1. Report

1.1 Introduction

The AFOSR Durip grant was awarded to OSU in May 2003. The OSU Research Foundation account # RF744774 was subsequently created. The target of this AFOSR Durip grant was to acquire a Large Signal Network Analyzer (LSNA). A brief description of the activities which took place in the calendar year 2003 following the award are described below.

The ordering of capital equipment follows a rigorous process at OSU which is mandated by Ohio state laws. As part of these regulations, capital equipment has to be submitted to a competitive bidding process. To complete this bidding process detailed specifications of the equipment targeted are required.

The PI spent the Summer 2003 establishing the specifications of the LSNA as required by the OSU bidding process. By the time of the award Agilent which initially developed the LSNA, had contracted with Maury Microwaves to fabricate and distribute it. OSU being one of the first customer for this new product, no detailed specs were then available and the PI worked with Maury Microwaves to develop them. Attached to this report is the resulting list of specifications which were established for the final equipment requisition. Also the LSNA had to be configured for the applications (pulsed RF measurement) targeted in the proposal. The final configuration selected is shown in Figure 1.1.

Maury provided a \$33,930 discount and donated the operating software. However the LSNA also requires various RF sources for the equipment to function. By directly ordering some of these particular pieces of equipment to their manufacturers (Agilent and Anritsu) instead of ordering them via Maury, OSU was able to benefit from an extra educational discount of 20% or more. The LSNA order was therefore broken into three separate orders, each of them requiring at least 3 bids.

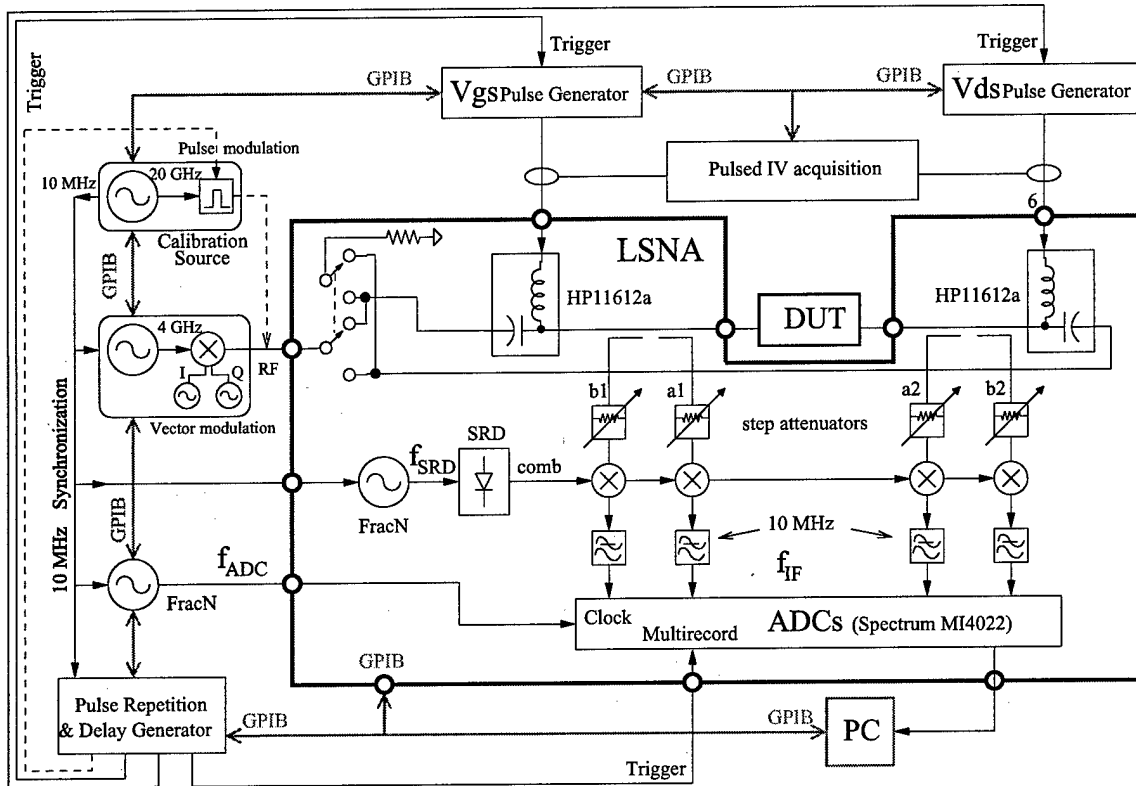

Figure 1.1: Schematic of LSNA configured for pulsed RF measurement.

Equipment	Source	Cost
20 GHz Large Signal Network Analyzer	Maury Microwaves	\$ 235,910
Digital Modulation RF source + Power meter	Agilent	\$ 46,981
2-20 GHz CW Synthesized Generator	Anritsu	\$29,760
TOTAL		\$ 312,651

Note that because of the extra RF source required to operate the LSNA with digitally modulated signals it was not possible to acquire the infrared camera initially targeted.

The 3 requisitions were internally submitted in OSU by the PI in September 4, 17 and 25, 2003 respectively. The cost of the equipment is to be splitted in 5 different ways:

- DOD/Durip RF744774: 50 %
- Ohio Board of Regent (OBOR): 25 %
- OSU: 25 %
 - Depart. of Elect. Eng.: 1/3 of OSU share
 - College of Eng.: 1/3 of OSU share

– Office of Research: 1/3 of OSU share

The equipment specifications were sent to various manufacturers for bidding. The results of the bidding was then reviewed by the PI and the originally proposed manufacturers were selected as they were either the most cost effective (Agilent and Anritsu) or offered the only viable solution (Maury). The requisitions were then sent to various successive auditing steps in OSU and finally to the Controlling Board of the State of Ohio. In December 15, 2003 the Controlling Board of the State of Ohio met and approved the 1/4 cost sharing initially pledged. The 3 purchase orders were then generated and mailed in December 18, 2003. The LSNA is expected to be delivered in late March 2004.

The Durip award specifies that the fund should be spent by March 31, 2004. In the absence of production delay we should be able to meet this schedule.

1.2 Description of the LSNA Acquired and of Potential Applications

OSU will be the first University in the US to acquire an LSNA. The LSNA was developed to measure the non-linear response of electronic devices to radio-frequency (RF) signals from 0.6 to 20 GHz. The RF signals can be continuous wave, multitone or pulsed periodic signals. Note that the control of non-linearities in devices is of critical importance in wireless applications to minimize the pollution of the RF spectrum resource and prevent signal distortion and cross-talk. The LSNA provides the means to reconstruct actual RF waveforms in the time domain for RF signals featuring up to 10,000 tones. The applications of the LSNA itself are various and include semiconductor device model-extraction and model-verification. The LSNA is also useful for designing highly-linear RF power-amplifiers for wireless communication. Finally the LSNA's unique capabilities should make it useful for measuring ultra-wide-band (UWB) periodic RF signals (typically having more than 1 GHz bandwidth). Note that ultra-wide band signals are the basis for novel applications including isothermal device-measurement, UWB communication, UWB radar and UWB detection of breast-cancer tumors.

1.3 Non-Linear RF Laboratory at OSU

The presence of the LSNA at OSU is expected to not-only leverage present research at OSU but also facilitate the development of new collaborative research thrusts with other Industrial, University and Governmental labs.

In expectation for the arrival of the LSNA a letter of intent for the creation of a multi university IUCRC center was submitted by OSU to NSF. The letter of intent is available at: <http://www.eleceng.ohio-state.edu/~roblin/iucrc/>

OSU and its partners Georgia Tech. and University of Colorado declined however the offer made by NSF to join an existing wireless IUCRC center as this would have diluted the research thrust targeted on non-linear RF. Nonetheless this attempt demonstrates the interest of other universities in joining OSU in such a research thrust.

The PI submitted a proposal to NSF for funding seed research focusing on the use of the LSNA for non-linear device and behavioral modeling, pulsed RF measurement and power amplifier linearization. The proposal is available at:

<http://www.eleceng.ohio-state.edu/~roblin/nsf03/nsf03.pdf>

The PI and his Co-PIs intend to submit other proposals in the near future to AFOSR and other agencies such as SRC. Indeed this equipment will permit us to pursue new types of research not conceivable before. In the mean time this equipment will benefit the various DOD, NSF and industrial research projects mentioned in our DURIP proposal. These projects include research in GaN RF power devices and research in linearization of broadband RF systems.

2. Large Signal Network Analyzer

Specifications of LSNA:

General:

Microwave system for measuring the calibrated phase and amplitudes of the harmonics of CW and modulated signals from 0.6 to 20 GHz with upgrade capability to 40 GHz. The LSNA has a 10 MHz bandwidth with 1 kHz resolution and can acquire 10,000 multi-tones. Typical dynamic range is 70 dBc and noise floor of -80 dBm.

Test Set:

2 test ports + power cal port
Frequency range: 0.6 to 40 GHz
Switch for RF input and load
Switch for signal conditioning by-pass
Maximum RF power: 10 W
Attenuators 60 dB, step 10 dB
Coupler Insertion loss: < 1.5 dB below 20 GHz
Connectors: 2.4 mm
All adapter/connector-savers required (8 minimum) for conversion of all the 2.4mm connectors of the testset to operate with 3.5 mm cal-kit/test-cable/power meter/RF-source for 20 GHz operation.

Bias Tee:

10 W RF min
DC input:
0.5 A
+/-40 V

Analog Sampling Converter:

Frequency Range: 50 GHz
Max Bandwidth: 10 MHz
SRD RF source (frac N or sF): 10-20 MHz controllable by user via GPIB.

Digital to Analog Conversion:

4 channels
14 bits
Memory: 250,000 M sample
Sampling rate: 10-20 MHz
ADC RF source (adcF) synchronized with 10 MHz clock.
Synchro and distribution ports for pulsed RF are provided externally with ADC options MI4022-mr and MI4022-gs.

Load Pull:

Controller with 1 tuner.
Frequency: 1.8 to 18.0 GHz
RF power: 50 W
Connector: 7mm
VSWR: 15 dB min
Max Insertion loss: 1.16 dB
Calibration software
Software interface with LSNA
Display: P1dB, PAE, gain contour plots

Software Function:

Equipment (except ADC) are controlled by GPIB.
Calibration (SOLT/LRRM, power, harmonic reference)
Testbed and tuner deembedding.
Harmonics and multisine data acquisition.
Display: load line, time domain, frequency domain.
Generic dll API and header files to allow for example LabView
to connect to LSNA.
Software documentation

Computer:

2.4 or more GHz Pentium 4, 80 GB disk, 512 MB RAM, RW CD
GPIB card High res 17" minimum LCD monitor
Optical mouse with center wheel
Keyboard

System integrated in a rack

All power supply cords.

All GPIB cables to control required equipment delivered

Hardware documentation

Specifications of RF CW Generator:

Synthesized CW Generator 10MHz to 20 GHz

Low phase noise (-80 dBc/Hz at 1kHz, -90 dBc/Hz at 10 kHz)

Low harmonics level (-30 dBc <2 GHz, -50 dBc >2 GHz)

High power output (> 15 dBm)

High stability time based

Pulse modulation (minimum pulse width 10 ns)

Pulse Generator (period: 500 ns to 1 s, width: 100 ns to 1 s, delay: 0 to 1s)

Rack mount configuration

Specifications of Vector Signal Generator:

Vectorial signal generator from 250 kHz to 4 GHz.

High output power from 136 dBm to 10 dBm

SSB phase noise <-130 dBc/Hz at 1 GHz <-115 dBc/Hz at 4GHz for 20 kHz offset

Harmonics below -30 dBc

2 channel baseband generator with 64 Msa and 16 bit resolution

IQ bandwidth of 100 MHz

6 Gbyte drive for waveform storage

3GPP WCDMA protocol

Specification of Power Meter and Sensor:

50 MHz to 26.5 GHz , -30 to 20 dBm

Calibration Kit:

SMA, DC to 26.5 GHz standards for SOLT calibration

Specification of Bias Tees:

1.5 dB Insertion loss from .4 to 26 GHz

14 dB Return loss from .4 to 26.5 GHz

10 W RF min

DC input:

40 MHz input

2 A DC , 10 A pulsed with 3% duty rate & 30ms pulse width max

+/-100 V

Maury Quote No. 03-0066D

Ohio State
Atten: Patrick Roblin
roblin@ee.eng.ohio-state.edu
Tel: 614-270-8737

Dear Patrick

Maury Microwave is pleased to offer the following quotation for a LSNA and Automated Tuner System.

1. LSNA Model Number MT4463Axx \$202,500.
(xx complete model number will be assigned at time of order entry)

a. Model MT4463Axx includes:

1. Sampling Converter, 50GHz
2. Test Set, 40 GHz
3. Harmonic Phase Reference, 20 GHz (calibrated)
4. Rack
5. LSNA Software with 20 hours of software support within first year
6. System Manual
7. Two days On-site Installation
8. One day On-site Training
9. Desktop Computer including:
 - a. 2.4 GHz or faster Pentium 4 Processor
 - b. 512 MB RAM
 - c. 80 GB Hard Drive
 - d. RW CD
 - e. GPIB Card
 - f. 17" Minimum High Resolution LCD Monitor
 - g. Optical Mouse with Center Wheel
 - h. Keyboard

b. The additional equipment needed for an LSNA measurement include the following items.

1. Digitally Modulated Signal Source
2. Power Meter
3. Bias Supply
4. Test Cables
5. Calibration Kit
6. System integration
7. Mathematica Software >= Version 4.2

The customer is responsible for the interconnecting cables, adapters, rack mounting hardware and integration of these additional components. Additionally, the customer supplied hardware must be in compliance with the current LSNA supported instruments at time of installation.

2. Automated Tuner System (ATS)

- a. Model MT980Nxx, 1.8 to 18.0 GHz System including the following items, \$ 58,430
(xx complete model number will be assigned at time of order entry)

- | | |
|------------|---|
| 1 MT982A02 | High Matching Range Tuner 1.8 to 18.0 GHz |
| 1 MT986B01 | Controller for 1 tuner |

- 1 MT993C Power and Noise Characterization Software
- 1 MT980Z06B On-site Installation 3 days
- 1 MT980Z09 2 days training for 2 people at Maury
- 20 Hours Technical Support to be used within 1st year

b. Software Options:

MT993D IMD/ACP Power Option	\$ 8,049
MT956D Fixture Software	4,777
MT993P Post Analysis Option	4,399
MT993F System Control Software	8,686
MT993G DC I-V Software Option	2,316
MT993H Harmonic Software Option	<u>4,053</u>
Subtotal	\$32,280

3. Hardware Options

- a. 2 each Cascade Probes, ACP, 40 GHz,
GSG, 150 Au \$1,000 each 2,000
- Note:** Must specify standard or 45 degree.
- b. MI4022-MR Option to the ADC Card 530
- c. Fractional - N Synthesizer 4,280
- Note:** This is not supported as part of the LSNA or ATS setups
and has no supported interface.
- d. 3.5/2.4mm Adapter Set, 10 pieces, Model 7927N01 2,100

Total Price for the LSNA and ATS Systems, software options, hardware options, installation and training.

LSNA	\$202,500
ATS	58,430
Software Options \$32,280	0 with system purchase
Hardware Options	<u>8,910</u>
Total	\$269,840
Educational System Discount	<u>*33,930</u>
Net Price to Ohio State	\$235,910 (Based upon all of the above being ordered.)

Delivery would be 16-20 weeks ARO. Terms of sale TBD, FOB origin, quote valid 90 days.

*The Educational System Discount is based upon a cooperative effort of Ohio State working with Maury and NMDG to promote the LSNA and ATS technology. This would include at least one technical paper being published (internally or externally) per year for the next five years in which the LSNA and/or ATS is used and referenced. Maury will further support Ohio State by providing at No Charge, ATS Software upgrades during this period. This will result in an additional savings and discount of \$7,153 per year, \$35,765 over five years.

Please don't hesitate to contact me with any questions that you may have.

Sincerely,

Jim Adamson
General Sales Manager
