

AD \_\_\_\_\_

Award Number: DAMD17-99-1-9198

TITLE: Combined M.D./Ph.D. and Ph.D. Training Program in Breast  
Cancer Prevention

PRINCIPAL INVESTIGATOR: Robert B. Dickson, Ph.D.

CONTRACTING ORGANIZATION: Georgetown University Medical Center  
Washington, DC 20057

REPORT DATE: July 2005

TYPE OF REPORT: Annual Summary

PREPARED FOR: U.S. Army Medical Research and Materiel Command  
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT: Approved for Public Release;  
Distribution Unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

## **ABSTRACT**

The goal of this training program is to dramatically extend our existing, highly successful Interdisciplinary Doctoral Training Program in Tumor Biology with a new track which integrates genetics, molecular epidemiology, and prevention of breast cancer. This new track offers both MD/PhD and PhD training opportunities, and integrates new faculty from the Lombardi Comprehensive Cancer Center Programs in Cancer Prevention and Control, and Cancer Genetics. The program is enriched by new courses, as well as practical research experience. This new programmatic initiative makes use of the existing organization structure of the Interdisciplinary Doctoral Training Program in Tumor Biology and incorporates a multi-disciplinary faculty who are devoted to research and education in breast cancer. To date, 12 students were recruited into 6 classes, and 4 new courses were created. Students in this program so far have published 20 papers, and 31 abstracts/presentations. They were also awarded 6 individual fellowship grants, and two have now been awarded the PhD, with others currently in the program continuing to make good progress toward that goal.

## COMBINED MD/PHD TRAINING PROGRAM IN BREAST CANCER PREVENTION

### INTRODUCTION

The goal of this program is to significantly extend our existing, highly successful Interdisciplinary Doctoral Training Program in Tumor Biology with a new track which integrates genetics, molecular epidemiology, and prevention of breast cancer. This new track offers both MD/PhD and PhD training opportunities, and integrates faculty from the Lombardi Comprehensive Cancer Center. To date, 6 MD/PhD and 6 PhD candidates were matriculated into this program. The program is enriched by new courses covering cancer genetics, molecular epidemiology, and cancer prevention, as well as practical research experience. To date, 4 new courses, including 2 electives and two core courses, have been developed. The new programmatic initiative makes use of the existing organization structure of the Interdisciplinary Doctoral Training Program in Tumor Biology and incorporates a multi-disciplinary faculty who are devoted to research and education in breast cancer. We have recently had approved an extension of this grant period from 6 years to 7 years, in order to optimize our recruitment of the best qualified candidates for the available budget and allow completion of available funds by students in the program.

### BODY

#### *Training and Research Accomplishments*

The accomplishments of this program, now finishing its sixth year, fall into two categories: the recruitment and progress of trainees, and the development of courses for the program. In the sixth year, we recruited Ms. Anne Miermont and Mr. Mark Markowski. Ms. Miermont received her BS in Cell Biology from the Universite Francois Rabelais, and received an MS in Applied Molecular Biology from the University of Maryland, Baltimore County. Mr. Markowski, an MD/PhD student received his BS in Biochemistry and Mathematics from Georgetown University. Ms. Miermont is currently working in the lab of her Thesis Mentor, Dr. Priscilla Furth. Mr. Markowski is currently working in the lab of Thesis Mentor Dr. Edward Gelmann.

The fifth year brought us two additional recruits, Mr. Ogan Abaan and Ms. Maria Frech. Mr. Abaan received his BS and MS in Biology from the Middle East Technical University in Ankara, Turkey. Ms. Frech received her BS in Pharmacy from the Universidad Nacional de Rosar and has an MS in Food Technology from the Universidad Catolica Argentina; both Universities are in Rosario, Argentina. Mr. Abaan has completed his Comprehensive Exam and is now doing research on PTPL1 in Ewing's Sarcoma Tumorigenesis. Ms. Frech is working on her thesis research with Dr. Furth, and has recently secured her own grant from the DOD towards her Breast Cancer Research.

In the fourth year, we recruited Mrs. Youhoung Wang to the program. Mrs. Wang joined the Tumor Biology program with advanced standing, as she has transferred from University of Illinois' Microbiology and Immunology PhD program and has a MS degree in Cellular and Molecular Biology from Sun Yat-sen University of Medical Sciences in China. Mrs. Wang completed her laboratory rotations, passed her Comprehensive Exams and is now in PhD research with Dr. Dickson studying Cell Survival mechanisms. Ms. Wang received a DOD predoctoral Fellowship to support her work.

Ion Cotarla, M.D. appointed during the third year of the program, has completed his comprehensive examination and is working on the regulation and function of Stat5 in normal and malignant mammary epithelial cells, in Dr. Priscilla Furth's laboratory. Dr. Cotarla received a DOD Predoctoral Fellowship grant to support his work. Riddhish Shah, M.D., also in the third year of the program, is continuing his thesis research project, TGF beta regulator region polymorphism and its functional significance, with Dr. Carolyn Hurley. Rita

Kralik, M.D., was also appointed into the third year of the grant, but elected to take an MS degree in Tumor Biology due to personal reasons.

Three trainees had been recruited for the second incoming class of the Program: one MD/PhD candidate, Ms. Carolyn Lee, and two PhD candidates, Ms. Sonia de Assis and Mr. Elijah Herbert. Ms. de Assis is in her fifth year of the program, she received a DOD predoctoral fellowship, and she is now working with her thesis mentor, Dr. Hilakivi-Clarke. Her thesis project concerns dietary factors during pregnancy and breast cancer. Ms. Lee completed her thesis research with Dr. Todd Waldman on breast cancer genetics and has just successfully defended her PhD thesis. She has returned to Medical School to complete the MD portion of her training. Unfortunately, Mr. Elijah Herbert withdrew from the program after only a few months for very acute health reasons; we were able to use his slot in the program for recruitment of Ms. Carolyn Lee (above).

Two trainees had been recruited into the first incoming class, Ms. Christine Coticchia and Ms. Stacey Kessler. Ms. Coticchia has received a DOD predoctoral fellowship, and is proceeding with thesis research with Dr. Robert Dickson, studying c- Myc mediated apoptosis in mammary carcinoma cells. Unfortunately, Ms. Kessler withdrew from the program for personal reasons, but she earned an MS degree in Tumor Biology. However, the funds made available due to her departure were productively used to recruit a student with advanced standing into the third class (Sonia de Assis, see above).

In addition to the existing core course work of our GU Interdisciplinary Doctoral Training Program in Tumor Biology, new course components have been incorporated into our Breast Cancer Prevention track since Spring, 2002. These include a course in Biostatistics, Applied Biostatistics, that has been refocused on statistical design and methodology for research rather than biostatistics theory, and a Cancer Genetics course, Genetics, Health, and Society in the 21st Century, which focuses on practical and ethical questions raised by genetic information and technology. Both courses have been very successful and continue to be offered. Applied Biostatistics has become a required course for Tumor Biology PhD and MS students. A new course in Genetics, Human and Microbial Genetics, had a successful first two years. Most recently, a Cancer Prevention and Epidemiology Course was created as a new core course.

All of these courses emphasize breast cancer, as most of the teaching faculty are extensively involved in breast cancer research. Interest in these courses has not been limited to students in the new Breast Cancer Prevention track: a number of additional students in the Interdisciplinary Doctoral Training Program in Tumor Biology and other biomedical graduate programs at Georgetown University have enrolled as well.

## **KEY RESEARCH ACCOMPLISHMENTS**

### *• Recruitment of New Trainees and Advancement of Existing Trainees:*

#### **Class #6**

- Mr. Mark Markowski began with a laboratory rotation with Dr. Priscilla Furth, and then moved into the lab of Dr. Edward Gelmann.
- Ms. Anne Miermont began with a laboratory rotations with Dr. Priscilla Furth and Dr. Carolyn Hurley. She has settled into her thesis research in the lab of Dr. Furth.

#### **Class #5**

- Ms. Maria Silvina Frech began with a laboratory rotation with Dr. Priscilla Furth, and then worked with Dr. Suzette Mueller. She has begun her PhD thesis work with Dr. Furth.
- Mr. Ogan Abaan has begun his PhD thesis work with Dr. Toretsky.

#### **Class #4**

- Mrs. Youhong Wang has begun her PhD thesis work with Dr. Dickson.

### Class #3

- Riddish Shah, M.D. completed in his thesis research with Dr. Hurley, and successfully defended his thesis.
- Ion Cotarla, M.D. continues his thesis research portion of the program. with Dr.Furth

### Class # 2

- Ms. Carolyn Lee completed her thesis research with Dr. Waldman, successfully defended her thesis, and has re-entered GU Medical School this fall to complete her MD/PhD training.
- Ms. Sonia de Assis continues her thesis research with Dr. Hilakiv-Clarke.

### Class # 1

- Ms. Christine Coticchia is in the final year of her thesis research with Dr. Dickson. She is expected to defend her thesis in 2005.

## REPORTABLE OUTCOMES

### • *Student Publications:*

• *Predoctoral Fellowship Awards:*

- **Ann Miermont** just received a DOD Breast Cancer Research Program Predoctoral Traineeship award (effective July 15, 2005) to study Stat 5a in mammary ductal hyperplasia and DCIS.
- **Maria Frech** received a DOD Breast Cancer Research Program Predoctoral Traineeship Award and an ACR Minority Scholar in Training Award in late 2004.
- **Christine Coticchia** received a DOD Fellowship Award in 2001 - Fas/Fas L System on c-Myc Expressing Mammary Carcinoma Cells.
- **Ion Cotarla** received a DOD Fellowship Award in 2003 – Nucleocytoplasmic Export of Stat5 in Normal and Malignant Mammary Epithelial Cells: Regulation and Implications in Breast Cancer.
- **Sonia de Assis** received a DOD Fellowship Award in 2003 – Pregnancy Leptin Levels and Breast Cancer Risk.
- **Youhong Wang** received a DOD Fellowship Award in 2004 – Transcription factor stat5 in invasion and metastasis of human breast cancer.

• *Thesis Defense:*

- **Carolyn Lee** successfully defended in 2004 her PhD thesis entitled: “Genetic Analysis of PTEN Function in Human Cancer Cells”
- **Riddhish Shah** successfully defended in 2005 his PhD thesis entitled:” Identification of an Extended

TGF-Beta1 Regulatory Region: Characterization of Regulatory Region Allelic Diversity and Functional Analyses of Novel and Known SNPs ”.

## CONCLUSIONS

The goal of our program was to extend our existing, highly successful Interdisciplinary Doctoral Training Program in Tumor Biology with a new track which integrates genetics, molecular epidemiology, and prevention of breast cancer. We have successfully recruits 12 students into 6 classes, and 4 new courses were created. Students have exhibited extraordinary creativity and productivity; 6 have been awarded individual fellowship grants. Two students were awarded the PhD, which others remaining in the program are making good progress toward that goal.
