

Running head: CONTRACT BILLING ANALYSIS

A Quantitative Analysis of BJC Health System Managed Care Contract Reimbursement for  
Major Joint and Limb Reattachment Procedures of Lower Extremities (DRG 209)

## Acknowledgements

It is not often that I take the time to thank everyone who has contributed to my life's achievements. In today's hectic world, it is easy to get caught up in the day-to-day grind and not reflect back on and pay tribute to the many positive influences on my life. Fortunately, this Graduate Management Project gives me the perfect opportunity to thank not only those directly linked to its development, but also those individuals who have played an instrumental part of my life. First and foremost, I would like to thank my Lord and Savior, Jesus Christ. My life has been one continual blessing. To my wife, Dana: you are my guiding light. You have brought nothing but joy into my life since the day we first met. Thank you for your dedication, support, and everlasting love, which have allowed me to achieve heights that I never would have known on my own. To Jacob and David: My world would not be complete without your love, thank you. You both are truly a special gift from God that bring sunshine into my every waking moment. Jacob, my oldest, thank you for your loving heart. Your thirst for knowledge is insatiable, and your intelligence continues to amaze me everyday. You are able to do anything you set your mind to. Let your heart guide you and you will never go wrong. David, my spunky child, from the first day I laid eyes on you, my heart melted. Your joy for life is unending. Please don't let anyone take away the sparkle and joy you bring to people. Although you both are probably too young to realize the time I spent away while studying, I hope that the time I was around that my love more than made up for it. Next, I would like to thank my family. Mom and Dad, I often hear others struggle when they try to describe the ideal parent and how it is impossible to have "the perfect parents". I now know why they struggled. I had them both. You have given

me the values and foundation necessary for any endeavor I may face in life. You provided me with invaluable opportunities and experiences, and every memory I have of my childhood was one of joy and love. I can only hope that I will be half as good a parent as you both were to me. To my brothers and sister: you mean the world to me. You were instrumental in my upbringing, and I thank you for your unconditional love and support.

I would also like to thank Chris Weaver. Chris, it has been a wonderful opportunity to complete the residency with you. The "truck talks" have made this learning experience even more invaluable. May God bless you and your family on your future endeavors. Additionally, I would like to acknowledge Charlie Sampson and Emmette Craft for taking me on as an additional resident. Charlie, your leadership has been inspirational. Emmette, you are truly unique. Rarely does one meet a person with such passion for life's experiences. Congratulations on the Vice Presidents position. I wish you the best of luck.

To the remaining BJC Managed Care Staff: you are some of the brightest people I have ever worked with. I appreciate you opening your arms and accepting Chris and me as "one of the gang". I know you will miss the "fly boys".

To the Baylor staff: you provided us with the academic skills necessary to lead tomorrow's health system. I realize many times you may feel your job goes unnoticed, but it does not go unappreciated. Thank you for the time and dedication you give to the future of the Military Health System.

## Abstract

In addition to the strain caused by the Balanced Budget Act and managed care, healthcare organizations are currently losing millions of revenue dollars each year because of errors and inefficiencies in billing and administrative processes. Many of these problems arise due to a lack of information about and comprehension of managed care contracts, terms, and requirements. As managed care continues to penetrate the healthcare markets, these problems are likely to magnify.

Given that BJC Health System's survival is absolutely dependent upon managed care revenue and the negotiated contract language is structured to maximize return, it is imperative BJC facilities bill and collect for all reimbursable contract line items that are allowable in their managed care contracts. However, there is suspicion among BJC Managed Care Executives that BJC facilities may not be accurately billing all the possible revenue, specifically in areas associated with prosthetics and implants.

The purpose of this study is to examine internal processes culminating in the patient's bill to determine if BJC is properly billing for prosthetics and implants. This study focuses on DRG 209 cases with an ICD-9 procedural codes 81.51 (Total Hip Replacement), 81.52 (Partial Hip Replacement), or 81.54 (Total Knee Replacement) as a potential area of lost revenue based upon the existing managed care contract language.

Overall, 8.6% of all charges for total knee and hip prosthetic and implant devices are not captured on the bills being sent to the managed care plans; therefore, BJC is not capturing all possible revenue. In 1998, BJC did \$1.2 billion worth of managed care business. If this 8.6% billing discrepancy is representative of what is being missed in charges, this would equate to \$103.2 million dollars in lost charges.

## Introduction

The Medicare program is the largest single payor of health care services in the United States. According to the Health Care Financing Administration (HCFA), in 1998 the Medicare program spent \$231.1 billion on health care for its 38.4 million enrollees with \$128.5 billion going to hospital care, \$12.7 billion to Skilled Nursing Facility (SNF) care, and \$13.8 billion going to home health care. Provisions in the Balanced Budget Act (BBA) of 1997 are currently projected to reduce Medicare spending by \$115 billion through Fiscal Year 2002 (HCIA, Inc., 1999).

As reductions in Medicare payments take effect, hospital inpatient margins are expected to fall, and the percentage of hospitals that lose money under the hospital Prospective Payment System (PPS) is expected to increase. A study performed by Ernst & Young and HCIA Inc. indicates that, nationwide, hospitals' total profit margins will drop from a median of 4 percent to -0.4 percent by the year 2002 (Hallam, p.3). Additionally, a recently developed set of financial indicators clearly shows that approximately 31 percent of the American Hospital Association hospitals surveyed could face closure in coming years because of negative cash flows (AHA, 1997). Furthermore, the increasing prevalence of hospitals that have developed integrated delivery systems which include post acute care services are likely to experience even greater losses. Although mandates in the BBA are straining all parts of the health care industry, hospitals and hospital outpatient care are absorbing a disproportionate share of the Medicare PPS reimbursement cuts, approximately \$100 billion out of the expected \$115 billion (HCIA, Inc., 1999).

In response to these measures and others designed to reduce reimbursement, hospital and health systems have taken great steps to reduce their costs. These cost cutting steps

include outsourcing clinical services, improving clinical efficiencies, redesigning work processes, closing services, laying off staff, and cutting or freezing employee wages. Although these measures help reduce the expenses to the health system, another major problem exists within the healthcare industry. Hospitals are highly leveraged businesses – that is, a great percentage of their costs are fixed so small changes in revenue (volume) have a major impact on profitability (loss). Due to this highly leveraged nature, hospitals can not solely focus on cost reduction. Albeit, cost-cutting measures may be a necessity, health systems must also concentrate on enhancing and maximizing their revenue stream (HCIA, Inc., 1999). One way hospitals have done this is to focus their efforts on managed care reimbursements.

Managed care organizations (MCOs) are a major source of patients in many health care markets. In addition to the negative impact of the Balanced Budget Act, hospital financial outcomes also depend on the managed care penetration within their market. Hospitals in markets with low managed care penetration are not expected to suffer nearly as much as those in heavily penetrated managed care areas (Hallam, p.3). For those markets in which managed care has deep penetration, the proportionately lower reimbursement found in negotiated managed care contracts represents a growing portion of a hospital's revenue (Managed Care Contract Compliance Review, 1999). Consequently, the two biggest payors, HCFA and MCOs, are negatively impacting a hospital's net revenue by reducing reimbursement levels closer to cost.

Even though MCOs had lower reimbursements than other traditional sources, hospitals took their business because of the potential increase in patient volume. Due to the fact that most hospitals have large amounts of unavoidable fixed costs and since most

hospitals are not operating at full capacity, hospitals accepted lower reimbursement rates from MCO business because the increased patient volume contributed additional revenue to the bottom line while covering fixed costs (Zelman, McCue, and Millikan, 1998). Previously, hospitals were able to subsidize managed care losses with Medicare cost reimbursement. However, with the BBA causing HCFA reimbursements to dwindle, hospitals can no longer afford to operate in this manner. BJC Health System is no exception to this trend.

### **Conditions Which Prompted the Study**

In addition to the strain caused by the BBA and managed care, healthcare organizations are currently losing millions of revenue dollars each year because of errors and inefficiencies in billing and administrative processes. Many of these problems arise due to a lack of information about and comprehension of managed care contracts, terms, and requirements. As managed care continues to penetrate the healthcare markets, these problems are likely to magnify.

From 1994 to 1998, BJC Health System's total managed care contract revenue grew by 33 percent (BJC Managed Care 1997 Annual Report). In 1997, managed care business accounted for 31 percent of BJC Health System's net revenue. In 1998, net revenue generated from the 503 managed care contracts that are active today increased to 40.8 percent of the entire BJC Health System's net revenue. Due to this increased reliance on managed care revenues, BJC, as well as most other health systems, are turning to state-of-the-art information systems to help manage the intricate contract and reimbursement processes associated with managed care. Without these complex management systems, health care institutions can easily lose revenue opportunities to which they are entitled under

managed care contracts (Contract Management, 1999). However, even with the sophisticated contract management software, problems with proper reimbursement arise due to human error or poor processes rather than contract management system inadequacies. Reimbursable expenses are often not captured due to incorrect billing processes, poor coding, or inappropriate categorization of supplies. To determine areas affecting lost revenue, health systems must examine billing processes throughout the entire episode of care.

### **Statement of the Problem or Question**

Given that BJC Health System's survival is absolutely dependent upon managed care revenue and that the negotiated contract language is structured to maximize return, it is imperative that BJC facilities bill and collect for all reimbursable contract line items that are allowable in their managed care contracts. However, there is suspicion among BJC Managed Care Executives that BJC facilities may not be accurately billing and collecting all the possible revenue, specifically in areas associated with prosthetics and implants. With this in mind, it raises the following question: Is BJC Health System billing all the line items allowed under existing managed care contracts?

### **Literature Review**

The objective of the accounts receivable process is to collect all of the revenue owed to the hospital in the most timely manner possible. However, hospitals continue to fall short in reaching this objective. Reimbursement shortcomings typically fall within four potential areas: missed charges, inaccurate use of codes, unsupported coding, and price/fee structure (Mathews and Shore, 1998). In addition to the inappropriate use of codes placing healthcare

institutions at risk of not receiving reimbursement for rendered services, it also opens the door for possible violation of Fraud and Abuse laws (Mathews and Shore, 1998). To streamline the reimbursement process and enhance financial cash flow, hospital billing offices must be aggressively educated on contracts, medical coding, and HCFA rules and laws. This would increase the billing office's understanding of the entire billing process and areas affecting it while enabling the billing staff to objectively assess the reimbursement process and to identify potential areas for revenue enhancement.

As managed care business becomes a larger percentage of their total business, hospitals are also experiencing problems with decreased net collections as a percentage of gross charges. The typical hospital only collects between 50% and 60% of its gross charges (Mathews and Shore, 1998). Within BJC, the aforementioned collection percentages do not even reach the break-even point for covering its costs at the medical centers and specialty hospitals, let alone, allow for additional funds for technological advancements or capital improvements. Hospitals and health systems are not alone with this reimbursement problem. Today's medical practices are also facing their biggest crisis yet. Private medical offices only collect an average of 54% of their billed charges. Further, only 65% to 75% of what is contractually allowable is billed because only minimal resources are allocated to the accounts receivable and billing processes (Medical Practice Reimbursement Manual, 1999). As a result of the poor dedication of resources to patient billing, claims are often incomplete, filed incorrectly, or untimely and, therefore, have a greater chance of being rejected or denied. Additionally, the complexity and lack of infrastructure compound the reimbursement issues for healthcare providers. Clearly, more attention needs to be directed to billing and claims management.

Many companies and consultants offer programs or services to assure that hospitals receive appropriate reimbursement. These vendors have found solutions to assist healthcare providers in recapturing revenue from under paid bills. Basically, these firms simply review claims subject to managed care agreements to substantiate that payments are consistent with contract terms. In addition, consulting companies often perform a retrospective review of closed patient accounts up to two years old. This process involves dissecting contracts into rates and services types. These dissected rates are compared to rates paid on closed accounts to determine if a difference in reimbursement exists. If a difference does exist, the previously paid claims are recalculated and a remittance is sent to the managed care company. One way to facilitate reimbursement and avoid the cost and delays of retrospective reviews is to account for contractual allowances, or discounts, at the time of billing. By taking contractual allowances at this time, it will aid in determining if the health system is accepting inappropriate amounts (DeKaye, A., 1998).

Insufficient or out-dated management information systems also contribute to an organization's inability to effectively track managed care agreements. Inadequate operational controls create missed opportunities to capitalize on contract terms and thus, maximize revenues. However, significant financial gains can be realized if information needed to comply with managed care contracts is accurately processed, and the "risk limiting" provisions included in most contracts to protect hospitals from catastrophic expenses are enforced. Examples of risk limiting provisions include stop-loss and contractual carve-outs. To achieve financial gains from managed care contracts, the organization must focus on education, communication, role assessment and process modification, automation, auditing, and data collection (Lohman, p. 35).

To combat reimbursement problems, health systems are turning to improved contract management systems. Today's contract management systems aid in improved accounts receivable management and billing timeliness. Modern contract management systems have the capability to review contract terms prior to provision of services to patients. These capabilities include the identification of covered and non-covered services and require pre-authorizations, second opinions or any other prerequisites. In addition, contract management systems provide the capability to create managed care bills, manage payment reconciliation and perform complex calculations such as expected reimbursement. Contract management systems are crucial to the successful administration of managed care agreements (Contract Management, 1999).

The most apparent benefit of newer contract reimbursement systems is the retrieval of otherwise lost revenue. The added revenue captured from a reimbursement system flows directly to the hospital or health system's bottom line. Since hospitals are highly leveraged organizations, a small increase of managed care revenue can translate into a huge increase in net profits. Another added benefit of a reimbursement analysis program is its identification of weaknesses in the billing systems which, when corrected, can prevent future losses (Inappropriate Allowances, 1998).

Baptist Health System in Alabama recognized the importance of a reimbursement system. As Baptist Health System's participation in managed care contracts increased to 365 contracts, so did its need for a sophisticated contract management system. Baptist's selection of a contract management system has enabled them to use a more accurate accounting method. Their focus has changed from managing gross receivables to collecting net receivables. Baptist's contract management system allows reporting on individual

contracts and types of reimbursement. This gives them leverage in contract renegotiations since most managed care systems cannot do this level of reporting. In addition, the contract management system provides reports for contractual write-offs and other activities (Baptist Health System, 1999).

BJC Health System also invested in a contract management system to improve contract oversight. BJC's contract management system is Hospital Cost Consultants (HCC) - Contract Manager. HCC automates the terms and conditions of managed care and government contracts, calculates expected reimbursement, and takes into account any contractual allowances. To do this, HCC utilizes Oracle relational databases to pull patient encounter data from the healthcare facilities on a daily basis and then construct data tables by consolidating information from Uniform Bill-Version 92 (UB-92) billing forms, itemized bills (charge codes) and other patient demographic data. HCC aids the hospitals and managed care department in identification of payment discrepancies, contractual carve-outs, and automatic write-downs of patient receivables at the time of billing (Horrell, 2000).

The hope is that these new information systems will help lower costs and increase revenues. Health systems and hospitals are purchasing these expensive new information systems in increasing numbers. However, many times training on the new system is minimal at best. Staff personnel tend to go back to their own ways of working around problems. While the current literature suggests and offers ways to prevent underpayments from managed care plans for submitted bills through improvements to information systems, it lacks discussions of possible internal problems associated with the billing process such as not including all billable charges and problems associated with inadequate training.

While state-of-the-art contract management systems aid in monitoring accounts receivables, they do not guarantee proper reimbursement. Analyzing proper reimbursement requires a review of the billing process throughout the entire episode of care to determine if all reimbursable expenses are to be properly documented and identified on the UB-92. Contract management systems focus only on the expected reimbursement and not on the accuracy and completeness of the billing information.

Although it is not an inherent function within these systems, the data captured by contract management systems is extremely valuable and can be used to analyze the accuracy of the final patient bill to determine if the health system is properly accounting for all reimbursable supplies. This analysis is accomplished by comparing the resources consumed against the UB-92 and the Explanation of Benefits (EOB). However, for health systems such as BJC to manually extract data for each episode of care and every contract line item to determine if cases are being properly charged and billed according to contract stipulations is a tremendous undertaking. Yet, it is possible to manually verify certain cases known to consume expensive medical devices, supplies and resources. To identify these types of cases, it is necessary to rely on the knowledge and expertise of the care providers. Potentially, this manual verification process of resource intensive cases can be extrapolated into an estimation of what is reimbursable but currently not billed or collected under managed care contracts due to poor billing processes.

One such area known to cause health systems reimbursement problems is surgical cases involving prosthetic and implant devices which include items such as pace makers, total joint replacements, and heart valves. As a surgical case, hospitals and MCOs commonly negotiate a surgical per diem rate as the reimbursement methodology. This

methodology is designed to take into account the average surgical procedure cost and length of stay. If a prosthetic or implanted device were used during a procedure, it is categorized as a medical supply and, therefore, would be covered under the per diem rate for hospital reimbursement. Due to the costly nature of these items, the per diem methodology commonly used between hospitals and MCOs seldom covers costs, and therefore, significantly impacts sufficient reimbursement for hospitals.

To gain an appreciation of the impact of this problem, it is necessary to examine a typical scenario within BJC Health System. A patient is hospitalized for three days for a total knee replacement surgery. The cost of the artificial knee joint for this surgery can range from \$4,000 to \$7,000 (M. Ivancic, personal communication, October 1999). If the facility negotiated a surgical per diem rate of \$1,000 with an MCO, the hospital would only collect \$3,000 for the episode of care. Thus, the hospital would suffer a loss up to \$4,000 for this one medical device alone. This loss is in addition to the loss generated by the consumption of all other resources necessary in delivering care during the hospitalization. This example is supported by a study performed by the Department of Orthopedic Surgery, Lahey Medical Center in Massachusetts. In this study, 207 primary unilateral total knee arthroplasties were analyzed. The average hospital costs for the total knee arthroplasty was \$10,421 per procedure. The average hospital income was \$3211 for the TKA procedure. The payer mix for this study included indemnity insurance, Medicare, Medicaid, managed care, and worker's compensation (Iorio, R., Healy, WL., and Richards, JA., 1999)

As hospitals and health systems become more savvy in the negotiating process due to the aforementioned reasons, they will attempt to segregate or "carve out" expensive medical equipment and procedures from the all inclusive per diem rates. This allows the expensive

items or procedures to be billed separately under a different rate structure or as a separate line item. However, many contractual carve-outs specify that the supply costs for the prosthesis or implant must be billed within Revenue Codes 274, 275, 276, or 278 to get the carved out reimbursement. Revenue Codes 27X indicate charges for supply items required for patient care. Specifically, Code 274 is for prosthetic and orthotic devices, Code 275 is for pacemakers, Code 276 is used to record intraocular lenses, and Code 278 is used to capture other implants. (St. Anthony's UB-92 Editor, 1998). Even though a procedure may be carved out in the contract, the billing processes in most hospitals are quite complex and may not be captured and billed under the contracted carve-out rates.

### **Purpose**

Due to the costly nature of prosthetics and implants and the suspicion that BJC is not properly collecting for them, further analysis is needed to determine how much money BJC Health System is potentially losing. The purpose of this study is to examine internal processes culminating in the creation of the UB 92 to determine if BJC Health System is properly billing for prosthetic and implant supplies. This study focuses on DRG 209 (Major Joint and Limb Reattachment Procedures of Lower Extremity) (DRG Guidebook, 1999) cases with an ICD-9 procedural codes 81.51 (Total Hip Replacement), 81.52 (Partial Hip Replacement), or 81.54 (Total Knee Replacement) as a potential area of lost revenue based upon the existing managed care contract language.

### **Methods and Procedures**

Reimbursement methodologies for prosthetic and implant devices can vary between managed care plans. Within BJC's managed care business, prosthetic and implant

reimbursement typically occurs in one of five ways. First, a health plan reimburses BJC using a percent of total billed charges for all inpatient care given during an episode of care. With this reimbursement mechanism, charges for implanted devices are incorporated into the inpatient charges and, therefore, are reimbursed at the discounted inpatient rate. Additionally, BJC uses a surgical per diem rate without a prosthetic and implant contractual carve-out as a reimbursement methodology. In this case, if a separate rate for prosthetic and implant devices is not negotiated, the cost of the device is covered under the negotiated per diem rate amount. The final three ways of reimbursing prosthetic and implant devices all involve contractual carve-outs. Prosthetic and implant contractual carve-outs use a separate rate structure to calculate reimbursement for the device. This reimbursement is independent of and in addition to the reimbursement obtained for the surgical procedure. One way to do this is to have the billable charges for the device paid at a percentage discount. Another carve-out mechanism is to reimburse the device using the actual cost of the device plus a percent mark-up. This usually requires a prosthetic and implant invoice be submitted with a patient's final bill. The final carve out is based on a discount off of billed charges with a required UB Revenue Code identifier of 274 through 276 or 278 on the final bill.

Although BJC uses five mechanisms for prosthetic and implant reimbursement, health plans using surgical per diems without a contractual carve-out and contractual carve-outs requiring invoices were excluded from this study. Since surgical per diems are pre-determined reimbursement amounts based solely on length of stay, the amounts and types of supplies and equipment, to include prosthetics and implants, used in treating surgical patients did not affect the billing analysis. Additionally, plans using a contractual carve-out requiring an invoice cost plus a percent mark-up for the device were also excluded.

Although this mechanism appears to be an appropriate reimbursement method in theory, hospitals within BJC are incapable of producing the invoices necessary for reimbursement. Therefore, these cases were excluded because it would skew the study results. This study analyzed cases with ICD-9 Procedure Codes 81.51, 81.52, 81.54 utilizing the remaining prosthetic and implant reimbursement methodologies. Figures 1 and 2 provide a pictorial representation of the procedures being analyzed in this study.

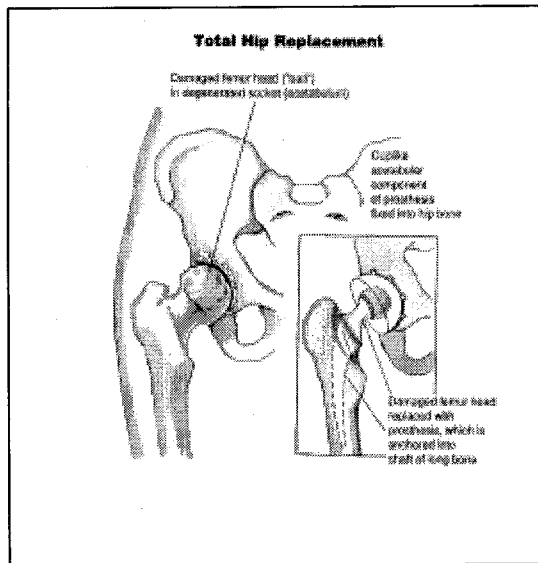

Figure 1. Total Hip Procedure

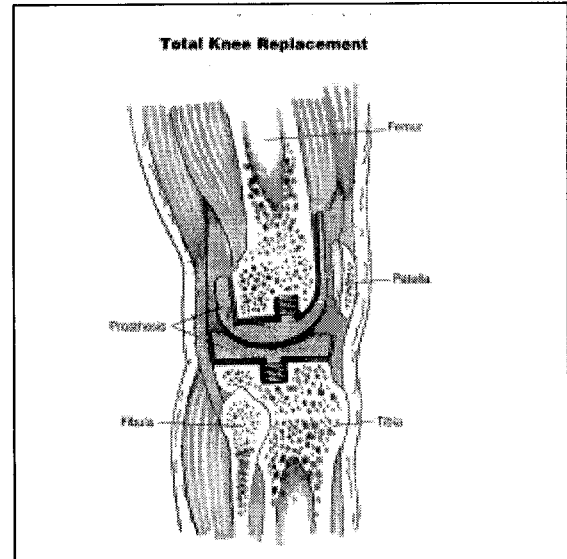

Figure 2. Total Knee Procedure

Prior to analyzing any cases, the first step was to identify hospitals within the system that had a high prevalence of orthopedic cases, especially major lower joint and limb reattachment procedures. Based on discussions within the BJC Managed Care Division, senior management selected the following hospitals for the DRG 209 reimbursement analysis: Barnes-Jewish Hospital, Barnes-Jewish West County Hospital, Missouri Baptist Medical Center, and Christian Hospital Northeast/Northwest.

Once the hospitals were selected, those managed care plans that used a prosthetic and implant reimbursement methodology in accordance with this study's parameters were identified. This was accomplished by manually examining the prosthetic and implant reimbursement language contained within all contracts associated with each of the four hospitals selected by senior management. If a plan had appropriate prosthetic and implant reimbursement language, the plan name was recorded along with the type of prosthetic and implant reimbursement methodology used. Results of this process are located at Attachment A. For the selected hospitals in this study, a total of 40 plans were identified having prosthetics and implants reimbursed using one of the defined methodologies. To simplify the remaining explanation of the data extraction process, Barnes-Jewish Hospital is used as the example in outlining the steps involved. Identical procedures were performed for each facility within this study.

The next step in data extraction required linking only those health plans that reimbursed prosthetics and implants according to the methodologies being analyzed to Barnes-Jewish Hospital. This was accomplished using BJC's contract management system, Hospital Cost Consultants (HCC). For the purpose of this study, the data contained within HCC is assumed to be both reliable and valid. First, using Optical Database Character (ODBC), all managed care contracts associated with Barnes-Jewish Hospital were pulled from HCC's Encounter Payor table into a Microsoft Access database and placed into a table entitled BJH\_CONTRACT. Next, all health plans not meeting the reimbursement criteria stated above were manually deleted from the BJH\_CONTRACT table.

After identifying and associating all health plans that reimbursed according to the predetermined prosthetic and implant reimbursement methodology to Barnes-Jewish

Hospital, several HCC data tables were required for filtering the data. The following HCC data tables for Barnes-Jewish Hospital were imported from HCC into the Microsoft Access data base using ODBC: Encounter\_Charge\_Detail Table, Encounter\_Payor\_Detail Table, Encounter\_Procedure Table, and the Patient\_Encounter Table. An example of each table is located at Attachment B. These tables were required to filter and manipulate the data to get meaningful results.

Once all of the tables required for the data analysis were extracted from HCC, a query entitled BJH 209 Query was generated within Microsoft Access. This query pulled all patient encounter data with a primary diagnosis of DRG 209 that had a discharge date occurring between 1 January 1998 and 31 December 1999. All cases that were not finalized and/or contained total charges of zero or had a zero balance for an expected reimbursement were excluded. To eliminate DRG 209 cases that did not reimburse prosthetic and implant devices according to the study parameters, the BJH\_CONTRACT table was used as a filter. The Structured Query Language (SQL) and query results for BJH 209 Query are located at Attachment C.

After pulling all data with a DRG 209 as the primary diagnosis that met the required reimbursement mechanism for this analysis, the BJH\_Encounter\_Charge\_Detail Crosstab Query was run. This query utilized the data from the BJH 209 Query and linked it to the Encounter\_Charge\_Detail table and Encounter\_Procedure table from HCC. Within Access, the crosstab query is a specialized type of total query that displays summarized data in a compact and readable format. It displays summary data in a cross-tabular form like a spreadsheet, with row and column headings based on fields in the table (Access for Windows 95 Bible, 1995, p197). The key process within this query was to pull all UB

Revenue Codes and associate them with their respective patient encounter. Once again, only those encounters that had a health plan that reimbursed prosthetics and implant using a predetermined reimbursement methodology for this study were pulled. The Structured Query Language (SQL) and query results for BJH\_Encounter\_Charge\_Detail Crosstab Query are located at Attachment D.

After associating the charges for each revenue code to the patient encounter, the BJH 209 Data Make Table Query was created. Within Access, a make table query creates a new table from the combined data resulting from a query. In this case, the make table query combined the data from the DRG 209 Query and the BJH\_Encounter\_Charge\_Detail Crosstab Query to extract the total charges associated with each of the revenue codes 270, 274-278. The Structured Query Language (SQL) and query results for BJH 209 Data Make Table Query are located at Attachment E.

Next, the table generated from the BJH 209 Data Query was exported to Microsoft Excel to determine which cases had missed reimbursement opportunities according to the contract language (Attachment F). Once in Excel, cases with ICD-9 procedure codes 81.51, 81.52, or 81.54 that used surgical per diems in conjunction with a straight discount off of charges (not requiring Revenue Code 274-278) for prosthetic and implant devices were identified and closely examined for missed charges. Although hospitals are billing in accordance with the contract, hospitals that captured prosthetic and implant devices in revenue code 270 may not be properly reimbursed for the device. Revenue code 270 is a miscellaneous supply category, and all supplies falling into this category are incorporated into the per diem reimbursement. Since reimbursement rules are set up within HCC to look for revenue codes 274-278, there is no way for the hospital billing system or the health plans

reimbursement system to identify each item within revenue code 270 and apply a separate reimbursement methodology.

Another area closely examined was patient encounters that required prosthetic and implant devices be billed under UB Revenue Codes 274-278. The patient encounters which required UB Revenue Codes 274-278, but did not have any charges in those codes, were identified as cases that potentially missed reimbursement opportunities for prosthetics and implant due to improper billing. To verify the missed reimbursement opportunities according to the contract, the detailed charges for each case in question were pulled from HCC. All charges associated with these questionable cases were manually examined to determine if the device used in the procedure was billed in the wrong revenue code or whether charges were altogether missed.

The next step in the analysis was to categorize the data. According to the research purpose stated above, proper charges for prosthetics and implants followed a binomial distribution. Billed charges fell into one of two categories. First, BJC correctly billed for all reimbursable prosthetic and implant devices allowed for the subject DRG. Conversely, BJC did not bill for the proper amount based upon the contract language.

The patient encounter data was tabulated for each facility based on the number of cases billed correctly and number of cases billed. Since patient confidentiality was absolutely critical in this process, encounter numbers were used as the unique identifier for the analysis to reduce likelihood of external identification of patient information. Each patient encounter was considered mutually exclusive and independent. After tabulating the data for each facility, descriptive statistics were used to analyze and compare each facility in their ability to properly bill prosthetics and implants.

## Findings and Discussion

After thoroughly examining and inspecting each episode of care, descriptive statistics were used to analyze the prosthetic and implant billing data for ICD-9 Procedure Codes 81.51, 81.52, and 81.54. The frequency distributions and n-percent results for the individual facilities are located in Table 1. Frequency distributions and percentage tables revealed alarming trends.

**Table 1. Prosthetics and Implants Billing Analysis for DRG 209**

1 January 1998 through 31 December 1999

Facility	Number of DRG 209 Cases	Number Cases with Prosthetics and Implants Billed Incorrectly	Percent of Prosthetics and Implants Billed Incorrectly By Facility	Percent of Total Prosthetic and Implant Cases	Percent of Total Cases Billed Incorrectly
BJWC	142	2	1.41%	43.69%	7.14%
BJH	84	12	14.29%	25.85%	42.86%
MBMC	64	11	17.19%	19.69%	39.29%
NENW	35	3	8.57%	10.77%	10.71%
System Total	325	28		100.00%	100.00%

Barnes-Jewish Hospital had 84 cases with the subject DRG and ICD-9 procedure codes, of which 14.29% cases were improperly billed. Of the 16 cases improperly billed, five cases had prosthetics and implant devices inappropriately billed in revenue code 270 when the contractual carve-out required the devices be billed under revenue codes 274-278. The charges for prosthetic and implant devices associated with these cases totaled \$76,329. Barnes-Jewish Hospital also had four total knee prostheses (ICD-9 81.54) not billed. The average charges a knee prosthesis used at Barnes-Jewish Hospital was \$7,669. This translates into \$30,676 in lost charges. Finally, Barnes-Jewish Hospital failed to bill for three hip prostheses. The charges for similar hip implants averaged \$8,222. Therefore, this

resulted in \$24,666 of unbilled charges. Although Barnes-Jewish Hospital did not have the highest percent of cases billed incorrectly when looking at each facility individually, they did have the highest dollar amount of charges not billed and the highest percentage of missed charges when compared as a system (42.86%). The 12 cases not billed correctly at Barnes-Jewish Hospital equated to \$131,671 in lost charges.

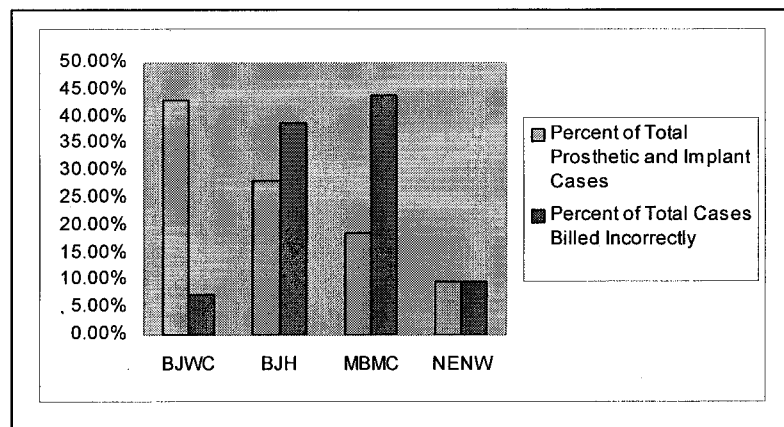

Missouri Baptist Medical Center also had problems properly billing prosthetics and implants. This facility incorrectly billed 28.13% of the 64 DRG 209 cases performed from 1 January 1998 to 31 December 1999. Of the 11 cases, six were total hip replacement procedures and 5 were total knee replacement procedures. Together, the charges for the devices not billed totaled \$49,106.

The other two facilities in this analysis did comparatively well. Barnes-Jewish West County Hospital performed the most surgeries for DRG 209 cases analyzed in this study (n=142, 43.69% of total cases), yet had the lowest number of prosthetic and implant devices billed improperly. Both cases improperly billed at Barnes-Jewish West County Hospital were total knee replacement procedures. One knee prosthetic device was billed in the correct revenue code, but the charges for the device were recorded as \$0.00. The other case recorded as improperly billed was due to a device not being billed. The average charge for a knee implant used at Barnes-Jewish West County Hospital was \$6869. Therefore, these two cases equated to \$13,738 in lost charges.

The final facility analyzed was Christian Hospital – Northeast/Northwest. This hospital performed the fewest procedures (n=35). This facility improperly billed for three knee prostheses. One of the knee prostheses was billed for \$84. The other two devices were not captured on the UB-92. Since the average charge for a knee implant at Christian

Hospital was \$3,200, these billing errors totaled \$9,600. One would predict that the percentage of errors within the system would be dependent on the volume of cases performed. As the number of cases increased, one would suspect there would be an increase in errors. However, this is not the case in this analysis. As shown in Figure 3, Barnes-Jewish West County Hospital performed 43.69% of all total knee and hip replacement procedures, yet had the lowest billing error rate. Together, BJH and MBMC accounted for 45.54% of all cases in this analysis, but had over 82% of the billing errors identified. As highlighted by Figure 3, there is a disproportionate share of billing errors occurring at Barnes-Jewish Hospital and Missouri Baptist Medical Center.

Figure 3. Percent of Total Cases For System

Overall, 8.6% of all charges for total knee and hip prosthetic and implant devices are not be captured on the bills being sent to the managed care plans. Therefore, BJC Health System is not capturing all possible revenue in this ever-dwindling world of healthcare payments. A future study needs to be accomplished to determine the cause of the lost prosthetic and implant charges. Barnes-Jewish West County should be used as the benchmark on how to properly capture prosthetic and implant charges. Additionally,

training should be provided to the remaining facilities to prevent future errors from occurring.

### **Conclusion and Recommendations**

BJC Managed Care Executives were correct in hypothesizing that BJC facilities were not appropriately billing for prosthetic and implant charges. Although \$202,000 may not seem significant to some when analyzing an organization of BJC Health System's size, it is important to remember this study only focused on three ICD-procedures. There are well over 4,000 ICD-9 Procedures Codes. In 1998, BJC did \$1.2 billion worth of managed care business. If this 8.6% billing discrepancy is representative of what is being missed in charges, this would equate to \$103.2 million dollars in lost charges. Although this is only speculation based on one procedure, it is safe to say there are other charges not being properly captured. If this is representative of the billing practices, BJC Health System is losing millions of dollars annually in lost charges. Additionally, the dollar figures of lost charges reported in this study do not account for the contractual write-offs occurring each day.

In today's ever tightening budgets, hospitals must become wiser and more frugal with how they operate their business. Although the prosthetic and implant billing process must be studied further to determine the causes for improper billing, more significant problems exist. One of the major problems with the billing process within BJC is that some of the lowest paid people within the health system are responsible for every dollar being charged to health plans and conversely, they are responsible for every dollar being collected within the facilities. Unfortunately, this is not just the case with BJC Health System. The Air Force follows the same practices. The medical coders and billing staff working within

the Military Health System are one of the most overworked and underpaid groups of people. If BJC and other health systems want to correct this problem and problems similar to these, they must take a systems approach to ultimately correct improper procedures and billing errors. BJC Executives must create the proper incentives for the billing departments to correct the internal processes. If motivated correctly, the people within those jobs will correct the problem. One way to incentivize the billing departments is to create a bonus based on additional charges found that would have otherwise been lost. However, in creating an incentive program, one must be careful not to reward the wrong behavior.

13. ABSTRACT (Maximum 200 words)  <p>Healthcare organizations are currently losing millions of dollars each year because of errors in billing processes. Many problems arise due to a lack of information, about and comprehension of, managed care contracts, terms, and requirements. As managed care continues to penetrate healthcare markets, these problems are likely to magnify. Given that BJC Health System's survival is dependent upon managed care revenue, and the negotiated contract language is structured to maximize return, it is imperative BJC facilities bill for all reimbursable items allowable in their managed care contracts. However, there is suspicion among BJC Managed Care Executives that BJC facilities may not be accurately billing for all reimbursable items, specifically prosthetics and implants devices.</p> <p>The purpose of this study is to examine internal processes culminating in the patient's bill to determine if BJC is properly billing for prosthetics and implants. This study focuses on DRG 209 cases (Total Hip Replacement, Partial Hip Replacement, and Total Knee Replacement procedures) as a potential area of lost revenue. Overall, 8.6% (\$202,000) of all charges for total knee and hip prosthetic and implant devices are not captured on bills being sent to managed care plans. Therefore, BJC is not capturing all possible revenue.</p>
