

Cultural Resources Series
Report Number: COELMN/PD-97/1

U.S. Army Corps
of Engineers
New Orleans District

**CULTURAL RESOURCES SURVEY
AND NATIONAL REGISTER TESTING
OF COMITE RIVER DIVERSION PROJECT,
EAST BATON ROUGE PARISH, LOUISIANA**

March 1997

FINAL REPORT

**VOLUME II OF II
Appendices I - IV**

**R. Christopher Goodwin & Associates, Inc.
5824 Plauche Street
New Orleans, LA 70123**

PREPARED FOR:

**U.S. Army Corps of Engineers
New Orleans District
P.O. Box 60267
New Orleans, LA 70160**

19981125 187

Unclassified. Distribution is unlimited.

APPENDIX I
ARTIFACT INVENTORIES

TABLE OF CONTENTS

Table 1.	Prehistoric lithic materials recovered during Phase I cultural resources survey of the Comite River Diversion Project area	1
Table 2.	Historic materials recovered during Phase I cultural resources survey of the Comite River Diversion Project area	2
Table 3.	Faunal remains recovered during Phase I cultural resources survey of the Comite River Diversion Project area	7
Table 4.	Prehistoric lithic materials recovered during Phase II cultural resources survey of Site 16EBR105	8
Table 5.	Prehistoric ceramic materials recovered during Phase II cultural resources survey of Site 16EBR105	11
Table 6.	Historic materials recovered during Phase II cultural resources survey of Site 16EBR105	12
Table 7.	Faunal remains recovered during Phase II cultural resources survey of Site 16EBR105	61
Table 8.	Botanical remains recovered from Phase II cultural resources survey of Site 16EBR105	66
Table 9.	Prehistoric lithic materials recovered during Phase II cultural resources survey of Site 16EBR117	67
Table 10.	Historic materials recovered during Phase II cultural resources survey of Site 16EBR117	69
Table 11.	Historic materials recovered during Phase II cultural resources survey of Site 16EBR118	147
Table 12.	Faunal remains recovered during Phase II cultural resources survey of Site 16EBR117	151
Table 13.	Botanical remains recovered from Phase II cultural resources survey of Site 16EBR117	154

ABBREVIATIONS FOR APPENDIX I

FS	--	Field Specimen
Site #	--	Site Number
Tr	--	Transect
ST #	--	Shovel Test Number
Fea	--	Feature
Str	--	Stratum
Lev	--	Level
TE	--	Top Elevation

Table 6. Historic Materials Recovered during Phase II Cultural Resources Survey of Site 16EBR105.

FS	Site #	Unit	ST #	North	East	Fea Str	Lev	TE	BE	Additional Provenience	Ct	Class	Type	Additional Description
2-065	16EBR105		12.00	1006	988	II	01	9	20		1	Nail(s), Iron	Machine-Cut, Unidentified Head Style	
2-066	16EBR105		19.00	1031	980	II	01	8	27		2	Nail(s), Iron	Machine-Cut, Unidentified Head Style	Both frags. from one nail
2-067	16EBR105		20.00	1022	978	II	01	12	32		1	Whiteware	Annular Decorated sherd(s)	Rim sherd; single dark blue band on exterior below rim; from hollow vessel
2-067	16EBR105		20.00	1022	978	II	01	12	32		1	Whiteware	Plain sherd(s)	Rim sherd; from flat vessel
2-067	16EBR105		20.00	1022	978	II	01	12	32		1	Unid. Molded Technique (Glass)	Colorless shard(s)	Body sherd; from flat-sided bottle
2-067	16EBR105		20.00	1022	978	II	01	12	32		1	Nail(s), Iron	Machine-Cut, Unidentified Head Style	
2-001	16EBR105	1		1033	961		01	18	28		1	Domestic Gray Stoneware	Brown Glazed sherd(s)	Shoulder/neck sherd; from bottle
2-001	16EBR105	1		1033	961		01	18	28		1	Whiteware	Plain sherd(s)	Basal sherd; from plate
2-001	16EBR105	1		1033	961		01	18	28		1	Whiteware	Relief-molded Decorated sherd(s)	Molded thin ribs forming weave pattern
2-001	16EBR105	1		1033	961		01	18	28		1	Machine-Made Bottle Glass	Colorless shard(s)	Body sherd; from bottle
2-001	16EBR105	1		1033	961		01	18	28		1	Unid. Molded Technique (Glass)	Colorless shard(s)	Body sherd; from bottle
2-002	16EBR105	1		1033	961		02	28	31		1	Unid. Blown-in-Mold Bottle Glass	Aqua shard(s)	Body sherd; large (1.5 cm) vert. ribs around body
2-002	16EBR105	1		1033	961		02	28	31		1	Unid. Molded Technique (Glass)	Amber shard(s)	Body sherd
2-002	16EBR105	1		1033	961		02	28	31		1	Unid. Molded Technique (Glass)	Colorless shard(s)	Body sherd
2-002	16EBR105	1		1033	961		02	28	31		1	Unidentified Glass shard(s) (Kitchen)	Light Aqua shard(s)	

Table 6, continued

FS	Site #	Unit	ST #	North	East	Fea	Str	Lev	TE	BE	Additional Provenience	Ct	Class	Type	Additional Description
2-003	16EBR105	1		1033	961			04	37	44		1	Activities	Doll Part(s)	Neck sherd from porcelain doll head; interior unglazed; string of dots prob. represent pearl necklace
2-003	16EBR105	1		1033	961			04	37	44		4	Cream-Colored Ware (Earthenware)	Annular Ware sherd(s)	Rim & body sherds, rims mend; silver-colored band along flared rim; from shallow bowl or plate
2-003	16EBR105	1		1033	961			04	37	44		2	Domestic Brown Stoneware	Colored Glaze on Buff sherd(s)	Body sherds; opaque blue glaze on exterior/interior
2-003	16EBR105	1		1033	961			04	37	44		1	Porcelain, Hard Paste	Relief-mold Decorated sherd(s)	Rim sherd; thin band of dots below rim & solid band below that
2-003	16EBR105	1		1033	961			04	37	44		2	Porcelain, Hard Paste	Undecorated sherd(s)	Rim sherds; thin; from shallow bowl
2-003	16EBR105	1		1033	961			04	37	44		1	Porcelain, Soft Paste	Overglaze Hand-painted sherd(s)	Rim sherd; thin gray overglaze band around interior of rim; from shallow bowl
2-003	16EBR105	1		1033	961			04	37	44		1	Whiteware	Decal Decorated sherd(s)	Body sherd; overglaze polychrome floral decal on interior
2-003	16EBR105	1		1033	961			04	37	44		1	Whiteware	Plain sherd(s)	Body sherd
2-003	16EBR105	1		1033	961			04	37	44		4	Whiteware	Plain sherd(s)	Rim & body sherds; from flat vessel
2-003	16EBR105	1		1033	961			04	37	44		1	Whiteware	Plain sherd(s)	Body sherd
2-003	16EBR105	1		1033	961			04	37	44		1	Whiteware	Relief-molded Decorated sherd(s)	Body sherd; molded scroll work on exterior; from hollow vessel or cover
2-003	16EBR105	1		1033	961			04	37	44		1	Crown Finish (Glass)	Aqua sherd(s)	Body sherd; from beverage bottle

FS	Site #	Unit	ST #	North	East	Fea Str	Lev	TE	BE	Additional Provenience	Ct	Class	Type	Additional Description
2-003	16EBR105	1		1033	961		04	37	44		1	Lamp Glass	Colorless shard(s)	Body shard; lamp chimney
2-003	16EBR105	1		1033	961		04	37	44		1	Machine-Made Bottle Glass	Colorless shard(s)	Body shard; from bottle
2-003	16EBR105	1		1033	961		04	37	44		1	Pressed Glass	Peach shard(s)	Body shard; pressed ridges running up body; from bowl
2-003	16EBR105	1		1033	961		04	37	44		1	Toy Marble (Glass)	Orange shard(s)	Opaque orange glass marble
2-003	16EBR105	1		1033	961		04	37	44		1	Unid. Blown-in-Mold Bottle Glass	Aqua shard(s)	Body shard; from pharmaceutical bottle
2-003	16EBR105	1		1033	961		04	37	44		2	Unid. Molded Technique (Glass)	Aqua shard(s)	Body shards; from beverage bottle
2-003	16EBR105	1		1033	961		04	37	44		4	Unid. Molded Technique (Glass)	Colorless shard(s)	Body shards; from bottles
2-003	16EBR105	1		1033	961		04	37	44		1	Unid. Molded Technique (Glass)	Colorless shard(s)	Body shard; thick, from near base; from bottle
2-003	16EBR105	1		1033	961		04	37	44		4	Window Glass shard(s)		Melted
2-003	16EBR105	1		1033	961		04	37	44		8	Window Glass shard(s)		
2-003	16EBR105	1		1033	961		04	37	44		1	Coins	Penny(ies)	1944 Lincoln wheat penny
2-003	16EBR105	1		1033	961		04	37	44		1	Metal Buttons	Metal Button(s)	Aluminum button; wire loop on back; may have had stone set in recess on face
2-003	16EBR105	1		1033	961		04	37	44		1	Miscellaneous Hardware (Metal)	Iron Strap(s)	Iron; thin strap metal
2-003	16EBR105	1		1033	961		04	37	44		1	Miscellaneous Hardware (Metal)	Iron Wire (non-barbed Wire) fragment(s)	
2-003	16EBR105	1		1033	961		04	37	44		1	Miscellaneous Kitchen (Metal)	Crown Cap(s)	
2-003	16EBR105	1		1033	961		04	37	44		3	Nail(s), Iron	Machine-Cut, Unidentified Head Style	

Table 6, continued

FS	Site #	Unit	ST #	North	East	Fea Str	Lev	TE	BE	Additional Provenience	Ct	Class	Type	Additional Description
2-003	16EBR105	1		1033	961		04	37	44		1	Nail(s), Iron	Wire, Common	Iron; 13 cm spike
2-003	16EBR105	1		1033	961		04	37	44		16	Nail(s), Iron	Wire, Common	Iron; large construction nails
2-003	16EBR105	1		1033	961		04	37	44		25	Nail(s), Iron	Wire, Common	
2-003	16EBR105	1		1033	961		04	37	44		1	Unidentified Metal	Iron/Steel	Knob with slightly rounded head & hollow stem
2-003	16EBR105	1		1033	961		04	37	44		1	Unidentified Metal	Unidentified Aluminum Object(s)	Aluminum; triangular flange w/ angled sheath for round post or dowel; pop rivets in 3 corners of triangle
2-004	16EBR105	1		1033	961		05	44	54		2	Domestic Brown Stoneware	Colored Glaze on Buff sherd(s)	Body sherds; opaque blue glaze on exterior/interior
2-004	16EBR105	1		1033	961		05	44	54		1	Ironstone	Annular sherd(s)	Rim sherd; light blue annular bands on exterior; from hollow vessel
2-004	16EBR105	1		1033	961		05	44	54		2	Ironstone	Decal sherd(s)	Body sherds, all mend; green floral overglaze decal on exterior; from hollow vessel
2-004	16EBR105	1		1033	961		05	44	54		1	Ironstone	Undecorated White sherd(s)	Basal sherd; small portion of green stamped makers mark w/poss. "A" in lower left corner; from plate
2-004	16EBR105	1		1033	961		05	44	54		1	Porcelain, Hard Paste	Overglaze Hand-painted sherd(s)	Rim sherd; blue-green band hand-painted near rim; from flat vessel
2-004	16EBR105	1		1033	961		05	44	54		1	Porcelain, Hard Paste	Undecorated sherd(s)	Body sherd; from hollow vessel
2-004	16EBR105	1		1033	961		05	44	54		4	Whiteware	Plain sherd(s)	Rim & body sherds, all mend; from steep-sided bowl or large cup

Table 6, continued

FS	Site #	Unit	ST #	North	East	Fea Str	Lev	TE	BE	Additional Provenience	Ct	Class	Type	Additional Description
2-004	16EBR105	1		1033	961		05	44	54		8	Whiteware	Plain sherd(s)	Body sherds
2-004	16EBR105	1		1033	961		05	44	54		1	Whiteware	Plain sherd(s)	Rim sherd; from flat vessel
2-004	16EBR105	1		1033	961		05	44	54		1	Whiteware	Plain sherd(s)	Rim sherd; from poss. chamber pot or large bowl
2-004	16EBR105	1		1033	961		05	44	54		2	Lamp Glass	Colorless sherd(s)	Body sherds; lamp chimney
2-004	16EBR105	1		1033	961		05	44	54		2	Stained Glass sherd(s)		
2-004	16EBR105	1		1033	961		05	44	54		3	Unid. Blown-in-Mold Bottle Glass	Light Blue sherd(s)	Rim & shoulder sherds; bead string rim; from bottle
2-004	16EBR105	1		1033	961		05	44	54		2	Unid. Molded Technique (Glass)	Amethyst sherd(s) (Manganese Solarization)	Body sherds; hollow tableware
2-004	16EBR105	1		1033	961		05	44	54		1	Unid. Molded Technique (Glass)	Aqua sherd(s)	Body sherd; from bottle

APPENDIX II

LOUISIANA STATE SITE FORMS

**STATE OF LOUISIANA
SITE RECORD UPDATE FORM**

LOCATIONAL DATA

SITE NAME:

STATE SURVEY NO.: 16EBR105

OTHER SITE DESIGNATIONS:C-JR-1; J.A. McHugh House

SITE LOCATION AND APPROACH: Take Highway 19 north and turn right on Lower Zachary Road. Continue to McHugh Road and turn right. Proceed along this road and about 400 m south of the second bend in McHugh Road turn right onto a dirt drive. The house site is south of the barn and east of a pond, within a fenced area.

PARISH: East Baton Rouge

NW1/4 of the SW1/4 of Section 8 Township 5S Range 1E

USGS QUADRANGLE: Zachary, LA (1980 photorevised) 7.5'

UTM COORDINATES: Zone 15, Easting 678220, Northing 3389500

GEOGRAPHICAL COORDINATES:

PHYSICAL SETTING

LANDFORM: Pleistocene Terrace

ELEVATION AND RELIEF: 24 m (80 ft) (MSL)

NEAREST WATER: Unnamed tributary of White Bayou

POSITION WITH RESPECT TO TERRAIN: on terrace southeast of relict channel of White Bayou

SOIL CHARACTERISTICS: silty loam with iron oxide concretions

FLORAL COMMUNITIES: upland hardwood forest and cleared pasture

FAUNAL COMMUNITIES: rabbit, squirrel, and deer

NEAREST KNOWN SITE: 16EBR85

SITE DESCRIPTION

SITE DESCRIPTION: Historic site, dating between 1859 and mid-1920s. Bulk of artifacts are late nineteenth/early twentieth century materials. Features included brick piers and central brick chimney foundation from the mid-nineteenth century house. A twentieth century concrete pipe well shaft and a twentieth century sheet midden are located to the rear of the house site. Stratigraphic integrity in the vicinity of the house has been disturbed by destruction and razing of the house, in addition to dredging activities associated with the pond. No concentrations of artifactual materials were located outside of the

immediate house area. Diagnostic materials recovered included machine-made bottle glass, crown caps, whiteware, yellowware, wire nails, cut nails, and a 1944 Lincoln penny.

The house was constructed ca. 1859 and was abandoned by the mid-twentieth century. Until the 1980s, when a fire destroyed the structure, it was used for agricultural storage. After destruction by fire, the site was cleared by bulldozing.

SITE SIZE: approximately 35 x 40 m (115 x 131 ft)

CONFIGURATION: rectangular

DENSITY OF CULTURAL MATERIALS: light to moderately dense

DEPTH OF DEPOSIT/STRATIGRAPHY: 0 - 45 cmbd (0 - 18 inbd)

FEATURES: Six features, including three brick piers, a brick chimney foundation, a concrete well shaft, and a posthole.

DATING/CULTURAL AFFILIATION: historic; post circa 1859 - mid twentieth century

PRESENT CONDITION/PRESERVATION: House site displays extensive disturbance from destruction of the house, from construction of the pond, and from twentieth century agricultural activities.

PRESENT USE: cattle pasture

PRESENT AND FUTURE IMPACTS: probable destruction by construction of the Comite River Diversion Project canal

COLLECTIONS

SURVEY/EXCAVATION METHOD: Phase I survey by Coastal Environments, Inc. included shovel testing and surface collection. Phase II conducted by R. Christopher Goodwin & Associates, Inc. included shovel testing and unit excavation. Eight 1 x 1 m (3.3 x 3.3 ft) units were excavated within the house area, an adjacent midden, and in the presumed yard areas to the north and south.

DESCRIPTION OF MATERIAL: Materials recovered included ceramics (whiteware, yellowware, and porcelain), machine-made and blown-in-mold bottle glass, cut and wire nails, miscellaneous items like a slate pencil, porcelain doll part, and a stoneware pipe fragment, a 1944 Lincoln penny, and modern materials.

SITE EVALUATION

RESEARCH POTENTIAL: Because of extensive post-occupation disturbance, the site no longer possesses significant research potential.

STATE OR NATIONAL REGISTER ELIGIBILITY: Not significant.

RECOMMENDATIONS: No additional testing of this site is recommended.

RECORDS

OWNER/TENANT AND ADDRESS: Guy McHugh et al. c/o Marion M. Coffee, 924 Thurman Dr., Baton Rouge, LA, 70806

SITE DESCRIPTION

Site Size 35 x 35m Plan square
Orientation structure faced east Stratigraphy artifact scatter in plowzone. site of former structure, plus 25cm of trash midden south of structure site.
Artifact Density moderate Artifact Distribution artifacts in plowzone around structure site, and in trash midden. Cultural Features structure site with central chimney fall, and associated trash midden.
Cultural Affiliation Historic, middle to late 19th century
Presumed Function J. A. McHugh house, built probably in early 1860's.

COLLECTIONS

Survey Method Pedestrian shovel test survey.
Assessment of Collecting Conditions fair, half of house site fenced in and overgrown.
Description of Material handmade brick fragments, square nails, metal, glass, and ceramic fragments.

CONDITIONS

Present Use cattle pasture Erosion or Disturbance previously plowed
Probable Future Destruction Will be destroyed by Comite Diversion Canal construction.

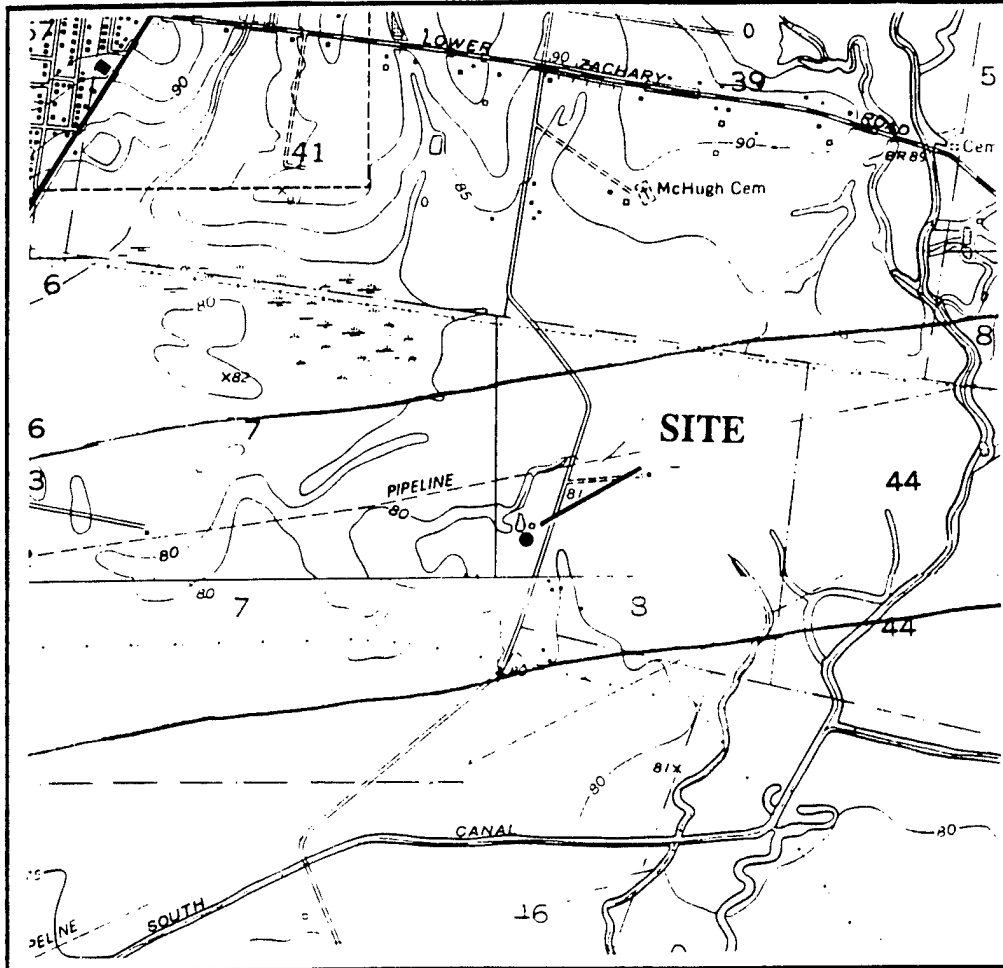

SITE EVALUATION

Research Potential Other subsurface features may lie intact below the plowzone.

State or National Register Eligibility potentially eligible, according to National Register criteria A, B, & D

Recommendations Divert Comite Diversion Canal away from this site, or monitor all excavations in this area.

SITE RECORD UPDATE FORM**

LOCATIONAL DATA

SITE NAME:

STATE SURVEY NO.: 16EBR115

OTHER SITE DESIGNATIONS: D-JR-6

SITE LOCATION AND APPROACH: Take Hwy. 964 north of Baker. Site is on right side of road, opposite the intersection with Carney road, and just south of the driveway into Magnolia Baptist Church.

PARISH: East Baton Rouge

NW 1/4 of the NW 1/4 of Section 72 Township 5S Range 1W

USGS QUADRANGLE: Scotlandville LA (1980 photorevised) 7.5'

UTM COORDINATES: Zone 15 Easting 672500 Northing 3388800

GEOGRAPHICAL COORDINATES:

PHYSICAL SETTING

LANDFORM: Pleistocene Terrace

GEOMORPHIC PROCESSES:

ELEVATION AND RELIEF: ca. 75 ft amsl

NEAREST WATER: Bayou Baton Rouge

POSITION WITH RESPECT TO TERRAIN: on low terrace west of branch of Bayou Baton Rouge

SOIL CHARACTERISTICS: silty loam with iron oxide concretions

FLORAL COMMUNITIES: upland hardwood forest and cleared pasture

FAUNAL COMMUNITIES: rabbit, squirrel, deer

NEAREST KNOWN SITE: 16EBR86, 16EBR54

SITE DESCRIPTION

SITE DESCRIPTION: Site 16EBR115 is a small early to mid-twentieth century historic scatter, probably associated with an agricultural outbuilding. There is a possible late nineteenth century component. No subsurface features were identified, and no intact architectural remains were located.

SITE SIZE: ca. 25 x 35 m (82 x 114.8 ft)

CONFIGURATION: roughly oval, oriented east-west

DENSITY OF CULTURAL MATERIALS: extremely sparse

DEPTH OF DEPOSIT/STRATIGRAPHY: During initial testing, artifacts located only in plowzone. Metal detector testing located artifacts at depth of ca. 30 - 50 cmbs (11.8 - 19.7 inbs). This stratum was below the plowzone, which extended only to ca. 30 cmbs (11.8 inbs).

FEATURES: none

DATING/CULTURAL AFFILIATION: Early to mid-twentieth century with a possible late nineteenth century component. Remains are consistent with an agricultural outbuilding.

PRESENT CONDITION/PRESERVATION: the site is overgrown, and there is little recent disturbance..

PRESENT USE: the site is crossed by a little-used dirt track leading to a private garden. There is no other evidence of occupation.

PRESENT AND FUTURE IMPACTS: The site lies on the edge of the revised Comite Drainage project corridor. It is unlikely that it will be severely impacted by construction.

COLLECTIONS

SURVEY/EXCAVATION METHOD: Phase I survey included shovel testing and pedestrian survey (Ryan et al. 1994); additional testing included systematic metal detector survey (Markell et al. 1997).

DESCRIPTION OF MATERIAL: Brick fragments, glass, metal fragments, copper lamp parts, barbed wire, single *Bos taurus* bone.

SITE EVALUATION

RESEARCH POTENTIAL: Extremely limited

STATE OR NATIONAL REGISTER ELIGIBILITY: Not eligible

RECOMMENDATIONS: No further excavations are warranted.

LOCATIONAL DATA

SITE NAME:

STATE SURVEY NO.: 16EBR117

OTHER SITE DESIGNATIONS: Penny Plantation, Carney Farm

SITE LOCATION AND APPROACH: Take Highway 964 north of Baker, and turn left onto Carney Road. The site is located south of Carney Road and immediately west of Baton Rouge Bayou.

PARISH: East Baton Rouge

E1/2 of Sections 89;70 Township 5S Range 1W

USGS QUADRANGLE: Scotlandville, LA (1980 photorevised) 7.5'

UTM COORDINATES: zone 15, Easting 67190, Northing 3388800

PHYSICAL SETTING

LANDFORM: Pleistocene Terrace

ELEVATION AND RELIEF: 26 m (85 ft) (MSL)

NEAREST WATER: Baton Rouge Bayou

POSITION WITH RESPECT TO TERRAIN: on west bank of Baton Rouge Bayou

SOIL CHARACTERISTICS: silty loam with iron oxide concretions

FLORAL COMMUNITIES: upland hardwood forest and cleared pasture

FAUNAL COMMUNITIES: rabbit, squirrel, and deer

NEAREST KNOWN SITE: 16EBR118, 16EBR86, and 16EBR54

SITE DESCRIPTION

SITE DESCRIPTION: This site is a working farm, first settled by James Penny ca. 1798. Penny, a Revolutionary War veteran, was buried across Carney Road in the Newport/Penny cemetery. The site contains archeological remains of eighteenth through twentieth century occupation. Stratigraphic integrity is apparent through much of the domestic portion of the site. Some evidence of Civil War activity was found during initial survey; this consisted of minie balls and a scabbard tip. The site is associated with 16EBR118, the site of a tenant cabin, and possibly slave quarters, during the nineteenth century.

SITE SIZE: 500 x 200 m (1,640 x 656 ft)

CONFIGURATION: rectangular

DENSITY OF CULTURAL MATERIALS: light to high, depending on area of site

DEPTH OF DEPOSIT/STRATIGRAPHY: depth varies from 0 - 60 cmbs (0 - 24 inbs)

FEATURES: Seven features were recorded, ranging from postholes to drainage ditches.

DATING/CULTURAL AFFILIATION: Artifactual and archival data suggest that the site dates between ca. 1798 through the present.

PRESENT CONDITION/PRESERVATION: The site is still a working farm. Deposits in the vicinity of the present house appear to be stratigraphically intact, although minor disturbance from gardening and construction activities have impacted small portions of the site. Areas in pasture, to the north and the south of the house, have been subjected to plowing, but features remain beneath the plow zone. A dairy barn and milkhouse complex dating from the early twentieth century is in poor repair, but retains structural and situational integrity.

PRESENT USE: Agricultural enterprise and dwelling

PRESENT AND FUTURE IMPACTS: construction of the Comite River Diversion Project canal will severely impact the site

COLLECTIONS

SURVEY/EXCAVATION METHOD: magnetometer testing, metal detector testing, shovel testing, and unit excavation

DESCRIPTION OF MATERIAL: Range of ceramics, including pearlware, whiteware, porcelain, yellowware, El Moro ware. Nineteenth and early twentieth century glass, ball clay pipe fragments, eighteenth and nineteenth century buttons, faunal material, cut and wire nails, miscellaneous metal artifacts.

SITE EVALUATION

RESEARCH POTENTIAL: The Penny Plantation site dates from the late eighteenth century to the present, and remains a working farm. It has been the site of three owner's dwellings during the past 198 years, in addition to farm outbuildings and slave and tenant housing. Deposits from the majority of these structures remain stratigraphically intact, and have the potential to permit studies of changing patterns in consumption, foodways, social interaction, and farm layout related to economic and technological shifts.

STATE OR NATIONAL REGISTER ELIGIBILITY: This site is assessed as significant for nomination to the National Register of Historic Places, under criterion d (36 CFR 60.4 [a-d]).

RECOMMENDATIONS: It is recommended that if the Comite River Diversion Project is finalized, and avoidance is not possible, this historic property be subjected to full mitigation excavations, HABS/HAER recordation of the dairy complex, and an oral historical study.

Floral Communities upland hardwood forest and cleared pasture.

Faunal Communities rabbit, squirrel, deer

Other Potential Resources aquatic resources from Bayou Baton Rouge.

Nearest known Site EBR 86 EBR 54

SITE DESCRIPTION

Site Size approximately 300 x 200m Plan rectangular

Orientation north-south Stratigraphy artifacts in plowzone and on surface. No intact deposit located in shovel tests.

Artifact Density moderate Artifact Distribution artifacts clustered around site of earlier dwelling, & site of outbuildings Cultural Features historic scatter in plowzone and on surface around dwelling; historic scatter in plowzone SE of dwelling, at site of outbuildings.

Cultural Affiliation Historic, late 18th century, through Civil War period, to present.

Presumed Function Site of settler's cottage and later plantation house & outbuildings; & Civil War camp.

COLLECTIONS

Survey Method Pedestrian shovel test survey

Assessment of Collecting Conditions fair, yet limited by current residents' structures & yards.

Description of Material Late 18th century button, 18th & 19th century ceramics, glass, metal, brick, plus 20th century metal debris.

CONDITIONS

Present Use residence and cattle farm Erosion or Disturbance later construction & farming

Probable Future Destruction May be impacted by Comite River Diversion Canal construction.

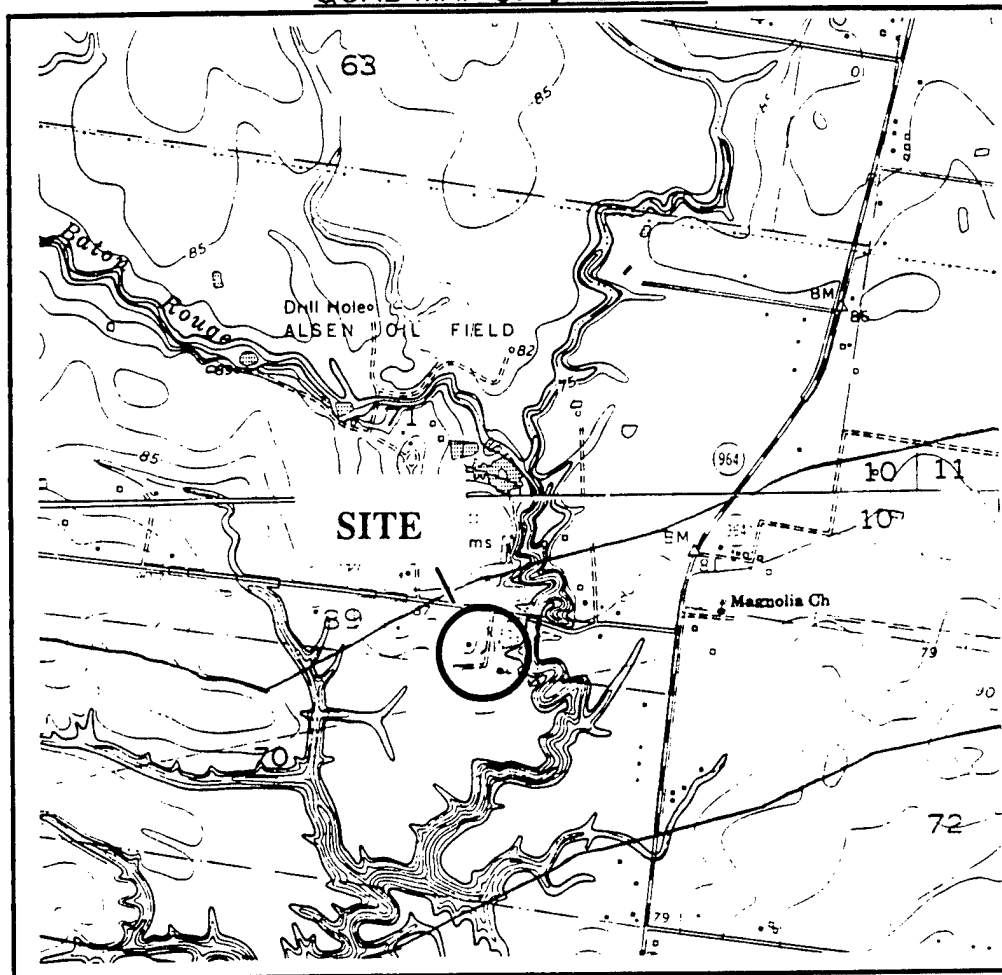

SITE EVALUATION

Research Potential Remains of previous dwellings, privies, etc may be preserved beneath current carport, house, trailer and yards. Sub-surface features may lie intact below the plowzone.

State or National Register Eligibility potentially eligible according to National Register criteria A, B, & D.

Recommendations The Comite River Diversion Canal, and other excavations, should be diverted away from this site.

Date 7/8/93

**STATE OF LOUISIANA
SITE RECORD UPDATE FORM**

LOCATIONAL DATA

SITE NAME: Labor quarters for Penny Plantation

STATE SURVEY NO.: 16EBR118

OTHER SITE DESIGNATIONS: E-DH-2B

SITE LOCATION AND APPROACH: Take Hwy 964 north of Baker. Turn left on Carney Road. Proceed to home of Bowman and Mary Carney (first house on left, east of Bayou Baton Rouge). Site is in pasture 300 m due south of Carney dairy barn

PARISH: East Baton Rouge

SE1/4 ___ of the NE1/4 ___ of the irreg. portion of Section 70 Township 5S Range 1W ___

USGS QUADRANGLE: Scotlandville, Louisiana (1980 photorevised) 7.5 '

UTM COORDINATES: Zone 15 E 671740 N 3388450

GEOGRAPHICAL COORDINATES:

PHYSICAL SETTING

LANDFORM: Pleistocene Terrace

GEOMORPHIC PROCESSES:

ELEVATION AND RELIEF: 75' amsl

NEAREST WATER: Bayou Baton Rouge

POSITION WITH RESPECT TO TERRAIN: site is on terrace just west of the main branch of the bayou

SOIL CHARACTERISTICS: silty loam with iron oxide concretions

FLORAL COMMUNITIES: upland hardwood forest and cleared pasture

FAUNAL COMMUNITIES: rabbit, squirrel, deer

NEAREST KNOWN SITE: 16EBR117, 16EBR86, 16EBR54

SITE DESCRIPTION

SITE DESCRIPTION: Light historic scatter of ceramics, architectural materials, metal - probably represents a mid nineteenth to early twentieth century labor dwelling, associated with Penny Plantation (Site 16EBR117). Most of site has been plowed; one partially intact posthole feature identified in plowed field. Possible occupational plane identified in wooded, unplowed portion of site, adjacent to bayou.

SITE SIZE: 100 x 45 m

CONFIGURATION: roughly oval, oriented north-south along bayou

DENSITY OF CULTURAL MATERIALS: light

DEPTH OF DEPOSIT/STRATIGRAPHY: material recovered between 0 - 40 cmbs (0 - 15.7 inbs). Stratum I ranged from 15 cm - 20 cmbs, and consisted of a dark grayish brown, loamy silt. In Units 14 and 15 this was plowzone. Stratum IA was a brown slightly clayey silt that appeared in Unit 14 at a depth between 20 and 21 cmbs. Stratum II extended to ca. 35 - 40 cmbs, and was an undisturbed yellowish brown loamy silt. Stratum III was sterile, a brown silty clay. The majority of materials were recovered from Strata I and IA, although significant numbers came from Stratum II.

FEATURES: One feature (Feature 14-1) was recorded. This was a remnant posthole, visible at the intersection of Strata II and III. There was some evidence of an occupational plane, or buried A horizon at the interface of Strata I and II.

DATING/CULTURAL AFFILIATION: mid nineteenth century to early twentieth century. Artifacts are consistent with domestic occupation, probably laborers/tenants associated with the Penny Plantation.

PRESENT CONDITION/PRESERVATION: site has been impacted by plowing, possibly erosion

PRESENT USE: pasture and wood lot

PRESENT AND FUTURE IMPACTS: unknown - this site is outside of the proposed Comite River Diversion Channel project boundaries

COLLECTIONS

SURVEY/EXCAVATION METHOD: Pedestrian reconnaissance and shovel testing conducted by Coastal Environments (1993); shovel testing, metal detector survey, and excavation of three test units conducted by Goodwin & Associates (1995)

DESCRIPTION OF MATERIAL: ceramics, glass, cut nails, brick fragments, lamp glass, brass button, cast iron stove parts, ax head, Buffalo nickel, .36 caliber percussion ball, minie balls

SITE EVALUATION

RESEARCH POTENTIAL: limited

STATE OR NATIONAL REGISTER ELIGIBILITY: not eligible

RECOMMENDATIONS: no further testing

SITE RECORD UPDATE FORM**

LOCATIONAL DATA

SITE NAME: Springfield Landing

STATE SURVEY NO.:16EBR149

OTHER SITE DESIGNATIONS: Includes Locus SL-1

SITE LOCATION AND APPROACH: North on Highway 61, turn west just before junction with Route 964, travel west approximately 4 miles to Hall Buck Marine facility, site runs along Profit Island Chute from off-load facility to Cooper Bayou (stop at facility and acquire permission to continue. Locus SL-1 is located at mouth of Cooper Bayou.

PARISH: East Baton Rouge

NW1/2 of the W1/2 of Section 53 Township 5S Range 2W

USGS QUADRANGLE: Walls, Louisiana 1980 1:24,000

UTM COORDINATES: NW corner of site: E665400 m N 3386000m Zone 15
SE corner of site: E 665600 m N 338485 m

GEOGRAPHICAL COORDINATES:

PHYSICAL SETTING

LANDFORM: natural levee

GEOMORPHIC PROCESSES: alluviation/bank erosion

ELEVATION AND RELIEF: 45 ft amsl

NEAREST WATER: Profit Island Chute/Mississippi River

POSITION WITH RESPECT TO TERRAIN: 5 - 7 ft below present ground surface along bank

SOIL CHARACTERISTICS: Crevasse soils

FLORAL COMMUNITIES: mixed hardwood/willow

FAUNAL COMMUNITIES: deer, rabbit, squirrel, raccoon, several cottonmouths observed

NEAREST KNOWN SITE: 16EBR141

SITE DESCRIPTION

SITE DESCRIPTION: site represents Springfield Landing (see attached etching), Civil War material is eroding out of bank along northern edge of Hall Buck Marine off-loading facility. Locus SL-1 represents a later occupation at the site, dating to the late 19th or early 20th centuries. Locus SL-1 consists of a sparse subsurface scatter of glass and metal, including iron can fragments, shotgun pellets, a .38 shell casing, copper fragments, a wire nail, and one sherd of plain whiteware. Material is consistent with an identification as a fishing or hunting camp.

SITE SIZE: Estimate for site based on informant information, observed material, Harper's Weekly etching, and horizontal dimension of associated landform - ca. 1500 m x 200 m

Locus SL-1 size is approximately 40 x 43 m

CONFIGURATION: linear, perpendicular to channel; Locus SL-1 is oval, with Mississippi River forming the western edge, and Cooper's Bayou forming the northern edge

DENSITY OF CULTURAL MATERIALS: sporadic across large area, high at specific locations; Locus SL-1 has sparse density

DEPTH OF DEPOSIT/STRATIGRAPHY: approximately 6 - 8 feet below present ground surface, mottled medium brown silty clay with some charcoal and burned earth present. Cultural layer is slightly darker than sandy deposits found above and below. Locus SL-1 cultural material was recovered from depths ranging from 3.7 - 4.9 fbs (1.18 - 1.5 mbs). Stratigraphy included a very dark brown clay loam from 0 - 32 cmbs (Stratum I), a light olive brown silty sand with clay bands from 32 - 148 cmbs (Stratum II), a grayish brown sandy silt - possible buried A horizon from 148 - 150 cmbs (Stratum IIA), and a light olive brown silty clay from 150 - 181 cmbs (Stratum III).

FEATURES: wooden planks eroding from bank at Hall Buck off-loading facility may represent some type of flooring for warehouse or tent; no features at Locus SL-1

DATING/CULTURAL AFFILIATION: 1863 (Siege of Port Hudson); late nineteenth early twentieth century for Locus SL-1

PRESENT CONDITION/PRESERVATION: southern half of site is utilized by Hall Buck Marine as off-load facility - northern portions have not been impacted are covered with timber and brush, portion of site where material was observed in bank is partially covered with rip-rap, which appears to be protecting deposits

PRESENT USE: one half of site is part of industrial complex; northern portion of site is wooded and used for hunting

PRESENT AND FUTURE IMPACTS: bank erosion is cutting into deposits, future industrial development may impact site; site is somewhat protected due to the depth of the deposit; Prosecution of the Comite River Diversion Channel project may cause severe erosion at the mouth of Cooper Bayou, affecting Locus SL-1.

COLLECTIONS

SURVEY/EXCAVATION METHOD: bankline reconnaissance and trenches excavated in the northern portion of the site. Visit and reconnaissance near Hall Buck Marine with informants.

DESCRIPTION OF MATERIAL: observed several in-situ planks sticking out of bank approximately 6 - 18 inches. Square nails were observed in planks, two severely deteriorated metal Civil War era tin bulls-eye canteens, one forged up-right campfire iron, and a brass bugle (infantry) hat badge, charcoal and burned earth. Six to eight Union SNY belt plates have been collected around Hall Buck Marine facility and adjacent to Cooper Bayou, according to informants. At Locus SL-1, artifacts include copper fragments, shotgun pellets, a .38 shell casing, fragments of a clear glass medicine bottle, a wire nail, and a single sherd of plain whiteware.

SITE EVALUATION

RESEARCH POTENTIAL: Excellent opportunity to contribute to historical record on Siege of Port Hudson; intact deposits are present. Locus SL-1 has little research potential.

STATE OR NATIONAL REGISTER ELIGIBILITY: Main portion of site is potentially eligible for Nation Register; Locus SL-1 is not eligible for nomination to National Register.

RECOMMENDATIONS: Additional testing should be done to determine horizontal and vertical dimension of site. Testing has only been done in northern portion of site. Because of the sporadic nature of the deposits, this area should receive additional monitoring if more subsurface disturbance is planned. No further work at Locus SL-1 is recommended.

RECORDS

OWNER/TENANT AND ADDRESS: Hall Buck Marine owns or leases southern end; Kaiser Aluminum owns northern portion

INFORMANTS: Jerry Jackson, Ron McAlum

PREVIOUS INVESTIGATIONS: none

COLLECTIONS AND AVAILABILITY: Above informants collected Civil War material from Site; material from Locus SL-1 at the State of Louisiana, Division of Archaeology, Curation Facility, 2170 N. 3rd St., Baton Rouge, LA 70804

SITE LOCATION AND APPROACH: From Scotlandville, travel north on US Route 61 to State Route 964. Travel north-northeast on State Route 964 past Heck Young Road to Carney Road. Turn west on Carney Road and continue past Bayou Baton Rouge to the Carney residence historic oak tree lined driveway. From the driveway entrance on Carney Road, drive an additional 180 m (600 ft) west and stop. From this point, the site is located on a low rise (10 m (35 ft) on the north side of Carney Road.

PARISH: East Baton Rouge Parish

IRQ of the SE of Section 71 Township 5S Range 1W

USGS QUADRANGLE: USGS 7.5' Series Topographic Quadrangle, Scotlandville LA, 1963, photo revised 1970 and 1980.

UTM COORDINATES: Zone 15, 3388940N, 671755E

GEOGRAPHICAL COORDINATES: Long. 91° 12'19" W, Lat. 30° 37'20" N

PHYSICAL SETTING

LANDFORM: Low rise or alluvial flood plain

GEOMORPHIC PROCESSES: Pleistocene deposition with subsequent Holocene alluviation/erosion.

ELEVATION AND RELIEF: The elevation is 22.9 to 26 m (75 to 85 ft) NGVD 1929; the terrain is flat to gently sloping.

NEAREST WATER: Bayou Baton Rouge is located 245 m (800 ft) from the site.

POSITION WITH RESPECT TO TERRAIN: The site is situated just below the crest of a low rise on a broad flood plain.

SOIL CHARACTERISTICS: Silt loam alluvium, 2-4% slopes.

FLORAL COMMUNITIES: Vegetation in the site area consists of pasture with low cropped grass and weeds, while vegetation surrounding the pasture is made up of pine, various hardwoods and briar.

FAUNAL COMMUNITIES: Species typical of the area include deer, coyote, raccoon, fox squirrel, opossum, rabbit, hawk, and crow.

NEAREST KNOWN SITE: The nearest known site is the Penney Plantation (Site 16EBR117), which is 100 m (325 ft) southeast.

SITE DESCRIPTION

SITE DESCRIPTION: The site consists of a late nineteenth century historic artifact scatter below the crest of a low rise in a cow pasture. Artifacts recovered from the site include amethyst pressed glass fragments, a fragment of an amethyst tooled bottle lip, stoneware, ironstone, and porcelain fragments, and miscellaneous metal. All materials were recovered from the surface or from the plow zone; there was no evidence of intact subsurface deposits. In an interview with the present landowner, Mr. Adrian Decker, Decker stated that the architectural remains of a share cropper's cabin, consisting of a brick foundation and chimney, stood on this site when his family took possession of the property in the 1930s. At that time, the foundation and chimney were demolished, and the debris was disposed of in the east field. Material recovered from the plow zone, approximately 30 m (98.4 ft) east of the site, probably is associated with this historic scatter.

SITE SIZE: The site measures 28 m (91.84 ft) north-south by 52 m (170.56 ft) east-west.

CONFIGURATION: The site is elliptical in shape.

DENSITY OF CULTURAL MATERIALS: Artifact density is very low, approximately 1 artifact per 70 m².

DEPTH OF DEPOSIT/STRATIGRAPHY: As demonstrated by three negative shovel tests within the site area, cultural materials on the site are limited to the sites surface.

FEATURES: None observed

DATING/CULTURAL AFFILIATION: Late 19th century/ early 20th century.

PRESENT CONDITION/PRESERVATION: No intact remains; sparse artifact scatter in the plow zone.

PRESENT USE: Pasture.

PRESENT AND FUTURE IMPACTS: Present impacts consist of continuing agricultural activities in the site area. Future impacts include the presently proposed Comite River Diversion Project, which would involve the construction of a new river channel through the site area. Excavation of the proposed river channel would destroy the site.

COLLECTIONS

SURVEY/EXCAVATION METHOD: The site originally was located during pedestrian survey and shovel testing of the project area. Three transects, spaced 30 m (98.4 ft) apart, were placed in the vicinity of the site; shovel tests were excavated at 30 m (98.4 ft) intervals along each survey transect. Of the initial shovel tests excavated within the site area, neither produced cultural material. During the subsequent site delineation process, three additional shovel tests were excavated in and near the site; each of these shovel tests failed to produce any cultural material. Artifacts were observed only on the site surface.

DESCRIPTION OF MATERIAL: A sample collection from the surface scatter resulted in the recovery of 10 artifacts. Of the 10 artifacts, 5 are glass, 4 are ceramic, and 1 is metal. The glass includes: 2 pieces of pressed amethyst glass bottle fragments, 1 amethyst bottle neck fragment with tooled lip, 1 piece of cobalt blue bottle machine-made bottle glass and 1 piece of opaque white milk glass. The ceramic artifacts include: 2 pieces of domestic brown stoneware, 1 piece of undecorated white ironstone, and 1 piece of white porcelain with hard paste. The metal object consist of an ovoid shaped piece of plate iron with the number "8" embossed on one side.

SITE EVALUATION

RESEARCH POTENTIAL: The site retains little research potential. The demolition and removal of the cabin remains, and the intensive plowing of the rise upon which the cabin sat have rendered the site destroyed. In addition, three shovel tests excavated within the site boundaries recovered no subsurface cultural materials, suggesting the absence of a buried culture bearing deposit.

STATE OR NATIONAL REGISTER ELIGIBILITY: Not significant..

RECOMMENDATIONS: No further testing is recommended.

S-35 Bourque Dairy Cow Pen

A small rectangular wood framed structure which is one of the three remaining parts of a small dairy farm complex of buildings. The dairy cow shed is a long rectangular structure which consists of three rooms. A central access and storage room is entered through a single door, this room is flanked on both sides by dairy cow pens or feeding rooms. These rooms are accessed through half doors which are adjacent to the center section on both sides. The door hardware for this structure is quite unique and consists of large cast iron slide bolts to secure the doors and large strap type cast iron hinges. The exterior horizontal wood siding appears to be cypress. The roof of the structure is a simple shed type roof clad with corrugated galvanized tin. A short shed canopy extends out on the front of the structure as well.

The Dairy Cow Pen is a good example of the type of structures used by the local dairy farmers in the early part of the twentieth century in the Zachary area. The hardware on the building is of special note. It is the opinion of this surveyor that these types of locally significant structures provide valuable information on the early twentieth century economy of the area and deserve additional evaluation for their significance both architecturally and historically.

III. Physical description of property and historic significance.

SS-36 Bourque Dairy Milk Shed

The Bourque Dairy Milk Shed is one of three support buildings of a small dairy farm complex. It is a small square building with an access door on the west side and windows on the north and south sides. Its roof is a simple gabled-end roof which is covered with corrugated galvanized tin. The exterior of the structure is clad with vertical board and batten cypress siding. The most unique feature of this structure is its foundation and its design. The foundation is made of concrete which is turned up at the perimeter of the building a height of approximately fifteen (15) to eighteen (18) inches upon which the exterior wall rest. The structure was used to store milk in milk cans until they could be trucked to market. The concrete floor was a practical device due to the quantity of water used to clean the floor of the structure daily. The Dairy Milk Shed is a good example of the type of structures used by local dairy farmers in the early part of the Twentieth Century in the Zachary area. This surveyor believes that these locally significant structure types provide valuable information on the early Twentieth Century economy of the area and deserve additional evaluation for their significance in the area of agriculture as well as their architectural and historical importance, if any.

III. Physical description of property and historic significance.

SS-37 Bourque Dairy Barn

The Bourque Dairy Barn is one of three support buildings of a small dairy farm complex. The building was originally used as the milking barn for several cows. Originally it was of the same construction as the Dairy Milk Shed being of wood framed construction which rested on an at grade concrete slab with elevated perimeter footings similar to the Milk Shed. The roof is a simple gabled-end roof design. The original roof has been replaced with modern fiberglass shingles. Originally the exterior of the structure was clad with vertical board and batten cypress boards. The unique foundation is made of concrete which is turned up at the perimeter of the building a height of approximately fifteen (15) to eighteen (18) inches upon which the exterior wall rests. The barn is now being converted into a garage and is in the process receiving brick on the exterior walls. The outside face of the exposed footing is slightly beveled in order to shed water. The barn is now being converted into a garage and is in the process of receiving bricks on the exterior wall. The Dairy Barn is a good example of the type of structure used by local dairy farmers in the early part of the Twentieth Century in the Zachary area. These structures need additional evaluation for their significance. They could provide valuable information toward understanding the development and impact of the dairy industry of this area.

 beam, exterior wall on concrete chain wall footing

II. Physical description of property and historic significance.

S-38 Bourque Livestock & Hay Barn

This large livestock and hay barn was built in the 1930's by Roscoe Skidmore. It is a large rectangular shaped structure of post and beam construction which consists of a tall central section separated from shorter and narrower wings on each side of the central section. The central section is defined by two rows of nine tall post from which wood hay troughs extend at an angle into the lower and narrower side areas. Its design is much the same as a church with a central nave and side aisles. The exterior walls of the barn rest on concrete chain wall footings which are continuous around the perimeter of the structure. The structure is framed under one continuous gabled-end roof which is clad with corrugated galvanized tin. The exterior walls are covered with vertical cypress boards. There is no loft in the center section however there is a loft door at the rear. Large double doors afford access to the central section and to each side wing on the front end. Although the barn lacks fine architectural detailing it is a good example of a large livestock and hay barn which would have been built in the early part of the twentieth century for a farm of this size. The barn is located about one hundred yards behind the residence of Mr. & Mrs. Leonce C. Bourque in a large pasture.

S-39 Carney Dairy Barn

A large rectangular wood framed structure which was used as a dairy barn to milk cows. The barn is constructed on a concrete slab and foundation. The exterior chainwall at the perimeter of the barn is raised and the exterior wood stud walls rest on top of the elevated concrete chainwall. The floor slab is constructed in a way that a pre-st feeder trough of about four and one half feet wide is built along the exterior wall, a flat portion of the slab extends from the feeder trough another four and one half feet to where a twelve inch dapped-out drain channel located and extends the length of the building to the outside. This configuration allowed the cow to stand at the feeder trough while workers performed milking and the dapped-out drain handled animal excrement which was then washed away. Fifty stalls accommodated the milking of fifty cows at one time. The roof structure made of 2"x6" built-up roof trusses spaced 36 inches on center which support a corrugated galvanized tin roof. Five original roof turbins still remain at the ridge of the gabled-end structure. Exterior siding consist of vertical cypress boards. There are 19 sets of double windows on the exterior walls. This unique structure is important in the scheme of economic development of the local dairy farming industry during the early part of the twentieth century and deserves additional evaluation for its significance both architecturally and historically.

SS-40 Carney Dairy Milk Shed

A small rectangular wood framed structure used as a milk storage shed where milk was kept cool until it was
picked up by truck and transported to market. The structure is connected to the Dairy barn by a covered walk.
The foundation of the structure is unique in that it is a concrete slab with elevated perimeter chainwall footings
which extend up eighteen inches above the floor slab. From the top of the raised concrete chainwall, the exterior
wood wall studs are placed and form the remainder of the structure. According to Mr. Bowman, large blocks of
ice were used to keep the fresh milk cool prior to pick up. The elevated concrete chainwall handled the excessive
build-up of water and protected the structure from rotting. The exterior walls of the shed are of horizontal board
and batten in design. The shed has a simple gabled-end roof which is clad with corrugated galvanized tin. The
shed has three sets of side-by-side six over six lite wood windows on each side and on the rear. Access to the
shed is gained through a single door on the south end of the building under the covered walk. This unique
structure is important in scheme of economic development of the local dairy farming during the early part of the
twentieth century and deserves additional evaluation for its significance both architecturally and historically.
At one time the shed was used as an apartment and the interior has been renovated to accommodate that use.

BS-41 Carney Livestock Barn

This small livestock barn or crib consist of two parts, the center section is an elevated rectangular enclosed crib type structure which has a raised wooden floor. Exterior wood walls are covered with horizontal cypress board and batten siding. Its roof design is a simple gabled-end type which is covered with "V" crimped galvanized tin. The second portion of the structure includes lean-to shed type extensions on the west and south sides of the central raised crib. These lean-to extensions are supported by wooden post and the floor is at grade. Two side walls of the shed extension are covered with horizontal beveled wood siding. A small corral or enclosed-in area surrounds the southern and western side of the barn. Although this structure seems quite unlike the two other dairy structures it is obviously connected in use in some way. Its date of construction may not be consistent with the dairy buildings.

SS-42 Carney Residence

A 1940's ranch style wood framed residential structure on brick piers. Original house has been added to at one
time. The exterior of the house is covered with wide horizontal wood lapped siding. The gabled-end roof
is covered with modern fiberglass roof shingles. Windows include side-by-side, six-over-six lite wood
windows, one-over-one lite windows, and modern aluminum clad windows. The structure has a fireplace in the
central main section with a chimney extending above the roof in the rear. The rear and sides of the house are
surrounded by a four foot chainlink fence. Several large live oaks form a beautiful front yard and define the
location of a much earlier house which no longer stands on the site. There is a large four vehicle carport at the
rear of the house within the fenced area. Although the site of the earlier house is very significant, this modern
structure exhibits no architectural or historical significance.

APPENDIX IV
SCOPE OF WORK

(REVISED)
SCOPE OF WORK

CULTURAL RESOURCE SURVEY, AND NATIONAL REGISTER
TESTING OF COMITE RIVER DIVERSION PROJECT

Contract No. DACW29-94-D-0019

I. LOCATION, OBJECTIVE, PURPOSE AND AUTHORITY

1.1 Location: The project is located in East Baton Rouge Parish, between the towns of Baker and Zachary, Louisiana. The twelve mile project corridor runs from the Comite river west to the junction of Cooper Bayou and Profit Island Chute (project plans are enclosed).

1.2 Objective: Conduct historical literature and cartographic records review to determine the following: 1) the location of known cultural resource sites; 2) the location of high potential areas for cultural resources; and 3) construction of base map with location of potential and known cultural resource data.

Conduct a cultural resource survey and testing investigation of project lands (approximately 60 acres) not covered during the earlier 1994 Coastal Environments Inc. (CEI) survey. Conduct National Register level testing for sites 16EBR105 and 16EBR117 and for newly discovered cultural resources. Conduct additional research and documentation for the Bourque and Carney dairy farms to determine National Register eligibility. Conduct testing activity along small portion of project right-of-way to define southern and **eastern limits** of possible "slave" cemetery. Conduct intensive testing in areas directly associated with Port Hudson campaign (Profit Island Chute south of Cooper Bayou and along the junction of Highway 964 and Carney road. Following completion of the field investigations, a scientific\technical report will be produced. The report will document the findings of the cultural resource investigation and provide recommendations for future investigations and mitigation.

1.3 Purpose: To obtain the professional services, labor, materials and equipment necessary to complete above noted objectives.

1.4 Authority: The U.S. Army Corps of Engineers (COE) is obligated under the National Historic Preservation Act (NHPA), and National Environmental Policy Act (NEPA) to take into account the effect its undertakings have upon cultural resources within a given project area. Under these laws and regulations, the COE assumes responsibility for the identification and evaluation of all cultural resources within the project boundaries. In addition, the COE must afford the State Historic Preservation

Officer (SHPO), and on occasion the Advisory Council on Historic Preservation (ACHP), the opportunity to review and comment upon proposed undertakings and associated cultural resource investigations.

II. BACKGROUND

2.1 Proposed Project: The proposed project is designed to reduce flooding along the Comite River and lower tributaries. Comite River waters will be diverted through the construction of a canal and the use of natural drainages and bayous. The project corridor is approximately twelve miles long and will run from the west bank of the Comite river west to the junction of Profit Island Chute and Cooper Bayou. A man-made channel will be excavated between the Comite River and U.S. Highway 61. Excavated material will be utilized in the construction of levees along the south side of the canal. The remaining portions of the project will utilize Lilly and Cooper Bayous to complete the diversion process. Six control structures will be built within the project corridor to regulate flow. The enclosed project plans illustrate the location of the project corridor. Since the 1994 CEI investigation, the project alignment has slightly changed; thus, approximately 60 acres of project right-of-way remain unsurveyed.

2.2 Previous Research: Three archeological investigations have taken place within the project corridor. In 1990 R. Christopher Goodwin and Associates conducted a survey and testing investigation around Cooper and Lilly Bayous within a portion of the currant project area (Goodwin et al. 1990). No cultural resources were identified as a result of this investigation. CEI conducted a pipeline survey for Exxon along the east side of Highway 61 through a portion of the currant project area (Perrault 1993). No cultural resource sites were located. In 1994 CEI conduct an intensive survey and testing investigation over the entire project area. CEI investigated one previously recorded cultural resource site and recorded 46 new prehistoric and historic cultural resource sites (Ryan et al. 1994). Following Section 106 consultation with the State Historic Preservation Officer (SHPO), four of the sites, 16EBR105, 16EBR117, and the Bourque and Carney dairy complexes, were determined potentially eligible for nomination to the National Register of Historic Places. Additional research and testing was recommended to determine eligibility.

III. **SERVICES**: The Contractor shall perform all work required to provide the following services and products:

3.1 Cultural Resource Literature, and Records Review (Task I): The Contractor will conduct a comprehensive literature and records review prior to the start of the field investigations. This will include, but may not be limited to the following: 1)

review of all available historic maps and aerial photos; 2) examination of local and regional historic archives and public records; 3) a review of the State of Louisiana's cultural resource site and standing structure files; 4) a review of the National Register of Historic Places; 5) a review of geomorphological data and reports; and 6) a review of past cultural resource reports and records.

The literature search and records review will determine the location of known cultural resources and the potential for such resources within the unsurveyed portions of the project area. Upon completion of the historic records and literature review, a 1:24,000 scale map shall be prepared illustrating the location of 19th century roads, house/building sites, landings, and military sites associated with the Civil War and Port Hudson Campaign. The map shall be generated by CADD graphic and/or design files in dgn or igds format and must be compatible with NOD's Intergraph system.

A. Additional historical/socio-economic research will be conducted on the development of the dairy industry and the role it played in the early 20th century economy of Louisiana, and more importantly, East Baton Rouge Parish. Documentation contained within the 1994 CEI report needs expansion and reevaluation so a determination of significance and National Register eligibility can be made. Within this context, the architectural uniqueness and integrity of the Bourque and Carney dairy farms will be assessed and recommendations made regarding National Register eligibility.

B. Following completion of the literature search and records review, the contractor and COR will meet to evaluate and/or reevaluate the research and field methodology to determine the need for a modification of the scope of work.

3.2 Cultural Resource Survey & Preliminary Testing (Task II):

Field investigations will begin following the completion of Task I. Field methodology and techniques will follow acceptable professional standards (see Secretary of the Interior's Standards and Guidelines for Archaeology and Historic Preservation, Federal Register, September 29, 1983). Project specific services are as follows:

A. Portions of the original project alignment changed following completion of the 1994 CEI cultural resource investigation. As a result, approximately 60 acres of previously unsurveyed project right-of-way need surveyed and tested (see enclosure). Within these areas, the contractor will physically survey/test areas that have a high potential for the presence of cultural resources. High potential areas include buried and elevated natural levees, terraces adjacent to major drainages, and where historic maps and documents indicate the likelihood for

the presence of a historic structures and/or features. Within high potential areas, the pedestrian survey/testing will be conducted along parallel transects spaced 20 meters apart. Shovel tests will be placed along these same transects at 20 meter intervals. Test intervals in adjacent transects will be staggered or offset to maximize coverage. Shovel test depth should be no less than 50 centimeters. If geomorphic data indicates that deeper deposits are likely, augers, machine cores and/or backhoe trenches may be utilized. Backdirt from shovel and auger tests should be screened for cultural evidence. Soil characteristics and stratigraphic associations will be described and recorded for all positive tests. Vertical location of recovered cultural materials should be indicated on profiles.

- (1) All measurements shall be made in the metric system.
- (2) Where applicable, surface collections will be conducted in a systematic fashion. Collections can be made along transects and/or within established grid units. A representative sample of all artifact/ecofact categories will be made.
- (3) A site map will be prepared for each newly recorded cultural resource site. The map will document the horizontal locations of all auger tests, collection units, diagnostic cultural materials/features and the approximate horizontal limits of the deposit. A permanent site datum should be selected or established and marked on map.
- (4) Radiocarbon samples will be collected when appropriate.
- (5) All human remains and/or burials and associated artifacts shall be left undisturbed. Upon discovery, the COR will be contacted immediately.
- (6) Upon completion of tests, all holes shall be backfilled.
- (7) All cultural resource sites will be recorded on the appropriate State of Louisiana site forms and clearly delineated on USGS topographic maps (1:24,000 scale).

B. Following completion of the 1994 CEI cultural resource survey investigation, new historical information has come to light regarding Civil War military sites within the project area. Several collectors and state employees at the Port Hudson military park have stated that military artifacts were collected along the edge of Profit Island Chute south of Cooper Bayou (within the present project right-of-way). This area may be associated with Springfield Landing, the primary supply point for Federal troops involved in the Port Hudson campaign. Several

collectors noted that New York State Militia buckles and related material was eroding out of a bank approximately 6 to 8 feet below ground surface. On 17 August 1995 the COR and several local collectors inspected areas south of Cooper Bayou and observed Civil War military artifacts eroding out of the river bank six to eight feet below ground surface. This confirmed the presence of the site and the information provided by the collectors.

(1) To test this area effectively, a series of backhoe trenches and bankline profiles should be utilized. A series of perpendicular trenches will be excavated to a depth of approximately six to eight feet below ground surface. The contractor will clearly identify the horizontal and vertical limits of the site within and adjacent to the project right-of-way. A series of forty, four meter long backhoe trenches will be strategically placed to define the site boundaries.

(2) Trench profiles and a topographic map shall be prepared illustrating the location of each trench, boring and bank profile.

(3) Field methods should follow guidance previously noted in section 3.2.

C. In addition to the military site noted above, the intersection of Springfield Landing road and the Bayou Sara road (to include the location of the Pipkin Chapel), will be surveyed and tested. Thousands of Union troops and smaller groups of Confederates were camped there between March and July 1863. The use of metal detectors in conjunction with traditional shovel tests is needed. On 17 August 1995 the COR and several local collectors inspected the intersection of the above noted roads. Both informants stated that they had collected Civil War military artifacts west of the intersection.

(1) To survey and test this area effectively, a pedestrian survey with combined shovel tests and metal detector sweeps will be needed. Metal detector sweeps should be conducted along parallel transects spaced 10 meters apart. Shovel tests will be placed in areas of artifact concentrations. Shovel test depth should be no less than 50 centimeters. The contractor will clearly identify the horizontal and vertical limits of the site within and adjacent to the project right-of-way.

3.3 Delineation of "Slave" Cemetery (Task III): A possible 19th century slave cemetery is located approximately 150 meters directly north of site 16EBR117 and 75 meters southeast of the Newport-Penney Cemetery (16EBR137). The location is plotted on

1980 U.S.G.S. Scotlandville Quadrangle map. There are no observable features (markers, depressions etc.) in the areas noted on the U.S.G.S. map. Based upon the U.S.G.S plot, it appears that the cemetery is located outside of the project right-of-way. To avoid construction delays and relocation problems, the northern portions of the project right-of-way need to be tested to determine the presence/absence of burials. To achieve this goal the following services are needed:

A. The contractor will test a 50 X 20 meter area along the northern portions of the project right-of-way directly south of the U.S.G.S cemetery plot and a 100 X 20 meter area east the U.S.G.S plot along the western edge of Baton Rouge Bayou. These areas can be effectively tested utilizing a backhoe. East west and north south oriented parallel shallow trenches should be excavated at 5 meter intervals. If found, burials will be left in place and undisturbed.

B. A contour site map shall be prepared illustrating the location of trenches and if present, the location of burials and the southern limits of the cemetery. Profiles shall be prepared illustrating the vertical location of burials.

3.4 National Register Testing (Task IV): Cultural resource sites 16EBR105 and 16EBR117 were tested by CEI during their 1994 cultural resource investigation. Shovel tests and magnetometer surveys were conducted, and both sites were determined to be potentially eligible for nomination to the National Register of Historic Places. Additional data and a reassessment of the CEI data is needed to determine significance, eligibility, and develop a mitigation strategy. The goal of this testing is to provide adequate data to make a clear determination of eligibility in accordance with established criteria (see National Register of historic places criteria of significance 36CFR60.4). The following services are needed:

A. Site 16EBR105 needs additional testing to achieve above noted goals:

(1) 20 shovel tests will be excavated to more accurately determine site boundaries and identify the presence and/or absence of intact cultural features and structural elements associated with the McHugh house.

(2) Following completion of (1), 6 1m x 1m test excavation units shall be strategically placed and excavated to sterile soil. One test unit shall be placed partially over the brick rubble in the center of the site and one within the trash midden located in the southwest corner of the site (both features are illustrated in Figure 56 of the 1994 CEI report).

(3) A topographic site map shall be made that delineates all shovel tests, test excavation units, and cultural features. Profiles shall be prepared for each test excavation unit.

(4) Field work shall follow previously noted methods outlined in section 3.4 of this scope.

B. Site 16EBR117 needs additional testing to achieve goals noted at the beginning of section 3.3:

(1) 40 shovel tests will be excavated to more accurately determine site boundaries and identify the presence and/or absence of intact cultural features and structural elements associated with the plantation complex.

(2) Following completion of (1), 10 1m x 1m test excavation units shall be strategically placed and excavated to sterile soil.

(3) A topographic site map shall be made that delineates all shovel tests, test excavation units, and cultural features.

(4) Field work shall follow previously noted methods outlined in section 3.2 of this scope.

C. Following the completion of the preliminary testing outlined in Task II, it is estimated that two additional potentially eligible cultural resource sites will be identified and require additional testing.

(1) In addition to the field work specified in Task II, the contractor will strategically place five 1m x 1m test excavation units within each site.

(2) A topographic site map shall be made that delineates all shovel tests, test excavation units and cultural features. Profiles shall be drawn for each test excavation unit.

(3) Field work shall follow previously noted methods outlined in section 3.3 of this scope.

(4) If no potentially eligible cultural resource sites are identified following completion of Task II, the ten 1m x 1m test excavation units shall be reallocated to sites 16ENR105 and 16EBR117. Reallocation of these units will require approval from the COR.

3.5 Laboratory Analysis and Cultural Resource Report

(Task V): All cultural material, reports, drawings, maps, photographs, notes, and other work developed in the performance of this contract shall be and remain the responsibility and/or sole property of the Government and may be used on any other work without additional compensation to the contractor. The contractor agrees not to assert any rights and not to establish any claims with respect thereto. The contractor agrees to furnish and provide access to all retained materials at the request of the COR.

A. Laboratory analysis and curation will be conducted in accordance with the following:

(1) All recovered archeological materials and artifacts shall be washed, preserved/stabilized and cataloged. All cultural materials shall be properly stored and secured from vandalism and extremes in temperature and humidity.

(2) Laboratory techniques and artifact analysis should meet acceptable professional standards. Faunal and floral remains will be identified according to standard zooarcheological procedures.

(3) Following completion of this delivery order, all cultural materials and records will be turned over to the State of Louisiana, Division of Archeology, Office of Cultural Development. Thus, all cultural materials and records will be cataloged according to the Division of Archeology's standards. The contractor shall work with the Louisiana Division of Archeology and the COR to coordinate the transfer of all archeological materials and records.

B. Following completion of the field work, a draft report shall be prepared. The draft cultural resource report is expected to be a polished product and accurate representation of the final report with two exceptions: 1) the draft report will be double spaced and 2) photographs may be photo-copied rather than being in publishable form. Report style shall follow acceptable professional standards as established by American Antiquity. The Cultural Resource Report shall contain, but not be limited to the following:

(1) Discussion of proposed Federal action/project.

(2) Overview of regional prehistory, history and previous cultural resource investigations.

(3) Research methodology and detailed discussion of field and laboratory techniques.

- (4) Local geology and environment.
- (5) Discussion of cultural resource sites within project area. Cultural resource site locations, horizontal/vertical provenience and site integrity will be discussed. Detailed site maps and soil profiles will be prepared to accompany discussions.
- (6) Artifact description and analysis accompanied by tables and illustrations.
- (7) Comparison of cultural resource sites, materials and associated data with local and regional chronologies.
- (8) A determination of cultural resource site significance and National Register Eligibility (see Revised 1991, National Register Bulletin 15, "How to Apply the National Register Criteria for Evaluation", Published by the National Park Service).
- (9) Discussion of project impacts and recommendations for future investigations and mitigation.
- (10) In order to preclude vandalism, the draft and final reports shall not contain specific locations of archeological sites.

C. Once the draft report has been reviewed and accepted by the COR, a preliminary final report shall be prepared. Following inspection and acceptance of the preliminary final report, the final report will be prepared and 40 copies forwarded to the COR. The final report shall follow the format set forth in MIL-STD-847A with the following exceptions: (1) separate, soft, durable, wrap-around covers will be used instead of self covers; (2) page size shall be 8-1/2 x 11 inches with 1 inch margins; (3) the reference format and report style will be analogous to American Antiquity. Spelling shall be in accordance with the U.S. Government Printing Office Style Manual dated January 1973. The cover of the report shall conform to the New Orleans District Cultural Resource Report Series standards and specifications. The COR will prepare a letter to the reader that will appear behind the Report Documentation Page at the beginning of the report. A copy of the Scope of Services shall be bound as an appendix at the end of the report.

IV. CONTRACTING OFFICER AND CONTRACTING OFFICERS REPRESENTATIVE

4.1 The COR for this project will be Kenneth Ashworth, CELMN-PD-RN, (504) 862-2548.

4.2 The Contractor shall keep clear and legible field records.

Records should be current and available for periodic review by the Contracting Officer (CO) or the COR. These records shall include, but shall not be limited to: field notebooks, site forms, field maps, drawings and photographs.

4.3 The CO, COR and/or their authorized representatives, may at all reasonable times inspect or otherwise evaluate the work being performed. All inspections and evaluations will be performed in such a manner as will not unduly delay progress of the work. It is necessary that close coordination between the contractor and Government be maintained throughout all contract periods to ensure satisfactory completion.

V. ACCESS AND SAFETY

5.1 The COE will secure right-of-entry for the above noted work. The contractor will work closely with the COR to ensure that local interests and concerns are addressed and considered during the course of the above noted field investigations. Right-of-entry has been secured for 90% of project lands east of Highway 61; however, right of entry has not been secured for areas west of Highway 61. The COR will inform the contractor when right-of-entry has been secured. Right-of-entry is anticipated by 15 September 1995. Artifact disposition, back-filling and site entry problems sometimes occur; thus, the contractor will work closely with the COR to avoid problems and costly delays.

5.2 The contractor shall be subject to all Federal and State safety regulations. The contractor will prepare a safety plan for Government approval. The plan should be submitted with the contractors proposal and cost estimate.

VI. CONTRACT SCHEDULE

6.1 Contract proposal, estimate and safety plan shall be submitted within 15 days of receipt of delivery order package.

6.2 The Government shall review the proposal and safety plan within 5 days of receipt.

6.3 The contractor shall begin Task I no later than 15 days following award of delivery order.

6.4 The contractor and the COR will hold a pre-fieldwork conference following completion of Task I.

6.5 The contractor shall complete Tasks I, II and III (completion of draft report) 180 days following contract award. The draft report (5 copies) shall be submitted to the COR. The COR will review the draft report and forward review comments to the contractor 40 days following receipt of the document. The

contractor will make the required changes and forward (to the COR) a pre-final report (2 copies) no later than 20 days after receipt of the review comments. The COR will inspect the pre-final report and notify the contractor of its acceptance no later than 10 days following its receipt. Once accepted, the contractor has 15 days to prepare and forward 40 copies of the final report. A reproducible master (both hard-copy and computer diskette) and associated GIS/CAD computer data should accompany the final report.

6.6 A brief one page monthly progress report will be submitted along with each monthly billing voucher. The progress report will cover the billing period noted on the voucher. Each report will discuss project status, work performed, logistical problems and difficulties, if any, in meeting the contract schedule. Cost breakdowns should be grouped according to specific "Tasks".
