**Clearinghouse, Springfield, Va. 22151**

**U.S. GOVERNMENT RESEARCH AND DEVELOPMENT REPORTS (USGRDR)**--SEMI-MONTHLY JOURNAL ANNOUNCING R&D REPORTS. ANNUAL SUBSCRIPTION \$30.00 (\$37.50 FOREIGN MAILING). SINGLE COPY \$3.00.

**U.S. GOVERNMENT RESEARCH AND DEVELOPMENT REPORTS INDEX**--SEMI-MONTHLY INDEX TO U.S. GOVERNMENT RESEARCH AND DEVELOPMENT REPORTS. ANNUAL SUBSCRIPTION \$22.00 (\$27.50 FOREIGN MAILING). SINGLE COPY \$3.00.

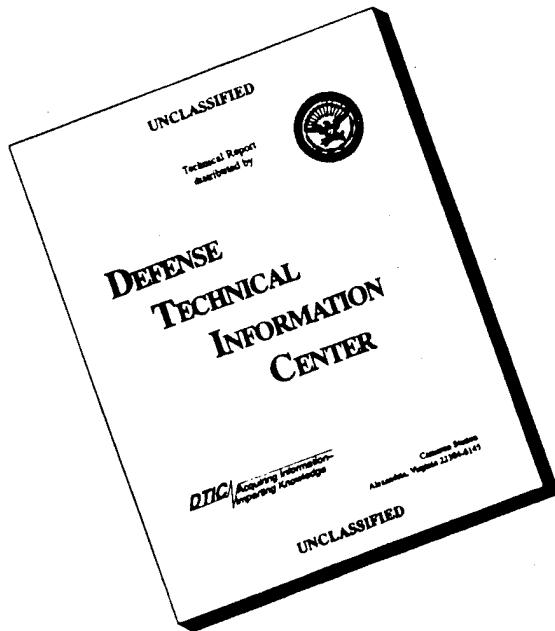

**FAST ANNOUNCEMENT SERVICE**--SUMMARIES OF SELECTED R&D REPORTS COMPILED AND MAILED BY SUBJECT CATEGORIES. ANNUAL SUBSCRIPTION \$5.00, TWO YEARS: \$9.00, AND THREE YEARS: \$12.00. WRITE FOR AN APPLICATION FORM.

**DOCUMENT PRICES**--ALMOST ALL OF THE DOCUMENTS IN THE CLEARINGHOUSE COLLECTION ARE PRICED AT \$3.00 FOR PAPER COPIES AND 65 CENTS FOR COPIES IN MICROFICHE.

**COUPONS**--THE CLEARINGHOUSE PREPAID DOCUMENT COUPON SALES SYSTEM FOR PURCHASING PAPER COPIES AND MICROFICHE PROVIDES FASTER, MORE EFFICIENT SERVICE ON DOCUMENT REQUESTS. THE PREPAID COUPON IS A TABULATING CARD WITH A FACE VALUE OF THE PURCHASE PRICE OF A CLEARINGHOUSE DOCUMENT (\$3.00 PAPER COPY OR 65 CENTS MICROFICHE). IT IS YOUR METHOD OF PAYMENT, ORDER FORM, SHIPPING LABEL, AND RECEIPT OF SALE.

COUPONS FOR PAPER COPY (HC) DOCUMENTS ARE AVAILABLE AT \$3.00 EACH OR IN BOOKS OF 10 COUPONS FOR \$30.00. COUPONS FOR MICROFICHE COPIES OF CLEARINGHOUSE DOCUMENTS ARE AVAILABLE IN BOOKS OF 50 COUPONS FOR \$32.50. WRITE FOR A COUPON ORDER FORM.

## A GUIDE TO THE USE OF ELASTOMERS

### Introduction

Selecting an engineering elastomer for application in today's chemistry takes a lot of the design engineer's time. Direct guidance is needed for choosing the best material for real life application.

Because of the current use of elastomers in nuclear radiation environments, it is believed that the attached data may be useful in answering some of the questions which arise in the selection of elastomers for use in nuclear equipment.

This report contains:

- A guide to the general properties of elastomers, and
- A summary of unclassified data available in the technical literature on the subject of the effects on elastomers of nuclear radiation.

At present the majority of the available irradiation data are those obtained in  $\gamma$  - sources and nuclear reactors, particularly by the ORNL graphite reactor. In the application of this information to equipment designed for use in particle accelerators, these data should be considered only as reasonable estimates since the fields of irradiation around accelerators and reactors are quite different.

In many instances the only available information is concerned with structural characteristics, such as tensile strength, rather than with electrical data. In general, if properties, such as tensile strength show large variations, it would be reasonable to expect that the electrical properties will also vary.

None of the data listed in this report was taken during irradiation. While some of the mechanical properties may differ little if measured during exposure, the volume resistivity can be significantly different.

The unit of radiation used in this report is the rad; one rad is equivalent to the absorption of 100 ergs of energy per gramme of material.

The radiation field inside the ORNL graphite reactor is:

- 1.1 x  $10^{12}$  thermal neutrons/cm<sup>2</sup> sec.
- 1.4 x  $10^{11}$  neutrons ( $\geq 0.1$  Mev)/cm<sup>2</sup> sec.
- 6.7 x  $10^{10}$  neutrons ( $\geq 0.5$  Mev)/cm<sup>2</sup> sec.
- 4.2 x  $10^{10}$  neutrons ( $\geq 1.0$  Mev)/cm<sup>2</sup> sec.
- $\sim 5 \times 10^{10}$   $\gamma$ -rays (1 Mev)/cm<sup>2</sup> sec.

The dose rate is  $10^6$  to  $10^7$  rads/hr.

EXPLANATION OF TABLES AND FIGURES

Table 1 represents the chemical resistance, physical and mechanical properties of the most common elastomers. As in plastics new elastomers are created by varying the composition, e.g. fillers and processing techniques. The data in the table are given only for pure gums.

Table 2 is a selection guide to aid the choice of material for a given application.

The effect of nuclear radiation on volume resistivity of the commonest elastomers are given in Table 3.

Table 4 gives values for the total gas evolved from irradiated samples of 0,2 to 0,5 gramme weight.

The radiation stability of some elastomers at temperatures above 85°C is summarized in Table 5.

Table 6 represents the popular name, chemical designation and trade names of elastomers.

---

Fig. 1 shows the relative radiation resistance of elastomers. It should be mentioned that this Figure reflects only resistance to radiation and that a consideration of other parameters (fillers, antirads, etc.) could change the order in which the material are ranked.

Figs. 2 - 37 show the mechanical property changes effected by radiation in a variety of commercially available polymers.

TABLE I: GENERAL PROPERTIES OF ELASTOMERS (GENERAL BIBLIOGRAPHY Etc.)

Popular Name Properties	Acrylics	Butyl	Ethylene Propylene	Fluoroelastomer			Natural Rubber
				Vinylidene Fluoride Hexafluoropropylene	Fluorosilicone	Polytrifluoroethylene	
Specific gravity	1.09	0.90	0.86	-	1.4	1.65	1.16
Minimum Service Temperature, (°C)	-19	-46	-50	-46	-68	-50	-40
Maximum Service Temperature, (°C)	175	150	150	232	200	200	160
Dielectric strength Kv/mm	5	6 -20	16 -30	12 -24	12 -24	12 -24	16 -30
Volume resistivity (ohm-cm)	10 <sup>10</sup> -10 <sup>12</sup>	10 <sup>12</sup> -10 <sup>14</sup>	10 <sup>12</sup> -10 <sup>14</sup>	>10 <sup>14</sup>	10 <sup>12</sup> -10 <sup>14</sup>	>10 <sup>14</sup>	>10 <sup>14</sup>
Dielectric constant 1.000 cps	3-3.5 7-10	3-3.5 7-10	3-3.5 7-10	3-3.5 7-10	3-3.5 7-10	3-3.5 7-10	3-3.5 7-10
Tensile strength (kg/cm <sup>2</sup> )	18-28	175-210	140-238	140	70	25-42	250-280
Elongation (%)	450-750	750-950	400-600	>350	200	500-800	600

## BIBLIOGRAPHY

- H. BARRON                            Modern Synthetic Rubbers  
    Chapman and Hall Ltd., London, 1949
- S. BOSTROM                         Kautschuk Handbuch, Bd. I, II, III,  
    1960, Verlag Berliner Union Stuttgart
- W. BRENERS und  
H. LUTTROP                         Buna, Herstellung Prüfung, Eigenschaften  
    1954, Verlag Technik Berlin
- N.L. CATTON                         The Neoprenes  
    1963, Ets Du Pont de Nemours Co.
- T.J. DRAKELEY                      Annual report on the progress of rubber  
    technology, Vol. XXVII, 1963  
    W. Heffer and Son Ltd., Cambridge, England
- N.G. GAYLORD                        Resins - Rubber - Plastics - Yearbook .960  
    Interscience publ. Co., N.Y., 1960
- G. GENIN et  
B. MORRISON                        Encyclopédie Technologique de l'Industrie  
    du Caoutchouc  
    1958, Dunod, Paris
- F. MARCHIONNA                      Butalastic Polymers, their preparation  
    and Applications  
    1946, Reinhold Publ. Corporation
- Mc PHERSON and  
A. KLEMIN                         Engineering uses of rubber  
    Reinhold Publ. Co., 1958
- M. MORTON                         Introduction to rubber technology  
    Reinhold publ. Co., 1959
- W.S. PENN                         Synthetic Rubber Technology, Bd. I, II  
    1960, Maclaren and Sons Ltd., London
- J.H. SAUNDERS and  
K.C. FRISCH                        Polyurethanes - Chemistry and Technology  
    Interscience Publishers Co., N.Y., 1963
- C.S. WHITBY e.a.                 Synthetic Rubber  
    1954, J. Wiley and Sons, New York
- G. WINSPEAR                        The Vanderbilt Rubber Handbook  
    R.T.Vanderbilt Co. Inc., N.Y., 1958

## Periodicals :

Materials in Design Engineering  
1965 - 1966

Machine Design  
Penton publications - Cleveland, Ohio  
1965 - 1966.
