PREFACE

We would like to thank Tina Brill and Sherri Blackwell of Sytronics Inc. and Marty Luka of Veridian Inc. for their careful editing and data formatting. We would also like to thank Charles Gidcumb of Boeing Inc. who carefully reviewed an early, hard to read version and detected what appeared to be a minor error, but which affected an entire section of the statistics in small ways. These kinds of things are hard to find and we are very thankful it was discovered early. This effort was conducted in part by Sytronics, Inc., under U.S. Air Force contract F41624-93-C-6001.

--------------------------------	---

INTRODUCTION

The Civilian American and European Surface Anthropometry Resource (CAESAR) project was a survey of the civilian populations of three countries: the United States of America (USA), The Netherlands, and Italy (Robinette et al. 1999, Robinette 2000). It was carried out by the U.S. Air Force, with the help of 1) the contractor, Sytronics Inc., 2) The Netherlands Organization for Applied Scientific Research (TNO) and 3) a consortium of companies under the umbrella of the Society of Automotive Engineers (SAE). The sampling strategy used was a stratified sample with gender, ethnicity, and age categories all equally sampled. To arrive at summary statistics for the USA, the data were weighted using the data from the National Health and Nutritional Examination Survey III (NHANES III) and the U.S. Census from 1990 (Anonymous 1997).

There are four sets of measurements included in this document. The first set of measurements, Traditional Measurements, consists of classic anthropometer, caliper and tape measure type measurements that were obtained from each subject prior to scanning the subject. The second set of measurements, Standing Scan Extracted Measurements, were computed as point-to-point or point-to-surface distances from completed scans in the standing pose. The third set of measurements, Seated Scan Extracted Measurements, were computed as point-to-point or point-to-surface distances from completed scans in the comfortable working posture seated pose. Please note that the postures used for the traditional measurements were different from the postures used for the scan extracted measurements. Therefore, traditional and scan extracted measurements are NOT the same. For a complete description of all measurements and landmarks used see Blackwell et al. 2002. Finally, the fourth set of measurements are the demographic data. Demographics contain data that were self-reported by each subject in response to questions posed by experimenters prior to scanning.

Weighting Method

For the purposes of weighting, 90 strata were used based upon gender, race, age, stature and weight. The gender, race, and age categories are the same strata used in our sampling plan. They are shown in Table 1 below. As can be seen there are 18 of these categories. For each of these there were 5 stature and weight strata for a total of 90.

For stature and weight strata we used five strata which were formed prior to data collection from information on the reported stature and reported weight from NHANES III. These were used as a rough check throughout the survey to ensure that we were not missing or extremely low in numbers of people in one stature and weight region. The groups for men are shown in Figure 1 below. One group was defined by finding the region that enclosed the central 20% of the NHANES III 1990 census weighted sample for stature and weight. The other four groups contained approximately 20% for each of the four quadrants outside the central block. Although the central 20% was centered around the means of both height and weight, the boundaries for the other groups were shifted down and to the left, to account for the skewness of the height and weight distributions.

Figure 1: The five stature/weight groups for CAESAR men.

Table 1: Sampling Strata

		Female				Male	
		Age				Age	
	18-29	30-44	45-65		18-29	30-44	45-65
Ethnic grp							
White	1	2	3		4	5	6
Black	7	8	9		10	11	12
Other	13	14	15		16	17	18

NHANES III subjects were assigned a weight in order to match the NHANES III sample to the 1990 U.S. Census, according to a great many variables. We calculated an NHANES III weight for each of our 90 cells, simply by taking the NHANES-weighted proportion of units per cell (SAS calculated the proportions using the NHANES weights, such that each person in the NHANES sample represented a certain number of person-units, rather than simply one individual) (SAS Institute Inc., 1996). This gave us 90 NHANES III and 1990 U.S. Census-based weights, one for each cell.

Having computed the weights from NHANES III, we then grouped the CAESAR subjects into the same 90 cells according to the same criteria. The proportion of CAESAR subjects falling in to each cell was computed. Each CAESAR subject within each cell was assigned a weight equal to the mean NHANES III weight for that cell divided by the proportion of CAESAR subjects occupying that cell. See Appendix A for a table showing the CAESAR weight for each cell.

Analysis of Continuous Variables:

For all continuous variable data sets, the data file was merged with the file containing CAESAR weights by subject number, in order to create a file containing weights and data. This data file was then translated into a format that was readable by the software program SUDAAN (Research Triangle Institute, 1997).

SUDAAN's use was necessitated by the fact that many standard statistical software packages are unable to perform accurate computations of standard errors for large weighted data sets, such as the weighted CAESAR data set. Means and frequencies can be computed correctly with simple packages, but the continuous variables required standard errors as well. SUDAAN was chosen, as it is the package recommended in the NHANES III manuals, and has been validated on weighted data sets as large as NHANES III and larger.

Using SUDAAN, the following statistics were computed for all continuous variables by gender: sample size, weighted sample size, mean, standard error of the mean (SE Mean), standard deviation of the mean (STD), and selected percentiles.

Analysis of Discrete Variables:

For discrete variables such as marital status, counts and percentages were computed. These computations were performed in the statistical package STATISTICA (Statsoft, Inc., 1998), as the computation of weighted frequencies is unproblematic for these types of statistics.

CHAPTER 1: VISUAL INDEX

This chapter contains a visual index of measurements. This index is useful for identifying the name of the variable of interest, in order to locate the summary statistics for that variable within this document.

- 6. Armscye Circumference (Scye Circumference over Acromion)
- 12. Crotch Height
- 23. Hip Circumference, Maximum
- 24. Hip Circumference, Maximum, Height
- 29. Stature (Body Height)
- 33. Thumb Tip Reach, Right
- 34. Total Crotch Length
- 36. Vertical Truck Circumference, Right
- 38. Waist Front Length
- 39. Waist Height, Preferred

- 30. Subscapular Skinfold, Right
- 35. Triceps Skinfold
- 40. Weight (Mass)

- 3. Arm Length (Shoulder-Elbow)
- 4. Arm Length (Shoulder-Wrist)
- 5. Arm Length (Spine-Wrist)
- 8. Bust/Chest Circumference
- 9. Bust/Chest Circumference Under Bust
- 11. Chest Girth (Chest Circumference at Scye)
- 26. Neck Base Circumference
- 27. Shoulder Breadth (Bideltoid)
- 31. Thigh Circumference, Maximum, Right
- 37. Waist Circumference, Preferred

1. Acromial Height, Sitting
10. Buttock-Knee Length, Right
13. Elbow Height, Sitting, Right
14. Eye Height, Sitting, Right
22. Hip Breadth, Sitting
25. Knee Height, Sitting, Right
28. Sitting Height
32. Thigh Circumference, Maximum, Sitting, Right

2. Ankle Circumference
7. Bizygomatic Breadth
15. Face Length (Menton-Sellion Length)
16. Foot Length, Right
17. Hand Circumference, Right
18. Hand Length, Right

- 95. Infraorbitale Height, Sitting (Comfortable), Right

89. Buttock to Trochanter Length (Comfortable)

CHAPTER 2: TRADITIONAL MEASUREMENTS

This chapter contains the sample size, weighted sample size, mean, standard error of the mean (SE Mean), standard deviation (STD), and selected percentiles for both men and women, and in both English (in. or lbs) and Metric (mm or kgs) units for the traditional measurements. The measurements are listed in alphabetical order.

CHAPTER 3: STANDING SCAN EXTRACTED MEASUREMENTS

This chapter contains the sample size, weighted sample size, mean, standard error of the mean (SE Mean), standard deviation (STD), and selected percentiles for both men and women, and in both English (in. or lbs) and Metric (mm or kgs) units for the standing scan extracted measurements. The measurements are listed in alphabetical order.

CHAPTER 4: SEATED SCAN EXTRACTED MEASUREMENTS

This chapter contains the sample size, weighted sample size, mean, standard error of the mean (SE Mean), standard deviation (STD), and selected percentiles for both men and women, and in both English (in. or lbs) and Metric (mm or kgs) units for the seated scan extracted measurements. The measurements are listed in alphabetical order.
