Forward

The events of September 11, 2001 will forever be etched in the psyche of mankind. Passenger airliners hijacked and then purposefully crashed into the twin towers of the New York World Trade Center. Moments later another commandeered plane slammed into the side of the Pentagon in Washington, D.C. while yet another plane crashed into the Pennsylvania countryside when brave passengers took the plane back from its captors and diverted it from hitting other populated targets.

These attacks were surprise attacks and unprecedented in their magnitude. It was a beautiful fall day, no hint of impending tragedy, no indication that the world was suddenly about to be thrust into unparalleled turmoil. Within a few frightening seconds, symbols of economic strength and power were reduced to rubble and thousands of lives were taken. Much like the April 19, 1995 truck bombing of the Alfred P. Murrah Federal Building, in downtown Oklahoma City, citizens of America were left numb and awestruck by what was happening in their country.

Then in October, terrorism in a different form reared its ugly head. This time in the form of the distribution of anthrax spores through the U.S. Postal Service. Several lost their lives through these terrorist activities and widespread disruption took place across the U.S.

Certainly, terrorism is not a new phenomenon to the global community, as many have struggled with it for decades. Terrorism is therefore by no means solely an American problem. When it strikes, terrorism involves everyone. No one goes untouched. We saw it in Tokyo when the subways were contaminated with sarin gas. We saw it over the skies of Lockerbie, Scotland and in the towns and cities of Northern Ireland and in countries throughout Central America. We have seen it throughout the Middle East and in notable places in Europe. Terrorism touches everyone.

Here in the American Heartland we have been wrestling with issues involving terrorism since the Oklahoma City bombing. Throughout the state of Oklahoma various agencies are working together to do their part to prevent such horrific acts. One such agency is the National Memorial Institute for the Prevention of Terrorism (MIPT) located in Oklahoma City. MIPT strongly believes in the idea of partnering to “prevent, deter and or mitigate the effects of terrorism” and is fortunate to work side by side with numerous state, local and federal agencies including the U.S. Government Information Division of the Oklahoma Department of

Libraries to insure that information regarding terrorism is readily accessible. This bibliography of federal documents is a valuable resource for any library and along with other valuable centers of information, such as the MIPT Library and website (www.mipt.org) will provide users with materials that will help them keep abreast of the critical issues involved in this effort.

Introduction

The attacks on the World Trade Center in New York and the Pentagon in Washington, DC, came as a terrible surprise to most Americans—from the upper echelons of political power to the streets of small-town America. Though most Americans do not live in New York or Washington, all were deeply affected by the terrorist attacks. And perhaps for the first time in many Americans' lives, the complex web of interconnected political and social threads in which we live came into specific relief. The new world that we now inhabit comes as a sharp contrast to the heady and seemingly more carefree era of the dot-com economic boom, the Oslo accords, and relative peace.

Since the founding of the United States, we, the people and our elected representatives, have participated in an ongoing debate about the nature and responsibilities of federal government. But regardless of political leanings or opinions about the role of government in our daily lives, few would dispute the proposition that at its very core, preparing for and responding to events such as those of September 11 are two of the most essential purposes of government. Just as the first societies, we exist as a collective because we cannot live as we do otherwise. We band together for the common good, and more fundamentally, for the common defense.

Before the attacks occurred, before they were planned, before some of the participants were even born, chains of events leading to the present situation were already in motion. Officials and strategic advisors over the years have predicted that some day events such as the September 11 attacks would occur, and the federal government responded to those predictions by evaluating, planning, and training. As the documents included in this bibliography attest, that work continues, and will continue into the foreseeable future.

This bibliography is intended to serve as a means of access to information produced by the United States Government concerning the events of September 11. Unlike so many of the nations of the world, the United States considers fundamental the right of its citizens to know what their government is doing, the logic behind its actions, and the ramifications of its policies. To this end, our government produces copious quantities of informational materials that are freely accessible to the public through libraries and the Federal Depository Library system. This bibliography presents a sampling of the materials available through the Depository system, via the Internet, or both.

Since the attacks—and our responses to them—grew out of historical circumstances, this bibliography is not limited to documents that directly concern September 11. Many of them do, but others show how we have

dealt with terrorism in the past, what the political circumstances of past terrorist acts were, how we have prepared in the past and for the future, what our weaknesses to future attacks are, what kind of future attacks are likely, and from whence those future attacks are likely to come.

The documents themselves include Congressional hearings, reports, acts, and resolutions; Presidential proclamations, addresses, and important White House press releases; U.S. defense, national security, and policy materials from the Department of the Army, the Department of Defense, and the State Department; intelligence materials from the Central Intelligence Agency and the Federal Bureau of Investigation; medical information from the Department of Health and Human Services and the Centers for Disease Control and Prevention; and miscellaneous materials from the Department of Agriculture, the Department of Energy, the Department of Education, the Library of Congress Federal Research Division, the Federal Emergency Management Agency, the Justice Department, the Department of the Interior, the U.S. Geological Survey, the Coalition Information Centers, the Naval War College, the U.S. Institute of Peace, the General Accounting Office, the National Committee on Terrorism, the Department of the Navy, the U.S. Air Force Academy, and the Army War College.

Format

This bibliography is arranged alphabetically by document title within broad subject areas, such as *Global Terrorism* and *Weapons of Mass Destruction*. These areas are not mutually exclusive, as one Congressional hearing may deal with both global terrorism and weapons of mass destruction. In such cases, the document has been placed in the category it concerns most directly or voluminously.

Superintendent of Documents numbers have been given for those documents to which they have been assigned. These numbers are typically assigned to all Federal Depository materials.

Many printed documents also have Internet analogues, and some federal documents are now released solely on the Internet. For these materials, Internet addresses have been provided and verified.

Some entries have two dates. The first is the date of publication or release, and the second is the date the Internet address was verified.

For printed materials, bibliographic information such as document titles, journal or periodical titles, and page numbers appear. Since many Internet resources are not divided into traditional pages, those that do not have paper versions do not have page numbers listed.

Annotations are of two kinds. Some documents contain sections of text that clearly indicate what the document is about, or that give additional color to the information provided in the title. When possible, such documents have been quoted verbatim in the annotation. For other documents that due to content or format do not provide such guidance, original annotations appear. Unambiguously titled documents such as some Internet resources and acts of Congress do not have annotations.

“Dual containment, promulgated in 1993, was supposed to constrain the two most powerful area states, Iran and Iraq, by imposing harsh economic sanctions on them. But, the author contends, the policy has only antagonized America’s allies, while Baghdad and Tehran continue to defy Washington and threaten the oil sheikhdoms Washington is trying to protect ... The Dual Containment policy must be changed, the author believes. And foremost, the practice of trying to police Iraq by aerial bombing should be abandoned. This tactic is counterproductive, according to the author; it is driving the Iraqis to rally behind the regime of Saddam Hussein, the very outcome Washington is seeking to discourage.”

Much of the money that has been made available for humanitarian purposes has not been spent, and will not be spent, as long as Saddam can prevent it in order to build pressure against the continuation of the sanctions by creating the impression that only the elimination of the sanctions can restore health to Iraqi women and children and deal with the humanitarian catastrophe we now see.”
