## MEMORANDUM FOR PR (In-House Publication)

FROM: PROI (TI) (STINFO)	02 May 2000
SUBJECT: Authorization for Release of Technical Information, Control Number: AFF Jessica Harper, "Progress in Advanced Propellant Research" (Abstract)	RL-PR-ED-AB-2000-098
11 <sup>th</sup> Advanced Space Propulsion Research Workshop (Pasadena, CA, 31 May - 02 Jun 2000) (Submission Deadline:	(Statement A) 06 May 2000)
1. This request has been reviewed by the Foreign Disclosure Office for: a.) appropriater b.) military/national critical technology, c.) export controls or distribution restrictions, d.) appropriateness for release to a foreign nation, and e.) technical sensitivity and/or economents:	conomic sensitivity.
Signature Date _	
2. This request has been reviewed by the Public Affairs Office for: a.) appropriateness fand/or b) possible higher headquarters review. Comments:	
Signature Date _	
3. This request has been reviewed by the STINFO for: a.) changes if approved as amena b.) appropriateness of distribution statement, c.) military/national critical technology, d. e.) parallel review completed if required, and f.) format and completion of meeting clear Comments:	.) economic sensitivity, irance form if required
Signature Date _	
4. This request has been reviewed by PR for: a.) technical accuracy, b.) appropriateness appropriateness of distribution statement, d.) technical sensitivity and economic sensitivity national critical technology, and f.) data rights and patentability Comments:	vity, e.) military/

## Progress in Advanced Propellant Research J. Harper Air Force Research Laboratory, Propulsion Directorate Edwards AFB, CA 93524 jessica.harper@ple.af.mil

While alternative propulsion systems advance towards maturity, a reliance on traditional chemical propulsion remains. This continued use of chemical propulsion allows spacerelated industry and agencies to draw on existing assets, infrastructure, and experience with the established technologies in this area. Chemical propulsion can therefore be a less costly, more readily accessible propulsion option. Because of these advantages, research to push chemical propulsion systems to their theoretical limits is ongoing in parallel with development of other propulsion options. The mission of the Propulsion Directorate of the Air Force Research Laboratory is discovery and development of revolutionary and evolutionary improvements in several areas of chemical propulsion. This talk will cover new results in four propellant research programs. The ongoing AFOSR sponsored cryogenic solid High Energy Density Matter (HEDM) program has made progress towards the goal of trapping energetic species in solid hydrogen to create propellant with performance exceeding that of LOX/LH<sub>2</sub>. Achievements include production of solid hydrogen in centimeter thick samples and generation of HEDM species for isolation in solid hydrogen. A DARPA funded program, which also receives AFOSR support, made a breakthrough with synthesis of the  $N_5^+$  cation, the first all nitrogen species to be discovered in over 100 years. This cation could be the first step to a very high performance monopropellant composed entirely of nitrogen. Significant successes have also been recently made in a monopropellant development program targeted to replace hydrazine with much lower toxicity and higher performance propellants. Monopropellant formulations from this effort have predicted performance exceeding that of some bipropellant systems. Testing and characterization is underway. Finally, a collaboration with NASA/MSFC to synthesize and test high performance liquid hydrocarbon fuels has yielded several viable new candidates with both density and specific impulse higher than RP-1, the standard liquid fuel. These advanced chemical propellants will increase payload on existing vehicles and enable new designs for future vehicles.
