Smoke fumigants.	do	Restricted	Inhalation hazard to humans. Acute dermal toxicity. Residue effects or mammalian, aquatic, avian species. Inhalation hazard to humans.
	Dust and granular formulations 2% and below.	do	do	Other hazards-accident history.
		do	do	
Fenamiphos	Emulsifiable concentrates 35% and greater.	do	do	Acute dermal toxicity.
Fensulfothion	Concentrate solutions 63% and greater, all emulsifiable concentrates and concentrate solutions 43% and greater with disulfoton 21% and greater all emulsifiable concentrates 32% and greater in combination with disulfoton 32% and greater.	do	Restricted.	do Acute inhalation toxicity.
	Granular formulations 10% and greater.	Indoor uses (greenhouse).	do	do
Fluoroacetamide/ 1081	As sole active ingredient in baits. No mixtures registered.	All uses.	Restricted.	Acute oral toxicity.
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Fonofos	Emulsifiable concentrates 44% and greater.	All uses.	do	Acute dermal toxicity.
	Emulsifiable concentrates 12.6% and less with pebulate 50.3% and less.	Tobacco	Unclassified	
Hydrocyanic acid	As sole active ingredient. No mixtures registered.	do	do	Inhalation hazard to humans.
Methamidophos	Liquid formulations 40% and greater.	All uses.	Restricted	Acute dermal toxicity; residue effects on avian species.
	Dust formulations 2.5% and greater.	All uses.	Restricted	Residual effects on avian species.
Methidathion	All formulations.	All uses except stock safflower and sunflower.	Restricted	Residue effects on avian species.
	All formulations.	Nursery stock, safflower, and sunflower.	Unclassified	Residue effects on avian species.
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Methomyl	As sole active ingredient in 1% to 2.5 baits (except 1% fly bait).	Nondomestic outdoor agricultural crops, ornamental and turf. All other registered uses.	Restricted.	Residue effects on mammalian species.
	All concentrated solution formulations.	do	do	Other hazards-accident history.
	90% wettable powder formulations (not in water soluble bags).	do	do	do
	90% wettable powder formulation in water soluble bags.	do	Unclassified	
	All granular formulations.	do	do	
	25% wettable powder formulations.	do	do	
	In 1.24% to 2.5% dusts as sole active ingredient and in mixtures with fungicides and chlorinated hydrocarbon, inorganic phosphate and biological insecticides.	do	do	
Methylbromide	All formulations in containers greater than 1.5 lb.	All uses.	Restricted	Other hazards-accident history.
	Containers with not more than 1.5 lb of methyl bromide with 0.25% to chloropicrin as an indicator.	Single applications (nondomestic use) for soil treatment in closed systems.	Unclassified	
	Containers with not more than 1.5 lb having no indicator.	All uses.	Restricted	do
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Methyl parathion	All dust and granular formulations less than 5%.	do	do	Other hazards-accident history. All foliar applications restricted based on residue effects on mammalian and avian species.
	Microencapsulated. All dust and granular formulations 5% and greater and all wettable powders and liquids.	do	do	Residue effects on avian species. Hazard to bees. Acute dermal toxicity. Residue effects on mammalian and avian species.
Mevinphos	All emulsifiable concentrates and liquid concentrates.	do	do	do
	Psycodid filter fly liquid formulations.	do	do	Acute dermal toxicity.
	2% dusts.	do	do	Residue effects on mammalian and avian species.
Monocrotophos	Liquid formulations 19% and greater.	do	do	Residue effects on avian species. Residue effects on mammalian species.
	Liquid formulations 55% and greater.	do	do	Acute dermal toxicity. Residue effects on avian species. Residue effects on mammalian species.
*do means same as above.

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Nicotine (alkaloid)	Liquid and dry formulations 14% and above.	Indoor (green-house)	Restricted	Acute inhalation toxicity.
	All formulations.	Applications to cranberries	Restricted	Effects on aquatic organisms.
	Liquid and dry formulations 1.5% and less.	All uses (domestic and nondomestic).	Unclassified	
Paraquat (dichloride) and paraquat bis(methylsulfate)	All formulations and concentrations except those listed below.	All uses.	Restricted	Other hazards. Use and accident history, human toxicological data.
	Pressurized spray formulations containing 0.44% Paraquat bis(methyl sulfate) and 15% petroleum distillates as active ingredients.	Spot weed and grass control.	do	
	Liquid fertilizers containing concentrations of 0.025% paraquat dichloride and 0.03% atrazine; 0.03% paraquat dichloride and 0.37% atrazine, 0.04% paraquat dichloride and 0.49% atrazine.	All uses.	Unclassified	
Phorate	Liquid formulations 65% and greater.	do	Restricted	Acute dermal toxicity. Residue effects on avian species (applies to foliar applications only). Residue effects on mammalian species (applies to foliar application only).
	All granular formulations.	Rice	Restricted	Effects on aquatic organisms.
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Phosacetim	Baits 0.1% and greater.	All uses.	Restricted	Hazard to nontarget species. Residues effects on mammalian species. Residue effects on avian species.
Phosphamidon	Liquid formulations 75% and greater.	do	do	Acute dermal toxicity. Residue effects on mammalian species. Residue effects on avian species.
	Dust formulations 1.5% and greater.	do	do	Residue effects on mammalian species.
Picloram	All formulations and concentrations except tordon 101R.	do	do	Hazard to nontarget organisms (specifically nontarget plants both crop and non-crop).
	Tordon 101 R forestry herbicide containing 5.4% picloram and 20.9% 2, 4-D.	Control of unwanted trees by cut surface treatment.	Unclassified	
Sodium cyanide ³	All capsules and ball formulations.	All uses.	Restricted	Inhalation hazard to humans.
Sodiumfluoroacetate	All solutions and dry baits.	do	do	Acute oral toxicity. Hazard to nontarget organisms. Use and accident history.
*do means same as above.				

(continued)

Appendix 5-1 (continued)

Active Ingredient	Formulation	Use Pattern	Classification	Criteria Influencing Restriction
Strychnine	All dry baits pellets and powder formulations greater than 0.5%.	do	do	Acute oral toxicity. Hazard to nontarget avian species. Use and accident history.
	All dry baits pellets and powder formulations.	All uses calling for burrow builders.	do	Hazard to nontarget organisms.
	All dry baits, and pellets, and powder formulations 0.5% and below.	All uses except subsoil.	do	do
	do	All subsoil uses.	Unclassified	do
Sulfotepp	Sprays and smoke generators.	All uses.	Restricted	Inhalation hazard to humans.
Tepp	Emulsifiable concentrate formulations.	do	do	Inhalation hazard to humans. Dermal hazard to humans. Residue effects on mammalian and avian species.
Zinc Phosphide	All formulations 2% and less.	All domestic uses and nondomestic uses in and around buildings.	Unclassified	
	All dry formulations 60% and greater.	All uses.	Restricted	Acute inhalation toxicity.
	All bait formulations.	Nondomestic outdoor uses (other than around buildings).	Restricted	Hazard to nontarget organisms.
	All dry formulation 10% and greater.	Domestic uses.	Restricted	Acute oral toxicity.
*do means same as above.

SECTION 6

PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

A. Applicability	1
B. Federal Legislation	1
C. State and Local Regulations	2
D. FWS/DOI Manuals	2
E. Key Compliance Requirements	2
F. Key Compliance Definitions	4
Guidance for Checklist Users	11

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 6

PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

A. Applicability

This section applies to FWS facilities which store, transport, dispose of, or utilize petroleum based fuels, oils, or lubricants (POL). This section presents review action items that respond to regulations, procedures, and organizational mechanisms designed to prevent or limit the accidental release of POL materials to surface water, groundwater, or soils. Procedures designed to review the control of volatile organic compounds (VOCs) from POL sources are addressed in Section 1, Air Emissions Management.

This section covers POL management of bulk storage tanks, organizational tanks, pipeline delivery systems, truck fill stands, and immediate operating storage areas. POL materials addressed include petroleum, diesel fuel, and lubricating oils. The storage of POL materials in underground storage tanks (USTs) is addressed in Section 9, Underground Storage Tank (UST) Management.

B. Federal Legislation

- *The Water Quality Improvement Act of 1974.* This law was the primary Federal law governing the discharge of oil into navigable waters. This regulation prohibits the discharge of harmful quantities of oil into navigable waters. 40 Code of Federal Regulations (CFR) 110, *Protection of Environment - Discharge of Oil*, defines harmful quantities as those discharges which will cause a sheen or discoloration of the surface of the water or a sludge or emulsion to be deposited beneath the surface of the water.
- *The Federal Water Pollution Control Act.* This act, commonly known as the *Clean Water Act* (CWA), as amended 4 February 1987, 33 U.S. Code (USC) 1251-1387, Public Law (PL) 100-4, governs the control of water pollution in the nation. The objective of the act is to restore and maintain the chemical, physical and biological integrity of the nation's waters. Federal agencies are required to comply with all Federal, state, interstate, and local water pollution control requirements both substantively and procedurally (33 USC 1323(a)).
- *The Oil Pollution Act (OPA) of 1990.* This law, Public Law (PL) 301-308 (33 USC 2701-2761, et. al.) as amended, requires the prevention of oil pollution into navigable waters by tank vessels.
- *The Resource Conservation and Recovery Act (RCRA), Subtitle C.* This law, PL 98-616 (USC 6921-6939b), establishes standards and procedures for the handling, storage, treatment, and disposal of hazardous waste. Specifically, RCRA prohibits the placement of bulk or noncontainerized liquid hazardous waste or free liquids containing hazardous waste into a landfill. It also prohibits the land disposal of specified wastes and disposal of hazardous waste through underground injection within 1/4 mi [0.40 km] of an underground source of drinking water.

- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or to correct situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards*.
 - 33 CFR 154, *Facilities Transferring Oil or Hazardous Materials in Bulk*.
 - 33 CFR 158, *Reception Facilities for Oil, noxious Liquid Substances, and Garbage*.
 - 40 CFR 110, *Discharge of Oil*.
 - 40 CFR 112, *Oil Pollution Prevention*.
 - 40 CFR 266, *Standards for the Management of Specific Hazardous Wastes and Specific Types of Hazardous Waste Management Facilities*.
 - 40 CFR 279, *Standards for the Management of Used Oil*.
 - 49 CFR 194, *Response Plans for Onshore Oil Pipelines*.
 - 49 CFR 195, *Transportation of Hazardous Liquids by Pipeline*.

C. State/Local Regulations

Many states and some major metropolitan and regional planning agencies have developed legislation and implemented regulations which closely parallel the Federal regulations. Some, however, may differ in important ways, and the evaluator should obtain copies of the state or local requirements for the Oil and Hazardous Substances Pollution Contingency (OHSPC) plan and the Spill Prevention, Control, and Countermeasures (SPCC) plan, where appropriate, and review them for those differences before conducting the evaluations. In particular, the evaluator should check for differences in the definitions of reportable quantities and the specific procedures for reporting spills that may exist in state/local regulations.

D. FWS/DOI Manuals

. No applicable manuals final as of the publication of this handbook.

E. Key Compliance Requirements

- SPCC Plans - Facilities that store, transport, or dispense petroleum products are required to prepare an SPCC plan, unless certain criteria are met. The SPCC plan is required to contain general information about the facility, name and title of the designated coordinator, and an inventory of all storage, handling, and transfer facilities. Each SPCC plan must be reviewed at least once every 3 yr, unless it is an exempted facility. The SPCC plan must be reviewed and/or amended when there is a material change in facility design, construction, operation, or maintenance that alters potential for an oil spill. Each SPCC plan and

any amendments must be certified by a registered professional engineer and the plan and each amendment must be prepared according to sound engineering practices. A copy of the SPCC plan is required to be available at sites that are normally attended at least 8 h/day where there is a potential for a discharge. All facility personnel involved with the management and handling of oil must receive training (40 CFR 112.3, 112.5, and 112.7(e)(10)).

- Response Plans - Nontransportation related onshore facilities that, because of location, could reasonably be expected to cause substantial harm to the environment by discharging oil into or on the navigable waters or adjoining shoreline are required to develop response plans. A facility could, because of its location, reasonably be expected to cause substantial harm if it meets any of the following criteria:
 - the facility transfers oil over water to or from vessels and has a total oil storage capacity greater than or equal to 42,000 gal
 - the facility's total oil storage capacity is greater than or equal to 1 million gal and one of the following is true:
 - the facility does not have secondary containment for each aboveground area sufficiently large to contain the capacity of the largest AST within each storage area plus sufficient freeboard to allow for precipitation
 - the facility is located at a distance such that discharge from the facility could cause injury to fish and wildlife and sensitive environment
 - the facility is located at a distance such that a discharge from the facility would shut down a public drinking water intake
 - the facility has had a reportable oil spill in an amount greater than or equal to 10,000 gal within the last 5 yr.
- Discharges/Spills - A discharge of oil into navigable waters of the United States, or adjoining shorelines, or into areas that may affect natural resources belonging to or under the exclusive management authority of the United States must be reported to the National Response Center (NRC). Facilities are not allowed to add dispersants or emulsifiers to oils that are discharged (40 CFR 110.2 through 110.10).
- Discharge Prevention/Cleanup - Facilities are required to have appropriate containment and/or diversionary structures and cleanup equipment readily available to prevent discharged petroleum products from reaching navigable water courses (40 CFR 112.7(c)).
- Aboveground Storage Tanks (ASTs) - All bulk storage tanks are required to be provided with a secondary means of containment for the entire contents of the largest single tank, plus sufficient freeboard to allow for precipitation. ASTs are required to undergo periodic integrity testing with a written log kept of this testing. Drainage of rainwater from diked areas must be controlled by a valve that is closed when not in active use. Drainage water that is determined to contain petroleum products in harmful quantities must be treated before discharge to meet applicable water quality standards (40 CFR 112.7(e)(1) through 112.7(e)(2)).
- Piping Systems - Buried piping at facility transfer operations, pumping activities, and in-plant processing is required to have a protective wrapping and coating to be cathodically protected if soil conditions warrant (40 CFR 112.7(e)(3)(i) and 112.7(e)(3)(iv)).
- Onshore Oil Pipelines - Facilities with onshore oil pipelines that, because of location, could reasonably be expected to cause substantial harm to the environment by discharging oil

into navigable waters are required to prepare a response plan. Copies of the response plan are required to be submitted to the U.S. Environmental Protection Agency (USEPA) Research and Special Programs Administration (RSPA) for approval. Copies of the response plan are required to be kept at the operators headquarters, pump stations, and other places where response activities might be conducted. Training is required for the implementation of the response plan. The Response Plan is required to be reviewed every 3 yr from the date of submission and modified to address new or different operating conditions or information (49 CFR 194).

- **Service Stations** - The storage of liquids at service stations, specifically Class I liquids, has to be done in containers that are secure and prevents the excess release of vapors (29 CFR 1910.106(g)).
- **Used Oil** - Although used oil has not been declared a hazardous waste at the Federal level, it does need to be stored, handled, and documented according to specific requirements depending on whether the facility is a used oil generator, a used oil collection center and aggregation point, a used oil transporter, a used oil burner, or a used oil marketer (40 CFR 279).
- **Recordkeeping** - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- **Container** - any portable device in which materials is stored, transported, treated, disposed of, or otherwise handled (40 CFR 279.1).
- **Contiguous Zone** - the entire zone established or to be established by the United States under article 24 of the Convention on the Territorial Sea and Contiguous Zone (40 CFR 110.1).
- **Continuous Discharge** - a discharge occurring without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities (40 CFR 123.3).
- **Daily Discharge** - the discharge of a pollutant measured during a calendar day or any 24 h period that reasonably represents the calendar day for purposes of sampling (40 CFR 122.2).
- **Direct Discharge** - the discharge of a pollutant (40 CFR 122.2).
- **Discharge** - when used in relation to Section 311 of the Act, includes, but is not limited to, any spilling, leaking, pumping, pouring, emitting, emptying, or dumping, but excludes (40 CFR 110.1):
 1. discharges in compliance with a permit
 2. discharges resulting from circumstances identified and reviewed and made a part of the public record with respect to an issued permit and subject to a condition in the permit

3. continuous or anticipated intermittent discharges from a point source, identified in a permit application that are caused by events occurring within the scope of relevant operating or treatment systems.
- *Do-It-Yourself (DIY) Used Oil Collection Center* - any site or facility that accepts aggregates and stores used oil collected only from household DIYs (40 CFR 279.1).
 - *Environmentally Sensitive Area* - an area of environmental importance which is in or adjacent to navigable waters (49 CFR 194.5).
 - *Existing Tank* - a tank that is used for the storage or processing of used oil and that is in operation, or a tank for which installation has commenced on, or prior to, the effective date of the authorized used oil program for the state in which the tank is located (40 CFR 279.1).
 - *Fish and Wildlife and Sensitive Environments* - this means areas that may be identified by either their legal designation or by evaluations of Area Committees (for planning) or members of the Federal On-Scene Coordinator's spill response structure (during responses) (40 CFR 112.2).
 - *Household "Do-It-Yourself" Used Oil* - oil that is derived from households, such as used oil generated by individuals who generate used oil through the maintenance of their personal vehicles (40 CFR 279.1).
 - *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
 - *Navigable Waters* - the waters of the United States, including the territorial seas. Navigable waters do not include prior converted cropland. The terms include (40 CFR 100.2):
 1. all waters that are currently used, were used in the past, or may be susceptible to use in interstate or foreign commerce, including all waters that are subject to the ebb and flow of the tide
 2. interstate waters, including interstate wetlands
 3. all other waters such as intra-state lakes, rivers, streams (including intermittent streams), mudflats, sandflats, and wetlands, the use, degradation, or destruction of which would affect or could affect interstate or foreign commerce including any such waters:
 - a. that are or could be used by interstate or foreign travelers for recreational or other purposes
 - b. from which fish or shellfish are or could be taken and sold in interstate or foreign commerce
 - c. that are used or could be used for industrial purposes by industries in interstate commerce
 4. all impoundments of waters otherwise defined as navigable waters under this section
 5. tributaries of waters identified above, including adjacent wetlands
 6. wetlands adjacent to waters identified above.

- *New Tank* - a tank that will be used to store or process used oil and for which installation has started after the effective date of the authorized used oil program for the state in which the tank is located (40 CFR 279.1).
- *Offshore Facility* - any facility of any kind located in, on, or under any of the navigable waters of the United States, and any facility or any kind that is subject to the jurisdiction of the United States and is located in, on, or under any other waters, other than a vessel or a public vessel (40 CFR 110.2 and 33 CFR 153.103).
- *Off-Specification Oil* - used oil burned for energy recovery and any fuel produced from used oil that exceeds the following allowable limits (40 CFR 279):

Arsenic	5 ppm maximum
Cadmium	2 ppm maximum
Chromium	10 ppm maximum
Lead	100 ppm maximum
Flash Point	100 °F minimum
Total halogens	4000 ppm maximum

- *Oil* - when used in relation to Section 311 of the Act, means oil of any kind or in any form, including, but not limited to, petroleum, fuel oil, sludge, oil refuse, and oil mixed with wastes other than dredged spoil (40 CFR 110.2 and 33 CFR 153.103).
- *Onshore Facility* - any facility (including but not limited to, motor vehicles and rolling stock) of any kind located in, on, or under any land within the United States, other than submerged land (40 CFR 110.2 and 33 CFR 153.103).
- *Onshore Oil Pipeline Facilities* - new and existing pipe, rights of way and any equipment, facility, or building used in the transportation of oil located in, on, or under, any land within the United States other than submerged land (49 CFR 194.5).
- *Operator* - in relationship to onshore oil pipeline facilities, a person who owns or operates onshore oil pipeline facilities (49 CFR 194.5).
- *Pipeline* - all parts of an onshore pipeline facility through which oil moves, including, but not limited to, line pipe, valves, and other appurtenances connected to the line pipe, pumping units, fabricated assemblies associated with pumping units, metering and delivery stations and fabricated assemblies therein, and breakout tanks (49 CFR 194.5).
- *Point Source* - any discernible confined and discrete conveyance including but not limited to a pipe, ditch, channel, tunnel, conduit, well, discrete fissure, container, rolling stock, concentrated animal feeding operation, or vessel or other floating craft, from which pollutants are or may be discharged. This term does not include return flows from irrigated agriculture or agricultural stormwater (40 CFR 122.2 and 401.11(d)).

- *Processing* - means chemical or physical operations designed to produce from used oil, or to make used oil more amenable for production, fuel oils, lubricants, or other used oil-derived product. Processing includes, but is not limited to blending used oil with Virgin petroleum products, blending used oils to meet the fuel specification, filtration, simple distillation, chemical or physical separation and re-refining (40 CFR 279.1).
- *Public Vessel* - a vessel owned or bare boat chartered and operated by the United States, or by a state or political subdivision thereof, or by a foreign nation, except when such vessel is engaged in commerce (40 CFR 110.2 and 33 CFR 153.103).
- *Qualified Individual* - an English-speaking representative of an operator, located in the United States, available on a 24-h basis, with full authority to: activate and contract with required oil spill removal organizations; activate personnel and equipment maintained by the operator; act as liaison with the On-Scene Coordinator (OSC); and obligate any funds required to carry out all required or directed oil response activities (49 CFR 194.5).
- *Re-Refining Distillation Bottoms* - the heavy fractions produced by vacuum distillation of filtered and dehydrated used oil. The composition of still bottoms varies with column operation and feedback (40 CFR 279.1)
- *Response Activities* - the containment and removal of oil from the water and shorelines, the temporary storage and disposal of recovered oil, or the taking of other actions as necessary to minimize or mitigate damage to the environment (49 CFR 194.5).
- *Response Area* - the inland zone or coastal zone, as defined in the National Contingency Plan (NCP), in which response activity is occurring (49 CFR 194.5).
- *Response Plan* - the operator's core plan and the response zone appendices for responding, to the maximum extent practicable, to a worst case discharge of oil, or the substantial threat of such a discharge (49 CFR 194.5).
- *Response Zone* - a geographic area, either along a length of pipeline or including multiple pipelines, containing one or more adjacent line sections, for which the operator must plan for the deployment of, and provide, spill response capabilities (49 CFR 194.5).
- *Sheen* - an iridescent appearance on the surface of the water (40 CFR 110.2).
- *Sludge* - an aggregate of oil or oil and other matter of any kind in any form other than dredged spoil, having a combined specific gravity equivalent to or greater than water (40 CFR 110.2).
- *Spill Event* - a discharge of oil into or upon the navigable waters of the United States or adjoining shorelines in harmful quantities (40 CFR 112.3).
- *Spill Prevention, Control, and Countermeasure (SPCC) Plan* - the SPCC plan shall be a carefully thought-out plan prepared in accordance with good engineering practices, and which has the full approval of management at a level with authority to commit the necessary resources (40 CFR 112.3).

- *Tank* - any stationary device, designed to contain an accumulation of used oil, which is constructed primarily of nonearthen materials which provides structural support (40 CFR 279.1).
- *Used Oil* - any oil that has been refined from crude oil or any synthetic oil that has been used and as a result of such use is contaminated by physical or chemical impurities (40 CFR 279.1).
- *Used Oil Aggregation Point* - any site or facility that accepts, aggregates, and/or stores used oil collected only from other used oil generation sites owned or operated by the owner or operator of the aggregation point, from which used oil is transported to the aggregation point in shipments of no more than 55 gal [208.20 L]. Used oil aggregation points may also accept used oil from household DIYs (40 CFR 279.1).
- *Used Oil Burner* - a facility where used oil not meeting the specification requirements is burned for energy recovery (40 CFR 279.1).
- *Used Oil Collection Center* - any site or facility that is registered/licensed/permited/recognized by a state/county/municipal government to manage used oil and accepts/aggregates and stores used oil collected from used oil generators who bring used oil to the collection centers in shipments of no more than 55 gal [208.20 L]. Used oil collection centers may accept used oil from household DIYs (40 CFR 279.1).
- *Used Oil Fuel Marketer* - any person who conducts either of the following activities (40 CFR 279.1):
 1. directs a shipment of off-specification used oil from their facility to a used oil burner
 2. first claims that used oil that is to be burned for energy recovery meet used oil fuel specifications.
- *Used Oil Generator* - any person, by site, whose act or process produces used oil or whose act first causes used oil to become subject to regulation (40 CFR 279.1).
- *Used Oil Processor/Re-refiner* - a facility that processes used oil (40 CFR 279.1).
- *Used Oil Transfer Facility* - any transportation related facility, including loading docks, parking areas, storage areas, and other areas where shipments of used oil are held for more than 24 h during the normal course of transportation and not longer than 35 days (40 CFR 279.2).
- *Used Oil Transporter* - any person who transports used oil, any persons who collects used oil from more than one generator and transports the collected oil, and owners and operators of used oil transfer facilities. Used oil transporters may consolidate or aggregate loads of used oil for purposes of transportation, but, with the following exception, may not process used oil. Transporters may conduct incidental processing operations that occur in the normal course of used oil transportation (e.g., settling and water separation), but that are not designed to produce or make more amenable for production of used oil derived products or used oil fuel (40 CFR 279.1).

- *Vessel* - every description of watercraft or other artificial contrivance used, or capable of being used, as a means of transportation on water other than a public vessel (40 CFR 110.2).
- *Wetlands* - those areas that are inundated or saturated by surface or groundwater at a frequency or duration sufficient to support and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include playa lakes, swamps, marshes, bogs, and similar areas such as sloughs, prairie potholes, wet meadows, prairie river overflows, mudflats, and natural ponds (40 CFR 110.2).
- *Worst Case Discharge* - the largest foreseeable discharge of oil, including a discharge from fire or explosion, in adverse weather conditions (49 CFR 194.5).

PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

GUIDANCE FOR CHECKLIST USERS

PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

Records To Review

- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Official correspondence with state implementing agency
- Spill Prevention and Response Plan
- Facility response plan required by OPA
- Records of spill response training programs
- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)

Physical Features To Inspect

- Refueling facilities, including:
 - Above and belowground storage tanks and dikes
 - Venting
 - Fill pipe
 - Gauges
- Washrack areas
- Vehicle maintenance areas
- Oil separators
- Oil and hazardous substance site
- Fire training pits
- Grease racks

COMPLIANCE CATEGORY:
PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT
Fish and Wildlife Service

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>ALL FACILITIES</p> <p>6-1. The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), interagency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p>6-2. FWS facilities are required to comply with state and local regulations (EO 12088, Section 1-1).</p> <p>6-3. Facilities will meet regulatory requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulation as a basis of finding).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, interagency agreements, or equivalent state enforcement actions.</p> <p>Verify that the facility is complying with state and local requirements.</p> <p>Verify that the facility is operating according to permits issued by the state or local agencies.</p> <p>(NOTE: Issues typically regulated by state and local agencies include:</p> <ul style="list-style-type: none"> - spill management - handling of wastewater and fuel sludge from tank cleaning - use of product recovery systems - containment - used oil - ASTs.) <p>Determine if any new regulations concerning POLs have been issued since the finalization of the handbook.</p> <p>Verify that the facility is in compliance with newly issued regulations.</p>

COMPLIANCE CATEGORY:
PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

6-8. (continued)

(NOTE: Facilities are exempt from the requirements outlined in 40 CFR 112 if:

- the facility, equipment, or operation is not subject to the jurisdiction of the USEPA as follows:
 - onshore and offshore facilities which, due to their location, could not be reasonably expected to discharge oil into or upon the navigable waters of the United States or adjoining shorelines
 - equipment or operations of vessels or transportation related onshore and offshore facilities which are subject to the authority of the DOT
- the facility, which although otherwise subject to USEPA jurisdiction, meets both of the following criteria:
 - the underground buried storage capacity of the facility is 42,000 gal [158,987 L] or less of oil
 - the storage capacity which is not buried at the facility is 1320 gal [4997 L] of oil or less and no single container exceeds a capacity of 660 gal [2498 L].)

6-9. Each SPCC plan and any amendments must be certified by a registered professional engineer and the plan and each amendment must be prepared according to sound engineering practices (40 CFR 112.1(d), 112.3(d) and 112.5(c)).

Verify that the SPCC plan has been certified.

(NOTE: Facilities are exempt from the requirements outlined in 40 CFR 112 if:

- the facility, equipment, or operation is not subject to the jurisdiction of the USEPA as follows:
 - onshore and offshore facilities which, due to their location, could not be reasonably expected to discharge oil into or upon the navigable waters of the United States or adjoining shorelines
 - equipment or operations of vessels or transportation related onshore and offshore facilities which are subject to the authority of the DOT
- the facility, which although otherwise subject to USEPA jurisdiction, meets both of the following criteria:
 - the underground buried storage capacity of the facility is 42,000 gal [158,987 L] or less of oil
 - the storage capacity which is not buried at the facility is 1320 gal [4997 L] of oil or less and no single container exceeds a capacity of 660 gal [2498 L].)

6-10. Each SPCC plan should be approved by the Regional Director (RD) (MP).

Verify that the plan has been approved by the RD.

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>6-25. Facilities with onshore oil pipelines that, because of location, could reasonably be expected to cause substantial harm or significant and substantial harm to the environment by discharging oil into or on any navigable waters of the United States, or adjoining shorelines, are required to prepare a response plan (49 CFR 194.3 and 194.101 through 194.107).</p>	<p>Verify that the response plan includes:</p> <ul style="list-style-type: none"> - a statement indicating which sections in a response zone can be expected to cause significant and substantial harm to the environment if there is a discharge of oil into or on the navigable water or adjoining shorelines - indications of the worst case discharge - immediate notification procedures - spill detection and mitigation procedures - the name address and phone number of an oil spill response organization - response activities and response resources - training procedures - equipment testing - schedules for drills - plan updating procedures - an appendix for each response zone indicating all the above general information in a way that is tailored to that response zone. <p>Verify that the response plan is in English and if necessary, any other language understood by personnel responsible for carrying out the plan.</p> <p>(NOTE: Significant and substantial harm can be expected if the line is greater than 6 5/8 in. [16.83 cm] in outside nominal diameter, greater than 10 mi [16.09 km] in length and the line section:</p> <ul style="list-style-type: none"> - has experienced a release greater than 1000 bbl [158,987.3 L] in the previous 5 yr - has experienced two or more reportable releases in the previous 5 yr - contains any electric resistance welded pipe, manufactured prior to 1970, operated at maximum operating pressure that corresponds to a stress level greater than 50 percent of the specified minimum yield strength of the pipe - is located within a 5 mi [8.05 km] radius of potentially affected public drinking water intakes and could reasonably be expected to reach the intake - is located within 1 mi [1.61 km] radius of potentially affected environmentally sensitive areas, and could reasonably be expected to reach these areas.) <p>(NOTE: The requirement to submit a response plan is effective 18 February 1993. After 18 August 1993, the onshore pipeline must be operated according to the details outlined in the response plan.)</p>

COMPLIANCE CATEGORY:
PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT
Fish and Wildlife Service

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>6-25. (continued)</p>	<p>(NOTE: A response plan is not required for the following facilities:</p> <ul style="list-style-type: none"> - a pipeline that is 6 5/8 in. [16.83 cm] or less in outside nominal diameter and is 10 mi [16.09 km] or less in length, and all the following conditions apply: <ul style="list-style-type: none"> - the pipeline has not experienced a release greater than 1000 bbl [158,987.3 L] within the previous 5 yr - the pipeline has not experienced at least two reportable releases within the previous 5 yr - the pipeline contains any electric resistance welded pipe, manufactured prior to 1970, does not operate at a maximum operating pressure that corresponds to a stress level greater than 50 percent of the specified minimum yield strength of the pipe - the pipeline is not in proximity to navigable waters, public drinking water intakes, or environmentally sensitive areas - a line section that is greater than 6 5/8 in. [16.83 cm] in outside nominal diameter and is greater than 10 mi [16.09 km] in length, where the operator determines that it is unlikely that the worst case discharges from any point on the line section would adversely affect, within 12 h after the start of discharge, any navigable waters, public drinking water intakes, or environmentally sensitive areas - a line section that is 6 5/8 in. [16.83 cm] or less in outside nominal diameter and is 10 mi [16.09 km] or less in length, where the operator determines that it is unlikely that the worst case discharge from any point on the line section would adversely affect, within 4 h after the initiation of the discharge, any navigable waters, public drinking water intakes, or environmentally sensitive areas.)
<p>6-26. Copies of the response plan are required to be submitted to the USEPA RSPA (49 CFR 194.119(a) through 194.119(d)).</p>	<p>Verify that two copies were submitted to the following address:</p> <p style="margin-left: 40px;">Pipelines Response Plans Office Research and Special Programs Administration Department of Transportation 400 Seventh St. SW Washington D.C. 20590-0001.</p> <p>Verify that the RSPA approved the response plan.</p>

COMPLIANCE CATEGORY: PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT Fish and Wildlife Service	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>6-27. If RSPA does not approve a response plan for a pipeline identified as expected to cause significant and substantial harm to the environment, the operator must submit certification to the RSPA by 18 July 1993 that the operator has obtained, through contract or other means, the necessary personnel and equipment to respond to a worst case discharge or a substantial threat of a discharge (49 CFR 194.119(e)).</p>	<p>Determine if the facility has an approved response plan.</p> <p>Verify that, if there is not an approved response plan, the necessary certification has been submitted.</p>
<p>6-28. Copies of the response plan are required to be kept at specific locations (49 CFR 194.111).</p>	<p>Verify that a copy of the complete response plan is at the operator's headquarters and a copy is provided to each responsible individual.</p> <p>Verify that a copy of the core portion of the plan and relevant response zone appendices for each line section whose pressure may be affected by the operation of a particular pump station is provided at the pump station.</p> <p>Verify that a copy of the core portion of the plan and relevant response zone appendices is kept at locations where response activities might be conducted.</p>
<p>6-29. Training is required for the implementation of the response plan (49 CFR 194.117).</p>	<p>Verify that training is conducted such that all personnel know:</p> <ul style="list-style-type: none"> - their responsibilities under the plan - the names, addresses, and procedures for contacting the operator on a 24-h basis and an qualified individual. <p>Verify that reporting personnel know:</p> <ul style="list-style-type: none"> - the content of the information summary - the toll free number of the NRC - the notification process.

COMPLIANCE CATEGORY:
PETROLEUM, OIL, AND LUBRICANT (POL) MANAGEMENT

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

6-29. (continued)

Verify that personnel engaged in response activities know:

- the characteristics and hazards of oil discharged
- the conditions that are likely to worsen emergencies and appropriate corrective actions
- the steps needed to control any accidental discharge of oil and to minimize the potential for fire, explosion, toxicity, or environmental damage
- the proper firefighting procedures and use of equipment, fire suits, and breathing apparatus.

Verify that training records exist for each individual that has been trained, specifically records for:

- operator personnel are at the operators headquarters
- personnel engaged in response are maintained as determined by the operator.

(NOTE: This training does not take the place of emergency response training requirements as found in 29 CFR 1910.120.)

6-30. Pipeline response plans are required to be reviewed every 3 yr from the date of submission and modified to address new or different operating conditions or information (49 CFR 194.121).

Verify that the plan is reviewed every 3 yr.

**REGULATORY
REQUIREMENTS:**

REVIEWER CHECKS:
July 1995

USED OIL

Dust Suppression

6-66. Used oil cannot be used for dust suppression unless allowed by the state (40 CFR 279.82).

Verify that used oil is not used for dust suppression at the facility.

Appendix 6-1

Used Oil Classifications (40 CFR 279.10 and 279.11)

Used Oils Which Are Required to be Handled According to the Requirements in 40 CFR 279 (40 CFR 279.10(b)(2)(ii), 279.10(b)(2)(iii), 279.10(b)(3), 279.10(c)(2), 279.10(d), 279.10(e)(2), and 279.10(i))

1. Used oil containing more than 1000 ppm of total halogens when the generator has demonstrated that the used oil does not contain hazardous waste.
2. Used metalworking oils/fluids containing chlorinated paraffins when they are recycled or disposed of and the generator has demonstrated that the used oil does not contain hazardous waste.
3. Used oils contaminated with CFCs that have been mixed with used oil from sources other than refrigeration units and the generator has demonstrated that the used oil does not contain hazardous waste.
4. Materials produced from used oil that are burned for energy recovery.
5. Mixtures of used oil and hazardous waste if the resultant mixture does not exhibit any characteristics of hazardous waste.
6. Mixtures of used oil and a waste that is hazardous solely because it exhibits the characteristic of ignitability and is not a listed waste.
7. Mixtures of used oil and conditionally exempt small quantity generator (CESQG) hazardous waste.
8. Mixtures of used oil and fuels or other fuel products except those marked onsite by the generator for use in the generators own vehicles if the used oil and the diesel fuel have been mixed.
9. Used oil burned for energy recovery and any fuel produced from used oil that exceeds the following allowable limits:

Arsenic	5 ppm maximum
Cadmium	2 ppm maximum
Chromium	10 ppm maximum
Lead	100 ppm maximum
Flash Point	100 ° F minimum
Total halogens	4000 ppm maximum

10. Materials containing or otherwise contaminated with used oil that are burned for energy recovery.
11. Used oil drained or removed from materials containing or otherwise contaminated with used oil.
12. Used oil at marketers or burners with any quantifiable level of PCBs (the standards in 40 CFR 761.20(a) must also be met for this type of oil).

(continued)

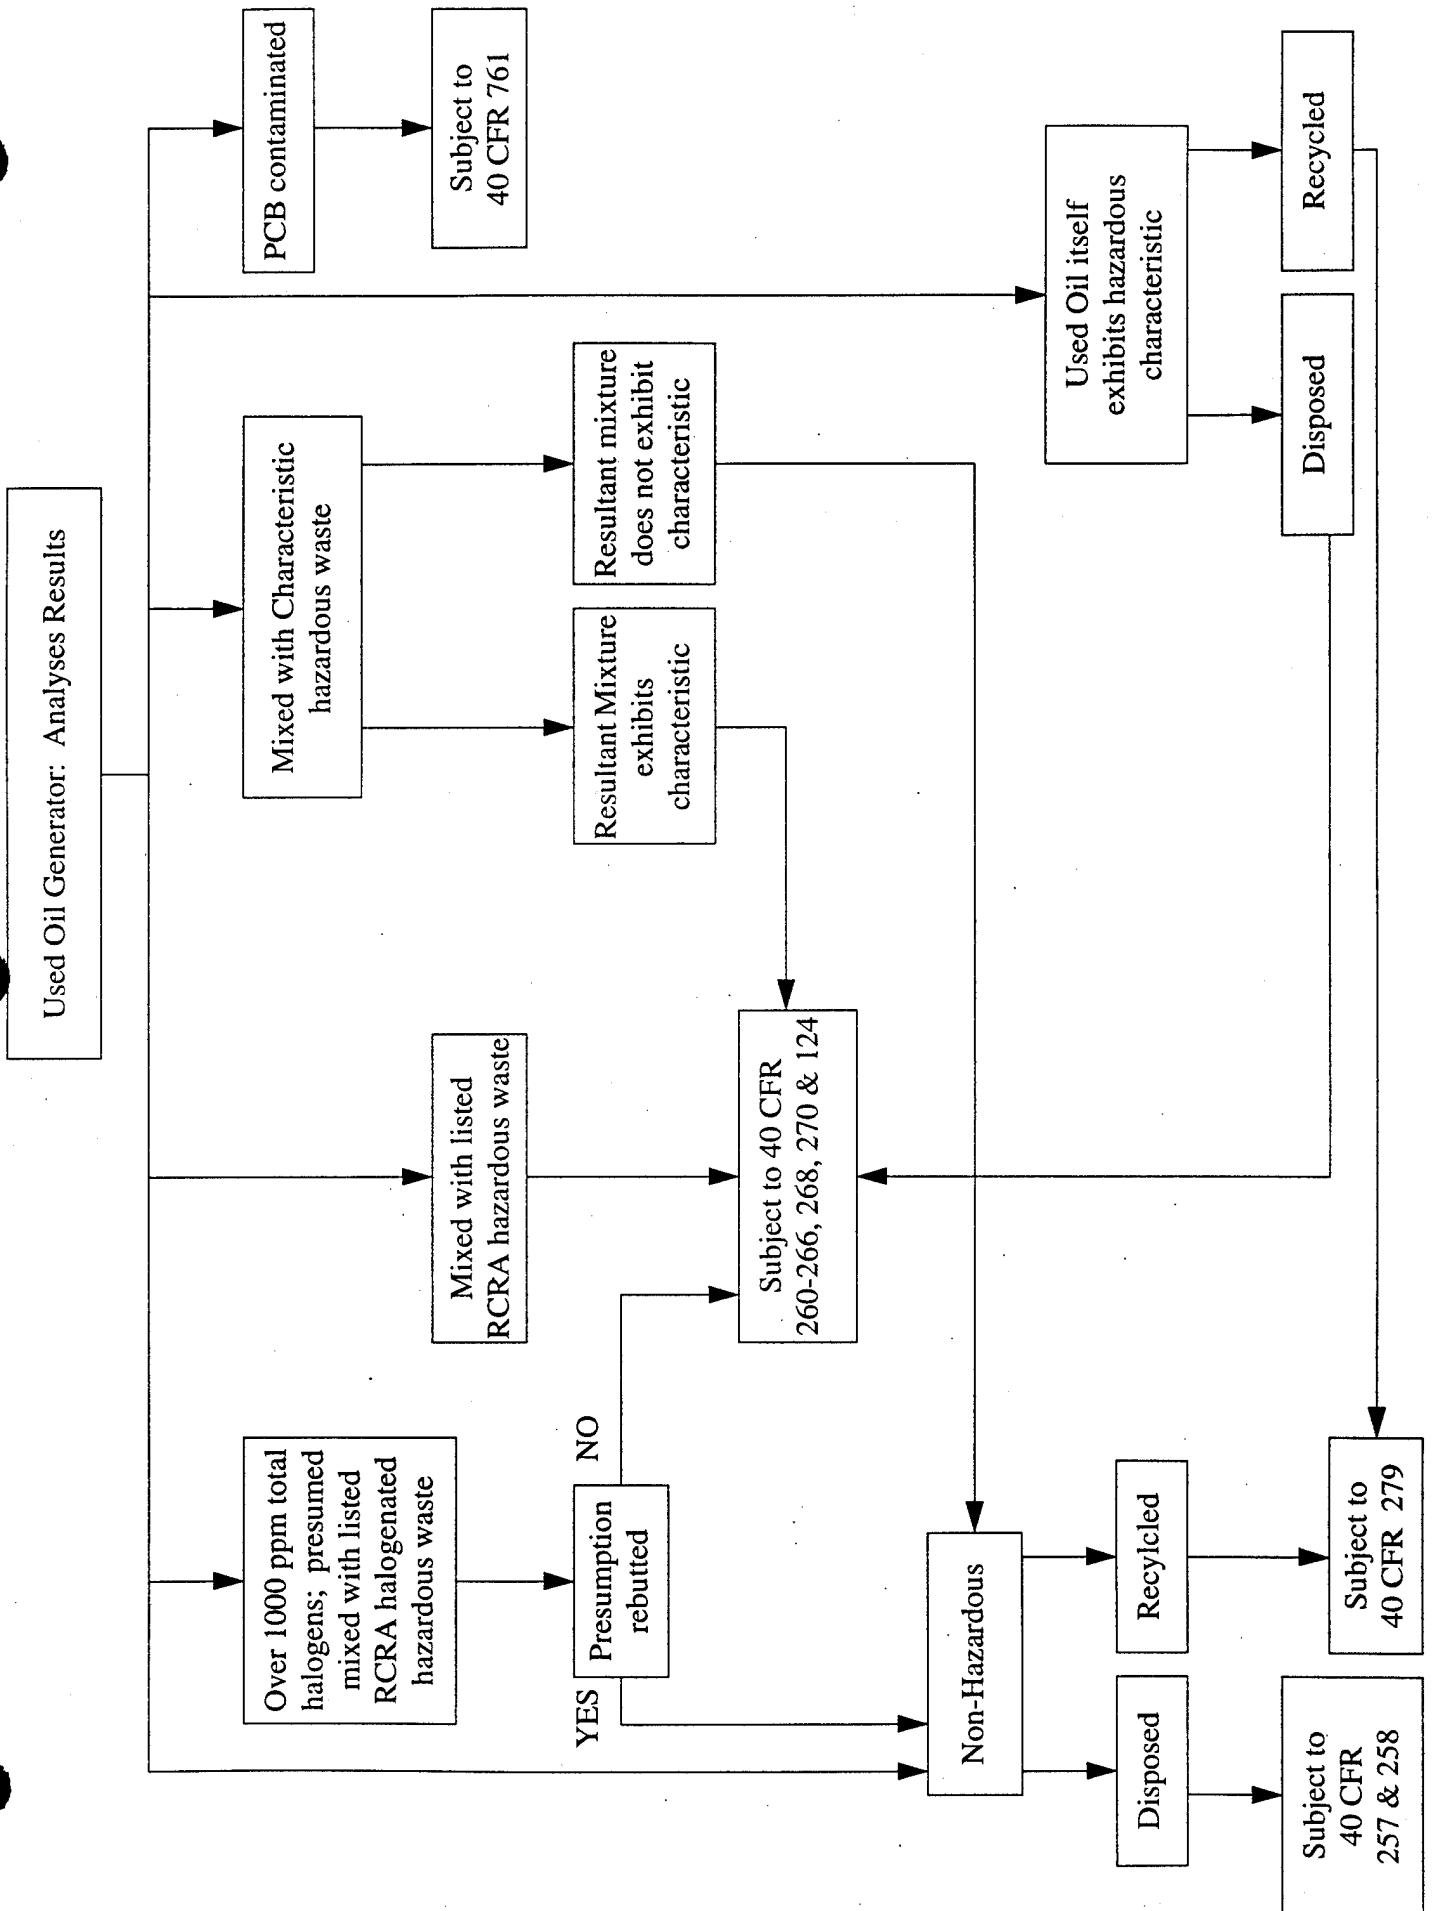

Appendix 6-1 (continued)

Used Oil that is Required to be Handled as a Hazardous Waste (40 CFR 279.10(b)).

1. Mixtures of used oil and listed hazardous waste.
2. Used oil containing more than 1000 ppm total halogens
3. Used metalworking oils/fluids containing chlorinated paraffins if processed through a tolling agreement.
4. Used oil contaminated with CFCs removed from refrigeration units where the CFCs are destined for reclamation.
5. Mixtures of used oil and hazardous waste if the resultant mixture exhibits characteristics of a hazardous waste.

Used Oil that is not Subject to the Requirements of 40 CFR 279, Nor is it to be Handled as a Hazardous Waste, Unless Testing Indicates Hazardous Constituents (40 CFR 279.10(c)(1), 279.10(d)(2), 279.10(e)(1), 279.10(e)(3), 279.10(e)(4), and 279.10(f) through 279.10(h)).

1. Mixtures of used oil and diesel fuel mixed onsite by the generator of the used oil for use in the generator's own vehicles.
2. Materials that are reclaimed from used oil that are used beneficially and are not burned for energy recovery or used in a manner constituting disposal.
3. Materials derived from used oil that are disposed of or used in a manner constituting disposal.
4. Used oil re-refining distillation bottoms that are used as feedstock to manufacture asphalt products.
5. Wastewater discharges with de minimis quantities of used oil.
6. Used oil within a crude oil or natural gas pipeline.
7. Used oil on vessels.
8. Materials containing or otherwise contaminated with used oil from which the used oil has been properly drained or removed so that no signs of visible free-flowing remains.

SECTION 7
SOLID WASTE MANAGEMENT

A. Applicability	1
B. Federal Legislation	1
C. State and Local Regulations	2
D. FWS/DOI Manuals	2
E. Key Compliance Requirements	2
F. Key Compliance Definitions	4
Guidance for Checklist Users	9

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 7

SOLID WASTE MANAGEMENT

A. Applicability

This section addresses the collection, storage, and disposal of solid waste at FWS facilities. Solid waste is considered to be nonhazardous trash, rubbish, garbage, bulky wastes, liquids, or sludges generated by any facility's operations and activities. The handling and disposal of asbestos waste materials is addressed in Section 8, Special Pollutants Management.

Recycling and resource recovery activities are also included in this section because they are considered a form of solid waste management.

B. Federal Legislation

- *Resource Conservation and Recovery Act (RCRA)* of 1976. This is the Federal law which governs the disposal of solid waste. Subtitle D of this act, as last amended in November 1984, Public Law (PL) 98-616, 42 U.S. Code (USC) 6941-6949a, establishes Federal standards and requirements for state and regional authorities respecting solid waste disposal. The objectives of this subtitle are to assist in developing and encouraging methods for the disposal of solid waste which are environmentally sound and which maximize the utilization of valuable resources recoverable from solid waste. The objectives are to be achieved through Federal technical and financial assistance to states and regional authorities for comprehensive planning (42 USC 6941).
- *The Solid Waste Disposal Act (SWDA)* of 1965, as amended. This act requires that Federal facilities comply with all Federal, state, interstate, and local requirements concerning the disposal and management of solid wastes. These requirements include permitting, licensing, and reporting.
- *The Occupational Safety and Health Act (OSHA)*. The general purpose of this act is to assure, as much as possible, every individual working in the United States safe and healthful working conditions. The control of medical waste is one aspect of assuring safe and healthy working conditions.
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or to correct situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- EO 12873, *Federal Acquisition, Recycling, and Waste Prevention*. This EO, dated 20 October 1993, mandates waste prevention and recycling as a part of an agency's daily

operations. It requires each agency to set a goal for solid waste prevention and a goal for recycling to be achieved by the year 1995. Agencies are also required to set goals for increasing the procurement of recycled and other environmentally preferable products.

- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards*.
 - 7 CFR 330, *Federal Plant Pest Regulations, General, Plant Pests, Soil, Stone, Quarry Products, and Garbage*.
 - 29 CFR 1910.1030, *Bloodborne Pathogens*.
 - 40 CFR 240, *Guidelines for the Thermal Processing of Solid Waste*.
 - 40 CFR 241, *Guidelines for the Land Disposal of Solid Wastes*.
 - 40 CFR 243, *Guidelines for the Storage and Collection of Residential, Commercial, and Institutional Solid Waste*.
 - 40 CFR 245, *Promulgation Resource Recovery Facility Guidelines*.
 - 40 CFR 246, *Source Separation for Materials Recovery Guidelines*.

C. State/Local Regulations

The Federal government set minimum national standards for municipal solid waste disposal in 40 CFR 258, but state and local governments are responsible for implementing and enforcing waste programs. States are required to develop their own programs based on the Federal regulations. Most states and municipalities have already developed their own regulations governing the permitting, licensing, and operations of landfills, incinerators, and source separation/recycling programs.

States are required to incorporate revised criteria for municipal solid waste landfills (MSWLF) into their permit programs and gain approval from U.S. Environmental Protection Agency (USEPA). States that apply for and receive USEPA approval of their programs have the opportunity to provide a lot of flexibility in implementing the regulations. This flexibility allows states to take local conditions into account and gives them the authority to alter some of the requirements. Evaluators will need to determine if a state has been granted approval for the 40 CFR 258 program in order to accurately audit a facility's compliance with the criteria. Many states have also instigated categories of special wastes which cannot be placed in landfills or dumps, or may only be disposed of under specific circumstances.

D. FWS/DOI Manuals

- 561 FWS 6, *Compliance Requirements SWDA - Solid Waste*. This chapter, dated 12 June 1995 provides guidance for the handling and disposition of solid waste material at Service facilities.

E. Key Compliance Requirements

- Storage/Collection - Facilities are required to store all solid wastes and materials separated for recycling so that it does not cause a fire, safety, or health hazard. All facilities are

required to operate their collection systems in a manner to protect the health and safety of personnel associated with the operation. All collection equipment is required to have a suitable cover to prevent spillage, and the equipment is to be constructed, operated, and maintained adequately. All facilities are required to collect solid wastes or materials separated for recycling according to a certain schedule, and in a safe, efficient manner (40 CFR 243.200-1, 243.201-1, 243.202-1(a) through 243.202-1(c), 243.203-1, and 243.204-1).

- Solid Waste Containers - Facility personnel should be periodically informed about materials that are prohibited from disposal in solid waste receptacles (MP).
- Recycling - FWS facilities should participate in any state or local recycling programs and reduce the volume of solid waste materials at the source whenever practical. Facilities with offices of over 100 office workers are required to recover high-grade paper. Facilities at which more than 500 families reside are required to recycle newspapers. Any facility generating 10 tons [101,605 kg] or more of waste corrugated containers per month is required to segregate or collect separately for recycling or alternate energy use (40 CFR 246.200-1 and 246.202-1).
- Specific Wastes - Bulky wastes must be disposed of according to certain methods, which differ depending on the variety of waste, i.e., automobile bodies, furniture, and appliances are required to be salvaged, or crushed and pushed onto working face near the bottom of the cell. Water treatment plant sludges, containing no free moisture, and digested or heat treated wastewater treatment plant sludges must be disposed of by covering them with soil or municipal solid wastes. Incinerator and air pollution control residues must be disposed of by covering them as necessary to prevent their becoming airborne (40 CFR 241.200-3).
- Open Dumping - Title 40 CFR 257 details the criteria for determining whether or not an activity would be considered an open dump for the purposes of state solid waste management planning under RCRA. See Appendix 7-1 for a list of the criteria that a facility or practice must meet in order for it to not be considered an open dump.
- Land Disposal Site Operations Other Than An MSWLF- Facilities are should place cover material at the end of each operating day. Land disposal sites that accept special wastes must have approval from the responsible agency and shold provide a list of the excluded itmes to regular users. Facilities that operate land disposal sites are required to operate the sites in a manner that will protect water quality and control decomposition gases and vectors. Land disposal sites are required to be designed and operated in an aesthetically acceptable manner, and to be designed, constructed, and operated to protect the health and safety of personnel. Land disposal site cover material is required to minimize fire hazards, infiltration of precipitation, odors and litter, control gas venting and vectors, discourage scavenging, and provide a pleasing appearance. Municipal solid waste and cover material must be compacted to the smallest practicable volume. The operators of land disposal sites are required to maintain records and monitoring data (40 CFR 241.200-3(a), 241.201-2, 241.201-3, 241.204-3, 241.205-3, 241.206-241.211, and 241.212-3(a)).
- Land Disposal Site Closure Other Than An MSWLF - Upon closure of a site, a detailed description is required to be recorded as required by the area's land recording authority. Facilities should survey for and be aware of old disposal sites at the facility (40 CFR 241.212-3(b)).

- **New Landfills Other Than MSWLFs** - New landfills are required to meet certain location and design criteria, which include evaluation of hydrogeology and onsite soil characteristics, and verification of easy access to vehicles. Plans for the design, construction, and operation of new sites or modification to existing sites are required to be prepared or approved by a professional engineer (40 CFR 241.202-2 and 241.203-1).
- **Medical Waste** - Contaminated reusable sharps and other regulated wastes are required to be placed in puncture resistant, color coded, leakproof containers, as soon as possible after use until properly reprocessed. Specimens of blood or other potentially infectious material are required to be placed in a container that prevents leakage during collection, handling, processing, storage, transport, or shipping, and specific labeling and handling requirements are to be followed (29 CFR 1910.1030(d)).
- **Medical Waste Containers** - All bins, cans, and other receptacles intended for reuse that have the likelihood of becoming contaminated with blood or other potentially infectious materials are required to be inspected and decontaminated on a regularly scheduled basis. Labels affixed to containers of regulated wastes, refrigerators and freezers containing blood, and other containers used to store, transport, or ship blood or other potentially infectious materials must meet specific standards, which include the biohazard symbol, and being colored a fluorescent orange with contrasting-colored lettering and symbols (29 CFR 1910.1030(d)(4)(ii)(c) and 1910.1030(g)(1)(i)).
- **Recordkeeping** - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- **Blood** - human blood, human blood components, and products made from human blood (29 CFR 1910.1030(a)).
- **Bottom Ash** - the solid material that remains on a hearth or falls off the grate after thermal processing is complete (40 CFR 240.101(b)).
- **Bulky Wastes** - large items of solid waste such as household appliances, furniture, large auto parts, trees, branches, stumps, and other oversize wastes which large size precludes or complicates their handling by normal solid waste collection, processing, or disposal methods (40 CFR 243.101).
- **Cell** - compacted solid wastes that are enclosed by natural soil or cover material in a land disposal site (40 CFR 241.101).
- **Collection** - the act of removing solid waste (or materials which have been separated for the purpose of recycling) from a central storage point (40 CFR 243.101).
- **Commercial Solid Waste** - all types of solid waste generated by stores, offices, restaurants, warehouses, and other nonmanufacturing activities, excluding residential and industrial wastes (40 CFR 243.101).

- *Construction and Demolition Wastes* - the waste building materials, packaging and rubble resulting from the construction, renovation, repair, and demolition operation on pavements, houses, commercial buildings, and other structures (40 CFR 243.101).
- *Contaminated* - the presences or the reasonably anticipated presence of blood or other potentially infectious materials on an item or surface (29 CFR 1910.1030(a)).
- *Contaminated Sharps* - any contaminated object that can penetrate the skin, including but not limited to, needles, scalpels, broken glass, broken capillary tubes, and exposed ends of dental wires (29 CFR 1910.1030(a)).
- *Corrugated Container Waste* - discarded corrugated boxes (40 CFR 246.101).
- *Cover Material* - soil or other suitable material that is used to cover compacted solid wastes in a land disposal site (40 CFR 241.101).
- *Daily Cover* - cover material that is spread and compacted on the top and side slopes of compacted solid wastes at least at the end of each operating day in order to control vectors, fire, moisture, and erosion and to assure an aesthetic appearance (40 CFR 241.101).
- *Decontamination* - the use of physical or chemical means to remove, inactivate, or destroy bloodborne pathogens on a surface or item to the point where they are no longer capable of transmitting infectious particles and the surface of item is rendered safe for handling, use, or disposal (29 CFR 1910.1030(a)).
- *Design Capacity* - the weight of solid waste of a specified gross calorific value that a thermal processing facility is designed to process in 24 h of continuous operation (40 CFR 240.101(d)).
- *Final Cover* - cover materials that serve the same function as daily cover but, in addition, may be permanently exposed on the surface (40 CFR 241.101).
- *Fly Ash* - suspended particles, charred paper, dust, soot, and other partially oxidized matter carried in the products of combustion (40 CFR 240.101).
- *Food Waste* - the organic residues generated by the handling, storage, sale, preparation, cooking, and serving of foods, commonly called garbage (40 CFR 243.101).
- *Garbage* - in relation to solid waste coming from outside the continental United States, it is all waste material derived in whole or in part from fruits, vegetables, meats, or other plant or animal material, and other refuse of any character whatsoever that has been associated with any such material on board any means of conveyance, and including food scraps, table refuse, galley refuse, food wrappers, or packaging materials, and other water materials from stores, food preparation areas, passengers; or crews quarters, dining rooms, or any other areas or means of conveyance. It also means meals and other food that were available for consumption by passengers and crew on an aircraft but were no consumed (7 CFR 330.400(b)).
- *Groundwater* - water present in the unsaturated zone of an aquifer (40 CFR 241.101).

- *High-Grade Paper* - letterhead, dry copy papers, miscellaneous business forms, stationary, typing paper, tablet sheets, and computer printout paper and cards, commonly sold as white ledger, computer printout and tab card grade by the wastepaper industry (40 CFR 246.101).
- *Industrial Solid Waste* - the solid waste generated by industrial processes and manufacturing that is not a hazardous waste (40 CFR 243.101).
- *Infectious Waste* - (40 CFR 240.101):
 1. equipment, instruments, utensils, and fomites of a disposable nature from the rooms of patients who are suspected to have or have been diagnosed as having a communicable disease and must, therefore, be isolated as required by public health agencies
 2. laboratory wastes such as pathological specimens and disposable fomites (any substance that may harbor or transmit pathological organisms)
 3. surgical operating room pathological specimens and disposable fomites attendant thereto and similar disposable materials from outpatient areas and emergency rooms.
- *Institutional Solid Waste* - solid wastes generated by educational, health care, correctional and other institutional facilities (40 CFR 243.101).
- *Intermediate Cover* - cover material that serves the same function as daily cover, but must resist erosion for a longer period of time, because it is applied in areas where additional cells are not to be constructed for extended periods of time (40 CFR 241.101).
- *Leachate* - liquid that has percolated through solid waste and has extracted dissolved or suspended materials from it (40 CFR 241.101).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Medical/Pathological Wastes* - any solid waste that is generated in the diagnosis, treatment, or immunization of human beings or animals, in research pertaining thereto, or in the production or testing of biologicals. This does not include hazardous waste or household waste (40 CFR 259.10).
- *Municipal Solid Waste* - residential and commercial solid wastes generated within a community (40 CFR 240.101).
- *Municipal Solid Waste Landfill (MSWLF) Unit* - a discrete area of land or an excavation that received household waste and that is not a land application unit, surface impoundment, injection well, or waste pile. It may also receive other types of RCRA-D wastes, such as commercial solid waste, nonhazardous sludge, conditionally exempt small quantity generator waste, and industrial solid waste. Such a landfill may be publicly or privately owned. An MSWLF unit may be a new MSWLF unit, an existing MSWLF unit, or a lateral expansion (40 CFR 258.2).

- *Open Burning* - burning of solid wastes in the open, such as in an open dump (40 CFR 240.101(r)).
- *Open Dump* - a land disposal site at which solid wastes are disposed of in a manner that does not protect the environment, are susceptible to open burning, and are exposed to the elements, vectors, and scavengers (40 CFR 240.101).
- *Recoverable Resource* - materials that still have useful physical, chemical, or biological properties after serving their original purpose and can, therefore, be reused or recycled for the same or other purposes (40 CFR 245.101).
- *Recycled Material* - a material that is utilized in place of a primary, raw, or virgin material in manufacturing a product (40 CFR 245.101).
- *Recycling* - the process by which recovered materials are transformed into new products (40 CFR 245.101).
- *Regulated Wastes* - liquid or semi-liquid blood or other potentially infectious materials, contaminated items that would release blood or other potentially infectious materials in a liquid or semi-liquid state if compressed; items that are caked with dried blood or other potentially infectious materials and are capable of releasing these materials during handling, contaminated sharps, and pathological and microbiological wastes containing blood or other potentially infectious materials (29 CFR 1910.1030(a)).
- *Residential Solid Waste* - the wastes generated by the normal activities of households, including, but not limited to, food wastes, rubbish, ashes, and bulky wastes (40 CFR 243.101).
- *Runoff* - the portion of precipitation that drains from an area as surface flow (40 CFR 241.101).
- *Sanitary Landfill* - a land disposal site employing an engineered method of disposing of solid wastes on land in a manner that minimizes environmental hazards by spreading the solid wastes in thin layers, compacting the solid wastes to the smallest practical volume, and applying and compacting cover material at the end of each operating day (40 CFR 240.101).
- *Separate Collection* - collection of recyclable materials which have been separated at the point of generation and keeping those materials separated from other collected solid waste in separate compartments of a single collection vehicle or through the use of separate collection vehicles (40 CFR 246.101).
- *Sludge* - the accumulated semiliquid suspension of settled solids deposited from wastewater or other fluids in tanks or basins (40 CFR 240.101).
- *Solid Waste* - garbage, refuse, sludge, and other discarded solid materials resulting from industrial and commercial operations and from community activities. It does not include solids or dissolved materials in domestic sewage or other significant pollutants in water resources (40 CFR 240.101).

- *Source Separation* - the setting aside of recyclable materials at their point of generation by the generator (40 CFR 246.101).
- *Special Wastes* - nonhazardous solid wastes requiring handling other than that normally used for municipal solid wastes (40 CFR 240.101).
- *Transfer Station* - a station at which solid wastes are concentrated for transport to a processing facility or land disposal site. A transfer station may be fixed or mobile (40 CFR 243.101).
- *Universal Precautions* - an approach to infection control. According to the concept of Universal Precautions, all human blood and certain human body fluids are treated as if known to be infectious for HIV, HBV, and other bloodborne pathogens (29 CFR 1910.1030(a)).
- *Vector* - a carrier, usually an arthropod, that is capable of transmitting a pathogen from one organism to another (40 CFR 240.202).
- *Working Face* - that portion of the land disposal site where solid wastes are discharged and are spread and compacted prior to the placement of cover material (40 CFR 241.101).

Medical Waste	7-44 through 7-49	7-33

SOLID WASTE MANAGEMENT

Records To Review

- Record of current nonhazardous solid waste management practices
- Documentation of locations (map) and descriptions of all nonhazardous waste storage, and disposal facilities
- Records of operational history of all active and inactive disposal facilities
- State and Federal inspection reports
- Environmental monitoring procedures or plans
- Records of resource recovery practices, including the sale of materials for the purpose of recycling
- Solid waste removal contracts and inspection records
- Operating record for onsite municipal solid waste landfills

Physical Features To Inspect

- Resource recovery facilities
- Incineration and land disposal facilities (active and inactive)
- Areas where nonhazardous waste is disposed
- Construction debris areas
- Waste receptacles
- Solid waste vehicle storage and washing areas
- Compost facilities
- Transfer stations
- Recycling centers

FWS facilities are required to comply with state and local solid waste regulations (EO 12088, Section 1-1).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, inter-agency agreements, or equivalent state enforcement actions.</p> <p>Verify that the facility is complying with state and local solid waste requirements.</p> <p>Verify that the facility is operating according to permits issued by the state or local agencies.</p> <p>(NOTE: Issues typically regulated by state and local agencies include:</p> <ul style="list-style-type: none"> - license or permit requirements for existing onsite landfills - requirements for filing a closure plan for onsite landfills specifying monitoring and inspection procedures - design and operation specifications for solid waste receptacles - disposal of solid waste offsite only at licensed or permitted facilities - design and policy procedures of thermal processing of solid waste - analysis for hazardous properties of ash residues and sludge from air pollution control devices at coal-fired facility heating plant operations before sale or disposal - handling and disposal of medical, pathological, and infectious waste - recycling requirements - disposal of household wastes - construction/demolition debris - yard waste - disposal of used tires.)

**COMPLIANCE CATEGORY:
SOLID WASTE MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

7-3. Facilities will meet regulatory requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulation as a basis of finding).

Determine if any new regulations concerning solid waste have been issued since the finalization of the handbook.

Verify that the facility is in compliance with newly issued regulations.

7-4. FWS facilities should report all NOV's to the Region and the Service Pollution Control Office (SPCO) (MP).

Determine if the facility has received an NOV relating to solid waste management.

Verify that the NOV was reported to the Region and the SPCO.

7-5. Service facilities are required to maintain a permanent onsite record copy of any contracts for waste disposal and documentation of the final place of disposal (561 FW 5.6B(4)).

Verify that the facility has copies of any contracts for waste disposal and documentation of the final place of disposal.

(NOTE: If the waste is a hazardous waste, this should be written up under the appropriate finding in the hazardous waste checklist.)

**COMPLIANCE CATEGORY:
SOLID WASTE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>STORAGE/ COLLECTION OF SOLID WASTE</p> <p>7-6. Facilities are required to store all solid wastes and all materials separated for recycling according to specific guidelines (40 CFR 243.200-1).</p> <p>7-7. All facilities are required to operate their collection systems in a manner to protect the health and safety of personnel associated with the operation (40 CFR 243.201-1).</p>	<p>(NOTE: Federal agencies, that have decided not to adopt the requirements contained in 40 CFR 243, are required to provide a report of the analysis and rationale used.)</p> <p>Verify that all solid wastes are stored so as not to cause a fire, health, or safety hazard.</p> <p>Verify that all solid waste containing food wastes are stored in covered or closed containers which are nonabsorbent, leakproof, durable, easily cleaned, and designed for safe handling.</p> <p>Verify that solid waste containers are of an adequate size and number to contain all waste generated between collections.</p> <p>Verify that bulky wastes are stored so as not to create a nuisance and to avoid the accumulation of solid waste and water in and around the bulky items.</p> <p>Verify that reusable containers are capable of being serviced without the collector coming into contact with the waste.</p> <p>Verify that the collection system is operated safely.</p>

**COMPLIANCE CATEGORY:
SOLID WASTE MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>7-48. All bins, pails, cans, and similar receptacles intended for reuse, that have the likelihood of becoming contaminated with blood or other potentially infectious materials are required to be inspected and decontaminated on a regularly scheduled basis (29 CFR 1910.1030(d)(4)(ii)(C)).</p> <p>7-49. Labels affixed to containers of regulated wastes, refrigerators and freezers containing blood or other potentially infectious materials, and other containers used to store, transport, or ship blood or other potentially infectious materials must meet specific standards (29 CFR 1910.1030(g)(1)(i)).</p>	<p>Verify that receptacles with the potential for contamination are regularly inspected and decontaminated.</p> <p>Verify that the labels:</p> <ul style="list-style-type: none"> - include the biohazard symbol - are fluorescent orange or orange-red or predominantly so, with lettering and symbols in contrasting color - are affixed as closely as possible to the container by adhesive, string, or wire, to prevent loss or removal. <p>(NOTE: Red bags or containers may be used as a substitute for labels.)</p> <p>(NOTE: The following are exempt from labeling requirements:</p> <ul style="list-style-type: none"> - containers of blood, blood components, or blood products that are labeled as to their contents and have been released for transfusion or other clinical use - individual containers of blood or other potentially infectious materials that is placed in a labeled container during storage, transport, shipment, or disposal.) <p>(NOTE: Regulated waste that has been decontaminated need not be labeled and color coded.)</p>

Appendix 7-1

Open Dumping (40 CFR 257.1 through 257.3-8)

Unless the following are met, a land disposal site is considered an open dump.

1. Facilities or practices in floodplains shall not restrict the flow of the base flood, reduce the temporary water storage capacity of the floodplain, or result in washout of solid waste, so as to pose a hazard to human life, wildlife, or land or water resources.
2. Facilities or practices do not cause or contribute to the taking of any endangered or threatened species of plants, fish, or wildlife. Nor does it result in the destruction of or adverse modification of the critical habitat.
3. The facility does not cause a discharge of pollutants into the waters of the United States that is in violation of the requirements of the National Pollutant Discharge Elimination System (NPDES). It also does not cause a discharge of dredged materials or fill materials or cause nonpoint source pollution of waters of the United States that violated applicable legal requirements.
4. The facility or practice does not contaminate an underground drinking water source beyond the solid waste boundary or beyond a specified alternative boundary established by the state.
5. When solid waste is applied within 1 m (3 ft) of the surface of land used for the production of food chain crops the following are done:
 - a. the pH of the solid waste and soil mixture is 6.5 or greater at the time of each solid waste application, except for solid waste containing cadmium at concentrations of 2 mg/kg (dry weight) or less
 - b. the annual application of cadmium from solid waste does not exceed 0.5 kg/ha
 - c. the cumulative application of cadmium from solid wastes does not exceed:

Soil cation exchange capacity (meq/100g)	Maximum cumulative application (kg/ha)	
	Background soil pH less than 6.5	Background soil pH more than 6.5
Less than 5	5	5
5 to 15	5	10
More than 15	5	20

(continued)

Appendix 7-1 (continued)

- d. when the background pH is less than 6.5, the cumulative application does not exceed the levels below provided the pH of the solid waste and soil mixture is adjusted to and maintained at 6.5 or greater whenever food-chain crops are grown:

Soil cation exchange capacity (meq/100g)	Maximum cumulative application (kg/ha)
less than 5	5
5 to 15	10
More than 15	20

6. When solid waste is applied within 1 m (3 ft) of the surface of land used for the production of animal feed the following are done:
- the pH of the solid waste and soil mixture is 6.5 or greater at the time of each solid waste application, or at the time the crop is planted, whichever occurs later, and the pH level is maintained whenever food chain crops are grown
 - there is a facility operating plan that demonstrates how human consumption will be avoided
 - future property owners are notified of the restrictions.
7. Solid waste containing concentrations of PCBs equal to or greater than 10 mg/kg (dry weight) is incorporated into the soil when applied to land used for producing animal feed, including pasture crops. Incorporation is not required if it is assured that the PCB content is less than 0.2 mg/kg (actual weight) in animal feed or less than 1.5 mg/kg (fat basis) in milk.
8. The onsite population of disease vectors is minimized through the periodic application of cover material or other techniques as appropriate so as to protect public health.
9. Sewage sludge that is applied or incorporated into the soil is treated by a process to significantly reduce pathogens prior to application or incorporation. Public access is controlled for at least 12 mo and grazing by animal whose product are consumed by humans is prevented for at least one month.
10. Septic tank pumpings that are applied or incorporated into the soil is treated by a process to significantly reduce pathogens prior to application or incorporation unless public access is controlled for at least 12 mo and grazing by animal whose products are consumed by humans is prevented for at least 1 mo.
- 11 There is no open burning of residential, commercial, institutional, or industrial solid waste. (This does not apply to the infrequent burning of agricultural wastes in the field, silvicultural wastes for forest management purposes, land clearing debris, diseased trees, and debris from emergency cleanup operations and ordnance.

(continued)

Appendix 7-1 (continued)

12. The concentrations of explosive gases does not exceed:

- a. 25 percent of the LEL for the gases in the facility structures (excluding gas control or recovery system components)
- b. the LEL for the gases at the property boundary.

13. The site is not a fire hazard.

14. There is not uncontrolled public access.

15. Facilities or practices where putrescible wastes that may attract birds and which occurs within 10,000 ft (3048 m) of any airport runway used only by piston-type aircraft does not pose a bird hazard to aircraft.

(NOTE: These requirements do not apply to the following:

1. agricultural wastes, including manure and crop residues, returned to the soil as fertilizers or soil conditioners
2. overburden resulting from mining operations intended for return to the mining site
3. land application of domestic sewage or treated domestic sewage
4. location and operation of septic tanks
5. solid or dissolved materials in irrigation return flows
6. industrial discharges which are point sources subject to NPDES
7. source, special nuclear or by-product material as defined by the *Atomic Energy Act*
8. hazardous waste disposal facilities which are subject to regulation
9. disposal of solid waste by underground well injection
10. municipal solid waste landfill units
11. use or disposal of sewage sludge on the land when it is used or disposed of in accordance with 40 CFR 503.)

E. Key Compliance Requirements	4
F. Key Compliance Definitions	7
Guidance for Checklist Users	13

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 8

SPECIAL POLLUTANTS MANAGEMENT

A. Applicability

This section is used to determine the compliance status of the management activities associated with:

1. polychlorinated biphenyls (PCBs) and in-service and out-of-service PCB items
2. the removal of asbestos from buildings and its ultimate disposal
3. testing for potential radon exposure
4. limiting environmental noise.

B. Federal Legislation

- *The Noise Control Act of 1972.* This act, Public Law (PL) 92-574 (42 U.S. Code (USC) 4901-4918), as amended:
 1. establishes a means for effective coordination of Federal research and activities in noise control
 2. authorizes the establishment of Federal noise emission standards for products distributed in commerce
 3. provides information to the public respecting the noise emission and noise reduction characteristics of such products.

The following categories of products which produce noise are covered by this act:

1. construction equipment
2. transportation equipment (including recreational vehicles and related equipment)
3. any motor or engine (including any equipment of which an engine or motor is an integral part)
4. electrical or electronic equipment.

The following articles are not covered by the act (42 USC 4902(3)):

1. any aircraft, aircraft engine, propeller, or appliance
2. any military weapons or equipment designed for combat use
3. any rockets or equipment designed for research, experimental, or developmental work to be performed by the National Aeronautics and Space Administration (NASA)
4. any other machinery or equipment designed for use in experimental work done by or for the Federal Government.

The manufacturer of a product is required to give notice to the prospective user about the level of the noise the product emits, or its effectiveness in reducing noise (42 USC 4907 (b)). Such notice may not be removed from the product or its container (42 USC 4909 (4)). The manufacturer is prohibited to remove or render ineffective any device or element of design incorporated into the product to control noise (42 USC 4909(2)).

- *Aviation Safety and Noise Abatement Act of 1979.* This act, PL 96-193 (49 USC Appendix 2103, 2104), as amended, relates to airport noise. Any airport operator may submit to the

Secretary of Transportation a noise exposure map. Such maps shall set forth the noncompatible uses in each area of the map, a description of the projected aircraft operations at such airport, and the ways in which such operations will affect such map (49 USC 2103). Any airport operator who has submitted a noise exposure map and the related information may submit to the Secretary of Transportation a noise compatibility program. This program shall include measures which the operator has taken or proposes for the reduction of existing noncompatible uses and the prevention of the introduction of noncompatible uses within the area covered by the noise exposure map submitted (49 USC Appendix 2104).

- *The Toxic Substances Control Act (TSCA)*. This act, as last amended in 1986, 15 USC 2601-2671, is the Federal legislation which deals with the control of toxic substances. The act consists of three subchapters, one of which regulates the control of toxic substances, another governs asbestos hazard emergency response, and another subchapter regulates indoor radon abatement. The policy developed in TSCA on chemical substances is as follows (15 USC 2601(b)):
 1. adequate data should be developed with respect to the effect of chemical substances and mixtures on health and the environment and that the development of such data should be the responsibility of those who manufacture and those who process such chemical substances and mixtures
 2. adequate authority should exist to regulate chemical substances and mixtures which present an unreasonable risk of injury to health or the environment, and to take action regarding chemical substances and mixtures
 3. authority over chemical substances and mixtures should be exercised in such a manner as not to impede unduly or create unnecessary economic barriers to technological innovation while fulfilling the primary purpose of this act to assure that such innovation and commerce in such chemical substances and mixtures do not present an unreasonable risk of injury to health or the environment.

Upon request by the U.S. Environmental Protection Agency (USEPA), each Federal department and agency is authorized to (15 USC 2625(a)):

1. make its services, personnel, and facilities available (with or without reimbursement) to the USEPA to assist the USEPA in the administration of this act
2. furnish the USEPA with information, data, estimates, and statistics, and allow the USEPA access to all information in its possession as the USEPA may reasonably determine to be necessary for the administration of this act.

Under TSCA, the national long-term goal of the United States with respect to radon levels in building is that the air within buildings in the United States should be as free of radon as the ambient air outside of buildings (15 USC 2661). The head of each Federal Department or agency that owns a Federal building must conduct a study for the purpose of determining the extent of radon contamination in such buildings. Such study must include, in the case of a Federal building using a nonpublic water source (such as a well or other groundwater), radon contamination of the water. Such a study must be based on design criteria specified by the USEPA (15 USC 2669(a)(c)(e)).

A recent Amendment of TSCA requires the creation of regulations governing lead-based paint activities to ensure that individuals engaged in such activities are properly trained; that training programs are accredited; and that contractors engaged in such activities are certified. As of the publication of this manual, these regulations have not been finalized (15 USC 2681 through 2692).

- *The Asbestos Hazard Emergency Response Act (AHERA)* of 1986. This act, last amended in November 1990, 15 USC 2641-2656, et. al., and 20 USC 4014, et. al., is the Federal legislation which governs the control and abatement of asbestos hazard present in school buildings. The purpose of this act is (15 USC 2641(b)):
 1. to provide for the establishment of Federal regulations which require inspection for ACM and implementation of appropriate response actions with respect to ACM in the Nation's schools in a safe and complete manner
 2. to mandate safe and complete periodic reinspection of school buildings following response actions, where appropriate
 3. to require the USEPA to conduct a study to find out the extent of the danger to human health posed by asbestos in public and commercial buildings and the means to respond to any such danger.
- *The Hazardous Materials Transportation Act.* This act was amended in 1978 to regulate the transport of asbestos materials. The regulations are contained in 49 CFR 172-177. In particular, 49 CFR 177 requires that asbestos must be loaded, handled, and unloaded in a manner that will minimize occupational exposure to airborne asbestos. Asbestos wastes which are transported for disposal at a landfills or other disposal facilities must meet all applicable requirements.
- Executive Order (EO) 12088. This EO, *Federal Compliance with Pollution Standards*, of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities it funds meet applicable Federal, state, and local environmental requirements or to correct situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards*.
 - 40 CFR 61, Subpart M, *National Emission Standards for Hazardous Air Pollutants*.
 - 40 CFR 761, *PCB Manufacturing, Processing, Distribution in Commerce and Use Prohibitions*.
 - 40 CFR 763, *Asbestos-in-Schools*.

C. State/Local Regulations

- *Noise* - State, regional, and local governmental agencies may develop zoning and planning ordinances which have the potential to effect FWS facilities and their operations. As a general rule, states tend to treat environmental noise as a source specific pollutant whose emissions will be controlled by the locally effected community.
- *PCBs* - According to the general structure of Federal regulatory programs, any state regulations must adopt the Federal regulations as a minimum set of requirements. In some cases, state regulations have been developed which regulate PCBs more stringently than the Federal program.

State PCB regulations may provide additional regulatory requirements beyond the Federal program to address a specific concern or activity sensitive in that state. State regulations may supersede the Federal regulations in areas including the following:

1. PCBs may be regulated as a hazardous waste
 2. PCBs may be regulated to a lower concentration. For example, regulated PCBs in one state are defined to be materials and fluids which contain PCBs at a concentration greater than 7 ppm
 3. shipments of PCBs may require manifest documents
 4. analysis may be required to quantify the PCB concentration in all PCB Items
 5. additional inspections of select PCB Items and specific disposal requirements for PCBs and PCB Items may also be required
 6. generators of PCBs and PCB Items may be required to obtain disposal permits.
- *Asbestos* - Many state and local governments have enacted standards more stringent than the Federal requirements concerning certification of asbestos workers and disposal of asbestos waste. If the facility is engaging in asbestos removal or disposal, contact the appropriate state and local agencies.
 - *Radon* - State and local governments may enact radon control standards.

D. FWS/DOI Manuals

- 561 FW 8, *Compliance Requirements TSCA/CAA - Asbestos*. This chapter, dated 12 June 1995, provides guidance for asbestos management at Service facilities.
- 485 DM 27, *Safety and Health Handbook*. This handbook, dated 13 July 1993 establishes a Departmental radon program to identify and control potential health hazards due to elevated levels of radon.

E. Key Compliance Requirements

- **Personnel and PCBs** - Certain regulations and practices should be followed to ensure the health of personnel who come in contact with PCBs. These include provision of protective work-clothing, shower facilities, and facilities for washing hands during shift. Airborne contaminations of PCBs should be audited and certain precautionary practices followed to protect personnel, which include the wearing of respirators if contamination is above a certain level. Certain records and practices should be maintained for employees exposed to PCBs, including medical histories and physical examinations emphasizing liver and skin condition.
- **PCB Equipment Marking** - The following equipment is required to be marked indicating that they contain PCBs (40 CFR 761.40 and 761.45):
 1. PCB Containers with PCBs in concentrations of greater than 50 ppm
 2. PCB Transformers (500 ppm or greater)
 3. PCB Large, High-Voltage Capacitors
 4. equipment containing a PCB Transformer (500 ppm or greater) or a PCB Large, High-Voltage Capacitor at the time of removal from service
 5. PCB Large, Low-Voltage Capacitors at the time of removal from service

6. electric motors using PCB coolants with a concentration of greater than 50 ppm
 7. hydraulic systems using PCB hydraulic fluid with concentrations of greater than 50 ppm
 8. heat transfer systems (other than PCB Transformers) using PCB concentrations of greater than 50 ppm
 9. PCB Article Containers containing any of the above
 10. each storage area used to store PCBs and PCB Items for disposal
 11. transport vehicles loaded with PCB Containers that contain more than 45 kg (99.4 lb) of PCBs in the liquid phase with PCB concentrations of greater than 50 ppm or one or more PCB Transformers with PCB concentrations of greater than 500 ppm: mark on each end and side
 12. vault doors, machinery room doors, fences, hallways, or means of access, other than a manhole or grate cover, to a PCB Transformer (500 ppm or greater).
- Records for PCBs - A written annual document log must be prepared by 1 July of each calendar year, covering the previous year for all facilities that use or store at any time at least 45 kg (99.4 lb) of PCBs contained in PCB Containers, or one or more PCB Transformers.

Owners and operators of PCB chemical waste landfills shall keep records on water analysis and operational records, including burial coordinates for 20 yr after disposal has ceased. Generators of PCBs shall maintain manifests and certificates of disposal (COD) for 3 yr (40 CFR 761.180(a), 761.180(d), and 761.180(f)).

- PCB Transformers - PCB Transformers with PCBs of 500 ppm or greater that are in use or in storage for reuse, must not pose an exposure risk to food and feed and are subject to registration requirements. Combustible materials, including, but not limited to, paints, solvents, plastics, paper, and sawn wood, must not be stored by a PCB Transformer. PCB transformers are required to be properly serviced, and inspections must be performed once every 3 mo for all in-service transformers. If the transformer is found to be leaking, it must be repaired or replaced to eliminate the source of the leak. When a PCB transformer is involved in a fire, the facility is required to immediately report the incident to the National Response Center (NRC) (40 CFR 761.30(a)(1)(vi) through 761.30(a)(1)(xi)).
- PCB Spills - Facilities are required to report spills of 10 lb [4.56 kg] or more by weight of PCBs of concentrations of 50 ppm to the USEPA regional office. Spills of greater than 1 lb [0.45 kg] or more by weight of PCBs must be cleaned up and reported to the NRC. The criteria for cleanup is based on whether the spill is of high or low concentration of PCBs (40 CFR 761.120, 761.123, and 761.125).
- PCB Items - The use of PCBs in electromagnetic switches, voltage regulators, capacitors, heat transfer and hydraulic systems, circuit breakers, reclosers, and cable is allowed if applicable restrictions are met and precautions taken (40 CFR 761.30).
- PCB Storage - PCBs and PCB Items at concentrations greater than 50 ppm that are to be stored before disposal must be stored in a facility that: assures the containment of PCBs, prevents rainfall from contacting PCBs and PCB Items; has a 6 in. [15.24 cm] curb, and is correctly labeled. Storage prior to disposal is not to exceed 1 yr. Nonleaking and structurally undamaged PCB Large, High-Voltage Capacitors and PCB-contaminated Electric Equipment that have not been drained of freeflowing dielectric fluid may be stored on pallets next to a storage area that complies with the storage area requirements if they are

checked weekly. Containers used for the storage of PCBs must comply with the shipping container specification of the Department of Transportation (DOT) (40 CFR 761.65).

- **PCB Transportation** - A generator who offers a PCB Waste for transport to commercial off-site storage or offsite disposal must prepare a manifest. If the generator does not receive a signed copy of the manifest within 35 days from the date the waste was accepted by the initial transporter, the generator must immediately contact the transporter and/or owner or operator of the designated facility to determine the status of the PCB Waste (40 CFR 761.207 through 761.210 and 761.215).
- **PCB Disposal** - For each shipment of manifested PCB Waste that a disposal facility accepts, the owner or operator of the disposal facility must prepare a Certificate of Disposal (COD). PCB-contaminated fluids of concentrations greater than 50 ppm, but less than 500 ppm, are required to be disposed of in a USEPA approved incinerator, or chemical waste landfill, or a high efficiency boiler. PCB liquids and Transformers with concentrations of 500 ppm or greater must be disposed of in a USEPA approved PCB incinerator. PCB Capacitors must be disposed of in either a solid waste landfill (nonleaking Small PCB Capacitor only) or an approved incinerator. PCB hydraulic machines containing PCBs at concentrations greater than 50 ppm may be disposed of as municipal solid waste when drained. PCB-contaminated Electrical Equipment, except capacitors, shall be disposed of by draining off the free-flowing liquid. PCB Articles and Containers shall be disposed of in a USEPA approved incinerator or chemical waste landfill if all free-flowing liquids have been removed (40 CFR 761.60, 761.218).
- **Asbestos Identification** - Facility buildings with the potential to be contaminated with asbestos should be tested and surveyed for asbestos and friable materials (MP).
- **Renovation and Demolition of Asbestos-Containing Structures** - Facilities that demolish structures containing asbestos above certain limits, must meet notification requirements, emission control requirements and wetting requirements. This applies to facilities that demolish structures containing at least 80 linear m (260 linear ft) of RACM on pipes, or at least 15 m² (160 ft²) of RACM on other components or at least 1 m³ (35 ft³) off facility components, and facilities renovating structures and stripping or removing at least 80 linear m (260 linear ft) of RACM on pipes, or at least 15 m² (160 ft²) of friable asbestos on other facility components and at least 1 m³ (35 ft³) off facility components. If the concentration of asbestos is less than this level, then the facility must submit notification of demolition. Facilities being demolished under state or local governmental agency orders shall have the portion of the facility containing friable asbestos adequately wetted during the wrecking operation. When a facility is demolished by intentional burning, all regulated asbestos-containing materials (RACM) must be removed. No RACM shall be stripped, removed, or otherwise handled or distributed unless at least one onsite representative trained in asbestos removal is present. When air cleaning is used as a method of controlling emissions of asbestos to the outside air, the fabric filter collection systems are required to meet specific standards, unless alternative equipment is authorized for use by the USEPA (40 CFR 61.145 and 61.152).
- **Asbestos Disposal** - Asbestos-containing waste must be wetted or bagged to prevent emissions to the air. Asbestos waste has to be disposed of in landfills that have been approved for the acceptance of asbestos-containing waste (40 CFR 61.150, 61.151, and 61.154).

- Environmental Noise - Making continuous or excessive noise at any time or any place by any means is prohibited when it interferes with an authorized use or project purpose. A single facility point of contact should be identified for noise complaints (MP).

- Radon

MITIGATION TIME FRAME

Radon Level (pCi/L) ⁴	Mitigate
Greater than 200 ¹	1 mo or move the occupants
200-20 ¹	6 mo
20-8 ²	1-4 yr ³
8-4 ²	5 yr
4 or less ¹	No action required

- ¹ Determine by 90-day screen or a 1-yr measurement in the case of Priority 2 and 3 structures.
- ² Annual average determined by 1-yr measurement. Screening measurements in this range will not be used as the basis for initiating mitigation actions.
- ³ Depending on the level of the measurement.
- ⁴ pCi = picoCurie; L = liters; mo = months.

- Recordkeeping - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- *Active Waste Disposal Site* - any disposal site other than an inactive site (40 CFR 61.14).
- *Adequately Wetted* - sufficiently mixed or penetrated with liquid to prevent the release of particulates (40 CFR 61.14).
- *Asbestos* - substances comprised of or derived from actinolite, amosite, anthophyllite, chrysotile, crocidolite, or tremolite (40 CFR 61.14).
- *Asbestos-Containing Waste Materials* - means mill tailings or any waste that contains commercial asbestos and is generated by a source subject to the provisions of 40 CFR 141. This term also includes filters from control devices, friable asbestos waste material, and bags or other similar packaging contaminated with commercial asbestos. However, as applied to demolition and renovation operations, this term includes regulated ACM waste and materials contaminated with asbestos including disposable equipment and clothing (40 CFR 61.141).
- *Asbestos Material* - asbestos or any material containing asbestos (40 CFR 61.141).

- *Asbestos Waste from Control Devices* - any waste material that contains asbestos and is collected by a pollution control device (40 CFR 61.141).
- *Capacitor* - a device for accumulating and holding a charge of electricity and consisting of conducting surfaces separated by a dielectric. Types of capacitors are as follows (40 CFR 761.3):
 1. *Small Capacitor* - a capacitor which contains less than 1.36 kg (3 lb) of dielectric fluid
 2. *Large, High-Voltage Capacitor* - a capacitor which contains 1.36 kg (3 lb) or more of dielectric fluid and which operates at 2000 V (a.c. or d.c.) or above
 3. *Large, Low-Voltage Capacitor* - a capacitor which contains 1.36 kg (3 lb) or more of dielectric fluid and which operates at 2000 V (a.c. or d.c.).
- *Category I Nonfriable Asbestos-Containing Material (ACM)* - asbestos-containing packing, gaskets, resilient floor covering, and asphalt roofing products containing more than 1 percent asbestos (40 CFR 61.141).
- *Category II Nonfriable ACM* - any material including Category I nonfriable ACM containing more than 1 percent asbestos that, when dry, cannot be crumbled, pulverized, or reduced to powder by hand pressure (40 CFR 61.141).
- *Chemical Waste Landfill* - landfill at which protection against risk of injury to health or the environment from mitigation of PCBs to land, water, or the atmosphere is provided from PCBs and PCB Items deposited therein by locating engineering, and operations, the landfill as required (40 CFR 761.3).
- *Commercial Asbestos* - any material containing asbestos that is extracted from ore and has value because of its asbestos content (40 CFR 61.141).
- *Commercial Storer of PCB Waste* - the owner or operator of each facility that is subject to the PCB storage facility standards of 40 CFR 761.65, and who engages in storage activities involving PCB Waste generated by others, or PCB Waste that was removed while servicing the equipment owned by others and brokered for disposal. The receipt of a fee or any other forms of compensation for services is not necessary to qualify as a commercial storer of PCB Waste. It is sufficient under this definition that the facility stores PCB Waste generated by others or the facility removed the PCB Waste while servicing equipment owned by others. If a facility's storage of PCB Waste at no time exceeds 500 gal [1892.71 L] of PCBs, the owner or operator is not required to seek approval as a commercial storer of PCB Waste (40 CFR 761.3).
- *Cutting* - to penetrate with a sharp-edged instrument and includes sawing, but does not include shearing, slicing, or punching (40 CFR 61.141).
- *dBA* - sound level in decibels, measured using the A-weighting network of a sound level meter.
- *dB(C)* - a sound level in decibels, measured using the C-weighting network of a sound level meter.

- *Decibel (dB)* - sound is measured in decibels. The zero on the decibel scale is based on the lowest sound level that a healthy, unimpaired human ear can hear. Decibels are not linear, but representative points on a sharply rising (exponential) curve.
- *Demolition* - the wrecking or taking out of any load-supporting structural member of a facility together with any related handling operations or the intentional burning of a facility (40 CFR 61.141).
- *Disposal* - intentionally or accidentally to discard, throw away, or otherwise complete or terminate the useful life of PCBs and PCB Items (40 CFR 761.3).
- *Double Wash/Rinse* - a minimum requirement to cleanse solid surfaces (both impervious and nonimpervious) two times with an appropriate solvent or other material in which PCBs are at least 5 percent soluble (by weight) (40 CFR 761.123).
- *Emergency Renovation Operation* - a renovation operation that was not planned but results from a sudden, unexpected event that, if not immediately attended to, presents a safety or public health hazard, is necessary to protect equipment from damage or is necessary to avoid imposing an unreasonable financial burden. This term includes operations necessitated by nonroutine failures of equipment (40 CFR 61.141).
- *Emergency Situations* - for continuing use of a PCB Transformer exists when (40 CFR 761.3):
 1. neither a non-PCB Transformer nor a non-PCB-contaminated transformer is currently in storage for reuse or readily available within 24 h for installation
 2. immediate replacement is necessary to continue service for power users.
- *Facility Component* - any part of any facility, including equipment (40 CFR 61.141).
- *Friable Asbestos Material* - any material that contains more than 1 percent asbestos by weight and can be crumbled, pulverized, or reduced to powder, when dry, by hand pressure (40 CFR 61.141).
- *Fugitive Source* - any source of emissions not controlled by an air pollution control device (40 CFR 61.141).
- *Glove Bag* - a sealed compartment with attached inner gloves used for the handling of ACM (40 CFR 61.141).
- *High Concentration PCBs* - PCBs that contain 500 ppm or greater PCBs, or those materials which the USEPA requires to be assumed to contain 500 ppm or greater PCBs in the absence of testing (40 CFR 761.123).
- *In or Near Commercial Buildings* - within the interior of, on the roof of, attached to the exterior wall of, in the parking area serving, or within 30 m of a nonindustrial, nonsubstation building (40 CFR 761.3).
- *In Poor Condition* - the binding of the materials is losing its integrity as indicated by peeling, cracking, or crumbling of the material (40 CFR 61.141).

- *Inactive Waste Disposal Site* - any disposal site or portion of it where additional asbestos-containing waste material will not be deposited and where the surface is not disturbed by vehicular traffic (40 CFR 61.141).
- *Industrial Building* - a building directly used in manufacturing or technically productive enterprises (40 CFR 761.3).
- *Leak or Leaking* - any instance in which a PCB Article, PCB Container, or PCB Equipment has any PCBs on any portion of its external surface (40 CFR 761.3).
- *Low Concentration PCBs* - PCBs that are tested and found to contain less than 500 ppm PCBs or those PCB-containing materials which USEPA requires to be assumed to be at concentrations below 500 ppm (i.e., untested mineral oil dielectric fluid) (40 CFR 761.123).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Mark* - the descriptive name, instructions, cautions, or other information applied to PCBs and PCB Items, or other objects subject to these regulations (40 CFR 761.3).
- *Marking* - the marking of PCB Items and PCB storage areas and transport vehicles by means of applying a legible mark by painting, fixation of an adhesive label, or by any other method that meets the requirements of these regulations (40 CFR 761.3).
- *Mineral Oil PCB Transformers* - any transformer originally designed to contain mineral oil as the dielectric fluid and which has been tested and found to contain 500 ppm or greater PCBs (40 CFR 761.3).
- *Non-PCB Transformers* - any transformer that contains less than 50 ppm PCB except that any transformer that has been converted from a PCB Transformer or a PCB-contaminated transformer cannot be classified as a non-PCB Transformer until reclassification has occurred in accordance with the requirements of 40 CFR 761.30(a)(2)(v) (40 CFR 761.3).
- *Nonscheduled Renovation* - a renovation operation necessitated by the routine failure of equipment, which is expected to occur within a given period based on past operating experience, but for which an exact date cannot be predicted (40 CFR 61.141).
- *Outside Air* - the air outside buildings and structures, including but not limited to, air under a bridge or an open ferry dock (40 CFR 61.141).
- *PCB or PCBs* - a chemical substance that is limited to the biphenyl molecule that has been chlorinated to varying degrees or any combination of substances which contains such substance (40 CFR 761.3).
- *PCB Article* - any manufactured article, other than a PCB Container, that contains PCBs and whose surface(s) has been in direct contact with PCBs. This includes capacitors, transformers, electric motors, pumps, and pipes (40 CFR 761.3).

- *PCB Article Container* - any package, can, bottle, bag, barrel, drum, tank, or other device used to contain PCB Articles or PCB Equipment, and whose surface(s) has not been in direct contact with PCBs (40 CFR 761.3).
- *PCB-Contaminated Electrical Equipment* - any electrical equipment, including but not limited to transformers, capacitors, circuit breakers, reclosers, voltage, regulators, switches, electromagnets, and cable, that contain 50 ppm or greater PCB, but less than 500 ppm PCB (40 CFR 761.3).
- *PCB Equipment* - any manufactured item, other than a PCB Container or a PCB Article container, which contains a PCB Article or other PCB Equipment, and includes microwave ovens, electronic equipment, and fluorescent light ballasts and fixtures (40 CFR 761.3).
- *PCB Item* - any PCB Article, PCB Article Container, PCB Container, or PCB Equipment, that deliberately or unintentionally contains or has as a part of it any PCB or PCBs (40 CFR 761.3).
- *PCB Transformer* - any transformer that contains 500 ppm PCB or greater (40 CFR 761.3).
- *PCB Waste* - those PCBs and PCB Items that are subject to the disposal requirements of Subpart D of 761 (40 CFR 761.3).
- *Particulate Asbestos Material* - finely divided particles of asbestos or material containing asbestos (40 CFR 61.141).
- *Planned Renovation Operations* - a renovation operation, or a number of such operations, in which the amount of friable asbestos material that will be removed or stripped within a given period of time can be predicted. Individual nonscheduled operations are included if a number of such operations can be predicted to occur during a given period of time based on operating experience (40 CFR 61.141).
- *Posing an Exposure Risk to Food or Feed* - being in any location where human food or animal feed products could be exposed to PCBs released from a PCB Item (40 CFR 761.3).
- *Radon-222* - a naturally occurring, inert, radioactive gas that is formed from the radioactive decay of uranium.
- *Regulated Asbestos-Containing Material (RACM)* - includes friable asbestos material; Category I nonfriable ACM that has become friable; Category I nonfriable ACM that has been subjected to grinding, casting, cutting, or abrading; and Category II nonfriable ACM that has a high probability of becoming crumbled, crushed, or pulverized (40 CFR 61.141).
- *Remove* - to take out RACM from any structure (40 CFR 61.141).
- *Renovation* - altering in any way one or more structure components. Operations in which load-supporting structural members are wrecked or taken out are excluded (40 CFR 61.141).
- *Retrofill* - to remove PCB or PCB-contaminated dielectric fluid and replace it with either PCB, PCB-contaminated, or non-PCB dielectric fluid (40 CFR 761.3).

- *Rupture of a PCB Transformer* - a violent or nonviolent break in the integrity of a PCB Transformer caused by an overtemperature and/or overpressure condition that results in the release of PCBs (40 CFR 761.3).
- *Strip* - to take off RACM from any part of a facility (40 CFR 61.141).
- *Structural Member* - any load-supporting member of a structure, such as beams and load-supporting walls; or any nonload-supporting member, such as ceilings and nonload-supporting walls (40 CFR 61.141).
- *Visible Emissions* - any emissions which are visually detectable without the aid of instruments, coming from RACM or asbestos-containing waste material, or from any asbestos milling, manufacturing, or fabricating operation. This does not include condensed water vapor (40 CFR 61.141).

GUIDANCE FOR CHECKLIST USERS

	REFER TO CHECKLIST ITEMS:	REFER TO PAGE NUMBER:
All Facilities	8-1 through 8-4	8-17
PCBs- General	8-5 through 8-10	8-19
PCB Records	8-11 through 8-13	8-23
PCB Transformers	8-14 through 8-23	8-25
PCB Spills	8-24 through 8-26	8-31
PCB Items	8-27 through 8-30	8-35
PCBs in Research	8-31	8-37
PCB Storage	8-32 through 8-37	8-39
PCB Transportation	8-38 and 8-39	8-43
PCB Disposal	8-40 through 8-50	8-45
Asbestos Identification	8-51 and 8-52	8-51
Renovation and Demolition of Asbestos-Containing Structures	8-53 through 8-61	8-53
Asbestos Training	8-62 and 8-63	8-59
Asbestos Disposal	8-64 through 8-67	8-61
Radon Gas	8-68 through 8-70	8-65
Environmental Noise	8-71	8-67

SPECIAL POLLUTANTS MANAGEMENT

Records To Review

- Inspection, storage, maintenance, and disposal records for PCBs or PCB Items
- PCB Equipment inventory and sampling results
- CODs and manifests
- Correspondence with regulatory agencies concerning PCB noncompliance situations
- Annual documentation logs
- Asbestos management plan and operating plan
- Notifications to Regulators concerning asbestos disposal
- Records of onsite disposal and transportation and offsite disposal of asbestos
- Regulatory inspection reports
- Documentation of asbestos sampling and analytical results
- Documentation of preventive measure or action
- Results of air sampling at the conclusion of response action
- Records of asbestos training program
- List of buildings insulated with asbestos or housing ACM
- Record of demolition or renovation projects completed in the past 5 yr that involve friable asbestos
- Decision documents and records of decision
- Noise complaint log

Physical Features To Inspect

- PCB storage areas
- Transformers
- Equipment, fluid, and other items at the facility containing PCBs
- Pipe, spray-on, duct, and troweled cementitious insulation and boiler lagging
- Ceiling and floor tiles
- Piping at hatcheries
- Power generating or other noise
- Emergency generators

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>ALL FACILITIES</p> <p>8-1. The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).</p> <p>8-2. FWS facilities are required to comply with state and local regulations (EO 12088, Section 1-1).</p> <p>8-3. Facilities will meet regulatory requirements issued since the finalization of the handbook (a finding under this checklist item will have the citation of the new regulation as a basis of finding).</p>	<p>Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, inter-agency agreements, or equivalent state enforcement actions.</p> <p>Verify that the facility is complying with state and local requirements.</p> <p>Verify that the facility is operating according to permits issued by the state or local agencies.</p> <p>(NOTE: Issues typically regulated by state and local agencies include:</p> <ul style="list-style-type: none"> - definitions of PCB-contaminated - PCB storage, labeling, and disposal requirements - certification of individuals sampling and/or working with asbestos - renovation and demolition procedures - asbestos handling and disposal procedures - motor vehicle noise - construction noise - noise from shooting and firing ranges.) <p>Determine if any new regulations concerning PCBs, asbestos, and radon have been issued since the finalization of the handbook.</p> <p>Verify that the facility is in compliance with newly issued regulations.</p>

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

8-4. FWS facilities should report all NOV's to the Region and the Service Pollution Control Office (SPCO) (MP).

**REVIEWER CHECKS:
July 1995**

Determine if the facility has received an NOV relating to air quality.
Verify that the NOV was reported to the Region and the SPCO.

COMPLIANCE CATEGORY: SPECIAL POLLUTANTS MANAGEMENT Fish and Wildlife Service	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
PCBs General 8-5. Certain regulations and practices should be followed to ensure the health of personnel who come in contact with PCBs (MP).	Verify that personnel are instructed to practice the following: <ul style="list-style-type: none"> - wash hands and exposed skin during work shift before: <ul style="list-style-type: none"> - eating - drinking - smoking - using toilet facilities - shower thoroughly before changing into street clothes. Verify that protective clothing is provided and worn when working with PCBs: <ul style="list-style-type: none"> - gloves - boots - overshoes - coveralls - safety glasses - face shields.
8-6. Airborne contamination of PCBs should be assessed and certain precautionary practices to protect personnel must be followed (MP).	Determine if measurements are made of air in the workplace to determine if airborne PCB contamination is present. Verify that, if the contamination level is at or above 0.5 mg PCB/m ³ , the following is done: <ul style="list-style-type: none"> - respirators are worn by all personnel - nondisposable equipment and clothing are thoroughly washed before being stored for reuse.
8-7. Certain records and practices should be enacted for employees exposed to PCBs (MP).	Verify that employees with potential exposure to PCBs are given medical examinations that include: <ul style="list-style-type: none"> - medical history - physical examination emphasizing liver function and skin condition. Verify that the liver function tests include: <ul style="list-style-type: none"> - serum glutamic oxaloacetic transaminase (SGOT) - serum glutamic pyruvic transaminase (SGPT) - gamma glutamyl transpeptidase (GGTP).

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

8-7. (continued)

Verify that, if respirators are used, each employee is checked annually for ability to work using such equipment.

Verify that records and results of medical examinations are maintained for at least 40 yr after the termination of employment.

8-8. Facilities that use or store at any time at least 45 kg (99.4 lb) of PCBs contained in PCB Containers or one or more PCB Transformers (500 ppm or greater), or 50 or more PCB Large, High-, or Low-Voltage Capacitors are required to keep an inventory (40 CFR 761.180(a)(2)((iii) through 761.180(a)(2)(vi)).

Determine if the facility uses or stores at any time at least 45 kg (99.4 lb) of PCBs contained in PCB Containers or one or more PCB Transformers (500 ppm or greater), or 50 or more PCB Large, High, or Low Voltage Capacitors.

Verify that the facility has an inventory/record of the following:

- total number (by type) of PCB Articles, PCB Article Containers, and PCB Containers placed into storage for disposal or disposed of during the calendar year
- total weight placed into storage for disposal or disposed of during the calendar year of:
 - PCBs in PCB Articles
 - contents of PCB Article Container
 - contents of PCB Containers
 - bulk PCB Waste
- a list of PCBs and PCB Items remaining in-service at the end of the calendar year. The total weight of any PCBs and PCB Items in containers including identification of container contents and the total number of PCB Transformers, PCB Large, High- and Low-Voltage Capacitors, and the total weight of PCBs in PCB Transformers.

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>8-9. Storage rooms and certain equipment that contains PCBs must be marked with an M_L marking (40 CFR 761.40, 761.45, and 761.65(c)(3)).</p>	<p>(NOTE: Marking format: Large PCB Mark (M_L) letters and striping, on a white or yellow background, sufficiently durable to equal or exceed the life of the PCB Article. The size shall be 15.25 cm (6 in.) on each side. If the article is too small to accommodate this size, a smaller label (M_S) may be used.)</p> <p>Verify that equipment containing PCBs is marked with an M_L marking that can be easily read by any person inspecting or servicing the equipment (see Appendix 8-1 for a sample of the marking):</p> <ul style="list-style-type: none"> - PCB Containers with PCBs in concentrations of greater than 50 ppm - PCB Transformers (500 ppm or greater) - PCB Large High-Voltage Capacitors - equipment containing a PCB Transformer (500 ppm or greater) or a PCB Large High-Voltage Capacitor at the time of removal from service - PCB Large Low-Voltage Capacitors at the time of removal from service - electric motors using PCB coolants with a concentration of greater than 50 ppm - hydraulic systems using PCB hydraulic fluid with concentrations of greater than 50 ppm - heat transfer systems (other than PCB Transformers) using PCB concentrations of greater than 50 ppm - PCB Article Containers containing any of the above - each storage area used to store PCBs and PCB Items for disposal - transport vehicles loaded with PCB Containers that contain more than 45 kg (99.4 lb) of PCBs in the liquid phase with PCB concentrations of greater than 50 ppm or one or more PCB Transformers with PCB concentrations of greater than 500 ppm are marked on each end and side - vault doors, machinery room doors, fences, hallways, or means of access, other than a manhole or grate cover, to a PCB Transformer (500 ppm or greater). <p>Verify that if one or more PCB Large High-Voltage Capacitors is installed in a protected location such as a pole, structure, or behind a fence, the pole, structure, or fence is marked and a record or procedure identifying the PCB Capacitor is maintained by the facility.</p> <p>(NOTE: Marking of PCB-contaminated Electrical Equipment (50 to 500 ppm) is not required.)</p> <p>Verify that PCB storage rooms are marked.</p> <p>(NOTE: Appendix 8-2 contains a list of manufacturers that produced PCB-contaminated dielectric fluid.)</p>

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>8-10. Generators, transporters, and disposers of PCB Waste are required to have an USEPA identification number (40 CFR 761.202 through 761.205).</p>	<p>(NOTE: Some facilities are exempt from the notification requirement and do not have a specified PCB storage area as regulated by 40 CFR 761.65 and just temporarily store before they transport for disposal.)</p> <p>Determine if the facility is a generator, transporter, or disposer of PCB Waste.</p> <p>Verify that facilities which generate PCB Waste have a USEPA identification number before processing, storing, dispensing, transporting, or offering for transport PCB Waste.</p> <p>Verify that facilities which transport or disposed of PCB Waste have a USEPA identification number.</p> <p>Verify that, if a facility must file, Form 7710-53, <i>Notification of PCB Waste Activity</i>, was filed with USEPA by 4 April 1990 and a USEPA identification number was obtained.</p>

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>PCB RECORDS</p> <p>8-11. A written annual document log must be prepared by 1 July of each calendar year, covering the previous year for all facilities that use or store at any time at least 45 kg (99.4 lb) of PCBs contained in PCB Containers or one or more PCB Transformers (500 ppm or greater), or 50 or more PCB Large, High-, or Low-Voltage Capacitors (40 CFR 761.180 (a)).</p>	<p>Verify that the annual document log and annual records (manifests certificates of disposal) are kept for at least 3 yr after the facility stops using or storing PCBs and PCB Items in the listed quantities.</p> <p>Review the written annual document log for the following:</p> <ul style="list-style-type: none"> - identification of facility - calendar year covered - manifest number for every manifest generated - total number (by type) of PCB Articles, PCB Article Containers, and PCB Containers placed into storage for disposal or disposed of during the calendar year - total weight placed into storage for disposal or disposed of during the calendar year of: <ul style="list-style-type: none"> - PCBs in PCB Articles - contents of PCB Article Container - contents of PCB Containers - bulk PCB Waste - a list of PCBs and PCB Items remaining in-service at the end of the calendar year. The total weight of any PCBs and PCB Items in containers including identification of container contents and the total number of PCB Transformers, PCB Large, High- and Low-Voltage Capacitors, and the total weight of PCBs in PCB Transformers - a record of each telephone call or other form of verification to confirm the receipt of PCB Waste transported by independent transport. <p>Verify that the annual document log contains the following for each manifest, for unmanifested waste, and for any PCBs or PCB Items received from or shipped from another facility owned or operated by the generator:</p> <ul style="list-style-type: none"> - date removed from service for disposal (first date material placed in PCB Container) - date placed into transport for offsite storage/disposal - date of disposal (if known) - weight of PCB Wastes <ul style="list-style-type: none"> - total: bulk PCB Wastes - in each article: PCB Transformers or Capacitors - total in each container: PCB Containers - total weight of contents and of the PCB Article (in kilograms) in each PCB Article Container - serial number or other unique identification number (except for bulk wastes) - description of the contents for PCB Containers and Article Containers.

COMPLIANCE CATEGORY: SPECIAL POLLUTANTS MANAGEMENT Fish and Wildlife Service	
REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
8-11. (continued)	Review the annual record and determine if the following information is provided: <ul style="list-style-type: none"> - all signed manifests generated or received at the facility during the calendar year - all certificates of disposal that have been generated or received during the calendar year.
8-12. Owners and operators of PCB chemical waste landfills shall keep records on water analysis and operational records, including burial coordinates, for 20 yr after disposal has ceased (40 CFR 761.180(d)).	Verify that proper records are being kept for the required 20 yr.
8-13. Storage and disposal facilities for PCBs shall maintain specific records for 3 yr (40 CFR 761.180(f)).	Verify that facilities which store or dispose of PCBs collect and maintain the following records for 3 yr: <ul style="list-style-type: none"> - all documents, correspondence, and data that have been provided by any state or local government - all documents, correspondence, and data provided to the state or local governments by the facility - any applications and related correspondence concerning wastewater discharge permits, solid waste permits, building permits, or other permits and authorizations.

SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>PCB TRANSFORMERS</p> <p>8-14. Facilities with transformers on their property that do not belong to FWS, should know whether or not the transformers are PCB Transformers (MP).</p> <p>8-15. PCB Transformers with PCBs of 500 ppm or greater that are in use or in storage for reuse shall not pose an exposure risk to food and feed (40 CFR 761.30(a)(1)(i)).</p> <p>8-16. PCB Transformers with concentrations of PCBs of 500 ppm or greater are subject to certain registration requirements (40 CFR 761.30(a)(1)(vi)).</p> <p>8-17. Railroad transformers must not contain dielectric fluid with greater than 1000 ppm PCB and must be serviced according to specific requirements (40 CFR 761.30(b)(1)(vi), 761.30(b)(2)(iii), and 761.30(b)(2)(iv)).</p>	<p>Determine if the facility has transformers on the property not belonging to the facility.</p> <p>Verify that the facility is aware of the concentration of PCBs in the transformer through either a label on the transformer or documentation from the owners of the transformer.</p> <p>Determine if there are any PCB Transformers on the facility, in use or in storage for reuse, that pose an exposure risk to food and feed, by reviewing the inventory.</p> <p>Verify that all PCB Transformers, including those in storage for reuse, are registered with facility fire department, or the fire department with jurisdiction, with the following information:</p> <ul style="list-style-type: none"> - physical location of PCB Transformer(s) - principle constituent of dielectric fluid (i.e., PCBs, mineral oil, silicone oil, etc.) - name and telephone number of contact person knowledgeable of PCB Transformer(s). <p>Verify that railroad transformers do not exceed 1000 ppm PCB.</p> <p>Verify that servicing of a railroad transformer is only done with dielectric fluid containing less than 1000 ppm PCB.</p> <p>Verify that if the coil is removed from the casing of a railroad transformer, it is refilled with dielectric fluid containing 50 ppm or less PCB.</p> <p>(NOTE: Dielectric fluid may be filtered through activated carbon or otherwise industrially processed for the purpose of reducing the PCB concentration in the fluid.)</p>

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>8-18. Combustible materials, including but not limited to paints, solvents, plastics, paper, and sawn wood, must not be stored by a PCB Transformer (40 CFR 761.30(a)(1)(viii)).</p> <p>8-19. PCB Transformers of concentrations of 500 ppm or greater in use in or near commercial buildings are subject to certain requirements (40 CFR 761.30(a)(1)(ii) through 761.30(a)(1)(v) and 761.30(a)(1)(vii)).</p>	<p>Verify that all combustible materials have been removed from the area within a PCB Transformer enclosure (i.e., vault or partitioned area) and the area within 5 m [16.40 ft] of a PCB Transformer or PCB Transformer enclosure.</p> <p>Determine if there are any transformers located in or near commercial buildings by reviewing the inventory.</p> <p>Verify that procedure/policy exists prohibiting installation of PCB Transformers which have been placed into storage for reuse or which have been removed from another location.</p> <p>Verify that there are no network PCB Transformers with higher secondary voltages (equal to or greater than 480 V, including 480/277 V systems) in or near commercial buildings.</p> <p>Determine where any of the following PCB Transformers are in use in or near commercial buildings or located in sidewalk vaults and if a plan exists to equip such PCB Transformers with electrical protection to avoid transformer failure that would result in release of PCBs:</p> <ul style="list-style-type: none"> - Radial PCB Transformers and lower secondary voltage network PCB Transformers (voltage less than 480 V) - Radial PCB Transformers with higher secondary voltages (greater than or equal to 480 V including 480/277 V system). <p>Determine if lower secondary voltage network PCB Transformers which have not been electrically protected were registered with the USEPA regional administrator and removed from service by 1 October 1993.</p> <p>Verify that all higher secondary voltage radial PCB Transformers, in use in or near commercial buildings, and lower secondary voltage network PCB Transformers not located in sidewalk vaults in or near commercial buildings, are equipped with:</p> <ul style="list-style-type: none"> - electrical protection such as current-limiting fuses to avoid transformer ruptures - disconnect equipment to insure complete de-energization of the transformer in case of a sensed abnormal condition.

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
8-19. (continued)	Verify that all lower secondary voltage radial PCB Transformers, in use in or near commercial buildings are equipped with electrical protection such as current limiting fuses or equivalent technology and provide for the complete de-energization of the transformer or complete de-energization of the faulted phase of the transformer within several hundredths of a second.
8-20. PCB Transformers are required to be properly serviced (40 CFR 761.30(a)(2)).	<p>Verify that servicing activities are properly conducted as follows:</p> <ul style="list-style-type: none"> - transformers classified as PCB-contaminated Electrical Equipment (50 to 500 ppm PCB) are only serviced with dielectric fluid containing less than 500 ppm PCB - the transformer coil is not removed during servicing of PCB Transformers with PCB concentrations of 500 ppm or greater - PCBs removed during servicing are captured and are either reused as dielectric fluid or disposed of properly - the PCBs from a PCB Transformer with PCB concentrations of 500 ppm or greater are not mixed with or added to dielectric fluid from PCB-contaminated Electrical Equipment (50 to 500 ppm PCB) - dielectric fluids containing less than 500 ppm PCB that are mixed with fluids containing 500 ppm or greater are not used as dielectric fluid in any transformers classified as PCB-contaminated Electrical Equipment (50 to 500 ppm PCB). <p>(NOTE: PCB Transformers may be serviced with dielectric fluid at any concentration.)</p>

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>8-21. Inspections must be performed once every 3 mo for all in-service PCB Transformers with greater than 500 ppm PCB (40 CFR 761.30(a)(1)(ix) and 761.30(a)(1)(xii) through 761.30(a)(1)(xiv)).</p>	<p>Verify that applicable transformers are inspected at least once every 3 mo by reviewing inspection records.</p> <p>Determine whether any PCB Transformers have been leaking.</p> <p>Verify that proper reporting procedures have been followed if any leaking transformers have been discovered.</p> <p>Verify that the following information is recorded for each PCB Transformer inspection:</p> <ul style="list-style-type: none"> - location of transformer - dates of each visual inspection - date when any leak was discovered - name of person conducting inspection - location and estimate of the dielectric fluid quantity for any leaks - data and description of any cleanup, containment, or repair performed - results of any daily inspections for transformers with uncorrected active leaks. <p>(NOTE: Reduced visual inspections of at least once every 12 mo is allowed for PCB Transformers with impervious, undrained secondary containment capacity of 100 percent of dielectric fluid and for PCB Transformers tested and found to contain less than 60,000 ppm PCBs.)</p> <p>(NOTE: Increased visual inspections of once a week is required for any PCB Transformer in use or stored for reuse which poses an exposure risk to food or feed.)</p> <p>Verify that records of inspection and maintenance are kept for 3 yr after disposal.</p>
<p>8-22. PCB Transformers with PCB concentrations of 500 ppm or greater found to be leaking during an inspection must be repaired or replaced to eliminate the source of the leak (40 CFR 761.30(a)(1)(x)).</p>	<p>Determine if cleanup and/or containment of released PCBs has been initiated within 48 h of its detection or as soon as possible.</p> <p>Verify that leaking PCB Transformers are inspected daily.</p> <p>Determine if plans exist to repair or replace transformers to eliminate the source of the leak.</p> <p>Verify that cleaned up material is disposed of according to appropriate requirements.</p>

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

8-23. When a PCB Transformer with concentrations of PCBs 500 ppm or greater is involved in a fire, the facility is required to immediately report the incident to the NRC (40 CFR 761.30(a)(1)(xi)).

**REVIEWER CHECKS:
July 1995**

Determine if any PCB Transformers have been involved in any incident where sufficient heat and/or pressure was generated to result in the violent or nonviolent rupture of a PCB Transformer and the release of PCBs.

Verify that the NRC was notified and the following measures were taken:

- floor drains were blocked
- water runoff was contained.

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
<p>PCB SPILLS</p> <p>8-24. Facilities are required to report spills of 10 lb [4.53 kg] or more of PCBs of concentrations of 50 ppm or greater (40 CFR 761.120(a)(1), 761.123(d)(2), and 761.125(a)).</p> <p>8-25. Cleanup of low concentration spills of less than 1 lb [0.45 kg] of PCBs (less than 270 gal [1022.26 L] of untested mineral oil) must be done according to specific requirements (40 CFR 761.120(a)(2), 761.120(b), 761.120(c), and 761.125(b)).</p>	<p>Verify that, when a spill of 10 lb [4.53 kg] or more directly contaminates surface water, sewers, or drinking water, the facility notifies the regional USEPA office within 24 h after discovery of the spill and acts on the guidance given by the USEPA.</p> <p>Verify that, if a spill of 10 lb [4.53 kg] or more directly contaminates grazing land or a vegetable garden, the facility notifies the USEPA regional office within 24 h after discovery and begins the cleanup of the spill.</p> <p>Verify that, when a spill of 10 lb [4.53 kg] or more occurs which does not directly contaminate surface waters, sewers, drinking water supplies, grazing land, or a vegetable garden, the facility notifies the USEPA Regional office within 24 h after discovery of the spill and begins decontamination of the spill area.</p> <p>(NOTE: Spills of greater than 1 lb [0.45 kg] must be reported to the NRC under 40 CFR 302.1 through 302.6, see appropriate questions in Section 3, Hazardous Materials Management.</p> <p>Verify that solid surfaces are double washed/rinsed and all indoor, residential surfaces other than vault areas are cleaned to 10 µg/100 cm² by standard commercial wipe tests.</p> <p>Verify that all soil within the spill area (visible traces of soil and buffer of 1 lateral foot [3.28 lateral meters] around the visible traces) is excavated and the ground restored to its original status by backfilling with clean soil (soil with less than 1 ppm PCB).</p> <p>Verify that the above cleanup requirements are done within 48 h after identifying the spill unless an emergency or adverse weather delays the process.</p> <p>Verify that the cleanup is documented with records and certification of decontamination and the records are maintained for 5 yr.</p> <p>(NOTE: The final numerical cleanup standards do not apply to spills directly into surface waters, drinking water, sewers, grazing lands, and vegetable garden.)</p> <p>(NOTE: The USEPA may impose more stringent or less stringent cleanup requirements on a case by case basis depending on conditions such as possibility of groundwater contamination.)</p>

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

8-26. Cleanup of high-concentration spills and low concentration spills involving 1 lb [0.45 kg] or more of PCBs by weight (270 gal [1022.64 L] or more of untested mineral oil) must be done according to specific requirements (40 CFR 761.120(a)(2), 761.120(b), 761.120(c), and 761.125(c)).

**REVIEWER CHECKS:
July 1995**

Verify that the following actions are taken within 24 h (or within 48 h for PCB Transformer with PCB concentrations of greater than 500 ppm) of discovery of the spill:

- notification of the USEPA regional office and the NRC
- the area of the spill is cordoned off or otherwise identified to include the area with visible traces of the spill and a 3 ft [0.91 m] buffer zone. If there are no visible traces the area of the spill may be estimated.
- clearly visible signs are placed advising persons to avoid the area
- the area of visible contamination is recorded and documented, identifying the extent and center of the spill
- cleanup of visible traces of the fluid from hard surfaces is initiated
- removal of all visible traces of the spill on soil and other media such as gravel, sand, etc., is started.

Verify that, if the spill occurs in an outdoor substation, the following is done:

- contaminated solid surfaces are cleaned to a PCB concentration of 100 $\mu\text{g}/\text{cm}^2$ (as measured by standard wipe tests)
- soil contaminated by the spill is cleaned to either 25 ppm PCBs by weight or 50 ppm PCBs by choice of the facility if a label to notice is placed in the area indicating the level of cleanup
- post-cleanup sampling is done.

Verify that, if the spill occurs in a restricted access area other than an outdoor substation, the following is done:

- high-contact solid surfaces are cleaned to 10 $\mu\text{g}/100 \text{ cm}^2$ (as measured by standard wipe tests)
- low-contact, indoor, impervious solid surfaces are decontaminated to 10 $\mu\text{g}/100 \text{ cm}^2$
- low contact, indoor, nonimpervious surfaces are cleaned to either 10 micrograms or 100 $\mu\text{g}/100 \text{ cm}^2$ and encapsulated at the option of the facility
- low-contact, outdoor surfaces (both impervious and nonimpervious) are cleaned to 100 $\mu\text{g}/100 \text{ cm}^2$
- soil contaminated by the spill is cleaned to 25 ppm PCBs by weight
- post-cleanup sampling is done.

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

REGULATORY REQUIREMENTS:	REVIEWER CHECKS: July 1995
8-26. (continued)	<p>Verify that spills in nonrestricted access locations are decontaminated as follows:</p> <ul style="list-style-type: none"> - furnishings, toys, and other easily replaceable household items are disposed of and replaced - indoor solid surfaces and high-contact outdoor solid surfaces are cleaned to 10 µg/100 cm² (as measured by standard wipe tests) - indoor vault areas and low-contact, outdoor, impervious solid surfaces are decontaminated to 10 µg/100 cm² - at the option of the facility, low-contact, outdoor, nonimpervious solid surfaces are cleaned to either 10 or 100 µg/100 cm² and encapsulated - soil is decontaminated to 10 ppm PCBs by weight provided that the soil is excavated to a minimum depth of 10 in. [25.4 cm] and replaced with clean soil - post-cleanup sampling is done. <p>Verify that records documenting all cleanup and decontamination are maintained for 5 yr.</p> <p>(NOTE: The occurrence/discovery of the spill on the weekend or overtime costs are not considered acceptable reasons to delay response.)</p> <p>(NOTE: The final numerical cleanup standards do not apply to spills directly into surface waters, drinking water, sewers, grazing lands, and vegetable gardens.)</p> <p>(NOTE: The USEPA may impose more stringent or less stringent cleanup requirements on a case by case basis depending on conditions such as possibility of groundwater contamination.)</p>

PCB DISPOSAL

8-40. For each shipment of manifested PCB Waste that a disposal facility accepts, the owner or operator of the disposal facility must prepare a Certificate of Disposal (COD) (40 CFR 761.218).

Verify that a COD has been prepared containing the following information:

- the identity of the disposal facility by: name, address, and USEPA identification number
- the identity of the PCB Waste affected by the COD including reference to the manifest number for the shipment
- a certification as defined in 40 CFR 761.3.

Verify that a copy of the COD was:

- sent to the generator identified on the manifest within 30 days of the date that disposal of the PCB Waste was completed
- retained at the facility with the annual report.

8-41. PCB-contaminated fluids other than mineral oil dielectric fluid at concentrations greater than 50 ppm but less than 500 ppm are required to be disposed of according to specific requirements (40 CFR 761.60(a)(3)).

Determine if any PCB fluids meeting these criteria were processed for disposal in the last year.

Verify that disposal was done at:

- a USEPA-approved incinerator
- a USEPA-approved chemical waste landfill
- a high efficiency boiler.

Verify that, if the fluid is burned in an high efficiency boiler, the following requirements are met:

- the boiler is rated at a minimum of 50 million British thermal unit (MBtu)/h [14.65 MW]
- the CO concentration in the stack is 50 ppm or less and the excess O₂ is at least 3 percent when PCBs are being burned and the boiler uses natural gas or oil as the primary fuel
- the CO concentration in the stack is 100 ppm or less and the O₂ content is at least 3 percent when PCBs are being burned and the boiler uses coal as the primary fuel
- the waste does not compromise more than 10 percent (on a volume basis), of the total fuel feed rate
- the waste is not fed into the boiler unless the boiler is operating at its normal operating temperature

**COMPLIANCE CATEGORY:
SPECIAL POLLUTANTS MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

8-56. Emissions from facility components that have been taken out in units or in sections from facilities being demolished under state or local orders or facilities being demolished or renovated with at least 80 linear meters (260 linear feet) of RACM on pipes, or at least 15 m² (160 ft²) of RACM on other facility components or at least 1 m³ (35 ft³) off facility components must be controlled (40 CFR 61.145 (c)(4) and 61.145(c)(5)).

8-57. Emissions from RACM that has been removed or stripped from facilities being demolished under state or local orders or facilities being demolished or renovated with at least 80 linear meters (260 linear feet) of RACM on pipes, or at least 15 m² (160 ft²) of RACM on other facility components or 1 m³ (35 ft³) or greater off facility components must be controlled (40 CFR 61.145(c)(6)).

Verify that facility components are either stripped or contained in leaktight wrappings.

Verify that facility components removed from facility as units or in sections for stripping meet the following:

- RACM is adequately wet during stripping operations
- a local exhaust ventilation and collection system designed and operated to capture emissions is in use
- the exhaust system exhibits no visible emissions to outside air.

Verify that when wetting operations are stopped because of the temperature, a record of the temperature is made and kept on file for 2 yr.

(NOTE: For large facility components such as reactor vessels, large tanks, and steam generators, but not beams, stripping is not required if the following are met:

- the component is removed, transported, stored, disposed of, or reused without disturbing the RACM
- the component is encased in leaktight wrapping and labelled.)

Verify that asbestos materials that have been removed or stripped meet the following:

- materials are adequately wet, and remain wet until collected for disposal
- materials are carefully lowered to the ground or lower floor (not dropped or thrown)
- materials not removed as units or in sections are transported to the ground via dust-tight chutes or containers if they are removed more than 50 ft [1524 cm] above ground level.

**REGULATORY
REQUIREMENTS:**

**REVIEWER CHECKS:
July 1995**

8-66. Active waste disposal sites where ACM is being disposed of are required to meet specific standards (40 CFR 61.154(a) through 61.154(e) and 61.154(i) through 61.154(j)).

Determine if the facility is operating a landfill where asbestos is being disposed.

Verify that there are no visible emissions from active asbestos-containing waste disposal sites, or that:

- at the end of each operating day, or once in a 24 h period, the waste material is covered with either at least 15 cm (6 in.) of compacted non-ACM
- a resinous or petroleum based dust suppression agent is applied, waste crankcase oil is not suitable for this purpose
- an alternative method of control approved by the USEPA is used.

Verify that, unless a natural barrier exists deterring access by the general public, that either the waste is properly covered by non-ACM daily or proper warning signs and fences are installed and maintained as follows:

- warning signs are displayed at all entrances at intervals of 100 m (330 ft) or less along property line of the site or the perimeter of the section of the site where ACM is disposed and state that the site contains asbestos and warns against creating dust
- the area is adequately fenced.

Verify that a copy of waste shipment records are maintained for 2 yr.

Verify that until closure, a record is kept of the location, depth, and area of asbestos-containing waste on a map or diagram of the disposal area.

Verify that upon closure, the administration receives a copy of all records.

Verify that a procedure is in place to notify the administration in at least 45 days prior to excavating or disturbing deposited asbestos-containing waste material.

8-67. Inactive waste disposal sites are required to meet specific standards (40 CFR 61.154(f) through 61.154(h) and 61.151).

Verify that inactive waste disposal sites meet one of the following:

- no visible emissions are discharged
- asbestos-containing waste material is covered with at least 15 cm (6 in.) of compacted non-ACM, and a vegetation cover is grown and maintained.
(NOTE: In desert areas where vegetation is difficult to maintain at least 8 cm (3 in.) additional of well-graded nonasbestos-containing crushed rock may be used instead.)
- cover the asbestos-containing waste material with at least 60 cm (2 ft) of non-ACM and maintain the cover to prevent exposure.

RADON GAS

8-68. FWS facilities are required to test for radon according to specific procedures (Department of the Interior (DOI) 485 DM, para 27.4a and 27.4b).

Verify that the monitor was in place for 90 days.

Verify that screening tests were conducted on the lowest occupiable level (basement) and on the first above ground floor.

Verify that the testing was done during the time of year when the building is normally kept closed.

Verify that the following have been tested:

- schools, medical facilities, living quarters, and daycare facilities
- structures that are occupied for more than 520 h/yr, including dwellings, offices, and workspaces.

Verify that, if the screening result was 4 to 20 pCi/L, a 12-mo alpha track device was placed in the lowest lived-in area to obtain a more accurate assessment of the annual average radon level.

Verify that, if the screening result is greater than 20 pCi/L, short-term measurements using charcoal canisters or continuous radon monitors is undertaken to verify the screening results and better estimate the annual average radon level.

8-69. Depending on the results of the radon tests, specific mitigation measures must be taken (DOI 485 DM, para 27.4c).

Verify that occupied structures with an annual average radon levels greater than 4.0 pCi/L are required to be mitigated according to the following schedule:

Annual Average Radon Level (pCi)	Residential Living Spaces	Office Working Spaces
> 200	1 mo	3 mo
20 - 200	1 yr	2 yr
10 - 19.9	2 yr	4 yr
4 - 9.0	4 yr	6 yr
< 4	No mitigation	No mitigation

(NOTE: If additional time is required for mitigation in areas where the result was greater than 200 pCi, the premises must be vacated until the mitigation achieves a reduction to lower radon levels.)

July 1995**

8-70. Structures which have undergone mitigation are required to undergo additional monitoring (DOI 485 DM, para 4.27d).

Verify that, if a structure has undergone mitigation, it is re-tested according to the following schedule:

Premitigation Level (pCi)	Re-testing Frequency
> 200	Annual
20 - 200	Every 2 yr
10 - 19.9	Every 4 yr
4 - 9.9	Every 10 yr.

Appendix 8-2

Dielectric Fluid Trend Names and Manufacturers

1. U.S. Manufactured Dielectrics:

Name	Manufacturer
Aroclor	Monsanto
Aroclor B	Mallory
Sbestol	American Corporation
Askarel Hevi-Duty	Hevi-Duty Corporation
Askarel *	Ferranti-Packard, Ltd.
Askarel	Universal Mfg. Co.
Chlorextol	Allis-Chalmers
Chlorinol	Sparagoe Electric
Chlorphen	Jard Company
Diaclor	Sangamo Electric
Dykanol	Cornell Dubilier
Elemex	McGraw Edison
Eucarel	Electric Utilities Co.
Hyvol	Aerovox
Inerteen	Westinghouse Electric
No-Flamol	Wagner Electric
Pyranol	General Electric
Saf-T-Kuhl	Kuhlman Electric

* Generic name used for insulating liquids in capacitors and transformers.

2. Foreign Manufactured Dielectrics:

Name	Manufacturer
Clophen	Bayer (Germany)
Fenclo	Caffaro (Italy)
Kennechlor	Mitsubishi (Japan)
Phenoclor	Prodelec (France)
DK	Caffaro (Italy)
Pyralene	Prodelec (France)
Solvot	USSR
Santotherm	Mitsubishi (Japan)

3. Transformers that list other dielectrics or do not bear a manufacturer's identification or service plate on the transformer: if the transformer contains any of the dielectrics (commonly referred to as askarels), it is to be certified as a PCB transformer containing in excess of 500 ppm PCB and no laboratory testing is necessary.

UNDERGROUND STORAGE TANK (UST) MANAGEMENT

A. Applicability	1
B. Federal Legislation	1
C. State and Local Regulations	1
D. FWS/DOI Manuals	1
E. Key Compliance Requirements	2
F. Key Compliance Definitions	4
Guidance for Checklist Users	11

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 9

UNDERGROUND STORAGE TANK (UST) MANAGEMENT

A. Applicability

This section applies to FWS facilities that utilize USTs for storage of hazardous materials or petroleum products. This section presents review action items for the proper management of USTs. The evaluation of UST management ranges from the installation of new systems and the maintenance of existing systems, to the repair, replacement, or permanent removal of USTs.

B. Federal Legislation

- *The Resource Conservation and Recovery Act (RCRA)*, Subtitle I. This law, Public Law (PL) 99-49 (42 U.S. Code (USC) 6991-6991i), established the standards and procedures for USTs. It required the U.S. Environmental Protection Agency (USEPA) to issue standards on leak detection, record maintenance, release reporting, corrective actions, tank upgrading, and replacement (42 USC 6991b(a)(c)).
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards*. This EO of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or for correcting situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards*.
 - 40 CFR 280, *Technical Standards and Corrective Action Requirements for Owners and Operators of Underground Storage Tanks (UST)*.

C. State/Local Requirements

Many state and local governments have active UST programs. These various governments have developed regulations specific to the physical environment and the regulated communities' needs. It is important to review regulations at the state and local level to ensure that any differences such as reporting or notice requirements, and monitoring requirements are complied with.

D. FWS/DOI Manuals

- 561 FW 7, *Compliance Requirements RCRA - Underground Storage Tanks*. This chapter, dated 20 June 1995, provides guidance for management of USTs at Service facilities.

E. Key Compliance Requirements

- Substandard USTs - Substandard UST systems must be upgraded, closed, or removed from service by 22 December 1998 (40 CFR 280.21(a) through 280.21(c)).
- New or Upgraded USTs - New or upgraded USTs are required to be fitted with spill and overfill prevention equipment. Notice must be given to the appropriate authority within 30 days when a UST system is brought into service after 8 May 1986. If the UST is installed after 22 December 1988, it must be constructed so that it will remain structurally sound for its operating life. Installation of USTs must be done by a certified installer and UST systems must be made of or lined with, materials compatible with the substance stored (40 CFR 280.20, 280.21(d), 280.22, and 280.32).
- Metallic USTs - Buried metallic storage tanks installed after 1973 must be protected from corrosion by coatings, cathodic protection, or other effective methods. They must also undergo regular pressure testing (40 CFR 112.7(e)(2)(iv)).
- Spill and Overfill Prevention - The filling of a UST must include the prevention of overfilling and spilling of the substance. If a spill does occur, facilities with UST systems are required to contain and immediately cleanup a spill or overfill and report it to the implementing agency within 24 h if (40 CFR 280.30 and 280.53):
 1. spills or overfills of petroleum resulted in a release to the environment of more than 25 gal [93.89 L] or caused a sheen on nearby surface water
 2. spills or overfills of hazardous substances result in a release to the environment in excess of the reportable quantity.
- Corrosion Protection and Repairs - Corrosion protection on USTs must operate continuously to provide corrosion protection to the metal components that routinely contain regulated substances and are in contact with the ground. UST systems with impressed current cathodic protection are required to be inspected every 60 days by a qualified cathodic protection tester. Repairs to USTs must be performed according to industry code. Tanks and piping that have been replaced or repaired are required to be tested for tightness within 30 days. Records of repairs shall be maintained for the life of the tank (40 CFR 280.31, 280.33, 280.43, and 280.44).
- Release Detection - Facilities with new and existing USTs are required to provide a method, or combination of methods of release detection. Release detection requirements in 40 CFR 280.40 through 280.45 do not apply to USTs which store fuel solely for use by emergency power generators. Release detection records are required to be kept as follows (40 CFR 280.40 through 280.45):
 1. all written performance claims pertaining to any release detection system used for 5 yr from the date of installation
 2. the results of any sampling testing or monitoring for 1 yr
 3. the results of tank tightness testing, until the next test is done
 4. written documentation of calibration, maintenance, repair, of release detection equipment permanently located onsite, at least 1 yr after the servicing is done
 5. schedules of required calibration and maintenance provided by the release detection equipment manufacturer, 5 yr after the date of installation.

Depending on the age, size, and construction of the tank, acceptable methods of release detection include the following:

1. inventory control
2. manual tank gauging
3. tank tightness testing
4. automatic tank gauging
5. vapor monitoring
6. groundwater monitoring
7. interstitial monitoring.

Existing UST system tanks must implement release detection requirements based on when the system was installed. The table below identifies the deadline for providing release detection:

UST System Installation Date	Leak Detection Required by 22 December of:
All others	1992
1980-December 1988	1993

- Release Detection for Underground Piping Associated with UST Systems - 40 CFR 280, Subpart D, establishes separate release detection requirements for underground piping depending on whether it conveys substances under pressure or suction. These include:
 1. Pressurized piping must be equipped with an automatic line leak detector and have an annual line tightness test conducted; or pressurized piping must be equipped with an automatic line leak detector and a permanent release detection system that allows monthly monitoring. Permanent release detection methods acceptable for piping include: vapor monitoring, interstitial monitoring, and groundwater monitoring. The deadline for implementing release detection requirements on pressurized piping is 22 December 1990.
 2. Suction piping either must have a line tightness test conducted every 3 yr or must use a permanent release detection system that allows monthly monitoring. Deadlines for implementing release detection requirements on suction piping are based on when the UST system was installed. The table above identifies the deadline for providing release detection. For suction piping constructed to certain standards, no release detection monitoring is required. It must meet five criteria:
 - a. belowgrade piping must operate at less than atmospheric pressure
 - b. belowgrade piping must be sloped to drain back into the tank when suction is released
 - c. only one check valve can be included in each suction line
 - d. check valve shall be located directly below and as close as practical to the suction pump
 - e. criteria in paragraphs b through d must be verifiable.
- Hazardous Substance USTs - Existing hazardous substance USTs are required to meet release detection standards for petroleum USTs (40 CFR 280.42).

- Reporting and Recordkeeping Requirements - Facilities are required to submit notifications of new USTs, release reports, planned or complete corrective actions, and notice of closure or change-in-service when applicable. Records are required to be available at the UST site or at a readily available alternative site. Records are to be kept of the following (40 CFR 280.34 280.45, and 280.74):
 1. corrosion expert's analysis of site corrosion potential if corrosion protection equipment is not used
 2. documentation of operation of corrosion protection equipment
 3. documentation of repairs
 4. closure records
 5. results of any site investigations.
- Change-in-Service or Closure of USTs - USTs which are put out of service temporarily must have continued maintenance. If the UST has been out-of-service for near or over 1 yr, plans must be made for permanent closure. The facility must notify the implementing agency (USEPA) for any closure or change-in-service 30 days in advance or within a reasonable time frame as determined by the implementing agency. UST closure must be done by either removing the tank from the ground or leaving it in place with the contents removed and the tank filled with an inert solid material and closing it to all future outside access. If a tank is undergoing a change-in-service, it must be emptied and cleaned and a site assessment conducted. Prior to the completion of permanent closure or change-in-service, measurements must be made for the presence of a release where contamination is most likely to be present at the site. Facilities with UST systems closed prior to 22 December 1988 must, when directed by the implementing agency, assess the excavation zone and close the UST according to current standards if releases from the UST may pose a current or potential threat to human health and the environment (40 CFR 280.70 through 280.73).
- Recordkeeping - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- *Aboveground Release* - any release to the surface of the land or to surface water. This includes, but is not limited to, releases from the aboveground portion of a UST system and aboveground releases associated with overfills and transfer operations as the regulated substance moves to or from a UST system (40 CFR 280.12).
- *Ancillary Equipment* - any devices including, but not limited to, such devices as pipings, fittings, flanges, valves, and pumps used to distribute, meter, or control the flow of regulated substances to and from the UST (40 CFR 280.12).
- *Belowground Release* - any release to the subsurface of the land and to groundwater. This includes, but is not limited to, releases from the belowground portion of a UST system and belowground releases associated with overfills and transfer operations as the regulated substance moves to or from a UST (40 CFR 280.12).

- *Cathodic Protection* - a technique to prevent corrosion of a metal surface by making that surface the cathode of an electrochemical cell. For example, a tank system can be cathodically protected through the application of either galvanic anodes or impressed current (40 CFR 280.12).
- *Cathodic Protection Tester* - a person who can demonstrate understanding of the principles and measurements of all common types of cathodic protection systems as applied to buried or submerged metal piping and tank systems. At a minimum, such persons must have education and experience in soil resistivity, stray current, structure-to-soil potential, and component electrical isolation measurements of buried metal piping and tank systems (40 CFR 280.12).
- *CERCLA - Comprehensive Environmental Response Compensation and Liability Act* of 1980 as amended (40 CFR 280.12).
- *Compatible* - the ability of two or more substances to maintain their respective physical and chemical properties upon contact with one another for the design life of the tank system under conditions likely to be encountered in the UST (40 CFR 280.12).
- *Connected Piping* - all underground piping including valves, elbows, joints, flanges, and flexible connectors attached to a tank system through which regulated substances flow. For the purpose of determining how much piping is connected to any individual UST system, the piping that joins two UST systems should be allocated equally between them (40 CFR 280.12).
- *Consumptive Use* - with respect to heating oil means consumed on the premises (40 CFR 280.12).
- *Corrosion Expert* - a person who, by reason of thorough knowledge of the physical sciences and the principles of engineering and mathematics acquired by a professional education and related practical experience, is qualified to engage in the practice of corrosion control on buried or submerged metal piping systems and metal tanks. Such a person must be accredited or certified as being qualified by the National Association of Corrosion Engineers or be a registered professional engineer who has certification or licensing that includes education and experience in corrosion control of buried or submerged metal piping systems and metal tanks (40 CFR 280.12).
- *Deferred USTs* - USTs which are exempt from meeting the requirements in 40 CFR 280 except those concerning release response and corrective action for UST systems containing petroleum or hazardous substances in 40 CFR 280.60 through 280.67. These tanks include (40 CFR 280.10(e):
 1. wastewater treatment tank systems
 2. any UST systems containing radioactive material that are regulated under the *Atomic Energy Act* of 1954
 3. any UST system that is a part of an emergency generator system at nuclear power generation facilities regulated by the Nuclear Regulatory Commission under 10 CFR 50, Appendix A
 4. airport hydrant fuel distribution systems
 5. UST system with field-constructed tanks.
 See also the definitions for USTs and Excluded USTs.

- *Dielectric Material* - a material that does not conduct direct electrical current. Dielectric coatings are used to electrically isolate UST systems from the surrounding soils. Dielectric bushings are used to electrically isolate portions of the UST system (e.g., tank from piping) (40 CFR 280.12).
- *Electrical Equipment* - underground equipment that contains dielectric fluid that is necessary for the operation of equipment such as transformers and buried electric cable (40 CFR 280.12).
- *Excavation Zone* - the volume containing the tank system and backfill material bounded by the ground surface, walls, and floor of the pit and trenches into which the UST system is placed at the time of installation (40 CFR 280.12).
- *Excluded USTs* - these are USTs which are not required to meet the requirements found in 40 CFR 280 and include (40 CFR 280.10(b)):
 1. any UST system holding hazardous wastes listed under Subtitle C of the *Solid Waste Disposal Act* (SWDA), or a mixture of such hazardous waste and other regulated substances
 2. any wastewater treatment tank system that is part of a wastewater treatment facility regulated under Section 402 or 307(b) of the *Clean Water Act* (CWA)
 3. equipment or machinery that contains regulated substances for operational purposes such as hydraulic lift tanks and electrical equipment
 4. any UST system whose capacity is 110 gal [416.40 L] or less
 5. any UST system that contains a de minimis concentration of a regulated substance
 6. any emergency spill or overflow containment UST system that is expeditiously emptied after use.

See also the definitions for Deferred USTs and USTs.

- *Existing Tank System* - a tank system used to contain an accumulation of regulated substances or for which installation has commenced on or before 22 December 1988. Installation is considered to have commenced if (40 CFR 280.12):
 1. the owner or operator has obtained all Federal, state, and local approvals or permits necessary to begin physical construction of the site or installation of the tank system
 2. a. either a continuous onsite physical construction or installation program has begun
 - b. or the owner or operator has entered into any contractual obligations:
 1. which cannot be canceled or modified without substantial loss
 2. for physical construction at the site or installation of the tank system to be completed within a reasonable time.
- *Farm Tank* - a tank located on a tract of land devoted to the production of crops or raising animals, including fish, and associated residences and improvements. A farm tank must be located on the farm property. Farm includes fish hatcheries, rangeland, and nurseries with growing operations (40 CFR 280.12).
- *Flow-Through Process Tank* - a tank that forms an integral part of a production process through which there is a steady, variable, recurring, or intermittent flow of materials during the operation of the process. Flow-through process tanks do not include tanks used for the storage of material prior to their introduction into the production process or for the storage of finished products or by-products from the production (40 CFR 280.12).

- *Free-Product* - a regulated substance that is present as a nonaqueous phase liquid (e.g., liquid not dissolved in water) (40 CFR 280.12).
- *Gathering Lines* - any pipeline, equipment, facility, or building used in the transportation of oil or gas during oil or gas production (40 CFR 280.12).
- *Hazardous Substance UST System* - any UST system that contains a hazardous substance defined in section 101(14) of the CERCLA (but not including any substance regulated as a hazardous waste under subtitle C) or any mixture of such substances and petroleum, and which is not a petroleum UST system (40 CFR 280.12).
- *Heating Oil* - petroleum that is No. 1, No. 2, No. 4--light, No. 4--heavy, No. 5 --heavy, and No. 6 technical grades of fuel oil; other residual fuel oils (including Navy Special Fuel Oil and Bunker C); and other fuels when used as substitutes for one of these fuel oils. Heating oil is typically used in the operation of heating equipment, boilers, or furnaces (40 CFR 280.12).
- *Hydraulic Lift Tank* - a tank holding hydraulic fluid for a closed-loop mechanical system that uses compressed air or hydraulic fluid to operate lifts, elevators, and other similar devices (40 CFR 280.12).
- *Liquid Trap* - sumps, well cellars, and other traps used in association with oil and gas production, gathering, and extracting operations (including gas production plants), for the purpose of collecting oil, water, and other liquids. These liquid traps may temporarily collect liquids for subsequent disposition or reinjection into a production or pipeline stream, or may collect and separate liquids from a gas stream (40 CFR 280.12).
- *Maintenance* - the normal operational upkeep to prevent a UST system from releasing product (40 CFR 280.12).
- *Management Practice (MP)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Motor Fuel* - petroleum or a petroleum-based substance that is motor gasoline, aviation gasoline, No. 1 or No. 2 diesel fuel, or any grade of gasohol, and is typically used in the operation of motor engines (40 CFR 280.12).
- *New Tank System* - a tank system that will be used to contain an accumulation of regulated substances and for which installation has commenced after 22 December 1988 (40 CFR 280.12).
- *Noncommercial Purposes with Respect to Motor Fuel* - not for resale (40 CFR 280.12).
- *On the Premises Where Stored (heating oil)* - UST systems located on the same property where the stored heating oil is used (40 CFR 280.12).
- *Operator* - any person in control of or having responsibility for the daily operation of the UST system (40 CFR 280.12).

- *Overfill Release* - a release that occurs when a tank is filled beyond its capacity, resulting in a discharge of the regulated substance to the environment (40 CFR 280.12).
- *Person* - an individual, trust, firm, joint stock company, Federal agency, corporation, state, municipality, commission, political subdivision of a state, or any interstate body. Person also includes a consortium, a joint venture, a commercial entity, and the U.S. Government (40 CFR 280.12).
- *Petroleum UST System* - a UST system that contains petroleum or a mixture of petroleum with *de minimis* quantities of other regulated substances. Such systems include those containing motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils (40 CFR 280.12).
- *Pipe or Piping* - a hollow cylinder or tubular conduit that is constructed of nonearthen materials (40 CFR 280.12).
- *Pipeline Facilities* - (including gathering lines) are new and existing pipe rights-of-way and any associated equipment, facilities, or buildings (40 CFR 280.12).
- *Regulated Substance (40 CFR 280.12)* -
 1. any substance defined in section 101(14) of the CERCLA of 1980 (but not including any substance regulated as a hazardous waste under subtitle C)
 2. petroleum, including crude oil or any fraction thereof that is liquid at standard conditions of temperature and pressure (60 °F [15.56 °C] and 14.7 lb/psia).

(NOTE: The term regulated substance includes, but is not limited to, petroleum and petroleum based substances comprised of a complex blend of hydrocarbons derived from crude oil through processes of separation, conversion, upgrading, and finishing, such as motor fuels, jet fuels, distillate fuel oils, residual fuel oils, lubricants, petroleum solvents, and used oils.)

- *Release* - any spilling, leaking, emitting, discharging, escaping, leaching, or disposing from a UST into groundwater, surface water, or subsurface soils (40 CFR 280.12).
- *Release Detection* - determining whether a release of a regulated substance has occurred from the UST system into the environment or into the interstitial space between the UST system and its secondary barrier or secondary containment around it (40 CFR 280.12).
- *Repair* - to restore a tank or UST system component that has caused a release of product from the UST system (40 CFR 280.12).
- *Residential Tank* - a tank located on property used primarily for dwelling purposes (40 CFR 280.12).
- *SARA - Superfund Amendments and Reauthorization Act* (40 CFR 280.12).

- *Septic Tank* - a water-tight covered receptacle designed to receive or process, through liquid separation or biological digestion, the sewage discharged from a building sewer. The effluent from such receptacle is distributed through the soil and settled solids and scum from the tank are pumped out periodically and hauled to a treatment facility (40 CFR 280.12).
- *Stormwater or Wastewater Collection System* - piping, pumps, conduits, and any other equipment necessary to collect and transport the flow of surface water runoff resulting from precipitation, or domestic, commercial, or industrial wastewater to and from retention areas or any areas where treatment is designated to occur. The collection of stormwater and wastewater does not include treatment except where incidental to conveyance (40 CFR 280.12).
- *Surface Impoundment* - a natural topographic depression, manmade excavation, or diked area formed primarily of earthen materials (although may be lined with manmade materials) that is not an injection well (40 CFR 280.12).
- *Tank* - a stationary device designed to contain an accumulation of regulated substances and constructed of nonearthen materials (e.g., concrete, steel, plastic) that provide structural support (40 CFR 280.12).
- *Underground Area* - an underground room such as a basement, cellar, shaft, or vault, providing enough space for physical inspection of the exterior of the tank situated on or above the surface of the floor (40 CFR 280.12).
- *Underground Release* - any below ground release (40 CFR 280.12).
- *Underground Storage Tank (UST)* - any one or a combination of tanks (including underground pipes connected thereto) that is used to contain an accumulation of regulated substances, and the volume of which (including the volume of underground pipes connected thereto) is 10 percent or more beneath the surface of the ground. This term does not include any (40 CFR 280.12):
 1. farm or residential tank of 1100 gal [4163.95 L] or less capacity used for storing motor fuel for noncommercial purposes
 2. tank used for storing heating oil for consumptive use on the premises where stored
 3. septic tanks
 4. pipeline facility (including gathering lines) which are regulated by other Acts
 5. surface impoundment, pit, pond, or lagoon
 6. stormwater or waste water collection system
 7. flow-through process tank
 8. liquid trap or associated gathering lines directly related to oil or gas production and gathering operations
 9. storage tank situated in an underground area if the storage tank is situated upon or above the surface of the floor such as basements or tunnels
 10. tanks holding 110 gal [416.40 L] or less
 11. emergency spill and overfill tanks.

(NOTE: The definition of UST does not include any pipes connected to any tank which is described in para (1) through (9) of this definition. Also refer to the definition for Deferred UST and Excluded UST.)

- *Upgrade* - the addition or retrofit of some systems such as cathodic protection, lining, or spill and overfill controls to improve the ability of a UST system to prevent the release of product (40 CFR 280.12).
- *UST System or Tank System* - UST, connected underground piping, underground ancillary equipment, and containment system, if any (40 CFR 280.12).
- *Wastewater Treatment Tank* - a tank that is designed to receive and treat influent waste water through physical, chemical, or biological methods (40 CFR 280.12).

UNDERGROUNDS STORAGE TANK (UST) MANAGEMENT

Records To Review

- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Official correspondence with state implementing agency
- Spill Prevention and Response Plan
- Records of spill response training programs
- Results of all UST testing, sampling, monitoring, inspection, maintenance, and repair work (for 1 yr)
- Registration records for all in-service, temporarily out-of-service, and permanently closed tanks
- Records of all spills, leaks, and associated site assessment/cleanup activities (for 3 yr)
- Records for UST disposal, closure, and removal from activity and results of excavation area assessment (for 3 yr)

Physical Features To Inspect

- Refueling facilities, including:
 - Belowground storage tanks and dikes
 - Venting
 - Fill pipe
 - Gauges
 - Vehicle Maintenance areas
- Oil and Hazardous Substance Site
- Any site with a UST

METALLIC USTs

9-11. Buried metallic storage tanks installed after 1973 must be protected from corrosion by coatings, cathodic protection, or other effective methods (40 CFR 112.7(e)(2)(iv)).

Verify that new USTs are appropriately protected from corrosion by inspecting records and interviewing personnel.

Verify that the tanks are pressure tested regularly.

(NOTE: Facilities are exempt from the requirements outlined in 40 CFR 112 if:

- the facility, equipment, or operation is not subject to the jurisdiction of the USEPA as follows:
 - onshore and offshore sites which, due to their location, could not be reasonably expected to discharge oil into or upon the navigable waters of the United States or adjoining shorelines
 - equipment or operations of vessels or transportation related onshore and offshore sites which are subject to the authority of the DOT.
- the facility, which although otherwise subject to USEPA jurisdiction meets both of the following criteria:
 - the underground buried storage capacity of the facility is 42,000 gal [158,987.3 L] or less of oil
 - the storage capacity which is not buried at the facility is 1320 gal [4996.74 L] of oil or less and no single container exceeds a capacity of 660 gal [2498.37 L] (40 CFR 112.1(d)(2)).)

<p>RELEASE DETECTION FOR USTs</p> <p>Hazardous Substance USTs</p> <p>9-18. Hazardous substance USTs must meet specific release detection standards (40 CFR 280.10(c), 280.10 (d), 280.42(a), 280.43, and 280.44).</p>	<p>Verify that tanks are monitored every 30 days using one of the following methods (details of methods are provided in Appendix 9-3):</p> <ul style="list-style-type: none"> - tank automatic gauging - vapor monitoring - groundwater monitoring - interstitial monitoring - other acceptable methods. <p>(NOTE: The following are exceptions:</p> <ul style="list-style-type: none"> - UST systems which meet performance standards for new or upgraded systems and monthly inventory requirements may use tank tightness testing at least every 5 yr until 22 December 1998 or until 10 yr after the tank is upgraded or installed - UST systems which do not meet performance standards for new or upgraded systems may use monthly inventory controls and annual tank tightness testing until 22 December 1998, at which time the tank must be upgraded or permanently closed - tanks which hold less than 550 gal [2081.98 L] may use weekly tank gauging.) <p>Verify that underground piping which routinely contains a regulated substance has the following release detection done as described in Appendix 9-3:</p> <ul style="list-style-type: none"> - pressurized piping: <ul style="list-style-type: none"> - equipped with automatic line leak detector - annual tightness testing or monthly monitoring - suction piping: <ul style="list-style-type: none"> - line tightness testing every 3 yr or monthly monitoring - no release detection system is needed for suction piping which is below grade and: <ul style="list-style-type: none"> - operates at less than atmospheric pressure - is sloped so that contents of pipe will roll back to tank when suction is released - only one check valve is included in each suction line - the check valve is located directly below and as close as practical to the suction pump.

REGULATORY REQUIREMENTS:

9-18. (continued)

9-19. Hazardous substance USTs must meet specific release detection standards by 22 December 1998 (40 CFR 280.10(c), 280.10(d), 280.42(b), 280.43, and 280.44).

- secondary containment is checked for evidence of a release at least every 30 days and is designed and constructed to:
 - contain regulated substances released until they are detected and removed
 - prevent releases of regulated substances to the environment at any time during the operational life of the UST
- double-walled tanks are designed, constructed, and installed to:
 - contain releases from any portion of the inner tank within the outer-wall
 - detect failure of the inner wall
- external liners, including vaults, are designed, constructed, and installed in such a manner that:
 - 100 percent of the capacity of the largest tank is contained within its boundary
 - the interference of precipitation or groundwater intrusion is prevented with the ability to contain or detect release of regulated substances
 - the tank is completely surrounded.

Verify that when other release detection methods are used, they are approved by the implementing agency.

DEFERRED USTs

9-28. Deferred UST systems (see definition) are required to meet specific standards (40 CFR 280.10(c) and 280.11).

Verify that deferred UST systems (whether single or double-walled) are not installed to store regulated substances unless:

- releases due to corrosion or structural failure will be prevented for the operational life of the system
- they are cathodically protected against corrosion, constructed of non-corrodible materials, steel clad with a noncorroding material, or designed to prevent release
- they are constructed or lined with material that is compatible with the stored substance.

Verify that deferred systems meet the standards concerning release response and action for USTs containing petroleum or a hazardous substance found in 40 CFR 280.60 through 280.67 (see checklist items 9-22 through 9-27).

(NOTE: The following types of USTs are deferred USTs:

- wastewater treatment tank systems
- any UST systems containing radioactive material that are regulated under the *Atomic Energy Act* of 1954
- any UST system that is a part of an emergency generator system at nuclear power generation facilities regulated by the Nuclear Regulatory Commission under 10 CFR 50, Appendix A
- airport hydrant fuel distribution systems
- UST system with field-constructed tanks.)

Schedule for Phase-In of Release Detection

Year system was installed	Year when release detection is required (by 22 December of the year indicated)				
	1989	1990	1991	1992	1993
Before 1965 or date unknown.	RD	P			
1965-69		P/RD			
1970-74		P	RD		
1975-79		P		RD	
1980-88		P			RD

P = must begin release detection for all pressurized piping as defined in 40 CFR 280.41(b)(1).

RD = must begin release detection for tanks and suction piping.

Appendix 9-3

Release Detection Requirements for USTs and Underground Piping (40 CFR 280.41 through 280.43)

A. UST Options (see NOTE for additional guidance)

- 1. Inventory control:** Product inventory control must be conducted monthly to detect a release of at least 1.0 percent of flow-through plus 130 gal on a monthly basis in the following manner:
 - i. inventory volume measurements for regulated substance inputs, withdrawals, and the amount still remaining in the tank are recorded each operating day
 - ii. the equipment used is capable of measuring the level of product over the full range of the tanks height to the nearest one-eighth of an inch
 - iii. the regulated substance inputs are reconciled with delivery receipts by measurements of the tank inventory volume before and after delivery
 - iv. deliveries made through a drop tube that extends to within one foot of the tank bottom
 - v. product dispensing is metered and recorded within the local standards of product withdrawn
 - vi. the measurement of any water level in the bottom of the tank is made to the nearest one-eighth of an inch at least once a month.
- 2. Manual gauging:** manual tank gauging must meet the following requirements:
 - i. tank liquid level measurements are taken at the beginning and end of a period of at least 36 h during which no liquid is added to or removed from the tank
 - ii. level measurements are based on an average of two consecutive stick readings at both the beginning and end of the period
 - iii. the equipment used is capable of measuring the level of product over the full range of the tank's height to the nearest one-eighth of an inch
 - iv. a leak is suspected and subject to the requirements of subpart E which include release reporting and investigation if the variation between beginning and ending measurements exceeds the weekly or monthly standards of Table A below
 - v. only tanks of 550 gal or less nominal capacity may use this as a sole method of release detection. Tanks of 551 to 2000 gal may also use inventory control (see paragraph 1 in this appendix). Tanks of greater than 2000 gal nominal capacity may not use this method to meet release detection requirements.

Table A

Nominal Tank Capacity	Weekly Standard (one test)	Monthly Standard (average of four)
550 gal or less	10 gal	5 gal
551-1000 gal	13 gal	7 gal
1001-2000 gal	26 gal	13 gal

(continued)

Appendix 9-3 (continued)

3. **Tank tightness testing:** Tank tightness testing must be capable of detecting a 0.1 gal/h leak rate from any portion of the tank that routinely contains product while accounting for the effects of thermal expansion or contraction of the product, vapor pockets, tank deformation, evaporation or condensation, and the location of the water table.
4. **Tank automatic gauging:** Equipment for automatic tank gauging that tests for the loss of product and conducts inventory control; must meet the following requirements:
 - i. the automatic product level monitor test can detect a 0.2 gal/h leak rate from any portion of the tank that routinely contains product
 - ii. inventory control is conducted according to requirements (see para 1 above).
5. **Vapor monitoring:** Testing or monitoring for vapors within the soil gas of the excavation zone must meet the following requirements:
 - i. the materials used as backfill are sufficiently porous (e.g., gravel, sand, crushed rock) to easily allow diffusion of vapors from releases into the excavation area
 - ii. the stored regulated substance, or a tracer compound placed in the tank system, is sufficiently volatile (e.g., gasoline) to result in a vapor level that is detectable by the monitoring devices located in the excavation zone in the event of a release from the tank
 - iii. the measurement of vapors by the monitoring device is not rendered inoperative by the groundwater, rainfall, or soil moisture or other unknown interferences so that a release could go undetected for more than 30 days
 - iv. the level of background contamination in the excavation zone will not interfere with the method used to detect releases from the tank
 - v. the vapor monitors are designed and operated to detect any significant increase in concentration above background of the regulated substance stored in the tank system, a component or components of that substance, or a tracer compound placed in the tank system
 - vi. in the UST excavation zone, the site is assessed to ensure compliance with the requirements of paragraph 5 subparagraph i through iv above and to establish the number and positioning of monitor wells that will detect any releases within the excavation zone from any portion of the tank that routinely contains product
 - vii. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.
6. **Groundwater monitoring:** Testing or monitoring for liquids in the groundwater must meet the following requirements:
 - i. the regulated substance stored is immiscible in water and has a specific gravity of less than one
 - ii. groundwater is never more than 20 ft from the ground surface and the hydraulic conductivity of the soil(s) between the UST system and the monitoring wells or devices is not less than 0.01 cm/s (e.g., the soil should consist of gravels, coarse to medium sands, coarse silts, or other permeable materials)
 - iii. the slotted portion of the monitoring well casing must be designed to prevent migration of natural soils or filter pack into the well and to allow entry of regulated substance on the water table into the well under both high and low groundwater conditions
 - iv. monitoring wells should be sealed from the ground surface to the top of the filter pack
 - v. monitoring wells or devices intercept the excavation zone or are as close to it as is technically feasible

(continued)

Appendix 9-3 (continued)

- vi. the continuous monitoring devices or manual methods used can detect the presence of at least one-eighth of an inch of free product on top of the groundwater in the monitoring wells
 - vii. within and immediately below the UST system excavation zone, the site is assessed to ensure compliance with the requirements of paragraphs 6 i-v above and to establish the number and positioning of monitoring wells or devices that will detect releases from any portion of the tank that routinely contains product
 - viii. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.
- 7. Interstitial monitoring:** Interstitial monitoring between the UST system and a secondary barrier immediately around or beneath it may be used, but only if the system is designed, constructed and installed to detect a leak from any portion of the tank that routinely contains product and also meets one of the following requirements:
- i. for double-walled systems, the sampling or testing method can detect a release through the inner wall in any portion of the tank that routinely contains product
 - ii. for UST systems with a secondary barrier within the excavation zone, the sampling or testing method used can detect a release between the UST system and the secondary barrier
 - a. the secondary barrier around or beneath the UST system consists of artificially constructed material that is sufficiently thick and impermeable (at least 10^{-6} cm/s for the regulated substance stored) to direct a release to the monitoring point and permit its detection
 - b. the barrier is compatible with the regulated substance stored so that a release from the UST system will not cause a deterioration of the barrier allowing a release to pass through undetected
 - c. for cathodically protected tanks, the secondary barrier must be installed so that it does not interfere with the proper operation of the cathodic protection system
 - d. the groundwater, soil moisture, or rainfall will not render the testing or sampling method used inoperative so that a release could go undetected for more than 30 days
 - e. the site is assessed to ensure that the secondary barrier is always above the groundwater and not in a 25 yr flood plain, unless the barrier and monitoring designs are for use under such conditions
 - f. monitoring wells are clearly marked and secured to avoid unauthorized access and tampering.
 - iii. for tanks with an internally fitted liner, an automated device can detect a release between the inner wall of the tank and the liner. The liner is compatible with the substance stored.
- 8. Other methods:** Any other type of release detection method, or combination of methods, can be used if:
- i) it can detect a 0.2 gal/h leak rate or a release of 150 gal within a month with a probability of detection of 0.95 and a probability of false alarm of 0.05
 - ii) the implementing agency may approve another method, if it can be demonstrated that this method can detect releases as effectively as the methods listed in this appendix

(continued)

Appendix 9-3 (continued)

NOTE: The following are alternatives on the above listings for UST release detection options:

1. USTs meeting the requirements in 40 CFR 280.20 for new tanks (see checklist items 9-7 through 9-10) and the monthly inventory requirements in A1 and A2 above can use tank tightness testing as outlined in A3 at least every 5 yr until 22 December 1998, or until 10 yr after the tank is installed or upgraded under 40 CFR 280.21(b) (see checklist item 9-6)
2. USTs that do not meet the standards of 40 CFR 280.20 or 280.21 (see checklist items 9-20 through 9-22) may use monthly inventory as outlined in A1 or A2 and annual tank tightness testing done according to A3 until 22 December 1998 when the tank must be upgraded or permanently closed.
3. USTs with a capacity of 550 gal or less may use weekly tank gauging done according to A2.)

B. Underground Piping Options

1. **Automatic line detectors:** Methods which alert the operator to the presence of a leak by restricting or shutting off the flow of regulated substances through piping, or triggering an audible or visual alarm may be used only if they detect leaks of 3 gal/h at 10 lb/in.² line pressure within one hour. An annual test of the operation of the leak detector must be conducted in accordance with the manufacturer's requirements.
2. **Line tightness testing:** A periodic test of piping may be conducted only if it can detect a 0.1 gal/h leak one and one-half times the operating pressure.
3. **Applicable tank methods:** The methods outlined in A5 through A8 may be used if they are designed to detect a release from any portion of the underground piping that routinely contains regulated substances.

(NOTE: The following is additional information on the above listings for underground piping release detection options:

1. Pressurized piping must meet both of the following:
 - a. be equipped with an automatic line leak detector as outlined in B1
 - b. have an annual line tightness test done according to B2 or have monthly monitoring done in accordance with B3
2. Underground suction piping must either have a line tightness test done according to B2 at least every 3 yr or use a monthly monitoring method in accordance with B3. No release detection is required for suction piping that is designed and constructed to meet the following standards:
 - a. the belowgrade piping operates at less than atmospheric pressure
 - b. the belowgrade piping is sloped so that the contents of the pipe will drain back into the storage tank is the suction is released
 - c. only one check valve is included in each suction line
 - d. the check valve is located directly below and as close as practical to the suction pump
 - e. a method is provided that allows compliance with these standards to be readily determined.)

SECTION 10

WASTEWATER MANAGEMENT

A. Applicability	1
B. Federal Legislation	1
C. State and Local Regulations	2
D. FWS/DOI Manuals	2
E. Key Compliance Requirements	2
F. Key Compliance Definitions	3
Guidance for Checklist Users	19

The contents of this section are the minimum requirements the auditor must review. The auditor must also review applicable state and local regulations.

SECTION 10

WASTEWATER MANAGEMENT

A. Applicability

This section includes regulations, responsibilities, and compliance requirements associated with wastewater discharge at FWS facilities. Wastewater discharge can include any of the following:

1. sanitary wastewater discharge directly to a receiving stream, or through an FWS treatment facility
2. sanitary or industrial wastewater discharge to a publicly owned treatment works (POTW) or other non-FWS facility
3. stormwater runoff from operational areas of the facility to a receiving stream or water body
4. industrial or storm wastewater drained to an industrial waste reservoir.

Most FWS facilities have wastewater discharge of one kind or another, and therefore, this section will be applicable to most facilities.

B. Federal Legislation

- *The Federal Water Pollution Control Act.* This act, commonly known as the *Clean Water Act* (CWA), as amended 4 February 1987, 33 U.S. Code (USC) 1251-1387, Public Law (PL) 100-4, governs the control of water pollution in the nation. The objective of the act is to restore and maintain the chemical, physical, and biological integrity of the nation's waters. Federal agencies are required to comply with all Federal, state, interstate, and local water pollution control requirements both substantively and procedurally (33 USC 1323(a)).
- Executive Order (EO) 12088, *Federal Compliance with Pollution Standards.* This EO of 13 October 1978 requires Federally owned and operated facilities to comply with applicable Federal, state, and local pollution control standards. It makes the head of each executive agency responsible for seeing to it that the agencies, facilities, programs, and activities the agency funds meet applicable Federal, state, and local environmental requirements or to correct situations that are not in compliance with such requirements. In addition, the EO requires that each agency ensure that sufficient funds for environmental compliance are included in the agency budget.
- Federal regulations used to develop the checklist include:
 - EO 12088, *Federal Compliance with Pollution Control Standards.*
 - 40 CFR 122, *EPA Administered Permit Programs: The National Pollutant Discharge Elimination System.*
 - 40 CFR 136, *Guidelines Establishing Test Procedures for the Analysis of Pollutants.*
 - 40 CFR 403, *General Pretreatment Standards for New and Existing Sources.*
 - 40 CFR 503, *Standards for the Use or Disposal of Sewage Sludge.*

C. State/Local Regulations

States normally have wastewater discharge legislation and regulations which require permitting similar to the National Pollution Discharge Elimination System (NPDES) program. The state is often delegated authority to administer the NPDES permits for discharges in their state. These permits are often joint permits issued pursuant to both Federal CWA and state legislation. In some cases, the state will not administer the NPDES program and will issue a state permit even though a NPDES permit has been issued by the U.S. Environmental Protection Agency (USEPA). The states and the USEPA normally cooperate in the permit issuance process to insure that the two permits are consistent, but there may be differences in monitoring requirements and the number of pollutants limited. These requirements normally do not conflict, but may require additional sampling and dual reporting.

States also have more stringent requirements for wastewater treatment plant operations. Many states have sewage treatment plant (STP) operator licensing and certification programs which require that an operator pass an exam and have a required amount of experience.

Local entities (counties, cities) may also have enforceable wastewater discharge limitations which regulate discharges to a POTW. Local limitations often include pH, temperature, and concentrations of various organic and inorganic compounds. Major industrial operations which discharge to an offsite POTW will be subjected to pretreatment permits issued by the POTW, state, or USEPA as appropriate.

D. FWS/DOI Manuals

No applicable manuals final as of the publication of this handbook.

E. Key Compliance Requirements

- NPDES Permits - Facilities with point source discharges and/or treatment works treating domestic sewage are required to have a Federal NPDES permit if located in states without a USEPA approved NPDES permit program. Facilities that are dischargers of stormwater associated with an industrial activity are required to apply for an individual permit, apply for a permit through a group application, or seek coverage under a promulgated stormwater general permit. Facilities must meet the sampling requirements stipulated by NPDES permits (40 CFR 122.1(b)(3) and 122.26(c)).
- Treatment Works - Facilities must not discharge into a treatment works any pollutant that would cause pass through or interference. Facilities shall not introduce pollutants into a treatment works that create a fire or explosion hazard, cause corrosive structural damage, have a pH below 5.0, or are solid or viscous enough to cause obstructions. Facilities are required to notify the treatment works immediately of any discharge, including any slug loadings, that could cause problems to the treatment works (40 CFR 403.5 and 403.12(f)).
- Operation and Maintenance of a Treatment Works - Treatment plant supervisors are required to maintain operating logs and records that are posted daily and are neat and leg-

ible. Treatment plants are required to be operated in accordance with all design parameters (40 CFR 403.12(f)).

- **Land Application of Sludge** - 40 CFR 503 details the pollutant concentrations, cumulative loading rates, and other restrictions pertinent to the land application of sludge that is generated during the treatment of domestic sludge in a treatment works.
- **Surface Disposal of Sewage Sludge** - The operation, management, monitoring, and closure requirements for units used for the surface disposal of sewage sludge are outlined in 40 CFR 503.20 through 503.28.
- **Incineration of Sewage Sludge** - Facilities with incinerators that fire sewage sludge must meet specific emissions standards for beryllium emissions, mercury emissions, and hydrocarbons. The incinerators are required to have continuous monitoring devices for hydrocarbons and oxygen in the exit gas, and continuous monitoring for combustion temperature as specified by the permitting authority. Assorted reports are required to be submitted and records kept (40 CFR 503.40 through 503.48).
- **Recordkeeping** - Regardless of the regulatory requirements concerning the length of time which records must be kept, it is advisable to maintain records beyond the regulated periods of time in order to support FWS compliance.

F. Key Compliance Definitions

- **Active Sewage Sludge Unit** - a sewage sludge unit that has not closed (40 CFR 503.21(a)).
- **Aerobic Digestion** - the biochemical decomposition of organic matter in sewage sludge into CO₂ and water by microorganisms in the presence of air (40 CFR 503.31(a)).
- **Agricultural Land** - land on which a food crop, a feed crop, or a fiber crop is grown. This includes range land and land used as pasture (40 CFR 503.11(a)).
- **Agronomic Rate** - the whole sludge application rate (dry weight basis) designed (40 CFR 503.11(b)):
 1. to provide the amount of nitrogen needed by the food crop, feed crop, fiber crop, cover crop, or vegetation grown on the land
 2. to minimize the amount of nitrogen in the sewage sludge that passes below the root zone of the crop or vegetation grown on the land to the groundwater.
- **Air Pollution Control Device** - one or more processes used to treat the exit gas from a sewage sludge incinerator stack (40 CFR 503.41(a)).
- **Anaerobic Digestion** - the biochemical decomposition of organic matter in sewage sludge into methane gas and CO₂ by microorganisms in the absence of air (40 CFR 503.31(b)).
- **Annual Pollutant Loading Rate** - the maximum amount of a pollutant that can be applied to a unit area of land during a 365-day period (40 CFR 503.11(c)).

- *Annual Whole Sludge Application Rate* - the maximum amount of sewage sludge (dry weight basis) that can be applied to a unit area of land during a 365 day period (40 CFR 503.11(d)).
- *Apply Sewage Sludge or Sewage Sludge Applied To The Land* - means land application of sewage sludge (40 CFR 503.9(a)).
- *Aquifer* - a geologic formation, group of geologic formations, or a portion of a geologic formation capable of yielding groundwater to wells or springs (40 CFR 503.21(b)).
- *Auxiliary Fuel* - fuel used to augment the fuel value of sewage sludge. This includes, but is not limited to, natural gas, fuel oil, coal, gas generated during anaerobic digestion of sewage sludge, and municipal solid waste (not to exceed 30 percent of the dry weight of sewage sludge and auxiliary fuel together). Hazardous wastes are not auxiliary fuel (40 CFR 503.41(b)).
- *Base Flood* - a flood that has a 1 percent chance of occurring in any given year (i.e., a flood with a magnitude equalled once in 100 yr) (40 CFR 503.9(b)).
- *Bulk Sewage Sludge* - sewage sludge that is not sold or given away in a bag or other container for application to the land (40 CFR 503.11(e)).
- *Class 1 Sludge Management Facility* - any POTW, as defined in 40 CFR 501.2, required to have an approved pretreatment program under 40 CFR 403.8(a) (including any POTW located in a state that has elected to assume local program responsibilities pursuant to 40 CFR 403.10(e)) and any treatment works treating domestic sewage, as defined in 40 CFR 122.2, classified as a Class 1 sludge management facility by the USEPA Regional Administrator, or, in the case of approved state programs, the Regional Administrator in conjunction with the state Director, because of the potential for its sewage sludge use or disposal practice to affect public health and the environment adversely.
- *Class A Sludge* - when one of the following method is used, it is considered Class A with respect to pathogens (40 CFR 503.32(a)(3)):
 - **Alternative 1.** Either the density of fecal coliform in the sewage sludge shall be less than 1000 Most Probable Number/gram (MPN/g) of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The temperature of the sewage sludge that is used or disposed shall be maintained at a specific value for a period of time. When the percent solids of the sewage sludge is 7 percent or higher, the temperature of the sewage sludge shall be 50 °C [122 °F] or higher; the time period shall be 20 min or longer; and the temperature and

time period shall be determined using the following equation, except when small particles of sewage sludge are heated by either warmed gases or an immiscible liquid.

$$D = \frac{131,700,000}{10^{0.1400t}} \quad \text{Eq. (2)}$$

Where, D = time in days. t = temperature in °C.

When the percent solids of the sewage sludge is 7 percent or higher and small particles of sewage sludge are heated by either warmed gases or an immiscible liquid, the temperature of the sewage sludge shall be 50 °C [122 °F] or higher; the time period shall be 15 s or longer; and the temperature and time period shall be determined using the above equation.

When the percent solids of the sewage sludge is less than 7 percent and the time period is at least 15 s, but less than 30 min, the temperature and time period shall be determined using the above equation.

When the percent solids of the sewage sludge is less than 7 percent; the temperature of the sewage sludge is 50 °C [122 °F] or higher; and the time period is 30 min or longer, the temperature and time period shall be determined using the below equation.

$$D = \frac{50,070,000}{10^{0.1400t}} \quad \text{Eq. (3)}$$

Where, D = time in days. t = temperature in °C.

- **Alternative 2.** Either the density of fecal coliform in the sewage sludge is less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The pH of the sewage sludge that is used or disposed shall be raised to above 12 and shall remain above 12 for 72 h.

The temperature of the sewage sludge shall be above 52 °C [125.6 °F] for 12 h or longer during the period that the pH of the sewage sludge is above 12.

At the end of the 72 h period during which the pH of the sewage sludge is above 12, the sewage sludge shall be air dried to achieve a percent solids in the sewage sludge greater than 50 percent.

- **Alternative 3.** Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp.

bacteria in sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The sewage sludge shall be analyzed prior to pathogen treatment to determine whether the sewage sludge contains enteric viruses.

When the density of enteric viruses in the sewage sludge prior to pathogen treatment is less than one Plaque-forming Unit per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to enteric viruses until the next monitoring episode for the sewage sludge.

When the density of enteric viruses in the sewage sludge prior to pathogen treatment is equal to or greater than one Plaque-forming Unit per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to enteric viruses when the density of enteric viruses in the sewage sludge after pathogen treatment is less than one Plaque-forming Unit per 4 g of total solids (dry weight basis) and when the values or ranges of values for the operating parameters for the pathogen treatment process that produces the sewage sludge that meets the enteric virus density requirement are documented.

After the enteric virus reduction is demonstrated for the pathogen treatment process, the sewage sludge continues to be Class A with respect to enteric viruses when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented.

The sewage sludge shall be analyzed prior to pathogen treatment to determine whether the sewage sludge contains viable helminth ova.

When the density of viable helminth ova in the sewage sludge prior to pathogen treatment is less than 1 per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to viable helminth ova until the next monitoring episode for the sewage sludge.

When the density of viable helminth ova in the sewage sludge prior to pathogen treatment is equal to or greater than 1 per 4 g of total solids (dry weight basis), the sewage sludge is Class A with respect to viable helminth ova when the density of viable helminth ova in the sewage sludge after pathogen treatment is less than 1 per 4 g of total solids (dry weight basis) and when the values or ranges of values for the operating parameters for the pathogen treatment process that produces the sewage sludge that meets the viable helminth ova density requirement are documented.

After the viable helminth ova reduction is demonstrated for the pathogen treatment process, the sewage sludge continues to be Class A with respect to viable helminth ova when the values for the pathogen treatment process operating parameters are consistent with the values or ranges of values documented.

- **Alternative 4.** Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

The density of enteric viruses in the sewage sludge shall be less than one Plaque-forming Unit per 4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f), unless otherwise specified by the permitting authority.

The density of viable helminth ova in the sewage sludge shall be less than 1 per 4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or give away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f), unless otherwise specified by the permitting authority.

- **Alternative 5.** Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or given away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

Sewage sludge that is used or disposed shall be treated in one of the Processes to Further Reduce Pathogens described in Appendix B of 40 CFR 503.

- **Alternative 6.** Either the density of fecal coliform in the sewage sludge shall be less than 1000 MPN/g of total solids (dry weight basis), or the density of *Salmonella* sp. bacteria in the sewage sludge shall be less than 3 MPN/4 g of total solids (dry weight basis) at the time the sewage sludge is used or disposed; at the time the sewage sludge is prepared for sale or given away in a bag or other container for application to the land; or at the time the sewage sludge or material derived from sewage sludge is prepared to meet the requirements in 40 CFR 503.10(b), 503.10(c), 503.10(e), or 503.10(f).

Sewage sludge that is used or disposed shall be treated in a process that is equivalent to a Process to Further Reduce Pathogens, as determined by the permitting authority.

- *Class B Sludge* - when one of the following methods is used, it is considered Class B with respect to pathogens (40 CFR 503.32(b)(2):
 - **Alternative 1.** Seven samples of the sewage sludge is collected at the time the sewage sludge is used or disposed. The geometric mean of the density of fecal coliform in the samples must be less than either 2 million MPN/g of total solids (dry weight basis) or 2 million Colony Forming Units (CFU)/g of total solids (dry weight basis).
 - **Alternative 2.** Sewage sludge that is used or disposed shall be treated in one of the Processes to Significantly Reduce Pathogens described in Appendix B of 40 CFR 503.
 - **Alternative 3.** Sewage sludge that is used or disposed is be treated in a process that is equivalent to a Process to Significantly Reduce Pathogens, as determined by the permitting authority.
- *Contaminate An Aquifer* - to introduce a substance that causes the MCL for nitrate in 40 CFR 141.11 to be exceeded in groundwater or that causes the existing concentration of nitrate in groundwater to increase when the existing concentration of nitrate in the groundwater exceeds the maximum contaminant label for nitrate in 40 CFR 141.11 (40 CFR 503.21(c)).
- *Continuous Discharge* - a discharge which occurs without interruption throughout the operating hours of the facility, except for infrequent shutdowns for maintenance, process changes, or other similar activities (40 CFR 123.3).
- *Control Efficiency* - the mass of a pollutant in the sewage sludge fed to an incinerator minus the mass of that pollutant in the exit gas from the incinerator stack divided by the mass of the pollutant in the sewage sludge fed to the incinerator (40 CFR 503.41(c)).
- *Cover* - soil or other material used to cover sewage sludge placed on an active sewage sludge unit (40 CFR 503.21(d)).
- *Cover Crop* - a small grain crop, such as oats, wheat, or barley, not grown for harvest (40 CFR 503.9(d)).
- *Cumulative Pollutant Loading Rate* - the maximum amount of an inorganic pollutant that can be applied to an area of land (40 CFR 503.11(f)).
- *Daily Discharge* - the discharge of a pollutant measured during a calendar day or any 24-h period that reasonably represents the calendar day for purposes of sampling (40 CFR 122.2).
- *Density Of Microorganisms* - the number of microorganisms per unit mass of total solids (dry weight) in the sewage sludge (40 CFR 503.31(c)).
- *Direct Discharge* - the discharge of a pollutant (40 CFR 122.2).
- *Discharge of Pollutant* - the addition of any pollutant to navigable waters from any point source and any addition of any pollutant to the waters of the contiguous zone or the ocean

zone or the ocean from any point source, other than from a vessel or other floating craft (40 CFR 401.11(h)).

- *Dispersion Factor* - the ratio of the increase in the ground level ambient air concentration for a pollutant at or beyond the property line of the site where the sewage sludge incinerator is located to the mass emission rate for the pollutant from the incinerator stack (40 CFR 503.41(d)).
- *Displacement* - the relative movement of any two sides of a fault measured in any direction (40 CFR 503.21(e)).
- *Domestic Septage* - either liquid or solid material removed from a septic tank, cesspool, portable toilet, Type III marine sanitation device, or similar treatment works that receives only domestic sewage. Domestic septage does not include liquid or solid material removed from a septic tank, cesspool, or similar treatment works that receive either commercial wastewater or industrial wastewater and does not include grease removed from a grease trap at a restaurant (40 CFR 257.2).
- *Domestic Sewage* - waste and wastewater from humans or household operations that is discharged to or otherwise enters a treatment works (40 CFR 503.9(g)).
- *Effluent Limitations* - any restriction established by the Administrator on quantities, rates, and concentrations of chemical, physical, biological, and other constituents which are discharged from point sources, other than new sources, into navigable waters, the waters of the contiguous zone, or the ocean (40 CFR 401.11(i)).
- *Environmentally Sensitive Area* - an area of environmental importance which is in or adjacent to navigable waters (49 CFR 194.5).
- *Excluded Sludge* - The following are types of sludge and activities which are exempted from meeting the requirements outlined in 40 CFR 503:
 1. processes used to treat domestic sewage or processes used to treat sewage sludge prior to final use except for the standards on pathogen and vector reduction in 40 CFR 503.32 and 503.33
 2. sewage sludge co-fired in an incinerator with other wastes or for the incinerator in which sewage sludge and other waste are co-fired
 3. sludge generated at an industrial facility during the treatment of industrial wastewater, including sewage sludge generated during the treatment of industrial wastewater combined with domestic sewage
 4. sewage sludge determined to be hazardous
 5. sewage sludge with a concentration of PCBs equal to greater than 50 mg/kg of total solids (dry weight basis)
 6. ash generated during the firing of sewage sludge in a sewage sludge incinerator
 7. grit (i.e., sand, gravel, cinders, or other material with high specific gravity) or screenings (e.g., relatively large materials such as rags) generated during preliminary treatment of domestic sewage in a treatment works
 8. sludge generated during the treatment of either surface water or ground water used for drinking water

9. commercial septage, industrial septage, a mixture of domestic septage and commercial septage, or a mixture of domestic septage and industrial septage (40 CFR 503.6).
- *Fault* - a fracture or zone of fractures in any materials along which strata on one side are displaced with respect to strata on the other side (40 CFR 503.21(f)).
 - *Feed Crops* - crops produced primarily for consumption by animals (40 CFR 503.9(j)).
 - *Feedlot* - a concentrated, confined animal or poultry growing operation for meat, milk, or egg production, or stabling in pens or houses wherein the animals or poultry are fed at the place of confinement and crop or forage growth or production is not sustained in the area of confinement (40 CFR 412.11(b)).
 - *Fiber Crops* - crops such as flax and cotton (40 CFR 503.9(k)).
 - *Final Cover* - the last layer of soil or other material placed on a sewage sludge unit at closure (40 CFR 503.21(g)).
 - *Fluidized Bed Incinerator* - an enclosed device in which organic matter and inorganic matter in sewage sludge are combusted in a bed of particles suspended in the combustion chamber gas (40 CFR 503.41(e)).
 - *Forest* - a tract of land thick with trees and underbrush (40 CFR 503.11(g)).
 - *Holocene Time* - the most recent epoch of the Quaternary period, extending from the end of the Pleistocene epoch to the present (40 CFR 503.21(h)).
 - *Hourly Average* - the arithmetic mean of all measurements, taken during 1 h. At least two measurements must be taken during the hour (40 CFR 503.41(f)).
 - *Incineration* - the combustion of organic matter and inorganic matter in sewage sludge by high temperatures in an enclosed device (40 CFR 503.41(g)).
 - *Indirect Discharge* - the introduction of pollutants into a POTW from any nondomestic source regulated under section 307(b), (c), or (d) of the act (40 CFR 403.3(g)).
 - *Industrial Activities* - in relation to stormwater runoff, industrial activities include (40 CFR 122.26(b)(14)(i) through 122.26(b)(14)(xi)):
 1. facilities subject to stormwater effluent limitations guidelines, new source performance standards under 40 CFR subchapter N
 2. facilities classified as Standard Industrial Classification 24 (except 2434), 26 (except 265 and 267), 28 (except 283), 29, 311, 32 (except 323) 35, 344, 373
 3. facilities classified as Standards Industrial Classifications 10 through 14 (mineral industry) including active or inactive mining operations and oil and gas explorations, production, processing, or treatment operations, or transmission facilities that discharge stormwater contaminated by contact with or that has come into contact with, any overburden, raw material, intermediate product, finished products, by-products or waste products located on the site of such operations

4. hazardous waste treatment, storage, or disposal facilities, including those that are operating under interim status or a permit under *Resource Conservation and Recovery Act* (RCRA), Subpart C
 5. landfills, land application sites, and open dumps that receive or have received industrial wastes, including those sites that are subject to Federal regulation
 6. facilities involved in the recycling of materials, including metal scrapyards, battery reclaimers, salvage yards, and automobile junkyards, including but not limited to those classified as Standard Industrial Classification 5015 and 5093
 7. steam electric power generating facilities, including coal handling sites
 8. transportation facilities classified as Standard Industrial Classifications 40, 41, 42 (except 4221-25, 43, 44, 45, and 5171) which have vehicle maintenance shops, equipment cleaning operations, or airport de-icing operations
 9. treatment works treating domestic sewage or any other sewage sludge or wastewater treatment device or system, used in the storage treatment, recycling, and reclamation of municipal or domestic sewage, including land dedicated to the disposal of sewage sludges that are located within the confines of the facility with a design flow of 1.0 mgd or more, or required to have an approved pretreatment program. Not included are farmlands, domestic gardens, or lands used for sludge management where sludge is beneficially reused and which are not physically located in the confines of the facility, or areas that are in compliance with section 405 of the CWA
 10. construction activity including clearing, grading, and excavation activities except operations that result in the disturbance of land less than 5 acres of total land area which are not part of a larger common plan of development or sale
 11. facilities under Standard Industrial Classifications 20, 21, 22, 23, 2434, 25, 265, 267, 27, 283, 285, 30, 31 (except 311), 323, 34 (except 3441), 35, 36, 37 (except 373), 38, 39, 4221-25, (and which are not otherwise included in categories 1 - 10).
- *Industrial User* - a source of indirect discharge (40 CFR 403.3(h)).
 - *Industrial Wastewater* - wastewater generated in a commercial or industrial process (40 CFR 503.9(n)).
 - *Interference* - a discharge which, alone or in conjunction with one or more discharges from other sources inhibits or disrupts the POTW and causes a violation of any requirement of the POTW's NPDES permit (40 CFR 403.3(i)).
 - *Job Shop* - a facility which owns not more than 50 percent (annual area basis) of the materials undergoing metal finishing (40 CFR 433.11).
 - *Land Application* - the spraying or spreading of sewage sludge onto the land surface; the injection of sewage sludge below the land surface; or the incorporation of sewage sludge into the soil so that the sewage sludge can either condition the soil or fertilize crops or vegetation grown in the soil (40 CFR 503.11(h)).
 - *Land With a High Potential For Public Exposure* - land that the public uses frequently. This includes, but is not limited to, a public contact site and a reclamation site located in a populated area (e.g., a construction site located in a city) (40 CFR 503.31(d)).

- *Land With a Low Potential For Public Exposure* - land the public uses infrequently. This includes, but is not limited to, agricultural land, forest, and a reclamation site located in an unpopulated area (e.g., a strip mine located in a rural area) (40 CFR 503.31(e)).
- *Leachate Collection System* - a system or device installed immediately above a liner that is designed, constructed, maintained, and operated to collect and remove leachate from a sewage sludge unit (40 CFR 503.21(i)).
- *Liner* - soil or synthetic material that has a hydraulic conductivity of 1×10^{-7} cm/s [3×10^{-8} in./s] or less (40 CFR 503.21(j)).
- *Lower Explosive Limit For Methane Gas* - the lowest percentage of methane gas in air, by volume, that propagates a flame at 25 °C [77 °F] and atmospheric pressure (40 CFR 503.21(k)).
- *Management Practices (MPs)* - practices that, although not mandated by law, are encouraged to promote safe operating procedures.
- *Monthly Average* - the arithmetic mean of the hourly averages for the hours a sewage sludge incinerator operates during the month (40 CFR 503.41(h)).
- *Monthly Average* - the arithmetic mean of all measurements taken during the month (40 CFR 503.11(i)).
- *Municipality* - a city, town, borough, county, parish, district, association, or other public body (including an intermunicipal Agency of two or more of the foregoing entities: created by or under state law; an Indian tribe or an authorized Indian tribal organization having jurisdiction over sewage sludge management; or a designated and approved management Agency under section 208 of the CWA, as amended). The definition includes a special district created under State law, such as a water district, sewer district, sanitary district, utility district, drainage district, or similar entity, or an integrated waste management facility as defined in section 201(e) of the CWA, as amended, that has as one of its principal responsibilities the treatment, transport, use, or disposal of sewage sludge. (40 CFR 503.9(o)).
- *National Pretreatment Standard* - any regulation containing pollutant discharge limits promulgated by the USEPA (40 CFR 403.3(j)).
- *Navigable Waters* - all navigable waters of the United States, tributaries of navigable waters of the United States, interstate waters, intrastate lakes, rivers, and streams which are utilized by interstate travelers for rivers, and streams which are utilized by interstate travelers for recreational or other purposes, intrastate lakes, rivers, and streams from which fish or shellfish are taken and sold in interstate commerce and intrastate lakes, rivers, and streams which are utilized for industrial purposes by industries in interstate commerce. Navigable waterways do not include prior converted cropland (40 CFR 401.11(l)).
- *New Source* - in relation to NPDES permits, any building, structure, facility, or installation from which there is or may be a discharge of pollutants the construction of which commenced (40 CFR 122.2 and 122.29(b)):
 1. after promulgation of standards of performance under section 306 of CWA which are applicable to such sources

2. after proposal of standards of performance in accordance with section 306 of CWA which are applicable to such source, but only if the standards are promulgated in accordance with section 306 within 120 days of their proposal.

The following are the criteria for new source determination:

1. it is constructed at a site at which no other source is located
 2. it totally replaces the process or production equipment that causes the discharge of pollutants at an existing sources
 3. its processes are substantially independent of an existing source at the same site.
- *New Source* - any building, structure, facility, or installation from where there is or may be the discharge of pollutants, the construction of which is commenced after the publication of proposed regulations prescribing a standards of performance under section 306 of the CWA, which will be applicable to such source as such standards is thereafter promulgated in accordance with section 306 of the act (40 CFR 401.11(e)).
 - *NPDES Permit* - a permit granted by USEPA to a direct discharger which permits wastewater discharge to a watercourse in accordance with the conditions of the permit. NPDES means National Pollutant Discharge Elimination System (40 CFR 403.3(l)).
 - *Open Lot* - pens or similar confinement areas with dirt, concrete (or paved or hard) surface wherein animals or poultry are substantially or entirely exposed to the outside environment except for possible small portions affording some protection by windbreaks, small shed-type shade areas (40 CFR 412.11(f)).
 - *Other Container* - either an open or closed receptacle. This includes, but is not limited to, a bucket, a box, a carton, and a vehicle or trailer with a load capacity of 1 metric ton (1.1 short tons) or less (40 CFR 503.11(j)).
 - *pH* - the logarithm of the reciprocal of the hydrogen ion concentration (40 CFR 503.31(g)).
 - *Pass Through* - a discharge which exits the POTW into waters in quantities or concentrations which, alone or in conjunction with one or more discharges from other sources, is a cause of a violation of any requirement of the POTW's NPDES permit (40 CFR 403.3(n)).
 - *Pasture* - land on which animals feed directly on feed crops such as legumes, grasses, grain stubble, or stover (40 CFR 503.11(k)).
 - *Pathogenic Organisms* - disease-causing organisms. These include, but are not limited to, certain bacteria, protozoa, viruses, and viable helminth ova (40 CFR 503.31(f)).
 - *Person* - an individual, association, partnership, corporation, municipality, state or Federal agency, or an agent or employee thereof (40 CFR 503.9(q)).
 - *Person Who Prepares Sewage Sludge* - either the person who generates sewage sludge during the treatment of domestic sewage in a treatment works or the person who derives a material from sewage sludge (40 CFR 503.9(r)).
 - *Place Sewage Sludge or Sewage Sludge Placed* - means disposal of sewage sludge on a surface disposal site (40 CFR 503.9(s)).

- *Point Source* - any discernible confined and discrete conveyance including but not limited to a pipe, ditch, channel, or conduit from which pollutants are or may be discharged (40 CFR 401.11(d)).
- *Pretreatment* - the reduction of the amount of pollutants, the elimination of pollutants, or the alteration of the nature of pollutant properties in wastewater prior to or in lieu of discharging or otherwise introducing such pollutants into a POTW (40 CFR 403.3(q)).
- *Process Generated Wastewater* - in relation to feedlots, this is water directly or indirectly used in the operation of a feedlot for any or all of the following: spillage or overflow from animal or poultry watering systems; washing, cleaning, or flushing pens, barns, manure pits, or other feedlot facilities; direct contact swimming, washing, or spray cooling of animals; and dust control (40 CFR 412.11(d)).
- *Process Wastewater* - any water which during manufacturing or processing, comes into direct contact with or results from the production or use of any raw material, intermediate product, finished product, or waste product (40 CFR 401.44(q)).
- *Process Wastewater for Feedlots* - any process generated wastewater and any precipitation (rain or snow) which comes into contact with any manure, litter, or bedding, or any other raw material or intermediate or final material or product used in or resulting from the production of animals or poultry or direct production (40 CFR 412.11(c)).
- *Public Contact Site* - land with a high potential for contact by the public. This includes, but is not limited to, public parks, ball fields, cemeteries, plant nurseries, turf farms, and golf courses (40 CFR 503.11(l)).
- *Publicly Owned Treatment Works (POTW)* - a treatment works which is owned by the state or a municipality. This includes any devices and systems used in the storage, treatment, recycling, and reclamation of municipal sewage or industrial wastes of a liquid nature. It also includes sewers, pipes, and other conveyances only if they convey waste to a POTW (40 CFR 403.3(o)).
- *Qualified Groundwater Scientist* - an individual with a baccalaureate or post-graduate degree in the natural sciences or engineering who has sufficient training and experience in groundwater hydrology and related fields, as may be demonstrated by state registration, professional certification, or completion of accredited university programs, to make sound professional judgments regarding groundwater monitoring, pollutant fate and transport, and corrective action (40 CFR 503.21(l)).
- *Range Land* - open land with indigenous vegetation (40 CFR 503.11(m)).
- *Reclamation Site* - drastically disturbed land that is reclaimed using sewage sludge. This includes, but is not limited to, strip mines and construction sites (40 CFR 503.11(n)).
- *Risk Specific Concentration* - the allowable increase in the average daily ground level ambient air concentration for a pollutant from the incineration of sewage sludge at or beyond the property line of the site where the sewage sludge incinerator is located (40 CFR 503.41(i)).

- *Runoff* - rainwater, leachate, or other liquid that drains overland on any part of a land surface and runs off of the land surface (40 CFR 503.9(v)).
- *Seismic Impact Zone* - an area that has a 10 percent or greater probability that the horizontal ground level acceleration of the rock in the area exceeds 0.10 gravity once in 250 yr (40 CFR 503.21(m)).
- *Sewage Sludge* - solid, semi-solid, or liquid residue generated during the treatment of domestic sewage in a treatment works. Sewage sludge includes, but is not limited to, domestic septage, scum or solids removed in primary, secondary, or advanced wastewater treatment processes; and a material derived from sewage sludge. Sewage sludge does not include ash generated during the firing of sewage sludges in a sewage sludge incinerator or grit and screenings generated during preliminary treatment of domestic sewerage in a treatment works (40 CFR 257.2).
- *Sewage Sludge Feed Rate* - either the average daily amount of sewage sludge fired in all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located for the number of days in a 365-day period that each sewage sludge incinerator operates, or the average daily design capacity for all sewage sludge incinerators within the property line of the site where the sewage sludge incinerators are located (40 CFR 503.41(j)).
- *Sewage Sludge Incinerator* - an enclosed device in which only sewage sludge and auxiliary fuel are fired (40 CFR 503.41(k)).
- *Sewage Sludge Unit* - land on which only sewage sludge is placed for final disposal. This does not include land on which sewage sludge is either stored or treated. Land does not include waters of the United States, as defined in 40 CFR 122.2 (40 CFR 503.21(n)).
- *Sewage Sludge Unit Boundary* - the outermost perimeter of an active sewage sludge unit (40 CFR 503.21(o)).
- *Specific Oxygen Uptake Rate (SOUR)* - the mass of oxygen consumed per unit time per unit mass of total solids (dry weight basis) in the sewage sludge (40 CFR 503.31(h)).
- *Stack Height* - the difference between the elevation of the top of a sewage sludge incinerator stack and the elevation of the ground at the base of the stack when the difference is equal to or less than 65 m [213.25 ft]. When the difference is greater than 65 m [213.25 ft], stack height is the creditable stack height determined in accordance with 40 CFR 51.100(ii) (40 CFR 503.41(l)).
- *Store or Storage Of Sewage Sludge* - the placement of sewage sludge on land on which the sewage sludge remains for 2 yr or less. This does not include the placement of sewage sludge on land for treatment (40 CFR 503.9(y)).
- *Stormwater Discharge Associated with an Industrial Activity* - the discharge from any conveyance which is used for collecting and conveying stormwater and which is directly related to manufacturing, processing or raw materials storage areas at any industrial plant. This does not include discharges from facilities excluded from the NPDES program. For the categories of industries identified in the definition for industrial activities, the item num-

bers 1 through 10, the term includes, but is not limited to stormwater discharges from industrial plant yards; immediate access roads and rail lines used or traveled by carriers of raw materials, manufactured products, waste material or by-products used or created by the facility; material handling sites; refuse sites; sites used for the application or disposal of process waste wastes; sites used for the storage and maintenance of material handling equipment; sites used for residual treatment, storage or disposal; shipping and receiving areas; manufacturing buildings; storage areas (including tank farms) for raw materials, and intermediate and finished products; and areas where industrial activity has taken place in the past and significant materials remain and are exposed to stormwater. For item number 11 in the definition for industrial activities the term only includes only stormwater discharges from all the areas (except access roads and rail lines) that are listed in the previous sentence where materials handling equipment or activities, raw materials, intermediate products, final products, waste materials, by-products, or industrial machinery are exposed to stormwater (40 CFR 122.26(b)(14)).

- *Surface Disposal Site* - an area of land that contains one or more active sewage sludge units (40 CFR 503.21(p)).
- *Total Hydrocarbons* - the organic compounds in the exit gas from a sewage sludge incinerator stack measured using a flame ionization detection instrument referenced to propane (40 CFR 503.41(m)).
- *Total Solids* - the materials in sewage sludge that remain as residue when the sewage sludge is dried at 103 to 105 °C [217.4 to 221 °F] (40 CFR 503.31(i)).
- *Treat or Treatment Of Sewage Sludge* - the preparation of sewage sludge for final use or disposal. This includes, but is not limited to, thickening, stabilization, and dewatering of sewage sludge. This does not include storage of sewage sludge (40 CFR 503.9(z)).
- *Treatment Works* - either a federally owned, publicly owned, or privately owned device or system used to treat (including recycle and reclaim) either domestic sewage or a combination of domestic sewage and industrial waste of a liquid nature (40 CFR 503.9(aa)).
- *Unstabilized Solids* - organic materials in sewage sludge that have not been treated in either an aerobic or anaerobic treatment process (40 CFR 503.31(j)).
- *Unstable Area* - land subject to natural or human-induced forces that may damage the structural components of an active sewage sludge unit. This includes, but is not limited to, land on which the soils are subject to mass movement (40 CFR 503.21(q)).
- *Vector Attraction* - the characteristic of sewage sludge that attracts rodents, flies, mosquitoes, or other organisms capable of transporting infectious agents (40 CFR 503.31(k)).
- *Volatile Solids* - the amount of the total solids in sewage sludge lost when the sewage sludge is combusted at 550 °C [1022 °F] in the presence of excess air (40 CFR 503.31(l)).
- *Wet Electrostatic Precipitator* - an air pollution control device that uses both electrical forces and water to remove pollutants in the exit gas from a sewage sludge incinerator stack (40 CFR 503.41(n)).

- *Wetlands* - those areas that are inundated or saturated by surface water or ground water at a frequency and duration to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs, and similar areas (40 CFR 503.9(bb)).
- *Wet Scrubber* - an air pollution control device that uses water to remove pollutants in the exit gas from a sewage sludge incinerator stack (40 CFR 503.41(o)).

WASTEWATER MANAGEMENT

GUIDANCE FOR CHECKLIST USERS

	REFER TO CHECKLIST ITEMS:	REFER TO PAGE NUMBER:
All Facilities	10-1 through 10-4	10-23
NPDES Permits	10-5 through 10-10	10-25
Treatment Works Operations	10-11	10-29
Discharges to POTWs/FOTWs General	10-12 through 10-20	10-31
Dredging	10-21	10-35
Effluent Limitations Feedlots	10-22	10-37
Land Application of Sludge General	10-23 through 10-29	10-39
Vectors and Pathogens	10-30 through 10-34	10-45
Notifications	10-35 through 10-39	10-51
Monitoring	10-40 and 10-41	10-57
Recordkeeping and Reporting	10-42 through 10-49	10-59
Surface Disposal of Sludge General	10-50 through 10-56	10-67
Monitoring and Documentation	10-57 through 10-62	10-73
Sludge Incineration	10-63 through 10-70	10-77

WASTEWATER MANAGEMENT

Records To Review

- NPDES Permits
- NPDES Permit renewal applications (if expire within 180 days)
- Discharge monitoring reports for the past year
- Laboratory records and procedures and USEPA QA results
- Monthly operating reports for wastewater treatment facilities
- Flow monitoring calibration certification and supporting records
- Ash pond volume certification and supporting records
- Red water inspection records
- Special reports, certifications, etc., required by NPDES permit
- Spill Prevention Control and Countermeasure (SPCC) plan
- All records required by SPCC plan
- All notices of noncompliance
- All notices of violations
- NPDES state or Federal inspection reports
- Sewage treatment plant operator certification
- Administrative Orders
- Sewer and storm drain layout
- Local sewer ordinance
- Local service use permit
- Notification to local POTW
- Old Spill Reports
- Repair/Maintenance records for the wastewater treatment system
- As-Built Drawings
- Federal Facility Compliance Agreements
- Stormwater pollution prevention plan
- Pretreatment Permits

Physical Features To Inspect

- Discharge outfall pipes
- Wastewater treatment facilities
- Industrial treatment facilities
- Streams, rivers, open waterways
- Floor and sink drains (especially in industrial areas)
- Stormwater collection points (especially in industrial areas)
- Oil storage tanks
- Oil/water separators
- Wastewater generation points

**COMPLIANCE CATEGORY
WASTEWATER MANAGEMENT
Fish and Wildlife Service**

**REGULATORY
REQUIREMENTS**

**REVIEWER CHECKS
July 1995**

ALL FACILITIES

10-1. The current status of any ongoing or unresolved consent orders, compliance agreements, notices of violation (NOVs), inter-agency agreements, or equivalent state enforcement actions is required to be examined (a finding under this checklist item will have the enforcement action/identifying information as the citation).

Determine if noncompliance issues have been resolved by reviewing a copy of the previous report, consent orders, compliance agreements, NOVs, inter-agency agreements, or equivalent state enforcement actions.

10-2. FWS facilities are required to comply with state and local wastewater regulations (EO 12088, Section 1-1).

Verify that the facility is complying with state and local water quality requirements.

Verify that the facility is operating according to permits issued by the state or local agencies.

(NOTE: Issues typically regulated by state and local agencies include:

- nonpoint sources
- NPDES permits
- wastewater
- monitoring and recordkeeping for NPDES permitted sources
- certification requirements for laboratories analyzing samples
- wastewater treatment plant operator certification
- sludge disposal
- pretreatment standards
- discharges to sewage treatment facilities
- industrial wastewater
- septic tanks
- stormwater pollution prevention plan
- stormwater discharges.)

REQUIREMENTS**

**REVIEWER CHECKS
July 1995**

**LAND APPLICATION
OF SLUDGE**

General

10-23. Representative samples of sewage sludge applied to the land, placed on a surface disposal site, or fired in a sewage sludge incinerator, are required to be collected and analyzed (40 CFR 503.8).

(NOTE: Checklist items 10-23 through 10-70 apply only to sludge generated during the treatment of domestic sewage in a treatment works. For exclusions see the definitions of the term Excluded Sludge. A summary of the important compliance dates is found in Appendix 10-1.)

Verify that the following types of facilities meet the standards outlined in 40 CFR 503:

- the treatment works treats only domestic sewage
- the treatment works is designed for domestic sewage treatment but also treats some industrial wastewaters
- the treatment works is designed for industrial wastewater treatment and it only treats domestic sewage at any one time during operations and then the resulting sewage sludge has to meet 40 CFR 503
- the treatment works generates domestic septage only
- the installation further changes the quality or treats (e.g., composting of sewage sludge) the sewage sludge of domestic septage received from a generator of sewage sludge /domestic septage for land application and is therefore a preparer of sewage sludge.

(NOTE: If the facility treatment works meets any of the following, the requirements in 40 CFR 503 do not apply:

- it treats industrial wastewaters only
- it is an industrial wastewater treatment plant that also treats domestic sewage along with the industrial wastewater
- it generates a combination of:
 - domestic septage and commercial septage (i.e., grease from grease traps)
 - domestic septage and industrial septage
 - commercial septage and industrial septage.)

Determine if the facility applies sewage sludge to the land, places it on a surface disposal site, or fires it in a sewage sludge incinerator.

Verify that the sludge is analyzed prior to application, placement, or firing for the following:

- enteric viruses
- fecal coliforms
- helminth ova
- inorganic pollutants
- salmonella bacteria
- SOUR
- total, fixed, and volatile solids.

OF SLUDGE**

Notifications

10-35. Persons who prepare bulk sewage sludge are required to provide specific notifications (40 CFR 503.10(b), 503.12(f), and 503.12(g)).

Verify that, if the facility prepare bulk sewage sludge, it provides the person applying the bulk sewage sludge the notices and necessary information needed to comply with the land application regulations.

(NOTE: When bulk sewage sludge or bulk material derived from sewage sludge is applied to the land that meets the requirements in Appendix 10-4, Class A pathogen requirements (see definitions), and vector attraction reduction requirements as follows, it is exempt from these requirements:

- the mass of volatile solids in the sewage sludge is reduced by a minimum of 38 percent. If this cannot be done:
 - for an anaerobically digested sewage sludge, vector attraction reduction is demonstrated by digesting a portion of the previously digested sewage sludge anaerobically in the laboratory in a bench-scale unit for 40 additional days at a temperature between 30 and 37 °C [86 and 98.6 °F]. When at the end of 40 days, the volatile solids in the sewage sludge at the beginning of that period are reduced by less than 17 percent, vector attraction reduction is achieved
 - for an aerobically digested sewage sludge, vector attraction reduction is demonstrated by digesting a portion of the previously digested sewage sludge that has a percent solids of 2 percent or less aerobically in the laboratory in a bench scale unit for 30 additional days at 20 °C [68 °F]. When at the end of the 30 days, the volatile solids in the sewage sludge at the beginning of the period are reduced by less than 15 percent, vector attraction reduction is achieved
- the SOUR for sewage sludge treated in an aerobic process is equal to or less than 1.5 mg of oxygen/h/g of total solids (dry weight basis) at a temperature of 20 °C [68 °F]
- sewage sludge is treated in an aerobic process for 14 days or longer, during which time the temperature of the sewage sludge is higher than 40 °C [104 °F] and the average temperature is higher than 45 °C [113 °F]
- the pH of the sewage sludge is raised to 12 or higher by alkali addition, and without the addition of more alkali, remains at 12 or higher for 2 h and then at 11.5 or higher for an additional 22 h
- the percent solids of sewage sludge that does not contain unstabilized solids generated in a primary wastewater treatment process is equal to or greater than 75 based on the moisture content and total solids prior to mixing with other materials

July 1995**

10-46. When bulk sewage sludge that meets the limitations in Appendix 10-2, is applied to agricultural land, forest, a public contact site, or reclamation site, specific reporting requirements must be met (40 CFR 503.17(a)(5)).

Determine if the facility applies bulk sewage sludge to agricultural land, forest, a public contact site or reclamation site.

Verify that it meets the requirements in Appendix 10-2.

Verify that the following information is retained for 5 yr by the person who prepares the sludge:

- the concentration of each pollutant listed in Appendix 10-2
- a statement certifying which form of vector attraction reduction is being used and that pathogen requirements are being met
- a description of how the pathogen requirements are being met
- a description of how the vector attraction reduction is being met when used.

Verify that the following information is retained indefinitely by the person who applies the sludge:

- the concentration of each pollutant listed in Appendix 10-2
- the number of hectares in each site upon which bulk sewage sludge is applied
- the date and time bulk sewage sludge is applied to each site
- the cumulative amount of each pollutant from Appendix 10-2 in the bulk sewage sludge applied to each site
- amount applied to each site
- a certification statement indicating that required information for each site has been obtained
- a description of how the requirements to obtain information were met.

Verify that the following information is retained for 5 yr by the person applying the sludge:

- a statement certifying that appropriate management practices and application procedures are being used
- a description of how required management practices are implemented
- a certification statement that Class B pathogen requirements are being met
- a description of how site restrictions are being met
- a certification statement that vector reduction requirements are met
- a description of how vector reduction requirements are being met.

 - a calibration and maintenance log for the instrument used to measure the CO concentration
- Class I sludge management facilities, POTWs with a design flow rate equal to or greater than one million gal per day, and POTWs that serve a population of 10,000 people or greater submit the monthly average CO concentrations in the exit gas to the permitting authority on 19 February of each year.)

- the exit gas from a sewage sludge incinerator stack is monitored continuously for CO
- the monthly average concentration of CO in the exit gas from a sewage sludge incinerator stack, corrected for zero percent moisture and to 7 percent oxygen, does not exceed 100 ppm on a volumetric basis
- the person who fires the sewage sludge incinerator retains the following information for 5 yr:
 - the CO concentrations in the exit gas
 - a calibration and maintenance log for the instrument used to measure the CO concentration
- Class I sludge management facilities, POTWs with a design flow rate equal to or greater than one million gal per day, and POTWs that serve a population of 10,000 people or greater submit the monthly average CO concentrations in the exit gas to the permitting authority on 19 February of each year.)

10-69. Individuals who fire sewage sludge in an incinerator are required to keep specific information on file for 5 yr (40 CFR 503.47).

- the concentration of lead, arsenic, cadmium, chromium, and nickel in the sewage sludge fed to the incinerator
- the total hydrocarbons concentration in the exit gas from the sewage sludge incinerator stack
- information that indicates the National Emissions Standards for beryllium and mercury are met
- the combustion temperatures, including the maximum combustion temperature for the incinerator
- values for the air pollution control device operating parameters
- the oxygen concentrations and information used to measure moisture content in the exit gas from the sewage sludge incinerator stack
- the sewage sludge feed rate
- the stack height for the incinerator
- the dispersion factor for the site where the incinerator is located
- the control efficiency for lead, arsenic, cadmium, chromium, and nickel for each incinerator
- the risk specific concentrations for chromium
- a calibration and maintenance log for the instruments used to measure the total hydrocarbons and oxygen content in the exit gas and the combustion temperature.

- the concentration of lead, arsenic, cadmium, chromium, and nickel in the sewage sludge fed to the incinerator
- the total hydrocarbons concentration in the exit gas from the sewage sludge incinerator stack
- information that indicates the National Emissions Standards for beryllium and mercury are met
- the combustion temperatures, including the maximum combustion temperature for the incinerator
- values for the air pollution control device operating parameters
- the oxygen concentrations and information used to measure moisture content in the exit gas from the sewage sludge incinerator stack
- the sewage sludge feed rate
- the stack height for the incinerator
- the dispersion factor for the site where the incinerator is located
- the control efficiency for lead, arsenic, cadmium, chromium, and nickel for each incinerator
- the risk specific concentrations for chromium
- a calibration and maintenance log for the instruments used to measure the total hydrocarbons and oxygen content in the exit gas and the combustion temperature.

REGULATORY REQUIREMENTS	REVIEWER CHECKS July 1995
<p>10-69. (continued)</p>	<p>(NOTE: The requirements for recordkeeping for total hydrocarbons does not apply if the following conditions are met:</p> <ul style="list-style-type: none"> - the exit gas from a sewage sludge incinerator stack is monitored continuously for CO - the monthly average concentration of CO in the exit gas from a sewage sludge incinerator stack, corrected for zero percent moisture and to 7 percent oxygen, does not exceed 100 ppm on a volumetric basis - the person who fires the sewage sludge incinerator retains the following information for 5 yr: <ul style="list-style-type: none"> - the CO concentrations in the exit gas - a calibration and maintenance log for the instrument used to measure the CO concentration - Class I sludge management facilities, POTWs with a design flow rate equal to or greater than one million gal per day, and POTWs that serve a population of 10,000 people or greater submit the monthly average CO concentrations in the exit gas to the permitting authority on 19 February of each year.)
<p>10-70. Class I sludge management facilities, POTWs with a design flow rate equal to or greater than 1 million gal/day [3,785,412 L/day], and POTWs that serve 10,000 people or more are required to submit specific information to the permitting authority (40 CFR 503.46).</p>	<p>Verify that the following information pertaining to incinerators is submitted to the permitting authority by 19 February of each year:</p> <ul style="list-style-type: none"> - the concentration of lead, arsenic, cadmium, chromium, and nickel in the sewage sludge fed to the incinerator - the total hydrocarbons concentration in the exit gas from the sewage sludge incinerator stack - information that indicates the National Emissions Standards for beryllium and mercury are met - the combustion temperatures, including the maximum combustion temperature for the incinerator - values for the air pollution control device operating parameters - the oxygen concentrations and information used to measure moisture content in the exit gas from the sewage sludge incinerator stack - the sewage sludge feed rate - the stack height for the incinerator - the dispersion factor for the site where the incinerator is located - the control efficiency for lead, arsenic, cadmium, chromium, and nickel for each incinerator - the risk specific concentrations for chromium - a calibration and maintenance log for the instruments used to measure the total hydrocarbons and oxygen content in the exit gas and the combustion temperature.

Appendix 10-1

(40 CFR 503)

Relevant Dates for the Sewage Sludge Program

Publication of Part 503 in 58 FR 9248.	19 February 1993
Publication of amendments to Sewage Sludge Permit Program regulations in 58 FR 9404.	19 February 1993
Effective date of Part 503.	22 March 1993
Requirements for monitoring and recordkeeping under Part 503 become effective (except for THC).	20 July 1993
Permit applications due from facilities required to have (or requesting) site-specific limits.	18 August 1993
Compliance date for part 503 requirements other than monitoring, recordkeeping and reporting (where construction is not required).	19 February 1993
Requirements for monitoring, recordkeeping and reporting for THC under Part 503 become effective (where construction is not required).	19 February 1993
Requirements for reporting under Part 503 become effective.	19 February 1993
Limited permit application information due from sludge-only facilities (not needing site-specific limits).	19 February 1993
Due for closure of active sewage sludge units:	22 March 1993
1. located within 60 m of a fault that has displacement in Holocene time (unless authorized by the permitting authority)	
2. located in a wetland (unless authorized under an NPDES permit)	
3. located in an unstable area.	
Compliance date for Part 503 requirements other than monitoring, recordkeeping, and reporting (where construction is required).	19 February 1993
Requirements for monitoring, recordkeeping, and reporting for THC under Part 503 become effective (where construction is required).	19 February 1993
Date when active sewage sludge unit owners/operators must submit closure plans.	180 days prior to the date the unit closes
Permit application information due from facilities with NPDES permits (not needing site-specific limits).	At the time of the next NPDES permit renewal
Permit application information due from facilities who commence operations after 19 February 1993.	180 days prior to the date proposed for commencing operation

Appendix 10-2

Cumulative Pollutant Loading Rates for Sludge (40 CFR 503.13(b)(2))

Pollutant	Cumulative Pollutant Loading Rate (kg/hectare)
Arsenic	41
Cadmium	39
Chromium	3000
Copper	1500
Lead	300
Mercury	17
Nickel	420
Selenium	100
Zinc	2800

Appendix 10-3

Ceiling Concentrations for Sludge (40 CFR 503.13(b)(1))

Pollutant	Ceiling Concentration (mg/kg, dry weight basis)
Arsenic	75
Cadmium	85
Chromium	3000
Copper	4300
Lead	840
Mercury	57
Molybdenum	75
Nickel	420
Selenium	100
Zinc	7500

Appendix 10-4

Pollutant Concentrations for Sludge (40 CFR 503.13(b)(3))

Pollutant	Monthly Average Concentrations (mg/kg, dry weight basis)
Arsenic	41
Cadmium	39
Chromium	1200
Copper	1500
Lead	300
Mercury	17
Nickel	420
Selenium	36
Zinc	2800

Appendix 10-5

Annual Pollutant Loading Rates (40 CFR 503.13(b)(4))

Pollutant	Annual Pollutant Loading Rates (kg/hectare/ 365 day period)
Arsenic	2.0
Cadmium	1.0
Chromium	150
Copper	75
Lead	15
Mercury	0.85
Nickel	21
Selenium	5.0
Zinc	140

Appendix 10-6

Frequency of Monitoring - Land Application, Surface Disposal, and Incineration (40 CFR 503.16, Table 1, 503.26, Table 1, 503.46, Table 1)

Amount of Sewage sludge* (metric tons/365-day period) [long ton/365 days]	Frequency
Greater than zero but less than 290 [285.42]	Once per year
Equal to or greater than 290 [285.42] but less than 1500 [1476.31]	Once per quarter (four times per year)
Equal to or greater than 1500 [1476.31]but	Once per 60 days (six times less than 15,000 [14,763.1] per year
Equal to or greater than 15,000 [14,763.1]	Once per month

* Either the amount of bulk sewage sludge applied to the land or the amount of sewage sludge received by a person who prepares sewage sludge that is sold or given away in a bag or other container for application to the land (dry weight basis).

Appendix 10-7

Pollutant Concentrations for an Active Sewage Sludge Unit (40 CFR 503.23, Table)

Unit Boundary to Property Site	Pollutant Concentration ¹		
(Distance in meters)	Arsenic mg/kg	Chromium mg/kg	Nickel mg/kg
0 to less than 25	30	200	210
25 to less than 50	34	220	240
50 to less than 75	39	260	270
75 to less than 100	46	300	320
100 to less than 125	53	360	390
125 to less than 150	62	450	420

¹ Dry weight basis

Appendix 10-8

Lead Concentration in Sewage Sludge Fed to an Incinerator (40 CFR 503.43)

Formula 1:

$$C = \frac{0.1 \times \text{NAAQS} \times 86,400}{\text{DF} \times (1 - \text{CE}) \times \text{SF}}$$

Where:

- C - Daily concentration of lead in sewage sludge in mg/kg of total solids (dry weight basis).
- NAAQS - National Ambient Air Quality Standards for lead in $\mu\text{m}/\text{m}^3$.
- DF - Dispersion Factor in $\mu\text{m}/\text{m}^3/\text{g/s}$.
- CW - Sewage sludge incinerator control efficiency for lead in hundreths.
- SF - Sewage sludge feed rate in metric tons/day (dry weight basis).

Formula 2:

$$C = \frac{\text{RSC} \times 86,400}{\text{DF} \times (1 - \text{CE}) \times \text{SF}}$$

Where:

- C - Daily concentrations of arsenic, cadmium, chromium, or nickel in sewage sludge in mg/kg of total solids (dry weights basis).
- CE - Sewage sludge incinerator control efficiency for arsenic, cadmium, chromium, or nickel in hundreths.
- DF - Dispersion Factor in $\mu\text{m}/\text{m}^3/\text{g/s}$.
- RSC - Risk specific concentration in $\mu\text{m}/\text{m}^3$.
- SF - Sewage sludge feed rate in metric tons/day (dry weight basis).

Appendix 10-9
Total Hydrocarbon Operational Standards
(40 CFR 503.44)

Formula 1:

$$\text{Corrective Factor (percent moisture)} = \frac{1}{(1 - X)}$$

Where:

X - decimal fraction of the percent moisture in the sewage sludge incinerator exit gas in hundredths.

Formula 2:

$$\text{Corrective Factor (oxygen)} = \frac{14}{(21 - Y)}$$

Where:

Y - Percent oxygen concentration in the sewage sludge incinerator stack exit gas (dry volume/dry volume).
