Form Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302, and to the Office of Management and Budget, Paperwork Reduction Project (0704-0188), Washington, DC 20503.

SUPERCONDUCTIVE ELECTRONIC DEVICES USING FLUX QUANTA
from
James E. Nordman
Department of Electrical and Computer Engineering
University of Wisconsin-Madison
1410 Johnson Drive
Madison WI 53706
Tel: (608) 262-2761

The student supported by this grant was Bruce Davidson. However, during this final period of a no-cost extension, his RA salary was provided by the University of Wisconsin. The remaining Air Force Funds were used only for supplies and travel necessitated by his need to use a scanning electron microscope at Stevens Institute of Technology in Hoboken, New Jersey. The details of his experiments, on fabrication and analysis of SNS Josephson junctions made by writing across a thin YBCO film with a very fine electron beam, were discussed in the third annual technical report.

Mr. Davidson has been very successful in making nearly ideal SNS junctions on high T_c superconducting thin films with this scribing technique. He has spent the last few months making careful and detailed electrical measurements on these junctions. A paper has been accepted by Applied Physics Letters and a second paper and his PhD thesis are in preparation. He expects to finish his degree during the Fall semester of 1996.
