## Acknowledgments

Data collection and dataset preparation for the Armed Forces 1996 *Equal Opportunity Survey* were performed by Data Recognition Corporation (DRC) under contract DASW01-94-H-0006, Delivery Order 0002. Contributing staff at DRC in the Survey Division include the Federal Government Team (Mary Ellen Hartmann, Patty Pringnitz, Joan Johnson, Teri Broderick, Lee Brekke, Jim Fisher), the Comment Processing Team (Paula Eckel, Elizabeth Panama, Kim Batsche, Marcia Beaudry, JoAnne Beckes, Linda Paulson), the Phone Staff (Dorothy Head, June Berthiaume, Reva Greenberg, Jo Hughes) and the Survey Operations Team (Barb Roff, Dan Murphy). They were supported at DRC by the staffs of Clerical Operations (Diane Hambrick, Diane Burmis, Penny Johnson, Dave Maurek, Dan Reid, Rosie Albrecht, Rhonda Robeck, Karen DuChene, Jeni DeStasio, Carol Meyer, Annette Kline, Judy Sirny, Ernest Bishop, Dan Cunningham, Tony Brown, Karyn Kelsey, Khanh Nguyen), Print Services, Inserting (Gary Hummel and staff), and Warehousing (Bob Tanke, Bruce Hendrickson, Tim Stuber).

We are indebted to numerous people for their assistance in the design of this instrument. In the initial design stage, we convened a group of outside experts to discuss desirable elements for the survey. Those who participated also had the opportunity later to review and provide comments on the survey outline developed at the meeting. We also wish to thank those who conducted the pretests and offered helpful suggestions as the instrument underwent revisions. Among those contributing to the instrument design and testing were Marian Aguilar (The University of Texas at Austin), Colin Beckles (Washington State University), Terra Bowen (Consortium Research Fellows Program), Robert Canon (The University of Texas at Austin), John Dovidio (Colgate University), Joe Feagin (University of Florida), Jennifer Hochschild (Princeton University), James Jones (University of Delaware), John McNeil (The University of Texas at Austin), James Stewart (The Pennsylvania State University), Steve Tarver (Consortium Research Fellows Program), Hernan Vera (University of Florida), William Willard (Washington State University), Paul Wong (Washington State University), and Laverne Wright (Defense Manpower Data Center). We especially thank Mary Weltin (Defense Manpower Data Center) for managing the pretesting and helping with question design.

Special thanks to the service members who helped with our pretesting of the instruments and to all the reviewers who helped us sharpen and refine the items in the questionnaires. Members of the Inter-Service Survey Coordination Committee were particularly helpful in providing Service-specific perspectives and in refining the final items: Major Walt Dyar (Headquarters, U. S. Marine Corps), Charlie Hamilton (Air Force Personnel Center), Richard Lanterman (Headquarters, U. S. Coast Guard), Morris Peterson (Army Research Institute), and Patricia Thomas (Office of Chief of Naval Personnel).

# ARMED FORCES 1996 EQUAL OPPORTUNITY SURVEY: ADMINISTRATION, DATASETS, AND CODEBOOK

## Executive Summary

At the request of the Under Secretary of Defense for Personnel and Readiness, the Defense Manpower Data Center (DMDC) conducted the first Joint-Service survey to assess active-duty service members' perceptions of fair treatment and equal opportunity (EO). After an extensive survey development process, the 16-page *Equal Opportunity Survey (EOS)* was administered from September 1996 through February 1997. It was fielded to a nonproportional stratified random sample of 76,754 Service members in the Department of Defense (DoD) and Coast Guard. The response rate was 53%, which is typical for large-scale surveys of DoD military personnel. This codebook documents survey development, sample construction and allocation, survey-administration procedures, and datasets that resulted from the survey.

The survey's items can be grouped broadly into several categories: workplace and job satisfaction; career issues; types, frequency, and effects of personal and work experiences related to race/ethnicity; use of and satisfaction with the complaints process and outcomes; opinions about personnel policies and programs; interpersonal relations of service members from different races/ethnicities; and members' views of EO in the military now, 5 years ago, and in the civilian sector. Because of the unique nature of this research, survey items could not be readily adopted from scales that have appeared in the civilian research literature.

Data were collected by mail with procedures designed to maximize response rates. Starting in August 1996, an introductory letter explaining the survey and soliciting cooperation was sent to members. The introductory letter was followed about six weeks later by a package containing the questionnaire and instructions for completing and returning the survey. A second letter was sent to thank individuals who had already returned the questionnaire and to ask those who had not to complete and return it. At approximately four weeks and eight weeks after the initial survey mailing, second and third questionnaires with letters stressing the importance of the survey were mailed to individuals who had not responded to previous mailings.

The population of interest for the 1996 *EOS* consisted of all active-duty Army, Navy, Marine Corps, Air Force, and Coast Guard members (including Reservists on full-time duty) below the rank of admiral or general, with at least six months of service. The sampling frame included only those members who were on active duty in April 1996, with final eligibility conditional on also being on active duty in June and September 1996.

Nonproportional stratified random sampling procedures were employed to ensure adequate sample sizes for subgroups of particular interest; thus, ethnic minorities were oversampled relative to their presence in the overall military population. The sampling design considered requirements for analyses by Service; gender; racial/ethnic group membership (Hispanic, non-Hispanic Black, non-Hispanic White, Asian/Pacific Islander, and Native American/Alaskan Native); paygrade; location (US, Europe, Asia/Pacific Islands); and the density in duty occupations of Blacks, Hispanics, and total minorities. The design oversampled

minority racial/ethnic group members to ensure adequate sample sizes for comparisons among subgroups.

The initial sample for the *EOS* consisted of 76,754 individuals, of whom 73,496 were ultimately determined to be eligible members of the target population. When the survey fielding closed in February 1997, usable surveys had been received from 39,855 Service members. The overall weighted response rate for eligibles, corrected for nonproportional sampling, was 53%. Complete details of the sample design and response rates for each race/ethnicity and paygrade category are reported in Wheeless, Mason, Kavee, Riemer, and Elig (1997).

Data were weighted to reflect the population of interest. The weights reflected (a) the probability of selection for that member, (b) a nonresponse adjustment to minimize bias arising from differential response rates among demographic subgroups, and (c) a poststratification factor for September 1996—the month in which the questionnaire was first distributed.

Care was taken in the preparation of analysis files. These files balance two needs: public access to data with sufficient information for accurate estimates versus participants' and nonparticipants' rights to privacy and anonymity.

# ARMED FORCES 1996 EQUAL OPPORTUNITY SURVEY: ADMINISTRATION, DATASETS, AND CODEBOOK

## Introduction

In 1996-97, the Defense Manpower Data Center (DMDC) conducted the first Joint-Service survey to assess active-duty service members' perceptions of personnel issues in the military and policies intended to ensure fair treatment and equal opportunity (EO) in the Department of Defense (DoD) and Coast Guard. The 16-page *Equal Opportunity Survey (EOS)* also allowed service members to indicate whether or not they or their family members experienced racial/ethnic insensitivity, harassment, or discrimination. The survey also elicited opinions on topics such as the EO complaint process, leadership commitment to EO, EO training, and EO progress in the military and across the nation. This codebook documents survey development, sample construction and allocation, survey-administration procedures, and datasets that resulted from the survey.

The Census Bureau (1996) estimated that by the year 2005, Whites will comprise 70% of the population compared to 74% in 1995; Hispanics will comprise 13% versus 10%; Asians/Pacific Islanders will be 4% versus 3%; and Blacks will remain at approximately 12% of the population. Accompanying this increasing heterogeneity are differing views about the extent to which discrimination is present in society. Research shows that there continues to be a divergence in the perceptions of Whites and Blacks regarding the presence of discrimination (Gallup, 1997). Whites have consistently been more optimistic than Blacks regarding the achievement of racial equality; conversely, Blacks have been more likely than Whites to indicate the continuing presence of racial discrimination (Hochschild, 1995). Researchers studying military personnel issues have also found that White and Black service members had different perceptions of EO (Moskos & Butler, 1996) and that Blacks were more likely than Whites to perceive discrimination against minorities (Dansby & Landis, 1991).

Increasing racial/ethnic heterogeneity in society, along with discrepant perceptions of EO by Whites and Blacks, underscores the importance of understanding obstacles to fair treatment and equal opportunity in the military. Civilian leaders and organizations have called for an examination of progress toward EO goals, the obstacles that remain, and the need for new approaches to address existing inequities. In 1997, President Clinton established the Advisory Board to the President on Race. In his remarks to introduce the Board, the President noted that its primary purpose is "launching a nationwide, honest discussion...that will lead to specific recommendations for further actions."

DoD has long been concerned with racial/ethnic issues and the development of policies and programs to ensure equal opportunity without regard to race or ethnicity. Military EO achievements are considerable and have been recognized widely. In their report to the President, Stephanopoulos and Edley (1995) noted the "significant progress" in EO made by the military. Recently, Patterson's (1997) book, *The Ordeal of Integration*, praised the military for its progress

in EO, citing it and particularly the Army as "a virtual model of successful race relations for the civilian community."

In addition to these ongoing efforts to address racial/ethnic issues in the military, senior leaders continue to seek ways to better understand climate and racial/ethnic relations in the military to ensure fair treatment and equal opportunity. One such means is by obtaining empirical data and using those data for policy formulation and review. In January 1994, the Under Secretary of Defense for Personnel and Readiness asked DMDC to develop and field a survey to assess racial/ethnic issues.

The administration of the *EOS* is yet another benchmark in DoD's history of leadership in the EO arena. Scarville, Button, Edwards, Lancaster, and Elig (in preparation) provide a brief review of major EO events in the military's history that helps to establish a context for understanding the *EOS* questionnaire and findings. This context is established by discussing watershed events that occurred between 1948 and 1990, reviewing recent initiatives to monitor and enhance military EO, describing Service-specific surveys that address EO, and listing the events and legislation that led to the *EOS*.

## Method

### *Survey Instrument*

A copy of the 16-page, 81-question (some with multiple items) *EOS* is provided in Appendix A. The survey's EO items can be grouped broadly into five categories: types, frequency, and effects of racial/ethnic incidents; characteristics of the complaints process; opinions about personnel policies and programs; interpersonal relations of service members from different races/ethnicities; and comparisons of EO in the military now to EO in the military 5 years ago and to the civilian sector. In addition to addressing EO-related issues, the survey included questions about demographics, identification with and commitment to the organization, career issues, characteristics of the workplace, and job satisfaction.

Because of the unique nature of this research, only the organizational commitment items (Mowday, Steers, & Porter, 1979) could be adapted from scales that have appeared in the civilian research literature. Other *EOS* items were adopted, adapted, or generated from one or more of the following sources:

- surveys conducted by individual Services, the Status of the Armed Forces Surveys: 1995 Form B—Gender Issues (Edwards, Elig, Edwards, & Riemer, 1997), and surveys from the Canadian and Australian militaries,
- reports from the House Armed Services Committee Staff Task Force (1994), DEOC (1995), GAO (1995; 1996), and the Department of Labor's Glass Ceiling Commission (1995),
- concerns identified by DoD policy officials and personnel from the Services' EO, survey-administration, or Inspector General offices,
- policy statements and EO procedures issued by DoD and the Services,
- personal interviews with officials of organizations representing minority-group members in the military (Air Force Cadet Officer Mentor Action Program, Association of Naval Service Officers, National Naval Officers Association, and ROCKS),
- telephone or personal interviews with representatives of public and private organizations that monitor EO (American GI Forum, Civil Rights Commission, Equal Employment Opportunity Commission, IMAGE, League of United Latin American Citizens, NAACP, National Council of La Raza, National Urban League, and Office of Personnel Management),
- inputs from academicians with EO expertise, and
- focus groups conducted with military personnel similar to those in the sample.

Because focus group research played such a significant role in the development of the *EOS* instrument, it warrants in-depth discussion. The large number of new and modified items in the *EOS* required developing and pretesting numerous iterative versions of the questionnaire. A total of 305 military members participated in the more than 30 focus groups that were conducted at nine installations located throughout the United States. To ensure the applicability of the items for the population of inferential interest, versions of the survey were pretested on members from all five Services. The layout of the surveys used in the pretests closely approximated that found

in the final instrument. The focus groups were conducted in groups of 7 to 12 members from a single Service. Almost all focus groups were homogeneous with regard to race/ethnicity and organizational level (e.g., Black officers, White junior enlisted personnel, and Hispanic senior enlisted personnel). To provide an atmosphere optimally conducive to exchanging views, focus groups were almost always conducted by an individual who was of the same racial/ethnic group as the members of the focus group.

In the 1- to 2-hour focus group sessions, participants were asked to imagine that they had received the survey in the mail and to complete it accordingly. Also, participants were instructed to write notes on the survey where they had concerns about items, alternatives, or instructions so that these issues could be discussed after the survey was completed. Survey completion typically took from 35 to 50 minutes. After everyone had completed the survey, the focus group facilitator reviewed the instrument section-by-section, asking for specific comments on each section. Special attention was paid to the section on harassment and discrimination to see if the focus group members felt that the items covered the range of what might be experienced and were realistic examples of experiences. For other portions of the survey, facilitators probed to see if all respondents were interpreting the instructions, items, and contexts similarly. After the section-by-section review was completed, focus group participants were asked to give general comments about the survey (e.g., survey length and whether respondents would feel free to answer the questions honestly). At the end of the session, facilitators gathered questionnaires to preserve the notes that participants had written.

A DMDC researcher debriefed the facilitators to identify problems and recommendations for revisions. The concerns were incorporated into the next version of the survey. In subsequent focus groups, facilitators probed to determine whether the implemented changes had corrected the problems or whether additional modifications were warranted.

## **Sample**

### **Overview**

The population of inferential interest for the *EOS* consisted of all active-duty Army, Navy Marine Corps, Air Force, and Coast Guard members (including Reservists on active duty) below the rank of admiral or general, with at least six months of service. Flag and general officers were excluded because they are such a small group that their confidentiality could not be assured. The sample frame included only those members who were on active duty in April 1996, with eligibility conditional on also being on active duty in June and September 1996.

The initial sample for the *EOS* consisted of a nonproportional stratified random sample of 76,754 individuals, of whom 73,496 were ultimately determined to be eligible members of the target population. The sampling design considered requirements for analyses by Service; sex; racial/ethnic group membership (Hispanic, non-Hispanic Black, non-Hispanic White, Asian/Pacific Islander, and Native American/Alaskan Native); paygrade; location (US, Europe, and Asia/Pacific Islands); and density in duty occupations of Blacks, Hispanics, and total minorities. The design oversampled minority group members to ensure adequate sample sizes

for comparisons among racial/ethnic subgroups. Details of the sample design and expected precision levels were reported by Wheelless, Mason, Kavee, Riemer, and Elig (1997) and are summarized below.

### ***Stratification Variables***

The sampling frame was constructed using four stratification variables: Service, paygrade, race/ethnicity, and duty location. Since in-depth documentation of the sample stratification, selection, and weighting is reported by Wheelless et al. (1997), only the general levels of the stratification variables are reviewed here.

Service has six levels of stratification: Army, Navy, Marine Corps, Air Force, Coast Guard, and members of the National Guard and Reserves in active-duty assignments for 179 days or more (e.g., AGR/TARs programs). The paygrade variable constructed for stratification has five levels: E1-E3, E4, E5-E6, E7-E9, and officers (WO1-WO5 and O1-O6). Race/ethnicity has six levels: non-Hispanic White, non-Hispanic Black, Hispanic, Asian/Pacific Islander, Native American/Alaskan Native, and Other. The duty location variable has two levels: US (a duty station in any of the 50 states or the District of Columbia) and Overseas.

Cell sizes were too sparse in some cases for the fully crossed stratification. For this reason, location was collapsed within the Marine Corps, Coast Guard, and AGR/TARs. Some enlisted categories also had to be collapsed within the Coast Guard and AGR/TARs. In no case was it necessary to collapse sampling strata across race/ethnicity. Table B-2 in Wheelless et al. (1997) shows the final sampling strata.

### ***Constructing the Frame and Drawing the Sample***

DMDC's April 1996 Active Duty Master File (ADMF) and DMDC's April 1996 Reserve Components Common Personnel Data System (RCCPDS) provided information for developing the sampling frame, constructing strata, and determining the sample size and allocation<sup>1</sup>. The

---

<sup>1</sup> DMDC builds the ADMF and RCCPDS from files submitted by the Services and applies edit routines to create common data elements and correct known deficiencies when possible. Like any large central database fed by multiple inputs, these central personnel files contain missing data and errors. Data problems are most prevalent with variables that change frequently (e.g., location) or are not critical for individual outcomes such as assignments or promotions (e.g., race and ethnicity). For most of the members in current files, race and ethnicity data elements are not self-reported and may never be reviewed by the member for accuracy or to reflect changes in their self-perception. The race and ethnicity of enlisted members are first entered in administrative records from the enlistment application (DoD Form 1966) which is typically completed by a recruiter. Race and ethnicity may be determined by the recruiter by observation or by asking the individual. The Services differ in the extent to which they require periodic personal reviews of personnel files and whether race and ethnicity are elements that are reviewed. The Services also differ in the coding. For example, the Coast Guard does not use a code for Other and forces an assignment to one of the five racial/ethnic categories, while the four DoD Services have procedures which allow a varying percentage of their personnel to be in the Other category. A problem with these personnel files is that Hispanics are under-reported by approximately half when administrative record data are compared to survey self-reports that have been gathered using items based on those used in the 1990 Decennial Census.

previously specified operational definition of the population resulted in a sampling frame with 1,573,663 members.

A nonproportional stratified random sample of 76,754 members was selected to receive the *EOS*. The design oversampled minority group members to ensure adequate sample sizes for comparisons among racial/ethnic subgroups.

Researchers identified subgroup breakouts (i.e., domains) that would be important when survey results were provided to policy officials. These reporting domains were defined by using the 14 demographic factors shown in Table 1. For three demographic characteristics, multiple versions of variables were created that differed in the level of detail. More detailed variables were used to define domains for analyses at the DoD level than were used to define domains within the five Services. For example, at the DoD-level domains were defined by crossing Paygrade Grouping 1 and Race/Ethnicity Grouping 1 (without the Other category); whereas within-Service domains were defined by crossings of the less detailed Paygrade Grouping 2 and Race/Ethnicity Grouping 3.

The demographic characteristics used for the domain factors are similar to those used for the stratification with the addition of three variables derived from members' duty occupations. Three occupational minority density indexes were created for this survey; they were based on the percentage of Blacks, Hispanics, and all minorities in a DoD occupational group—a general family of military occupational specialties (see Department of Defense, 1993, for a list of occupations and codes). The percentage of each subgroup in each 2-digit occupational group was determined using the April 1996 ADMF. Separately for officers and enlisted, the occupations for each racial/ethnic subgroup were rank ordered based on the percentage of Blacks, Hispanics, and all minorities. A median split was then used to create three sets of occupational classes based on minority density as shown in Table 2: high versus low Black density, high versus low Hispanic density, and high versus low total minority density. Appendix B contains the full listing of occupational groups in each class. Although a median split was used in sample planning, Appendix B shows the sextiles that are contained in the analytic variables available on the dataset.

Next, researchers determined the number of people who would be sampled for each stratum using a sample-planning tool developed for DMDC (Kavee & Mason, 1997). A formal mathematical procedure (Chromy, 1987) based on Karush-Kuhn-Tucker theory is used in the sample-planning tool to determine an optimized sample size and allocation—a sample that would achieve at minimal cost the precision levels required for each analytic domain. The Kuhn-Tucker solution provides an optimal solution to satisfy precision constraints (e.g.,  $\pm 5$  percentage points) imposed on estimates of prevalence rates in key reporting domains. Researchers iteratively modified the inputs to the sample-planning tool to arrive at acceptable precision levels for reporting domains that would be of particular interest to policy officials. Table B-1 in Wheelless et al. (1997) lists the final set of domains on which precision constraints were imposed that determined the final sample design—for other domains under consideration, precision requirements were met coincidentally with meeting these most difficult to satisfy constraints.

## **Respondents**

### **Overview**

When the survey fielding closed in February 1997, usable surveys had been received from 39,855 Service members. Another 3,258 individuals were determined to be ineligible because they had separated from military service after the sample frame was constructed. After making adjustments in accordance with industry standards (Council of American Survey Research Organizations, 1982) for eligibility and differential sampling rates across the various subgroups, the response rate was 53%.

Individuals for whom response status and eligibility were determined were weighted to ensure that the answers from respondents represented the population of interest. The weights reflected (a) the probability of selection for that member, (b) a nonresponse adjustment to minimize bias arising from differential response rates among demographic subgroups, and (c) a poststratification factor for September 1996—the month in which the survey form was first distributed. Summing across all 43,113 individuals for whom response status and eligibility were determined, the final weights summed to 1,554,870—the number of service members on active duty (including Reservists) below the rank of admiral or general in September 1996. Summing the final weights across the 39,855 eligible respondents gives a weighted estimate that 1,379,983 of these members had been on active duty at least six months and were thus eligible for the survey. Details of determining response rates and calculating nonresponse adjustments were reported by Wheelless et al. (1997) and are summarized below.

Table 3 shows the demographic characteristics<sup>2</sup> of the 39,855 respondents, while Table 4 shows the population estimated by these respondents. In line with the sampling plan, minorities are 73% of the respondents but are weighted to estimate 33% of the population.

<sup>2</sup> The demographic characteristics in these tables are primarily based on survey self-reports; and to varying extents, they differ from similar variables on the administrative files.

**Table 3.**  
**Respondents**

	Hispanic		Non-Hispanic				Total

## **Determining Response Status**

Table 5 shows the number of sample members selected for the survey, the numbers determined to be ineligible by administrative record data and by self-report, the number not located, and the number of non-respondents. The first row of Table 5 shows that a worldwide sample of 76,754 was selected from a population of 1,573,663 active-duty DoD and Coast Guard members. This population total is the actual frame count and the base weights of the sample sum to this amount. With the exception of the frame-based population total of 1,573,663, numbers in the population columns are estimated from the sample. The percentages shown for the population are the weighted estimates of the counts that would have occurred if the entire population had been selected for the sample—they differ from the percentages shown for the sample because the sample was not drawn in proportion to the population.

Losses from the sample are displayed hierarchically in Table 5. When personnel fit into more than one loss category, the sampled members were assigned to the loss category appearing first in the table. For example, if an individual was ineligible because both the personnel files and the individual self-report indicated that the individual was no longer in the military, the sample member was assigned to the "Separated from Service (master files)" category rather than to the "Self-reported ineligibility" category.

A total of 3,258 (4%) of the members was lost from the sample because of ineligibility. Most ineligibility losses (3,075) occurred when eligibility status and mailing addresses were updated with the end of September 1996 (October 17, 1996 file) Defense Enrollment Eligibility Reporting System (DEERS) files<sup>3</sup>. The remaining ineligibility losses (183) occurred when people either sent a letter or fax to Data Recognition Corporation (DRC), the operations contractor, to indicate that they were ineligible (Self-reported ineligibility). Of the DEERS ineligibility losses, most occurred because the member was not shown as being on active duty; only a handful of members were coded ineligible for other reasons such as death, incarceration, or hospitalization. Elimination of the 3,258 known ineligibles resulted in decreasing the eligible sample to 96% ( $n = 73,496$ ) of the drawn sample size.

Slightly more than 1% ( $n = 1,094$  of 76,754) of the drawn sample was lost because the sampled members could not be located. Personnel records for this 1% of the sample had either an incomplete or out-of-date address, and other steps designed to obtain addresses were not fruitful. Sending surveys to military personnel is complicated because military personnel are very mobile. Relative to their counterparts in most civilian organizations, military personnel move much more frequently, often to or from foreign locations. This fact, coupled with the size of the military, makes it difficult to maintain up-to-date addresses. As a result, an elaborate

---

<sup>3</sup> The database for the sample was constructed using information from the April 1996 ADMF and RCCPDS. Information in the database included social security numbers, names, addresses, eligibility status, stratification variables, etc. The names and social security numbers were then used to verify the eligibility and addresses of the sampled members at the time of the first survey mailing against the data in a more current but less readily accessible database, the September 1996 DEERS.

**Table 5.**  
**Frequency Counts and Percents of the Final Usable Sample Relative to the Drawn Sample**

	Sample counts		Weighted estimates of population	
	n	%	n	%
Drawn sample	76,754		<sup>a</sup> 1,573,663	
Separated from Service (master files)	-3,075	4.0%	-74,528	4.7%
Self-reported ineligible	-183	0.2%	-4,736	0.3%
Total: Ineligible	-3,258	4.2%	-79,265	5.0%
Eligible sample	73,496	95.8%	1,494,398	95.0%
Total not located	-1,094	1.4%	-20,636	1.3%
Located sample	72,402	94.3%	1,473,763	93.7%
Requested removal from survey mailings	-77		-1,836	
Returned blank	-107		-2,750	
Skipped key questions	-122		-2,349	
Did not return a survey	-32,241		-681,275	
Total: Nonresponse	-32,547	42.4%	-688,209	43.7%
Usable responses	39,855	51.9%	785,554	49.9%

*Notes.* Percentages reported for usable responses represent the yield of usable responses from the survey procedures, but are not responses rates as typically reported for surveys.

<sup>a</sup> This is both the population frame count and the sum of base weights from the sample.

address-update procedure was developed to minimize the number of people who would be lost from the survey because of outdated addresses. These procedures were more elaborate than those used the previous year for the *1995 DoD Sexual Harassment Survey* (Edwards, Elig, Edwards, & Riemer, 1997) and resulted in cutting the non-locatables from approximately 5% to 1%.

Seventy-seven respondents contacted the operations contractor (by mail, fax, or telephone) and asked to have their names removed from the survey-mailing list. Another 107 people returned surveys that were entirely blank. A third group of 122 returned surveys, but they left key items blank. Partially completed surveys were treated as nonresponses if the respondent did not complete any of the items in Questions 29-31.

All sampled members who (a) were not assigned to an earlier loss category and (b) did not return a usable survey were placed in the category, "Did not return a survey." This nonresponse group ( $n = 32,547$ ) was composed of those individuals who had been sent at least one survey without it being returned to DRC and for whom no information (on ineligibility or a completed survey) had been obtained.

At the conclusion of the survey fielding, 39,855 eligible personnel had returned usable questionnaires.

### ***Location, Completion, and Response Rates***

Varying operational definitions of response rates can lead to problems when interpreting the results of a survey. To lessen this problem, the Council of American Survey Research Organizations (CASRO, 1982) recommended guidelines for standardizing the operational definitions of response rates. Beginning in 1995, DMDC standardized its methods for calculating response rate and completion rate, using procedures closely patterned after those advocated by CASRO. More specifically, the new DMDC procedures most closely follow CASRO's Sample Type II design.

As discussed by CASRO, the overall response rate has two components: the rate at which individuals can be located (*location rate*) and the rate at which located individuals complete the survey (*completion rate*). CASRO recommended that nonrespondents for whom eligibility has not been determined be distributed to eligibility and ineligibility status using the eligibility rate among those for whom a determination could be made. In the *EOS*, an assumption has been made that all master file ineligibles were identified and therefore are excluded from the ineligibility rate used to estimate unidentified ineligibles. Based on the proportion of self-reported ineligibles (138) found among responding sample members, 0.4% of the 1,094 nonlocatables, or 5 nonlocatables, were estimated to be ineligible and 0.4% of 32,241, or 146 of sample members with no survey return were likewise estimated to be ineligible. CASRO-adjusted located and adjusted eligible sample counts are shown in Table 6, and the CASRO-compliant location, completion, and response rates are defined as shown in Table 7.

Unweighted (observed) rates are useful for some purposes; however, to gauge the rate of participation among the target population more accurately, weighted response rates are needed.

Weighted rates also have the advantage of being comparable among surveys that use different sampling methods. Because weighted rates adjust for each sample member's probability of selection, they yield rates that apply to a simple random sample. The biasing effects of other sampling strategies (e.g., oversampling and cluster sampling) are eliminated when weighted rates are used. For these reasons, weighted response rates are typically preferable to unweighted response rates. The weighted rates for the *EOS* are presented in Table 7.

The weighted response rate for this survey is estimated at 52.7%, not much lower than 53.4% for the 1995 *Sexual Harassment Survey (SHS) Form B* when the rates for that survey are calculated in the same way as used for the *EOS*. Comparison of these single numbers does not, however, tell the full story. The location rate for *EOS* (98.6%) is higher than the location rate for *SHS Form B* (93.8%) while the completion rate for *EOS* (53.4%) is lower than the completion rate for *SHS Form B* (57.0%). The greater expense put into locating respondents for the *EOS* did not fully compensate for the lower propensity of the population to complete the *EOS*.

**Table 6.**  
*CASRO-adjusted Located and Eligible Sample Counts*

	Sample	Weighted estimates of population
CASRO adjustments to eligible count		
Eligible sample	73,496	1,494,398
Estimated ineligible of those not located	-5	-123
Estimated ineligible of those who did not return a survey	-146	-4,048
Adjusted eligible sample	73,345	1,490,227
CASRO adjustments to located count		
Located	72,402	1,473,763
Estimated ineligible of those who did not return a survey	-146	-4,048
Adjusted located sample	72,256	1,469,717

*Note.* The adjustments follow the CASRO approach of projecting the observed ineligibility rate onto sample members who are not located or are non-respondents.

**Table 7.**  
*Location, Completion, and Response Rates*

Type of Rate	Computation	Observed Rate	Weighted Rate
Location rate	Adjusted located sample / Adjusted eligible sample	98.5%	98.6%
Completion rate	Usable responses / Adjusted located sample	55.2%	53.4%
Response rate	Usable responses / Adjusted eligible sample	54.3%	52.7%

*Note.* The rates in this table are computed from the information in Tables 5 and 6.

## ***Survey Materials and Their Distribution***

Data were collected by mail with procedures designed to maximize response rates. A total of 355,965 pieces of mail were sent in 43 separate batches to the sample members. All eligible sample members could have received up to five different mailings: a notification letter, a wave 1 letter and survey, a reminder/thank-you letter, a wave 2 letter and survey, and a wave 3 letter and survey. The 4.5" x 9.5" window envelopes for the notification and reminder/thank-you mailings contained only a letter. The 9" x 12" window envelopes for the other three mailings included a cover letter, a survey, and a folded pre-addressed business-reply envelope.

This section describes the letters that were sent to the respondents and the procedures used to distribute the mailings. The procedures included developing a relational database to monitor all data transactions, establishing a process for updating addresses, and conducting multiple mailings for each of the five possible times that a respondent could be contacted.

### ***Letters***

DMDC provided DoD and Coast Guard officials with a draft set of five letters—one for each of the five different mailings. These letters contained information describing why the survey was being conducted, how the information would be used, and why participation was necessary. DoD and Coast Guard officials modified the five core letters to reflect points that the officials wanted to stress. Thus, the final text of the DoD letters differed from the final text used in the Coast Guard letters. (See Appendix C for a copy of the letters.)

All letters to DoD personnel included Edwin Dorn's reproduced signature and the letterhead for his position: Under Secretary of Defense (Personnel and Readiness). All letters to Coast Guard personnel included W. R. Somerville's (Chief, Office of Civil Rights) reproduced signature and the letterhead for the Commandant, United States Coast Guard. Both DoD and Coast Guard letters included letterhead and signature printed in blue.

The text and recipient information of all letters were printed in black. In addition to including a name and address (which was also used as the mailing information for the window envelopes), each letter included a personalized salutation. The salutation addressed each member by his/her general or specific rank. For example, a letter to a Navy E5 with the last name Smith would have included the salutation "Dear Petty Officer Smith." Similarly, an Army O3 named Jones would have received a letter starting "Dear Captain Jones."

### ***Survey Control System (SCS)***

The SCS<sup>4</sup> was used to manage and monitor the data collection process and to track all data transactions over the course of survey administration. The datasets in the SCS contain the

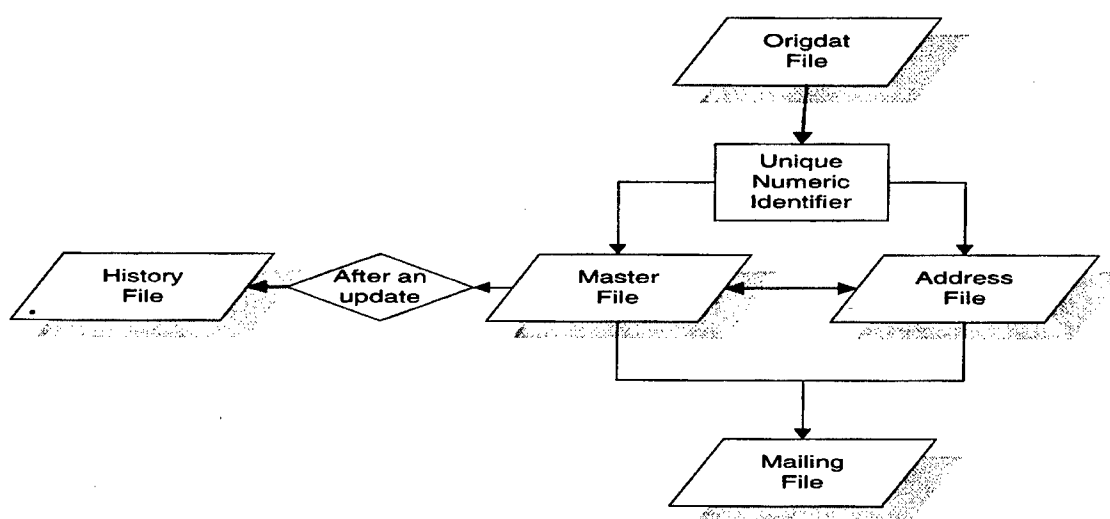

---

<sup>4</sup> In this document, the term *SCS* refers to the set of data files as well as the program or operating system which maintains those files.

names and addresses of sample members, but do not contain any data obtained with the survey instruments. Because of privacy concerns, SCS datasets are not available for public release.

DRC used the SCS to store and update project data, monitor mailings, respond to documents returned as postal nondeliverable (PND), and determine survey participation and eligibility status. The SCS was a relational database consisting of five SAS<sup>5</sup> datasets: the ORIGDAT file, the ADDRESS file, the MASTER file, the HISTORY file, and the MAILING file. Figure 1 displays the interrelationships among those datasets. Information in these relational datasets is linked by DMDC\_ID, a unique individual record number that DMDC assigned to each sample member when the sample was drawn.

**Figure 1.**  
*Survey Control System*

**ORIGDAT file.** The ORIGDAT file is a SAS version of the original sample file that DMDC sent to DRC. It consists of 76,754 records—one for each member in the drawn sample. The ORIGDAT file contains the original sample file that DMDC supplies, plus variables DRC creates for survey control and administration. Among other information, each ORIGDAT record includes DMDC\_ID, member name, paygrade, and up to two addresses: residential and unit/office. As the file was converted into a SAS dataset, the SCS generated a unique identifier, or INRECNO, for each record in ORIGDAT. The ORIGDAT file remained otherwise untouched throughout survey administration except for adding updated information from DMDC on eligibility and addresses; all further transactions, updates or changes to individual records occurred within the four related datasets described in detail below.

<sup>5</sup> SAS<sup>®</sup> is a registered trademark of SAS Institute Inc., Cary, NC, USA.

**ADDRESS file.** The ADDRESS file tracked the multiple addresses that were maintained for each sample member. ADDRESS contains one record for each address for each sample member. For example, if five addresses were located for one sampled individual, that individual has five separate records in the ADDRESS file. ADDRESS records were created as new information was located. Each record includes the individual's INRECNO, DMDC\_ID, home or unit address, the source of the address (e.g., supplied in the original file, telephone call, or the postal service), an address priority code, the date that the address was loaded into the system, and the address number (the sequential order of receipt of the address for a particular sample member). For example, if a sample member has one address record in the ADDRESS file, the address number for that record is "one." If the same individual later faxed a change of address or a credit bureau supplied an update, the new address was added to the ADDRESS file and assigned the next available sequential address number for that individual. The sequential address number assigned to a given address for an individual did not fluctuate with changes in addresses caused by updating efforts.

Each address in the ADDRESS file was assigned not only a sequential number but also a priority. The priority is unrelated to the sequential number and is dependent on the source and date of the address. For example, a priority of "1" was assigned to an address received directly from a sample member through a phone call or fax (it had the highest priority since it came from the source); a priority of "2" was assigned to a postal service update; and a priority of "8" was assigned to a credit bureau address. The priority of an address was changed to a number higher than "800" if the address was found to be invalid. At any given time, the address number of the highest priority address for a given INRECNO was recorded in the MASTER file as the current address number to use for mailings. This address was also flagged in the ADDRESS file as the "active" address. Address updates were entered through both automated processes (e.g., recording PNDs or adding credit bureau addresses) and by manual key entry (e.g., new information from a phone call from a sample member). Updates were dynamic and could occur from external sources simultaneously. The SCS also checked addresses as they were added to see if they duplicated an existing address; if the address was a duplicate, it was ignored in searches for new addresses to use in mailings.

**MASTER file.** The MASTER file was the file from which the SCS selected records for each mailing. This file included only one record for each member of the sample and was created by an extraction of data from the ORIGDAT file. Each MASTER record included each individual's INRECNO and the highest priority address number for the individual in the ADDRESS file. The address number and INRECNO were used as a link between the MASTER and ADDRESS files. Each MASTER file record included variables for recording a sample member's eligibility; refusal to take the survey; the mailing identification codes (MIC) and dates of mailings; the need for remails of various types; the member's status; and the source, date, and time of the last change made to the record. The MASTER file accommodated data updates through both automated processes (e.g., updating address number in use due to a return of a mailing postal non-deliverable [PND]) and manual key entry (e.g., updating vital information based on a phone call or fax from a sample member, or an address correction request [ACR]). As new information was received for a particular record, the SCS updated the MASTER record,

indicated the source of the update (phone, fax, credit bureau, etc.) and wrote the old record to the HISTORY file.

**HISTORY file.** The HISTORY file chronicles the various changes that occurred within the MASTER file; each HISTORY record corresponds to an outdated MASTER record. HISTORY contains as many records as there were updates to the MASTER file.

**MAILING file.** The MAILING file contains one record for each item mailed during the survey administration. Each MAILING file record includes the INRECNO, address number at the time of mailing, date of mailing, mailing status (e.g., sent, returned, PND, etc.), type of mailing (e.g., notification, wave 1, wave 2, etc.) and the mailing information code (MIC). For mailings that included a survey, the MIC is the unique lithocode printed on the survey included in that mailing. For mailings that did not include a survey, the MIC is a unique code created by the SCS as a tracking device for that mailing. For survey mailings, the MAILING file was also used to record the batch, serial, scan date, and reason returned blank (if applicable) of all returned surveys.

Address updates occurred continuously throughout the survey mailing cycle, beginning with the notification letter, continuing through main mailings and remails and ending with the final wave 3. For any main mailing or remail, an address list was drawn from the MASTER file far enough in advance of the mailing to provide sufficient time for preparation of mailing materials. No further updates were made to this list once it was extracted from the MASTER file. For example, if the wave 1 mailing list had been selected on September 13 for a mail drop one week later (September 20), the addresses used for wave 1 were those in the MASTER file on September 13. However, updates resulting from the notification letter were still made to the MASTER file after September 13 and were used in future mailings. Figure 2 outlines the continuous address update process.

### **Address-update Procedures**

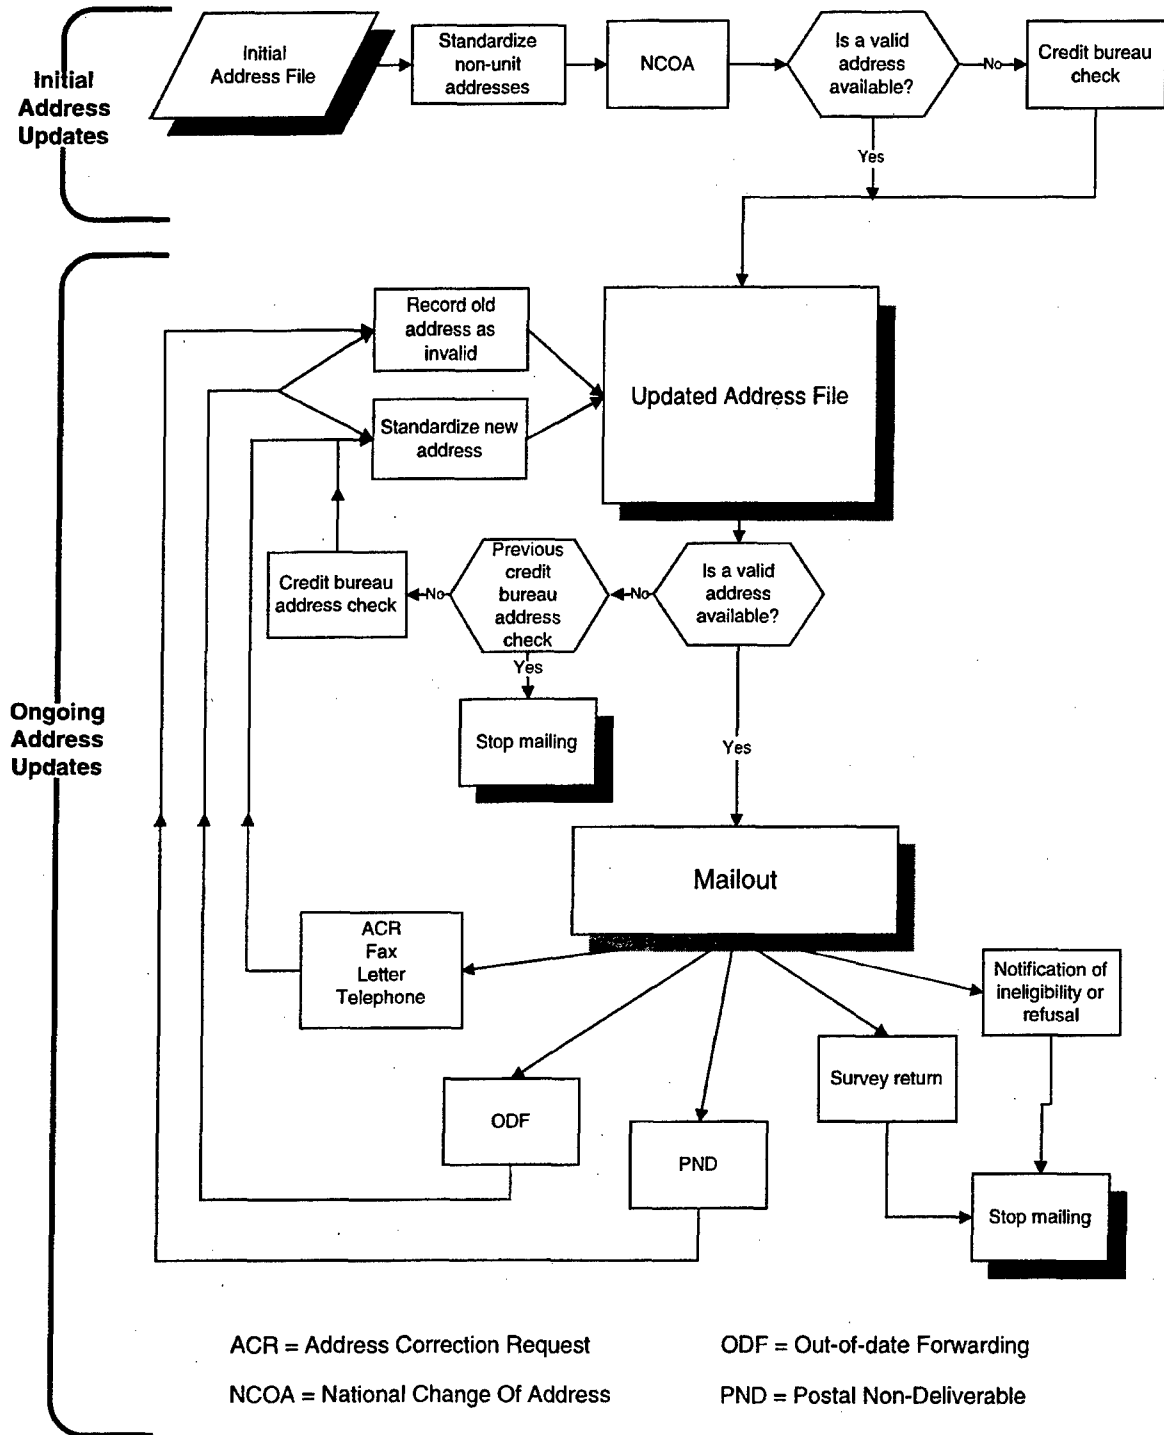

**Initial address updates.** Prior to the first mailing, DRC sent all sample records to an outside vendor where they were checked against the National Change of Address (NCOA) database. NCOA software updated the address records based on change-of-address cards filed with the US Postal Service (USPS). The results were integrated into the SCS ADDRESS file.

After the NCOA-updated data was added to the SCS, another file was compiled of sample members who had an incomplete address or an address identified by NCOA as an undocumented move (i.e., the sample member had moved, but NCOA did not have a new address). DRC sent copies of this file to three credit bureaus (Equifax, Trans Union, and TRW)<sup>6</sup> to determine whether a complete, up-to-date address for these sample members could be found. The results were integrated into the SCS ADDRESS file.

---

<sup>6</sup> Equifax, Trans Union, and TRW are outside vendors with consumer-credit-information databases. Social security numbers of sample members with incomplete or out-of-date address information were forwarded to the vendors for address updates when the MAILING dataset contained no valid address.

**Figure 2.**  
*Continuous Address Updates*

***On-going address usage and updates.*** Assuming that DRC had a home (or unit) address for a member, the mailing process began with that address. DRC modified the SCS and used a new home<sup>7</sup> address in the next re-mailing or mailing if (a) a member self-reported a new address by fax or letter, (b) the postal service forwarded an address correction, or (c) a credit bureau provided a new address. A letter that did not result in an invalid-address condition was assumed to have been addressed correctly. All subsequent mailings were sent to that address unless one of the invalid-address conditions occurred later.

Surveys returned from individuals were documented in the SCS so that those members were not sent additional surveys regardless of whether the survey was returned completed, partially completed, or blank. Individuals who requested to be dropped from the survey received, at minimum, the first three sets of mailings (the notification letter, the wave 1 survey, and the reminder/thank-you letter).

Twice during the survey fielding, letters (notification and reminder/thank you) to the respondents included the address and fax number of DRC, along with a request for corrections to address or demographic information. Respondent-supplied updates made by fax or regular mail (and a few telephone calls) generally did not result in a re-mailing of prior-sent materials to the new address. Instead, the new address was used in subsequent mailings of new materials. It was assumed that the previous letters, and possibly surveys, had reached the individual. If, however, the respondent-supplied update included a request for a survey, the individual was included in a re-mail.

When preparing for a mailing, address records were examined for each individual eligible for a mailing. The highest priority valid address was used for the mailing. If no valid address was available, then the sample member was dropped from that mailing, but not necessarily from future mailings. If no previous request had been made to the credit bureaus, then an address request was sent to the three credit bureaus. A sample member was considered to be nonlocatable and dropped from all future mailings only if all addresses including any from credit bureaus had resulted in a PND. Otherwise, the record would be re-examined at the next mailing to see if a valid address for the individual had been added to the ADDRESS file from any type of update.

### ***Description of Each Mailing or Re-mailing***

Table 8 shows information on the 43 mailings and re-mailings. For each mailing and re-mailing, Table 8 provides the date when the address file was processed, the number of members who were sent materials during the mailing or re-mailing, the number of surveys that were eventually returned by respondents, and the number of PNDs that occurred during the mailing or re-mailing. Depending upon the size of the mailing or re-mailing, the time between starting the address processing and delivering the mail to the USPS was 1 to 5 days.

---

<sup>7</sup> DMDC instructed DRC to give the highest priority to a home address rather than a unit address.

Potential respondents were informed of their selection for the survey by a notification letter. DMDC makes heavy use of notification letters for three reasons:

- Contacting potential respondents multiple times (e.g., by supplementing survey mailings with notification letters) is perhaps the most effective means of increasing survey response rates (Fox, Crask, & Kim, 1988; Yammarino, Skinner, & Childers, 1991).
- The USPS does not always forward the large envelopes that are used to mail surveys despite the envelopes' first class postage and request to forward. Forwarding is, however, more routine for mail in standard, business-sized envelopes.
- It is cheaper to send an initial notification letter and have that letter returned PND, correct the address, and re-mail the notification letter to the correct, updated address than to start the process by mailing the survey.

The first mailing was delivered to the USPS on 28-31 August. Table 8 shows that mailing 1 was sent to 76,671 sample members, and it resulted in 10,994 letters being returned PND. During the next 1½ months, five additional attempts were made to reach sample members with notification letters. Across the six mailings, 16.3% (14,485 of 88,917) of the letters were returned PND.

The start of the first round of survey mailing began while DRC continued trying to locate sample members with notification letters. On 24-28 September, the first wave 1 surveys were mailed. Eleven re-mailings of wave 1 surveys occurred during the subsequent 1½ months. A total of 28,832 (31.6%) of the 91,140 mailed wave 1 surveys were returned by respondents and another 13,147 (14.4%) were returned PND.

The third set of mailings was the reminder/thank-you letters. They started with mailing 13 on 16-22 October, almost 2 months after mailing 1 was processed. Despite the large number of address changes that had been processed in those 2 months, 9.6% (7,373 of 76,988) of the reminder/thank-you letters were returned as PNDs. These letters were sent in 10 mailings and re-mailings that spanned approximately 1½ months.

On 15-20 November, the first wave 2 surveys were sent. This mailing excluded people who (a) requested to be dropped from the survey or (b) had their surveys scanned and entered into the SCS. Across the 5 mailings and re-mailings, DRC sent 53,743 surveys. Respondents returned 8,107 (15.7%) of the surveys, and the USPS returned another 4,396 (8.2%) PNDs. Notably, the 8,107 surveys returned in this wave of mailings underrepresents the actual number of surveys that were returned as a result of the mailing. Some respondents returned their wave 1 surveys after receiving a wave 2 (or wave 3) survey.

**Table 8.**

**Mailings: Print File Creation Dates and the Numbers of Mailings Sent, Returned, and PND**

Mailing Numbers and Groups		Date*	Sent	Returns	PNDs
1.	Notification mailing	8/27/96	76,671	N/A	10,994
2.	Notification re-mail	9/18/96	4,211	N/A	1,057
5.	Notification re-mail	9/26/96	4,100	N/A	1,204
7.	Notification re-mail	9/30/96	458	N/A	153
9.	Notification re-mail	10/03/96	650	N/A	202
11.	Notification re-mail	10/10/96	2,827	N/A	875
<b>Subtotal: Notification</b>			<b>88,917</b>		<b>14,485</b>
3.	Wave 1 mailing	9/20/96	74,834	25,674	8,456
4.	Wave 1 mailing	9/23/96	1,716	440	402
6.	Wave 1 re-mail	9/26/96	4,078	945	1,111
8.	Wave 1 re-mail	9/30/96	493	107	145

<b>TOTAL</b>			<b>355,965</b>	<b>40,562</b>	<b>40,965</b>

\* This is the date on which records were identified for inclusion in a mailing and written to a print file.

The first 42,139 wave 3 surveys were delivered to the USPS on 16-17 December 1996. The last survey mailing was on 29 January 1997. During that 1½ months, 45,177 wave 3 surveys were sent. The number of surveys received from respondents was 3,309 (7.3%). Another 1,564 (3.5%) wave 3 surveys resulted in PNDs.

The survey fielding period was kept open through 28 February 1997. During the 5½ months of the survey fielding, 355,965 pieces of mail were sent to potential respondents. The USPS returned 11.5% of those pieces to DRC because of bad addresses.

### ***Processing Returned Surveys***

This phase of the survey process can be divided into three general steps. In the first step, DRC performed two tasks: scanning raw data from every optic-read area on the first 150 returned surveys and using a DMDC-supplied coding scheme to write software that converted the raw data to scored data. In the second step, DRC revised their programs after the test with the first 150 records, scanned surveys in batches as they were returned, and prepared three (preliminary, interim, and final) datasets with codebook tables showing the frequency of response for each variable in the datasets. This step provided DMDC with an opportunity to monitor data collection and begin preliminary analyses. In the third stage of processing returned surveys, DRC created files that contain narrative information (e.g., comments) from the surveys. These three stages of processing returned surveys are more fully described in the remainder of this section.

### ***Preparing the Scoring Software and Coding Scheme***

As soon as DRC received a scannable copy of the survey form, programmers began writing and testing programs to capture the data from the surveys. The scanner program was set up to capture data from every optic-read bubble or box on the form. At the same time, DRC began writing software to convert raw data from the scanner to a scored dataset. To start this task, DMDC provided DRC with an annotated copy of the survey form (Appendix A) and the coding notes contained in Appendix D.

A guiding assumption in designing the coding scheme was that the analysts creating the dataset would not be the only people analyzing the data. DMDC datasets are analyzed repeatedly over time by people in governmental, private-sector, and academic organizations. Care is taken in organizing and documenting DMDC surveys so that secondary analysts can use the data and be reasonably certain that they understand how the data are coded and what limitations exist. Moreover, every attempt is made to preserve all information from completed surveys so that secondary analysts can later construct variables that were not anticipated by the original DMDC researchers.

DRC scanned the first 150 returned surveys and created a scored dataset for these cases. Both DRC and DMDC compared the returned surveys with the scored dataset for these first 150 cases. Checks were done to determine if (a) the scanner was set at an acceptable level to pick up lightly marked bubbles and (b) respondents were consistently answering in an unexpected

manner (e.g., marking more than one bubble for a single-answer item such as highest education level completed).

### ***Creating the Scored Datasets***

Prior to scanning bubbled answers and key entering narrative answers, returned surveys were visually checked and separated into two groups: blank forms versus surveys with one or more items completed. Blank forms were further divided into batches according to the reason (e.g., separation from the military, transitioned from active duty to the Guard or Reserve, death, or no reason given) that the form was returned blank. The reason was captured in BLKREAS in the SCS. All blank forms were optically scanned so that lithocodes could be tracked and the number of returns could be updated.

Approximately 2% (fewer than 1,000) of the respondents returned surveys that were mutilated in the mail or completed in ink. DRC re-gridded the bubbles for these respondents to ensure that all usable data were captured.

Once these preliminary steps were taken, DRC scanned the surveys, edited surveys that were flagged by the scanner because the pencil marks were too light, scored the data, and created two types of data files: SAS files and ASCII flat files (OS files). All DMDC survey data are stored in SAS files for DMDC's official use. Recognizing that many analysts use other statistical packages for their analyses, DMDC also provides ASCII flat files.

In addition to the previously mentioned 150-record check of raw data, DRC provided DMDC with preliminary, interim, and final datasets and codebook tables. DMDC used the preliminary and interim datasets and codebook tables to finalize the information to be documented in the tables, identify out-of-range errors (e.g., a respondent marked on the survey a current age of 15 years, but military service requires that an individual be at least 17 years of age), create additional flag variables (e.g., a total score for the number of racial/ethnic harassment and discrimination behaviors that a person experienced), and begin preliminary analyses. The final version of the datasets and tables also went through a similar fine tuning before they were published in their present form.

### ***Capturing Respondent-supplied Statements***

***Key entry of open-end response items into text files.*** After each batch of surveys was scanned, the surveys were transferred to key-entry personnel for comment entry. These personnel manually checked each page of the survey to determine if a respondent had supplied narrative answers to "Other, please specify" items or the general comments section at the end of the survey. "Other, please specify" items offered respondents a space for writing an answer when the pre-specified options did not fully cover all alternatives. For this type of item, DRC entered the first 51 characters of the written response. For the general comments at the end of the survey, 100% of the information on the comments page was captured. The text of both types of narrative information was key entered nearly verbatim into ASCII files and spell-checked. Proper names were replaced with "(name)," and expletives were changed to "(expletive)."

Additional materials (letters, documentation on complaints, etc.) sent back with the survey were read by DMDC staff, but the material was not added to the comments file.

The ASCII comment files contain DMDC\_IDs and lithocodes to allow DMDC personnel to relate narrative responses to all other variables in the EOS databases. Because of privacy and confidentiality concerns, these files are not available for public release.

***Setting specify flags for open-end response items in the scored dataset.*** When the scanner detected text in an "Other, please specify" or general comment area, it placed a "1" in the corresponding field in the scanned data files. These "1" flags were used during the survey field period to monitor the occurrence of write-ins and to help verify that all general comments and "Other, please specify" answers were keyed and associated with the appropriate sample member. Because the scanner could make false detections from printed text on the reverse side of the page, scanned detection of narrative answers may not be reliable for indicating that written text was entered. Once all key-entry was completed, the specify flags in the final scored datasets were set to reflect where open-end responses had been given by respondents.

***Coding for open-end response items.*** In addition to key-entry, DRC provided numeric codes for two types of write-in responses: location (in the US), and race. This initial numeric coding is described in the next two paragraphs.

In Questions 10 and 36, respondents were asked a location. If the answer was in one of the 50 States, DC, Puerto Rico, or a US Territory or Possession, then the respondent was asked for the 2-letter postal abbreviation. DRC converted these to Federal Information Processing Standard (FIPS) codes. These codes are on the scored datasets as variables EQ9610CD and EQ9636CD.

In Questions 8, 18, 24, and 39, respondents were asked to write-in a specification of race. DRC coded these answers in accordance with the codes used by the Bureau of the Census for the 1990 Decennial Census. These codes are on the scored datasets as variables SRRACICD, SRRACACD, SRRACOCD, SPRACICD, SPRACACD, SPRACOCD, EQ9624CD, and EQ9639CD.

These numeric codes were further processed by DMDC for analysis. Because of confidentiality concerns, these raw codes do not appear on public-release datasets.

## Survey Analysis Files

This section of the report (a) provides an overview of requirements for analysis of the data, (b) documents the structure of survey analysis files created for the *EOS*, (c) describes the assembly of the analysis files, and (d) provides an overview of the variables in the survey analysis files.

### *Estimation*

Data for the *EOS* were collected from a nonproportional stratified random sample. Responses were weighted up to population totals adjusting for differential sampling and response rates in demographically homogenous groups. In general, the procedures used to compute sample estimates of population parameters (including population totals, means, proportions, and tests of hypotheses and regression relations) and their associated variances are derived from the probability structure that gives rise to the observations. As with other surveys that involve complex probability structures, most of the parameter estimates of interest in this survey take the form of non-linear statistics. Examples include domain means and proportions where the denominator values are unknown and must be estimated from the sample data. The estimator takes the form of a ratio of random variables (i.e., the ratio of the estimated numerator and denominator totals or counts). In general, ratio estimates are not unbiased and their variances cannot be expressed in closed form. The bias in a ratio estimate depends on the variance associated with the denominator total or count and can usually be ignored in samples having a large number of observations. As a working rule, the bias may be assumed negligible if the number of observations on which the estimate is based exceeds 30 or is otherwise large enough so that the *coefficient of variation* [ $SE_{(x)}/x$ ] of the denominator is less than .10 (cf., Cochran, 1977, pp. 153-165).

Approximations must, however, be found for the variances. The approximations commonly take the form of Taylor series linearizations or replicate methods such as those based on resampling methods. Variables have been included in the analysis files so that variance estimates can be based on Taylor series linearizations computed by SUDAAN<sup>8</sup> for a stratified, without replacement design. Wheeler et al. (1997) provided more detail on variance estimation and examples of analyses of these data using SUDAAN. Replicate methods can also be used to estimate the variances; however, replicate weights (required for many of these approaches) have not been prepared.

Many of the standard statistical software packages, such as SPSS<sup>9</sup> and SAS, do not properly compute variance estimates from weighted data that were collected with a design other than simple random sampling. Analyzing the *EOS* datasets with the proper use of ANL\_WT as the weighting factor in standard statistical programs (e.g., SAS and SPSS) results in *accurate* point estimates and *inaccurate* variance estimates. Wolter (1985) provided a detailed discussion

---

<sup>9</sup> SPSS<sup>®</sup> is a registered trademark of SPSS Inc., Chicago, IL, USA.

on methods used for variance estimation from sample surveys including replication, Taylor series approximation, and analytic methods.

### **Data Structure**

In addition to a public-release file, a confidential file (containing a more complete set of variables than the public-release file) has been prepared for internal DMDC use. These files were prepared as SAS system files. An ASCII (Operating System or OS) flat file was prepared from the public-release SAS system file. File names are indicated in Table 9.

**Table 9.**  
**Analysis File Names**

Type of File	File Name
Public-release File -- SAS	EOS96PUB.SD2
Confidential File -- SAS	EOS96CON.SD2
Public-release File -- OS	EOS96PUB.DAT

Care was taken in the preparation of survey analysis files to provide public-access to data from these surveys with sufficient information for accurate estimations, while meeting requirements for participant and non-participant anonymity. As described below, some detailed variables have been deleted from the public-release files either because (a) they are typically needed only to analyze survey methods and not needed to analyze the survey data or (b) they provide too great a chance of identifying an individual. For the latter reason, some demographic variables are available on public files only in a collapsed version.

The structure of the confidential file is shown in Figure 3. As shown in Figure 3, the confidential file contains the public-release file plus additional confidential variables.

All variables in the confidential file are documented in this report. Appendix E lists all variables, has a flag to indicate which variables are confidential, and shows where each variable is documented. Intermediate weighting variables that appear only in the confidential file were documented by Wheelless et al. (1997). Variables that appear in collapsed form in the public-release part of the file and in a fuller version only in the confidential file are discussed later.

Both the confidential file and the public-release file contain 76,754 records, one for every sampled individual. As depicted in Figure 3, these 76,754 records can be divided into three subgroups. The first subgroup, nonrespondents, includes all records indicated by WGHT\_FLG = 0, where no *usable* response was received<sup>10</sup> ( $n = 122$ ) or no information was received to indicate ineligibility ( $n = 33,519$ ). It includes all individuals shown earlier in two Table 5

<sup>10</sup> To be usable, a questionnaire had to have at least one response to the items in Questions 29-31.

subcategories—*Total: Not located* and *Total: Nonresponse*. The total number of records in these two subcategories is 33,641.

Assignment of a record to the other two subgroups was based on whether (a) a member returned a “completed” survey and (b) the person was eligible to be included in the population of interest (i.e., was found to be on active duty in the DEERS files at the end of June and September 1996, and did not contact DRC to indicate that they were ineligible).

These two subgroups of records are required for analyses: records for study subjects determined to be ineligible (known ineligible), and records for study subjects who returned usable surveys and are assumed to be eligible (eligible respondents). Both the eligible respondents (ELIGFLGW = 1) and known ineligibles (ELIGFLGW = 0) are included because both types of records were used to develop weights that sum to the population total, and both type of records are needed to compute accurate variance estimates by the Taylor series linearization method implemented by SUDAAN. For these records, WGHT\_FLG = 1, an indicator that information was available to assign a non-zero final weight to the study subject. WGHT\_FLG is not an indicator of whether a completed survey was returned.

**Figure 3.**  
*The Structure of the Confidential File*

Subgroups	Public-release File	Confidential and Detailed Methodological Variables	Number of Records in Subgroup
Nonrespondents (WGHT_FLG = 0)			33,641
Known Ineligible Sample Members (WGHT_FLG = 1 and ELIGFLGW = 0)			3,258
Respondents, assumed eligible (WGHT_FLG = 1 and ELIGFLGW = 1)			39,855

*Note.* The shaded portion represents the subset of the data typically required for analysis.

## ***Variables in the Survey Analysis Files***

### ***Public-release File***

The variables in the public-release file fall into five categories: (a) derived from survey responses, (b) created by DRC to document survey operations and data quality, (c) created by Research Triangle Institute (RTI; Wheelless et al., 1997) to analyze the weighted dataset, (d) created by DMDC for analysis, and (e) extracted from the demographics in administrative personnel records. Variables are grouped in these categories in Appendix F.

***Information gathered on the survey.*** These variables came directly from the survey or were constructed using only information from the survey. There is at least one variable for every item in the survey except for a few items that had to be removed to preserve confidentiality. The annotated survey (see Appendix A) contains the item names, the values used to code the pre-specified alternatives, and references to applicable Appendix D coding notes. Appendix I gives information on how DMDC evaluated the special values used for variables in survey skip patterns and documents the treatment of these values in DMDC analyses reported by Scarville et al. (in preparation).

Although the first part of Appendix D extensively documents the conventions that DMDC uses to name survey variables, a brief overview of the naming convention is also given here. In general, survey-derived variables can be subclassified as variables that begin with "EQ," "SR," or "SP."

Naming of "EQ" variables is reviewed using the example variable, "EQ9627A." The first characters in the name specifies the name of the survey. In the present case, the survey is the *E*Qual Opportunity Survey—EO (two letters) was not used to name the variables because of the potential confusion of the letter "O" and the number "0." The third and fourth positions indicate the year (1996) in which the survey administration started. The last four digits indicate the item number—Item A in Question 27. Appendix D provides exceptions to this general convention.

Most of the remainder of the survey-derived variables in the public-release section of the dataset begin with "SR"—a mnemonic for self-reported or survey reported. The SR variables are a set of primarily demographic items that are named consistently across many DMDC survey forms. (For example, SRSVC is the variable name for the Service item included on most DMDC survey forms.) Although all survey data—including responses for variables beginning with EQ—are self-reported, the SR is used to distinguish the survey-reported information from DMDC-provided information (e.g., SRSVC from the survey versus SVC from the DMDC databases). Many items in this survey also requested proxy reports of the demographics of the individual's spouse. These demographic variables start with "SP" to distinguish the spouse characteristics from the member characteristics which start with "SR."

***Information on operations.*** DRC created three types of variables: missing, identifying, and matching. The missing variables listed in Table 10 were created to track the number of times that sample members skipped questions or gave invalid responses to survey items. (The latter

part of Appendix D contains information on the survey-wide and item-specific codes that were used to indicate missing data.) The variables that begin with "MISS\_" provide the sum of how many times a respondent's record contains each type of missing data. For the MISS\_ totals, mark-all-that-apply items were only counted once; and "Don't Know" responses were not counted.

**Table 10.**  
***Variables Indicating How Many Times Missing Codes Were Found on Each Record***

<b>Variable Name</b>	<b>Variable Label</b>	<b>Definition</b>
MISS99	Count of 99	Don't Know response was given.
MISS_9	Count of -9/.	Invalid skip (i.e., no response) was given.
MISS_8	Count of -8/.A	Multiple responses were given when one answer was requested.
MISS_6	Count of -6/.N	Based on prior answer(s), an item was validly skipped.
MISS_4	Count of -4/.I	Respondent incompletely gridded an answer (e.g., left a column blank).
MISS_2	Count of -2/.	Continuation was implied based on the answer to another item.
MISS_TOT	Sum of MISS variables	This variable is the total number of MISS_ "X" entries on a record.

DMDC\_ID is a key variable that can be used to tie any future updates of records to the public-release file. It is a unique randomly-assigned identification number for every member of the sample. ARVDATE is the date that the survey arrived at DRC, not the date that it arrived at the servicing post office—depending on mail flow a local post office may hold deliveries of business reply mail to schedule delivery efficiently.

The matching variables were used as a quality-control check. More specifically, matching variables (i.e., variables beginning "MAT") were created for some demographic variables to indicate whether or not survey-supplied information matched DMDC-provided data. The demographics used to create matching variables were gender, race, branch of Service, and paygrade. If either the DMDC-supplied or survey-derived information was missing, then the respondent was assigned a value for missing for that matching variable. A value of "1" was assigned if the survey- and DMDC-supplied data matched. Conversely, a value of "0" was assigned when the two types of data did not match.

***Information on weighting.*** The derivation and use of these variables were discussed in detail by Wheelless et al. (1997). The files have five analytic weighting variables:

ANL_WT	Analysis weight
ELIGFLGW	Eligibility flag used to exclude ineligible sample members when computing point estimates
NVSTRAT	Frame count within each variance estimation strata
VSTRAT	Variance estimation strata
WGHT_FLG	Flag indicating records weighted as respondents or known ineligible sample members

**Variables constructed for analysis.** Certain demographic variables, including some information collected on the survey form, had to be censored to preserve the anonymity promised to survey respondents and nonrespondents. For example, RSRED\_HI and R9603 are recordings of SRED\_HI and EQ9603. An "R" as the first letter of a variable listed in this section of Appendix F is an indication that the variable has been recoded to preserve anonymity of respondents and that a more complete variable is available only on the confidential analysis file.

Certain key demographic variables were constructed for DMDC analyses (Scarville et al., in preparation). These analytic variables, indicated by variables starting with "X" (for crossing variables), are based primarily<sup>11</sup> on self-reported information from the survey. In cases where the self-reported information was missing, the missing value was imputed from the member's record. Also, other imputations were made so that race and ethnicity could be reported in accordance with Office of Management and Budget (OMB, 1977) Statistical Directive 15 on standards for reporting Federal statistics. For members who self-reported "Other" as their race, race was imputed from record data; further, if the record data did not include a valid race value, then race was treated as missing.

The SAS code used in constructing these analytic variables is included in Appendix I. Three of the key demographic variables (i.e., XSEX, XSVC, XCPAY3) are included in the confidential analytical variables section of the file. Three other variables (i.e., RXCRACE, RLOC10A, and RLOC10B) are recordings of the actual variables used in DMDC analysis—variables that are only contained on the confidential file because of the possibility of them being used in combination with other variables to identify individuals.

Other variables in this section were constructed for analysis by Scarville et al. (in preparation) and are provided here because of the complexity of constructing these variables. The SAS code used in constructing these analytic variables for the 1996 EOS is included in Appendix I.

Appendix I also documents many decisions made in analyses reported by Scarville et al. (in preparation). For a large number of survey items, analysts must make decisions on the treatment of special codes used to indicate inconsistencies in the survey data, especially on respondent failures to follow skip pattern directions. Although the survey analysis files do not contain recoded variables for these items, DMDC evaluations of the special codes for these items are included in Appendix I.

**Information from records.** While most of the variables used in sample design and selection are too detailed to be in the public-release file (see the later sections on confidential variables), some items from the administrative records are included in the public-release file. Four demographic variables that were not modified from record data are included on the public-

---

<sup>11</sup> Self-reported demographics (e.g., paygrade, marital status) on the survey are current with the collection of the other information on the survey and provide more consistency in responses than using the administrative record for these demographics.

release file: gender (SEX), Service (SVC), race (RACE), and combined race and ethnicity (RETH).

Recodings of three other variables constructed from record data and used for sample planning are also on the public-release file. These variables represent the occupational density of Blacks (RBLKDEN), Hispanics (RHISPDEN), and total minorities (RMINDEN). These three variables contain more information than those used in sampling or weighting.

### **Confidential File**

In addition to variables on the public-release file, the confidential file has five additional categories of variables: (a) the uncensored version of survey items that appear in a collapsed form in the public-release section, (b) the uncensored version of key demographic variables used in analyses that appear in a collapsed form in the public-release section; (c) detailed variables created by DRC to document operations, (d) detailed variables used in sampling, and (e) detailed variables used in weighting. Variables are grouped in these categories in Appendix F.

**Confidential variables—survey.** This section of the confidential file contains the original full version of survey variables that had to be recoded for the public-release file to preserve confidentiality. To the extent possible, recoded versions of these variables are in the public-release file section for variables constructed for analysis.

**Confidential variables—analysis.** This section of the confidential file contains the original full version of analytic variables constructed by DMDC. To the extent possible, recoded versions of these variables are in the public-release file section for variables constructed for analysis.

**Confidential variables—operations.** This section of the confidential file contains operational variables created by DRC. These variables are useful for methodological studies and/or were used by RTI in determining eligibility and response status.

The identifying variables describe how the record was processed once a survey was returned. The variables BATCH, SERIAL, and LITHO uniquely identify each returned survey. LITHO is the lithocode scanned from the survey. BATCH and SERIAL are the codes printed on the survey during scanning to identify the scan batch number and scan order of each survey. These numbers can be used to retrieve the paper copy of a survey for a short time after it has been scanned (e.g., should researchers want to check electronically-stored information against the respondent's answer on the paper survey). SCANDATE is the date the survey was scanned, and INRECNO is a unique identification number that DRC assigned to each sample member.

**Confidential variables—sampling and record data.** This section of the confidential file contains administrative file variables and constructed variables used in determining the sampling design. It also includes the sampling strata identifiers and counts.

**Confidential variable —weighting.** This section of the confidential file contains variables used in analysis of nonresponse and in the construction of the weights. For more detail, see Wheelless et al. (1997).

### **A Description of the Information in Appendix G**

Regardless of whether analysts use all or only portions of the dataset, all analysts should start their analyses by replicating the results found in the tables in Appendix G. It is only by replicating these results that analysts can be sure that they are reading the data correctly. We especially recommend that frequencies be done for ELIGFLGW and WGHT\_FLG. These counts should be compared to the codebook pages for these variables and to the numbers in Figure 3. These numbers are also key to checking that the subsetted files for analysis contain the correct number of cases.

An example of the tables in Appendix G is depicted in Figure 4. Thirteen aspects of the example are indicated by superscripted numbers and described in the following paragraphs that correspond to those numbers.

**1. The codebook title.** The title is the same for every page in Appendix G of this codebook.

**2. Variable name.** The variable name is up to eight characters in length and corresponds to the variable name that is used in the SAS-based datafiles. The conventions for naming variables are documented in Appendix D. Appendixes E and F contains a full listing of variables and short descriptions of what the variables document.

**3. Statement of survey item text.** The text is the verbatim quote of the item wording. In a very few cases, some of the text was deleted because of space limitations. When this occurred, analysts are alerted to this fact by a message at the end of the statement.

**4. Introductory text for the item series that includes the specific survey item.** If there is any introductory text for a series of items it is displayed here. In some cases the text is a simple instructing to the person to indicate whether they agree with the following statements, or in some cases it is more extended instructions setting the context for answering.

**5. Location of the item on the OS data file.** This information provides analysts with the location of the variable on the flat data files. The OS location provides information on (a) the starting and ending column numbers where the data are stored and (b) the number of columns that the data occupy. "N/A" is used to indicate this information is not available for variables that appear only in the confidential file. See Appendix H for further information on the file layout.

**6. Information on the variable in the version 6.12 SAS data file.** The length reported here is for the version 6.12 data file and it may change for files that have been converted through transport files to other versions of SAS.

**Figure 4.**  
**Example of a Page from Appendix G**

<sup>1</sup>Status of the Armed Forces Survey Form D--Equal Opportunity 1996

<sup>4</sup>To what extent

<sup>2</sup>EQ9625A - <sup>3</sup>Does your work make use of your skills?

<sup>5</sup> OS DATA		<sup>6</sup> SAS DATA			
COLS	LENGTH	FORMAT NAME	TYPE	LENGTH	INFORMAT
0003-0004	2	EDSVC	NUM	4	STDOS2

<sup>7</sup> FREQ	<sup>8</sup> PERCENT	<sup>9</sup> OS VALUE	<sup>10</sup> SAS VALUE	<sup>11</sup> MEANING
186	0.2	-9	.	No response

36404	47.4	-1	.B	No survey returned
1533	2.0	1	1	Not at all
4077	5.3	2	2	Small extent
8563	11.2	3	3	Moderate extent
11537	15.0	4	4	Large extent
14452	18.8	5	5	Very large extent
<sup>12</sup> 76754	<sup>12</sup> 100.0	Totals		

<sup>13</sup>PERCENT TOTAL DOES NOT = 100 DUE TO ROUNDING ERROR.

<sup>14</sup>G-26

**7. Counts of respondents represented by each value.** The count indicates the number of respondents who fall into the category corresponding to each value for the variable. The count provided for each variable value should correspond exactly to those that analysts would obtain when running frequencies on the accompanying database. Before running complex statistical analyses, analysts are encouraged to recreate the frequency tables in Appendix G. Recreating the counts minimally ensures that the data are being correctly read by the analysts' computers and programs.

**8. Percentages of respondents represented by each value.** The percentages are calculated by dividing the number in the "FREQ" column (on the same row) by the total number at the bottom of the "FREQ" column. The percentages provided for each variable value should correspond to those that analysts would obtain when running frequencies on the accompanying dataset.

**9. Actual (or recoded) OS file response values.** The values appearing in this column are for the OS (flat file) version. Interpretation of these values and the rules for their assignment are found in the annotated survey form and the coding notes (Appendixes A, D, and I).

**10. Actual (or recoded) SAS file response values.** The values appearing in this column are for the SAS system file. Interpretation of these values and the rules for their assignment are found in the annotated survey form and the coding notes (Appendixes A, D, and I).

**11. Explanation of the response value codes.** The verbal explanations of the coding are found in either the annotated survey form or the coding notes (Appendixes A, D, and I). If the verbal explanation of the coded information pertains to a response alternative in the annotated survey, the text in the table is the verbatim response from the form.

**12. Total of response frequencies and percents.** The number appearing at the bottom of the "FREQ" column is the total number of individuals in the dataset (i.e., 76,754). The number is the same for every table in this codebook. That is, every individual in the dataset is accounted for on every variable, even if the variable indicates only that the information was missing for the member.

The number appearing at the bottom of the "PERCENT" column is typically 100.0. Rounding of the percentages for the individual values in the table, however, occasionally causes the total percentage to be slightly above or below 100.

**13. Messages to analysts.** These messages alert analysts to a number of situations including (a) rounding errors resulted in a total percentage that was not equal to 100%, (b) the variable could assume values that were "Too numerous to list," (c) the variable was extracted from another specified database, (d) the variable documented in the table was created from multiple variables as specified in the message, and/or (e) an explanation is given to clarify further the statement (see numbered paragraph 3 above) about what the variable is.

**14. Codebook page number.** This information is the page number corresponding to a specific variable. To locate a variable quickly, analysts can use Appendixes E and F. In addition to providing the variable name and a short description of the variable, Appendixes E and F also identifies the page number in Appendix G where the variable can be found.

## Appendix A

### ***Status of the Armed Forces Survey Form D--Equal Opportunity 1996***

The survey reproduced in this appendix is based on the version of the questionnaire used in the final pretests. It has all of the text and layout of the actual survey, but it does not have the final formatting of the printed questionnaire. The final printed questionnaire is reproduced in Scarville et al. (in preparation).

The annotations in this appendix were not printed on the survey forms used in the pretests. Annotations appear either above the item number or in the boxes used for write-in answers. These annotations provide three kinds of information.

First the annotations show the variable name(s) used in the dataset for the item and whether the variable is public release or confidential. Where more than one variable was required for an item, multiple variables are listed without being enclosed in parentheses. Multiple part items will show a range of variable names. For example, the annotation of "EQ961A-B" for item 12 indicates that two variables, EQ962A & EQ963B, were generated. An asterisk is used to indicate a variable that appears only on the confidential file. Public-release versions of these confidential variables are *not* shown in the annotations in this appendix but are listed in the Variables Constructed for Analysis section of Appendix E.

The second annotation on some items indicates that the same or a very similar item appeared on the 1995 *Sexual Harassment Survey Form B* (Edwards, Elig, Edwards, Riemer, 1997). These annotations are enclosed in parentheses and show the question number from that survey.

The third annotation on some items is a coding Note. These Notes are the part of the coding scheme (Appendix D) that discusses complex coding rules for the generation of the values for certain variables.

- This is not a test, so take your time.
- Select answers that best fit you.
- Do not use ink, ball-point, or felt tip pens.
- Make heavy black marks that fill the response circles.
- Do not make any marks outside of response circles or write-in boxes.
- If you change your mind, erase old marks completely.

## ABOUT THIS QUESTIONNAIRE

This survey asks about your perceptions of personnel issues in the military and military policies intended to ensure fair treatment and equal opportunity for all military members. Some questions ask about your experiences (and those of your family) on installations and in the communities around military installations.

### WHY ME?

You have been selected at random to be part of a sample of people who represent members of the Armed Services. Based on your responses and the responses of others, conclusions may be drawn about the views and experiences of Service members overall, and those of demographic subgroups. The validity of these conclusions depends, in part, on receiving enough completed surveys from individuals like yourself. **The survey results will not be valid if you allow someone else to fill out the survey for you.**

### WHY SHOULD I BOTHER? DO SURVEYS CHANGE ANYTHING?

**While no decisions about you alone will be made based on this survey, survey results will influence policy discussions and may result in changes that affect you and other Service members.** If you don't respond, your views and the views of other members like you will not be considered in personnel policy reviews and changes.

### WILL MY SURVEY RESPONSES BE KEPT PRIVATE?

**Yes. Under NO circumstances will any information about identifiable individuals be released.** Your responses will be combined with information from many other members to report the views and experiences of groups of members. We need your responses to evaluate personnel policies and to make improvements. **Do not use any personal names anywhere on this survey.**

## PRIVACY NOTICE

In accordance with the Privacy Act of 1974 (Public Law 93-579), this notice informs you of the purpose of the survey and how the findings will be used. Please read it carefully.

AUTHORITY: 10 United States Code 451 note.

**PRINCIPAL PURPOSE:** Information collected in this survey will be used to report attitudes and perceptions of military members about personnel relationships, programs, and policies. This information will assist in the formulation of policies which may be needed to improve the military working environment and relevant personnel policies. Reports will be provided to the Secretaries of Defense and Transportation, each Military Service, and the Joint Chiefs of Staff. Findings will be used in reports and testimony provided to Congress. Some findings may be published by the Defense Manpower Data Center (DMDC) or professional journals, or reported in manuscripts presented at conferences, symposia, and scientific meetings. In no case will the data be reported or used for identifiable individual(s).

**ROUTINE USES:** None.

**DISCLOSURE:** Providing information on this survey is voluntary. There is no penalty if you choose not to respond. However, maximum participation is encouraged so that the data will be complete and representative. Your survey form will be treated as confidential. Identifying information will be used only by persons engaged in, and for purposes of, the survey research. Only group statistics will be reported.

## Background Information

This first set of items asks for background information about you and your family. This will allow us to understand how experiences are the same or vary for different groups of Service members and their families.

SRSEX, (SRSEX)

1. Are you ...

- 1  Male                      2  Female

SRED, SREDA-I, SRED\_HI, (SRED), Note 1

2. How much education have you completed? **Mark the one answer that describes the highest grade or academic degree that you have completed.**

- 1  Less than 12 years of school (no diploma)  
 2  GED or other high school equivalency certificate  
 3  High school diploma  
 4  Less than 2 years of college credits, but no college degree  
 5  2-year college degree (AA/AS)  
 6  More than 2 years of college credits, but no 4-year college degree  
 7  4-year college degree (BA/BS)  
 8  Some graduate school, but no graduate degree  
 9  Master's, doctoral, or professional school degree (MA/MS/PhD/MD/JD/DVM)

EQ9603

3. Where were you born?

- 1  In one of the 50 States or DC  
 2  In a U.S. Territory or Possession, or Puerto Rico  
 3  Somewhere else of American parent(s)  
 4  Somewhere else and neither parent was an American

EQ9604

4. Is English a second language for you?

- 1  No                                      2  Yes

SRSVC, (SRSVC)

5. In what Service are you?

- 1  Army                                      4  Air Force  
 2  Navy                                        5  Coast Guard  
 3  Marine Corps

SRGRADE, (SRGRADE)

6. What is your current pay grade?

- |                              |                              |                                       |
|------------------------------|------------------------------|---------------------------------------|
| 01 <input type="radio"/> E-1 | 11 <input type="radio"/> W-1 | 21 <input type="radio"/> O-1          |
| 02 <input type="radio"/> E-2 | 12 <input type="radio"/> W-2 | 22 <input type="radio"/> O-2          |
| 03 <input type="radio"/> E-3 | 13 <input type="radio"/> W-3 | 23 <input type="radio"/> O-3          |
| 04 <input type="radio"/> E-4 | 14 <input type="radio"/> W-4 | 24 <input type="radio"/> O-4          |
| 05 <input type="radio"/> E-5 | 15 <input type="radio"/> W-5 | 25 <input type="radio"/> O-5          |
| 06 <input type="radio"/> E-6 |                              | 26 <input type="radio"/> O-6 or above |
| 07 <input type="radio"/> E-7 |                              |                                       |
| 08 <input type="radio"/> E-8 |                              |                                       |
| 09 <input type="radio"/> E-9 |                              |                                       |

EQ9607, (GB95009), Note 2

7. How many years of active-duty service have you **completed** (including enlisted, warrant officer, and commissioned officer time)?

	Years
0	0
1	1
2	2
3	3
4	4
	5
	6
	7
	8
	9

Write the number of years in the boxes and then blacken the corresponding circles.

Do not include partial years. For example, indicate "00" if you have not completed 1 full year.

Please read the next two items before answering either. Race/ethnicity items in this survey are phrased to match the 1990 U.S. Census. Responses will be grouped in the way currently required by Federal Regulations. If you are of mixed heritage, choose the race that you consider yourself primarily to be.

SRHISPA1, (GB95-4), Note 3

8. Are you of Spanish/Hispanic origin or descent? **Mark one.**

- 1  No (not Spanish/Hispanic)  
 2  Yes, Mexican, Mexican-Amer., Chicano  
 3  Yes, Puerto Rican  
 4  Yes, Cuban  
 5  Yes, other Spanish/Hispanic

SRRACE1, (GB95-5), Note 4

9. What race do you consider yourself to be? **Mark one.**

- 1  White  
 2  Black, African-Amer.  
 3  Eskimo, Aleut  
 4  Indian (Amer.) (Please specify name of enrolled or principal tribe below)↓

SRRACISP; SRRACICD

please print

### Your Workplace and Career

EQ9619 (GB95:34), Note 8

19. How many months have you completed at your duty station during your current tour?

		Months
0	0	
1	1	
2	2	
3	3	
4	4	
5	5	
6	6	
7	7	
8	8	
9	9	

Do not include partial months. For example, indicate "00" if you have not completed 1 full month.

Enter "99" to indicate ninety-nine or more months.

EQ9620 (GB95036)

20. Is this location your permanent duty station?

- 1  Yes
- 2  No, I am TDY/TAD attending training
- 3  No, I am TDY/TAD for other reasons

**21. Are you ... (Mark one answer for each item.)**

- 2 Yes  
1 No
- a. A student in a military course? .....
  - b. Serving aboard ship at sea? .....
  - c. In a work environment where members of your race/ethnicity are uncommon? .....
  - d. In a work environment where members of racial/ethnic minorities are uncommon? .....
  - e. Deployed on a peace keeping mission such as in Bosnia? .....

EQ9622, (GB95038)

**22. What is the gender of your immediate supervisor?**

- 1  Male
- 2  Female

EQ9623

**23. Is your immediate supervisor of Spanish/Hispanic origin or descent? Mark one.**

- 1  No
- 2  Yes
- 99  Don't know

EQ9624

**24. What is the race of your immediate supervisor? Mark one.**

- 1  White
- 2  Black, African-Amer.
- 3  Indian (Amer.), Eskimo, Aleut
- 4  Asian, Pacific Islander
- 5  Other race (Please specify below) ↓

EQ9624SP; EQ9624CD, Note 9  
*please print*

- 99  Don't know

EQ9625A-D, (GB95-51)

**25. To what extent ...**

5 Very large extent  
4 Large extent  
3 Moderate extent  
2 Small extent  
1 Not at all

- a. Does your work make use of your skills? .....
- b. Do you get the information you need to do your job? .....
- c. Does your supervisor tell you what you need to know to do your work? .....
- d. Does your supervisor tell you when he/she does not understand what you say? .....

**26. How satisfied are you with ...**

5 Very satisfied  
4 Satisfied  
3 Neither satisfied nor dissatisfied  
2 Dissatisfied  
1 Very dissatisfied

- a. Your opportunities for promotion? .....
- b. Your pay and benefits? .....
- c. Your job security? .....
- d. The direction/supervision you receive? .....
- e. The relationship you have with your co-workers? .....
- f. The kind of work you do? .....
- g. Your chances to acquire valuable job skills? .....
- h. Your job as a whole? .....

EQ9627A-E, (GB95-20)

**27. How much do you agree with the following statements about your military career and Service?**

5 Strongly agree  
4 Agree  
3 Neither agree nor disagree  
2 Disagree  
1 Strongly disagree

- a. I will get the assignments I need to be competitive for promotions .....
- b. My Service's evaluation/ selection system is effective in promoting its best members .....
- c. If I stay in the Service, I will be promoted as high as my ability and effort warrant .....
- d. I am proud to tell others that I am a member of my Service .....
- e. Being a member of my Service inspires me to do the best job I can .....

EQ9628, (GB95-10)

**28. Suppose that you need to decide whether to remain in the military. Assuming you could remain, how likely is it that you would choose to do so?**

- 1  Very unlikely
- 2  Unlikely

## Personal Experiences

In this part of the survey, you are asked how often you have experienced various incidents during the past 12 months. Please report only on the past 12 months so that annual rates can be estimated.

EQ9629AA-AO & BA-BO, (GB95-71), Note 10.

29. How frequently during the past 12 months have you been in circumstances where you thought . . .

*For each item a-o,  
mark one response  
in column A  
and one response  
in column B.*

**A. Military personnel  
(on or off duty,  
on or off installation)  
and/or Service/DoD  
civilian employees  
(on or off installation)**

**B. Civilians  
in the local  
community  
around an  
installation**

| n. Assaulted you physically because of your race/ethnicity? .....   | O | O | O             | O | O O O O       |
| o. Bothered or hurt <u>any of your family</u> in any of these ways (items a-n) because of your or your family's race/ethnicity? .....                                     | O | O | O             | O | O O O O       |

30. During the past 12 months, did any of the following happen to you? If it did, do you believe your race/ethnicity was a factor? Mark one alternative for each item.

- 3 Yes, and my race/ethnicity was a factor
  - 2 Yes, but my race/ethnicity was NOT a factor
  - 1 No, or does not apply
- a. I was rated lower than I deserved on my last evaluation.....
  - b. My last evaluation contained unjustified negative comments.....
  - c. I was held to a higher performance standard than others.....
  - d. I did not get an award or a decoration given to others in similar circumstances.....
  - e. My current assignment has not made use of my job skills.....
  - f. I was not able to attend a major school needed for my specialty.....
  - g. I did not get to go to short (1- to 3-day) courses that would provide me with needed skills.....
  - h. I received lower grades than I deserved in my training.....
  - i. I did not get a job assignment that I wanted because of scores that I got on tests.....
  - j. My current assignment is not good for my career if I continue in the military.....
  - k. I did not receive day-to-day, short-term tasks that would help me prepare for advancement.....
  - l. I did not have a professional relationship with someone who advised (mentored) me on career development or advancement.....
  - m. I did not learn--until it was too late--of opportunities that would help my career.....
  - n. I was unable to get straight answers about my promotion possibilities.....
  - o. I or my family was discriminated against when seeking non-government housing.....
  - p. I or my family was made to feel unwelcome by a local business (for example, a store or restaurant).....
  - q. I or my family did not get appropriate medical care.....

- 3 Yes, and my race/ethnicity was a factor
  - 2 Yes, but my race/ethnicity was NOT a factor
  - 1 No, or does not apply
- r. I or my family got poorer military support service (for example, at commissaries, exchanges, clubs, and rec centers) than others did.....
  - s. I was excluded by my peers from social activities.....
  - t. Local civilian police harassed me or my family without cause.....
  - u. I or my family was watched more closely than others were by armed forces police....
  - v. I was taken to nonjudicial punishment or court martial when I should not have been.....
  - w. I was punished for something that others did without being punished.....
  - x. I was afraid for me or my family to go off the installation because of gang activity.....
  - y. I was afraid for me or my family to go off the installation for other reasons.....
  - z. I was afraid for me or my family because of gang activity on the installation.....

EQ9631, Note 10

31. Have you or your family had other bad, race/ethnic related experiences during the past 12 months - experiences related to your job, an installation/ship, or a community around an installation?

- 1  No
- 2  Yes (Please specify what happened and to whom below; continue in Question 80 if more space needed).

EQ9631SP

please print

EQ9632, EQ9632S1, EQ9632S2, (GB95-72), Note 11

32. Do you think that DoD and your Service have a responsibility to prevent the racial/ethnic harassment or discrimination which you marked in Questions 29, 30, and/or 31? Mark one.

- 1  No
- 2  Yes, some of it
- 3  Yes, all of it
- 61  Doesn't apply—I did not mark anything in Questions 29, 30, and 31 that happened to me or my family because of race/ethnicity -> GO TO QUESTION 58

Description of One Situation

Think about the situation(s) you marked in Questions 29, 30, and 31 that happened because of race/ethnicity. Pick one situation to tell us about in

PLEASE DO NOT WRITE IN THIS AREA SERIAL #

**this section. That situation should be the event or set of related events during the past 12 months that bothered you most.**

EQ9633A-N. (GB95-73), Note 12

**33. Which of the following best describe(s) the situation that during the past 12 months has bothered you most? Mark all that describe the situation that you are going to tell us about in this section.**

- a  Offensive speech (for example, names, jokes, stories, remarks)
- b  Offensive music, pictures, or printed material (for example, graffiti, pamphlets, posters)
- c  Offensive non-verbal looks, dress, or appearance (for example, tattoos, distinctive clothes, hostile looks, stares)
- d  Threats, intimidation, vandalism, or physical assault
- e  Being left out socially, social isolation
- f  Being left out of information affecting your job or career
- g  Discrimination in assignment(s)
- h  Discrimination in discipline/punishment
- i  Harassment/discrimination by police
- j  Discrimination in training opportunities
- k  Harassment/discrimination by service providers (for example, in stores, in obtaining health care)
- l  Discrimination in career development or promotion
- m  Discrimination in performance evaluations or awards
- n  Other (Please specify below) ↓

g  Don't know

EQ9640A-D, (GB95-84)

40. Using the following scale, indicate the degree to which you found this situation to be . . .

- a. Annoying .....
- b. Offensive .....
- c. Disturbing .....
- d. Threatening .....

EQ9641A-L, (GB95-89,92,94,97)

41. Did you experience any of the following effects as a result of this discrimination or harassment?

- a. Lost time from work .....
- b. Decreased productivity .....
- c. Loss of trust or other negative feelings about co-workers .....
- d. Loss of trust or other negative feelings about supervisors or chain of command .....
- e. Thoughts about getting out of my Service .....
- f. Physical ailments (for example, headaches, upset stomach, high blood pressure, difficulty sleeping, loss of appetite) .....
- g. Sadness or depression .....
- h. Anger or rage .....
- i. Stress, anxiety, or fear .....
- j. Low self-esteem .....
- k. Thoughts of suicide .....
- l. Thoughts of physically harming the person(s) who did it .....

EQ9642, (GB95-81)

42. During the course of the situation you have in mind, how often did the event(s) occur?

- 1  Once
- 2  Occasionally
- 3  Frequently
- 4  Almost everyday

EQ9643, (GB95-82)

43. How long did this situation last (or if continuing, how long has it been going on)?

- 1  Less than 1 week
- 2  1 week to less than 1 month
- 3  1 month to less than 3 months
- 4  3 months to less than 6 months
- 5  6 months to less than 9 months
- 6  9 months to less than 12 months
- 7  12 months or more

EQ9644, (GB95-83)

44. Is this situation still going on?

- 2  Yes
- 1  No

EQ9645A-K, (GB95-99)

45. Other than reporting it, did you take any of the following actions to stop it?

- a. I ignored the behavior .....
- b. I avoided the person(s) .....
- c. I asked or told the person(s) to stop (either orally or in writing) .....
- d. I asked someone else to speak to the person(s) for me .....
- e. I threatened to tell or told a co-worker(s) .....
- f. I settled it myself physically .....
- g. I acted as though it didn't bother me .....
- h. I called a hotline for advice/information (not to file a complaint) .....
- i. I requested a transfer or temporary assignment elsewhere .....
- j. I discussed it with or got advice from someone unofficially (for example, chaplains or counselors) .....
- k. Other (If you answered "Yes...", please specify below)↓ .....

EQ9668A-B, (GB95-111)

68. To what extent do you know and understand ...

- 5 Very large extent
- 4 Large extent
- 3 Moderate extent
- 2 Small extent
- 1 Not at all

- a. What kinds of words, symbols, and actions are considered racist or offensive to members of other race/ethnic groups? .....
- b. The process for reporting racial/ethnic discrimination and harassment on your installation/ship? .....

EQ9669A-E, (GB95-129)

69. During the last 12 months, have you had any training on the following topics?

- 2 Yes
- 1 No

- a. Your Service's policies on racial/ethnic discrimination and harassment .....
- b. Your Service's policies on members participating in extremist activities .....
- c. Procedures for reporting racial/ethnic discrimination and harassment .....
- d. How to identify and deal with racial/ethnic discrimination and harassment .....
- e. Cross-cultural awareness and stereotypes .....

**70. In total, about how much training have you had during the past 12 months on topics related to racial/ethnic equal opportunity issues?**

- 1  None, I haven't received any training --> **GO TO QUESTION 73**
- 2  1 hour or less
- 3  More than 1 hour, but no more than 4 hours
- 4  More than 4 hours, but no more than 8 hours
- 5  More than 8 hours

EQ9671, (GB95-131)

**71. In your opinion, how effective was the training you received in making personnel aware of behaviors which might be seen as racial/ethnic discrimination or harassment?**

- 1  Not at all effective
- 2  Slightly effective
- 3  Moderately effective
- 4  Very effective

EQ9672, (GB95-131)

**72. In your opinion, how effective was the training you received at actually preventing/reducing behaviors which might be seen as racial/ethnic discrimination or harassment?**

- 1  Not at all effective
- 2  Slightly effective
- 3  Moderately effective
- 4  Very effective

## Progress in Equal Opportunity

EQ9673A-L

**73. Would you say that opportunities/conditions for people of your racial/ethnic group are better in the military, better in civilian employment, or that there isn't any difference?**

- 3  Better in the military
- 2  No difference
- 1  Better as a civilian

- a. Promotion opportunities
- b. Pay and benefits
- c. Fair performance evaluations
- d. Education and training opportunities
- e. Quality of life
- f. Fair administration of criminal justice
- g. Chance to show pride in yourself
- h. Chance to show pride in your racial/ethnic group
- i. Freedom from harassment
- j. Freedom from discrimination
- k. Freedom from extremism/hate crimes
- l. Racial/ethnic relations overall

EQ9674

**74. Do you have friends of a different race/ethnicity with whom you socialize in your home/quarters?**

- 2  Yes
- 1  No

EQ9675

**75. Do you have close personal friends who are of a race/ethnicity different than yours?**

- 2  Yes
- 1  No

EQ9676

**76. Compared to right before you entered the military, do you have more or fewer close personal friends who are of a race/ethnicity different than yours?**

- 3  More now
- 2  About the same
- 1  Fewer now

EQ9677

**77. In your opinion, have race relations in our nation gotten better or worse over the last 5 years?**

- 3  Better today
- 2  About the same as 5 years ago
- 1  Worse today

EQ9678

**78. In your opinion, have race relations in the military gotten better or worse over the last 5 years?**

- 67  Don't know—I have been in the military less than 5 years
- 3  Better today
- 2  About the same as 5 years ago
- 1  Worse today

EQ9679A-J

**79. In your opinion, have opportunities gotten better or worse over the last 5 years for ...**

- 67  Don't know—I have been in the military less than 5 years
- 3  Better today
- 2  About the same as 5 years ago
- 1  Worse today

- a. Blacks, African-Americans in our nation?
- b. Hispanics in our nation?
- c. Am. Indians/Eskimos/Aleuts in our nation?
- d. Asians and Pacific Islanders in our nation?
- e. Whites in our nation?
- f. Blacks, African-Americans in the military?
- g. Hispanics in the military?
- h. Am. Indians/Eskimos/Aleuts in the military?
- i. Asians and Pacific Islanders in the military?
- j. Whites in the military?

## **Appendix B**

### **Classification of Occupation Groups**

Six tables in this appendix present information on minority group density in DoD occupation groups. This information is shown in separate tables for Blacks, Hispanics, and all minorities. Tables are shown first for enlisted personnel and then for officers.

The first column in each table is a public-release variable on the dataset that shows the categorization of occupations with similar densities. The second column on each table is the minority group density for the occupation group—This information is in a variable on the confidential part of the dataset. The third column in each table is the number of personnel in the occupation group. The next three columns present information on the minority group (Black, Hispanic, all minorities): the number of that minority in that occupation group, the cumulative count of that minority, and the cumulative percent of that minority. The final two columns are the occupation code (DUTYOCC, a variable in the confidential part of the dataset ) and description from the occupational conversion index (Department of Defense, 1993).

**Table B-1.**  
**Enlisted Occupation Groups Classified by the Percentage of Blacks in the Group**

RBLKDEN	BLKDEN	Population		Black		Occupation
		Count	Count	Count	Count	
		55706	11553			
1	20.74%	5180	116	116	0.04%	0 Unknown occupation.
1	2.24%	2959	99	215	0.08%	43 Ordnance Disposal and Diving - Includes the excavation and rendering safe of explosive ordnance and of chemical and nuclear agents, and underwater demolition and other types of diving.
1	3.35%	733	44	259	0.10%	21 Sonar - Includes specialists in the operation of sonar and related detection equipment.
1	6.00%	4514	397	656	0.24%	14 Nuclear Weapons Equipment - Includes specialists in the maintenance and repair of nuclear weapons control and test equipment.
1	8.79%	6131	608	1264	0.47%	45 Musicians - Includes military bands personnel and special band musicians.
1	9.92%	11198	1121	2385	0.88%	13 Sonar Equipment - Includes specialists in underwater detection and fire control systems, oceanographic equipment, and related anti-submarine gear.
1	10.01%	423	43	2428	0.90%	19 Other Electronic Equipment - Includes training devices, inertial navigation systems, and electronic instruments specialists.
1	10.17%	2813	304	2732	1.01%	75 Industrial Gas and Fuel Production - Includes specialists in the production of liquid oxygen, hydrogen, nitrogen, and carbon dioxide.
1	10.81%	4527	494	3226	1.20%	63 Missile Mechanical and Electrical - Includes missiles and missile systems and related components.
1	10.91%	3115	345	3571	1.32%	42 Weather - Includes specialists in the collection of weather and sea condition data and in weather forecasting.
1	11.08%	11694	1308	4879	1.81%	11 Fire Control Electronic Systems (Non-Missile) - Includes the maintenance and repair of electronic fire control and bomb navigation equipment, excluding missile and underwater fire control equipment.
1	11.19%	21510	2437	7316	2.71%	70 Metalworking - Includes specialists in the machining, shaping, and forming of metal and in the fabrication of metal parts.
1	11.33%					23 Signal Intelligence/Electronic Warfare - Includes the intercept, translation, and analysis of foreign communications, and the operation of electronic countermeasures equipment.

**Table B-1. (continued)**

RBLKDN	BLKDN	Black			Code	Occupation Description
		Population Count	Count	Cumulative Count		
1	12.30%	24828	3053	10369	66	Power Generating Equipment - Includes nuclear power reactors and primary electric generating plants.
1	12.45%	803	100	10469	91	Officer Candidates and Students - Includes personnel or authorizations for personnel in training to become commissioned or warrant officers and personnel or authorizations for personnel in a student status.
1	12.58%	106842	13440	23909	60	Aircraft and Aircraft Related - Includes aircraft engines, electrical systems, structural components and surfaces, and launch equipment.
1	13.01%	6101	794	24703	15	ADP Computers - Includes all digital and analog computers.
1	13.33%	1530	204	24907	67	Precision Equipment - Includes optical and other precision instruments and office machines.
1	13.54%	12593	1705	26612	24	Intelligence - Includes the gathering, receipt, and analysis of non-signal intelligence data, the interrogation of prisoners, other language translators and interpreters, image interpretation, and specialists in counterintelligence and investigative activity.
1	14.10%	15955	2249	28861	71	Construction - Includes specialists in construction trades and construction equipment operation.
1	14.12%	5781	816	29677	86	Forward Area Equipment Support - Includes specialists in parachute packing and repair, in aerial delivery operations, and in flight equipment fitting and maintenance.
1	14.26%	36712	5235	34912	95	Not Occupationally Qualified - Includes bootcampers and other personnel in a training status.
1	14.61%	6755	987	35899	79	Other Craftworkers, N.E.C. - Includes specialists in trades such as molding, camouflage, and plastic work, which are not readily classifiable elsewhere in this section.
1	14.73%	30615	4509	40408	83	Law Enforcement - Includes military police, protective and corrections specialists, and criminal and non-criminal inspectors and investigators.
2	15.45%	59827	9242	49650	10	Radio/Radar - Includes fixed and mobile radio, air traffic and tracking radar; communication, navigation, and electronic countermeasure gear.
2	15.96%	3953	631	50281	16	Teletype and Cryptographic Equipment - Includes teletype and associated on-and-off line encryption devices.
2	16.08%	22419	3605	53886	7	Installation Security - Includes specialists who guard weapon systems, defend installations, and protect personnel, equipment, and facilities.

**Table B-1. (continued)**

RBLKDN	BLKDN	Population Count	Black		Code	Occupation Description
			Count	Cumulative Count		
2	16.18%	24606	3981	57867	5	Air Crew - Includes pilots and navigators, flight engineers, and other air crewmen.

CPT JOHN Q SAMPLE USA 09999999  
123 ANY STREET SW  
ANY TOWN DC 99999-9999

Dear Captain Sample:

The Department of Defense is seeking your help in gathering important information about racial/ethnic discrimination and harassment in the Armed Forces. You were selected in a random sample of service members to participate in this study. The information you and other service members provide will be used to evaluate discrimination/harassment policies and programs and to identify areas where improvements are needed.

Enclosed is your copy of the "Equal Opportunity 1996 Survey." Completing this questionnaire should take 30 to 45 minutes. This is your opportunity to provide input into issues that affect you and all other service members.

Sometimes concern is expressed about the risks of responding frankly to such surveys. I assure you that your responses will be kept confidential and only group statistics will be reported. While survey processing is underway, the survey center must know your identity in order to send your survey materials. Only the survey center will have access to this information, and they will use it only in administering the survey. When data collection and data preparation are complete, information which could be used to identify individuals will be removed.

Please return your completed survey in the enclosed postage-paid envelope at your earliest convenience. Your time and cooperation are appreciated.

Sincerely,

Edwin Dorn  
Under Secretary of Defense  
(Personnel and Readiness)

123 ANY STREET SW  
ANY TOWN, DC 99999-9999

Dear Chief Warrant Officer Sample:

Recently, you were mailed the "Equal Opportunity 1996 Survey." I want to emphasize two things about this survey.

First, this survey is important. It allows military members to report first-hand on racial/ethnic discrimination and harassment. Findings from the survey will be used to modify Department policies and programs. Thus, results of this survey will influence decisions directly affecting all military members.

Second, your participation in this survey is important. You may feel that no one individual could be very important to the success of this survey. That is not the case. Because not every member receives a questionnaire, your answers also represent the views of many other service members.

You may have already completed and returned your survey. If so, thank you for your participation. No further action is required. If you have not, please take 30 to 45 minutes to complete the survey. It should be returned in the postage-paid envelope that was provided. Your responses will be held in strictest confidence.

If you have not received a copy of the survey, please take a moment to inform us of your correct address. You can register your new address by calling our contractor at the tollfree number 1-800-881-5767. If you did receive the survey, you do not need to call. If you prefer, you can return this letter with your correct address (written at the top of this letter) to the DMDC Survey Processing Activity, c/o Data Recognition Corporation, 5900 Baker Road, Minnetonka, MN 55345-5967. I appreciate your time and cooperation.

Sincerely,

Edwin Dorn  
Under Secretary of Defense

Dear Chief Warrant Officer Sample:

Several weeks ago, you were asked to participate in the "Equal Opportunity 1996 Survey." When this letter was written, we had not yet received your completed survey.

Your participation is very important. Your responses will help the Department of Defense assess what changes need to be made to equal opportunity policies and programs. This is your opportunity to provide information regarding concerns that directly impact all service members.

A duplicate survey is enclosed in case you misplaced your original questionnaire. If you have already completed and returned your questionnaire, please discard this duplicate survey and accept my thanks. If you have not completed the survey, please fill out the questionnaire and return it in the enclosed postage-paid envelope.

Your time and cooperation are appreciated.

Sincerely,

Edwin Dorn  
Under Secretary of Defense

Dear Seaman Sample:

The Commandant recently approved Coast Guard participation in the "Equal Opportunity 1996 Survey" to assess the effectiveness of Coast Guard Civil Rights policies and programs, and to identify areas that may need improvement.

You were randomly selected to participate in this survey involving racial and ethnic issues. I urge you to complete your survey and return it as soon as it arrives in a few weeks. Your responses to this questionnaire will provide input in the formulation of personnel policies that directly affect you and fellow Coast Guard members.

Your responses to this survey will be confidential; your identity will be closely guarded. Only group statistics will be reported and no data identifying individuals will be released.

If the address on this letter is incorrect or your address will soon change, please take a moment to inform us of the corrected address. You can register your new address by calling our contractor at the toll-free number 1-800-881-5767. This toll-free line is provided for recording address changes only. If you prefer, you can mail this letter with your correct address to the following address:

Dear Petty Officer Sample:

Recently, you were asked to participate in the "Equal Opportunity 1996 Survey." To date, your completed questionnaire has not been received by the Survey Processing Center. Because your opinions are important to us, I want to offer you this final opportunity to add your valued input to the findings of this survey.

Because these findings will be reported to Congress and used in the formulation of Coast Guard policies, we want them to accurately represent the opinions and attitude of the entire military work force. The sample was scientifically selected to ensure this representation but the success of this method depends on you and many others like you who will complete and return the questionnaire.

If you have not already done so, please take the time now to complete and return the survey. A duplicate survey is enclosed in case you misplaced your original questionnaire. For your views to be included in the survey results, your questionnaire must be received by the Survey Processing Center within the next three weeks.

Thank you for your participation.

Sincerely,

*W. R. Somerville*

**Appendix D**

**Coding Scheme for the *Status of the Armed Forces Survey Form D—  
Equal Opportunity 1996***

## **Coding Scheme for the Status of the Armed Forces Survey Form D—Equal Opportunity 1996**

The guiding premise of coding this and other DMDC surveys is that the analysts creating the dataset will not be the only ones analyzing the data. This premise is historical fact for DMDC since DMDC rarely collects data only for immediate use or to answer one question. DMDC datasets are analyzed repeatedly over time by different people at both DMDC and other organizations (governmental and private). Care is taken in organizing and documenting DMDC surveys so that secondary analysts can use the data and be reasonably certain that they understand how the data are coded and the limitations of the data. This appendix describes (a) variable naming conventions, (b) how data are captured from the survey instruments, and (c) the edit process to create survey response variables for the analysis files.

### ***Variable Naming***

In responding to a customer's request for information, DMDC often uses multiple data sources. Information on a particular topic could be obtained from different surveys or from a survey that has been repeated over a number of years. For example, a customer might be interested in organizational commitment items included in a survey on sexual harassment in 1995 and an equal opportunity survey in 1996. Conventions discussed below are being used as a means for facilitating such analyses.

### ***Non-survey-derived Variables***

Variables names for non-survey-derived variables tend to be character strings that aid in remembering the meaning of the variable. Two important conventions were used in naming variables.

- A variable name from DMDC record files was used only if the data, values, and value-labels were identical to those from an official DMDC data file. When data were added to an analysis file unchanged from record data, the same variable name, values, and value labels were used. For example, "SVC" is a field in the ADMF and RCCPDS that indicates the member's Service; since the variable in the survey data file is identical to that in the record data from the month that the sample was drawn, the same variable name and labels were used. In contrast, the constructed variable CSERVICE was given a variable name that is not used in the official records so as not to confuse analysts who work routinely with record data.
- Beginning a variable name with "X" indicates that it is a special crossing (marginal) variable for key analyses. "X" variables typically involve using record data to impute values for missing data in survey items. "X" variables may also be used to mask data. In such cases, collapsing or recoding to missing is performed in order to preserve confidentiality of respondents. (See Appendix I for the programming that was used to compute "X" variables.)

## ***Survey-derived Variables***

Identical demographic items are used across many DMDC surveys. Each time that these items are used, identical variable names and values are used. The variable names for this group of demographic items start with *SR* (mnemonic for survey reported). The following items in this survey fall into this category: *SRSEX* (for gender), *SRED* (for education), *SRHISPA1* (for Hispanic ethnicity), *SRRACE1* (for race), *SRSVC* (for armed Service), *SRGRADE* (for military paygrade), and *SRMARST* (for marital status) (see pp. A-3 and A-4 of the survey instrument). *COMMENT* (for a flag indicating if a comment has been entered) and *SRDATE* (for the date the survey was completed) are other standard variables across DMDC surveys (see p. 15 of survey instrument). Spouse versions of two standard items are introduced in this survey: *SPHISPA1* and *SPRACE1* are spouse versions of *SRHISPA1* and *SRRACE1* (see p. A-4 of the survey instrument).

Variable names for items that are not standardized across DMDC surveys start with 1 or 2 letters to represent the survey, followed by 2 digits to represent the year that data are gathered, and end with 4 numbers/letters corresponding to the questionnaire item. Because of how sorting is done, leading zeros are used so that items are ordered from "01" through "99". Typically, the last one or two of the 4 item-number digits is blank or contains a letter representing one of the sub-items within the question. The basic naming conventions are implemented as follows for *EOS*:

- The first and second positions are "EQ" for items appearing in the *Equal Opportunity Survey*. Recoded variables are named for the basic survey item and have an "R" replacing the "EQ" to indicate that it is a recoded variable.
- The third and fourth positions of the variable names are "96" to indicate that these data come from surveys administered in 1996.
- The fifth and sixth positions are the item numbers in the survey.
- Letters following the numbers for multipart items are usually representing the sub-item. The exceptions are:
  - Specify flags (ending in a 'SP') represent whether information has been written in a specify box. For example, if respondents to this survey indicate on Question 10 that they spent most of the last year in the U.S., they are directed to specify the two-letter abbreviation for where they spent most of their time. EQ9610SP is a flag variable that indicates whether text was entered in the write-in area, and whether the presence of text in this area is consistent with how the basic question was answered. For initial and interim files, specify flag variables are based on scanning the area of the survey for pencil marks. For the final data set, these variables are based on matching to the verbatim files to determine if legible text was entered in the write-in areas.

- Skip pattern flags (ending in 'SK') represent data quality for questions that direct respondents to skip later questions if they respond to that question in a certain way. For example, if respondents to this survey indicate on Question 14 that they were not married at any time in the last year, they are directed to skip Questions 15-18. EQ9614SK is a flag variable that indicates if the responses to Questions 14-18 are answered consistently with the skip directions.
- For certain write-in responses numeric codes are available. These variables are named for the basic survey item by appending 'CD' to the usual variable name of items that accept write-in answers. For example, Question 10 has the coding variable EQ9610CD to represent the FIPS code equivalent of the state postal abbreviation, in addition to the regular variable EQ9610 and the specify variable EQ9610SP. Since coding variables contain unique content based codes, every coding variable along with a special coding note is shown in the coding annotation of the survey in Appendix A.

### ***Value Coding and Formats***

Datasets were prepared as SAS system files. An OS or flat file version of the public-release file was then prepared from the SAS system file. This section describes how values were treated in creating the SAS system files and notes any differences in the flat file.

In the SAS system files, variables were declared as numeric unless they contain true alphabetic characters. Although numeric variables can take more storage space, many statistical and logical operations can only be done with variables that are declared as numeric. Values for alphabetic variables were input with \$CHARww. formats to preserve leading, embedded, and trailing blanks.

### ***Raw-Data Encoding Process***

Responses on the surveys are edited for the analysis files in five coding steps.

1. Each response is coded with one of three types of standard codes: valid response option value (see Coding Annotation on the survey form in Appendix A), no response (-9), or multiple-response error (-8).
2. Specify flag variables are created, and codes are assigned to indicate if respondents wrote in responses correctly where fill-in boxes were used.
3. Skip flag variables are created, and codes are assigned to indicate if respondents completed the skip pattern correctly.
4. Special codes for valid skips are assigned to variables within skip patterns using a "forward coding" process.
5. Text code variables are created, and codes are assigned based on the content coding of the text entries. Content code variables created for this survey are: (a) Census coding

of race text entries, (b) text entered in the Comments section, and (c) other miscellaneous text entries.

The first step in creating the SAS system files involved the scanning of the surveys and resolution of problems based on visual inspection of problem surveys. All returned surveys were optically scanned to create raw data files containing "0" and "1" coding for every unmarked and marked scannable space on the survey. At this stage each item is evaluated individually and codes are assigned according to only what is marked in that item. These codes are based on the position of mark(s) in only one item and are found on the annotated forms in Appendix A. Problem codes are resolved by visual inspection of the survey form—these problems often arise from grid items (e.g., years of service). Data editors attempt to resolve every grid with no scanned response, an incomplete response, or multiple responses, by visually inspecting surveys. Missing values codes remain in the main data file if manual inspection of the item cannot resolve the grid entry.

In the coding sequence, coding in the second and later steps build on prior steps and usually involve values in multiple items to resolve edits.

The next sections discuss the assignment of missing value codes, the special treatment of date variables, and the editing of skip patterns during steps 2 and 3.

### ***Missing Data Codes***

The instructions used to assign missing data codes and other special codes are shown in five tables. In these tables the value labels associated with each assigned code are shown in italicized text. These are the SAS format labels used in the SAS dataset.

- Table D-1 contains basic SAS and flat file missing data codes.
- Table D-2 contains SAS and flat file missing data codes for dates.
- Table D-3 contains standard coding notes for flag variables.
- Table D-4 contains SAS and flat file special not applicable codes.
- Table D-5 provides special coding notes for items involving skip patterns or other non-obvious coding.

The codes presented in Table D-1 are general missing data codes that have been adopted recently for use on DMDC surveys. This table has separate columns for values used for SAS system files and the flat files. The biggest difference between the flat files and SAS system files is in the treatment of missing values. The flat file codes differ from the SAS codes because SAS implements special missing codes and formats that may not be compatible with other statistical analysis software such as SPSS. SAS can represent up to 27 missing data values for numeric variables as either a period or a period-letter combination. While SAS can read alphas representing missing data in a raw data field declared to be numeric, other programs such as SPSS do not accept alpha characters in numeric fields. Missing numeric data are represented in the flat files by negative numbers that can be declared as missing values. For example, a

multiple-response error in flat files is coded as a “-8”, which can be declared as a missing value when the data are input in SPSS—in the SAS file, the value “.A” is used to represent a multiple response error.

Data requirements of SUDAAN were also considered in coding this survey. Primarily this meant not using a code of zero which has a special use for certain procedures in SUDAAN for a variable being used as an independent variable.

Many types of missing data are common to scannable surveys and are self-explanatory. In general, missing data are coded as “-9” (SAS: .) when respondents *invalidly* skip the item; and multiple response errors are coded as “-8” (SAS: .A). Incompletely gridded responses that could not be resolved by visual inspection are coded as “-4” (SAS: .I). Out-of-range responses in grids (e.g., a current age less than minimum entry age for the military) are coded as “-7” (SAS: .O).

For a *single item* that contains a response alternative of “Not applicable”, a missing data code of “-6” (SAS: .N) is typically used. When *multiple items* can be affected by a skip pattern or when item(s) have *multiple ways* to be not applicable, specific codes are used. This type of coding is discussed later in the section entitled “Skip Pattern Coding”. That later section also explains using the code “-2” (SAS: .M) to denote implied continuations.

Multiple survey forms are sometimes used in a single effort, and the data from all the related forms may be combined into a single dataset for analysis. In a combined dataset, a code of “-5” (SAS: .F) indicates missing data for variables not on the form completed by a respondent. This code is not used on the files for this survey.

Records are included in the files for sampled members regardless of whether or not they returned a survey. If a member did not return a survey or returned a blank survey, every survey variable is assigned a value of “-1” (SAS: .B).

In very rare cases, a match might not be able to be made to official records. For example, some records might not have been found in the DEERS system for members sampled from the ADMF. In other cases, a duplicate survey might be returned that was marked as being completed by someone other than the member to whom it was sent. In such cases, a value of “-3” (SAS: .G) would be assigned to the official record variables; this code indicates that the survey could not be matched back to the sample file or to other official records.

**Table D-1:**  
**Basic SAS and Flat File Missing Data Codes**

<u>SAS File</u>		<u>Flat File</u>		<u>Description</u>
<u>Numeric</u>	<u>Alpha</u>	<u>Numeric</u>	<u>Alpha</u>	
.	.	-9	.	<i>No response (invalid skip)</i>
.A	.A	-8	.A	<i>Multiple response error</i>
.O	.O	-7	.O	<i>Out-of-range error</i>
.N	.N	-6	.N	<i>Not applicable (valid skip)</i>
.F	.F	-5	.F	<i>Variable not on survey form.</i> This value is reserved for multiple form surveys.
.I	.I	-4	.I	<i>Incomplete grid error</i>
.G	.G	-3	.G	<i>No match on official records.</i> Only used for master file, sampling, and weighting variables for surveys that cannot be matched back to the sample file. Typically used in files of duplicate returns; these returns are not stored in the main or public use data files.
.M	.M	-2	.M	<i>Implied continuation.</i> Respondent's answer to this item is inconsistent with his/her answering items in a skip pattern started with this item.
.B	.B	-1	.B	<i>Blank/no survey.</i> Filler values for survey variables when either a blank survey is returned or no survey is returned. Survey control system variables retain their assigned values.
99	DK	99	DK	<i>Don't know*</i>

*Notes.* \*Use of 'Don't know' as a response is not exactly missing data. It is, however, given special treatment because it lacks precision and is *sometimes* excluded when calculating percentages. If an analyst decides to exclude this response when calculating percentages, it should be recoded as missing; in SAS datasets the value .D is suggested for use. Also, it is often useful to sum (across items) the number of times 'Don't know' is used as a response by a respondent.

### **Date Codes for Missing Data**

Exact dates were formatted YYYYMMDD<sup>12</sup> (SAS input format YYMMDD8.) in anticipation of the turn of the century. Because SAS stores dates as the number of days from a standard date of 1 January 1960, special dates have to be used to indicate specific types of missing or error data (see Table D-2). The column headed YYYYMMDD shows how special missing data values for SRDATE are formatted in the flat file for this survey.<sup>13</sup> When SAS reads a date value from a flat file, it stores that date as the value in the column headed "Value read from input." SAS "if-then" statements were used to recode those values to the special missing value codes in the first column of Table D-2.

**Table D-2:**  
**SAS and Flat File Missing Data Codes for Dates**

<u>SAS File</u>		<u>Flat File</u>		<u>Description</u>
<u>Recoded value</u>	<u>Value read from input</u>	<u>YYYYMMDD</u>	<u>MMYYYY</u>	
.	-54908	18090901	SEP1809	<u>No response (invalid skip)</u>
.A	-55304	18080801	AUG1808	<u>Multiple response error</u>
.O	-55701	18070701	JUL1807	<u>Out-of-range error</u>
.N	-56096	18060601	JUN1806	<u>Not applicable (valid skip)</u>
.I	-56887	18040401	APR1804	<u>Incomplete grid error</u>
.B	-58073	18010101	JAN1801	<u>Blank/no survey.</u> Filler value for survey variables when either a blank survey is returned or no survey is returned. Survey control system variables retain their assigned values.

*Note.* This conversion has already been done in the DMDC SAS files for this survey and SRDATE has the values shown under the "Recoded value" column.

<sup>12</sup> Similarly, dates given as months and years would be formatted as MONYYYY (e.g., AUG1993). When input by SAS format MONYY7., month/year dates are stored as if they specified the first day of the month.

<sup>13</sup> While there are no variables in this survey where only a month and year are entered, the column MMYYYYY is included in this table to illustrate how the coding works for this type of variable in other surveys.

## Standard Flag Variables

As noted above, this survey employs two standard flag variables: specify flags and skip pattern flags. In the second edit step, specify flags are set in accordance with Table D-3. In the third edit step, skip flags are set in the manner discussed in Table D-3; however, the specifics for each skip flag are detailed in the next section. Note that two values ('-2/.M' and '-9/.') are used to represent missing data in flag variables in a slightly different way than they are used for standard survey variables.

**Table D-3:**  
**Standard Coding Notes for Flag Variables**

---

- 1 **SPECIFY FLAGS.** A flag variable (with the variable name ending in 'SP') is generated for each specify box. For example, Question 10 has the flag variable EQ9610SP. All specify flags are shown in the annotated survey in Appendix A. Specify flags are also discussed in Table D-5 if there are multiple responses that can indicate that the specify box should have text entered.

EQ96xxSP variables indicate the result of checking the specify box for marks and checking the parent variable to see if the specify-below response option was selected.

The skip flag variables are coded with one of six values.

- 1 *Valid skip*  
Assigned to the flag variable (e.g., EQ9610SP = 1) if the respondent did not select the specify-below response option (e.g., EQ9610 = 2-8) and no text is entered in the specify-below box.
- 2 *Valid continuation*  
Assigned to the flag variable (e.g., EQ9610SP = 2) if the respondent selected the specify-below response option (e.g., EQ9611 = 1) and the specify-below box contains text.
- 3 *Implied continuation*  
Assigned to the flag variable (e.g., EQ9610SP = 3) if the respondent did not select the specify-below response option (e.g., EQ9610 = 2-8) but the specify-below box contains text.
- 4 *Invalid skip*  
Assigned to the flag variable (e.g., EQ9610SP = 4) if the respondent selected the specify-below response option (e.g., EQ9611 = 1) but no text is entered in the specify-below box.
- 2 *Missing continuation*  
Assigned to the flag variable (e.g., EQ9610SP = -2) if the parent variable is missing (e.g., EQ9610 = -8 OR -9) and the specify-below box contains text.

-9 *Missing skip*

Assigned to the flag variable (e.g., EQ9610SP = -9) if the parent variable is missing (e.g., EQ9610 = -8 OR -9) and no text is entered in the specify-below box.

This can also be illustrated by a contingency table that shows the value of a specify variable (e.g., EQ9610SP) based on examining the values of the parent variable (e.g., EQ9610) and whether the respondent entered anything in the 'please specify below' box to provide the two-letter state postal abbreviation:

EQ9610 value after first edit step	text in box	
	yes	no
1 (specify)	2 (Valid continuation)	4 (Invalid skip)
values in range 2-8	3 (Implied continuation)	1 (Valid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

**CODED VARIABLES.** A coded variable (with the variable name ending in 'CD') is generated for certain write-in responses. For example, Question 10 has the coded variable EQ9610CD. All coded variables are shown in the annotated survey in Appendix A. Coded variables may have the special values of *.I-9 No response (invalid skip)*, *.FI-5 Variable not on survey form*, or *.BI-1 Blank/no survey* assigned in the first edit step of scanning. No other special values are assigned in editing for Specify Flags or Skip Flags because values assigned in these edit steps would often match legitimate codes used for standard codes such as the Census Bureau coding of race/ethnicity or FIPS coding of states. The specify flag for the question should be used to evaluate the legitimate cases for which the coded variable is appropriately analyzed.

- 2 **SKIP FLAGS.** A flag variable (with the variable name ending in 'SK') is generated for each skip pattern. For example, Question 14 has the flag variable EQ9614SK and the regular variable EQ9614. Skip variables are useful for evaluating the effectiveness of the skip pattern, and as a flag for screening out ambiguous response patterns during analysis. Skip flags are shown in the annotated survey in Appendix A and are discussed below in Table D-5.

The skip flag variables are coded with one of six values.

1 *Valid skip*

Assigned to the flag variable (e.g., EQ9614SK) if the parent variable indicates a skip (e.g., EQ9614 = 1) and the responses are missing for all items in the skip pattern (e.g., all of EQ9615 -- SPRACE1 = -9).

- 2 *Valid continuation*  
Assigned to the flag variable (e.g., EQ9614SK) if the parent variable indicates a continuation (e.g., EQ9614 = 2) and the respondent answered at least one of the items in the skip pattern (e.g., at least one of EQ9615 -- SPRACE1 NE -9).
- 3 *Implied continuation*  
Assigned to the flag variable (e.g., EQ9614SK = 3) if the parent variable indicates a skip (e.g., EQ9614 = 1) but the respondent answered one or more items in the skip pattern (e.g., at least one of EQ9615 -- SPRACE1 NE -9).
- 4 *Invalid skip*  
Assigned to the flag variable (e.g., EQ9614SK = 4) if the parent variable indicates a continuation (e.g., EQ9614 = 2) but the responses are missing for all items in the skip pattern (e.g., all of EQ9615 -- SPRACE1 = -9).
- 2 *Missing continuation*  
Assigned to the flag variable (e.g., EQ9614SK = -2) if the parent variable is missing (e.g., EQ9614 = -8 OR -9) and the respondent answered one or more items in the skip pattern (e.g., at least one of EQ9615 -- SPRACE1 NE -9).
- 9 *Missing skip*  
Assigned to the flag variable (e.g., EQ9614SK = -9) if the parent variable is missing (e.g., EQ9614 = -8 OR -9) and the responses are missing for all items in the skip pattern (e.g., all of EQ9615 -- SPRACE1 = -9).

This can also be illustrated by a contingency table that shows the value of a skip variable (e.g., EQ9614SK) based on examining the values of the parent variable (e.g., EQ9614) and the variables in the skip pattern (e.g., EQ9615 -- SPRACE1) after the first edit step:

EQ9614 value after first edit step	EQ9615--SPRACE1 values after first edit step	
	at least one NE -9	all = -9
1 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
2 (continuation)	2 (Valid continuation)	4 (Invalid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

### **Special Codes For Skip Patterns**

Coding steps 3 and 4 involve editing data to resolve discrepancies in skip patterns. Skip flags are created in step 3 (Tables D-3 and D-5) and special values are assigned to variables within the skip patterns in step 4 (Tables D-4 and D-5).

Discrepancies between a question that initiates a direction to skip and whether the respondent correctly follows the directions can be ignored, or resolved in one of two ways. Backward coding involves correcting the discrepancy by editing back from the skip pattern items to make the initial question conform. Forward coding involves correcting the discrepancy by editing forward from the initial question to make the skip pattern items conform.

Backward coding has been used in other recent DMDC surveys, most notably for the 1995 Sexual Harassment Surveys (Status of the Armed Forces Surveys Forms A-C). Separate skip flags were not used in the Sexual Harassment Surveys. Instead, the lead item for the skip pattern was recoded to -2 (SAS: .M), 'Implied continuation' resulting in a loss of data for those few skip patterns where more than one response option directs the respondent to skip items. (If only one response option initiates the skip and inconsistency is only checked for that response option, then an analyst can know exactly which response was marked that was recoded to -2 (SAS: .M), 'Implied continuation.' However, in this survey, if this convention were used, an analyst would not know which of two responses were marked by a respondent to Question 47 if the respondent also made a mark in any of Questions 48-55. For this and future DMDC surveys that use skip flags, analysts will have to decide whether to recode inconsistent responses to initial questions based on an assessment of skip flag variables.

In "forward" coding for skip patterns, data on the starting question are accepted as marked, and all data for the remaining items are ignored. Furthermore, answers to all of the subsequent items in the skip pattern are coded irretrievably -6 (SAS: .N), 'Not applicable (valid skip).' Given these limitations of forward coding, DMDC does not use forward coding to edit a respondent's answer unless a respondent only marks 'Not-applicable' alternatives in the skip pattern. In this case, it is assumed that the respondent went on to read the items within the skip pattern and "helped" by continuing to mark 'Not applicable' when there was no need to do so.

This survey is coded to preserve all data. Skip flags indicate if the skip directions were followed, and items within a skip pattern are forward coded only in the sense that special missing value codes are assigned to indicate that the questions were skipped consistently with the skip pattern. Analysts should evaluate the data for each skip pattern and decide how cases are to be handled. Generally this will mean backward coding of the initial item based on the skip flag. If the answer to the first item in a skip pattern indicates that the remaining items in the pattern should be skipped but the respondent answered the other skip-pattern items, the initial item may be recoded as missing by analysts (-2 [SAS: .M], 'Implied continuation'), as was done in data set preparation for previous DMDC surveys such as the 1995 Sexual Harassment Surveys. Where only one response can initiate a continuation, some analysts may recode the initial question to that response rather than to the missing data value (-2 [SAS: .M], 'Implied continuation').

As indicated above, questions within a skip pattern are "forward coded" to differentiate valid skips for non-applicable items from simple non-response. Survey-specific special values are assigned in edit coding 4 when the reason for an item not being applicable can be defined and used across multiple items.

A single item might have multiple codes for 'Not applicable'--each uniquely identified with a separate reason. Some 'Not applicable' reasons may be considered valid in calculating percentages while others may not. As a result, different reasons for an item being 'Not applicable' must be preserved by distinct codes. Special 'Not applicable' codes for the 1996 Equal Opportunity Survey are given in Table D-4. These special codes require the analyst to produce frequencies of missing values and then make situation-by-situation decisions on whether to use the missing-value cases in the calculation of percentages (or to exclude the cases and the part of the population that they represent).

**Table D-4.**  
**SAS and Flat File Special Not Applicable Codes**

SAS File	Flat File	Description
60	60	<i>Not applicable.</i> Used when NAs might be counted as valid responses.
61	61	<i>Doesn't apply marked (Q32), consistent with 29-31.</i> Skip EQ9633A through EQ9657.
62	62	<i>Doesn't apply marked (Q32), but inconsistent with 29-31.</i> Skip EQ9633A through EQ9657.
63	63	<i>Doesn't apply--not reported through installation/Service/DoD.</i> Skip EQ9649A through EQ9655.
64	64	<i>Doesn't apply--ALL reported through installation/Service/DoD.</i> Skip EQ9656B through EQ9656SP.
65	65	<i>Doesn't apply--action still being processed.</i> Skip EQ9654A through EQ9655.
66	66	<i>Doesn't apply, I haven't received any training.</i> Skip EQ9671 through EQ9672.
81	81	<i>Doesn't apply--no spouse in last year.</i> Skip EQ9615 through SPRACOCD.

*Note.* Codes 60 through 66 were used similarly for SAFS 1995 Forms A-C (Sexual Harassment Surveys).

Table D-5 provides special coding notes for items involving skip patterns or other non-obvious coding. The number of the coding note is keyed to the Notes annotated on the survey instrument contained in Appendix A.

**Table D-5.**  
***Special Coding Notes***

---

<b>Note</b>	<b>Coding instructions and codebook specifications for Appendix G</b>
-------------	---

---

- 1      **SRED, SREDA--SREDI, SRED\_HI.** Although this item asks for one (highest grade or degree) response, respondents frequently mark multiple responses. SRED is coded as a standard mark one item while SREDA-SREDI are coded as a mark-all-that-apply. SREDA-SREDI are coded as 1 (Not marked), 2 (Marked), or -9 (Missing skip). The -9 code is used for SREDA-SREDI if nothing is marked in the question. SRED\_HI equals SRED except: where SRED equal -8, SRED\_HI is constructed from SREDA-SREDI and is coded from 1 to 9 to represent the highest education marked.

Codebook pages for SRED, SREDA-SREDI note: "Although this item asks for one (highest grade or degree) response, respondents frequently mark multiple responses. SRED is coded as a standard mark one item while SREDA-SREDI are coded as a mark-all-that-apply. SRED\_HI equals SRED except where SRED has a multiple response error, SRED\_HI has the code of the highest education level that was marked."

- 2      **EQ9607.** Responses were not checked for valid values at upper end of the range.

Codebook page for EQ9607 notes: "This field is not checked for unlikely values; entries up to 49 years are accepted. Note, the master file variable 'TAFMS' (which is calculated in months) is edited such that values over 35 years and less than or equal to 40 years are recoded to 35 years while values over 40 years are recoded to missing."

- 3      **SRHISPA1.**

Codebook page for SRHISPA1 notes: "This item is identical in wording to the standard DMDC SRHISPA item. However, coding differs from SRHISPA and the lead-in text to the item has not been used in other DMDC surveys."

- 4 **SRRACE1, SRRACICD, SRRACACD, SRRAC OCD.** This race item differs from the DMDC standard item SRRACE. The coding variables contain content codes generated from text in the specify box. The content coding is performed in accordance with Census Bureau specifications.

Codebook page for SRRACE1 notes: "This race item differs from the DMDC standard item SRRACE in that write-in boxes are provided in this version for 'Indian (Amer.)' and 'Asian, Pacific Islander' categories. Two, the text before Question 8 has not been used in other DMDC surveys. Three, 'Eskimo, Aleut' is a category separate from 'Indians (Amer.),' unlike the standard DMDC SRRACE item."

Codebook pages for SRRACICD, SRRACACD, and SRRAC OCD note: "Coding represents 1990 Decennial Census coding of the text written in the 'please specify' box. Codes are too numerous to list here."

- 5 **EQ9610CD.** This coding variables contain content codes generated from text in the specify box. The content coding is performed in accordance with FIPS standards.

Codebook pages for EQ9610CD note: "Coding represents Federal Information Processing Standard (FIPS) codes for the states, DC, PR, the Territories and Possessions, for the text written in the 'please specify' box. Codes are too numerous to list here."

- 6 **EQ9614SK, EQ9615--SPRACE1, SPRACISP, SPRACASP, SPRACOSP.** A mark for the 'No...' response (value = 1) in EQ9614 indicates a skip for EQ9615--SPRACE1, SPRACISP, SPRACASP, SPRACOSP. A mark for the 'Yes...' response (value = 2) in EQ9614 indicates a continuation.

**EQ9614SK** has the usual codes of 1, 2, 3, 4, -2, and -9 for a skip flag variable.

Specifically:

EQ9614 value after first edit step	EQ9615--SPRACE1 values after first edit step	
	at least one NE -9	all EQ -9
1 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
2 (continuation)	2 (Valid continuation)	4 (Invalid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

One special code is used for forward coding of **EQ9615--SPRACE1, SPRACISP, SPRACASP, SPRACOSP**. Note that the specify variables (SPRACISP, SPRACASP, SPRACOSP) are created before this forward coding and are included in the forward coding. Each of SPRACISP, SPRACASP, SPRACOSP are checked where EQ9614SK = 1 and each of them that equals -9 is set equal to 81.

81 *Doesn't apply--no spouse in last year*  
is assigned if EQ9614 equals 1 and no response is marked in EQ9615--SPRACE1. That is, if EQ9614SK = 1 then EQ9615--SPRACE1 are set equal to 81.

EQ9614 value after first edit step	EQ9615--SPRACE1 values after first edit step	
	at least one NE -9	all EQ -9
1 (direction to skip)		81 is assigned
2 (continuation)		
-8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

- 7 **SPRACE1, SPRACICD, SPRACACD, SPRACOCD**. This item is about the race of the spouse. The coding variables contain content codes generated from text in the specify box. The content coding is performed in accordance with Census Bureau specifications.

Codebook pages for SPRACICD, SPRACACD, and SPRACOCD note: "Coding represents 1990 Decennial Census coding of the text written in the 'please specify' box. Codes are too numerous to list here."

- 8 **EQ9619**.

Codebook page for EQ9619 notes: "Codes are too numerous to list here."

- 9 **EQ9624, EQ9624CD**. This item is about the race of the supervisor.

Codebook page for EQ9624CD notes: "Coding represents 1990 Decennial Census coding of the text written in the 'please specify' box. Codes are too numerous to list here."

- 10 **EQ9629AA--EQ9631SP, EQ9632, EQ9632S1**. EQ9632S1 is a skip flag that indicates the consistency of responses on EQ9632 with EQ9629AA--EQ9631. No editing of EQ9629AA--EQ9631SP is performed in the main data set based on this consistency check. Analysts should consider in their interpretations the consistency of responses indicated by EQ9632S1, and may decide to do further recoding.

- 11 **EQ9632, EQ9632S1, EQ9632S2, EQ9633A--EQ9657.** EQ9632 is the pivotal item in the survey and is checked for consistency back to EQ9629AA--EQ9631 and forward through EQ9633A--EQ9657. These edits are performed in sequence and after the first two edit steps that assign basic values and create the specify flags.

A mark in the last response (value = 61) in EQ9632 indicates a skip for EQ9633A--EQ9657 (all questions = -9) and is consistent with *no* harassment/discrimination being reported: EQ9629AA--EQ9629BO (no values  $\geq 2$ ), and EQ9630A--EQ9630Z (no values = 3), and EQ9631 (value not = 2). A mark in the first three response options in EQ9632 indicates a continuation in EQ9633A--EQ9657 (at least one value not = -9) and is consistent with harassment/discrimination being reported: EQ9629AA--EQ9629BO (at least one value  $\geq 2$ ), or EQ9630A--EQ9630Z (at least one value = 3), or EQ9631 (value = 2).

**EQ9632S1** indicates if EQ9632 is answered consistently with Questions 29-32 as defined above. Specifically:

EQ9632 value after first edit step	Questions 29-31 values after first edit step	
	EQ9629AA--EQ9629BO (at least one value $\geq 2$ ), or EQ9630A--EQ9630Z (at least one value = 3), or EQ9631 (value = 2)	EQ9629AA--EQ9629BO (no values $\geq 2$ ), and EQ9630A--EQ9630Z (no values = 3), and EQ9631 (value not = 2)
1	2 (Valid continuation)	4 (No H/D in 29-31, but H/D responsibility in32)
2	2 (Valid continuation)	4 (No H/D in 29-31, but H/D responsibility in32)
3	2 (Valid continuation)	4 (No H/D in 29-31, but H/D responsibility in32)
61	3 (H/D in 29-31, but no H/D in 32)	1 (Valid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

**EQ9632S2** indicates if EQ9632 is answered consistently with Questions 33-57.

Specifically:

EQ9632 value after first edit step	Questions 33-57 values after first edit step (excluding SP flag variables)	
	at least one NE -9	all EQ -9
in range 1-3 (continuation)	2 (Valid continuation)	4 (Invalid skip)
61 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

Where **EQ9632S1** has values of 3 or 4 indicating inconsistencies, **EQ9632** is edited. Four new values are assigned to EQ9632 in these edits.

- 11, 12, 13     *same value labels as 1, 2, 3, respectively*  
are assigned if EQ9632 equals 1, 2, or 3, respectively, but no harassment/discrimination reported in Questions 29-31.
- 62     *Doesn't apply marked (Q32), but inconsistent with 29-31*  
is assigned if EQ9632 equals 61 and harassment/discrimination reported in Questions 29-31.

EQ9632 value after first edit step	Questions 29-31 values after first edit step	
	EQ9629AA--EQ9629BO (at least one value $\geq 2$ ), or EQ9630A--EQ9630Z (at least one value = 3), or EQ9631 (value = 2)	EQ9629AA--EQ9629BO (no values $\geq 2$ ), and EQ9630A--EQ9630Z (no values = 3), and EQ9631 (value not = 2)
1		11 is assigned
2		12 is assigned
3		13 is assigned
61	62 is assigned	
-8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

Where **EQ9632S2** has a value of 3 indicating inconsistencies, **EQ9632** is edited. One new value is assigned to **EQ9632** in this edit.

**-2 Implied continuation**

is assigned if **EQ9632** equals 61 or 62 but responses are marked in **EQ9633A--EQ9657**. This is equivalent to the statement: if **EQ9632S2=3** then **EQ9632=-2**, and is equivalent to the following table.

EQ9632 value after first edit step and editing for Q 29-31	Questions 33-57 values after first edit step (excluding SP flag variables)	
	at least one NE -9	all EQ -9
in range 1-3 or 11-13		
61 (direction to skip)	-2 is assigned	
62 (direction to skip)	-2 is assigned	
-8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

Note that the above edits are consistent with the treatment of the parallel item (**GB95072**) in the 1995 Sexual Harassment Survey Form B. However, the code for implied continuation was also assigned in the 1995 Sexual Harassment Survey Form B to the harassment behaviors (**GB95071A--GB95071Y**) in the few cases where one situation was reported but no harassment behaviors were reported. An equivalent edit has not been implemented for this survey; if analysts wish to perform an equivalent edit, they would set each non-missing value in **EQ9629AA--EQ9631** equal to -2 where **EQ9631S1=1** and **EQ9631S2=3**.

Two special codes are used for forward coding of **EQ9633A--EQ9657**. Note that the specify variables are created before this forward coding and are included in the forward coding. Each of the SP flag variables within the range of EQ9633A--EQ9657 are checked where EQ9632 = 61 or 62 and each of them that equals -9 is set equal to EQ9632.

- 61            *Doesn't apply marked (Q32), consistent with 29-31*  
is assigned if EQ9632 equals 61.
- 62            *Doesn't apply marked (Q32), but inconsistent with 29-31*  
is assigned if EQ9632 equals 62.

EQ9632 value after first edit step and Q29-31 & Q33-57 edits	Questions 33-57 values after first edit step (excluding SP flag variables)	
	at least one NE -9	all EQ -9
in range 1-3 or 11-13		
61 (direction to skip)		61 is assigned
62 (direction to skip)		62 is assigned
-8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

- 12            **EQ9633A- EQ9633N.** EQ9633A--EQ9633N are coded in edit step 1 as a mark-all-that-apply question: 1 (Not marked), 2 (Marked), or -9 (Missing skip). The -9 code is used for EQ9633A--EQ9633N if nothing is marked in the question.
- 13            **EQ9636CD.** This coding variables contain content codes generated from text in the specify box. The content coding is performed in accordance with FIPS standards.

Codebook page for EQ9636CD notes: "Coding represents Federal Information Processing Standard (FIPS) codes for the states, DC, PR, the Territories and Possessions, for the text written in the 'please specify' box. Codes are too numerous to list here."

- 14            **EQ9639A- EQ9639G.** EQ9639A--EQ9639G are coded in edit step 1 as a mark-all-that-apply question: 1 (Not marked), 2 (Marked), or -9 (Missing skip). The -9 code is used for EQ9639A--EQ9639G if nothing is marked in the question.

Codebook pages for EQ9639A--EQ9639G note: "EQ9639A--EQ9639G are not edited for the logical inconsistency of marking 'Don't know' and any other response."

15 **EQ9645SP.** EQ9645SP is a variation on the typical specify flag:

EQ9645K value after first edit step	text in box	
	yes	no
1	3 (Implied continuation)	1 (Valid skip)
values in range 2-4 (specify)	2 (Valid continuation)	4 (Invalid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

16 **EQ9647SK, EQ9648A--EQ9655.** If EQ9647 was set as not applicable (value = 61 or 62) in Note 11, then EQ9647SK is set to the same value as EQ9647 and the rest of this Note does not apply.

A mark for the third or fourth response (value = 1 or 2) in EQ9647 indicates a skip for EQ9648A--EQ9655. A mark for the first or second response (value = 3 or 4) in EQ9647 indicates a continuation

**EQ9647SK** has the usual codes of 1, 2, 3, 4, -2, and -9 for a skip flag variable (plus codes of 61 and 62, set to equal EQ9647). Specifically:

EQ9647 value after first edit step	EQ9648A--EQ9655 values after first edit step (excluding SP flag variables)	
	at least one of EQ9648A-- EQ9648H EQ neither 1 nor -9) or one of EQ9649--EQ9655 NE - 9	(EQ9648A-- EQ9648H EQ 1 OR -9) and EQ9649-- EQ9655 EQ -9
1-2 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
3-4 (continuation)	2 (Valid continuation)	4 (Invalid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

Special coding is used for imputing a response to EQ9648A--EQ9648SK. The table does not show that EQ9648A--EQ9648SK may also have values of 61 or 62, and that these values are not affected by this edit. If the value for EQ9648H is changed to 1 by this edit, then re-evaluating EQ9648SP based on the new value for EQ9648H also changes EQ9648SP from -9 to 1.

1 *No, I did not report it to this person/office* (for EQ9648A--EQ9648H)

EQ9647 value after first edit step	EQ9648A--EQ9655 values after first edit step (excluding SP flag variables)	
	at least one NE -9	all EQ -9
1-2 (direction to skip)		1 is assigned
3-4 (continuation)		
-8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

17 **EQ9648SK, EQ9649--EQ9655.** If EQ9648A--EQ9648H were set as not applicable (value = 61 or 62) in Note 11, then EQ9648SK is set to the same value as EQ9648A and the rest of this Note does not apply.

Marks only for 'No...' (value = 1) in EQ9648A--EQ9648H indicate a skip for EQ9649--EQ9655. Any mark for a 'Yes...' (value = 2 or 3 or 4) in EQ9648A--EQ9648H indicates a continuation

**EQ9648SK** has the usual codes of 1, 2, 3, 4, -2, and -9 for a skip flag variable (plus codes of 61 and 62, set to equal EQ9648A). Specifically:

EQ9648A--EQ9648H values after first edit step and Q47 (Note 16) edits	EQ9649--EQ9655 values after first edit step (excluding SP flag variables)	
	at least one NE -9	all EQ -9
no values in range 2-4 (direction to skip), some but not all -8,-9	3 (Implied continuation)	1 (Valid skip)
at least one value in range 2-4 (continuation), some but not all -8,-9	2 (Valid continuation)	4 (Invalid skip)
all -8, -9	-2 (Missing continuation)	-9 (Missing skip)

One special code is used for forward coding of EQ9649--EQ9655. The table does not show that EQ9649--EQ9655 may also have values of 61 or 62, and that these values are not affected by this edit. Note that the specify variables are created before this forward coding and are included in the forward coding. Each of the SP flag variables within the range of EQ9649--EQ9655 are checked where EQ9648SK equals 1, and each of them that equals -9 is set equal to 63.

63 *Doesn't apply--not reported to installation/Service/DoD*  
is assigned if EQ9648SK equals 1, equivalently:

EQ9648A--EQ9648H values after first edit step and Q47 (Note 16) edits	EQ9649--EQ9655 values after first edit step (excluding SP flag variables)	
	at least one NE -9	all EQ -9
no values in range 2-4 (direction to skip), some but not all -8,-9		63 assigned
at least one value in range 2-4 (continuation), some but not all -8,-9		
all -8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

18 **EQ9648SP.** EQ9648SP is a variation on the typical specify flag:

EQ9648H value after first edit step	text in box	
	yes	no
1	3 (Implied continuation)	1 (Valid skip)
value in range 2-4 (specify)	2 (Valid continuation)	4 (Invalid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

19 **EQ9650A- EQ9650M.**

Codebook pages for EQ9650A--EQ9650M note: "EQ9650A--EQ9650M are not edited for the logical inconsistency of marking "Yes" to "I don't know what action was taken" (EQ9650L) and marking "Yes" to any other item in EQ9650A--EQ9650M."

20 **EQ9653SK, EQ9654A--EQ9655.** If EQ9653 was set as not applicable (value = 61, or 62, or 63) in Notes 11 or 17, then EQ9653SK is set to the same value as EQ9653 and the rest of this Note does not apply.

A mark for the second response (value = 2) in EQ9653 indicates a skip for EQ9654A--EQ9655. A mark for the first response (value = 1) in EQ9653 indicates a continuation.

**EQ9653SK** has the usual codes of 1, 2, 3, 4, -2, and -9 for a skip flag variable (plus codes of 61, 62, and 63 set to equal EQ9653). Specifically:

EQ9653 value after first edit step	EQ9654A--EQ9655 values after first edit step	
	at least one NE -9	all EQ -9
2 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
1 (continuation)	2 (Valid continuation)	4 (Invalid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

One special code is used for forward coding of **EQ9654A--EQ9655**. The table does not show that EQ9653 and EQ9654A--EQ9655 may also have values of 61, 62, or 63, and that these values are not affected by this edit.

65 *Doesn't apply--action still being processed*  
is assigned if EQ9653 equals 2 and no response is marked in EQ9654A--EQ9655.

EQ9653 value after first edit step	EQ9654A--EQ9655 value after first edit step	
	at least one NE -9	all EQ -9
2 (direction to skip)		65 is assigned
1 (continuation)		
-8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

- 21 **EQ9656A--EQ9656SP.** EQ9656A--EQ9656T are coded in edit step 1 as a mark-all-that-apply question. The basic coding is: 1 (Not marked), 2 (Marked), or -9 (Missing skip). The -9 code is used for EQ9656A--EQ9656T if nothing is marked in the question.

If EQ9656A--EQ9656SP were set as not applicable (value = 61 or 62) in Note 11, then EQ9656SK is set to the same value as EQ9656A and the rest of this note for the embedded skip does not apply.

A mark (value = 2) in EQ9656A indicates a skip for EQ9656B--EQ9656SP. No mark (value = 1) in EQ9656A indicates a continuation.

**EQ9656SK** only has codes of 1, 2, 3, and -9 (plus codes of 61 and 62 set to equal EQ9656A). Specifically:

EQ9656A value after first edit step	EQ9656B--EQ9656T values after first edit step	
	at least one NE 1	all EQ 1
2 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
1 (continuation)	2 (Valid continuation)	
-9	-9 (Missing skip)	

Note: Blank entries indicate impossible combinations for a mark all that apply with an embedded skip.

One special code is used for forward coding of **EQ9656B--EQ9656SP**. The table does not show that EQ9656A and EQ9656B--EQ9656SP may also have values of 61 or 62, and that these values are not affected by this edit. Note that the specify variable EQ9656SP is created before this forward coding and is included in the forward coding. EQ9656SP is checked where EQ9656SK equals 1, and if it equals 1 it is set equal to 64.

- 64 *Doesn't apply--ALL reported to installation/Service/DoD*  
is assigned if EQ9656A equals 2 and no response is marked in EQ9656B--EQ9656T.

EQ9656A value after first edit step	EQ9656B--EQ9656T value after first edit step	
	at least one NE 1	all EQ 1
2 (direction to skip)		64 is assigned
1 (continuation)		
-9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

- 22 **EQ9663A--EQ9663C.** EQ9663A--EQ9663C are coded in edit step 1 as a mark-all-that-apply question: 1 (Not marked), 2 (Marked), or -9 (Missing skip). The -9 code is used for EQ9663A--EQ9663C if nothing is marked in the question.

Codebook pages for EQ9663A--EQ9663C note: "EQ9663A--EQ9663C are not edited for the logical inconsistency of marking 'No' and any other response."

- 23 **EQ9663SP.** EQ9663SP is a variation on the typical specify flag:

EQ9663B-- EQ9663C values after first edit step	text in box	
	yes	no
no values of 2	3 (Implied continuation)	1 (Valid skip)
at least one value of 2 (specify)	2 (Valid continuation)	4 (Invalid skip)
both values of -8, -9	-2 (Missing continuation)	-9 (Missing skip)

- 24 **EQ9666AA--EQ9666DD.** EQ9666AA--EQ9666AD, EQ9666BA--EQ9666BD, EQ9666CA--EQ9666CD, and EQ9666DA--EQ9666DD, are coded in edit step 1 as mark-all-that-apply questions. The basic coding is: 1 (Not marked), 2 (Marked), or -9 (Missing skip). The -9 code is used for EQ9666AA--EQ9666AD if nothing is marked as a response to Question 66A. Variables for Questions 66B, 66C, and 66D are constructed in a like manner.

A mark (value = 2) in EQ9666AA indicates a skip for EQ9666AB--EQ9666AD. No mark (value = 1) in EQ9666AA indicates a continuation.

**EQ9666SA** only has codes of 1, 2, 3, and -9, specifically:

EQ9666AA value after first edit step	EQ9666AB--EQ9666AD values after first edit step	
	at least one NE 1	all EQ 1
2 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
1 (continuation)	2 (Valid continuation)	
-9	-9 (Missing skip)	

Note: Blank entries indicate impossible combinations for a mark all that apply with an embedded skip.

A value of '3' for this skip flag (EQ9666SA) indicates an inconsistency that should be resolved before analysis of EQ9666AA--EQ96AD by either recoding the 'No' variable (EQ9666AA) to '1' (Not marked), or by treating all variables (EQ9666AA--EQ96AD) as missing.

**EQ9666SB, EQ9666SC, and EQ9666SD** are constructed and evaluated in a like manner for Questions 66B, 66C, and 66D, respectively.

25 **EQ9667SP.** EQ9667SP is a variation on the typical specify flag:

EQ9667A-- EQ9667D values after first edit step	text in box	
	yes	no
no values in range 2-5	3 (Implied continuation)	1 (Valid skip)
at least one value in range 2-5 (specify)	2 (Valid continuation)	4 (Invalid skip)
all values of -8, -9	-2 (Missing continuation)	-9 (Missing skip)

26 **EQ9670SK, EQ9671--EQ9672.** A mark for the first response (value = 1) in EQ9670 indicates a skip for EQ9671--EQ9672. A mark for the second through fifth responses (values = 2,3,4,5) in EQ9670 indicates a continuation.

**EQ9670SK** has the usual codes of 1, 2, 3, 4, -2, and -9 for a skip flag variable. Specifically:

EQ9670 value after first edit step	EQ9671--EQ9672 values after first edit step	
	either NE -9	both EQ -9
1 (direction to skip)	3 (Implied continuation)	1 (Valid skip)
2-5 (continuation)	2 (Valid continuation)	4 (Invalid skip)
-8, -9	-2 (Missing continuation)	-9 (Missing skip)

One special code is used for forward coding of **EQ9671--EQ9672**.

66 *Doesn't apply, I haven't received any training*

is assigned if EQ9670 equals 1 and no response is marked in EQ9671--EQ9672.

EQ9670 value after first edit step	EQ9671--EQ9672 value after first edit step	
	NE -9	EQ -9
1 (direction to skip)		66 is assigned
2-5 (continuation)		
-8, -9		

Note: Blank entries indicate that no change is made at this step and previously assigned values stand.

27 **COMMENT.**

**COMMENT** has two codes.

2 *Text entered*

is assigned if something written in space provided for comments.

1 *No text entered*

is assigned if nothing written in space provided for comments.

28 **SRDATE.** See Table D-2 for coding. Note that '1996' or '1997' is inserted with respondent-specified month and day. The dates are formatted YYYYMMDD.

Codebook page for SRDATE should note: "Values not checked for valid range."

## **Appendix E**

### **Alphabetical Variable List for the Survey Analysis Files**

In the alphabetical variable list, an asterisk indicates variables that appear only on the confidential dataset.

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

VARIABLE NAME	ITEM NUMBER	LABEL	PAGE(S) IN APPENDIX G
ANL_WT		Analysis Weight	401
ARVDATE		Arrival Date	368-371
ASSIGN		Assignment/Career	451
BATCH*		DRC Batch number applied for scanning	525-530
BLKDEN*		% Black in DoD Occ Group	578-582
BLKREAS*		Reason Survey Returned Blank	532
COMMENT	80.	Flag for whether comments made	358
COMOFF		Offensive Encounters - Community	447
COMTHRT		Threat/Harm - Community	448
CPAY*		Constructed Pay Grade Code	593
CRACE*		Constructed Race Code	594
CRACE2B*		Constructed Race Code 2B	596
CRACE2W*		Constructed Race Code 2W	595
CRACE3*		Constructed Race Code 3	597
CRACE4*		Constructed Race Code 4	598
CRACE5*		Constructed Race Code 5	599
CRACE6*		Constructed Race Code 6	600
CREGION*		Region Code	601
CSERVICE*		Constructed Service Code	602
CS_COMP*		Constructed Service Component Code	603
DENBLK2*		Black Density Category (4)	644
DENHSP2*		Hispanic Density Category (4)	645
DENMNR2*		Minority Density Category (4)	646
DISPO*		Disposition Variable	533
DMDC_ID		DMDC Identification Number	367
DODOFF		Offensive Encounters - DoD	445
DODTHRT		Threat/Harm - DoD	446
DPLOYIND*		Deployment Indicator	604
DUPRET*		Multiple Returns -- Excludes Blanks	534
DUPRET2*		Multiple Returns - Includes Blanks	535
DUTYLOC*		Duty Location Code	605-610
DUTYOCC*		Duty Occupation Code	611
EDLEVEL*		Education Category From Military Records	695
EER*		End Eligibility Code	545

EF101796*		October 17, 1996 Eligibility Code	547
EFWAVE2*		Wave 2 Eligibility Code	548
ELIGFLGW		Eligibility Indicator	402
ELIG_NUM*		Eligibility Code	549
EQ9603*	3.	Where were you born	485
EQ9604*	4.	Is English a second language	486
EQ9607*	7.	Years of active-duty service completed	488-490
EQ9610*	10.	Past yr: place srvd most active-dty time	496
EQ9610CD*	10.	Past yr:place srvd active-dty time/coded	497-499
EQ9610SP	10.	Past yr:place srvd active-dty time/state	6-7

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

VARIABLE NAME	ITEM NUMBER	LABEL	PAGE(S) IN APPENDIX G
EQ9611	11.	Past yr: lived where	8
EQ9612A	12a.	Excluding self, # of dep - reside w/you	9
EQ9612B	12b.	Excluding self, # of dep - reside other	10
EQ9614	14.	Past yr: marital status = married	11
EQ9614SK	14sk.	Past yr: marital status = married (skip)	12
EQ9615*	15.	Where was spouse born	501
EQ9616*	16.	English second language for spouse	502
EQ9619*	19.	Months completed at current duty station	508
EQ9620	20.	Is this location permanent duty station	16
EQ9621A	21a.	Are you: student in military course	17
EQ9621B	21b.	Are you: serving aboard ship at sea	18
EQ9621C	21c.	Are you: in work env, your race uncommon	19
EQ9621D	21d.	Are you: in work env minorities uncommon	20
EQ9621E	21e.	Are you: dplyd on peace keeping mission	21
EQ9622	22.	Gender of immediate supervisor	22
EQ9623	23.	Immediate supervisor of Spanish descent	23
EQ9624	24.	Race of immediate supervisor	24
EQ9624CD*	24.	Race of immediate supervisor (coded)	509
EQ9624SP	24.	Race of immediate supervisor (specify)	25
EQ9625A	25a.	Work makes use of skills	26
EQ9625B	25b.	Receive info to do your job	27
EQ9625C	25c.	Supv tells info for you to do your job	28
EQ9625D	25d.	Supv tell when they don't understand you	29
EQ9626A	26a.	Satis: opportunities for promotion	30
EQ9626B	26b.	Satis: pay/benefits	31
EQ9626C	26c.	Satis: job security	32
EQ9626D	26d.	Satis: direction/supervision you receive	33
EQ9626E	26e.	Satis: relationship with co-workers	34
EQ9626F	26f.	Satis: kind of work you do	35
EQ9626G	26g.	Satis: chances to acquire job skills	36
EQ9626H	26h.	Satis: job as a whole	37
EQ9627A	27a.	Get assignments for competitive prmtn	38
EQ9627B	27b.	Eval/select effective in promoting best	39
EQ9627C	27c.	Promoted as high as my ability/effort	40
EQ9627D	27d.	Proud to be member of service	41
EQ9627E	27e.	Being member inspires me to do best job	42
EQ9628	28.	How likely to remain in military	43
EQ9629AA	29aa.	Mil: unwelcome attempts to discuss race	44
EQ9629AB	29ab.	Mil: told racist stories/jokes	45
EQ9629AC	29ac.	Mil: condescending due to race/ethnicity	46
EQ9629AD	29ad.	Mil: distribute racist materials	47
EQ9629AE	29ae.	Mil: displayed racist tattoos/clothing	48
EQ9629AF	29af.	Mil: not included in actvty due to race	49
EQ9629AG	29ag.	Mil: uncomfortable, hostile looks/stares	50
EQ9629AH	29ah.	Mil: offensive marks about appearance	51

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

VARIABLE NAME	ITEM NUMBER	LABEL	PAGE(S) IN APPENDIX G
EQ9629AI	29ai.	Mil: remarks your race not suited to job	52
EQ9629AJ	29aj.	Mil: offensive remarks about race	53
EQ9629AK	29ak.	Mil: vandalized property due to race	54
EQ9629AL	29al.	Mil: threatened with retaliaton	55
EQ9629AM	29am.	Mil: physically threatened/intimidated	56
EQ9629AN	29an.	Mil: assaulted you physically	57
EQ9629AO	29ao.	Mil: bothered or hurt your family	58
EQ9629BA	29ba.	Civ: unwelcome attempts to discuss race	59
EQ9629BB	29bb.	Civ: told racist stories/jokes	60
EQ9629BC	29bc.	Civ: condescending due to race/ethnicity	61
EQ9629BD	29bd.	Civ: distribute racist materials	62
EQ9629BE	29be.	Civ: displayed racist tattoos/clothing	63
EQ9629BF	29bf.	Civ: not included in actvty due to race	64
EQ9629BG	29bg.	Civ: uncomfortable, hostile looks/stares	65
EQ9629BH	29bh.	Civ: offensive marks about appearance	66
EQ9629BI	29bi.	Civ: remarks your race not suited to job	67
EQ9629BJ	29bj.	Civ: offensive remarks about race	68
EQ9629BK	29bk.	Civ: vandalized property due to race	69
EQ9629BL	29bl.	Civ: threatened with retaliaton	70
EQ9629BM	29bm.	Civ: physically threatened/intimidated	71
EQ9629BN	29bn.	Civ: assaulted you physically	72
EQ9629BO	29bo.	Civ: bothered or hurt your family	73
EQ9630A	30a.	Rated lower than deserved on last eval	74
EQ9630B	30b.	Last eval contained unjustified comments	75
EQ9630C	30c.	Held to higher performance std than othr	76
EQ9630D	30d.	Didn't receive award like others	77
EQ9630E	30e.	Assignmt has not made use of job skills	78
EQ9630F	30f.	Unable to attend major sch nec for job	79
EQ9630G	30g.	Unable to attend sht courses nec for job	80
EQ9630H	30h.	Received lower grades than deserved	81
EQ9630I	30i.	Didn't get job due to scores on test	82
EQ9630J	30j.	Current assignment not good for career	83
EQ9630K	30k.	No shrt-trm tsks to prepare for advncmnt	84
EQ9630L	30l.	No prof rel for career dvlpmnt advice	85
EQ9630M	30m.	Learnd of oportnties to late for career	86
EQ9630N	30n.	No straight answers about prmtn pssblty	87
EQ9630O	30o.	Discriminated against for non-gvt house	88
EQ9630P	30p.	Unwelcomed by local business	89
EQ9630Q	30q.	Didn't receive appropriate medical care	90
EQ9630R	30r.	Received poorer mil support service	91
EQ9630S	30s.	Excluded by peers from social activities	92
EQ9630T	30t.	Local civ police harassed me/family	93
EQ9630U	30u.	Watchd closer than othrs by mil police	94
EQ9630V	30v.	Wrongly taken to nonjudicial pnshmnt	95
EQ9630W	30w.	Punished when others were not	96

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

VARIABLE NAME	ITEM NUMBER	LABEL	PAGE(S) IN APPENDIX G
EQ9630X	30x.	Afraid to leave installation due to gang	97
EQ9630Y	30y.	Afraid to leave installation, othr rsn	98
EQ9630Z	30z.	Afraid due to gangs on installation	99
EQ9631	31.	Bad race/ethnicity experience in past yr	100
EQ9631SP	31.	Bad race/ethnicity exp in past yr (SP)	101
EQ9632	32.	DoD responsible to prevent race hrssmnt	102-103
EQ9632S1	32s1.	DoD responsible to prvnt race hrssmnt S1	104-105
EQ9632S2	32s2.	DoD responsible to prvnt race hrssmnt S2	106-107
EQ9633A	33a.	Bthrd most: offensive speech	108
EQ9633B	33b.	Bthrd most: offensive music, pictures	109
EQ9633C	33c.	Bthrd most: non-vrbl looks/dress/apprnc	110
EQ9633D	33d.	Bthrd most: threats/intmtd/vndlsm/asslt	111
EQ9633E	33e.	Bthrd most: left out socially	112
EQ9633F	33f.	Bthrd most: left out of info affctng job	113
EQ9633G	33g.	Bthrd most: assignments discrimination	114
EQ9633H	33h.	Bthrd most: dscpln/pnshmnt discriminatn	115
EQ9633I	33i.	Bthrd most: hrssmnt/dscrmntn by police	116
EQ9633J	33j.	Bthrd most: training discrimination	117
EQ9633K	33k.	Bthrd most:hrssmnt/dscrmntn by svc prvdr	118
EQ9633L	33l.	Bthrd most: career dvlpmnt discriminatn	119
EQ9633M	33m.	Bthrd most: prfmnc eval discrimination	120
EQ9633N	33n.	Bthrd most: other	121
EQ9633SP	33.	Bthrd most: other (specify)	122-123
EQ9634A	34a.	Bthrd mostly at military installation	124

ANL\_WT - Analysis Weight

OS DATA		SAS DATA			
COLS	LENGTH	FORMAT NAME	TYPE	LENGTH	INFORMAT
0739-0756	18	18.14	NUM	8	STDOS18.14

ANL\_WT IS A CONTINUOUS VARIABLE. THERE ARE 33,641 NON-RESPONDENTS WITH ZERO WEIGHTS AND 43,113 (ELIGIBLE AND NONELIGIBLE) RESPONDENTS WITH WEIGHTS IN THE RANGE OF 1.06 TO 579.45 WITH A MEDIAN OF 11.06. SAMPLING WEIGHTS ARE CALCULATED AS THE INVERSE PROBABILITY OF SELECTION FOR EACH SAMPLE MEMBER. ADJUSTMENTS ARE APPLIED TO THE SAMPLING WEIGHTS TO ACCOUNT FOR THE STUDY NONRESPONDENTS. POST-STRATIFICATION ADJUSTMENTS ARE FURTHER APPLIED TO THE WEIGHTS TO CREATE THE FINAL ANALYSIS WEIGHTS (ANL\_WT). BY SUMMING THE SAMPLING WEIGHTS FOR A PARTICULAR DOMAIN, SUCH AS MALES, AN ESTIMATE OF THE TOTAL NUMBER OF MALES IS CALCULATED. DUE TO SUBJECT NONRESPONSE AND FLUCTUATIONS IN THE WEIGHTS, THIS ESTIMATE OF THE TOTAL DIFFERED FROM THE TOTAL CALCULATED FROM THE SAMPLING FRAME. THE POST-STRATIFICATION ADJUSTMENTS SCALE THE SAMPLING WEIGHTS SO THAT THE SUM CLOSELY MATCHES THE SAMPLING FRAME TOTAL. THE SURVEY ANALYSIS FILES SECTION GIVES RECOMMENDED USES OF THIS VARIABLE DURING ANALYSIS--FOR FURTHER DETAILS SEE APPENDIX A IN DMDC REPORT 97-025, "THE 1996 ARMED FORCES EQUAL OPPORTUNITY SURVEY: STATISTICAL METHODOLOGY REPORT."

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

ELIGFLGW - Eligibility Indicator

OS DATA		SAS DATA			
COLS	LENGTH	FORMAT NAME	TYPE	LENGTH	INFORMAT
0757-0758	2	ELIGFLGW	NUM	4	STDOS2

FREQ	PERCENT	OS VALUE	SAS VALUE	MEANING
33519	43.7	-9	.	Unknown eligibility
3258	4.2	0	0	Ineligible Subjects
39977	52.1	1	1	Eligible
76754	100.0	TOTALS		

SAMPLE MEMBERS WERE CLASSIFIED AS ELIGIBLE OR INELIGIBLE BASED ON INFORMATION SUCH AS MILITARY RECORDS AND SELF-REPORT RECORDS (SEE INELCODE DISCUSSION). INELIGIBLE SUBJECTS ARE INCLUDED ON THE DATA SET FOR ANALYSIS PURPOSES BECAUSE THEY ARE REPRESENTATIVE OF OTHER INELIGIBLE SUBJECTS WHO DID NOT RESPOND. THE POPULATION TOTALS USED FOR POST-STRATIFICATION ADJUSTMENTS ALSO CONTAINED INELIGIBLES (SEE ANL WT DISCUSSION). DURING ANALYSES USING THE DESIGN-SPECIFIC PACKAGE SUDAAN, ELIGIBLE SUBJECTS SHOULD BE IDENTIFIED WITH THE SUBPOPN STATEMENT. HOWEVER, THE RECORDS FOR THE INELIGIBLE RESPONDENTS SHOULD BE ELIMINATED PRIOR TO ANALYSES USING OTHER STATISTICAL PACKAGES SUCH AS SAS. THE SURVEY ANALYSIS FILES SECTION GIVES RECOMMENDED USES OF THIS VARIABLE DURING ANALYSIS FOR FURTHER DETAILS SEE APPENDIX A IN DMDC REPORT 97-025, "THE 1996 ARMED FORCES EQUAL OPPORTUNITY SURVEY: STATISTICAL METHODOLOGY REPORT."

NVSTRAT - Frame Count Within Variance Estimation Strata

FREQ	PERCENT	OS VALUE	SAS VALUE	MEANING
462	0.6	85127	85127	85127
76754	100.5	TOTALS		

PERCENT TOTAL DOES NOT = 100 DUE TO ROUNDING ERROR.

NVSTRAT IS A CONTINUOUS VARIABLE IN THE RANGE OF 26 TO 85,127 WITH A MEDIAN OF 2,536. A STRATIFIED RANDOM SAMPLING DESIGN WAS USED FOR THE 1996 EOS SURVEY. THE SAMPLING FRAME WAS STRATIFIED BY SERVICE, REGION, PAYGRADE GROUPINGS, AND RACE/ETHNICITY GROUPINGS. OPTIMUM ALLOCATION TECHNIQUES WERE USED TO DISTRIBUTE THE SAMPLE ACROSS THE STRATA. VARIANCE ESTIMATION REQUIRES AT LEAST TWO ANALYSIS RECORDS WITHIN EACH SAMPLING STRATUM. PRECISION OF THE ESTIMATE IMPROVE AS THE AVERAGE NUMBER OF ANALYSIS RECORDS WITHIN THE STRATA INCREASES. SINCE NONRESPONSE CAUSES A DECREASE IN THE NUMBER OF RECORDS, SEVERAL STRATA WERE COLLAPSED. STRATA WERE COMBINED BASED ON THE STRATUM VARIABLES AND THE RESPONSE PATTERN WITHIN THE STRATA. THUS VARIANCE ESTIMATION STRATA (VSTRAT) WERE FORMED BY COLLAPSING THE SAMPLING STRATA TO OBTAIN A MINIMUM SAMPLE SIZE OF 25 RESPONDENTS. SAMPLING FRAME COUNTS WERE CALCULATED WITHIN THE VARIANCE ESTIMATION STRATA FOR ANALYSIS PURPOSES (NVSTRAT). THE SURVEY ANALYSIS FILES SECTION GIVES RECOMMENDED USES OF THIS VARIABLE DURING ANALYSIS--FOR FURTHER DETAILS SEE APPENDIX A IN DMDC REPORT 97-025, "THE 1996 ARMED FORCES EQUAL OPPORTUNITY SURVEY: STATISTICAL METHODOLOGY REPORT."

PERCENT TOTAL DOES NOT = 100 DUE TO ROUNDING ERROR.

VSTRAT IS IN THE RANGE OF 1 TO 234. A STRATIFIED RANDOM SAMPLING DESIGN WAS USED FOR THE 1996 EOS SURVEY. THE SAMPLING FRAME WAS STRATIFIED BY SERVICE, REGION, PAYGRADE GROUPINGS, AND RACE/ETHNICITY GROUPINGS. OPTIMUM ALLOCATION TECHNIQUES WERE USED TO DISTRIBUTE THE SAMPLE ACROSS THE STRATA. VARIANCE ESTIMATION REQUIRES AT LEAST TWO ANALYSIS RECORDS WITHIN EACH SAMPLING STRATUM. PRECISION OF THE ESTIMATES IMPROVE AS THE AVERAGE NUMBER OF ANALYSIS RECORDS WITHIN THE STRATA INCREASES. SINCE NONRESPONSE CAUSES A DECREASE IN THE NUMBER OF RECORDS, SEVERAL STRATA WERE COLLAPSED. STRATA WERE COMBINED BASED ON THE STRATUM VARIABLES AND THE RESPONSE PATTERN WITHIN THE STRATA. THUS VARIANCE ESTIMATION STRATA (VSTRAT) WERE FORMED BY COLLAPSING THE SAMPLING STRATA TO OBTAIN A MINIMUM SAMPLE SIZE OF 25 RESPONDENTS. THE SURVEY ANALYSIS FILES SECTION GIVES RECOMMENDED USES OF THIS VARIABLE DURING ANALYSIS--FOR FURTHER DETAILS SEE APPENDIX A IN DMDC REPORT 97-025, "THE 1996 ARMED FORCES EQUAL OPPORTUNITY SURVEY: STATISTICAL METHODOLOGY REPORT."

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

WGHT\_FLG - Flag for records weighted as respondents

OS DATA			SAS DATA			
COLS	LENGTH		FORMAT NAME	TYPE	LENGTH	INFORMAT
10769-0770	2		WGHTFLG	NUM	4	STDOS2

FREQ	PERCENT	OS VALUE	SAS VALUE	MEANING
33641	43.8	0	0	Nonrespondent
43113	56.2	1	1	Respondent
76754	100.0	TOTALS		

WGHT\_FLG IS USED TO IDENTIFY CASES THAT THAT WERE CONSIDERED RESPONDENTS FOR THE PURPOSE OF WEIGHTING TO THE POPULATION. ELIGIBLE RESPONDENTS WHO RETURNED A USABLE SURVEY ARE WEIGHTED. ALSO WEIGHTED ARE SAMPLE MEMBERS WHO EITHER SELF-REPORTED THAT THEY WERE INELIGIBLE OR FOR WHOM THE RECORDS INDICATED THEY WERE INELIGIBLE BECAUSE THE MEMBER LEFT THE SERVICE. THE POPULATION TOTALS USED FOR POST-STRATIFICATION ADJUSTMENTS ALSO CONTAINED INELIGIBLES (SEE ANL\_WT DISCUSSION). ESTIMATES FROM ALL WEIGHTED RESPONDENTS WERE POST-STRATIFIED TO REFLECT THE SEPTEMBER 1996 MASTER FILE TOTALS. INELIGIBLE RESPONDENTS ARE INCLUDED ON THE DATA SET BECAUSE THEY ARE REPRESENTATIVE OF THE PORTION OF THIS POPULATION INELIGIBLE BECAUSE OF NOT HAVING APPROXIMATELY SIX MONTHS OF SERVICE. ALTHOUGH ALL 76,754 SAMPLE MEMBER RECORDS ARE PROVIDED IN THE DATASET, WORKING DATASETS CAN BE LIMITED TO THOSE CASES WHERE WGHT\_FLG = 1. THE SURVEY ANALYSIS FILES SECTION GIVES RECOMMENDED USES OF THIS VARIABLE DURING ANALYSIS--FOR FURTHER DETAILS SEE APPENDIX A IN DMD REPORT 97-025, "THE 1996 ARMED FORCES EQUAL OPPORTUNITY SURVEY: STATISTICAL METHODOLOGY REPORT."

76754	100.0	TOTALS		

THIS VARIABLE WAS CONSTRUCTED FROM INC\_S AND INC\_FAM AND COVERS ALL OF EQ9629AA THROUGH EQ9631. IF EITHER OF THESE INDICES WERE CODED "1", THIS VARIABLE WAS CODED "1" OR EXPERIENCED BY THE SERVICE MEMBER AND/OR EXPERIENCED BY A FAMILY MEMBER. OTHERWISE IT WAS CODED "0", INDICATING THAT NONE OF THE BEHAVIORS WERE REPORTED AS EXPERIENCED. NO ELIGIBLE RESPONDENTS HAVE MISSING DATA ON THIS ITEM.

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

R9632 - RECODED DoD responsible to prevent race/ethnicity harassment/discrimination

OS DATA			SAS DATA			
COLS	LENGTH		FORMAT NAME	TYPE	LENGTH	INFORMAT
0853-0854	2		R32FMT	NUM	4	STDOS2

FREQ	PERCENT	OS VALUE	SAS VALUE	MEANING
547	0.7	-9	.	Missing
47	0.1	-8	.A	Multiple response error
14557	19.0	-6	.N	NA & other inconsistent resps
2493	3.2	-2	.M	Implied cont.
36404	47.4	-1	.B	No survey returned
3331	4.3	1	1	No
12579	16.4	2	2	Yes, some of it
6796	8.9	3	3	Yes, all of it
76754	100.0	TOTALS		

THIS VARIABLE WAS CONSTRUCTED FOR ANALYSIS FROM EQ9632. RESPONDENTS WHO DID NOT REPORT AN INCIDENT IN EQ9629AA THROUGH EQ9631 ARE TREATED AS MISSING DATA. ALSO TREATED AS MISSING DATA ARE ANY RESPONSES THAT THE ITEM DOES NOT APPLY, REGARDLESS OF WHETHER THE PERSON HAD MARKED A BEHAVIOR AS OCCURRING IN QUESTIONS 29 OR 31, OR OCCURRING WITH RACE/ETHNICITY AS A FACTOR IN QUESTION 29. PERCENTAGES FROM THIS VARIABLE ARE BASED ONLY ON THOSE WHO EXPERIENCED AN INCIDENT (IN QUESTIONS 29 THROUGH 31) AND WHO ANSWERED QUESTION 32 ON DOD RESPONSIBILITY FOR PREVENTING THE RACIAL/ETHNIC HARASSMENT OR DISCRIMINATION.

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

INC32 - DoD responsible-Incident-Denominator is total eligible population

OS DATA			SAS DATA			
COLS	LENGTH		FORMAT NAME	TYPE	LENGTH	INFORMAT
0855-0856	2		INC32F	NUM	4	STDOS2

FREQ	PERCENT	OS VALUE	SAS VALUE	MEANING
133	0.2	-9	.	No response
36404	47.4	-1	.B	No survey returned
9330	12.2	0	0	No experience
8181	10.7	1	1	Exp, unknown responsibility
3331	4.3	2	2	Exp, DoD not resp
19375	25.2	3	3	Exp, DOD resp some/all
76754	100.0	TOTALS		

THIS VARIABLE WAS CONSTRUCTED FOR ANALYSIS FROM THE INCIDENT VARIABLE (THAT SUMMARIZES QUESTIONS 29 THROUGH 31) AND EQ9632. NO ELIGIBLE RESPONDENTS HAVE MISSING DATA ON THIS ITEM. RESPONDENTS WITH A VALUE OF "0" (NO EXPERIENCE) FOR THE INCIDENT VARIABLE HAVE A VALUE OF "0" (NO EXPERIENCE) FOR INC32. RESPONDENTS WITH A VALUE OF "1" FOR THE INCIDENT VARIABLE WERE ASSIGNED CODES OF "2" IF DOD NOT SAID TO BE RESPONSIBLE (A NO RESPONSE (1) FOR R9632), OR "3" IF DOD SAID TO BE RESPONSIBLE FOR SOME/ALL (EITHER OF THE YES RESPONSES (2, 3) FOR R9632), OR "1" FOR UNKNOWN RESPONSIBILITY (ANY OTHER VALUE FOR R9632). PERCENTAGES FROM THIS VARIABLE ARE BASED ON THE ENTIRE ELIGIBLE POPULATION.

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

INC32A - DoD responsible-Incident-Denominator is the part of the eligible population who reported an Incident

OS DATA		SAS DATA			
COLS	LENGTH	FORMAT NAME	TYPE	LENGTH	INFORMAT
10857-0858	2	INC32AF	NUM	4	STDOS2

FREQ	PERCENT	OS VALUE	SAS VALUE	MEANING
133	0.2	-9	.	No response
9330	12.2	-6	.N	N/A-No experience
36404	47.4	-1	.B	No survey returned
8181	10.7	1	1	Exp, unknown responsibility
3331	4.3	2	2	Exp, DoD not resp
19375	25.2	3	3	Exp, DOD resp some/all
76754	100.0	TOTALS		

THIS VARIABLE WAS CONSTRUCTED FOR ANALYSIS FROM INC32. UNLIKE INC32, IN INC32A RESPONDENTS WHO DID NOT INDICATE THAT THEY EXPERIENCED RACE/ETHNIC RELATED EXPERIENCES IN QUESTIONS 29 THROUGH 31 (AS SUMMARIZED BY INCIDENT) ARE TREATED AS MISSING DATA--RESPONDENTS WITH A VALUE OF "0" (NO EXPERIENCE) FOR THE INCIDENT AND INC32 VARIABLES HAVE A VALUE OF "-9/." (N/A - NO EXPERIENCE) FOR INC32A. PERCENTAGES FROM THIS VARIABLE ARE BASED ON THE ELIGIBLE POPULATION WHO REPORTED EXPERIENCING AN INCIDENT.

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

FLAG32 - Edit Flag for One Situation Q33-Q57

OS DATA		SAS DATA			
COLS	LENGTH	FORMAT NAME	TYPE	LENGTH	INFORMAT

76754	100.0	TOTALS		

THIS VARIABLE WAS CONSTRUCTED TO CORRECT ERRORS IN THE SKIP PATTERN INITIATED AT QUESTION 32. THE BASIC EDIT DESCRIBED IN CODING NOTES 10 AND 11, APPENDIX D, CHECKS ON THE CONSISTENCY OF RESPONSES TO QUESTION 32 WITH QUESTIONS 33-57 ON THE BASIS OF WHETHER ANY BUBBLE IS FILLED IN QUESTIONS 33-57. FLAG32 WAS CONSTRUCTED ON THE BASIS OF COMPARING WHETHER THE PERSON GAVE THE CRITICAL INFORMATION ON THE ONE SITUATION [WHAT (QUESTION 33), WHERE (QUESTION 34), AND WHO (QUESTION 37)], HOW THEY MARKED EQ9632, AND WHETHER THEY REPORTED ANY EXPERIENCE IN INCIDENT (QUESTIONS 29-31). BASED ON FLAG32, DMDC REASSIGNS VALUES FOR VARIABLES CONSTRUCTED FOR QUESTIONS 33-57. SEE APPENDIX I FOR CODING.

PERCENT TOTAL DOES NOT = 100 DUE TO ROUNDING ERROR.

THIS VARIABLE IS THE PERCENTAGE DENSITY FOR BLACKS IN THE MEMBER'S DUTY OCCUPATION (GROUP) AND WAS CONSTRUCTED FROM APRIL 1996 DMDC MASTER FILE RECORDS. THE DENSITY VARIABLE GROUPING USED IN SAMPLE PLANNING WAS FROM EARLIER FILES AND IS PRESERVED IN VARIABLE DENBLK2. AS IN DENBLK2 (BUT NOT AS IN RBLKDEN), THE PERCENTAGE FOR "OCCUPATION UNKNOWN" IS CONSIDERED A VALID VALUE FOR THIS VARIABLE.

PERCENT TOTAL DOES NOT = 100 DUE TO ROUNDING ERROR.

THIS VARIABLE IS THE PERCENTAGE DENSITY FOR ALL MINORITIES IN THE MEMBER'S DUTY OCCUPATION (GROUP) AND WAS CONSTRUCTED FROM APRIL 1996 DMDC MASTER FILE RECORDS. THE DENSITY VARIABLE GROUPING USED IN SAMPLE PLANNING WAS FROM EARLIER FILES AND IS PRESERVED IN VARIABLE DENMNR2. AS IN DENMNR2 (BUT NOT AS IN RMINDEN), THE PERCENTAGE FOR "OCCUPATION UNKNOWN" IS CONSIDERED A VALID VALUE FOR THIS VARIABLE.

Status of the Armed Forces Survey Form D--Equal Opportunity 1996

CPAY - This variable indicates the sample member's constructed pay grade code. <survey control system variable>

THIS VARIABLE IS TAKEN FROM DMDC MASTER FILE VARIABLES.

DATA FOR AGRS WAS OBTAINED FROM RESERVE COMPONENT COMMON PERSONNEL DATA SYSTEM (RCCPDS).

AS A RESULT OF MERGING THE ADMF AND THE RCCPDS FILE THE SAMPLE MEMBER'S ETHNIC GROUP IS UNAVAILABLE FOR AGR/TAR'S WHO ARE ASSIGNED A VALUE OF 21. A VALUE OF 21 IS NEVER USED FOR REGULAR ACTIVE DUTY INDIVIDUALS. OTHERWISE THE CODING FOR M\_ETH IS THE SAME AS ETH FOUND ON THE ADMF.

SEE DMDC REPORT 97-025, "THE 1996 ARMED FORCES EQUAL OPPORTUNITY SURVEY: STATISTICAL METHODOLOGY REPORT" FOR DETAILS CONCERNING THE USE OF THIS VARIABLE DURING CONSTRUCTION OF THE ANALYSIS WEIGHTS.

PERCENT TOTAL DOES NOT = 100 DUE TO ROUNDING ERROR.

SAMPLE MEMBERS WERE CLASSIFIED AS ELIGIBLE OR INELIGIBLE BASED ON INFORMATION SUCH AS MILITARY RECORDS AND SELF-REPORT RECORDS. THIS INFORMATION WAS USED TO CREATE THE ELIGIBILITY FLAG (ELIGFLGW). INELIGIBLE SUBJECTS ARE INCLUDED ON THE DATA SET FOR ANALYSIS PURPOSES BECAUSE THEY ARE REPRESENTATIVE OF OTHER INELIGIBLE SUBJECTS WHO DID NOT RESPOND.

## Notes on Analysis of the 1996 Dataset

Jacquelyn Scarville, Scott B. Button, and Timothy W. Elig

The first section of this discussion is focused on which cases to use in analyses. The next section discusses analytic variables contained on the survey analyses files that were used by Scarville et al. (in preparation) in reporting the initial results of the survey. The final section discusses suggested edits for other survey variables.

### *Preparation of the Data for Analysis*

Two variables are necessary to determine whether to keep cases in the dataset for analyses: ELIGFLGW (eligibility flag) and WGHT\_FLG (flag for records weighted as respondents). The survey analysis files have cases with an ELIGFLGW of zero, one, or missing (./-9). A value of zero indicates that the sample member was ineligible, whereas a value of one indicates that the member was eligible. ELIGFLGW is missing for cases where no information on eligibility was received from the sample member and where the eligibility checks of the June and September records (ADMF and RCCPDS) did not indicate the individual had left the Service. WGHT\_FLG either has values of zero or one. A value of zero indicates that no information was obtained during the survey process that could be used as a response for the individual.

Only cases with WGHT\_FLG=1 should be used for most survey analyses. Cases with WGHT\_FLG=0 are needed only for methodological studies of the entire sample. Keep all cases with WGHT\_FLG=1 in analysis files intended for use with SUDAAN.<sup>14</sup> For point estimation by programs other than SUDAAN (e.g., SAS or SPSS), however, only use cases where WGHT\_FLG=1 and ELIGFLGW=1. (Note that any SAS system file intended to be used with the SUDAAN software must have been created using the SAS V604 engine and sorted by the variable WCSTRAT [weighting class stratum]. All EOS files produced by DMDC have been sorted by WCSTRAT.)

Some cases with ELIGFLGW=0 will have non-missing survey variables. These are cases where a survey was returned but the person was determined to be non-eligible (i.e., they were eligible when selected for the sample from the April 1996 ADMF or RCCPDS, but had become ineligible [left the military or AGR/TAR status] when eligibility was checked on June and/or September 1996 DEERS files). Other cases with ELIGFLGW=0 will have missing data for all survey and SCS variables. These cases are people who did not return a survey, but who were determined from DMDC records to be ineligible (as above) or they reported to DRC that they were ineligible (e.g., they were incarcerated or had left the military).

---

<sup>14</sup> When WGHT\_FLG=1, cases with ELIGFLGW=0 are required by SUDAAN to precisely estimate variances. These cases are not used in any other estimation; they represent the non-eligible portion of the original population and are part of the variance structure estimated by SUDAAN, but are not part of the point-estimate structure.

To be included in DMDC analyses, respondents must have had at least one valid response for EQ9629AA through EQ9631. There were 122 cases in which the respondent returned a questionnaire without at least one valid response for these questions. These cases were assigned values of WGHT\_FLG = 0 and ELIGFLGW = 1. Figure I.1 presents the structure of the data file.

**Figure I.1**  
*The Structure of the DMDC Internal Use File*

Subgroups	Number of Records	Sum of Analysis Weights
Nonrespondents, eligibility unknown (WGHT_FLG = 0 and ELIGFLGW = .)	33,519	0
Returns Missing Relevant Questions, eligibility known (WGHT_FLG = 0 and ELIGFLGW = 1)	122	0
Known Ineligible Sample Members (WGHT_FLG = 1 and ELIGFLGW = 0)	3,258	174,887.5
Respondents, found eligible (WGHT_FLG = 1 and ELIGFLGW = 1)	39,855	1,379,982.5
Total	76,754	1,554,870

*Note.* See Wheelless et al. (1997) for more information on the weight flag (WGHT\_FLG) and the eligibility flag used for weighting (ELIGFLGW).

### **Analytic Variables**

The most important variables constructed for preliminary analyses have been preserved on the survey analysis files. Where possible these variables are on the public-release file. In every case where a crossing of demographic variables would allow the isolation of one or two respondents, however, either a variable was collapsed into broader categories or some variable was set to missing in the public-release variables in order to reserve respondents confidentiality. Some cases of apparently uniquely identifiable respondents do remain—these are individuals whose demographics were shared by several other individuals before those individuals had one or more demographics set to missing.

### **Key Demographic Variables**

Demographic data are obtained both from respondents' self-reports on the questionnaire and from the ADMF and RCCPDS for Active Duty and AGR/TAR personnel, respectively. Self-reported race, gender, Service, paygrade, and location were used when available in the analyses reported by Scarville et al. (in preparation). Where self-reported data were missing, values were imputed through the use of master file data extracted from the (April 1996) ADMF for active-

duty personnel and from the April 1996 RCCPDS for AGR/TAR personnel. These imputed variables are referred to as X (crossing) variables in the SAS code. Other than for location which is discussed below, Figure I.2 shows the SAS coding used to construct the X demographic variables.

**Figure I.2**  
**SAS Code for Key Demographic Variables**

```
***** MISSING SELF REPORT DATA IMPUTED FROM ADMF/RCCPDS*****;

end;

```

### **Construction of Other Race Variables**

In the DMDC analyses reported by Scarville et al. (in preparation), five race/ethnic groups were presented: (a) Hispanic, (b) non-Hispanic White, (c) non-Hispanic Black, (d) non-Hispanic Asian/Pacific Islander, and (e) non-Hispanic Native American/Eskimo/Aleut (see Figure I.2 for the SAS code for the construction of the analytic race variable).

In anticipation of a demand for analyses requiring differing constructions of race, six additional race variables (CRACE6, CRACE5, CRACE4, CRACE3, CRACE2W, CRACE2B) were constructed from self-reported race (SRRACE1) and self-reported Hispanic ethnicity (SRHISPA1). Note that because these variables are constructed from the self-reported race and Hispanic ethnicity variables and not the "X" variables described earlier, respondents who are missing on self-reported race/Hispanic ethnicity will also be missing for these constructed variables. In other words, imputed data was not used in the construction of these variables. Each variable name begins with a "C" identifying it as a constructed variable. The number in the variable name reflects the number of race categories identified by that variable. Figure I.3 provides the SAS code used to create these constructed variables.

**Figure I.3**  
**SAS Code for Constructed Race Variables**

```

/*VARIABLE = CRACE6                SAS VALUE
White, non-Hispanic                1
Black, non-Hispanic                2
Hispanic                            3
Amer Indian/Eskimo, Aleut, non-Hispanic 4
Asian/Pacific Islander, non-Hispanic 5
Other, non-Hispanic                6*/

```

### **Construction of Additional Variables**

In addition to the constructed race variables, other variables deemed important to anticipated analyses were also constructed. Figure I.5 contains the code for additional constructed variables such as supervisor's race, spouse's race, family race (2 versions), and multiple location and region variables. Code for three- and four-category paygrade variables is also included. Additionally, levels for several continuous variables (such as years of service or years at location) were collapsed for the convenience of future researchers. Location variables were also constructed by this code.

### **Editing**

The edits presented in Figure I.6 are those that were performed for analyses of the *EOS* as reported by Scarville et al. (in preparation) and are considered to be *suggestions* of how data editing might be approached; it is expected that other analysts will draw their own conclusions as to data quality and editing. Please refer to the coding scheme (Appendix D) and the annotated questionnaire (Appendix A) when assessing the following edits. Figure I.6 also provides the SAS code for the creation and assignment of formats and the creation of V612 and V604 (SUDAAN readable) SAS datasets.

### **Item EQ9632 Inconsistencies and Special Codes**

**Codes 11-13.** Definition: These codes represent cases in which respondents did not indicate experiencing any of the racial/ethnic harassment or discrimination referenced in Questions 29 through 31, yet did mark a value of 1, 2, or 3 for Question 32 (*No; Yes, some of it; Yes, all of it*, respectively). Consequently, their response for Question 32 was *inconsistent* with their responses for Questions 29 through 31. To track this inconsistency, values of 1, 2, and 3 on Question 32 (i.e., EQ9632) in these cases were recoded to values of 11, 12, and 13, respectively. There were 1705 of these cases.

**Decision/Recommendation:** Respondents with a code of 11 through 13 for EQ9632 were assigned to missing (.N) on a newly constructed variable (i.e., R9632) that was created to analyze

DoD/Service responsibility to prevent racial/ethnic harassment and discrimination. Subsequent edits for the questions dealing with members' most bothersome situation (i.e., Questions 33 to 57) dropped respondents who had a code of 11 through 13 for EQ9632 if they did not meet each of the following criteria: (a) had at least one valid value (1 or 2) for EQ9633A through EQ9633N indicating the type of bothersome situation experienced, (b) had at least one valid value (1 or 2) for EQ9634A through EQ9634F indicating where or to whom the situation occurred, and (c) had at least one valid value (1 or 2) for EQ9637A through EQ9637J describing the person(s) committing the harassment or discrimination. There were 1170 cases that did not meet these criteria and were dropped. Cases that did not meet these three criteria were assigned to .N for Questions 33 through 57 (i.e., R9633A to R9657). This added 535 cases to the analyses of Questions 33 through 57.

**Implied continuations (.M).** There were 2,472 cases (6.2% of all eligible responses) in which respondents chose *doesn't apply—I did not mark anything in Questions 29, 30, and 31 that happened to me or my family because of race/ethnicity* for Question 32 and also had at least one non-missing response for Questions 33 through 57. These cases are defined as 'implied continuations' for EQ9632.

**Decision/Recommendation:** In order to retain the most usable information, implied continuations (coded as .M) on EQ9632 were handled in several different ways on the items that dealt with members' most bothersome situation (i.e., EQ9633A to EQ9657). These cases were retained in the analyses of Questions 33 through 57 if the respondent (a) had at least one valid value (1 or 2) for EQ9633A through EQ9633N, (b) had at least one valid value (1 or 2) for EQ9634A through EQ9634F, and (c) had at least one valid value (1 or 2) for EQ9637A through EQ9637J. Implied continuations were assigned a code of 61 for Questions 33 through 57 (EQ9633A to EQ9657) when the respondent did *not* indicate having any experience of harassment or discrimination in Questions 29 through 31 which occurred because of race/ethnicity, and did *not* have at least one valid value in each of the three questions listed above (i.e., Questions 33, 34, and 37). Implied continuations were assigned to a code of 62 for Questions 33 through 57 (EQ9633A to EQ9657) when the respondent indicated having at least one of the experiences of harassment or discrimination in Questions 29 through 31 which occurred because of race/ethnicity and did *not* have at least one valid value in each of the three questions listed above (i.e., Questions 33, 34, and 37).

**Code 61.** Definition: Respondents were assigned a code of 61 for EQ9632 if they marked *does not apply—I did not mark anything in Questions 29, 30, and 31 that happened to me or my family because of race/ethnicity* and they had not indicated that any of the experiences referenced in Questions 29 through 31 occurred because of their race/ethnicity. Therefore, their response to Question 32 is *consistent* with responses to Questions 29 through 31.

**Decision/Recommendation:** These cases represent respondents who did not indicate experiencing any of the harassment or discrimination referenced in Question 29 through 31, and therefore were instructed to skip Questions 33 through 57. All respondents with a code of 61 for

Question 32 were assigned to missing (.N) for R9632 and were assigned to missing (.N) for Questions 33 through 57 (i.e., R9633A to R9657).

**Code 62.** Definition: This code represents cases in which respondents marked “*Does not apply—I did not mark anything in Questions 29, 30, and 31 that happened to me or my family because of race/ethnicity*” for EQ9632 but also indicated in Questions 29 through 31 that they had an harassment or discrimination experience. Thus, their response to Question 32 is *inconsistent* with their responses to Questions 29 through Question 31.

**Decision/Recommendation:** All respondents with a code of 62 for Question 32 were assigned to missing (.N) for R9632 and were assigned to missing (.N) for Questions 33 through 57 (R9633A to R9657).

### **Items EQ9634-EQ9657 - Inconsistencies and Special Codes**

**Code 63.** Definition: This code was assigned for EQ9649 through EQ9655. It represents cases in which the most bothersome situation experienced by the respondent was *not* reported to an individual or organization within the installation/Service/DoD and was assigned, if the respondent had answered none of the items from EQ9648A through EQ9648H.

**Decision/Recommendation:** All cases with a 63 were excluded from the analyses of EQ9649-EQ9655.

**Code 64.** Definition: This code was assigned only to EQ9656B-EQ9656T and represents the 2,993 cases in which the respondent reported all of the discrimination/harassment to an installation official or organization (i.e., made a mark for EQ9656a) *and* made no marks for EQ9656B-EQ9656T. Therefore, individuals assigned a code of 64 responded *consistently* to EQ9656A and EQ9656B-EQ9656T.

However, the frequency distribution for EQ9656a alone indicates that 3,131 respondents made a mark indicating that they reported all discrimination/harassment incidents to an installation/Service/DoD individual or organization (irrespective of their responses for EQ9656B-EQ9656T). The difference (3,131-2,993=138) represents respondents who *inconsistently* responded by marking EQ9656A and also making some mark for EQ9656B-EQ9656T.

**Decision/Recommendation:** All cases with a 64 were excluded from the analyses of EQ9656B-EQ9656T. For the 138 cases where the response to EQ9656a was inconsistent with responses to EQ9656B-EQ9656T, the value of EQ9656A was recoded to a value of 2 (i.e., no mark).

**Code 65.** Definition: This code was used for EQ9654A-EQ9654F and EQ9655. It was assigned if: (a) the respondent indicated in EQ9653 that action on the complaint was still being

processed (value of 2) and (b) the respondent was assigned missing (-9) for EQ9654A-EQ9654F. There were 328 such cases.

***Decision/Recommendation:*** All cases with a 65 were excluded from the analyses of Questions 54 and 55.

***Code 66.*** Definition: This code is assigned to the 9,852 respondents who indicated that they had received no training during the last year on racial/ethnic equal opportunity issues (value of 1 for EQ9670) and who then skipped EQ9671 and EQ9672, as instructed.

***Decision/Recommendation:*** These respondents were excluded from analyses of EQ9671 and EQ9672.

<b>13. ABSTRACT (Maximum 200 words)</b>  This report documents survey development, survey administration procedures, and the datasets for the Armed Forces 1996 Equal Opportunity Survey (EOS). The target population for the EOS consisted of active-duty Army, Navy, Marine Corps, Air Force, and Coast Guard members (including Reservists on full-time duty) below the rank of admiral or general, with at least six months of service. The survey's items can be grouped broadly into several categories: workplace and job satisfaction; career issues; types, frequency, and effects of personal and work experiences related to race/ethnicity; use of and satisfaction with the complaints process and outcomes; opinions about personnel policies and programs; interpersonal relations of service members from different races/ethnicities; and members' views of EO in the military now, 5 years ago, and in the civilian sector. Data collection was by mail starting August 1996 to a stratified random sample of 76,754 service members. Usable surveys were completed by 39,855. After making adjustments for eligibility and differential sampling rates across subgroups, the response rate was 53%. Responses were weighted to population totals, adjusting for differential sampling and response rates in demographically homogenous groups. Survey results, sampling design, estimation procedures, and missing data compensation procedures are reported elsewhere.
