DESIGN PLAN FOR THE COLLECTION, STORAGE, AND ACCESS OF CLOSE AIR SUPPORT PERFORMANCE DATA FOR THE AIR-GROUND TRAINING AND FEEDBACK SYSTEM (AGTFS)

I. PURPOSE

This document is the eighth in a series of interim reports concerning the Air-Ground Training Feedback System (AGTFS) being developed under Army Research Institute Contract MDA 903-92-D-0075. The purpose of this paper is to describe the design and specifications of the Close Air Support database as well as how the measurement data, both process and outcome, for close air support (CAS) in a mid-high intensity conflict will be collected and entered into the research database.

II. INTRODUCTION

As the Airland Battle doctrine continues to evolve, the need for enhanced coordination between the ground and air forces becomes ever more critical. To meet this requirement the military has instituted a number of organizational reforms, such as unified commands and an emphasis on staff training in interservice operations. The Gulf War further highlighted the need for increased training at the tactical level.

Joint ground-air training is conducted at various levels at all the Combat Training Centers (CTCs). The National Training Center (NTC) is linked to the Air Forces's Air Warrior I program which supplies CAS in a mid-high intensity combat training environment. The JRTC is supported by Air Warrior II which provides CAS in a Low Intensity Conflict (LIC) environment. The training environments at both locations provide adequate maneuver and air space to provide realistic training to both ground and air forces.

The increased emphasis on joint operations and the availability of the Combat Training Centers that employ Airland Battle scenarios make it both practical and worthwhile to develop an air-ground training and feedback system. The AGTFS provides for the results to be organized into a common database. This will allow all services access to information to identify systemic issues, guide training development, and provide feedback to units on their performance during training. The data collected will provide a quantifiable basis for further training resource requirements.

Several previously published reports in this study, and in the parallel CAS in low intensity conflict study, have provided necessary input to the database. These include: Measurement Model for Evaluating Mission Results and Evaluating CAS Battle Task Performance (Keesling 1993), Integrated List of Battle Tasks for Close Air Support in a Mid to High Intensity Conflict (Root, 1994), and Performance Measurement Index (Jarrett, 1994), Field Tryout of Close Air

Support Task Performance Measurement System, Air-Ground Training and Feedback System (Huffman 1994), and Database Specification Report, Air Ground training and Feedback System for Low Intensity Conflict (Butterfield, Huffman, Jarrett, 1994). The paragraphs below contain a more detailed discussion of the applicability of these five reports to the database and this report.

The first report describes the measurement model used for this project which is discussed in the Measurement System Criteria Model paragraph below.

The second report identified the battle tasks necessary to accomplish CAS in a mid-high intensity environment. These provided the basis for the process measures that were used to collect unit performance data during the field tryout.

The third report (Performance Measurement Index) identified the instrumented systems in place at NTC and Air Warrior I. It developed the outcome measures based on data that can be collected using the existing instrumentation and addressed the methodology, procedures, and equipment for collecting outcome measures at NTC. This collection system and the outcome measures are discussed in detail in the Data Collection section, below.

The fourth report (Field Tryout of Close Air Support Task Performance Measurement System) addressed the field verification test conducted at NTC. This test evaluated the process and outcome measures and the applicability of the tasks in the task list. The task list for the NTC evaluation was modified based on the results of the, previously conducted, JRTC field verification. After modification, the list was reconfigured into forms suitable for the assessment of CAS employment during a field exercise at the NTC. The reconfigured task list was used to assess the employment of CAS, and the applicability of the tasks themselves, during the required field test of the measurement system. Using the results of the field verification test, the CAS task list was again modified and a final list was produced.

The fifth report (Database Specification Report) describes the development of the prototype database. That database was used to collect and analyze the data from the verification test conducted at JRTC and the field tryout test at NTC. The database was constructed based on the identified data collection mechanisms and sample report requirements, as described in the Database Specification Report.

III. STUDY METHODOLOGY

Using the model constructed for the Air Ground Training Feedback System, Mid-High Intensity study as a framework, the CAS battle tasks were identified. A front end analysis was conducted to identify the specific criteria measures of battle task performance. A doctrinal review was conducted and the tasks derived were used to produce a doctrinally based task list.

The candidate task list was then verified through interviews with subject matter experts (SMEs) at NTC and AW1. The tasks were modified based on those interviews and reconfigured

into forms suitable for the assessment of CAS employment during an exercise. The reconfigured task list was used to assess the employment of CAS, and the applicability of the tasks themselves, during the required field tryout of the measurement system. Using the results of the field tryout, the CAS task list was modified and a final list was produced.

While the field tryout at NTC was being conducted, the prototype database constructed during the field verification of the low intensity CAS task list was modified to provide for the different data collection mechanisms at NTC and to allow input of automated outcome measure data. Once the field tryout at NTC was completed, a final, tested, CAS battle task list was developed that consolidated the battle tasks for both the mid-high intensity and the low intensity conflict. A new database structure was then constructed which would apply to that finalized, consolidated, task list.

The specifications and the programs identified in this report are those that describe the database that resulted from the use of the prototype database to compile and analyze the data derived from the field tryout test at NTC. The major changes to the prototype database were a reordering of the performance tasks (process measures), elimination of several tasks, deletion of some variables and/or report selection criteria from the database, deletion of one pre-set report, finalization of the outcome measures report formats, and the addition of Maneuver Execution tasks. The development and specifications of that database are described below.

IV. MEASUREMENT SYSTEM CRITERIA MODEL

A Measurement Model Supporting the Air-Ground Training Feedback System (Keesling, 1993) reported on the model developed for the Air-Ground Training Feedback System for Close Air Support study (Root, 1994). The measurement model identified two main areas in which performance must be measured. The first was "process measures" which examine the tasks that commanders and units must perform to synchronize and apply the air-ground assets effectively. The second was "outcome measures" which examine the effects of the air-ground systems on the battlefield.

Figure 1 shows a conceptualization of the measurement model. The figure depicts the use of doctrinal and operational information sources to develop process measures. These process measures are in the form of battle tasks which must be performed by both the ground and air forces involved in planning and execution of CAS. The performance measures are linked to the outcome measures with an arrow showing that variations in the performance of process tasks will result in variations in outcomes. The results of both the process and the outcome measures are then shown feeding into four separate areas or functions: providing AAR input to ground/air units; providing lessons learned for the ground/air units; making revisions to the measurement system; and, building a research database to provide data for doctrine, organization, training, materiel, and leadership (DOTML) decisions.

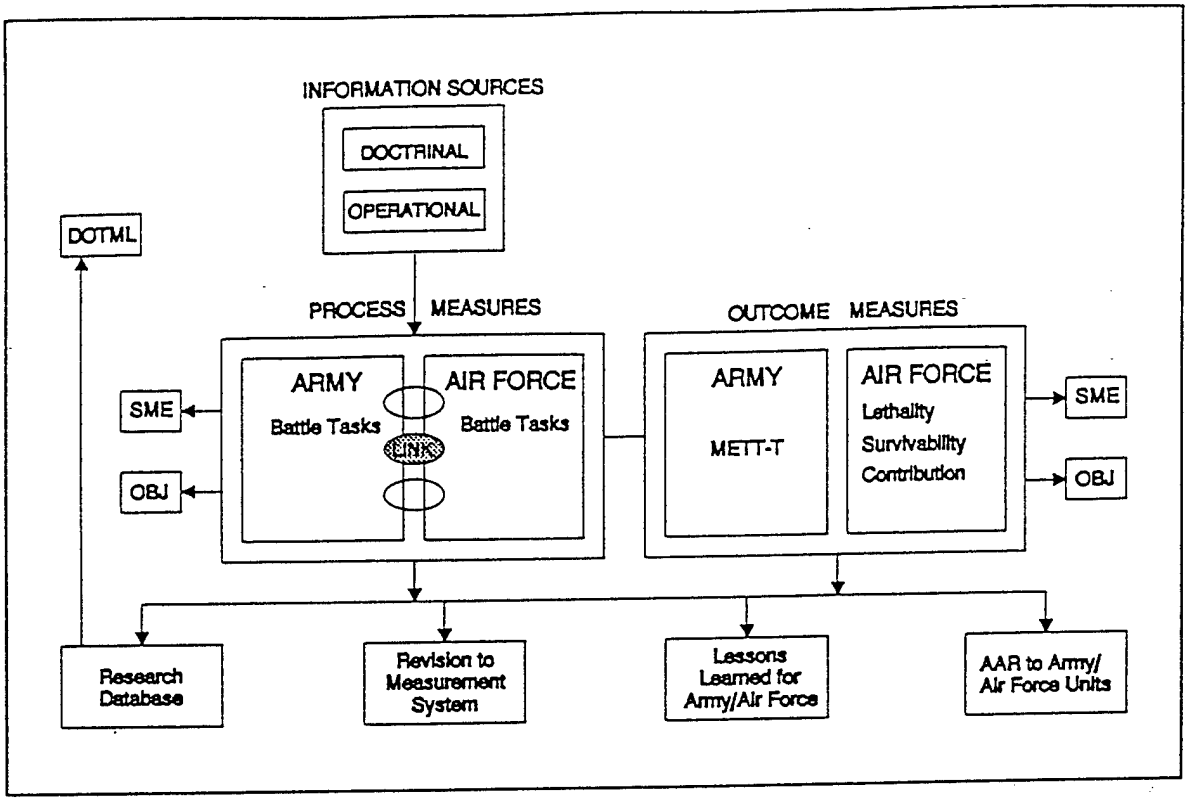

Figure 1 Schematic Organization of the Battle Task and Outcome Measurement Model

This model is applicable to both mid-high intensity and low intensity conflict and provides an operational structure which organizes the CAS measurement system. The model identified broad categories of measures to be included. Previous research (List of Battle Tasks for Close Air Support in a Low Intensity Conflict (Front End Analysis) (Huffman 1994) and Field Tryout of Close Air Support Battle Task Measurement System (Implementation Test Report) (Huffman 1994)) demonstrated the applicability of methods for developing specific process and outcome measures. An additional consideration was the current training feedback processes (After Action Reviews, Mission Debriefs, etc.) being used at the NTC, Fort Irwin, CA, and Air Warrior I, Nellis AFB, Nevada. Process measures include performance of the close air support battle tasks (in planning, preparation, and execution phases). Outcome measures include tactical mission success or failure, bomb damage, aircraft losses etc. Data on mission conditions (weather, terrain, type mission, etc.) are also needed to provide a context for the other measures. Analysis of these measures indicated that some could be highly objective (e.g., losses of combat systems) while others would require judgement by subject matter experts (e.g., performance of certain battle tasks).

Using this analysis framework, the data to be collected and stored in the database was

identified. The data format of the task list used to collect data on CAS in the mid-high intensity environment at NTC was designed to be compatible with the Combined Arms Battle Task mission books (Lewman, 1994) as well as other analytical tools in use at the Combat Training Center Archive.

IV. DATABASE REQUIREMENTS

A. General Requirements: Defined in Statement of Work

The development of the database for the Air Ground Training and Feedback System (AGTFS) is closely coordinated with the study of close air support for low intensity conflict (Root, 1994). The separate statements of work for both projects required each resulting database to allow "researchers to fully utilize the data collected with this methodology," and to "provide a structure that will accommodate the storage and retrieval of this data." They further state, "This data should be readily available to the user community and accessible at the CTC Archive." This requirement was interpreted to mean that data should be gathered and stored in a common system that would conform to database standards developed for the CTC Archive and would facilitate linking the data in the CAS databases with other data in the archive.

By using a common CAS measurement framework (Keesling, 1993), developing very similar data collection instruments, and by designing a common database, the two AGTFS

projects were able to conform to the requirements for user access and compatibility with CTC Archive databases while minimizing redundant development efforts. The common database, called the Collective AGTFS Database, is designed to be used in conjunction with other CTC Archive databases as shown in Figure 2. At each CTC shown, the information gathered about CAS-related performance may be fed into the AAR and THP products developed at the CTC (e.g., task performance) while other information that is collected for those products is fed into the collection of CAS performance measures (e.g., air BDA). The AAR and THP products are intended to inform the rotating units about their performance so they may improve upon their training.

Once the CAS performance measures from each CTC are entered into the Collective AGTFS Database, they may then be combined with information from other CTC Archive databases to develop lessons learned and various research products (e.g., trends studies or studies of particular DOTML issues). Not shown in Figure 2, for the sake of clarity, are the linkages fron AAR and THP products to the other CTC Archive databases, or the additional data collection effort that go into filling those databases.

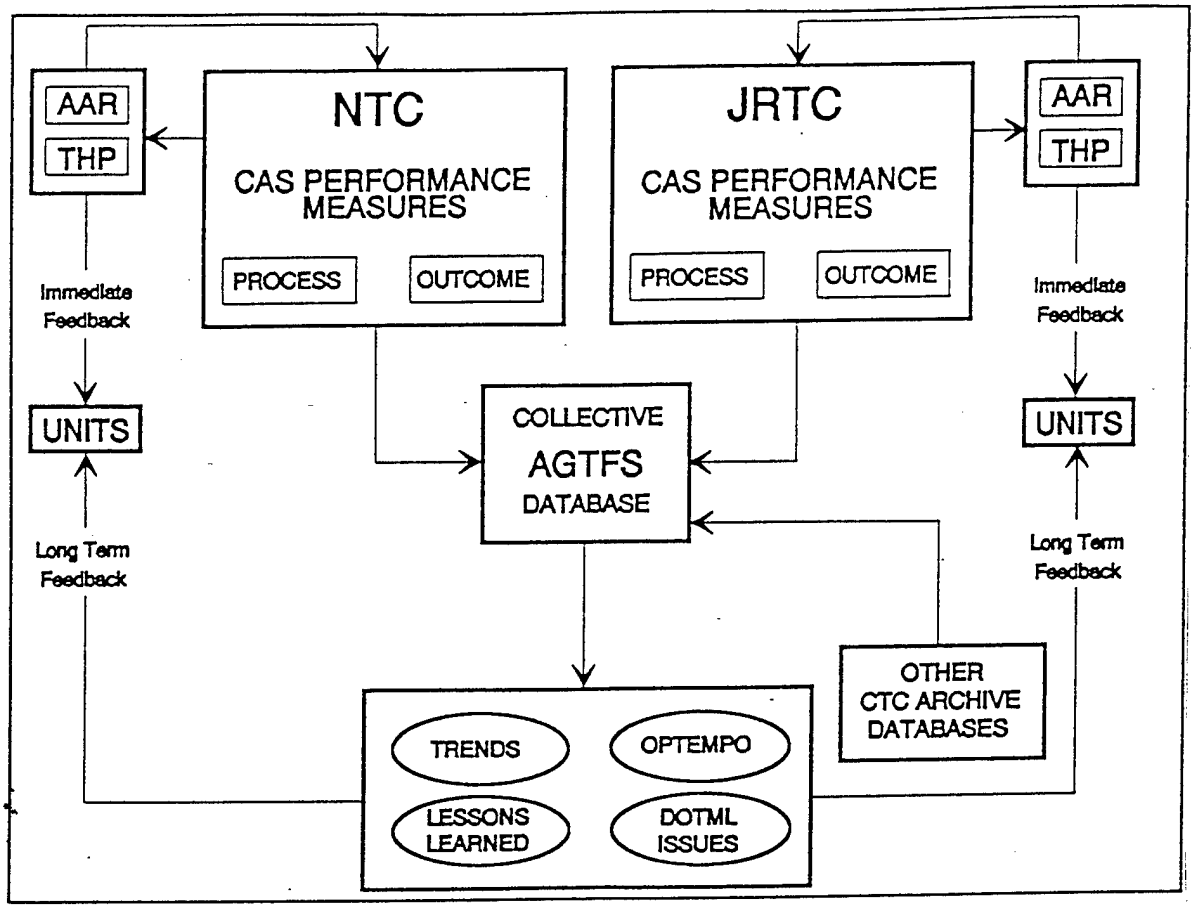

Figure 2 Schematic of Collective Database Position within the AGTFS

VI. DATABASE REPORT

A. Formats and Organizational Requirements

The initial database requirements were identified prior to the field verification test of the close air support battle task list at JRTC. Specific pre-formatted database reports that were anticipated to be required for the analysis of the results of the field verification test were identified. As a result of identifying those report formats, the need to be able to sort the database by several different variables was also identified.

As the development progressed, it was evident that several of the identified formats were too cumbersome to be of much use. In addition, as the field verification was conducted, the assumptions on how the O/Cs might combine their efforts while making assessments (which had been the basis for some of the reports) proved to be incorrect, invalidating some of the requirements for comparison summaries. Last, after completion of the field verification test at JRTC and following an evaluation of the database, one additional report turned out to be of little utility.

As a result of the field verification test, and the data analysis, the task identification levels and two pre-formatted report formats were retained. This database was considered the test database for the process measures and was used as the initial database for the field tryout test at NTC. The list of pre-formatted reports retained for the database and used for the analysis of the data upon completion of the rotation at NTC are shown in Figure 3 below. The detailed requirements, formats, and sample reports in the designated formats are in Appendix A.

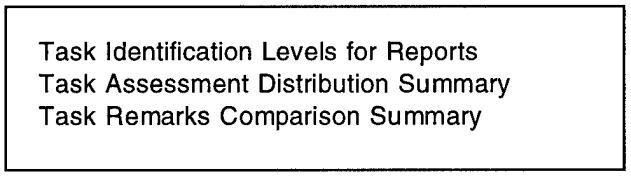

Figure 3 Pre-formatted Database Reports

In addition to the above requirements, other requirements were identified to allow the user to manipulate the database data using the following variables. A major addition to these was the requirement for a collective, or "All" option to be added to each variable:

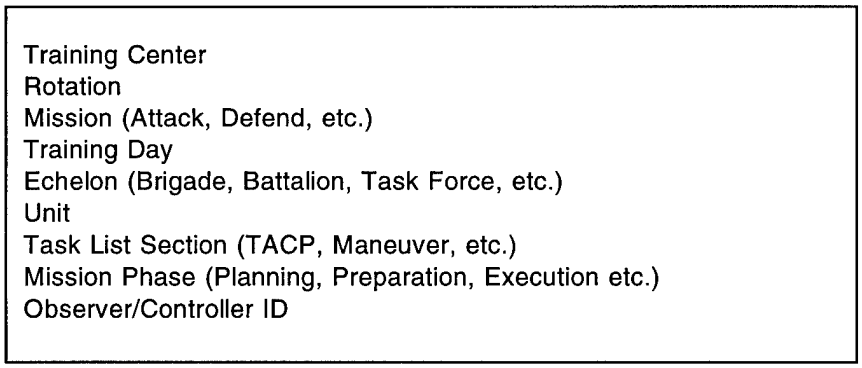

Figure 4 Required Database Sorting Variables

B. Data Collection

The measurement system designed to collect the data for AGTFS (in both low and mid-high intensity conflicts) consists of both process measures and outcome measures. The instrumented systems provide input to the outcome measures at NTC. The responses to the CAS task lists that have been developed provide the input for the process measures.

At the present time, data for process measures can only be collected manually by observer/controllers (O/Cs) entering comments in paper based forms and booklets or electronic

collection instruments. While data for outcome measures can be collected both manually from the O/Cs and electronically through the NTC and AW I instrumentation systems, overall, data collection at the CTCs for CAS is mostly manual.

Data collection for input into the database is designed to follow the After Action Review format. Completion of a database for both the process and outcome measures that receive electronic data input from the CTCs is required so that it will be in place when full instrumentation is installed and working at all the CTCs. This report addresses the development of both the outcome measure and the process measure databases.

Data collection for this study relied on current NTC practices and procedure. In order to evaluate the utility of the database, it was necessary to simulate the type of electronic data input anticipated as a result of future instrumentation improvements. The ECI (electronic collection instrument) equipment and software was utilized to simulate those expected improvements in instrumentation. Data was collected during an NTC Rotation using the ECI format with paper task lists as the field collection system at NTC. The paper based assessments were later entered into the ECI and then downloaded into the database. At AW I, the Forward Air Controllers entered their process measure responses directly into an ECI form which was then downloaded into the database. Copies of task list booklets used for the data collection were included with the field tryout report. A list of the task list booklets used for data collection is included below.

The collection and identification of data to be put into the database is discussed below. The following paragraph on methodology for data collection discusses the way the data was collected and identifies, and provides definitions for, the various forms and assessments that were used. The reports, formats, and displays that were identified as being required from the database are attached at Appendix A.

C. Methodology for Data Collection

The collection and identification of information to be put into the database is discussed below. This section discusses the way the data was collected and defines the various forms and assessments that were used.

The methodology for data collection at NTC was to satellite on the Observer/Controller (O/C) teams at the brigade and task force level. O/Cs act in the capacity of assessors of the unit's employment of close air support as they perform their normal duties of observing and coaching the unit in tactical training. As the unit performed its normal planning, preparation and execution for its mission, the O/Cs observed whether those tasks identified as relating to CAS were accomplished. The O/Cs then made the appropriate assessment entries in booklets.

While the maneuver unit O/Cs (brigade and task force) collected data on the unit's tasks in relation to CAS employment, the Air Force Tactical Air Control Party (TACP) O/Cs collected the data on the unit TACPs and Air Liaison Officers (ALO) for the TACP planning, preparation, and execution of CAS. These O/Cs also made the appropriate assessment entries in booklets.

Air Force Air Forward Air Controller (AFAC) personnel, and contractor personnel, collected the information on the AFAC planning and preparation tasks at AW I. This data was entered directly into the AFAC data forms loaded into the ECI.

In addition, information on Air Control Orders, Air Tasking Orders, sortie allocations, availability of aircraft, preplanned and immediate air requests and Bomb Damage Assessment was collected at the NTC's Training Analysis and Feedback (TAF) Facility and at AW I's flight operations.

D. Process Measures Data Collection Process

The data collection plan described below is the one used during the field tryout test. The data collected during the test was used to fill and test the utility of the prototype database. Some of the procedures and methods were changed as a result of the test. Those changes that affect the design, loading, composition, and use of the database will be discussed later in this report.

The initial CAS task list was divided into seven sections: Maneuver Planning and Maneuver Preparation; TACP Planning and TACP Preparation; AFAC Planning and AFAC Preparation; and CAS Execution. The maneuver tasks had previously been divided into sub-sections for each staff functional area (operations, intelligence, fire support, etc.) for the verification test at JRTC. That was determined to not be a useful step in the evaluation process and was eliminated for the field tryout at NTC. The fire support element was determined to be the maneuver staff element most involved with CAS. When the maneuver tasks were consolidated into one section, the fire support section was retained to provide input to the CAS maneuver tasks. For the NTC verification test, the planning and preparation sections were further combined for each of the functional areas, leaving only four sections (Maneuver, TACP, AFAC, and CAS Execution). Outcome measures were included with the CAS Execution tasks. These sections were then reduced in size, printed, and bound into booklets approximately 5.5" by 8.5" in size so that they would fit in the BDU trousers' cargo pocket. A set of the booklets was included with the report on the verification test (Huffman, 1994). All O/Cs at NTC used the booklets. In addition to the paper collection forms (the booklets), the Electronic Collection Instrument (ECI) was used by AFAC personnel at Air Warrior, Nellis AFB. This provided for both paper and electronic data collection processes to be evaluated. The electronic data was directly entered into the database that was available on site while the verification test was being conducted.

The task list booklets were filled out at both the brigade and the task force echelons (for two task forces) for each mission. Due to shortages of TACP O/Cs, the TACP planning and preparation task lists were filled out twice, during the mid- and end-rotation AARs conducted with the unit ALOs. The AFAC planning and preparation task lists were filled out by the AFACs on each day that missions were flown. The execution task list was filled out by the TACP O/Cs for each CAS mission flown.

Recognizing that different Observer/Controllers (O/Cs) might assess the tasks from any

single section, the O/Cs were instructed that any O/Cs entering assessments to a booklet should be identified by call sign. One or more O/Cs could contribute to the booklet for a given mission over the time period for that mission. Several O/Cs could contribute to the ratings on one booklet or data file, either by adding assessments to partially assessed tasks during the same day; or by assessing additional tasks in the same section on different days. O/Cs were instructed to use a separate page for their individual comments. Due to database design and the format of the ECI, it later turned out that only one O/C could be identified with any individual booklet and that it was not possible to separately identify individual O/Cs with separate pages in a book. O/Cs were provided the following scale and meanings for their assessments:

NOT DONE	Unit should have performed the task listed, but did not attempt to perform it.
NOT ADEQUATE	The unit did not perform the task to standard.
MARGINALLY ADEQUATE	The unit successfully performed the task with some shortcomings. The shortcomings were not severe enough to require complete retraining.
ADEQUATE	The unit successfully performed the task to standard. The performance was free of significant shortcomings.
SUPERIOR	The unit exceeded the standard by a significant margin. Unit performance of the task stands out to the extent that it should be cited in the TF AAR. Remarks section should be used to sketch any TTPs that should be relayed to appropriate service schools.
NOT OBSERVED	Unit performed or attempted to perform the task, but OC did not observe the performance or the outcome.
NOT APPLICABLE	The task is not performed by this type or echelon unit. This task is not applicable to the battlefield operating system being evaluated by the OC. The task was not relevant to the given mission.
	Each major task is followed by a remarks section for any additional comments or explanation of the assessment.

Figure 5 Task Assessment Scale

The O/Cs were also given the following instructions on required and optional assessments.

If a major task is assessed "ADEQUATE" or better, then the subordinate tasks need not be addressed unless they are "NOT ADEQUATE".
If a subordinate task is "NOT ADEQUATE", it should be assessed even if the overall task is judged "ADEQUATE" or better.
If a major task is assessed as "NOT ADEQUATE", then all the subordinate tasks need to be individually assessed to identify, in more detail, the rationale for the overall "NOT ADEQUATE" assessment.
If the subordinate tasks do not adequately explain why a major task is being assessed "NOT ADEQUATE", the remarks section should be used to identify the additional factors which caused that assessment.

Figure 6 Required Assessments

Each O/C using the ECI was instructed to select the form that matched the functional area for which the O/C was responsible and the phase of the mission being evaluated. The O/Cs using the booklets were given the appropriate paper forms (booklets) at the beginning of each mission.

After selecting, or being given, the proper form, the O/Cs filled in the header information on the form, which included: Rotation, Training Day, O/C Identity, Unit Mission, CAS Mission, and Unit. This allowed each data collection form to have a unique identifier compiled from the header information on the form.

The booklets, and the forms prepared in the ECI, were given distinctive names and two letter identification codes to facilitate data entry of uniquely identified responses into the database. Each numbered or lettered task and subtask was designed to have a unique task data element field identifier consisting of the one or two letter form prefix identifying the section (see below) and the complete task number. The task numbers for planning and preparation tasks for any given section are numbered consecutively (e.g., TACP Planning section contained tasks G01-G28 and TACP Preparation section contained tasks G29-G35) and those task numbers are discreetly identified in the database with the appropriate phase.

The names and corresponding codes are as follows:

FORM NAME	FORM PREFIX FOR TASK ID
Maneuver [Fire Support] Planning and Preparation	MF
TACP Planning and Preparation	G
AFAC Planning and Preparation	A
CAS Execution and Outcome Measures	GA

Figure 7 Form and Task Identifier Codes

Data collection was conducted using the reduced size, bound booklets containing the required tasks for the maneuver units. The Airborne Forward Air Controller (AFAC) personnel were selected to be trained on the Electronic Collection Instrument (ECI) for use as primary means for the data collection.

Maneuver unit O/C personnel were provided the booklets at the beginning of each of the four force-on-force missions of the rotation and the books were collected during the preparation for the AAR for each mission. In addition, books were also distributed to and collected from the fire support O/C on the Live Fire team for the two live fire missions. Air Force O/Cs and unit ALOs were provided books during the mid-rotation AAR and at the completion of the rotation. Task assessments were made during the AARs and the booklets collected. Execution and outcome measures were assessed by the TACP O/Cs at the Training and Feedback (TAF) facility for each CAS mission flown. All of the assessments at NTC were completed in the books. That data was then entered into the ECI by contractor personnel and downloaded to the database for on site analysis. The AFACs at Nellis completed the AFAC planning and preparation task lists for each of the missions flown and entered their responses directly into the ECI. That data was downloaded to the database by contractor personnel upon completion of the rotation.

The Observer/Controller team and unit player identifiers are shown in the chart below.

Maneuver Observer/Controller Team Position				
	Identifier Call Sign			
	Brigade Team	Heavy TF	Light TF	Live Fire
Fire Support O/Cs	F20	F30	F40	Z27
Air Force TACP Observer/Controller Team and Unit Players				
TACP O/Cs	RAVEN			
Unit ALO/TACPs	ANTI30	TRP60	ANTI32	
AFACs (All)	MISTY			

Figure 8 Observer/Controller Positions and Identifiers.

E. Outcome Measures Data Collection Process

Outcome measures examine the effects of some activity. At the Combat Training Centers, outcome measures are used to exhibit the results of the employment of combat systems on the training battlefield. The results consist of electronically collected force-on-force engagement outcomes, subjective observations of weapons' effects, or an analysis of the participants' actions and their results. Actions are the coordination and communications between participants, tactics, and the synchronization of assets. Specifically, this report is interested with outcome measures for the Air-Ground Training and Feedback System (AGTFS) that capture the effects of close air support aircraft at the NTC.

The outcomes for the AGTFS are the physical actions and effects of close air support at the NTC. Close air support is defined in JCS Pub. 1 as: "Air action against hostile targets which are close to friendly forces and which require detailed integration of each air mission with the fire and movement of those forces."[1] Execution of a close air support mission is the performance of physical actions against hostile targets. The outcome of a close air support mission is the effect of those actions on the target.

---

[1] Joint Chiefs of Staff, Department of Defense Dictionary of Military and Associated Terms, JCS Publication 1 (Washington, D.C.: U.S. Government Printing Office, 1 January 1986), p. 70.

While the outcomes of a CAS mission are the effects of the weapons on a target, to be useful, outcome measures should allow commanders, trainers, and analysts to understand not only what happened but also why something happened. Outcome measures are more than just a number of weapons launched and number of targets hit. Considerations for the AGTFS outcome measures are shown in Figure 9 below.

Effects of Ground and Air Weapons	• Casualties on the ground caused by air-to-ground weapons. • Aircraft casualties caused by small arms and surface-to-air weapons. • Effects of the air attack on the enemy ground force's actions. • Effects of the air attack on friendly ground forces.
Precision of the Delivery of Air-to-Ground Weapons	• Aircraft attack the correct target. • Weapons hit the correct target.
Tactics Used by Aircraft	• The use of terrain and flight techniques. • The use of countermeasures.
Coordination Between Air and Ground Forces	• Delivery of air-to-ground weapons support the ground mission. • The air attack is synchronized with the ground forces.

Figure 9 Outcome Measure Considerations

The Performance Measure Index (of the ATGFS) is based on the NTC's and Air Warrior I's collective electronic Measurement and Debriefing System (See Performance Measure Index for the Air-Ground Training Feedback System, HumRRO, P. Jarrett, 1994), and is derived from these three measures:

Lethality: The *Lethality Component Measure* (LCM) is a measure of success achieved by the air platforms against ground targets. The LCM measures the performance of all the air crews in a given mission. LCM is not concerned with what target is attacked; it is only concerned with the physical outcome of a given attack. Differentiating between targets is part of the Contribution Component Measure. The LCM consists of a ratio for each mission: The number of kills made divided by the number of air-to-surface weapons used. This measures the effectiveness of the pilots to engage targets with the aircraft's weapon systems. The two components of this measure are collected electronically from the instrumentation system.

Survivability: The *Survivability Component Measure* (SCM) is the ratio of surviving

aircraft at the end of a mission to the aircraft available at the beginning of the mission. The SCM is not concerned with why an aircraft is killed, or how it was killed. SCM only measures the percentage of surviving aircraft against total aircraft committed. The SCM is collected and reported in the same manner as the LCM. This measure uses the number of aircraft at the start of a mission and the number of aircraft at the end of a mission to determine the ratio. This is an objective measure collected electronically.

Contribution: The *Contribution Component Measure* (CCM) is a collective measure based upon the plan, coordination, and attack. The CCM is a subjective analysis of how well the ground and air components synchronized the use of CAS. The CCM is collected as a series of observations made by observer/controllers. Observer/controllers make these observations as part of their critique of the elements participating in the training. Observer/controllers gather CCM data at the same time they observe operations. The framework for the analysis lies in the Army's METT-T (mission, enemy, troops, terrain, and time) method for mission analysis:

Mission: The mission is the result of what the ground commander wants to achieve from the close air support sorties. During planning, the ground commander has determined that the combat power of the close air support sorties will accomplish some action that will help the ground forces accomplish their mission. Examples are, the close air support destroys an enemy unit, close air support attacks delay enemy units, or the close air support attacks allow friendly units to maneuver. The mission portion of the CCM is a subjective measure gathered by an Observer Controller. The mission portions will not answer why, but only whether CAS was used as intended.

Enemy: In the LCM the number of enemy vehicles and personnel killed by close air support is collected. In the enemy portion of the CCM O/Cs collect a subjective measure of whether the close air support attacked the correct target. The destruction of many enemy targets by close air support may not have a positive influence on the mission if the correct target is not attacked.

Troops: Fratricide is a continuing problem on the battlefield. As ranges of weapons and mobility of combat vehicles increase, the difficulties involved in correctly identifying enemy and friendly vehicles also increase. This is especially true in a low intensity conflict scenario where friendly and enemy elements may be very close (within small arms range) and interspersed. Procedural controls must be used by the close air support team to eliminate the chances of fratricide; the troops portion of the CCM is a measure of the success of the procedural controls used. The goal of all commanders is zero fratricide.

Terrain: Historically, terrain is used as cover and concealment to protect oneself from enemy fires. With the increasing use of stealth technology, electronics, and other devices, the use of terrain as cover and concealment for CAS aircraft may not be as necessary on the modern battlefield. Yet, the close air support aircraft must take measures to protect themselves from enemy and friendly fires. The terrain portion of the CCM is a subjective observation of whether the close air support aircraft used the correct flight tactics, air defense countermeasures, and airspace control measures.

Time: Time is a critical function of synchronizing combat forces on the battlefield. Close air support aircraft arriving too early may run out of station time prior to the having an opportunity to attack; aircraft arriving late may miss the opportunity to synchronize their attack with other combat forces. Time is also a function of how well the ground commander has foreseen the events on the battlefield. The time portion of the CCM is not concerned with what went wrong or why someone was early or late, only if they were. This factor is not only concerned with whether the aircraft was on time, but also must address how the commander synchronizes aircraft that become available when he has not planned for them. Time, in this case, is a subjective judgement by the observer/controller of the commander synchronizing the close air support into the battle with his other fire support assets.

Collection of the CCM has to be accomplished from several different locations by observer/controllers. The Mission, Enemy and Time portions must be collected by someone who is familiar with the what the commander intended his close air support to accomplish. This observer/controller will have the be positioned with the headquarters that is planning and coordinating the attack. Collection of the Troops and Terrain portions can be made by observer/controllers who can observe the target and attacking aircraft. This data can be collected at the same time as the LCM and the SCM.

Observer/controllers answer the specific questions below in conducting the METT-T analysis of a CAS mission:

Mission:	Was the mission assigned by the TF commander to the CAS accomplished?
Enemy:	Was the correct enemy force, or engagement area attacked?
Terrain:	Did the CAS aircraft use the proper tactics and/or counter measures during their attack?
Troops:	Were friendly forces attacked by the CAS aircraft or were friendly aircraft engaged by friendly ground fires?
Time:	Did the CAS aircraft attack within the time window designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

The three measures (lethality, survivability, and contribution) are collected by both electronic means and observer/controller comments. The measures are then available for use as a collective measure or as individual measures for use in after action reviews at the NTC and Air Warrior I or as data for analysis.

The LCM, SCM, and CCM do not answer why something was successful or was not successful. They are the basis for developing empirical relationships among various observations about employment of close air support. The observer/controllers must analyze this, and other, data to determine why a particular battle had a particular outcome. The commander determines

the degree of success of that outcome, and of the training.

After collection, the observations must be combined into one package for each mission. Ultimately, this will entail facsimile or electronic transmission of the collected data and observations to a central location. Once all of the data and observations have been delivered to a central location, they can be assembled into one package for debriefings and analysis.

F. Database Specifications

The CAS databases were constructed using FoxPro for Windows V 2.5, but any XBASE compatible database manager should be able to read in and enable the user to manipulate or view the database data.

Initial, or prototype, databases were constructed during the field verification test of the close air support battle task measurement system at JRTC. Data was collected manually at JRTC and was entered into the database upon return to ARI POM. This prototype CAS database, with the six different maneuver databases was then used to analyze the results and to evaluate the applicability of the tasks and subtasks. As a result of that analysis, the requirements were modified, and the database structure was changed to reflect the evolving requirements. The revised database was the starting point for the next phase of the two close air support projects, which was the field tryout of the close air support performance measurement system at NTC. There was no outcome database developed prior to the JRTC field tryout. Upon completion of the analysis of the outcome data collection process at JRTC and NTC, tentative report formats and collection formats were developed. These were then used to collect outcome data during the field tryout test at NTC.

The prototype database was used to compile and analyze the data derived from the field tryout test at NTC. That analysis identified modifications that were required for the final CAS database. The major changes to the prototype database were a reordering of the performance tasks (process measures), elimination of several tasks, deletion of some variables and/or report selection criteria from the database, deletion of one pre-set report, finalization of the outcome measures report formats, and the addition of Maneuver Execution tasks.

The prototype CAS database has been retained with the data from the two field tryout tests. The final CAS database programs were developed and the database structure, with its reports, was established. That database, however, will contain no data until further data is collected at the training centers using the final task list and outcome measures. The resulting databases, files, and reports for the final CAS database are described in the following paragraphs and the programs and file summaries are included as appendices.

The CAS database employs a Graphical User Interface (GUI) that enables the user to enter data into the Master and Outcome databases. There are preset reports available from the master database. The program allows the user to establish the criteria, or variables, for a query from the master database using drop-down list menus.

The user executes the CAS Project Application (by selecting "casproj.app") to start the set of CAS programs. The CAS Project Application "modifies" the FoxPro root menu at the top of the screen. By selecting the "Close Air Support" title from the title bar, the user is presented with a drop-down menu similar to the following:

Close Air Support
- Data Entry - CAS Master Database
- Data Entry - CAS Outcome Database
- Report - CAS Master Database
- Report - CAS Outcome Database
- ECI - CAS Conversion

Selection of the "Data Entry" menu item for the CAS Master Database prompts a sub-menu which allows the user to identify the type of tasks for which data is to be entered. That menu allows selection of the categories of tasks shown below.

- AFAC Planning
- AFAC Preparation
- MANEUVER Planning
- MANEUVER Preparation
- MANEUVER Execution
- TACP Planning
- TACP Preparation
- CAS Execution

Selection of the "Data Entry" menu item for the CAS Outcome Database takes the user directly to a blank form into which outcome data can be entered. Both the master and the outcome database data entry formats first require header information which uniquely identifies the information being entered. This header information includes: Rotation, Training Day, O/C Identity, and Mission. Sample outcome reports are included in Appendix B.

Selection of the "ECI" menu item takes the user to a directory for identification of the ECI database to be converted to the CAS database format and incorporated into the CAS Master Database. The ECI conversion program guides the user through a series of functions to complete the conversion and transfer the ECI data to the CAS database.

To facilitate research and analysis of the task data collected during the field tryout, the data was organized to allow access through a menu selection format. Programs were written to allow the use of the mission variables (previously identified) to build the pre-formatted reports. Selection of the "Report" menu item prompts the compilation of data into the database program for selection of report criteria. Once the data has been compiled, a report menu is displayed that allows selection of options to build the specific report desired. It is possible to select reports for both the process measures ("Report - CAS Master Database") and the outcome measures ("Report - CAS Outcome Database"). The report selection menu for the master database allows for the identification of five report criteria, each of which has several options. The process report and

query selections that result from selecting "Report - CAS Master Database" are shown below.

REPORT SELECTIONS	QUERY SELECTION
Title Selection	Rotation Number
Summary Selection	Mission
Task Type Selection	Training Day
Task Phase Selection	Unit Observed
Echelon Level Selection	O/C
	Report (Task) Level

The five report selections allow the user to identify the type and scope of report desired. Title selection allows identification of one of two pre-formatted reports. The first shows the distribution of the task assessments (adequate, not adequate, marginal, etc.) for each task or subtask. The second is a summary of the O/C remarks made, organized by major task. The summary selection identifies the time period desired (mission, day, rotation, all rotations at a training center). Task type selection identifies the four major types or categories of CAS tasks, primarily organized by the organization performing the tasks. Task phase selection identifies the phase of the operation. Echelon level selection allows identification of the army organization level desired. The various options for the report selections are shown in Table 1, on the following page.

REPORT SELECTIONS	OPTIONS
Title Selection	Task Assessment Distribution Task Remarks Comparison
Summary Selection	Training Day Mission Rotation Training Center
Task Type Selection	AFAC TACP Maneuver CAS Execution
Task Phase Selection	All Plan Prepare Execution
Echelon Level Selection	All Battalion Task Force Brigade Division Corps Company

Table 1 Report selections and all associated options.

The report criteria are further defined, or narrowed, by selecting from an additional six query options. The Rotation Number is the four digit, alpha-numeric code for all rotations from which data has been collected. Mission lists all the maneuver unit missions conducted during the observed rotations. The Training Day selection lists the specific days in the rotation that missions were conducted, identified by a number or letter and number. The Unit Observed selection lists the unit designation of each unit for which data has been collected during a rotation. O/C lists all the Observer/Controller call signs for those O/Cs who have provided assessments and comments. The Report Level selection allows the user to identify the task/sub-task level desired for the task assessments in the designated report. The query selections available, and a sample content of the different options for each, are listed in Table 2, on the following page.

QUERY SELECTION	MENU OPTIONS
Rotation Number	All J945 N949
Mission	All MTC ATK FORCED ENTRY AIR ASLT
Training Day	All 1 5 D-Day D-1 D+2
Unit Observed	All 2BDE, __DIV 3BDE, __DIV
O/C	All Y03 S05
Report (Task) Level	Level 1 (M01) Level 2 (M01a) Level 3 (M01a1) Level 4 (All task numbering)

Table 2 Query Selection and sample associated options

The outcome report and query selections resulting from selecting "Report - CAS Outcome Database" are shown below. This menu allows the user to select one of the four listed outcome report summaries and specify report content using the query selection criteria.

OUTCOME REPORTS - Select	QUERY SELECTION
Rotation Summary	Rotation Number
Mission Summary	Mission
Day Summary	Training Day
Comments Summary	

The various options available for the query selections are shown in Table 3, below. The Rotation Number is the four digit, alpha-numeric code for all rotations from which data has been collected. Mission lists all the maneuver unit missions conducted during the observed rotations. The Training Day selection lists the specific days in the rotation that missions were conducted, identified by a number or letter and number. Sample outcome reports are at Appendix B.

QUERY SELECTION	MENU OPTIONS
Rotation Number	All J945 N949
Mission	All MTC DEFENSE FORCED ENTRY AIR ASLT
Training Day	All 1 5 D-Day D-1 D+2

Table 3 Query Selection and sample associated options.

VII. DATABASE MANAGEMENT FILES AND PROGRAMS

A. CAS Database System Summary

The Close Air Support database contains a series of interacting programs, procedures, functions, databases, tables, report forms, and menus. The system has 8039 lines of code which are contained in two project files, thirteen program and procedure files, 38 procedures and functions, 24 databases and tables, seven report forms and a menu file. The following paragraphs describe the various files and programs that were developed to manage the CAS database and provide for the preset report generation. At Appendix C is a tree diagram that depicts the interaction and relationships of the different programs, procedures, and functions. Appendix D is a list of the files in the CAS database.

B. CAS Database Project Files

The overall CAS set of programs, reports, menus, and databases are managed via a project file called "casproj.pjx". This file enables the FoxPro user to group program files and databases together for easier project management. The project program also combines all of the programs, reports, and menus into an application program. The overall application program for the CAS databases is "casproj.app".

C. CAS Database Menu Files

CAS user selection menu for data entry, reports, or conversion. The menu file summary (casmenu.mnx) is at Appendix E. The menu program with definitions and procedures (casmenu.mpr) is at Appendix I.

D. CAS Database Procedures and Function Files

There are thirty-eight procedures and functions in the CAS database. Appendix F lists the procedures and functions sorted by the programs in which they are used.

E. CAS Database Procedure and Program Files

The names and descriptions of the thirteen procedure and program files developed for this database are listed below. A summary of the seven programs that contain procedures and functions is included in Appendix F. The text of the program files are attached as Appendixes I-T.

casmenu.mpr	CAS menu definition and procedure file (Appendix I)
casentry.prg	Enter data into the casdata.dbf database (Appendix J)
casout1.prg	Enter data into the casoutc.dbf database (Appendix K)
casrpts.prg	User interface to SQL query and reports (Appendix L)
caserr.prg	Inform the user of program/application errors (Appendix M)
cascrpt1.prg	SQL queries for the Task Assessment Consistency Report (Appendix N)
cascrpt2.prg	SQL queries for the Task Assessment distribution Report (Appendix O)
cascrpt3.prg	SQL queries for the Task Remarks Comparison Report (Appendix P)
casnone.prg	Inform the user that no data was found per his query request (Appendix Q)
casorpts.prg	User interface to SQL query and outcome reports (Appendix R)
casorot.prg	SQL queries for the Outcome Reports (Appendix S)
casconv.prg	Convert ECI data to the casdata or casoutc database format (Appendix T)
casloc.prg	Select option to print report to printer or to a file (Appendix U)

Figure 10 CAS Procedure and Program File Names

F. CAS Database Files and Tables

There are twenty-four database files and tables in the CAS database. There are two primary, variable, CAS databases. One accumulates the task number accomplishment levels (process data) and the other is used to record lethality, survivability, and contribution data (outcome data). The fields contained in the two primary databases are described in tables 4 and 5 below. In addition, there are twenty-two supplemental, static, databases that are used in conjunction with the CAS Master Database and CAS Outcome Database to formulate relational database SQL queries. The files names and a brief description for each are listed in Appendix G.

CAS Master Database (casdata.dbf)			
Field Name	Field Type	Field Size	Contains
rotation	char	4	CTC Rotation identification
trng_day	char	8	Training day
time	char	4	Time mission observed
unit_obs	char	15	Designation of unit observed
oc_cs	char	15	Designation of O/C commenting
mission	char	15	Type mission
cas_mis	char	4	CAS mission number
task_id	char	2	Two letter task section identification

Table 4 CAS Master Database Fields

CAS Outcome Database (casoutc.dbf)			
Field Name	Field Type	Field Size	Contains
rotation	char	4	CTC Rotation identification
mission	char	15	Type mission
oc_cs	char	4	Designation of O/C commenting
dtg	char	15	Date-time group of mission observed
leth_a	numeric	2	Number of weapons used
leth_b	numeric	2	Number of vehicles killed
surv_a	numeric	2	Number of aircraft starting mission
surv_b	numeric	2	Number of aircraft at end of mission
com_mis	numeric	1	Yes/no response to Mission question
com_ene	numeric	1	Yes/no response to Enemy question
com_tro	numeric	1	Yes/no response to Troops question
com_ter	numeric	1	Yes/no response to Terrain question
com_tim	numeric	1	Yes/no response to Time question
rem_mis	memo	10	Narrative remarks on Mission
rem_ene	memo	10	Narrative remarks on Enemy
rem_tro	memo	10	Narrative remarks on Troops
rem_ter	memo	10	Narrative remarks on Terrain
rem_tim	memo	10	Narrative remarks on Time

Table 5 CAS Outcome Database Fields

G. Report Form Files

There are seven report form files in the CAS database. Three of these are process reports and four are outcome reports. The list of report form files is at Appendix H. The programs for generating these reports are at Appendices L, N, O, P, R, and S.

H. Collective Air Ground Training and Feedback System Database

A copy of the AGTFS database on disc is attached as Appendix V. This is the shell database with all programs, files, and databases, but without the data from the two test rotations.

APPENDIX A

DATABASE REPORT REQUIREMENTS AND SAMPLE FORMATS

This appendix describes the database report requirements as they were identified for the initial database development.

1. The required database reports (listed below) all need to be available at different levels of detail with respect to the task identification. The first level is tasks identified at the major task level [ie. MO18]. The second level is tasks identified to the sub-task level [ie. MO18a]. The third level is tasks identified to the lowest level available in the database [ie. MO18b1)]. The example reports in the next section are all shown at the first level, or only to the major task level.

   a. An example of the task ID listing for the three levels is:

LEVEL 1	LEVEL 2	LEVEL 3
TASK ID	TASK ID	TASK ID
MO18 [TEXT]	MO18 [TEXT]	MO18 [TEXT]
	MO18a [TEXT]	MO18a [TEXT]
	MO18b [TEXT]	MO18a1) [TEXT]
		MO18a2) [TEXT]
		MO18b [TEXT]
		MO18b1) [TEXT]
		MO18b2) [TEXT]
		MO18b3) [TEXT]

Chart: Task Identification Levels for Reports

   b. The user or report requester needs to be able to specify the level of task identification desired or required.

   c. In the numbered sections below, the example reports show only the task identification numbers. In the generated reports, the task number and the text of the task identified by the number are both required.

2. List, by task for each task list section: by training day, by mission, by rotation and/or by training center; and by unit, by echelon:

   a. The count of each assessment category (not done, not adequate, marginally adequate, adequate, superior, not observed, and/or not applicable; and given no score) for each task.

   b. Intent is to show the range and distribution of scores for each task for each task list section; unit, echelon; training day, mission, rotation and/or training center.

GENERIC REPORT TITLE: Items shown in brackets [...] are the different possible variables that can be selected to identify the particular data set being summarized for a report.

TASK ASSESSMENT DISTRIBUTION, [training day, mission, rotation, training center]
SUMMARY
[task section] TASKS, [echelon] LEVEL
[Identifier information - specific rotation number;
unit identification;
mission IDs of missions included in the summary.]

c. EXAMPLE:

TASK ASSESSMENT DISTRIBUTION, ROTATION SUMMARY
MANEUVER [OPERATIONS] PLANNING TASKS, BRIGADE LEVEL
ROTATION 94-5; 3D BRIGADE, 82D ABN; MISSIONS 45-1, 45-2, 45-3, 45-4, 45-5

TASK ID	NOT DONE	NOT ADQ	MARG ADQ	ADQ	SUP	NOT OBS	NOT APP	NO ASSESS
MO01		2	1	1		1		
MO02	1	1	1	2				
MO03		1	1	3				
MO04							5	
MO05							5	

NOTE: *Task titles in text should follow each task ID number in this report and all following reports.*

3. List, by task for each task list section: by training day, by mission, by rotation and/or by training center; and by unit, by echelon:

a. The text of the remarks made for each task for the period of the report.

b. Intent is to list all the comments or remarks made about each task in a task list section together for comparison. The source of each remark must be identified (day, mission, O/C, etc.)

GENERIC REPORT TITLE: Items shown in brackets [...] are the different possible variables that can be selected to identify the particular data set being summarized for a report.

TASK REMARKS COMPARISON, [training day, mission, rotation, training center]
SUMMARY
[task section] TASKS, [echelon] LEVEL
[Identifier information - specific rotation number; unit identification; mission IDs of missions included in the summary.]

c. EXAMPLE:

TASK REMARKS COMPARISON, ROTATION SUMMARY,
MANEUVER [OPERATIONS] PLANNING TASKS, BRIGADE LEVEL
ROTATION 94-5; 3D BRIGADE, 82D ABN; MISSIONS 45-1, 45-2, 45-3, 45-4, 45-5

MANEUVER [OPERATIONS] PLANNING		
MO01		
	MISSION 45-1: O/C 1:	[TEXT]
	MISSION 45-4: O/C 2:	[TEXT]
MO02	MISSION 45-3: O/C 1:	[TEXT]
	MISSION 45-4 O/C 1:	[TEXT]

APPENDIX B

SAMPLE OUTCOME REPORTS

This appendix contains four sample outcome reports. The preset report format titles and the data included in each report are described below.

CAS Outcome Rotation Summary:

Summarizes the lethality and survivability data for all missions flown during the entire rotation. Shows the total number of "Yes" and "No" responses to the contribution component questions.

CAS Outcome Mission Summary:

Summarizes the lethality and survivability data for all CAS missions flown during a specific ground maneuver mission. Shows the total number of "Yes" and "No" responses to the contribution component questions and a summary of the comments made in addition to the "Yes/No" responses.

CAS Outcome Day Summary:

Summarizes the lethality and survivability data for all missions flown during an entire day. Shows the total number of "Yes" and "No" responses to the contribution component questions. This is the same format as the rotation summary, but for a shorter time period.

CAS Outcome Comments, Rotation Summary:

Summarizes the comments made in response to the contribution component questions. Report produces a separate page of comments for each mission flown which resulted in outcomes assessed.

CAS Outcome Rotation Summary

Rotation: All **# of Air Missions:** 9 **Training Day:** All

Leathality Component

A. Total Number of Weapons Used: 101

B. Total Number of Vehicles Killed: 33

Survivability Component

A. Total Number of Aircraft Starting Mission: 28

B. Total Number of Aircraft at End of All Missions: 18

Contribution Component

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

Yes 6 No 3

ENEMY: Was the correct enemy force or engagement area attacked?

Yes 7 No 2

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

Yes 1 No 8

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

Yes 7 No 2

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

Yes 5 No 4

CAS Outcome Mission Summary

Rotation: All **Air Mission #:** MTC **Training Day:** All

Leathality Component

A. Total Number of Weapons Used: 28

B. Total Number of Vehicles Killed: 7

Survivability Component

A. Total Number of Aircraft Starting Mission: 6

B. Total Number of Aircraft at End of All Missions: 2

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

Yes 1 NO ASSIGNED/SYNCHRONIZED BDE PLAN.

No 1

ENEMY: Was the correct enemy force or engagement area attacked?

Yes 2

No 0

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

Yes 0 BUT POSSIBLE DUE TO MIXED FORCES.

No 2

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

Yes 2

No 0

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

Yes 0

No 2

CAS Outcome Day Summary

Rotation: All **# of Air Missions:** 2 **Training Day:** 14

Leathality Component

A. Total Number of Weapons Used: 28

B. Total Number of Vehicles Killed: 9

Survivability Component

A. Total Number of Aircraft Starting Mission: 8

B. Total Number of Aircraft at End of All Missions: 4

Contribution Component

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

Yes 2 No 0

ENEMY: Was the correct enemy force or engagement area attacked?

Yes 2 No 0

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

Yes 1 No 1

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

Yes 1 No 1

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

Yes 2 No 0

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** MTC **Training Day:** 1 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

NO ASSIGNED/SYNCHRONIZED BDE PLAN.

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

BUT POSSIBLE DUE TO MIXED FORCES.

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** SORTIE 2 **Training Day:** 1 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

ENEMY: Was the correct enemy force or engagement area attacked?

AFAC GRID FOR CAS TGT WAS 10 K OFF.

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

UNCONFIRMED REPORT OF ONE AIRCRAFT ATTACKING A VEHICLE SOUTH OF EA. THAT LOCATION HAD A BMP & M2 NEXT TO EACH OTHER.

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS NOT SYNCHRONIZED W/BDE PLAN.

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** SORTIE 1 **Training Day:** 3 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

MARGINAL

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** SORTIE 2 **Training Day:** 3 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

DIFFICULT TO SAY DUE TO UNREALISTIC BDA ASSESSENTS BY NTC OCS.

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TENDENCY TO DO RE-ATTACKS WITHOUT DEPARTING TGT AREA AND BREAK LINE OF SIGHT AND COME IN FROM DIFFERENT DIRECTION.

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** SORTIE 3 **Training Day:** 3 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

BIG TIME.

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** MTC **Training Day:** 12 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS SHOWED UP 30 MIN LATE AND NEVER GOT INTEGRATED INTO BATTLE.

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** SORTIE 1 **Training Day:** 14 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS Outcome Comments, Rotation Summary

Rotation: N949 **Air Mission #:** SORTIE 2 **Training Day:** 14 **OC C/S:** RAVEN

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

2 FRATS BY SPAD 31

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

SPAD 31 CIRCLED THE TARGET AREA DID 6 REATTACKS , NEVER LEFT TGT AREA.

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

CAS Outcome Comments, Rotation Summary

Rotation: **Air Mission #:** **Training Day:** **OC C/S:**

Contribution Component and Comments

MISSION: Did the CAS mission accomplish the task assigned by the ground commander?

ENEMY: Was the correct enemy force or engagement area attacked?

TROOPS: Were friendly forces attacked by the CAS or the friendly aircraft destroyed by friendly ADA or ground fires?

TERRAIN: Did the CAS aircraft use the proper tactics or counter measures during their attack?

TIME: Did the CAS aircraft attack within the time windows designated by the ground commander, or did the ground commander synchronize the CAS into the battle?

APPENDIX C

CLOSE AIR SUPPORT DATABASE FUNCTIONAL TREE DIAGRAM

1. System: Close Air Support

2. Author: Dave Butterfield/Jerry Fargo

3. The Tree Diagram depicts the structure and relationships among the various programs, functions, and procedures used in this database. The different programs, functions, and procedures are described in greater detail in subsequent appendices.

```

APPENDIX D

CLOSE AIR SUPPORT DATABASE FILE LIST

1. System: Close Air Support

2. Author: Dave Butterfield/Jerry Fargo

3. This appendix is a list of the files used for the Close Air Support database. The list is divided into five functional areas: Menu, Programs, Procedures, Databases/Tables, and Reports.

---

1. Menu files:

   CASMENU.MNX

2. Program files:

   CASMENU.MPR
   CASENTRY.PRG
   CASRPTS.PRG
   CASCONV.PRG
   CASOUT1.PRG
   CASOROT.PRG
   CASORPTS.PRG

3. Procedure files:

_QU70J2FB9	(procedure in CASMENU.MPR)
_QU70J2FCT	(procedure in CASMENU.MPR)
_QU70J2FEC	(procedure in CASMENU.MPR)
_QU70J2FLO	(procedure in CASMENU.MPR)
_QU70J2FNM	(procedure in CASMENU.MPR)
_QU70J2FPI	(procedure in CASMENU.MPR)
_QU70J2FR2	(procedure in CASMENU.MPR)
_QU70J2FSN	(procedure in CASMENU.MPR)
_QU70J2FUJ	(procedure in CASMENU.MPR)
_QU70J2FWF	(procedure in CASMENU.MPR)
_QU70J2FYA	(procedure in CASMENU.MPR)

_QU70J2G35	(procedure in CASMENU.MPR)
_QU70J2G4O	(procedure in CASMENU.MPR)
TMPARRAY()	(function in ?)
_WIN_LOWER()	(function in CASENTRY.PRG)
_CHKFORUPDATE	(procedure in CASRPTS.PRG)
_WAITMSG	(procedure in CASRPTS.PRG)
_ROTATION	(procedure in CASRPTS.PRG)
_MISSION	(procedure in CASRPTS.PRG)
_TRAINING	(procedure in CASRPTS.PRG)
_CALLSIGN	(procedure in CASRPTS.PRG)
_UNITOBS	(procedure in CASRPTS.PRG)
_CREATE_RPT()	(function in CASRPTS.PRG)
_STOP_LOOP()	(function in CASRPTS.PRG)
_GET_RPT	(procedure in CASRPTS.PRG)
_GET_BOOK	(procedure in CASRPTS.PRG)
_GET_TYPE	(procedure in CASRPTS.PRG)
_GET_ECHLEV	(procedure in CASRPTS.PRG)
ECI_ARRAY()	(function in ?)
_WAITWINDOW	(procedure in CASCONV.PRG)
_GET_TASKID	(procedure in CASCONV.PRG)
_CHK_TASKNO	(procedure in CASCONV.PRG)
_PUT_FIELDS	(procedure in CASCONV.PRG)
_INVALID_DATA	(procedure in CASOUT1.PRG)
_ROT_SUMMARY	(procedure in CASOROT.PRG)
_MIS_SUMMARY	(procedure in CASOROT.PRG)
_DAY_SUMMARY	(procedure in CASOROT.PRG)
_CMT_SUMMARY	(procedure in CASOROT.PRG)
_MAKE_ARRAYS	(procedure in CASORPTS.PRG)
_DOREPORTS()	(function in CASORPTS.PRG)

4. Tables/databases:

CASABK.DBF
CASDATA.DBF
CASDATA.FPT
CASDESC.DBF
CASEBK.DBF
CASEXEC.DBF
CASLEV1.DBF
CASLEV2.DBF
CASLEV3.DBF
CASLEV4.DBF
CASMBK.DBF
CASMISS.DBF

CASOCCS.DBF
CASOUTC.DBF
CASOUTC.FPT
CASPLAN.DBF
CASPREP.DBF
CASRECNO.DBF
CASREM.DBF
CASROTA.DBF
CASSCALE.DBF
CASTBK.DBF
CASTKDE.DBF
CASTRNG.DBF
CASUNIT.DBF
SEL_BOOK.DBF

5. Report forms:

CASOCMT.FRX
CASODAY.FRX
CASOMIS.FRX
CASOROT.FRX
CASRPT1.FRX
CASRPT2.FRX
CASRPT3.FRX

APPENDIX E

CLOSE AIR SUPPORT DATABASE MENU FILE SUMMARY

1. System: Close Air Support

2. Author: Dave Butterfield/Jerry Fargo

3. The Menu File Summary (CASMENU.MNX) lists the functions, commands, and procedures used in the CAS database menus.

APPENDIX F

CLOSE AIR SUPPORT DATABASE PROCEDURE AND FUNCTION SUMMARY

1. System: Close Air Support

2. Author: Dave Butterfield/Jerry Fargo

3. The Procedure and Function Summary describes the procedures and functions used by different programs in the CAS database. It is organized by program and depicts each of the procedures, how it is called by the program, and what other programs or procedures are called by the procedure.

4. There are 7 program files in the system containing procedures. They are:

CASMENU.MPR	Menu definition and procedure file (Menu generated by GENMENU).
CASENTRY.PRG	Program to enter data into CAS database.
CASRPTS.PRG	Program to allow user interface to SQL query and reports.
CASCONV.PRG	Program to convert ECI data to CAS database format.
CASOUT1.PRG	Program to enter data into the CAS outcome database.
CASOROT.PRG	Program providing SQL queries for outcome reports.
CASORPTS.PRG	Program to allow user interface to SQL query for outcome reports.

APPENDIX G

CLOSE AIR SUPPORT DATABASE STRUCTURE SUMMARY

1. System: Close Air Support

2. Author: Dave Butterfield/Jerry Fargo

3. The Database/Table Structure Summary provides a summary of the fields,to include field size and position within the database, for each of the databases in the CAS database system. The summary also indicates which procedures use each database.

4. The 24 tables/databases in the system are listed below.

CAS AFAC Book Task Numbers	CASABK.DBF
CAS Master Database	CASDATA.DBF
CAS Task Number Description	CASDESC.DBF
CAS Execution Book Task Numbers	CASEBK.DBF
CAS Execution Task Numbers	CASEXEC.DBF
CAS Level One Task Numbers	CASLEV1.DBF
CAS Level Two Task Numbers	CASLEV2.DBF
CAS Level Three Task Numbers	CASLEV3.DBF
CAS Level Four Task Numbers	CASLEV4.DBF
CAS Maneuver Book Task Numbers	CASMBK.DBF
CAS Planning Task Numbers	CASPLAN.DBF
CAS Preparation Task Numbers	CASPREP.DBF
CAS Score Scale Descriptions	CASSCALE.DBF
CAS TACP Book Task Numbers	CASTBK.DBF
CAS Task ID Descriptions	CASTKDE.DBF
CAS Remark Task Numbers and Descriptions	CASREM.DBF
CAS Outcome Database	CASOUTC.DBF
CAS Mission Mission Description	CASMISS.DBF
CAS Observer/Controller Call Sign	CASOCCS.DBF
CAS Rotation Designation	CASROTA.DBF
CAS Training Day Description	CASTRNG.DBF
CAS Unit Designation	CASUNIT.DBF
CAS Number of records	CASRECNO.DBF
CAS Task Book Titles	SEL_BOOK.DBF

---

1. Structure for table/dbf: CASABK.DBF

Number of data records : 198
Last updated : 10/07/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
2	TK_ID_TYPE	Char	2	0	8	9
** Total **			10			

Used by: _QU70J2FLO (procedure in CASMENU.MPR)
_QU70J2FNM (procedure in CASMENU.MPR)

---

2. Structure for table/dbf: CASDATA.DBF

Number of data records : 0
Last updated : 10/11/94

Field	Field name	Type	Width	Dec	Start	End
1	ROTATION	Char	4	0	1	4
2	TRNG_DAY	Char	8	0	5	12
3	TIME	Char	4	0	13	16
4	ECHELON	Char	5	0	17	21
5	UNIT_OBS	Char	15	0	22	36
6	OC_CS	Char	7	0	37	43
7	MISSION	Char	15	0	44	58
8	CAS_MIS	Char	6	0	59	64
9	TASK_ID	Char	2	0	65	66
10	TASK_NO	Char	7	0	67	73
11	SCORE	Numeric	1	0	74	74
12	REMARKS	Memo	10	0	75	84
** Total **			85			

This table/dbf is associated with the memo file: CASDATA.FPT

Used by: CASCRPT2.PRG
CASCRPT3.PRG
CASCRPT1.PRG
_ROTATION (procedure in CASRPTS.PRG)
_MISSION (procedure in CASRPTS.PRG)
_TRAINING (procedure in CASRPTS.PRG)
_CALLSIGN (procedure in CASRPTS.PRG)
_UNITOBS (procedure in CASRPTS.PRG)

---

3. Structure for table/dbf: CASDESC.DBF

Number of data records : 980
Last updated : 10/10/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
2	TK_ID_TYPE	Char	2	0	8	9
3	TASK_DESC	Char	254	0	10	263
** Total **			264			

Used by: CASCRPT1.PRG

---

4. Structure for table/dbf: CASEBK.DBF

Number of data records : 136
Last updated : 10/07/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
2	TK_ID_TYPE	Char	2	0	8	9
** Total **			10			

Used by: _QU70J2FYA (procedure in CASMENU.MPR)

---

5. Structure for table/dbf: CASEXEC.DBF

Number of data records : 206
Last updated : 10/07/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
2	TK_ID_TYPE	Char	2	0	8	9
** Total **			10			

---

6. Structure for table/dbf: CASLEV1.DBF

Number of data records : 121
Last updated : 10/07/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
** Total **			8			

---

7. Structure for table/dbf: CASLEV2.DBF

Number of data records : 632
Last updated : 10/10/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
** Total **			8			

---

8. Structure for table/dbf: CASLEV3.DBF

Number of data records : 851
Last updated : 10/10/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
** Total **			8			

---

9. Structure for table/dbf: CASLEV4.DBF

Number of data records : 858
Last updated : 10/10/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
** Total **		8				

---

10. Structure for table/dbf: CASMBK.DBF

Number of data records : 320
Last updated : 10/10/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
2	TK_ID_TYPE	Char	2	0	8	9
** Total **			10			

Used by: _QU70J2FPI (procedure in CASMENU.MPR)
_QU70J2FR2 (procedure in CASMENU.MPR)
_QU70J2FSN (procedure in CASMENU.MPR)

---

11. Structure for table/dbf: CASPLAN.DBF

Number of data records : 564
Last updated : 10/07/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
2	TK_ID_TYPE	Char	2	0	8	9
** Total **			10			

---

12. Structure for table/dbf: CASPREP.DBF

Number of data records : 209
Last updated : 10/07/94

Field	Field name	Type	Width	Dec	Start	End
1	TASK_NO	Char	7	0	1	7
2	TK_ID_TYPE	Char	2	0	8	9
** Total **			10			

---

13. Structure for table/dbf: CASSCALE.DBF

Number of data records : 9
Last updated : 07/26/94

Field	Field name	Type	Width	Dec	Start	End
1	SCORE	Numeric	2	0	1	2
2	SHORT_DESC	Char	10	0	3	12
3	LONG_DESC	Char	20	0	13	32

APPENDIX H

CLOSE AIR SUPPORT REPORT FORM SUMMARY

1. System: Close Air Support

2. Author: Dave Butterfield/Jerry Fargo

3. The Report Form File Summary identifies the 7 report forms in the system. It also identifies the procedure or function that uses the report form and the program which contains that procedure. The report forms are listed below.

   CASRPT2.FRX
   CASRPT3.FRX
   CASOCMT.FRX
   CASODAY.FRX
   CASOMIS.FRX
   CASOROT.FRX
   CASRPT1.FRX

---

1. CASRPT2.FRX

   Last updated: 05/11/94 at 14:49:20
   Used by: _CREATE_RPT() (function in CASRPTS.PRG)

---

2. CASRPT3.FRX

   Last updated: 08/18/94 at 12:23:24
   Used by: _CREATE_RPT() (function in CASRPTS.PRG)

---

3. CASOCMT.FRX

   Last updated: 08/19/94 at 13:22:30
   Used by: _CMT_SUMMARY (procedure in CASOROT.PRG)

---

4. CASODAY.FRX

Last updated: 08/19/94 at 12:20:08
Used by: _DAY_SUMMARY (procedure in CASOROT.PRG)

---

5. CASOMIS.FRX

Last updated: 08/18/94 at 15:45:44
Used by: _MIS_SUMMARY (procedure in CASOROT.PRG)

---

6. CASOROT.FRX

Last updated: 08/19/94 at 9:22:36
Used by: _ROT_SUMMARY (procedure in CASOROT.PRG)

---

7. CASRPT1.FRX

Last updated: 05/03/94 at 12:40:38
Used by: _CREATE_RPT() (function in CASRPTS.PRG)

APPENDIX J

PROGRAM TO ENTER DATA INTO CAS DATABASE

1. Program: casentry.prg

2. Author: D.Butterfield, PRC Inc.

3. Date: 30 March 1994

4. Notes: Program produced to provide the user with a data entry screen which resembles the Close Air Support data collection forms/books. The user can open a book and proceed page by page entering the data. Screen representation emulates book form layout.

5. Usage: Program is called from the casproj.app Close Air Support menu item by selecting Data Entry - CAS Data.

6. Files: Uses the casdata.dbf database to store entered data.

7. Problems: User can not alter previous page data.

8. History:

Date	Name	Ver	Modifications	By
03/30/94	casentry	1.0	original	dbb
07/21/94	casentry	1.1	no detail	dbb

APPENDIX K

PROGRAM TO ENTER DATA INTO THE CAS OUTCOME DATABASE

1. Program: casout1.prg

2. Author: D.Butterfield, PRC Inc.

3. Date: 12 May 1994

4. Notes: Program produced to provide the user with a data entry screen for use in entering the CAS OUTCOME data.

5. Usage: Program is called from the casproj.app menu selection under Close Air Support. select Data Entry - Outcome.

6. Files: Uses the casoutc.dbf database to store entered data.

7. Problems: None noted.

8. History:

Date	Name	Ver	Modifications	by
04/12/94	casout1	1.0	original	dbb
07/21/94	casout1	1.1	no detail	dbb

APPENDIX L

PROGRAM TO ALLOW USER INTERFACE TO SQL QUERY AND REPORTS

1. Program: casrpts.prg

2. Author: D.Butterfield/Jerry Fargo, PRC Inc.

3. Date: 16 April 1994

4. Notes: Program produced to provide the user with desired database data selection criteria and type of report to generate. Once the data and report type are selected from the dropdown menus, the user may preview or print the report.

5. Usage: Program is called from the initial menu for report selection and generation. Titles are displayed over each of the respective dropdown menus. Select items from the menus and then preview or print the report.

6. Files: Uses almost all cas database tables.

7. Problems: None noted.

8. History:

date	name	ver	modifications	by
04/16/94	casrpts	1.0	original	dbb
07/21/94	casrpts	1.1	no detail	dbb
08/02/94	casrpts put into tables for faster execution	1.2	dropdown menus	dbb
10/06/94	casrpts rotations. removed one report	1.3	modified for 'All'	dbb

9. Last modified: 11/18/94 at 12:24:34

10. Procedures and Functions:
_CHKFORUPDATE
_WAITMSG
_ROTATION
_MISSION
_TRAINING

10.	Procedures and Functions:	_CHKFORUPDATE _WAITMSG _ROTATION _MISSION _TRAINING _CALLSIGN _UNITOBS _CREATE_RPT() _STOP_LOOP() _GET_RPT _GET_BOOK _GET_TYPE _GET_ECHLEV	
11.	Set by:	_QU70J2FCT	(procedure in CASMENU.MPR)
12.	Calls:	CASERR.PRG	
		_CHKFORUPDATE	(procedure in CASRPTS.PRG)
		_WAITMSG	(procedure in CASRPTS.PRG)
		_ROTATION	(procedure in CASRPTS.PRG)
		_MISSION	(procedure in CASRPTS.PRG)

APPENDIX M

PROGRAM TO INFORM THE USER OF PROGRAM/APPLICATION ERRORS

1. Program: caserr.prg

2. Author: D.Butterfield, PRC Inc.

3. Date: 5 May 1994

4. Notes: Program produced to provide the user with an error message which is displayed as a pop-up window indicating the possible execution error.

5. Usage: Program is called from most of the CAS programs.

6. Files: Uses the error number and error message that is passed to it from the program that 'discovered'/created the error.

7. Problems: None noted.

8. History:

Date	Name	Ver	Modifications	By
05/05/94	caserr	1.0	original	dbb
07/21/94	caserr	1.1	no detail	dbb

```

APPENDIX N

PROGRAM PROVIDING SQL QUERIES FOR THE TASK ASSESSMENT CONSISTENCY REPORT

1. This program was used in the process of validating the CAS task lists. It is not needed in the routine data processing using the AGTFS. It has been deleted from the CAS menu and cannot be directly accessed to compile a report. However, the program, itself, has not been deleted from the CAS system and database. A listing of the program may be obtained by accessing the file "cascrpt1.prg".

APPENDIX O

PROGRAM PROVIDING SQL QUERIES FOR THE TASK ASSESSMENT DISTRIBUTION REPORT

1. Program: cascrpt2.prg

2. Author: D.Butterfield, PRC Inc.

3. Date: 20 April 1994

4. Notes: Program produced to generate the necessary SQL query from the selections requested by the user in the casrpts.prg program. Provides the data for the task assessment distribution report. Each case statement is a different SQL query based on the 'All' selections.

5. Usage: Program is called from casrpts.prg. Program can not be executed by itself. However, the SQL statements may be used by cut and paste and then replacing the variables with selection criteria.

6. Files: Does not use files, but it does create two temporary CURSOR files for use. The first contains the requested data selections which are then analyzed with results placed into the second CURSOR for use by the report form casrpt2.

7. Problems: None noted.

8. History:

Date	Name	Ver	Modifications	By
04/20/94	cascrpt2	1.0	original	dbb
07/21/94	cascrpt2 detail	1.2	many without	dbb
10/06/94	cascrpt2 rotations selection	1.3	added 'All'	dbb

```
**********************************************************************
* task assessment distribution report
*
* different selection criteria changes report output.
* all of the case statements are near identical except for which
* variable is on and which is not. at each case statement the number
```

```
* variable is on and which is not. at each case statement the number
* indicates which of the four variables is an 'All' and which is not.
* an 'All' is indicated as a '0' and a NOT 'All' is indicated as a '1'.

APPENDIX P

PROGRAM PROVIDING SQL QUERIES FOR THE TASK REMARKS COMPARISON REPORT

1. Program: cascrpt3.prg

2. Author: D.Butterfield, PRC Inc.

3. Date: 20 April 1994

4. Notes: Program produced to generate the necessary SQL query from the selections requested by the user in the casrpts.prg program. Provides the data for the task remarks comparison report. Each case statement is a different SQL query based on the 'All' selections.

5. Usage: Program is called from casrpts.prg. program can not be executed by itself. However, the SQL statements may be used by cut and paste and then replacing the variables with selection criteria.

6. Files: Does not use files, but it does create two temporary CURSOR files for use. The first contains the requested data selections which are then analyzed with results placed into the second CURSOR for use by the report form casrpt3.

7. Problems: None noted.

8. History:

Date	Name	Ver	Modifications	by
04/20/94	cascrpt3	1.0	original	dbb
07/21/94	cascrpt3 detail	1.2	many without	dbb
10/06/94	cascrpt3 rotations selection	1.3	added 'All'	dbb

```
**********************************************************************
* task remarks comparison report
*
* different selection criteria changes report output.
* all of the case statements are near identical except for which
* variable is on and which is not. at each case statement the number
* indicates which of the four variables is an 'All' and which is not.
```

```
* indicates which of the four variables is an 'All' and which is not.
* an 'All' is indicated as a '0' and a NOT 'All' is indicated as a '1'.

APPENDIX Q

PROGRAM TO INFORM THE USER THAT NO DATA WAS FOUND PER HIS QUERY REQUEST

1. Program: casnone.prg

2. Author: D.Butterfield, PRC Inc.

3. Date: 21 April 1994

4. Notes: Program produced to provide the user with a popup message which indicates no data was found using the users selection criteria.

5. Usage: Program is called from the casrpts.prg program after one of the SQL cascrpt?.prg programs finds no data.

6. Files: Does not use other files.

7. Problems: None noted.

8. History:

Date	Name	Ver	Modifications	By
04/21/94	casnone	1.0	original	dbb
07/21/94	casnone	1.1	no detail	dbb

APPENDIX T

PROGRAM TO CONVERT ECI DATA TO CAS DATABASE FORMAT

1. Program: casconv.prg

2. Author: D.Butterfield, PRC Inc.

3. Date: 12 April 1994

4. Notes: Program developed to provide a user interface to the ECI import/conversion process. User executes the program by selecting ECI convert from the Close Air Support Menu item displayed when casproj.app is executed. Program reads in, converts and stores ECI CAS files to the CASDATA.DBF or CASOUTC.DBF database file.

5. Usage: Select ECI convert from casproj.app menu. Program can be executed stand alone if the type of conversion, which relates directly to the database name, casdata or casoutc is passed as a parameter.

6. Files: Uses the selected ECI files to convert into the CASDATA or CASOUTC databases.

7. Problems: User/operator needs to set the CTC letter for the location the ECI data is being received from. to set the letter modify the variable mctc_letter below by changing the mctc_letter to one of the following:

CTC	variable	letter
---	--------	------
NTC	mctc_letter =	N
CMTC	mctc_letter =	C
JRTC	mctc_letter =	J

8. History:

Date	Name	Ver	Modifications	By
04/12/94	casconv	1.0	original	dbb
07/21/94	casconv	1.5	many without detail	dbb

```
**********************************************************************
PARAMETERS dconvert

* CHANGE CTC LETTER FOR mctc_letter AT THIS LOCATION
* select initial CTC letter for rotation
* where N = NTC, C = CMTC, J = JRTC
mctc_letter = 'N'

* close all databases and clear screen
close databases
clear

ON ERROR DO caserr WITH ERROR(), MESSAGE()

APPENDIX V

AIR GROUND TRAINING AND FEEDBACK SYSTEM DATABASE

1. Attached are two discs which contain both the collective database developed as a result of this project and the test database used to evaluate the data collection system.

2. The disc marked "casfinal" is the final database with all related programs, ready to be installed and used, once data collection starts. This database is not the test database that contains the data collected during the two validation rotations. There are no data in the two primary CAS databases: CAS Master Database (casdata.dbf) and CAS Outcome Database (casoutc.dbf).

3. The disc marked "castest" is the test database that was used during the two validation rotations. It contains the data that was colllected and used to verify to utility of the different data collection and assessment methods. This data is located in the CAS Master Database (casdata.dbf) and CAS Outcome Database (casoutc.dbf) in "castest.app".

4. Because of the size of the files written for the databases, the files were compressed in order to fit on the discs. Software to decompress the files is included on the discs and is automatically started by the installation procedure. The users must have FoxPro for Windows version 2.5 or 2.6 software loaded on the computer or the network on which these databases are to be loaded.

5. Instructions to load the databases are included as a text file on each disc and are reproduced below.

   • CASFINAL/CASINSTL.TXT contains instructions for installation of the (empty) CAS Final Database, and readying it for acceptance of new data.

   • CASTEST/CASINSTL.TXT contains instructions for installation of the CAS Test Database, which has the test data loaded.

6. CASFINAL\CASINSTL.TXT: Close Air Support Installation Directions

Installation Information

This notepad window, which is displaying the CAS Final installation directions, will probably need to be reduced in size or moved to view the installation window. Once you can see the installation window, select it by placing the mouse cursor anywhere in the window and clicking on it with mouse button one. Then select the "OK" button by tabbing to it and pressing "Enter", or by pressing on it using mouse button one.

This installation will place all of the Close Air Support application programs and databases in the directory C:/CASFINAL.

After the installation is finished, a Windows Group call "Windows Applications" will be created. You will have to install an icon in order to execute the CASFINAL application.

Installing the Icon

1. Click mouse button one in the "Windows Applications" group box to select it.

2. From the Program Manager select the "File" option at the top left hand corner of the Program Manger window by using mouse button one, or the keyboard combination "Alt-F". The drop down File Selection Menu will appear.

3. Select "New..." from the File Selection Menu using mouse button one or the "Alt-N" keyboard combination.

4. A popup window that has the title "New Program Object" will appear. Select "Program Item" by clicking on the title "Program Item" or on the radio button at the left of the title "Program Item". You may also use the keyboard combination "Alt-I" to select "Program Item".

5. Using mouse button one or by tabbing (use the "tab" key), push or press "Enter" to select the "OK" button on the popup menu. The "New Program Object" popup window will disappear.

6. A new popup window will appear on the screen with the window title, "Program Item Properties". Please follow the these steps to fill in the

required information:

a. Select the "Description:" area either by using mouse button one or by using the "Alt-D" combination from the keyboard. Type in "CASFINAL" or "CAS Final" in the text area.

b. Select the "Command Line:" area by using mouse button one, the "Alt-C" combination, or the "Tab" key. Type in the following according to your FoxPro for Windows version:

For FoxPro for Windows Version 2.6, type in:
C:\FPW26\FOXPROW.EXE CASFINAL.APP

For FoxPro for Windows Version 2.5, type in:
C:\FOXPROW\FOXPROW.EXE CASFINAL.APP

Note: *If you are using a network version of FoxPro for Windows, replace the above drive and path for FoxPro for Windows with your drive and path. For example, if you are using FoxPro for Windows Version 2.5 and it is located on the F: drive under the APPS directory, you would type in the following for your "Command Line:" input:*
F:\APPS\FPW26\FOXPROW.EXE CASFINAL.APP

c. Next select the "Working Directory:" area by using mouse button one, keyboard "Alt-W" combination, or the "Tab" key. Type in the following directory path:

C:\CASFINAL

d. You are finished with the typing. Now click on the "OK" button in the popup window. A FoxPro for Windows icon (a fox head) should appear in the "Windows Applications" group with the title CASFINAL or CAS Final below it.

7. The Icon installation is complete. Double click on the icon and within a few moments you should have FoxPro for Windows initialize and execute the CASFINAL application.

7. CASTEST\CASINSTL.TXT: Close Air Support Installation Directions

Installation Information

The installation instructions for installing the CASTEST database are the same as the instructions for the CASFINAL database, except that all references to "CASFINAL" are replaced with "CASTEST".
