This document makes use of international metric units according to the Systeme International d'Unites (SI). In certain cases, utility requires the retention of other systems of units in addition to the SI units. The conventional units stated in parentheses following the computed SI equivalents are the basis of the measurements and calculations reported.

# OUTGASSING DATA FOR SPACECRAFT MATERIALS

William A. Campbell, Jr., Richard S. Marriott, and John J. Park  
*Goddard Space Flight Center*

## INTRODUCTION

This second compilation of outgassing data of materials for spacecraft use consists of data obtained utilizing equipment similar to that developed at Stanford Research Institute (SRI). The first compilation included data from Goddard Space Flight Center (GSFC) tests and from the SRI report (reference 1) for tests through December 31, 1972. The present compilation includes the prior data (reference 2) plus additional data through December 31, 1974. Thus, this compilation supersedes TN D-7362.

Stanford Research Institute personnel, under contract to the Jet Propulsion Laboratory (JPL), developed a system for determining the weight loss in vacuum and for collecting the volatile compounds. Their report, which contained results for the period from June 1964 to August 1967, served admirably as a foundation for selecting spacecraft materials with low outgassing properties. Based on the SRI data and on GSFC data, a GSFC report (reference 3) was published that included data for those materials which met two criteria: a maximum mass loss of 1.0 percent and a maximum of 0.10 percent condensable materials.

## EQUIPMENT

The particular system used at GSFC for outgassing testing was developed at SRI for JPL. The equipment was designed to test microquantities, as opposed to large samples or macroquantities, and to collect outgassing molecules for identification.

A number of samples can be tested at one time in the vacuum system. Each sample, of about 100 to 300 milligrams mass, is placed into a preweighed aluminum foil boat which has been thoroughly cleaned and dried. Following a 24-hour preconditioning in 50 percent relative humidity atmosphere, to ensure that the samples receive a common preliminary treatment, the individual samples are weighed. The samples are then loaded into individual compartments in a solid copper bar which can be heated. Each compartment is closed by a solid copper cover, requiring that all volatile materials escape through a 0.63-cm (1/4-in.) diameter exit port only.

The copper heater bar, having 12 sample compartments, is heated to 398 K (125° C) for 24 hours. The sample, being heated by conduction and radiation, also is heated to 398 K (125° C). This heating causes the volatile materials to be driven off with their only escape being through the exit port. At a distance of 1.25 cm (1/2 in.), a chromium plated collector

plate is in the direct line of sight of the exit port and is maintained at 298 K (25° C). The molecules which condense at 298 K (25° C) or above in the particular vacuum environment will be collected. Barriers are near the collector plate to prevent cross-contamination from adjacent samples.

The mass loss of the sample is determined from the weights before and after the 398 K (125° C) exposure, and the percentage loss is calculated to provide the total mass loss (TML). In a similar manner, the difference between the weight of a clean collector and of a collector having condensed materials will provide the mass of condensables. This mass of condensables can be calculated as a percentage of the starting mass of the sample and is stated as collected volatile condensable materials (CVCM).

## DATA PRESENTATION

The data presented in sections A and B include both the GSFC data and those from the SRI 1967 Final Report (reference 1). A few materials included in these previous reports have been deleted to avoid duplication and to remove materials which are unavailable or otherwise unsuitable. The outgassing data are ordered differently in the two sections in order to be more usable for material selection. In section A, the selected materials are divided into 17 different categories of uses, such as adhesives, greases, paints, potting compounds, and so forth. In section B, all the selected materials contained in section A as well as other uncategorized materials are listed in alphabetical order by the manufacturer's identification for the materials.

These data are stored on computer tape for filing and reading. In the time interval between this compilation and the preceding TN D-7362 (reference 2), the data tapes were converted to be compatible with the Mark IV File Management System. The use of the Mark IV system will make it easier to add data for updating the tapes and to generate current output reports.

In this system, the computer has been instructed to follow a strict alphabetic and numerical order. This may at first seem confusing, particularly since the numbers are read from left to right, irrespective of the number of digits. For example, the order appears as DC11, DC142, DC2106, DC271, and DC3101. Similarly, the series of Scotchcast 200 materials is followed by Scotchcast 3 and 9. In the listing, letters have precedence over numbers; for example, MMM Tape Y-9360 will appear before MMM Tape 136.

All materials are listed only once in section A; there is no cross-indexing within either section A or section B. Thus, in looking for a specific material, one may start in section A under a possible use; if not found, one should consider another use of the material or look in section B under the specific manufacturer's identification of the material. Many materials have been tested, and the manufacturer's identification is the best clue in finding it, although often the name of the manufacturer may not be in the identification.

## Section A

This section contains outgassing materials grouped in 17 categories according to their primary use, such as adhesives, conformal coatings, and marking materials. There are various types within the adhesive group, including film, conductive adhesives, and foam; the types are indicated wherever possible. Similarly, tapes include those which are mylar, vapor depositions on mylar, and aluminum sheet plus adhesive. This information is often stated in the description. However, certain materials can be used as adhesives and as potting compounds. In these instances, the material is listed in one category only, reflecting its most prevalent use.

In the printed data, the first column contains each material, listed by its manufacturer's identification followed by the mixture of components, if more than one component. The second column, "Code," contains a three-letter code for the manufacturers. (The appendix contains the manufacturers code list.) The outgassing data of TML and CVCM are in the next two columns, followed by three columns giving the particular curing time, temperature, and atmosphere for that particular sample. If the cure conditions are unknown, the columns are left blank. Some materials are cured or post-cured in two or more steps, which are carried out in the order listed. Some materials have been tested more than once and usually with different cures. The last column gives the application, as known.

## Section B

In this section all the materials are listed in alphabetical order, as previously described, in the first column. The second column, "Data Reference," contains a reference number which indicates a GSFC test or an SRI test. The GSFC numbers are the sequentially designated test numbers, the higher numbers being more recent tests; the SRI numbers give page number (first 3 digits) and the material's order (last 2 digits) on that page, as reported in reference 1. The following columns contain the outgassing data as described for section A.

## USE OF THE DATA

Whether one has a particular material in mind or not, section A, ordered by use, would be the first place to look. In the adhesives category, for example, there are 501 different test results—almost too many. Selection criteria of a maximum of 1.00 percent TML and a maximum 0.10 percent CVCM are suggested as a guide. One must consider his own experiment and the effect to others on the spacecraft in terms of potential outgassing products. Obviously, the lowest outgassing materials are the safest to select. These criteria are a starting point in materials selection, with other properties such as tensile strength, hardness, curing procedure, and possibly clarity also being considered.

Two component materials, often as A and B, are listed as A/B, and their relative amounts are also listed as a fraction, for example, 1/1, 100/73, and 50/50. These are mixed as parts by weight (BW) and sometimes by volume (BV). These may be cured at a specific temperature for a specific time; the temperatures are in degrees Celsius and the times can be minutes

(M), hours (H), or days (D). If no cure is listed, the cure data are not known, but one may presume that the manufacturer's directions for curing were followed. Also, the cures performed in vacuum are indicated by E-3 or E-6, referring to  $0.13 \text{ N/m}^2$  or  $0.00013 \text{ N/m}^2$  ( $10^{-3}$  or  $10^{-6}$  torr), respectively.

Certain samples, particularly tapes and film adhesives, require specific treatment in testing. Some of the early tape samples were applied to a tubular screen (S), permitting the adhesive to be exposed to the vacuum, a technique no longer used. Tapes can be adhered to an aluminum ring (R), the adhesive being against the aluminum with outgassing occurring at the edges. Double sided tapes and transfer film adhesives are applied to preweighed aluminum foil (F) and covered with another piece of foil; this composite must be folded or cut into smaller pieces for loading into the boat, a procedure which permits outgassing at the edges.

*Caution:* The materials in this listing have been tested over a period of 10 and more years. There can be no assurance that variations in component materials have not occurred, with a resultant change in outgassing properties. The data should be used as a guide in selecting, with a fair degree of confidence (provided one uses the correct mixture, prepares the mixture properly, and cures the mixture as required), low outgassing materials for use on board spacecraft. Additionally, certain materials use MOCA (methylene-bis-ortho-chloroaniline) as a curing agent. Because the Department of Labor has included MOCA among the chemicals listed in an emergency temporary standard, certain precautions and cleanliness requirements must be followed when using it.

**APPENDIX  
CODE LIST OF MANUFACTURERS**

## CODE LIST OF MANUFACTURERS

AAC	Ablestick Adhesive Company Abletech Division Gardena, California
AAI	Anchor Alloys Incorporated Brooklyn, New York
AAT	ARNO Adhesive Tapes Incorporated Michigan City, Indiana
ABC	Andrew Brown Company Los Angeles, California
ABR	Amphenol Corporation Bunker Ramo Division Scarborough, Ontario, Canada
ACC	American Cyanamid Company Bloomingdale Department Havre de Grace, Maryland  Formica Corporation Cincinnati, Ohio  Plastics and Resin Division Wallingford, Connecticut
ACH	Acheson Colloids Port Huron, Michigan
ACM	Allied Chemical Corporation Mesa Products Los Angeles, California
ACR	Acme Resin Corporation Forest Park, Illinois
ACT	Acton Research Company Acton, Massachusetts
ADL	Arthur D. Little, Incorporated Cambridge, Massachusetts

AEC	Adhesive Engineering Company San Carlos, California
AEW	Alpha Wire Corporation Linden, New Jersey
AGI	AGI Rubber Company Bridgeport, Connecticut
ALL	Allaco Products Incorporated Westbury, New York
AMC	Amicon Corporation Lexington, Massachusetts
AMH	American Hoechst Delaware City, Delaware
AMI	American Microwave Industries Waltham, Massachusetts
AMP	AMP, Incorporated Harrisburg, Pennsylvania
AMS	American Metaseal Company Carlstadt, New Jersey
ANS	Arthur Ansley Manufacturing Company Perkasie, Pennsylvania
AOC	Amoco Chemicals Corporation Chicago, Illinois
AOP	American Optical Company Southbridge, Massachusetts
APC	Armstrong Products Company, Incorporated Warsaw, Indiana
APF	Avery Products Company Fasson Division Painesville, Ohio
APP	Applied Plastics Company El Segundo, California
APS	Advanced Process Supply Company Chicago, Illinois
APX	Apex Mills Incorporated New York, New York

ARC	Alloys and Research Company Cleveland, Ohio
ARM	John L. Armitage and Company Newark, New Jersey
ARP	American Reinforced Plastics Company Los Angeles, California
ART	Artus Corporation Englewood, New Jersey
AST	Astro Chemical Company, Incorporated Schenectady, New York
ATC	American Thread Company New York, New York
ATL	Atlantic Laminates Franklin, New Hampshire
ATP	Atlas Plastics Buffalo, New York
AUI	Automation Industries, Incorporated Danbury, Connecticut
AWC	Alpha Wire Company Elizabeth, New Jersey
BAC	Bacon Industries, Incorporated Watertown, Massachusetts
BAK	Baker Castor Oil Company Bayonne, New Jersey
BAL	Ball Chemical Company Glenshaw, Pennsylvania
BAR	Barry Wright Barry Division Watertown, Massachusetts
BCC	BASF Colors and Chemicals Incorporated New York, New York
BCM	The Borden Company New York, New York  The Borden Chemical Company Philadelphia, Pennsylvania

---

BCM	The Borden Company New York, New York Mystik Tape Northfield, Illinois
BEE	Bee Chemical Company Lansing, Illinois
BEH	Berkshire Hathaway, Incorporated New Bedford, Massachusetts
BEL	Balsa Ecuador Lumber Corporation New York, New York
BFG	B. F. Goodrich Chemical Company Cleveland, Ohio
BGG	The Biggs Company Santa Monica, California
BHM	Bently-Harris Manufacturing Company Conshohochen, Pennsylvania
BID	James G. Biddle Company Plymouth Meeting, Pennsylvania
BIW	Boston Insulated Wire and Cable Company Dorchester, Massachusetts
BLA	H. L. Blachford, Incorporated Troy, Michigan
BLD	Belden Manufacturing Company Chicago, Illinois
BLH	BLH Electronics Incorporated Waltham, Massachusetts
BPS	Bronze and Plastics Specialties Baltimore, Maryland
BRX	Brand-Rex Company Willimantic, Connecticut
CAC	Carroll Products, Incorporated Farmingdale, Long Island, New York
CAF	Cali-Foam Santa Ana, California

CAL	Calabra Plastics Upper Darby, Pennsylvania
CAM	Carmac Company Shawnee, Kansas
CAN	ITT Cannon Electric Los Angeles, California
CAR	Carter's Ink Company Cambridge, Massachusetts
CAU	L. D. Caulk Company Milford, Delaware
CCC	Chrysler Corporation Chemical Division Trenton, Michigan
CCE	Chemical Coatings & Engineering Company Media, Pennsylvania
CEL	Cellasto, Incorporated (Address Unknown)
CHE	Chemplast Incorporated Wayne, New Jersey
CHO	Chomerics, Incorporated Arlington, Massachusetts
CHR	Connecticut Hard Rubber Company New Haven, Connecticut
CIB	Ciba Corporation Summit, New Jersey
CIC	Cicoil Corporation (Address Unknown)
CLI	Caig Laboratories, Incorporated Westbury, New York
CLY	Clayborn Laboratories, Incorporated Santa Ana, California
CMC	Circuit Materials Company Princeton, New Jersey

**CMS** Coast Manufacturing and Supply Company  
 Livermore, California

**CMT** Cambridge Thermionic Corporation  
 Cambridge, Massachusetts

**COM** Compac Corporation  
 Newark, New Jersey

**CON** Conap, Incorporated  
 Allegany, New York

**COX** Cox and Company, Incorporated  
 New York, New York

**CPC** Crest Products Company  
 Santa Ana, California

**CPI** Chart-Pak Incorporated  
 Leeds, Massachusetts

**CPT** Coast Pro-Seal  
 Compton, California

**CRP** California Reinforced Plastics  
 (Address Unknown)

**CRY** Cryton Optics  
 Roslyn, New York

**CTC** Colombia Technical Corporation  
 Humiseal Division  
 Woodside, New York

**CTD** Carlisle Corporation  
 Tensolite Insulated Wire Company, Incorporated  
 Carlisle, Pennsylvania

**CTL** Chemical Technology Laboratories  
 Los Angeles, California

**CUM** Custom Materials, Incorporated  
 Chelmsford, Massachusetts

**CVC** Consolidated Vacuum Corporation  
 Rochester, New York

**DAD** Dadburn Electronics and Cable Corporation  
 New York, New York

DAY	Dayton Chemical Company Dayton, Ohio
DCC	Dow Corning Corporation Midland, Michigan
DEC	Dow-Elco Company Montibello, California
DEL	Delron Fasteners Santa Ana, California
DEU	Deutch Company Los Angeles, California
DEV	Devcon Corporation Danvers, Massachusetts
DEX	Dexter Corporation Midland Division Hayward, California
DIL	Dilectrix Corporation Farmingdale, Long Island, New York
DIN	Dodge Industries Hoosick Falls, New York
DIX	Dixon Corporation Bristol, Rhode Island
DNN	Dennison Manufacturing Company Framingham, Massachusetts
DNS	Dennis Chemical Company St. Louis, Missouri
DOW	Dow Chemical Company Midland, Michigan
DRC	Davol Incorporated Providence, Rhode Island
DSC	D. Strauss Company, Incorporated New York, New York
DUP	E.I. duPont de Nemours and Company, Incorporated Wilmington, Delaware  Elastomer Chemicals Department Fabrics and Finishes Department Film Department Plastics Department

EAS	Eastman Kodak Company Rochester, New York
ECC	Electronized Chemicals Corporation Burlington, Massachusetts
ECP	Eclipse-Pioneer Division Teterboro, New Jersey
EDC	Electro-Development Corporation (Address Unknown)
EFI	Electrofilm Incorporated North Hollywood, California
EHC	Engelhard Minerals and Chemicals Corporation Newark, New Jersey  Engelhard Industries Division Newark, New Jersey  Minerals and Chemicals Division Edison, New Jersey
ELB	Elliot Brothers (Address Unknown)
ELI	Electroply, Incorporated (Address Unknown)
ELP	Elco-Pacific Company El Segundo, California
ELR	Electrical Refractories East Palestine, Ohio
EMC	Emerson and Cuming, Incorporated Canton, Massachusetts
ENJ	Enjay Chemical Company New York, New York
EON	EON Corporation Los Angeles, California
EPC	EpoxyLite Corporation South El Monte, California
EPK	Epoxy Technology Incorporated Watertown, Massachusetts

<b>EPO</b>	Epoxy Products Company Irvington, New Jersey
<b>EPP</b>	Eppley Laboratories Incorporated Newport, Rhode Island
<b>EPX</b>	Epoxy Pack Company Los Angeles, California
<b>ERP</b>	Expanded Rubber and Plastics Gardena, California
<b>ESX</b>	Essex Chemical Corporation Clifton, New Jersey
<b>EWC</b>	Elco Webster Corporation Watertown, Massachusetts
<b>FBR</b>	Dart Industries Fiberfil Division Evansville, Indiana
<b>FCC</b>	Fluorocarbon Company Anaheim, California
<b>FEN</b>	Fenwal Incorporated Ashland, Massachusetts
<b>FER</b>	Ferro Corporation Cleveland, Ohio
<b>FHB</b>	H. B. Fuller Company St. Paul, Minnesota
<b>FIB</b>	Fiberite Corporation Winona, Minnesota
<b>FIR</b>	Franklin Institute Research Laboratories Philadelphia, Pennsylvania
<b>FLA</b>	Fortin Laminating Corporation San Fernando, California
<b>FLC</b>	Fortin Plastics, Incorporated Valencia, California
<b>FLO</b>	Floquil Products Incorporated Cobleskill, New York
<b>FLX</b>	Flexaust Company New York, New York

FMC	FMC Corporation Industry, California
FPC	Finch Paint and Chemical Company Torrance, California
FPI	Furane Plastics Incorporated Los Angeles, California
FRC	Fargo Rubber Corporation (Address Unknown)
FUL	Fuller Company (Address Unknown)
GAC	Goodyear Aerospace Corporation Akron, Ohio
GBE	Gudebrod Brothers Silk Company, Incorporated Electronics Division New York, New York
GCC	General Cement Rockford, Illinois
GCE	G. C. Electronics Company Rockford, Illinois
GDC	General Dynamics Convair Division San Diego, California
GEC	General Electric Company Plastics Department Pittsfield, Massachusetts  Silicone Products Department Waterford, New York  Wire and Cable Department Bridgeport, Connecticut
GEN	General Electronics, Incorporated Newark, New Jersey
GEV	General Electric Company Reentry and Environmental Systems Valley Forge, Pennsylvania

<b>GHI</b>	Grayhill, Incorporated La Grange, Illinois
<b>GLI</b>	Garlock Incorporated Palmyra, New York
<b>GMC</b>	General Mills Chemical Division Kankakee, Illinois
<b>GPM</b>	General Plastics Manufacturing Company Tacoma, Washington
<b>GRC</b>	Goshen Rubber Company Goshen, Indiana
<b>GRO</b>	Grow Chemical Corporation Cleveland, Ohio
<b>GRU</b>	Grumman Aerospace Corporation Bethpage, Long Island, New York
<b>GSC</b>	Goddard Space Flight Center Greenbelt, Maryland
<b>GTR</b>	General Tire and Rubber Company Akron, Ohio
<b>GTS</b>	G. T. Schjeldahl Company Northfield, Minnesota
<b>HAC</b>	Hughes Aircraft Company Culver City, California
<b>HAV</b>	Haveg Industries Winooski, Vermont
<b>HBM</b>	Hettinger, Baldwin, and Messtechnik The Netherlands
<b>HCC</b>	Hughson Chemical Company Erie, Pennsylvania
<b>HER</b>	Hercules Incorporated Wilmington, Delaware
<b>HEX</b>	Hexcel Products, Incorporated Berkeley, California
<b>HLR</b>	Hoffman-La Roche, Incorporated Nutley, New Jersey

**HMB** Heminway and Bartlett Manufacturing Company  
New York, New York

**HNC** Henkel and Cie  
Federal Republic of Germany

**HOB** Howe and Bainbridge, Incorporated  
Boston, Massachusetts

**HSD** Hawker and Siddeley Dynamics, Limited  
London, England

**HSP** High Strength Plastics Corporation  
Chicago, Illinois

**HTW** Hi-Temp Wires Company  
Westburg, Long Island, New York

**HUE** Hughes Associates  
Excelsior, Minnesota

**HWC** Hope Webbing Company, Incorporated  
Providence, Rhode Island

**HYD** Hydron Laboratories  
(Address Unknown)

**HYS** Hysol Division  
Olean, New York

**IBM** IBM Corporation  
Armonk, New York

**ICO** Icore Wire and Cable  
Santa Barbara, California

**IER** International Electronic Research Corporation  
Burbank, California

**IMP** Imperial-Eastman  
Chicago, Illinois

**IND** Independent Ink Incorporated  
Gardena, California

**INK** Inks and Specialties  
Irving, Texas

**INR** Industrial Electronic Rubber Company  
Twinsburg, Ohio

INS	Insta-Foam Products Addison, Illinois
INX	Insl-X-Company Brooklyn, New York
IRC	Isochem Resins Company Lincoln, Rhode Island
ITR	IIT Research Institute Chicago, Illinois
ITT	ITT Industrial Products Division San Fernando, California

*"The aeronautical and space activities of the United States shall be conducted so as to contribute . . . to the expansion of human knowledge of phenomena in the atmosphere and space. The Administration shall provide for the widest practicable and appropriate dissemination of information concerning its activities and the results thereof."*

—NATIONAL AERONAUTICS AND SPACE ACT OF 1958

## NASA SCIENTIFIC AND TECHNICAL PUBLICATIONS

**TECHNICAL REPORTS:** Scientific and technical information considered important, complete, and a lasting contribution to existing knowledge.

**TECHNICAL NOTES:** Information less broad in scope but nevertheless of importance as a contribution to existing knowledge.

**TECHNICAL MEMORANDUMS:** Information receiving limited distribution because of preliminary data, security classification, or other reasons. Also includes conference proceedings with either limited or unlimited distribution.

**CONTRACTOR REPORTS:** Scientific and technical information generated under a NASA contract or grant and considered an important contribution to existing knowledge.

**TECHNICAL TRANSLATIONS:** Information published in a foreign language considered to merit NASA distribution in English.

**SPECIAL PUBLICATIONS:** Information derived from or of value to NASA activities. Publications include final reports of major projects, monographs, data compilations, handbooks, sourcebooks, and special bibliographies.

**TECHNOLOGY UTILIZATION PUBLICATIONS:** Information on technology used by NASA that may be of particular interest in commercial and other non-aerospace applications. Publications include Tech Briefs, Technology Utilization Reports and Technology Surveys.

Details on the availability of these publications may be obtained from:

**SCIENTIFIC AND TECHNICAL INFORMATION OFFICE**

**NATIONAL AERONAUTICS AND SPACE ADMINISTRATION**
