The comments, which are just a few of the many made by federal agencies, highlight the need for a coordinated look at the cumulative impacts of all Air Force low-level training missions, along with the impact of low-level flights by other branches of the military as well. This analysis should be carried out in a programmatic environmental impact statement prepared by the Air Force that considers impacts on humans and wildlife nationwide.

30

001131

GE-2 E. The Public Participation Process for Comment on the DEIS Is Inadequate.

While proposed Alternative D affects 9 New Mexico counties, the public hearings for the DEIS were held in only three locations: Roy, Angel Fire, and Taos. Because of the great distance between numerous affected communities and these three locations, many persons who will be greatly impacted by RBTI did not have an opportunity to appear at the hearings. For instance, the route passes just south of the town of Costilla, yet the nearest public hearing was held in Taos, 40 miles away. Public hearings were not held in the town of Clayton, which lies beneath the MOA, or the town of Tucumcari, just west of the MTR. Clearly, the Air Force understood that communities in these areas would be affected. Indeed, the Air Force held public hearings in both Clayton and Tucumcari during the scoping phase of the EIS. Thus, it is hard to conceive why these areas were neglected during the DEIS comment phase.

GE-28 Further, there is a substantial Spanish-speaking population in the region affected by Alternative D. Indeed, for many Spanish is their first and primary language. Yet the Air Force did not publish any Spanish language notices or newsletters, and failed to provide translators at the public hearings. The military is accustomed, however, to carrying out bilingual environmental evaluations. At the Yuma Proving Grounds in Arizona, the Army published its EIS in Spanish and provided translators at public hearings. Bilingual documents and public hearings are equally appropriate and necessary in the Northern New Mexico region, and should have been provided in order for the Air Force to gather comment from one of the largest affected population groups in the region.

31

001131

the German Air Force expansion (GAF), formal consultation on RBTI must be at least as broad in scope as the GAF consultation and biological opinion. In addition, because the flight patterns of RBTI and GAF together cover much of New Mexico, formal consultation must address the cumulative impacts on endangered species in the entire State.

Finally, the DEIS states that alternative D overflies unsurveyed but potential Spotted Owl habitat. DEIS at 4-107. As part of the Cannon AFB action, the Air Force was supposed to survey these areas. It appears from the DEIS that the Air Force has not fulfilled this obligation. As part of consultation on RBTI, the Air Force should proceed with the requisite Spotted Owl survey.

IV. CONCLUSION

As stated above, the DEIS is lacking the kind of detailed analysis required under NEPA. The Air Force must recognize the vast body of scientific study demonstrating that the proposed RBTI may indeed have significant impacts on people and wildlife. The Air Force must acknowledge, discuss, and analyze these potential impacts, including cumulative impacts in its Final EIS. In addition, the Air Force must comply with the Endangered Species Act before proceeding with any action.

33

001131

III. THE AIR FORCE HAS NOT COMPLIED WITH THE ENDANGERED SPECIES ACT.

The Endangered Species Act was enacted "to provide a means whereby the ecosystems upon which endangered species and threatened species depend may be conserved, [and] to provide a program for the conservation of such endangered species and threatened species" 16 U.S.C. § 1531(b). Under the Act, all federal agencies are required to initiate consultation with the appropriate wildlife agency to ensure that the agency's action "is not likely to jeopardize the continued existence of any endangered species or any threatened species or result in the destruction or adverse modification of habitat of such species which is determined . . . to be critical . . ." 16 U.S.C. § 1536(a)(2). In every consultation, "each agency shall use the best scientific and commercial data available." *Id.* Formal consultation is required if there may be a potential impact on a listed or candidate species or its critical habitat.

As the DEIS recognizes, there are numerous threatened and endangered species in BI-11 northern New Mexico. Nevertheless, the Air Force has failed to initiate consultation with the Fish and Wildlife Service. Although the DEIS states that the Air Force has initiated consultation under the ESA (DEIS at 2-63), it is readily apparent from Air Force and FWS correspondence that this is not the case. *See* DEIS Appendix at H (January 27, 1998 letter from FWS to Air Force stating that RBTI would not become part of GAF consultation and "will not be addressed by the Service until the GAF consultation is complete.").

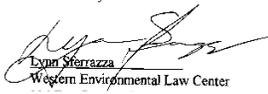

Formal consultation is required for RBTI because, according to FWS, the proposed flight path "may potentially affect threatened and endangered species in counties where overflights and ground disturbing activities occur." *Id.* Because RBTI will affect much of the same airspace as

Dear Sir:

BR-6

This is a response for your request for public comment on the Realistic Bomber Training Initiative (NRTI). We realize fully that if our armed services are to be effective in their mission realistic training is essential.

We are requesting that the Air Force reconsider the use of the low altitude air space over Philmont Scout Ranch in northeastern New Mexico. Mr. White Phillips donated this area to the Boy Scouts of America in 1941 for use as a high adventure base. Since that time over 500,000 young men and women of our country have enjoyed this area. For many of these young people it may be their only experience in what was the "Wild West", and I feel that low flying bombers would depress their adventure. In addition during the summer there are thousands of acres throughout Philmont's 137,000 acres, please do not put them in danger by turning Philmont into a MCA.

This area teems with natural wonders and wildlife that you cannot show on population demographics in a cold report. Raymond enjoyed his first "Yuk" to Philmont in 1973 at the age of fourteen. Matthew who is also a signatory to this letter is twelve and I (Raymond) look forward to sharing this experience with him in an environment where we see deer, bison, and other wildlife not 3-5% overlaid at 3-400 ft.

In light of the recent tragedies in our country involving youth, with your help scouting can reach young people with positive goals in a natural environment. Through the dedication of adult volunteers, scouting might be able to stem the tide of youth violence in our society. We truly believe that the Air Force could use federal lands in the area vicinity and accomplish their training goals without disturbing Philmont.

• KINGWOOD, TX •

## ORAL COMMENTS

---

---

TY

1 As I mentioned before the break, we're going to proceed with  
2 our speakers in the order that I indicated previously, and we're  
3 going to start with Mr. Bill Ehrle from the Abilene Chamber of  
4 Commerce.

008000

5 MR. EHRLE: Good evening. Can you hear me? Last  
6 name is spelled E-h-r-l-e, retired colonel, former wing  
7 commander, currently representing the Abilene Chamber of  
8 Commerce Military Affairs Committee.

9 On behalf of the Military Affairs Committee, we have  
10 reviewed the Environmental Impact Statement and the history  
11 behind this issue. We want it clearly known that we support the  
12 issue fully. The proven methodology that's been used to develop  
13 the EIS both currently and in the past clearly substantiates the  
14 fact that there is no impact to the area.

15 While we acknowledge the concerns of other citizens as  
16 they've expressed them in various forms, the methodology does  
17 not support that, neither does the facts. When you look at the  
18 history of Air Force flying throughout the United States and  
19 Canada in the low-level environment, the methodologies that have  
20 been used to develop EISes over the last 30 to 40 years clearly  
21 states that there is no impact that you can recognize and it's  
22 substantiated in this report.

23 We support the Air Force's efforts on selecting a route.  
24 And when that route selection is known, we will support that.  
25 On behalf of the Abilene community and the Dyess Air Force Base

6:41P

TY

1 community, we think it's absolutely essential for the training  
2 of the airmen and women in the 21st Century that we go forward  
3 with these routes and establish a greater presence in West Texas  
4 than we've had in the past. If we're to be prepared for war in  
5 the next century, we must be prepared to train in the proper  
6 environments. The EIS is correct and online. It states the  
7 case very well. We stand behind it, and we stand behind the Air  
8 Force on this effort. I don't think you'll hear us quibble one  
9 bit on any other issue that subjects itself to a confrontation.  
10 Thank you.

11 HEARING OFFICER: Thank you, sir. Now we're going  
12 to move on with the other individuals here. Bynum Miers.

13 008001 MR. MIERS: Colonel, my name is Bynum Miers. I'm  
14 a rancher in Taylor County, Texas, and have two locations. One  
15 location is one mile north of Tye -- north of Interstate 20  
16 north of Tye, and the other one is three and a half miles  
17 southwest of Buffalo Gap.

18 I'm here to speak mainly about the effects of noise and/or  
19 low-level flights. I have a cow/calf operation north of Tye,  
20 and I've been operating that place for 40 years, since 1959, and  
21 I have had no effects on cattle or horses. As you can imagine,  
22 that near Dyess, those planes come out of there when the wind is  
23 out of the north at pretty low altitude. Cattle operate on  
24 the -- and react on the theory of what hurts me. And when they  
25 find out that it doesn't hurt them, it doesn't bother them.

6:43P

BR-4

1 The noise pollution is -- is more so to humans, but it is  
2 not -- it has had no effect on reproductivity. My cattle  
3 reproduce and are easy to handle. When they find out something  
4 doesn't bother them, they don't pay any attention to it.

5 As far as the south part of the county, those flights there  
6 are at a little bit higher level, but I have no effects from --  
7 from those flights for cows or horses. My son has a horse  
8 operation there. And those are the only two things that -- that  
9 I wanted to speak to you about.

10 HEARING OFFICER: Thank you, sir. Buster Welch.  
11 008002

12 MR. WELCH: I'm Buster Welch from Fisher, Scurry,  
13 and Kent County. I ranch up there on the Double Mountain Fork  
14 of the Brazos River. And I want to say right off that I'm real  
15 proud of our Air Force, and I think we've got the best Air Force  
16 there's ever been, and I'm proud of Dyess and the personnel, and  
17 I want Abilene to do real well.

18 But I'm president of H.E.P.A., an organization that we  
19 formed to stop you from practicing your training over our  
20 eight-county area because we cannot stand the decrease in the  
21 value of property, the interruption of our lives, and -- so --  
22 but I want you to know that I have a brother that's a retired  
23 colonel. I lost a brother in World War II in a bomber crash.  
24 And we're Air Force people and we want you to have a good place  
25 to train, but we don't want you to work a hardship on 55,000  
good, hardworking American people.

6:45P

TY

1 That's -- I'll show you men up there that -- five brothers  
2 went to the war at the same time. We're all patriotic, but our  
3 economy will not stand that. And noise is expensive, and  
4 there's all kinds of tales to prove it. Thank you.

5 HEARING OFFICER: Thank you, sir. Stanley  
6 Griffith.

008003

7 MR. GRIFFITH: My name is Stanley Griffith,  
8 G-r-i-f-f-i-t-h. I raise cows. The military guarantees my  
9 freedom to raise cows, so I have a vested interest in you  
10 conducting the most realistic training that you could do. I  
11 also would hate to think that my reluctance to disturb a jack  
12 rabbit might result in some crewman not coming back from a  
13 mission. That's all I have to say. Thank you.

14 HEARING OFFICER: Thank you, sir. And Diana  
15 Moore, did you wish to speak?

16 MS. MOORE: I'd like to wait. If anyone else --

17 HEARING OFFICER: We just exhausted the list.

18 MS. MOORE: You said you're going to open it up.

19 HEARING OFFICER: Would anyone like to make any  
20 comments at all that hasn't made any comments? Or any of those  
21 who have made comments, would you like to make additional  
22 comments?

23 MR. PAGE: (Indicating.)

24 HEARING OFFICER: Yes, sir. I take it, sir, that  
25 you have not filled out one of our cards?

1 MR. PAGE: Filled out the card. I did not  
 2 indicate that I would speak.  
 3 HEARING OFFICER: I see.  
 4 MR. PAGE: But listening to the program, I would  
 5 like a comment.  
 6 HEARING OFFICER: Yes, sir. If you could just  
 7 approach the microphone. And, if you could, provide us a little  
 8 bit of information. **003004**

6:46P  
TY

9 MR. PAGE: I'm William L. Page, P-a-g-e. I'm a  
 10 retired lieutenant colonel of the Air Force. I'm also a safety  
 11 consultant by education, by training. I performed noise level  
 12 surveys in connection with my job as a safety consultant and a  
 13 safety engineer over the last 33 years.  
 14 In looking at the draft document, I see that the methodology  
 15 that was used is very well done, and I was very impressed with  
 16 the methodology that I saw in that document.  
 17 My experience in working with noise level surveys indicates  
 18 that there would not be any significant impact on wildlife or  
 19 livestock as a result of the overflights proposed by these  
 20 training routes. I also represent the Page and Childress Ranch,  
 21 which is located in the northwest corner of Stonewall County, so  
 22 I'm looking at this from both sides of the table, both as a  
 23 retired Air Force officer and as a rancher, and I see no  
 24 significant impact on the ranching operations as a result of  
 25 these training routes.

6:48P 1 HEARING OFFICER: Thank you very much, sir. Would  
 2 anyone else like to make any additional comments?  
 3 Ladies and gentlemen, that concludes this public hearing.  
 4 Thank you very much for your participation and your inputs.  
 5 Please remember, the public comment period will extend through  
 6 June 16, 1999 and comments can be sent to the address shown on  
 7 the slide. This public hearing is adjourned. Thank you again.  
 8 (Meeting adjourned at 6:48 p.m.)  
 9  
 10  
 11  
 12  
 13  
 14  
 15  
 16  
 17  
 18  
 19  
 20  
 21  
 22  
 23  
 24  
 25

1 appreciate you handing it in so that any names,  
 2 places, references to scientific terms or other  
 3 information can be recorded accurately.  
 4 Finally, I would like to remind you to limit  
 5 your comments to the draft EIS. That is the purpose  
 6 of this public comment period. Also, I ask that you  
 7 avoid repeating what another speaker has said if  
 8 there -- there is nothing inappropriate about  
 9 agreeing with other speakers, but to repeat the same  
 10 thing just delays others in making their comments.  
 11 If you agree with a previous speaker on a particular  
 12 issue, you can just state your agreement.  
 13 If you'd like to turn in your written  
 14 comments there, you can do that at any time. There  
 15 is a box provided for -- for you to do that.  
 16 I would like to get started now so -- as I  
 17 indicated, we will start with comments from elected  
 18 officials. Following their remarks, we will take  
 19 oral comments from those of you who have asked to  
 20 speak. Again, I wish to remind you of the  
 21 three-minute time limit.  
 22 And the first speaker that I would like to  
 23 call upon is Ricky Fritz, who is a county judge.  
 24 (PAUSE) **008005**  
 25 MR. FRITZ: Yes, sir. Can you hear

1 me?  
 2 My name is Ricky Fritz. I am the Scurry  
 3 County Judge. I am out here for several reasons, but  
 4 the first point I want to make is that I firmly  
 5 believe that we live in the greatest country in the  
 6 world, and I believe it is great because of our  
 7 freedoms, the freedoms we have that didn't come  
 8 cheap, that people in the military and lots of people  
 9 here fought and had friends that died serving our  
 10 country to keep it free.  
 11 And the freedom I want to talk about  
 12 specifically tonight is the freedom to own and  
 13 possess property. We are one of the few countries in  
 14 the world where you can actually own property as a  
 15 citizen. And our earliest rights, property rights,  
 16 have been set up where when you own your property,  
 17 you own it from the borders to the center of the  
 18 earth and to the Heavens above. It don't include  
 19 that the government can take it away from you without  
 20 just compensation.  
 21 So my first question would be is, if we are  
 22 actually going to be losing some space, there doesn't  
 23 appear to be just compensation. I feel like there is  
 24 a detrimental situation there.  
 25 My second one is, I feel like there is many,

BR-5

AO-4

1 many areas -- you know, big cities don't feel like we  
2 are a populated area, but we feel like we are  
3 populated. And we feel like any time there is  
4 military planes or private planes flying over, there  
5 is that risk. And God forbid that something would  
6 happen that you got citizens out here. We feel like  
7 there is areas in other parts of the country where,  
8 if something did unforeseen happen, you know, it  
9 wouldn't even kill a lizard. And so we feel like  
10 that that is our second problem.

BR-2

11 And our third problem -- as County Judge, we  
12 have an airport here that is very important to our  
13 economy, and we spend a lot of time trying to keep it  
14 up. We have boll weevil eradication flying out of  
15 here, we have private planes flying out of here with  
16 our industry, crop dusters fly out of here, and we  
17 are just very, very concerned that it will be  
18 detrimental to our airport and to citizens. So I  
19 just wanted to touch on those three points.

20 So as County Judge of Scurry County, I  
21 received many, many calls from our citizens, and so I  
22 would have to say that I'm opposed to Scurry County  
23 being a part of -- of this project.

24 And thank you for letting me speak.

25 COLONEL BURD: Thank you.

PD-7

1 I would like to call on Buddy B. Baldrige.  
2 The organization listed here is the Jayton-Girard  
3 ISD.

008006

4 MR. BALDRIDGE: Hello, everybody. My  
5 name is Buddy Baldrige, B-A-L-D-R-I-D-G-E, for the  
6 record. I would like to thank you for the  
7 opportunity to address this hearing.

8 I, too, support -- support a strong military  
9 for the protection of the United States. It is  
10 important that our men and women of our armed forces  
11 be well trained and be prepared physically and  
12 mentally to defend the United States against a  
13 variety of opponents. While not a veteran myself, I  
14 have numerous friends and family members who have  
15 faithfully served in the military in World War I and  
16 World War II and in Vietnam to defend our country and  
17 our way of life. Some have even given the supreme  
18 sacrifice of their lives for our country.

19 With this as a background, let me say that I  
20 clearly am opposed to the proposed use of the private  
21 lands for the Realistic Bomber Training Initiative.

22 In particular, I am opposed to the Lancer MOA because  
23 of its effect it will have on my home and my  
24 community.

25 As I understand the proposal, the Lancer MOA

AF-6

1 would be used for realistic bomber training of B-52s,  
2 B-1s and their associated support aircraft. As many  
3 in our area will attest, it not unusual to have a  
4 C-130 or T-37 or T-38 or Military Lear flying at or  
5 below 3 to 500 feet above the ground, often directly  
6 over our homes. Obviously, the military aircraft are  
7 not prohibited from flying below the published floor  
8 of the MOA. That would keep the B-1s and B-52s from  
9 flying -- what would keep them from flying lower than  
10 3,000 feet?

11 When I was growing up, my dad gave me a good  
12 way to make a decision. He said split a piece of  
13 paper in half and put the advantages on one side and  
14 disadvantages on the other. In discussing this  
15 proposal with the leaders from the counties that are  
16 involved, no one came up with even one advantage, not  
17 one.

18 I would like to use the rest of my time to  
19 focus on the effect that RBTI would have on land  
20 values in our area where training is conducted. You  
21 are probably wondering how it could have a direct  
22 effect. The noise and stress that it will cause will  
23 have multiple effects on people, livestock and  
24 wildlife. Animals, including domestic livestock and  
25 wildlife, will be subjected to the startling effect

AO-18

BR-3

BR-3

1 of extremely loud, fast-moving aircraft even at the  
2 3,000 feet. Weight gain, reproduction, antler growth  
3 and many other areas of production will be affected.  
4 Can you imagine what a startled herd of cattle can do  
5 to a fence?

6 The stress of continual noise will also  
7 affect humans. In '69 and '70, I officed just  
8 outside of the DFW Dallas -- or Dallas Love Field  
9 area under the flight path. We never got used to the  
10 noise when air -- of aircraft flying overhead.

11 Currently, recreational use of our lands is  
12 the only enterprise that is profitable. Recreation  
13 has kept land prices stable. We have hunters to come  
14 to our ranch from all over the United States. They  
15 come all the way to West Texas to relax and get away  
16 from city life and the noise. They come for the  
17 experience. Will they keep coming with these  
18 aircraft flying overhead? Absolutely not.  
19 Landowners will lose income as a source of revenue,  
20 and the local community will also lose money.

21 COLONEL BURD: You have met your three  
22 minutes, sir.

23 MR. BALDRIDGE: Thank you very much.

24 COLONEL BURD: Thank you.

25 I appreciate Mr. Baldrige terminating his

1 present -- his comments right at the three-minute  
2 point. Again, as I said earlier, if we do have time,  
3 and any of you who run out of time before you finish  
4 your comments and you want to make additional  
5 comments, we will certainly accommodate you.

6 The next speaker I would like to call on is  
7 Bobby McGough from Stonewall County. 008007

8 MR. MCGOUGH: Thank you, Colonel. As  
9 you said, my name is Bobby McGough. That is spelled  
10 M-C-G-O-U-G-H. I am the County Judge of Stonewall  
11 County, and I have also served 25 years as a military  
12 pilot, over three years of that flown out of Dyess in  
13 and around this air space.

14 We are a God-fearing and nation-respecting  
15 community. And as we are here, there are people  
16 projected on our behalf, and we would ask to  
17 protect -- the Almighty for their safe return and the  
18 safe (inaudible) of their mission.

19 I have read through a portion of the EIS and  
20 would like that it be further expanded or better  
21 information concerning a statement that the Lancer  
22 would not represent a substantial increase from  
23 recent or historic air space use, and that was  
24 footnoted and based to a recent are four, a recent  
25 area of five in the Roby MOAs, and those two

AO-77

1 (inaudible) to have 106 aircraft operations over the  
2 past year. The Lancer MOA, as it is stated, will  
3 have 2,350 operations over a year, and I personally  
4 consider that a substantial increase in the air  
5 space.

6 In addition, the three prior MOAs based air  
7 space is either 10 or 12,000 feet AGL, and Lancer, as  
8 is expressed, will be at 3,000 feet.

9 The noise level is addressed at minimal  
10 change from the baseline of a 45 DNL. If the Lancer  
11 were enacted we would have a 46 DNL. I am not a  
12 scientist or have the ability to analyze DB, but it  
13 would be a -- it is hard for me to imagine that 2,350  
14 airplanes, with 40 percent of them operating between  
15 5,000 -- between 3,000 feet AGL and 5,000 feet AGL,  
16 would not create a change. Thank you.

AO-78

17 Overall, the likely effect on land use,  
18 recreation -- aircraft, to date, 260 operations --  
19 260 operations a day will affect our ability to  
20 effectively raise livestock, our cost of production  
21 and the cost of operation and increase the hazard of  
22 handling.

BR-4

23 In a socio -- on the socioeconomic statement  
24 of no measurable impact on the economic values of  
25 land since the area has generally been overflowed

1 since 1940, I believe there will be a decreased  
2 margin in production value, (inaudible) a decline,  
3 and our costs go up. There will be a decreased  
4 potential for wildlife income.

BR-4

5 And the direct impression of that is, if you  
6 choose to seek a -- your recreational solitude and  
7 solace in the open countryside, and you had a choice  
8 between leasing, renting, hunting, boating, fishing  
9 in an area that had aircraft operating over ten a day  
10 down to the 3,000 feet and the noise that would be  
11 generated by them and operating -- or leasing an area  
12 that wouldn't, I believe you would choose the  
13 latter. Thank you.

14 COLONEL BURD: Thank you.

15 I would like to call on Mr. Giles Dalby, the  
16 County Judge for Grange County, it looks like.

17 MR. DALBY: My name is Giles, 008008  
18 G-I-L-E-S, Dalby, D-A-L-B-Y. I'm County Judge for  
19 Garza County.

20 Your Honor, I have to concur with my fellow  
21 Judges on what has been said here today. Also, I  
22 would like to address some of the other concerns that  
23 we have. If the Air Force decides to go down below  
24 five -- to a level of 500 feet, what is the liability  
25 of the Air Force in coming over homes, some of our

1 rural homes?

2 Now, I live in the country. I am a rancher,  
3 too. I live in the direct path of Dyess Air Force  
4 Base where they fly the C-130s. I know what the  
5 noise level there is, and they fly fairly low.  
6 Excuse me. I was also in the flight pattern 12 years  
7 ago when you were flying B-52s on the deck, and we  
8 had an Air Force installation there in Post guiding  
9 the low-level flying of the aircraft, so I know from  
10 experience the noise level that can be created. With  
11 a B-51, I understand it is three or four times the  
12 noise level.

13 Now, those are some of the concerns, as well  
14 as the others, and there is no sense of me repeating  
15 what my colleagues have said.

AF-15

16 But I do have some concerns, and I would  
17 like to know what the liability is to the Air Force  
18 and how are you going to proceed to address your  
19 grievances as far as any damages are concerned?  
20 Because I know when in our home the 52s came over,  
21 they rattled every dish in the house, and my wife has  
22 got some pretty valuable dishes. And if nothing  
23 else, I would like a phone number to give to somebody  
24 to talk to her from the Air Force, if you can do  
25 that.

AF-36

1 (PAUSE)

2 COLONEL BURD: It has been brought to

3 my attention that possibly my earlier remarks may

4 have been misunderstood about repeating comments you

5 have already heard. I, in no way, want to limit

6 anybody's comments, and if you want to comment

7 repetitively on essentially what someone else has

8 said, that is fine, and you will be permitted to do

9 that. But what I would like everyone to be conscious

10 of is the time constraints that we have here and the

11 number of people who would like to make comments.

12 And if you haven't already filled out a card

13 and indicated that you want to comment, you still

14 have the option of doing that. Representatives are

15 around the room, and just give a card to one of them

16 or bring it directly up to the sergeant that is

17 sitting down here below me.

18 I would like to now call on Mayor David

19 Holt. **008009**

20 MR. HOLT: Thank you, Judge. My name

21 is David Holt. I am mayor of the City of Snyder. I

22 have a resolution prepared by each member of the city

23 council in opposition to the RBTI, and also I would

24 like to address some of the concerns.

25 On what some of the others have said on the

1 economic impact, I have had realtors tell me that to

2 try to sell ranchland out in the Big Bend country,

3 that when they are out showing ranches and the planes

4 come over and the noise is pretty great, that people

5 just get back in their car and say, "No. Thank you

6 very much." So, to me, that has a great impact on

7 the ability to resell land.

8 Also, another issue is the safety issue.

9 And I know other people that have addressed that, but

10 my other concern is the responsibility of the Air

11 Force. More than one person has told me that the

12 more you complain, the more flights you have over

13 your property. And that when people call the Air

14 Force with complaints, they don't get much

15 satisfaction, and that is of great concern to me.

16 Also, as mayor, I have not had a single

17 phone call or letter in support of this project.

18 In a matter of saving time, another job that

19 I have, I represent Representative David Counts. And

20 he could not be here today, so I have a prepared

21 statement for him which says, "Gentlemen: My

22 schedule in Austin would not allow me to be here this

23 evening to express my opposition to the use of the

24 eight counties, seven of which I represent, for

25 low-level training. This training will diminish

1 property values, increase noise and discourage

2 economic development in an already economic

3 disadvantaged area. While I am very much for a

4 strong and well trained military, I feel that there

5 are already enough well situated areas to provide

6 adequate training sites. Your consideration of the

7 wishes of the people of the 70th district is greatly

8 appreciated."

9 Thank you.

10 COLONEL BURD: I would like to now call

11 on the Greg Henley. The organization he is from is

12 the Tahoka ISD board of trustees. **008010**

13 MR. HENLEY: Yes, sir. Thank you,

14 Colonel Burd.

15 I am the president of the board of trustees

16 for the Tahoka ISD, and we would like to express our

17 concerns on the proposal for the Realistic Bomber

18 Training Initiative and the possible loss of land

19 values which could result if this initiative passes.

20 The Tahoka ISD receives approximately 40

21 percent of our taxable values from agricultural

22 lands. T-Bar Ranch is one of the top ten taxpayers

23 for the Tahoka ISD, and of those top ten taxpayers,

24 is the only privately-owned entity of that top ten.

25 So we are greatly concerned of anything that would

1 adversely affect or prohibit this ranch from

2 remaining a viable and active part of our community,

3 which it has been for over 100 years.

4 Just like everyone in this room, our entire

5 economy is based on agriculture. As everyone knows,

6 this is a economy that is under stress. We have low

7 cattle prices, cotton prices. And anything that

8 would further put a hardship on these depressed

9 economies could be catastrophic to our area.

10 We are extremely concerned with the

11 conflicts created by having these jets and bombers

12 that would be flying in the same air space with our

13 crop dusters or aerial applicators. These are a

14 vital part of our economy. They are necessary for

15 the treatment of our crops for pesticides. And with

16 the passage in the southern part of our county of the

17 boll weevil eradication project, there will be a

18 significant increase in the number of flights

19 necessary to eradicate these pests. And so anything

20 that would hinder or prevent these applications would

21 have a dire effect on our economy, and so we would

22 question the ability to these flights to be able to

23 be performed with the bombers in the area.

24 We also have safety concerns as to the U.S.

25 Air Force pilots, in that our area has a large number

BI-2

1 of sandhill cranes. These are birds that are quite  
2 large. They have wingspans in excess of six feet.  
3 They are present in our area for five to six months,  
4 and their numbers are well into the thousands. We  
5 question the safety of having jets and stuff flying  
6 in the same air space with these large birds.

7 I will share the same concerns we have with  
8 the safety of the farms and homes that are located in  
9 this area and the effect of their quality of life and  
10 value as well.

PD-4

11 In closing, we simply hope that the Air  
12 Force will be able to have common sense, and there  
13 has to be a better place in the way to locate this  
14 training initiative. We hope they will abandon their  
15 plans for using this area and allow us to continue to  
16 have our quality of life that we enjoy in West  
17 Texas. Contrary to what the rest of the state  
18 believes, we are a viable, productive part of the  
19 state and want to remain that way.

20 I thank you for your time.

21 COLONEL BURD: I would like to call on  
22 Van L. York of Borden County. 008011

23 MR. YORK: Thank you.

24 My name is Van York. I am the County Judge  
25 from Borden County. Borden County is located just

BR-7

1 west of Snyder, Texas, here. Borden County is a  
2 rural, agricultural based county with a population of  
3 approximately 800 people.

4 We in Borden County have chosen this place  
5 and this way of life, an outdoor, a serene -- in an  
6 outdoor and serene setting. If the proposed  
7 Realistic Bomber Training Initiative becomes a  
8 reality, our way of life will come to an end. The  
9 quality of life in Borden County will be greatly  
10 reduced. This is a fear that has been presented to  
11 me by many of my citizens in the past couple of  
12 weeks.

AO-79

13 From a personal standpoint, my ranch is  
14 located on the east side of Borden County, and I have  
15 experienced these bombers flying at low altitudes.  
16 This has taken place over the last three years.  
17 These planes fly from north to south about once every  
18 two or three weeks. They are flying about  
19 one-quarter to one-half mile west of my house. The  
20 noise is so loud when -- that it will drown out the  
21 conversation in the house. And on one occasion, I  
22 was caught out in the pasture as one flew directly  
23 overhead. The noise was just deafening. In fact, it  
24 almost hurt. This is what we are concerned with when  
25 we talk about our quality of life.

AO-20

BR-3

1 We have cowboys who are on horseback daily  
2 in these pastures. If one of these planes come over,  
3 the safety factor would be highly questionable.  
4 It -- it just can't be safe.

5 It is frightening to imagine 10, 20 or 30  
6 flights a day and the amount of noise and disruption  
7 to our peace and quiet that we will -- we will  
8 endure.

BR-2

9 Also, on another area that I would like to  
10 address is from an economic standpoint of our  
11 ranchers. We use a type of predator control, which  
12 is aerial hunting, to protect these livestock. One  
13 of the most effective areas was using these light  
14 planes to hunt these air -- these coyotes and bobcats  
15 to protect our livestock. These flights -- the B-1  
16 bombers must not be allowed to fly over these private  
17 lands.

18 I am not antimilitary or antigovernment, but  
19 a citizen and a Judge of Borden County, and it is my  
20 first responsibility to protect the citizens of the  
21 county and of my family.

BR-4

22 In closing, I will repeat that the Realistic  
23 Bombing Training Initiative will destruct our farming  
24 industry, our livestock industry and hunting  
25 industry. And more importantly, the realistic bomber

BR-2

1 training initiative will lower our quality of life in  
2 the affect counties. Thank you.

3 COLONEL BURD: I now call on Mike  
4 Braddock, Lynn County Commissioner No. 2. 008012

5 MR. BRADDOCK: Good evening. My name  
6 is Mike Braddock. I am here representing the Lynn  
7 County Commissioners Court and the people of Lynn  
8 County.

9 I guess what I'm -- it is just a repeat of  
10 what has been going on, but I feel like repetition is  
11 a thing that really soaks in.

12 I guess what the main problems are is going  
13 to be the private planes that spray our lands and to  
14 take care of them. Are they going to have to get  
15 permission from you all, or what is going to be the  
16 deal on that? Or will they have their own?

AO-12

17 And can you actually tell me this will not  
18 damage property, and that it will not drop over the  
19 3,000-foot mark? Is this going to damage the  
20 foundations on houses, barns or farmhouses that are  
21 getting more and more obsolete?

22 And, also, the training in our area, that is  
23 something that a lot of people enjoy, and it is  
24 something that we are proud to have in our  
25 community. A lot of people come down and hunt, and

BI-2  
AO-16

1 it -- and I feel like it could be detrimental to the  
 2 Air Force if they fly in this area. They could  
 3 either drive the birds out or create even a larger  
 4 problem, a crash and kill innocent people.  
 5 And that's -- that's mainly all I have to  
 6 say, except for there are about approximately 6,700  
 7 people in my county, and I feel like there are other  
 8 areas that are a whole lot less populated. Thank  
 9 you.

10 COLONEL BURD: Now, I would like to  
 11 call Vic Burke, the president of the Rotan ISD board  
 12 of trustees. **008013**

13 MR. BURKE: Thank you for allowing me  
 14 the opportunity to speak. My name is Vic Burke. I  
 15 am the president of the board of trustees of the  
 16 Rotan ISD.

17 I would like to address some things that I  
 18 feel the draft EIS did not address. It states in the  
 19 December '97 meetings, prior to the notice of intent  
 20 to prepare the EIS, there were meetings held to gain  
 21 input on the alternatives. None of these meetings  
 22 were held within a hundred miles of the area of the  
 23 Lancer MOA, so there was no input for this area  
 24 considered at that time. Also, only one scoping  
 25 meeting was scheduled initially within the boundaries

GE-2

BR-4

BR-4

1 of the Lancer MOA.

2 Moving on to some of the socioeconomic  
 3 issues, I agree with what my colleague from Tahoka  
 4 said. But, also, there are studies out there that  
 5 show increased noise causes decreased land values,  
 6 and they were disregarded or not considered in the  
 7 EIS.

8 The impact of the Realistic Bomber Training  
 9 Initiative on land use for tourism and hunting is not  
 10 addressed. That considers -- they don't consider  
 11 recent changes in our land use. 20 years ago, 30  
 12 years ago, hunting leases weren't important to the  
 13 income of this area, and now they are vital.

14 Our school district has experienced the loss  
 15 of approximately 40 percent of the taxpayer value in  
 16 the past several years. Further decreases could be  
 17 devastating to our ability to raise funds and  
 18 continue programs, and that could also apply to our  
 19 cities and counties.

20 The EIS doesn't attempt to adequately assess  
 21 the total economic impact on the area. Cultural  
 22 resources such as parks and historical buildings seem  
 23 to be given more consideration than schools, towns,  
 24 hospitals and homes. An example of that is the  
 25 proposal to eliminate the overflights of Big Bend in

1 favor of flying over populated, private land. If the  
 2 impact is truly minimal, as stated by the Air Force  
 3 in the EIS, why not fly over the Big Bend or the Mall  
 4 of Abilene.

5 (PAUSE)

6 MR. BURKE: The concerns of people  
 7 actually living under the proposed Lancer MOA are  
 8 consistently trivialized or disregarded entirely in  
 9 the EIS. If the impact is not minimal, there is no  
 10 protocol in place to go back and change it once it is  
 11 here. I think that we -- I want to submit that it is  
 12 because the impact is known to be substantial, and  
 13 that is why some of these areas weren't included.  
 14 Thank you.

15 COLONEL BURD: I would like to call on  
 16 W. Calloway Huffaker. Mr. Huffaker is from the City  
 17 of Tahoka. **008014**

18 MR. HUFFAKER: Colonel Burd, ladies and  
 19 gentlemen, Congressman Stenholm, I'm W. Calloway  
 20 Huffaker, the city attorney for the City of Tahoka  
 21 here representing the city council of the City of  
 22 Tahoka to present a resolution against this  
 23 initiative.

24 We in the City of Tahoka, population of  
 25 approximately 2,500, and of the county, approximately

PD-4

1 7,000, strongly oppose this initiative for the  
 2 reasons that have previously been stated here this  
 3 evening and others that we would additionally point  
 4 out to this group here this evening.

5 We in the rural areas live in these rural  
 6 areas for the quality of life. The quality of life  
 7 is very important to us. We appreciate the quiet,  
 8 the peacefulness that is afforded in these areas.

9 Because of this initiative, I would point  
 10 out that -- to you as an individual and to the people  
 11 here at this gathering tonight that this is a perfect  
 12 example of a governmental entity taking advantage of  
 13 a population that is not comparative to the urban  
 14 centers such as Dallas, Houston and San Antonio. You  
 15 are taking advantage of the low population and trying  
 16 to utilize this initiative to get a -- a flying zone  
 17 which would benefit the Air Force and impact as few a  
 18 people as possible.

19 We in the country do not feel that that is  
 20 fair. We do not feel that you are taking our rights  
 21 into account. We would strongly urge you to look at  
 22 other places which are less populated and strongly  
 23 urge you to look at federal lands that are not  
 24 populated to use this initiative.

25 (PAUSE)

BR-5

1 MR. HUFFAKER: Lastly, this is another  
2 example of you using our land and not compensating us  
3 for it.

4 (PAUSE)

BR-4

5 MR. HUFFAKER: If I want to go hunting  
6 or fishing on my neighbor's land, I compensate him  
7 for it. If someone wants to come hunt and fish on my  
8 land, I am compensated for it. You are going to  
9 adversely affect my ability to make a living by  
10 utilizing the air space above my land, mainly in the  
11 hunting of the sandhill crane, which is becoming very  
12 prominent in our area. I would ask this panel to  
13 strongly look at that.

14 We in the rural portions of this country  
15 strongly support strong defense, and we are not in  
16 this to stop a strong defense. We are here to ask  
17 you to go somewhere else. Thank you.

18 COLONEL BURD: I'd like to now call on  
19 Mayor Jerry Marshal from the City of Rotan. 008015

20 MR. MARSHAL: I think I'm a little  
21 shorter.

22 Colonel Burd, thank you, sir.

23 Like it has been said, I am Jerry Marshal,  
24 mayor of the City of Rotan. Also, for the record, I  
25 would like to say that I'm immediate past president

1 of West Texas Texas Council of Governments and the  
2 Texas Midwest Community Network. And I say that not  
3 to toot my horn, but to say that because I fully  
4 believe in regional cooperation.

5 Had this project not being here created a  
6 negative impact on Abilene and the City of Abilene  
7 and Dyess Air Force Base, then I might not be here.  
8 But since it could certainly create a negative impact  
9 on our area and the City of Rotan, then I am here.

10 Much has been said of the quality of life,  
11 and you all heard that. We say that over and over to  
12 our city folks, because that is all we have out here  
13 is quality of life. It is quiet. And in the City of  
14 Rotan. We have no trains. We have no -- very few  
15 planes. We have no traffic. So, therefore, that is  
16 all we have. And hunting is primarily our largest  
17 industry.

BR-4

18 I also have a letter from the District and  
19 County Chamber of Commerce, and they express the same  
20 thing that, I think, Dr. Burke and several others  
21 mentioned, that there is no -- in the EIS, there has  
22 been no significant mention of the hunting industry.  
23 That is one of the things that our Chamber of  
24 Commerce is beginning to stress, because of the  
25 declining cattle prices and the other things, and of

1 course, the oil industry.

2 It is one of those things -- I guess the  
3 bottom line is that the citizens of my city just  
4 don't want any extra noise. They like it quiet, and  
5 that is the way they want to keep it. Thank you very  
6 much.

7 COLONEL BURD: And our last official is  
8 Tommy Stanaland, Kent County Judge. 008016

9 MR. STANALAND: I am Tommy Stanaland,  
10 S-T-A-N-A-L-A-N-D. I am the County Judge of Kent  
11 County.

12 To the honorable Congressman Charles  
13 Stenholm and to the distinguished Unites States Air  
14 Force, thank you. Number one, thank you for  
15 defending our country. Number two, thank you for  
16 defending our allies who are in need.

17 As recent as now, this very moment, the need  
18 for training is evident and understandable. What  
19 isn't understandable is in this great vastness of the  
20 United States, in the huge land mass from border to  
21 border, why did you pick Kent County and the  
22 surrounding counties and --

PD-4

23 (PAUSE)

24 MR. STANALAND: Sirs, please realize  
25 that the people will be subjected to noise

BR-4

1 pollution. They will be subjected to a loss of  
2 property value, to a loss of revenue on their hunting  
3 leases.

4 Sirs, our ranchers, our farmers frankly do  
5 not want their livestock buggeded.

6 (PAUSE)

AO-50

AO-16

7 MR. STANALAND: We don't want our land  
8 damaged due to a possible fuel dumpage. We don't  
9 want our citizens, our homes, our communities or our  
10 lands put in any danger due to a possible airplane  
11 crash.

12 In closing, we the people in Kent County  
13 prefer you seek other alternatives for your training  
14 program. Thank you.

15 COLONEL BURD: We are now going to move  
16 to the second group of individuals commenting on  
17 behalf of themselves.

18 What I am going to do is I am going to -- to  
19 help speed this up a little bit, I will read the name  
20 of the individual who is up now and then also read  
21 the next person so you can be ready to come on up and  
22 make your presentation. And then when I call that  
23 person, I will read the person who is on deck.

24 Now, the first person I would like to call  
25 upon now is Brian Kelly. Then after Mr. Kelly makes

1 his comments, then Dick Crill will be the next  
 2 speaker after that. **008017**  
 3 MR. KELLY: I would like to express my  
 4 thanks for coming back over here about a year ago  
 5 when we had the scoping process.  
 6 My name is Brian Kelly. I'm the president  
 7 of the TransPecos Protection Group. We have been at  
 8 this nearly three years. What we have found over  
 9 this period of time is like the draft of the EIS, if  
 10 you have looked at -- I hope you have all read it.  
 11 If you haven't, please do. It is very educational.  
 12 The only trouble is, most of it is smoke and  
 13 mirrors. We have got about 27 pages that really  
 14 address what the issues are. I won't talk legalese  
 15 to you. I would like for you to get into this. Most  
 16 of all, please, if you would, write, call, contact.  
 17 The National Environmental Policy Act is, if  
 18 nothing else, a participation piece of federal law,  
 19 statute. Please participate. It is very important.  
 20 Mail, certified mail, return receipt, to all your  
 21 elected officials, county, state, federal, senators,  
 22 representatives, but most of all, of course, to the  
 23 Air Force.  
 24 I'm sorry, I'm not addressing you, but you  
 25 have heard me for two and a half years now, and I am

1 sure you understand how I feel. I am totally against  
 2 this, of course.  
 3 I am tired of the Air Force and the bombers  
 4 and the F-16s and so forth trying to fly into my  
 5 carport space. I have been knocked down a couple of  
 6 times back in April and May of 1996. It got me  
 7 interested about, you know, who are these guys?  
 8 Where do they come from? And we have answered all  
 9 the questions that I think we need to answer.  
 10 We would like to make an executive solution  
 11 to this, if possible. We have tried, and we have  
 12 failed. We would like to make a legislative solution  
 13 to this. Our representative, Mr. Henry Bonilla, has  
 14 worked very hard on this to no avail. Our Senator  
 15 Kay Bailey -- I'm speaking of the Air Force -- Kay  
 16 Bailey Hutchison has done the same thing  
 17 (inaudible).  
 18 The whole point of this, the very -- there  
 19 is a easy solution to it, really. The solution is  
 20 the Air Force needs to go fly over some of the 6  
 21 million acres of federally-owned land that now  
 22 exists. It needs to be like training for tanks,  
 23 training for artillery, training for Army, et cetera,  
 24 et cetera. It needs to be isolated from the human  
 25 environment. All you people sitting here live within

PD-7

1 the human environment. There is no difference  
 2 between military training for the United States Air  
 3 Force or air combat command or the Department of  
 4 Defense air forces as there is for Army tank  
 5 divisions or -- they have just got to be isolated.  
 6 That is the only solution there is.  
 7 So, please, if you would, write your elected  
 8 officials. We can -- I hope all of you got one of  
 9 these handouts that we brought with us. We have a  
 10 book of about 98 pages that we have conditioned into  
 11 this one part.  
 12 But, again, this EIS is exactly like we have  
 13 seen in 26 others, a joke.  
 14 COLONEL BURD: Mr. Kelly.  
 15 MR. KELLY: Yes?  
 16 COLONEL BURD: Your time has expired.  
 17 MR. KELLY: Thank you very much.  
 18 COLONEL BURD: Mr. Crill. And then  
 19 after Mr. Crill will be John Oudt, O-U-D-T. I'm  
 20 sorry if mispronounced that. **008018**  
 21 MR. CRILL: Thank you, Colonel Burd.  
 22 My name is Dick Crill. I have a comment  
 23 that is a question about the environment that is the  
 24 air space above my property where I live at Camp  
 25 Springs here in Scurry County.

BR-5

1 For my information, what is your plan to  
 2 compensate the affected citizens for the proposed  
 3 military occupation of our environmental air space,  
 4 whether it is above my property or in any other part  
 5 of the country? Thank you.  
 6 COLONEL BURD: Mr. Oudt. And then  
 7 after Mr. Oudt, Kay Kelley. **008019**  
 8 MR. OUDT: My name is John Oudt,  
 9 spelled O-U-D-T. My family and I ranch in Kent  
 10 County, Texas. We pay school taxes to both Kent  
 11 County and to the Snyder ISD.  
 12 I am extremely upset that -- by what I have  
 13 read in this draft EIS, and more importantly, for  
 14 what I don't read in this draft EIS. The draft EIS  
 15 is extremely complicated, and laypeople must rely on  
 16 oral statements made by the Air Force, many of which  
 17 were made here tonight.  
 18 For example, the Air Force has repeatedly  
 19 told the public that they will not fly below 3,000  
 20 feet in the proposed Lancer MOA. But if you read  
 21 this EIS very carefully, you will find out, in fact,  
 22 that there continue to be four MTRs underneath the  
 23 Lancer MOA. I am talking about IR-180, with a floor  
 24 of 200 feet above ground level; IR-128, with a floor  
 25 of 600 feet above ground level; VR-1116, with of

AO-80

AO-80

AO-25

1 floor of 200 feet above ground level; and IR-154,  
 2 with a floor of surface level.  
 3 Using the usual justification, that this  
 4 special use air space already exists, the question  
 5 is, what is to keep the Air Force from using these  
 6 MTRs for B-1s? The answer that I have repeatedly  
 7 come up with by conversations with the FAA and the  
 8 Air Force is very little.  
 9 Even more misleading to me is the  
 10 representation that the new IR-178 MTR leading in the  
 11 Lancer MOA will have a floor of 2,000 feet above  
 12 ground level. While that may be true, the Air Force  
 13 barely mentions that IR-178 directly overlays  
 14 VR-1116, which has a floor of 200 feet above ground  
 15 level in those very same segments. What's to stop  
 16 the Air Force from deciding tomorrow that they need  
 17 to fly B-1s over VR-116 at 200 feet? Again, the  
 18 answer is not much.  
 19 My most serious complaints about the EIS,  
 20 however, is what it does not contain. It does not  
 21 contain any research on noise levels that we will  
 22 hear in the countryside if the RBTI is adopted.  
 23 I was naive enough to think in that the  
 24 environmental impact study the Air Force would  
 25 actually study our noise problem. Instead, they just

BR-4

BR-3

1 copied some 20-year-old data on urban noise, and then  
 2 constantly state that the noise will have no  
 3 significant impact on my life. That is not very  
 4 comforting to me.  
 5 In the scoping meeting, my neighbor and --  
 6 my neighbors and I voiced repeated concern over the  
 7 low-level training, how it would affect our  
 8 livestock, wildlife and our hunting industry. Once  
 9 again, we thought the Air Force would actually study  
 10 our problems. Instead, they just went to the  
 11 library, pulled out some old existing studies that  
 12 don't apply to our specific area and shrugged off our  
 13 concerns as unfounded.  
 14 On Page 4-93 of the EIS, the Air -- the Air  
 15 Force admits that range cattle have not been  
 16 studied. Our cattle are, in fact, range cattle.  
 17 That is it?  
 18 COLONEL BURD: Your time has expired.  
 19 MR. OUDT: Time has expired. Thank you  
 20 very much. **008020**  
 21 COLONEL BURD: Now, let's call on Kay  
 22 Kelley. And then after Kay Kelley, we will call on  
 23 William J. Weida.  
 24 MS. KELLEY: Thank you very much.  
 25 My name is Kay Kelley. The last name is spelled

1 K-E-L-L-E-Y.  
 2 We are representing the TransPecos  
 3 Protection Group. It is a group of people that are  
 4 opposed to the expansion of the military in the West  
 5 Texas area only these overflights. And we are an  
 6 informational organization and very concerned for  
 7 having the best training for our Air Forces, but  
 8 having these low-level realistic combat training  
 9 flights over populated private property just doesn't  
 10 make any sense. There is no way that we can mix  
 11 these flights with people or anything living, really,  
 12 under them and come to any kind of compromise that  
 13 will work.  
 14 All of the fears that you have been hearing,  
 15 we agree with all of them that the public has been  
 16 telling you. They are very, very, very real. I have  
 17 been under some B-1s. Also, all the stories that I  
 18 get told to me -- people have described it as being  
 19 annoyed. They have described it as they were  
 20 terrified. We will hope you will listen to us.  
 21 This area is very precious to many more  
 22 people than just the landowners and the residents.  
 23 This is sort of a sanctuary for many, many tourists  
 24 and people that just need to know that the quiet and  
 25 peace and remoteness of Big Bend country is out there

AO-16

1 for them when they vacation here. They come for the  
 2 peace and quiet, and I have never seen anyone that  
 3 wanted to go vacation in a war zone.  
 4 Is there a couple of questions I could ask  
 5 you all at this time?  
 6 COLONEL BURD: Well, as I previously  
 7 indicated, you are certainly permitted to state any  
 8 questions you have, but this is not a forum for  
 9 questions and answers.  
 10 MS. KELLEY: Well, my questions were  
 11 that I was wondering -- I recently read that there  
 12 were 93 B-1 bombers, and we knew about the ones that  
 13 have gone down in Montana in the mountainside and  
 14 most recently Kentucky, and I just wondered what  
 15 happened to the seventh B-1 that had gone down? Is  
 16 that a -- is that a crash? Is there 93 or is there  
 17 94? And that was my concern. I just wanted to find  
 18 out about that.  
 19 Also, I was concerned on the recent -- the  
 20 previous literature with no-action alternative shows  
 21 you all flying into other areas, and the one that is  
 22 in this last newsletter shows you still in 178 and in  
 23 those areas, and I was wondering about the  
 24 significance of the no-action alternative as it has  
 25 been represented in the newsletter. Thank you.

AO-60

1 COLONEL BURD: I call on William  
 2 Weida. Then after that, Rich Anderson.  
 3 MR. WEIDA: My name is Bill Weida.  
 4 That is spelled W-E-I-D-A. 008021  
 5 This entire environmental impact statement  
 6 is based on projected noise levels, and these  
 7 projections all come from an Air Force model. This  
 8 Air Force model is based on data that were gathered  
 9 in such locations as Amsterdam, Berlin, Los Angeles,  
 10 Copenhagen, Chicago. There is not a single bit of  
 11 rural data in this model. As a result, this model  
 12 has been thoroughly discredited in most places in the  
 13 world. It is not -- as a matter of fact, the work of  
 14 Schultz is not even referenced anymore in Europe.  
 15 In the United States, there are only two  
 16 agencies that use this model in an urban setting, and  
 17 that is the FAA and the Air Force. And there is only  
 18 one outfit -- and that's the Air Force -- that claims  
 19 this model is applicable to rural settings.  
 20 Now, in 1986, Air Force contract  
 21 F33615-86-C-0530, issued to Fidel and others,  
 22 informed the Air Force that this model vastly  
 23 underestimated the amount of noise that was generated  
 24 by aircraft and the amount of annoyance to that  
 25 noise. That was the second part of a study which has

1 never been referenced in any EIS. In 1993, the Air  
 2 Force's head researcher, Lawrence Fiengold, confirmed  
 3 this finding.  
 4 In 1996, Armstrong Labs published a  
 5 request for proposal which stated that they had no  
 6 model in -- that could forecast noise annoyance in  
 7 rural areas, and what's more, what they were doing  
 8 was not legally defensible, something you are well  
 9 aware of, because the last two EISs, the ones you  
 10 copied Appendix G out of, are already tied up in the  
 11 Courts.  
 12 A number of us for the last four or five  
 13 years have been providing you not only with citations  
 14 that you could reference to clean up the EIS, but  
 15 also with specific models that you could use as  
 16 alternative forecasting models. None of this has  
 17 been adopted. Instead what we have in this  
 18 particular case is a model which has been designed by  
 19 the Air Force specifically to depress noise levels in  
 20 rural areas and then has been used to try and tell  
 21 people that they will not be annoyed with the  
 22 activity that is planned to take place.  
 23 Why aren't the approved noise models being  
 24 used? Very simple. Because if the Air Force was to  
 25 use them, they could not do what is being proposed in

BR-5

1 this EIS. Thank you.  
 2 COLONEL BURD: I would like to call on  
 3 Rich Anderson. And then after that, we will call  
 4 Corky King. 008022  
 5 MR. ANDERSON: Thank you, Colonel Burd,  
 6 for the time limits.  
 7 I just -- I am going to associate myself  
 8 with the remarks that have been made, particularly  
 9 those by County Judge Ricky Fritz about private  
 10 property.  
 11 However, I would like to say that The West  
 12 has been under attack by the government for several  
 13 years now. They have attacked private property  
 14 through various acts that have been passed in the  
 15 Congress, the Endangered Species Act, the Clean Water  
 16 Act, the Clean Air Act and others. And for working  
 17 people, like Congressman Charles Stenholm, the  
 18 government would like to see an end to private  
 19 property. The environmentalists have said as soon as  
 20 we get all the cattle off of federal lands, they were  
 21 going to start on private property.  
 22 I look at this as Texas. If they drill an  
 23 oil well on my ranch, and they drilled it 50 or  
 24 60,000 feet, whatever they find down there is mine.  
 25 Conversely, if I want to build a building twice as

BR-5

1 tall as the Empire State Building on our ranch -- my  
 2 banker wouldn't allow it, you understand. But,  
 3 theoretically, if I did, I could do it, and nobody  
 4 could stop me because I own that air space.  
 5 In a lot of cities, if you own a -- people  
 6 have buildings on different sides of the street, and  
 7 they want to build a skywalk across there, they have  
 8 to make a deal with the city to either lease that  
 9 space or buy it. And so here, none of this -- none  
 10 of this is happening.  
 11 Now, there is a Mr. Penley that has written  
 12 a book. He works for the Mountain States Legal  
 13 Foundation. It is called War On The West. And,  
 14 quite frankly, I am sick and tired of it.  
 15 I noticed on your map up there a while ago  
 16 that we didn't go east of Mississippi River.  
 17 Everything was back west. And I -- and I want to go  
 18 along with the people that said you should work it on  
 19 government-owned properties.  
 20 Your Commander-in-Chief found well enough to  
 21 go to Utah, mark off about a million acres there that  
 22 nobody could do anything in, and the Congress has  
 23 marked off millions of acres for wilderness areas,  
 24 and I suspect that the reason for that is because of  
 25 the environmentalists.

1 So I am going to cut to the point here. I  
2 am willing to go to the Supreme Court to tell you  
3 that I own the air over my ranch, and if you violate  
4 it, we are going to find out just how much air I do  
5 own.

6 (PAUSE)

7 COLONEL BURD: I'd call on Corky King.  
8 And then after that, Roy Davis. 008023

AO-2

9 MR. KING: Colonel, Charlie Stenholm.  
10 I am wondering if this environmental impact  
11 study studies anything about the vertices off of  
12 wings of low-flying jets. I used to fly a private  
13 helicopter on my ranching operations, and it just got  
14 too dangerous. At one point, I quit because some  
15 low-flying aircraft, oh, about 50 miles south of here  
16 over Silver, Texas, a big ranch over there -- these  
17 were coming out of Bergstrom. I visited with the  
18 people at Bergstrom, and it didn't help. They  
19 informed me that, no, they couldn't see me. Yes,  
20 they didn't have to hit me or shoot me to make me go  
21 down; they just had to be close. And that concerned  
22 me greatly.

AO-2

23 Back on the vertices or the wind off of air  
24 tips. I have got pictures of -- I have given one to  
25 Congressman Stenholm of a windmill that was taken

1 down by low-flying aircraft. This happens -- has  
2 happened through the years many times in Crockett  
3 County. And Buddy Baldrige that has already talked  
4 earlier knows of three accounts on his  
5 father-in-law's country.

6 The noise level -- my little helicopter,  
7 two-seat helicopter that I flew on the ranch one time  
8 at 8,000 feet. My guys couldn't see me coming, but  
9 they could hear me, my -- my ranch crew. And at --  
10 at 3,000 feet, a B-1, a B-2, even if they don't lower  
11 their level, has got to make extreme noise.

AO-11  
BI-19

12 I consider myself much into wildlife  
13 management. On my ranch out here, there's mule deer,  
14 white tail deer, blue quail, bobwhite quail.  
15 Yesterday, I saw two turkeys. It's the first turkey  
16 I have seen in 16 years I have had the ranch, and one  
17 toad frog. I hadn't seen one of those in years.

18 What are these hydrocarbons coming off -- out of  
19 these planes and fuel burning going to do to these  
20 animals? I wonder if it's really been approached in  
21 your study. Thank you.

22 COLONEL BURD: I would call on Roy  
23 Baze. And then after Mr. Baze, I will be calling on  
24 John Boswell. 008024

25 MR. BAZE: Colonel, my name is Roy

1 Baze. I appreciate the opportunity to speak here and  
2 enter this one page of comments.

3 I am a long time resident of Snyder. For  
4 the record, I love this country and respect the  
5 flag. I served in the field artillery in World War  
6 II, discharged as captain and spent years in the  
7 reserves. Usually, I am a strong supporter of  
8 military operations. Today, I would have to speak in  
9 opposition to the bomber training initiative for this  
10 Lancer area.

11 I don't see this as a political matter and I  
12 don't see it as an opportunity that can only take  
13 place in this Lancer area. I have had considerable  
14 experience in economic development both as an officer  
15 of an international corporation and in projects here  
16 in Scurry County. I am very much aware of the  
17 economic needs in this area.

18 Colonel, I am an experienced petroleum  
19 engineer and manager. Starting about 50 years ago,  
20 some of these Lancer counties were favored, blessed  
21 with the discovery of major oil fields. Local  
22 economies then shifted from the agricultural base  
23 over to the oil base. But, Colonel, oil fields are  
24 like people, they get old, they get tired and they  
25 wear out, and that's exactly what is happening to oil

1 fields in this area.

2 In Scurry County, the tax base declined 80  
3 percent in about the last 15 years due to the  
4 depletion of oil reserves. It has come from \$2.7  
5 billion down to \$500 million. The depletion of the  
6 oil base is going to continue. It will not get  
7 better. Dependence on agricultural is increasing.

BR-4

8 I heard the argument the Lancer area is a  
9 less costly area in which to operate. However, in my  
10 view, national and economic savings come out second  
11 best when I size up the adverse economic effects on  
12 the area and adverse economic effects on people  
13 living here and trying to make a living here when I  
14 weigh that up against the fact that, reasonably,  
15 these operations can take place in other areas. The  
16 federal government controls vast acreages better  
17 suited than Lancer private property.

18 In conclusion, sir, I respectfully enter  
19 this opposition. The Air Force considers the Lancer  
20 proposal as a win proposition, but I have to tell you  
21 that most of us here think it is losing for us.  
22 Apparently, the Air Force thinks the bomber incentive  
23 is a good label for the program, but I have to tell  
24 you many of us here think a better name for the  
25 scenario we see is bomber disincentive.

1 It is already challenging enough here to  
 2 make a living with Nature's forces of wind and  
 3 declining oil. This area doesn't need or want the  
 4 addition of a man-made disincentive.

5 I wish you success in operation, but I wish  
 6 you would move them somewhere else. Thank you.

7 COLONEL BURD: John Boswell. And then  
 8 after Mr. Boswell, Doug Riley, I think, we will  
 9 call. **008025**

10 MR. BOSWELL: My name is John Boswell.  
 11 My mother and I run a commercial cow/calf operation  
 12 in Dawson and Borden Counties on a ranch which has  
 13 been in our family for over 125 years, and we are  
 14 members of HEPA. And we also have other members --  
 15 ranch families, people that live on a ranch here in  
 16 attendance here today.

17 I was sitting here thinking before I got up  
 18 here what I was going to say, because everybody else  
 19 has said what I want to say. I want, for the record,  
 20 to be known that I am in opposition to this. And I  
 21 also, for the record, want to point out to you that  
 22 in the almost two hours I have been sitting here I  
 23 have not heard one argument in favor of the Lancer  
 24 MOA and its related MTRs and --  
 25 (PAUSE)

1 MR. BOSWELL: I want to start off by  
 2 saying that I do support a strong military, and my  
 3 comments aren't supposed to be taken any other way.

4 Since I was prepared to make a longer speech  
 5 and I only have three minutes, I will try to cut it  
 6 down. I believe that this country is the greatest  
 7 country in the world to live in. I have had the good  
 8 fortune to travel, and I know that this is the  
 9 greatest country.

10 It is times like this that it makes me  
 11 wonder why that such a great country would take it  
 12 upon itself to seize, or for a better term,  
 13 confiscate a property right of its citizens. In this  
 14 case, I believe that y'all are proposing to  
 15 confiscate the air space over our ranch.

16 And what it really boils down to is it is  
 17 not a matter of national security; it is a matter of  
 18 convenience to the Air Force pilots who want to play  
 19 war games in our backyard, and to heck with the  
 20 55,000 God-fearing, tax-paying citizens of this  
 21 area.

22 (PAUSE)

23 MR. BOSWELL: Some months ago, I  
 24 requested an environmental impact study conducted by  
 25 the Air Force. I want to tell you that as of

BR-5

1 yesterday when I left my home, I have yet to receive  
 2 one. If that is the way you do business, then I just  
 3 don't know what to think.

4 I would like to know if anybody has done any  
 5 studies on the effects on livestock. I have a  
 6 feeling that they haven't. Have you all done any  
 7 studies on how this will affect the crop dusters?  
 8 Not only do they help the farmers, but they also  
 9 spray for mesquite and other invading plant life on a  
 10 ranchland.

11 And I just really think it's a shame that  
 12 the military and the Air Force think that some of  
 13 these hearings are going to pacify our fears when  
 14 what you are proposing will have a negative impact on  
 15 a way of life that is sacred to me and many of these  
 16 eight counties, and it will affect us for years to  
 17 come. Thank you very much.

18 COLONEL BURD: I would like to call on  
 19 Doug Riley. And then after that, I will be calling  
 20 on David Freeman. **008026**

21 MR. RILEY: I am Doug Riley, and thank  
 22 you for being here today. I want to express my  
 23 appreciation to be allowed to come up and air one or  
 24 two of my views.  
 25 I thoroughly enjoyed the presentations that

BR-3

BR-2

BR-7

1 have been made here this afternoon. They make a lot  
 2 of sense to me. The thing that is running through my  
 3 mind is a couple of items that -- these low-lying,  
 4 low-flying aircraft and things, there is a lot of  
 5 activities that go on around here in the ranching and  
 6 recreation means, and a lot of kids are involved in  
 7 this. And what happens if one of these planes come  
 8 over where we got a bunch of kids at a rodeo arena  
 9 practicing on a play day or what have you and  
 10 somebody gets hurt? Who is going to be liable for  
 11 that?

12 You know, we are trying to raise these kids  
 13 to be good citizens of the United States, but if we  
 14 are forced into these situations where, you know, we  
 15 are afraid to do these things on account of these  
 16 airplanes coming up. There has been one or two come  
 17 over my house down there, and as it has been stated  
 18 here earlier, it rattled every dish in my house, you  
 19 know. And if it comes over after you've gone to bed,  
 20 you think the barn has blown up or something.

21 And the other thing that I want to know is  
 22 that in the event that you get some horses run over a  
 23 fence and cut up when one of them planes come over,  
 24 who is going to be liable for that? Is the United  
 25 States going to allow us as an individual the same

AF-15

BR-3

GE-32

1 amount of money as they allow the Air Force to fight  
2 this to see who it is, or are we going to have to do  
3 it ourselves? We are bucking a deal there that there  
4 is no winning to it.

5 Another thing that I want to point out that  
6 a lot of people here hadn't thought about, in 1970  
7 when the Cuban crisis was going on, the B-1s were  
8 flying out of Abilene. They are still flying out of  
9 there. What is the motive for putting these in and  
10 what effect is it going to have on the Stealth  
11 Bomber? Will we be having them next?

12 COLONEL BURD: Call on David Freeman.  
13 And after David Freeman, we will be calling on  
14 Ms. Sherry Gicklhorn. **008027**

15 MR. FREEMAN: My name is David  
16 Freeman. I live in Wilson, Texas. I work in  
17 Lubbock, Texas, and I drive over a half an hour to  
18 get to and from work.

19 The reason I moved out of Lubbock south of  
20 Wilson is because I like the peace and quiet, so I am  
21 not just real pleased about the proposal.

22 Secondly, it is a farming community out  
23 there. This is in the Lancer MOA. Crop dusters are  
24 needed to timely do the application of chemicals for  
25 the farmers, and we are a little bit concerned about

BR-2

BR-2

1 y'all knocking a few of them maybe out of the sky.

2 The third problem, we live right next to the  
3 Tahoka plate. A gentlemen mentioned earlier that we  
4 have got a lot of sandhill crane out there. These  
5 flocks are over 1,000 thick. They come in over  
6 winter in that area, and that is from March until  
7 October. And they fly out every morning, and they  
8 catch thermals and they follow these things up just  
9 as high as they can go, and then they glide to  
10 Muleshoe and then come back in the evening. And it's  
11 going to put them way up there. They are going to be  
12 in the area where they can do some damage to y'all's  
13 equipment and possibly your people, and that is a  
14 concern that bothers me.

BI-2

15 The other thing is, if everybody here will  
16 just for a second think about it, when you are  
17 working on your pickup and you got your hood up, and  
18 I don't know about y'all, but I'm a little short, and  
19 I can't hardly reach everything. You got the bar  
20 up. You got a foot or two hanging out, you know,  
21 trying not to get your ole shirt dirty and all and  
22 trying to do a little work there, or maybe on the  
23 stripper or on the combine. And you're about a foot  
24 and a half into it, and you got your knuckles about  
25 halfway bleeding anyway from doing the work and

AO-81

1 stuff, and then all of a sudden, wham. That is what  
2 these gentlemen are getting ready to do to us, and  
3 that is -- you are talking about people getting  
4 hurt. This isn't just for grins and looks and  
5 stuff. When you are working on cotton sprinklers,  
6 combines and equipment like that, you are talking  
7 about people getting hurt bad.

8 They said that the noise level is 42 to 62.  
9 They know better than that. That's an average noise  
10 level. That's not a single event noise level. The  
11 knock out is better than 20 dBA with the possibility  
12 that you live in your house with the doors and  
13 windows shut. That is making you a trapped animal,  
14 but I am considering that.

15 A power lawnmower is up to 90 dBA. 10 dBA  
16 difference doubles the noise. They said 40 to 62. A  
17 power lawnmower can do 90. Now, somebody is not  
18 telling the truth. I have heard these things  
19 before.

20 A B-1 bomber that's got a four-inch,  
21 13,000-pound thrust engine pushing up to 477,000  
22 pounds of aircraft, and there is no way in the world  
23 that those things can fly over you at a couple  
24 thousand feet and produce 45 to 62 dBA. That is less  
25 than a blender in your kitchen. Somebody is not

AO-81

1 telling the truth.

2 (PAUSE)

3 MR. FREEMAN: The information that they  
4 are providing us, they have got better information  
5 than that. They know that, for instance -- they have  
6 done studies on it. They know that this can  
7 interrupt -- interrupt people's sleeping. Anything  
8 over 72 dBA will wake up your baby, and it's hard to  
9 explain to a kid what is going on. It can cause  
10 increase in suicides, increase in cardiovascular  
11 disease and interrupt your school activities.

12 That's about it. I appreciate it.

13 COLONEL BURD: Thank you.

14 Ms. Gicklhorn. And then I will be calling  
15 on Preston Brouchard after that. **008028**

16 MS. GICKLHORN: My name is Sherry  
17 Gicklhorn, G-I-C-K-L-H-O-R-N, from Lynn County. I'm  
18 a farm wife, and I also represent FARM, which is a  
19 group of concerned farmers, active business people,  
20 ranchers and merchants.

21 I would like to express thanks for being  
22 able to attend tonight and also to be able to voice  
23 our concerns regarding the recent critical  
24 information that we have obtained regarding the  
25 proposed military exercises being conducted over

1 eight of our area counties, including our own county  
2 of Lynn County.

3 While we clearly understand and want our  
4 military to be well-trained and combat ready, we do  
5 not want these military training exercises to take  
6 place over these populated counties.

7 Our federal government owns millions of  
8 uninhabited areas and acres in other states that  
9 these training exercises could be conducted in.  
10 There is absolutely no reason why 50,000 plus  
11 citizens of our eight-county area should have to be  
12 put through this major disruption and also loss of  
13 certain property rights and piece of mind.

14 We are also extremely concerned about the  
15 fact that much of these areas in these counties is  
16 farm and ranchland. Besides all of us citizens,  
17 livestock, wildlife, farm and ranchland that will be  
18 adversely affected by these training exercises, our  
19 farmers and ranchers are already in extreme crisis.  
20 Please do not put them in further crisis. Our small  
21 towns also need to be protected, not hurt.

22 Please understand we are very supportive of  
23 our military, and we understand they must stay  
24 trained for our country's future and protection. We  
25 would greatly appreciate understanding our position

PD-7

1 and our concerns regarding this serious matter.  
2 Please hold these trainings elsewhere. And I do  
3 oppose this Realistic Bomber Training Initiative.

4 COLONEL BURD: I would call on Preston  
5 Brouchard. And then after that, I will be calling on  
6 Buster Welch. 008029

7 MR. BROUCHARD: I am one of a family  
8 that owns the Coleman Ranch in Scurry and Mitchell  
9 County, and I came here from California where I live  
10 to protest because I think it's an extremely bad  
11 precedent that -- it preempts a person's right to  
12 complain about flights.

13 Now, if there is a U-2 spy plane or  
14 something at a great altitude, that doesn't make much  
15 difference. If they are down at 300 feet, we ought  
16 to have the -- our property rights extend at least  
17 that far. As you go up, maybe our property rights  
18 get smaller. But as it stands now, we have a right  
19 to protest and to make complaints and to -- but the  
20 Air Force is going to get a preemptive right on this  
21 ability to protest, it seems to me.

22 I can see why they would want to do  
23 something like this, because now they have to make  
24 settlements with individuals and go to Court  
25 occasionally and pay damages. I know some of that

BR-5

1 will continue, but it -- it preempts our ability, and  
2 I think this is a first -- I don't think this kind of  
3 thing has been stated before where they take away  
4 your ability to -- to protest anywhere from 300 feet  
5 to 5,000 feet against citizens.

6 I also differentiate this from the way  
7 things were done in World War II bomber training.  
8 There was a target on our ranch which the -- the Air  
9 Force -- in Big Spring, at least they went around  
10 leasing certain lands from everybody. There was  
11 compensation. So I think that that's lacking, and it  
12 certainly should -- should be there. Thank you.

13 COLONEL BURD: I now call on Buster  
14 Welch. And then after Mr. Welch, then I will be  
15 calling on -- I am having trouble reading this --  
16 Jerry and Nancy Swafford, I believe. From Lamesa,  
17 Texas, if that helps. 008030

18 MR. WELCH: Thank you.

19 I am Buster Welch. I am president of HEPA,  
20 and I'm here to object to the RBTI, and I want to go  
21 on the record as that. But I want to say that I am  
22 real proud of our Air Force. I appreciate your  
23 coming and listening to us, and I want to thank the  
24 honorable congressman there for being here. And I  
25 think -- I want to thank all of you all for being

PD-4

1 here, and I am proud they got to see real people.

2 These are real people here. I want you to  
3 look at them. They bought a one-way ticket to come  
4 here and make a living and raise their families and  
5 educate them, and it is not an easy life. It can be  
6 hard, but it is a good life, and we love it. And we  
7 want you to think about going somewhere where there  
8 is not inhabitants. If you don't have it, buy it.  
9 And the -- that is the way we got our land, we bought  
10 it.

11 (PAUSE)

12 MR. WELCH: And I want you to know that  
13 I am patriotic. I want you to know that I am for  
14 fair. Now, if you want to get fair, well, I'll tell  
15 you what I will do. I will give up my ranch to train  
16 bombers on if all the Air Force colonels and generals  
17 will give up their retirements and all the  
18 politicians that want to bring this into Texas will  
19 give up their retirement plans. We can save the  
20 government a whole lot of money.

21 (PAUSE)

22 MR. WELCH: You know, if we are going  
23 to talk about somebody sacrificing, let's all get in  
24 it together.

25 You know, I have three -- I have one

1 minute. I have three legs that supports my  
2 business. They are hunting, they are riding cattle  
3 and they are horses, and a lot of our horses that  
4 is in our town. And cattle is my biggest income.  
5 And I -- I run 14 or 1,500 mother cows. And I sell  
6 to Coleman Natural Meats and Supreme Beef, and I  
7 probably get an average of \$15.00 over the sale barn  
8 market.

BR-3

9 But I have to ranch those cattle. I have to  
10 be out there. I have to seek them. I have to have  
11 people out there. And I don't let anybody slam a  
12 pickup door at the wrong time when I am working  
13 cattle, and much less fly one of them big airplanes  
14 there.

BR-4

15 And the thing that I depend upon most is my  
16 hunting. Since I have been out here 12 years, my  
17 hunting has tripled as how much money it brings in.

18 I want to thank you tonight.

19 COLONEL BURD: Jerry Swafford. And  
20 after that, I will be calling on Jim and Carol  
21 Wilson. **008031**

22 MR. SWAFFORD: Thank you, Colonel.

23 I am Jerry Swafford, S-W-A-F-F-O-R-D. And I  
24 thought I'd sign in with my wife tonight, but she is  
25 not going to speak.

1 My family and I have owned land in Dawson,  
2 Terry and Tom Green County for 75 years and operated  
3 businesses. My concern today is safety. I have over  
4 8,000 hours as a pilot in command. The majority of  
5 it is ag time in what you would call spray flying or  
6 crop dusting.

BR-2

7 Let me tell you the realistic truth. About  
8 eight years ago in 1992, or somewhere about that  
9 time, I was about 15 miles north of Lamesa in  
10 northern Dawson County crop dusting, and I was headed  
11 to the east one afternoon about 4:00 o'clock. And as  
12 I come up in my turn, you normally -- the lane I was  
13 flying, the way it was loaded, it gets to about 150,  
14 170 feet at the peak of my turn. As I was in the  
15 peak of my turn, I looked to the left where a shadow  
16 flipped across me. I looked up to my right, and  
17 there was a B-1 bomber that went over me at probably  
18 300 feet. We were within 120 or 30 feet of one  
19 another. So that will bring realistically to you the  
20 hazards and -- of this program.

21 I had two more instances I would like to --  
22 to relay right quick. I have a ranch in San Angelo,  
23 Texas, and in January of this year at about 12:20 at  
24 night I was laying in bed asleep, and it sounded  
25 like -- just immediately like a bulldozer pulled up

1 in your front yard with the motor wide open. I  
2 jumped out of bed and went out, and there was two  
3 black -- those big, heavy helicopters beating. They  
4 were probably 100 feet in the air or 100 feet east of  
5 the ranchhouse, and they had no lights on. The FAA  
6 requirements are to have certain types of beacons and  
7 lights running at night. The military, I assume, can  
8 get around those requirements.

9 This last Saturday morning, a turkey hunter  
10 came in and said, "What was happening last night,  
11 Jerry?"

12 And I says, "What do you mean?"

13 He said, "There was a helicopter out over  
14 the ranch with a spotlight flying when I came in last  
15 night." And I assumed it was a military helicopter  
16 out of Goodfellow. Thank you.

17 COLONEL BURD: Call on either Jim or  
18 Tim --

19 MR. WILSON: Tim. **008032**

20 COLONEL BURD: Tim and Carol Wilson.  
21 And after that, I will be calling on R. J. Grossman.

22 MR. WILSON: I am Tim Wilson from  
23 Borden County. We are ranchers, and we are clearly  
24 in opposition to the Proposal B. I agree with  
25 everything I have heard here, and my comments will

1 reflect very much what I have already heard. But --  
2 but I wanted to present our comments representing our  
3 family more from an emotional viewpoint, and I think  
4 I represent most of the people here.

5 80 years ago -- really, a little longer than  
6 that -- my wife's grandfather purchased the ranch  
7 that we currently live on with our two young  
8 children. We are the third generation, and I can  
9 assure you that the cattle business was much better  
10 back in those days than it is now. And I think you  
11 could probably say that about all of agriculture.  
12 And when you look on the horizon, there are very few  
13 bright spots out there.

14 So the question would naturally be, well,  
15 why do people stay here like that? We are young, and  
16 we have young children. Why would you want to live  
17 out here? And the answer is very simple, and you  
18 have heard it from Mr. Welch and a number of other  
19 people. It's because we can live out here with our  
20 neighbors in which is essentially a pollution-free  
21 environment with a significant lack of noise  
22 pollution. It is probably our only great luxury that  
23 we have out in this region of the United States is  
24 that we truly have peace and quiet. It's a  
25 phenomenal thing to have that. A large percentage of

BR-7

1 our citizens in this country have never experienced  
2 it. It has been that way for three generations for  
3 the family in the ranch that we live on.

4 If this Proposal B is passed, that is all  
5 gone. I mean, it is gone overnight. Poof, it is  
6 gone. And, to me -- and it is not gone just for us;  
7 it is gone for all of these other good folks here and  
8 the people that aren't here. And with all the  
9 difficulties that this region is facing that you have  
10 heard about today, it would seem to me that approval  
11 of this proposal is just knocking people or kicking  
12 people that are already down.

PD-34

13 Personally, as a taxpayer, I think that our  
14 state and federal lands should be used for this  
15 training. I think it is completely unfair to  
16 adversely impact private property when there is so  
17 much public property available. The urban patrons of  
18 these lands, if it is the Big Bend or the Yellowstone  
19 or whatever, those people would not want their homes  
20 impacted in such a way as this. I think it is simply  
21 unfair.

22 COLONEL BURD: Call on R. J. Grossman.  
23 (PAUSE)

24 COLONEL BURD: And R. J. indicated  
25 maybe, so I will take that as a no.

1 And I would like to call on Greg Pruitt  
2 now. After Mr. Pruitt, I will be calling on Terry  
3 Gillam. 008033

4 MR. PRUITT: Sir, my name is Greg  
5 Pruitt, and I am here as a representative for the  
6 Rotan Development Corporation. I would like to read  
7 a statement from this board.

8 The Rotan Development Corporation wishes to  
9 express our opposition to the military project known  
10 as the Realistic Bomber Training Initiative. Our  
11 opp -- our opposition is based mainly on that this  
12 project could greatly damage our fragile local  
13 economies.

BR-4

14 Our board administers the 1/2 cent sales tax  
15 for economic development in Rotan. Our local economy  
16 is based primarily on agricultural, cotton farming  
17 and ranching and that type of agricultural. However,  
18 there is a growing interest in this area in many  
19 types of bird and wild game hunting, and a military  
20 project such as this could greatly damage this part  
21 of our economy.

BR-2

22 Another very important part of our economy,  
23 cotton farming, is at a critical stage in boll weevil  
24 eradication. We cannot afford interference with our  
25 planes that are flying insecticide during this

BR-4

1 period. There is no guarantee from the military that  
2 there won't be conflicts over air space in the area  
3 that is involved with this boll weevil eradication.  
4 Boll weevil eradication is also supported by some  
5 federal funding, as well as this project would be, so  
6 there is a conflict there, and we see that as a  
7 problem.

8 Private property rights are very important  
9 in this part of Texas, and there are studies also  
10 based on similar type projects that have shown  
11 significant decreases in property values. There is  
12 no potential for any kind of property value  
13 increases. And like it has been said before, there  
14 is federal lands available that this project could be  
15 used for, and we feel strongly about that.

16 As a board, we are always looking for  
17 projects that help our local economy and the people  
18 that choose the rural life-styles that we enjoy.  
19 People in this area of Texas aren't antimilitary or  
20 antigovernment. However, we do not want projects  
21 forced upon us that will alter our quality of  
22 living.

BR-7

23 Thank you for your consideration.

24 COLONEL BURD: I now call on Terry  
25 Gillam. And then after that, I will be calling Joel

1 Dennis. 008034

2 MR. GILLAM: Gentlemen, Mr. Stenholm,  
3 my name is Terry Gillam. I'm a small stock farmer,  
4 and so I may not know as much as some of the rest of  
5 you do, but I do appreciate the information you have  
6 put out.

AO-62

7 The people who produce the livelihood for  
8 the armed services are being abused by that same  
9 armed service. Not many people who come into power  
10 use it wisely. There will be many people that I know  
11 that are allergic to gas fumes, some of them being my  
12 friends and one of them my wife, that it will be  
13 extremely painful and harmful to her.

14 I have a lot of other things in here, so if  
15 you'll be patient with me, well, I will skip over a  
16 bunch of it, because much of it has already been  
17 said.

18 We waste much money in government at home  
19 and overseas helping nations who are our enemies, so  
20 it would not be a waste of money to fly over desert  
21 areas, build towns, fake ones, to practice over. It  
22 would be a saving when you look at the complete  
23 picture.

24 One more example that I know personally  
25 about, in World War II in Houston they were flying

1 light aircraft, the cadets were, and they would come  
 2 in and tell of the fun they had. One of them, he  
 3 flew in and over a farmer on a tractor, and the  
 4 farmer on the -- was so afraid, he jumped off of his  
 5 tractor. His tractor went through several fences and  
 6 ended up in a ditch, because it didn't have anybody  
 7 to take care of it. There will be much of this, and  
 8 the excuse will be low-level flying. There will be  
 9 cows to be brought back home, fences to be repaired,  
 10 and no kind of compensation will be able to pay for  
 11 the trouble that we will have.

AF-15

AO-31

12 Is the additive, ethyl diprobine (phonetic),  
 13 being added to JP8 jet fuel? This additive was  
 14 removed from gasoline in 1960 due to its toxicity to  
 15 the people. Several sources say it has been added.

16 I thank you.

17 COLONEL BURD: I'll call now on Joel  
 18 Dennis. And then after that, I will be calling on  
 19 Mark -- and I can't make it out -- G-L-Z-E-S, maybe,  
 20 of Snyder, Texas.

008035

21 Mr. Dennis.

22 MR. DENNIS: Colonel, Congressman, I  
 23 appreciate the opportunity to come.

24 My name is Joel Dennis, and I am a rancher  
 25 in Borden County. I am also the president of the

1 Texas Wildlife Damage Management Association, which  
 2 is a cooperative between the United States Department  
 3 of Agriculture, the Texas A & M University system and  
 4 ourselves to protect the livestock and wildlife in  
 5 parts of the State of Texas.

6 My main concern here is safety. We have  
 7 helicopter pilots and gunners which are -- many times  
 8 are local trapping personnel, and they are in the air  
 9 at random. We hunt when the weather is good, which  
 10 we try to take advantage of as often as we can. They  
 11 also fly supercubs. We range to low-level.

BR-2

12 But when I was speaking to my helicopter  
 13 pilot that I flew with Monday, I asked him a  
 14 scenario. I said, "If we were surveying the  
 15 countryside and looking for predators at 150 feet,  
 16 and we got passed over the top by a B-1 at 300, where  
 17 would we be?" and he said, "Dead," and that kind of  
 18 struck home.

AO-2

19 The tornadic winds coming off the wing tips  
 20 would obviously be devastating to a lot of our  
 21 private aircraft that are flying, looking at the  
 22 ground, and they are supposedly in our air space here  
 23 close to the ground that we thought belonged to us.

BR-5

24 I want to close by reading a small statement  
 25 from the EIS which says, "Aircraft emission and the

1 potential for aircraft mishaps would be  
 2 inconsequential." Thank you.

3 COLONEL BURD: Mark, are you -- are you  
 4 here?

5 UNIDENTIFIED PERSON: It is Mark  
 6 Glass.

7 COLONEL BURD: If you are here and  
 8 would like to speak, please come on up.

(PAUSE)

10 COLONEL BURD: I would like to then  
 11 move to the next speaker, and that is Ray Alderman.  
 12 So if Ray Alderman is present and would like to  
 13 speak, please come forward.

14 After Mr. Alderman, I will be calling on  
 15 Wendell Strahan.

008036

16 MR. ALDERMAN: Thank you, Colonel. I  
 17 am happy to be here, and I appreciate being able to  
 18 talk to you.

19 My name is Ray Alderman, and I live at  
 20 Winters, Texas. We ranch in Coke, Nolan and Kent  
 21 County, and, of course, my reason for being here  
 22 today is because of our Kent County operations. My  
 23 son, George, operates the ranch, which is eight miles  
 24 north of Clairmont. It is known locally as the White  
 25 Camp Ranch. George lives there with his wife and

1 four children. They pretty well work the ranch by  
 2 themselves. All the kids have horses.

3 The ranch has two sources and only two  
 4 sources of income. One is the sale of cattle and the  
 5 other one is hunting leases. We have been real  
 6 fortunate on hunting leases. We have people coming  
 7 from Virginia, Tennessee. They come there and hunt  
 8 quail. It is some of the best quail country in the  
 9 state. The proposal that you have to fly low level  
 10 over this land would be detrimental to our  
 11 operation.

BR-4

12 We are not new to this business. My  
 13 grandfather came to Texas in 1869. This fall, we  
 14 will have been in Texas 130 years.

15 I will shift gears on you now and tell you  
 16 that I do honor the Air Force. I am an ex Air Force  
 17 pilot, a fighter pilot, and I graduated from Williams  
 18 Air Force Base, fighter training in the FAD, which  
 19 was the first jet that got down to the squadron  
 20 level. I transitioned to the F-84 at Luke Air Force  
 21 Base. We flew low-level missions over southwestern  
 22 Arizona. It is a tremendous amount of country  
 23 there. It was live ammunition, flying at altitudes,  
 24 so you know there had to be plenty of room  
 25 underneath. That gunnery range is still there. It

PD-4

PD-4

1 is not being used. Luke was closed down as far as  
2 tactical aircraft were concerned.

BR-4

3 Do I think that low-level flying will be  
4 detrimental to our ranching operation? I certainly  
5 do. And what -- but I have no desire at all to  
6 interfere with the best training that air crews can  
7 get.

8 But, you know, we own something like 145  
9 million acres that belongs to the government. You  
10 have got places you can fly over Snyder at 50,000  
11 feet and see Fort Bliss out at El Paso. They have  
12 got a couple of million acres there. You are not  
13 dropping ordnance with these airplanes. You are  
14 simply shooting electronic messages.

PD-4

15 Why something couldn't be worked out where  
16 the Air Force could use some of these millions of  
17 acres that the government already owns in place of  
18 imposing themselves on private property owners beats  
19 the hell out of me.

20 COLONEL BURD: I would like to now call  
21 on Wendell Strahan. And after that, I will be  
22 calling on Mark Kirkpatrick. 008037

23 MR. STRAHAN: Thank you, Colonel.  
24 Most of the comments that I have have been  
25 covered. I -- I have one comment, and this is an

PD-41

1 observation, since we don't have answers to the  
2 questions. And that is, your military operating  
3 areas, MOAs, now existing between Abilene, Big  
4 Spring, Lubbock and Wichita Falls were utilized by  
5 air bases that are now closed. Webb Air Force Base  
6 in Big Spring was closed, and Reese was closed, but  
7 they never seem to abandon military operating areas.  
8 With that premise, I would presume your proposed new  
9 area would be just as permanent, and we are not  
10 talking about something temporary.

11 The other comment is that our Air Force and  
12 our neighboring forces are now training -- and I  
13 don't know where -- but they sure look competent on  
14 TV, and so they must be training somewhere. And I  
15 would think to go back to that place where you are  
16 training now. And if the premise is that you don't  
17 have the fuel to get there, I think our economy, if  
18 it is supported and continues to grow and pays taxes,  
19 will pay for that fuel.

BR-4

20 In answer to -- I believe Mr. Boswell  
21 mentioned the environmental study. It didn't mention  
22 the noise cost or what cost it might have on  
23 livestock. Well, on Page G-13 of that study, I  
24 noticed that it affects livestock as follows: The  
25 sporadic jumping, galloping, vocalization and random

BR-4

1 movement. I invite your environmental people to  
2 stand in a corral that has been suggested here with  
3 either livestock, cattle or horses, or mount one, and  
4 let's send a bird over and see what happens.

5 And I thank you.  
6 COLONEL BURD: Call on Mark  
7 Kirkpatrick. And after that, I will call on George  
8 Newman. 008038

9 MR. KIRKPATRICK: Colonel, my name is  
10 Mark Kirkpatrick, K-I-R-K-P-A-T-R-I-C-K, from Post,  
11 Texas. I am also a member of the school board in  
12 Post.

13 I would like to concur with what everybody  
14 has said here this evening. I would like to  
15 reiterate a couple of points. Number one, that the  
16 economic impact it will have on our school districts  
17 and our -- our governments as far as the land values  
18 falling. I think mostly ranchers will be the first  
19 people in the appraisal offices, if you start flying  
20 jets over their land, to try and get the appraisal  
21 district to lower their land values, because it is  
22 not worth as much.

23 Secondly, I would like to say that this --  
24 this part of the country is very unique, in that we  
25 have got several people here that represent fourth

1 and fifth generation ranchers. Their families were  
2 some of the first people in these counties. And  
3 if -- if you are going to consider the endangered  
4 species of animals, why don't you consider the  
5 endangers species that this may become as these kind  
6 of acts continue. Thank you.

7 COLONEL BURD: I'll call on George  
8 Newman. And then after that, I will be calling on  
9 Glenn McClarity. 008039

10 MR. NEWMAN: Thank you, Colonel, and  
11 thank you, Congressman Stenholm, for being here.

12 I am George Newman. I am a rancher, and I  
13 am a professional biologist. I have my Doctorate  
14 Degree from Texas A & M in wildlife biology. I have  
15 been involved in writing and researching several  
16 environmental impact statements over my professional  
17 life. But unlike the rest of the people that have  
18 spoken here, I already ranch under one of these  
19 low-level flight corridors.

20 If you will look at your map that was  
21 provided to us by the Air Force, you will see a dark  
22 line, and you will see the northernmost point of that  
23 line where aircraft come from the southeast and turn  
24 at that northernmost point and go to the southwest.  
25 My house is right at that point, my ranchhouse in

1 West Andrews, Texas, and Eastern Lea County, New  
2 Mexico, and I get low-level flights all the time. It  
3 has been particularly bad with the B-1s over the past  
4 several years.

AF-8

5 I was in this position that the gentleman  
6 spoke of just a few minutes ago. Four or five  
7 cowboys, myself included, had just rounded up a  
8 six-section pasture. We had just penned cattle, cows  
9 and calves, about 200 of them, in a gathering pen  
10 when two B-1 bombers came over at treetop level one  
11 right after the other. Of course, we had cattle that  
12 broke out. We had several crippled, though not  
13 permanently. We had horses pitching. The cowboys  
14 were good enough to stay on them. One of the B-1s  
15 circled and came back over. Why? I don't know. I  
16 don't know if they were enjoying the rodeo or what.

BR-3

17 I have been in a pasture when I felt the  
18 muscles of that horse tense up before I could sense  
19 anything. I saw the wild-eyed look in his eyes, and  
20 then I felt the rumble as the B-1 came right over my  
21 head.

22 I suggest to you that some of you be in that  
23 position. I will provide the horses. If I don't  
24 have enough, I am sure Buster Welch will provide some  
25 horses for you. But come on out, and let these

1 people that have written these environmental impact  
2 statements be a part of that so that they know  
3 exactly what it is that is happening to them.

4 I, too, support the armed forces. I  
5 appreciate them very much. Only in this country  
6 could we come and speak like this and not be fearful  
7 of what might happen to us.

8 So thank you very much.

9 COLONEL BURD: I now call on Glenn  
10 McClarity. And after that, I will be calling on Doug  
11 Thompson.

008040

12 MR. McCLARITY: Hello, Colonel Burd.  
13 For the record, my name is Glenn McClarity.  
14 I have been a resident of Scurry County for 19 years  
15 and have employed during those 19 years as the chief  
16 pilot for Patterson Energy, Incorporated, which a  
17 publicly-held oil well drilling company.

18 As the corporate pilot for Patterson Energy,  
19 my job entails flying our company personnel to and  
20 from Winston Field in our turbo prop aircraft to  
21 varying destinations. I fly approximately 300 hours  
22 or 75,000 miles a year.

23 My purpose in speaking to you this afternoon  
24 is to register not only my personal opposition, but  
25 also the opposition of the management of Patterson

1 Energy, Incorporated, to the proposed RBTI.

2 In the limited time I am allowed to speak, I  
3 would like to address the concept of military  
4 operating areas, or MOAs, as they are commonly  
5 referred. We have a saying in aviation, MOAs are  
6 like flies. They are everywhere, and they breed  
7 constantly. They are large blocks of public air  
8 space designated by the Federal Aviation Agency that  
9 are allocated to the military for their inflight  
10 training purposes.

BR-2

11 Whenever MOAs are in use by the military,  
12 the use of that air space is denied to civilian air  
13 traffic that is operating under instrument flight  
14 rules. When that air space is denied to civilian  
15 use, we have to go under, over or around that MOA,  
16 regardless of the weather conditions. I recognize  
17 the Air Force's need for MOAs, but I question the  
18 necessity of even more air space being gobbled up by  
19 the military.

20 Here is an interim chart. From the far left  
21 side of the chart is El Paso, Texas, to -- the  
22 southeast quadrant is San Antonio. Lubbock is at the  
23 very top. Snyder is just about in the middle. The  
24 red areas that you see entail military operating  
25 areas. They got a bunch of them. There is millions

1 of square miles of air space there, and yet the Air  
2 Force wants more. They are proposing the additional  
3 large and very inclusive Lancer MOA that will  
4 literally sit on top of Scurry County, Snyder and  
5 Winston Field and the surrounding countryside.

BR-2

6 Once the Lancer MOA is in place, general  
7 aviation aircraft arriving or departing from Winston  
8 Field will be subject to numerous restrictions that  
9 will result in both takeoff and arrival delays.

10 In terms of national security? Perhaps it  
11 is more accurate to say in terms of U. S. Air Force  
12 convenience.

13 I only wonder why the Air Force couldn't  
14 waive this convenient intrusion into our backyard and  
15 utilize the air space that has already been  
16 designated for them. Go west to Mt. Dora. Go south  
17 next to Texon. Go fly the low-altitude training  
18 groups above Alternative C or D, but please don't  
19 come to Scurry County. Leave our air space as it is,  
20 and let us get on with the job of raising cotton,  
21 cattle and kids in some semblance of peace and  
22 quiet. Thank you.

23 COLONEL BURD: I'll now call on Doug  
24 Thompson. And then after that, I will be calling on  
25 Gary Lawrence.

1 MR. THOMPSON: Thank you. 008041  
 2 My name is Doug Thompson, and I serve as  
 3 volunteer and executive director of HEPA. And as  
 4 most of you know, probably from being out in the  
 5 lobby, we oppose this Alternative B. And I am here  
 6 tonight as the executive director and here to speak  
 7 on some of the administrative things we are concerned  
 8 about.  
 9 The first has to do with where this hearing  
 10 was originally scheduled. I don't know how many are  
 11 aware that down the hall there is a room, the lunch  
 12 room. If you go look in that, there is a lot of  
 13 pillars, and it maybe will hold about 100 people or  
 14 so. There is 438 people here tonight. The Air Force  
 15 thought that room was going to be just fine. As a  
 16 matter of fact, the high school told the Air Force  
 17 about the inadequacies of that room, and the Air  
 18 Force said, "Don't worry about that. That is all we  
 19 need."  
 20 The second issue -- and Mr. Boswell made the  
 21 point early on -- he hadn't got his environmental  
 22 impact statement. Well, the Air Force knows this,  
 23 and I will tell you that, from what we have heard,  
 24 the Air Force has sent out about 1,200 copies of the  
 25 environmental impact statement. We gave them about

GE-26

1 500 of those names on our own, so that shows you  
 2 where the other -- how much research was done to get  
 3 those out.  
 4 They had one library for this whole  
 5 eight-county area where they were going to send the  
 6 environment impact statement here in Snyder. We got  
 7 them -- we gave them five of our libraries when we  
 8 saw what was happening, and asked them to send it to  
 9 Post, Rotan and some of the other ones.  
 10 So a lot of people -- we have been calling  
 11 people. We called about 600 people on our mailing  
 12 list last night or over the last week to get them to  
 13 this meeting. A lot of people go to church on  
 14 Wednesday night in the part of the country, so this  
 15 is a very inappropriate night for this meeting. We  
 16 have got 438 people, but there is still a lot of  
 17 people in church praying for us. But we have got  
 18 these people here, and I encourage you to send those  
 19 letters back in.  
 20 But if it wasn't for the work that HEPA has  
 21 done -- and we are not trying to pat ourselves on the  
 22 back. But what the Air Force was doing was they  
 23 placed one ad for this meeting. In all of the eight  
 24 counties, they placed one ad last week in the Snyder  
 25 newspaper advertising this public hearing, and that

GE-26

GE-2

GE-22

1 was filled with a lot of other things about how their  
 2 EI -- the environmental impact studies in New  
 3 Mexico. We didn't need to know that.  
 4 HEPA has run a series of three ads in eight  
 5 newspapers for the last month or so. We also paid  
 6 for 50 radio spots in Snyder to get people here.  
 7 Somewhere, someone made a decision in the  
 8 Air Force of how much money was going to be allocated  
 9 to telling the people in this eight-county area about  
 10 what was going to be ongoing, and we think they made  
 11 a serious error in judgment in terms of what was  
 12 going to be going on, because people here are very  
 13 concerned about what is going on.  
 14 And we just would like to encourage all of  
 15 you to continue to share with the Air Force your  
 16 concerns of the opposition. Thank you.  
 17 COLONEL BURD: I would like to now call  
 18 on Gary Lawrence. And then after that, I will be  
 19 calling on Powell Box. 008042  
 20 MR. LAWRENCE: Colonel Burd and  
 21 Congressman Stenholm, thank you for the opportunity  
 22 to speak at this hearing.  
 23 My name is Gary Lawrence, and I am  
 24 president, chairman and CEO of Norwest Bank in  
 25 Lubbock. I am also the past immediate chairman for

1 the last three years of Market Lubbock, Inc., which  
 2 is the city economic development corporation. So I  
 3 have spent some time not only in Lubbock looking at  
 4 our economy, but also this entire region because we  
 5 are kind of linked together. Our bank serves  
 6 customers from as north to Dalhart, Texas, east of  
 7 Paducah, Texas, west of Seminole, Texas, and south to  
 8 Abilene.  
 9 Environmentalists talk about endangered  
 10 species. And Mark Kirkpatrick, he kind of stole my  
 11 line here, but I think it is worth repeating. I am  
 12 here to tell you that ranchers in West Texas are  
 13 becoming an endangered species due to the price of  
 14 cattle and the amount of capital to operate a ranch  
 15 today. I am real worried about our future in West  
 16 Texas in some of these critical areas.  
 17 Ranchers have turned to hunting and hunting  
 18 leases to create income. Not supplement income in  
 19 many cases, but to create income to survive in these  
 20 days. I have a small customer in Kent County that,  
 21 without hunting income, would have gone out of  
 22 business the last two years. If wildlife is harmed,  
 23 then the resource of -- the source of income will  
 24 deteriorate and more ranchers will go out of  
 25 business, in my opinion.

BR-4

1 Recent sales of ranches have been to --  
 2 mainly to rich people from Dallas and Houston and  
 3 other big cities in Texas, because our people don't  
 4 have the -- the wherewithal when you can't make any  
 5 money raising cattle to make debt service payments.  
 6 These people from the outside towns, they want  
 7 wildlife and not noise. They want to get away from  
 8 noise, not come to it.

9 This proposal, in my opinion, will lower  
 10 the future land prices in this area and will reduce  
 11 the borrowing bases for borrowing customers, which  
 12 will -- which will contract an already depressed  
 13 economy in this region.

14 With great respect, I hope this proposal is  
 15 not implemented. Thank you very much.

16 COLONEL BURD: I would call on Powell  
 17 Box now. And then after that, I'll be calling on  
 18 Tory and Brenda Remy. **008043**

19 MR. BOX: Yes, my name is Powell Box.  
 20 The last name is B-O-X.

21 I tell you what, I was raised in West Texas  
 22 all my life, Sweetwater, Roscoe. I always had a  
 23 dream of owning my own ranch. Me and my wife worked  
 24 our tails off, earned the money and bought the  
 25 ranch. We are out here 18 miles northeast out toward

1 Buster.

2 And just Tuesday morning, our kids were  
 3 taking a nap, and eight helicopters flew right over  
 4 the house. I wouldn't have spoke if that hadn't have  
 5 happened. It woke both of our kids up. It woke me  
 6 up. I was home sick.

7 And now, that is not livelihood, people.  
 8 That is not -- we moved out there to have peace and  
 9 quiet. We have a big wheat field around the house.  
 10 The mule deer, 60 and 70 of them, come in there every  
 11 evening. I have seen it with my own eyes, these  
 12 helicopters and planes come over. Those deer, they  
 13 don't stay in the fields. We don't even hunt them.  
 14 We enjoy them. We can't even enjoy them now.

15 Our livelihood -- I want my kids to have  
 16 peace and quiet. I want to know when I send my  
 17 4-year-old out on his little pony, he ain't going to  
 18 get bucked off out in the pasture or run off with.  
 19 Those are my concerns as a father, and those are my  
 20 concerns as a citizen of Scurry County.

21 I have been here all my life, and I am doing  
 22 what I do. I've worked in the oil field, too. My  
 23 day starts at 5:00 every morning, and it ends at  
 24 10:00 after the news every evening. What about the  
 25 quality of sleep? You all talk about all these tests

BR-3

AO-26

1 that you all have looked at, all these examples.  
 2 What about me? What about my family? What about the  
 3 other ranchers and farmers and just people that enjoy  
 4 the countryside just to go out and have a nice  
 5 restful night?

6 If I wanted planes, I would have moved to  
 7 Irving, Texas. I want peace and quiet. I want a  
 8 good surrounding for my family and my kids, and that  
 9 is all I have to say.

10 COLONEL BURD: Call on Tory and Brenda  
 11 Remy. And then after that, I will be calling on Mark  
 12 Graham. **008044**

13 MR. REMY: My name is Tory Remy.  
 14 I have been involved in litigation with the  
 15 Air Force in another low-altitude route for about a  
 16 year and a half now. There are tremendous  
 17 similarities between the two suits. This will not  
 18 stand up in Court. Unfortunately, this is where it  
 19 is headed. I think you know it won't stand up in  
 20 Court. You have heard plenty of people talk about  
 21 the inconsistencies and the disinformation that has  
 22 been perpetrated on us.

23 I think that it is really wrong to spend so  
 24 much time and effort and taxpayer money trying to  
 25 perfect a mistake. I think it would be very

1 important to consider that substantial investment,  
 2 which we will all have to make if we finally get to  
 3 litigation on this, is not the right thing to do.

4 I am not only promilitary, I am something of  
 5 a hawk. I believe if you don't want to fight, you'd  
 6 better be ready to fight. I believe that very much.  
 7 Our founding fathers were that way.

8 There is some issues here that they had to  
 9 really struggle with. One of them had to do with how  
 10 to have the military be big and strong and good and  
 11 serve a country and not run it. One of the things  
 12 they came up with was the Third Amendment.

13 I have had the personal experience of being  
 14 in my house and happened to get buzzed by a fighter  
 15 and have conversations disrupted, felt the vibration  
 16 inside and run outside to see it disappear above the  
 17 barn before I could even get to the front door. And  
 18 I was so thankful no one was shoeing a horse in there  
 19 at the time.

20 This is an intrusion into the home. This is  
 21 a Third Amendment issue. This is not just a debating  
 22 issue. These guys say right there in EIS that they  
 23 are going to obey the Federal Aviation Regulations  
 24 and miss your house by 500 feet. That airplane was  
 25 more than that away from me, and it wasn't at the

AF-8

BR-5

1 ungodly speeds that these airplanes are going to be  
 2 flying, and it wasn't a B-1; it was a fighter plane.  
 3 That is a Third Amendment issue. That is not open  
 4 for taking. Our founding fathers saw to that.  
 5 The military does not have the right to take  
 6 a portion of the value of your home and cause you to  
 7 have to support the military. This country is not  
 8 set up this way.  
 9 I believe the patriot is one who loves and  
 10 defends his country. I believe that we can defend  
 11 our country, and we can try to see that the military  
 12 is not able to wrongly confiscate property, and that  
 13 it should service this country. Thank you.  
 14 COLONEL BURD: I would like to call on  
 15 Mark Graham now. And then after that, I will be  
 16 calling on Carla and Dan Ducet. 008045  
 17 MR. GRAHAM: Congressman Stenholm, I'm  
 18 glad to see you. Officers.  
 19 I am Mark Graham, G-R-A-H-A-M. I have been  
 20 a pilot since I was 15. I have lived in Scurry  
 21 County as a resident for over 20 years sometimes as a  
 22 rancher, and like in the audience, always a  
 23 taxpayer.  
 24 Now, Glenn McClarity really kind of stole my  
 25 thunder on the MOAs. Earlier today, I counted them

TY

1 in Texas. 41 Texas MOAs. The Reeves one, two and  
 2 three are 75 by 100 miles. In New Mexico, I counted  
 3 16 with the size of 200 by 100 miles with a roaming  
 4 of 5107 bravo. And like the other gentlemen, I agree  
 5 that the MOAs tend to expand and never retract.  
 6 And that is all I have.  
 7 COLONEL BURD: I now call on Carla and  
 8 Dan Ducet. And then after that, I will be calling on  
 9 Mike and Molly Tatum.  
 10 (PAUSE)  
 11 COLONEL BURD: We will move on with  
 12 Mike and Molly Tatum then. After that, I will be  
 13 calling on Robie Robinson. 008046  
 14 MS. TATUM: Thank you.  
 15 My husband wasn't able to come tonight, so  
 16 I'm -- I came just so I could become more aware about  
 17 the bomber training and become more -- get more  
 18 involved in what was going on in my community, I  
 19 guess.  
 20 I have heard a lot of people talking about  
 21 this, but this was the first meeting I had really  
 22 been to. And I came here tonight hoping that some of  
 23 my fears would go away after this meeting, and that I  
 24 wouldn't be so fearful of what is happening to my  
 25 home life.

AO-42

1 We also recently had a plane to come over  
 2 our place that spooked our horses and was very  
 3 disruptive to our household, and it was very  
 4 frightening to me.  
 5 And unlike most of the people here, we are  
 6 not ranchers. We have a small piece of property here  
 7 in Scurry County, and we have been able to raise a  
 8 little bit of livestock and two kids on that. Our  
 9 children are very involved in showing horses and  
 10 rodeoing, and we spend a lot of time in our roping  
 11 pen with other friends and their kids roping.  
 12 And just for the record, my dad was Doug  
 13 Riley that spoke a while ago about the kids in this  
 14 community that do spend a lot of time going to  
 15 rodeos, horse shows and just riding with their  
 16 parents. There is a lot of babies out there, folks.  
 17 There is a lot of these ranchers out here, they just  
 18 don't wake up one morning and become a cowboy. They  
 19 have got those kids on horseback, and they are 3 and  
 20 4 years old, so their parents know where they are  
 21 when they are working cattle. Something like this  
 22 comes through and you are out there getting them, it  
 23 could be devastating.  
 24 And I -- I guess I came here tonight because  
 25 I really felt like I was going to hear that the

1 planes wasn't going to fly that low and these things  
 2 wasn't going to happen. But after my dad sat down, a  
 3 man from the Air Force come and give him a piece of  
 4 paper saying who we could contact if our horses get  
 5 cut up or if our kids get killed. This doesn't make  
 6 me feel any better. I'm sorry.  
 7 COLONEL BURD: I would like to now call  
 8 on Robie Robinson. And then I would call on Marshal  
 9 Bennett. 008047  
 10 MR. ROBINSON: My name is Robie  
 11 Robinson, R-O-B-I-E, R-O-B-I-N-S-O-N. Not only do I  
 12 live here in this area as a landowner, but I am also  
 13 an elected official. I'm the elected county attorney  
 14 of Fisher County, Texas.  
 15 I think there is some common ground here  
 16 that hadn't been considered yet. I want to join  
 17 Congressman Stenholm and everyone else in thanking  
 18 you all personally and the rest of the Air Force for  
 19 providing us the most efficient and best-trained  
 20 military in the world. There is no question about  
 21 that. I watch CNN. I read the newspaper every day.  
 22 We have some very efficient fighting men and women  
 23 working for us. It is also affordable training that  
 24 they get; otherwise, they wouldn't have gotten it  
 25 already. They are already getting it without any

PD-1

PD-1

1 undue burden on the private sector, those of us out  
2 here who are not in the military.  
3 Alternative A, no action, will allow this to  
4 continue, so we can keep seeing the same positive  
5 results in the newspaper, and we can be proud of what  
6 we have.

BR-7

7 Quality of life is a very important issue  
8 that was not really addressed adequately in this  
9 draft EIS. Quality of life, according to that, boils  
10 down to what makes people happy. Quality is not --  
11 of life is not simply a decibel noise level. There  
12 is a little bit more to it than that.

BR-4

13 As Dr. Burke and several other people  
14 pointed out, in agricultural income hunting leases  
15 are becoming ever more important. Hunting and  
16 tourism, whether it is fishing, hiking, camping,  
17 those things are what are going to make the  
18 difference for people to stay around and keep raising  
19 cattle and for people to keep living in this  
20 environment.

21 What we have to offer is not Time Square.  
22 It is not Disney World. We can't offer people lights  
23 and sounds. What we have is exactly the opposite; we  
24 have peace and tranquility that we can offer to  
25 people.

1 This draft EIS evaluates animal behavior and  
2 results to noise, but it ignores human behavior in  
3 terms of whether these people are actually going to  
4 come here and provide us the income that lets us feed  
5 and educate our children.

6 You say that the Lancer MOA saves money.  
7 Well, maybe it does. If it does so, every penny it  
8 saves it puts on our backs. You choose a small area  
9 like this without enough people to oppose it and ask  
10 them to shoulder that entire burden, and we can't do  
11 it. We cannot do that and stay around. It will put  
12 people out of business. We rely on that too  
13 greatly.

14 I am asking you now to go back and look at  
15 the social and economic impact of the -- of the  
16 Lancer MOA on this area.

17 Alternative A, no action, we have the most  
18 effective, the strongest and the best-trained  
19 military fighting for us in the world, and we can  
20 continue living here and raising our families the way  
21 we know how to do and we are proud to do. Thank  
22 you.

23 COLONEL BURD: Now, I'll call on  
24 Marshal Bennett. And after that, I will be calling  
25 on Drew Bullard.

008048

AO-47

1 MR. BENNETT: I am Marshal Bennett, the  
2 Fisher County Judge, and I had to follow my attorney,  
3 thank you very much.

4 I was contacted by Buster Welch about a year  
5 ago, and at the time we were talking about a  
6 5,000-foot ceiling and all. Now, it got down to  
7 3,000, and now I came in today and it's down to 200.

BR-2

8 I don't have a horse that can be spooked or  
9 anything, but I do have a lot of farmers. The  
10 farmers right now are in the real process of trying  
11 to have a boll weevil eradication. And I think with  
12 this 200-foot or 300-foot ceiling you are talking  
13 about, low-level, not only are we going to have  
14 restricted air space, we're probably going to have  
15 closed air space.

16 These men are sitting there, and they've  
17 spent time and money on trying to fight the boll  
18 weevil, and they don't need to be sitting around  
19 fighting the Air Force on this same thing. Thank you  
20 very much.

21 COLONEL BURD: I would like to  
22 apologize to those officials who should have been  
23 included in the first group.

24 I would like to call now on Drew Bullard.  
25 And after that, I will be calling on Crawford

008049

1 Edwards.

2 MR. BULLARD: I am Drew Bullard, and I  
3 am an official trustee at Western Texas College, and  
4 I want to take a little bit different perspective  
5 than we have had.

6 At the Western Texas College, we have just  
7 started a work force education center, which has been  
8 very successful. It has state-of-the-art equipment.  
9 It is designed to attract business, to allow distance  
10 learning and video conferencing, and we have had  
11 tremendous response from businesses.

12 One of the businesses that uses this is  
13 Harver Industries, which has attracted statewide  
14 attention. Mr. Harver has met with Governor Bush,  
15 and we have had a number of politicians tour the  
16 facilities. And it's -- it has a tremendous ability  
17 to attract other businesses that would relate to  
18 Harver, which is a cotton-spinning mill.

19 And I think that this will -- something like  
20 the -- the Realistic Bomber Training Initiative will  
21 kill economic development here, because it is a very  
22 competitive business. And if somebody says, "I am  
23 going to put a business in Snyder," they say --  
24 another town or region says, "If you want to have  
25 these" -- "do you know they have bombers flying over

BR-2

1 there all the time over their airport? You may not  
 2 even be able to get into their airport."  
 3 We have an airport here that is big enough  
 4 to accommodate some corporate jets. They come in  
 5 quite often. If they can't come in or they're even  
 6 worried about their safety, it is going to hurt us.  
 7 It is going to hurt our economic development.  
 8 Another thing that I want to mention is the  
 9 character of the West Texas people that we have seen  
 10 here. Most people -- in fact, everyone has been very  
 11 polite. People support the military, and they are  
 12 behind the military, and they are patriotic, but I  
 13 hope that the military doesn't take this to mean  
 14 there is not a lot of passion behind what they are  
 15 saying.  
 16 And I think this passion will be reflected  
 17 in several ways. One is we are here making a  
 18 reasoned argument, hoping that the military will see  
 19 our point. If that doesn't happen, I have no doubt  
 20 that the money will be generated to go to Court and  
 21 fight it all the way, whatever it takes. And the  
 22 third thing is political. If that doesn't work,  
 23 people are going to have long memories when this  
 24 comes over. And people are getting upset, losing  
 25 jobs and having their life-style destroyed, and we

AF-38

PD-7

GE-29

1 may have to try to get people that support us. Thank  
 2 you for the opportunity to speak.  
 3 COLONEL BURD: I would like to call on  
 4 Crawford Edwards. And there will be following a  
 5 Steve Godwin. **008050**  
 6 MR. EDWARDS: My name is Crawford  
 7 Edwards.  
 8 Ostensibly, the Lancer MOA and the other two  
 9 Alternatives B and C are to conduct low-level  
 10 missions. To my knowledge, Desert Storm, trying to  
 11 effect Saddam Hussein, nor the recent deboggle in  
 12 Belgrade were there any low-level bombing missions  
 13 flown by B-1Bs or B-2s. I stand to be corrected on  
 14 that.  
 15 The second point I would like to make is,  
 16 these fine people have asked some excellent  
 17 questions, very germane questions, yet difficult  
 18 questions. They have given you an answer, and the  
 19 answer is to conduct these missions on  
 20 government-owned land. So although they have asked  
 21 these difficult questions, they have given you an  
 22 answer on it.  
 23 Now, the third thing that has been brought  
 24 to my attention recently is that, as far as economic  
 25 or anybody else knows, not one person in any of these

GE-29

AF-15

1 lands came to conduct the draft EIS. We would ask  
 2 you to at least come to this land, walk on this land,  
 3 instead of drafting a draft EIS from Washington or  
 4 Abilene or wherever. Thank you.  
 5 COLONEL BURD: Is Steve Godwin here?  
 6 Please come forward. And after that, I will be  
 7 calling on Randall Murphree. **008051**  
 8 MR. GODWIN: I am Steve Godwin,  
 9 president of Stonewall Kent County Farm Bureau. We  
 10 represent 515 farm families in a two-county area.  
 11 I appreciate Congressman Stenholm here and  
 12 certainly our state representative, David Counts',  
 13 comments, and Colonel Burd, you giving us the  
 14 opportunity to voice our opposition.  
 15 The message from our county farm bureau is  
 16 very simple: We oppose any low-level bombing  
 17 training over our area.  
 18 I would like for the gentleman that is  
 19 passing out the card from the air base where you turn  
 20 in complaints -- I lost a windmill this last year. I  
 21 would really like to know who to contact over that.  
 22 Hunting in -- has been a Godsend for us in  
 23 1998. It's been a really tough year, drought, low  
 24 prices. We take our hunters in on horseback. We  
 25 have got a lot of deep canyons. The scenario that we

BR-3

BR-2

1 have talked about with horses would be catastrophic,  
 2 not to mention I have one grandchild, a 7-year-old  
 3 granddaughter, that rides all the time. It would be  
 4 really rough on us.  
 5 And I say this very candidly, I don't want  
 6 to be compensated. I don't want you flying over my  
 7 country. Thank you.  
 8 COLONEL BURD: Call Randall Murphree.  
 9 And then after that, I will be calling on that B. J.  
 10 Baldrige. **008052**  
 11 MR. MURPHREE: Colonel, Congressman  
 12 Stenholm, thank you for the opportunity to speak.  
 13 My name is Randy Murphree. I have spent 48  
 14 years over here next door in Fisher County. I own  
 15 and operate a crop dusting business, Murphree Flying  
 16 Service, and my company serves six of these eight  
 17 counties in the proposed Lancer MOA.  
 18 I've accumulated about 20,000 hours over  
 19 these skies around here, and I have got a pretty good  
 20 idea how it all works. In my commercial flying  
 21 business, I have been in the charter business, and  
 22 I've made my living most of the time in the crop  
 23 dusting plane. I got to tell you that when we are  
 24 down here working if -- we have got tunnel vision.  
 25 We don't have time to be watching over our shoulder

BR-2

1 for one of these shadows coming over and seeing  
 2 how -- how close these guys are going to be to us.  
 3 I am a patriotic American. I was at Dyess  
 4 Air Force Base the first day the first B-1 came in  
 5 from Edwards Air Force Base, and I got to tell you, I  
 6 was amazed. That is a tremendous airplane. But the  
 7 one thing that sticks in my mind about that occasion  
 8 was noise. We were expecting that airplane to come  
 9 in from the west, from Edwards Air Force Base. Those  
 10 of us -- Charlie, you were there. He slipped around  
 11 the backside of Abilene and approached from the east,  
 12 and when he came over at about 2 or 300 feet, it was  
 13 awesome. It was absolutely awesome. I love  
 14 airplanes, but I have got to tell you, the noise was  
 15 also awesome.  
 16 And I can tell you that when these airplanes  
 17 get out here over Lancer right on that 600 knots, it  
 18 is going to be awesome. It is something we cannot  
 19 tolerate, our fragile economy won't tolerate it, and  
 20 we hope you will go somewhere else with it. Thank  
 21 you very much.  
 22 COLONEL BURD: I would like to call on  
 23 B. J. Baldrige. **008053**  
 24 MR. BALDRIDGE: My name is B. J.  
 25 Baldrige. I'm from Jayton and Kent County, and I am

BR-5

1 a fifth generation rancher. And I have lived on that  
 2 ranch all my life, and it has been in the family a  
 3 long time.  
 4 And growing up there was the greatest place  
 5 to grow up in the world, because of the peace and  
 6 quiet and the seclusion and the ability to do as  
 7 you pleased. And with the -- the airplanes flying  
 8 over and stuff, it won't be the same place it will be  
 9 as it was as I grew up. And seriously thinking  
 10 ahead, being 18 years old, I might want to bring my  
 11 family to grow up on the same ranch, and I don't want  
 12 my kids growing up any other way than how I was.  
 13 And it is important to every person in this  
 14 building that we have our land to ourselves as  
 15 property. Property is one of the most valued things  
 16 to every person in this room, and we all treasure  
 17 it. It is very important to us, because our  
 18 Constitution gives us the right of property and  
 19 gives -- the government has no right, nor anyone  
 20 else, to take it away, including the air above our  
 21 land. It does not say anywhere where the -- where  
 22 the air is not ours if we own the land below it.  
 23 Thank you. That's all I have to say.  
 24 COLONEL BURD: Ladies and gentlemen,  
 25 that exhausts the list of cards and names of

1 individuals who have indicated a desire to speak.  
 2 I would like to now give anyone else who  
 3 would like to speak that opportunity.  
 4 MS. MERLESON: Sir?  
 5 COLONEL BURD: Yes.  
 6 MS. MERLESON: May I speak?  
 7 COLONEL BURD: I believe we have one  
 8 gentleman that is now coming down and then --  
 9 MR. FERGESON: Thank you, sir. **008054**  
 10 Congressman Stenholm and Colonel Burd and Lt. Colonel  
 11 Mason, my name is Richard Ferguson, and I have a  
 12 small place in Scurry County. I turned in the card  
 13 to speak here. I don't know what happened to it.  
 14 I have been a crop duster since 1966, and I  
 15 still am. But for 24 years in there, I was an Air  
 16 Force pilot, and I am retired from the Air Force,  
 17 fast movers, gun ships, helicopters, transports and a  
 18 few others.  
 19 In 1974, I had to tell a military judge  
 20 about this. I guess I can do it now. In Oswego,  
 21 Kansas, I was leaving at about 350 knots, a three  
 22 shift south of Oswego, and I topped a rise and I saw  
 23 firsthand the effect on cattle. I saw a 16-year-old  
 24 go through a barb wire fence, a couple of cowboys  
 25 hung on, a few cattle had splayed legs. I pulled up,

BR-2

1 but there was nothing I could do. There was nothing  
 2 I could do.  
 3 If you don't think it will change your  
 4 quality of life, talk to the people at Ajo, Arizona,  
 5 or talk to the ranchers at Dade County, Florida.  
 6 They will tell you what happened to their quality of  
 7 life. If you don't think that it will affect your  
 8 life-style, if you don't think when an airplane comes  
 9 behind you and you are on your tractor that there is  
 10 a tremendous shock effect to human beings, you are  
 11 wrong, because there is.  
 12 Strong national defense, yes, we need it.  
 13 Training, I am not so sure that any of the U.S.  
 14 bombers ever dropped a bomb 40 miles from a  
 15 (inaudible) home station, but maybe we need to do  
 16 that sometime.  
 17 A strong national defense, I don't know.  
 18 Personally, I was a volunteer for Vietnam and the  
 19 Falklands. I tried to get back on active duty to go  
 20 to the Gulf War. I'd go to Kosovo tomorrow. Every  
 21 man in this room would. That is strong national  
 22 defense and always has been.  
 23 Lt. Colonel Mason assures me that, as a crop  
 24 duster, low-level conflict and safety is negligible.  
 25 Well, that is probably true. If you seen this B-1

BR-2

1 and my little (inaudible) plane hit head on, that is  
 2 true, he probably doesn't have much of a problem.  
 3 I asked the Air Force in the forum outside  
 4 if they brought a current United States chart of MOA  
 5 restricted flight areas, low-level routes and MOA  
 6 routes, and no, they don't. They don't have one  
 7 here. There is a good reason for that. If you saw  
 8 it, it looks like an explosion of spaghetti.  
 9 Low-level routes are everywhere. The only reason  
 10 they want the air space is because it is there. That  
 11 is the only way it has ever been since I have been  
 12 associated with them, and it is going to continue.  
 13 The reason we don't have the -- the  
 14 environmental impact people in New York or wherever,  
 15 Washington, say that we don't have any problems is  
 16 because we don't have 5,000 people from the library,  
 17 or whatever the number is.  
 18 These ranches have been in gener -- in the  
 19 family for generations. Thank you.

20 MS. MERLESON: Thank you, sir. 008055  
 21 My name is LuAnn Merleson, and I thank you  
 22 for the opportunity to speak tonight. I am a mother,  
 23 I am a landowner, I am a taxpayer and I am a member  
 24 of the Snyder Independent School board of trustees,  
 25 an elder in the Presbyterian Church and a pilot, and

TY

008056

TY

1 in any one of those capacities I can see no good for  
 2 the low-level bombing practice.  
 3 And I agree with this fellow that was just  
 4 up here, if you see an MOA of the United States, you  
 5 have plenty of land, and it seems like government  
 6 greed.  
 7 And I ask you, when you go back to  
 8 Washington to make your decision and you are in your  
 9 bed, ask yourself, "Would I want these airplanes over  
 10 my house?" Thank you.

11 MR. CHISHOLM: My name is Roy 008056  
 12 Chisholm. I am a family rancher in Kent County. And  
 13 I didn't come here intending to speak tonight, but  
 14 something has become evident in watching the comments  
 15 made tonight.  
 16 There is some -- we do value our peace and  
 17 tranquility, but there is something else we value  
 18 here, and that is honesty and integrity. And the  
 19 best I can see tonight, the Air Force has not been  
 20 honest with us. They have misled us, tried to pull  
 21 the wool over us and presented an invalid study. And  
 22 my comment for the record is, I am ashamed. Thank  
 23 you. 008057  
 24 MS. BULLARD: I am Carol Bullard, and  
 25 thank you for the opportunity for letting me speak.

BR-1

1 I live on a ranch. I also work in town. I  
 2 have a Master's Degree in art education. I teach  
 3 1,500 children art. I just want to mention about our  
 4 clusters of also individuals who live in the city of  
 5 Snyder, plus the surrounding cities, that they will  
 6 also be emotionally affected.  
 7 I noticed during art, children's emotions  
 8 come out, things that they can't verbally tell us  
 9 about. And I noticed just today some drawings of  
 10 children just from the things on television about  
 11 Kosovo. The children were drawing bombers --  
 12 airplanes and bombers flying in and houses being  
 13 blown up and people getting killed.  
 14 I knew that -- as I grew up in Los Angeles,  
 15 every Friday we had air raid exercises where we would  
 16 get under our desk in case they dropped the A-bomb.  
 17 It would do you a lot of good.  
 18 But, anyway, I know the emotional impact on  
 19 children for things like that. So they -- in their  
 20 reality, they have a difficulty separating fiction  
 21 from fact or practice from real bombers.  
 22 So I was just saying, aside from the rural  
 23 community, we also have -- I just need to speak for  
 24 the several thousand children that we have here that  
 25 are not used to -- as I was used to Los Angeles, a

TY

1 certain level of noise, I gained certain levels of  
 2 paranoia. When I moved here, I had to learn to  
 3 relax, and I finally came down off of it.  
 4 But I just know the children here are not  
 5 used to the same kind of level that even the city  
 6 children that -- like, say, children in Los Angeles  
 7 are used to.  
 8 Also, I wouldn't want to be a surgeon  
 9 operating or a dentist doing a root canal on me at  
 10 those particular moments.  
 11 But I am just saying, our kids have a  
 12 different outlook than, say, Dallas, just their  
 13 psyche. So I didn't know if there was any studies  
 14 done on impact of children's performance in school on  
 15 the TAAS test or literacy and their emotional  
 16 well-being.  
 17 Excuse me. Thank you very much. I  
 18 appreciate it.  
 19 COLONEL BURD: We still have a little  
 20 bit of time, so please address us. 008058  
 21 MR. BILLUP: Thank you, sirs.  
 22 My name is Jason Billup, and I am from  
 23 Borden County. I am not -- I have been out here  
 24 about eight years, and I figured I was one of the  
 25 luckiest ones that got to come out here and to live

1 in this country. Moving from East Texas to West  
 2 Texas is just like going from no bombers flying over  
 3 to having bombers fly over.

4 I was told on the ranch that I live on there  
 5 that there was planes there that have gone down, and  
 6 I looked for them and talked to some folks, and I  
 7 found them. And it -- it had come to Borden County  
 8 about a mile west of the Borden County High School  
 9 there. The school there is where a plane went down.  
 10 There is an ejection seat there and part of the  
 11 fuselage is still there.

12 I know there hasn't been any impact studies  
 13 done on this -- on the environment, because me just  
 14 being a cowboy, I have been out there, and I haven't  
 15 seen anybody else out there. We are the only ones  
 16 out there.

17 I know, you know, it's you all's job to  
 18 defend us, but it sounds like you are going to kill  
 19 us trying to take care of us. Thank you.

20 COLONEL BURD: Would anyone else who  
 21 has not had an opportunity to make comments like to  
 22 make comments? Please come forward. **008059**

23 (PAUSE)

**TY** 24 MR. EILAND: My name is Bill Eiland,  
 25 E-I-L-A-N-D. I started out with Buster and them on

1 HEPA to try to put it together. They have done a  
 2 good job. I thought we was fighting a losing battle,  
 3 but after tonight I think we can whoop the hell out  
 4 of the whole damn bunch. **008060**

**TY** 5 MR. HERRING: My name is Ray Herring.  
 6 I was stationed in Camp Roberts, California, and  
 7 that's the only guy that didn't see me while I was  
 8 there.

9 I appreciate what has been said here  
 10 tonight, and I would reiterate it. There is not any  
 11 use in trying to go back over it, even if I could.  
 12 But I was just going to tell you guys that -- in the  
 13 military, we respect you. We are not a bunch of flag  
 14 burners up here, and we love the military. We love  
 15 the service that we served. There is Vietnam  
 16 veterans here; there is Cold War veterans; there is  
 17 second World War veterans; there is Desert Storm.  
 18 And we all put our britches on one leg at a time just  
 19 like you do.

20 And we know -- we know that you have  
 21 superiors and we know that you are disciplined, and  
 22 we just want you to -- our message to you is, would  
 23 you just go back and tell them that we are just real  
 24 people and we have got real concerns, and we honestly  
 25 believe that we -- what we are standing for is

1 correct, and we just want to thank you.

2 COLONEL BURD: Now, is there anyone  
 3 else who has not had an opportunity to speak that is  
 4 interested in making comments?

5 Is there anyone who has already made  
 6 comments that wasn't able to finish the comments and  
 7 would now like to make some additional comments.

8 MR. KELLY: Here.

9 COLONEL BURD: Please come forward.

10 MR. KELLY: Thank you. **008061**

11 I would just like to finish up what I  
 12 started earlier. In our opinion, in investigating  
 13 over 52 documents issued by the Department of  
 14 Defense, the United States Air Force and air and  
 15 combat command, as well as the Federal Aviation  
 16 Administration, Environmental Protection Agency and  
 17 Council on Environmental Equality, what we have here  
 18 is a mistake that started as far back as World War  
 19 II. The Air Force has been nothing but attempting  
 20 for all these years to perfect a mistake, which is  
 21 the worst thing, as you know, you can try to do is  
 22 perfect a mistake.

23 We would like to help them every way we  
 24 can. We would like to have them fly -- you know,  
 25 they can do dives three stories high, fence to fence,

**PD-7** 1 bomb (inaudible). Just go fly over federal --  
 2 existing federal land where there is no human  
 3 environment. Thank you. **008062**

**TY** 4 MR. EILAND: I apologize to you, sir,  
 5 for what I just got through saying. Not for what I  
 6 said, but for the way I said it. I am a veteran of  
 7 World War II. I have respect for you and myself, but  
 8 I am sorry for the way I said that.

9 COLONEL BURD: Thank you, sir, but to  
 10 me personally that was not needed. Thank you.

11 Yes? **008063**

12 MR. WELCH: I appreciate the extra  
 13 time. There wasn't time earlier to address something  
 14 I think is very significant, and it really comes  
 15 under the area of cultural and heritage factors. You  
 16 will find they are addressed in the EIS. It is  
 17 admitted that they exist. The only reference that is  
 18 made of doing any kind of study for any consideration  
 19 of the factors is the sentence in there that  
 20 describes Indian tribes that this disturbs. I think  
 21 these cultural and heritage factors are extremely  
 22 important.

23 I agree that the Air Force -- the military  
 24 is extremely important for national defense, for the  
 25 strength of the nation, for national defense. It's

1 also important for a nation to be able to produce  
 2 its own food. Something that really needs to be  
 3 fitted into this cultural thing is the motivations  
 4 for why you are in this sort of industry and  
 5 producing food.

6 I have worked for years with the cultural  
 7 services grazing lands and ranch management and other  
 8 entities that are very concerned with the health  
 9 agricultural sector that's so important to the  
 10 nation. If you look at any other types of business,  
 11 you will find no one vesting in the -- remaining in  
 12 a business that has such a very poor return on  
 13 assets.

14 What is very important to realize is that  
 15 people participate in agriculture for the challenge  
 16 itself. It is the most complex production  
 17 environment that I know of, and I have some  
 18 experience in production. It is a very complex  
 19 production environment. And the fulfillment that is  
 20 gained from it, that is very important.

21 We don't want to end up like the Russians  
 22 where nobody cares to dig the potatoes up. Nobody  
 23 owns the land, and you have got to send your Army out  
 24 there to do it. When you look at these motivations,  
 25 you find that stewardship is a very important part of

BR-4

1 it.

2 All of us in various ways assess what our  
 3 long-term grazing or long-term farming implications  
 4 are. It is a very difficult science. It deserves to  
 5 be plugged in on this EIS. It's hardly considered at  
 6 all. It is vital to the nation as national defense.  
 7 These motivations far exceed what you would get from  
 8 monetary satisfactions, but you are giving up a lot  
 9 in order to remain in this sector.

10 The way you can hurt agricultural groups the  
 11 most, then, is to do something that actually directly  
 12 devalues the property that they own. You have no  
 13 hope for recovery after that. And it has already  
 14 been pointed out this initiative is going to do  
 15 that.

16 I think if the Air Force itself were more  
 17 acquainted with these motivations and with these  
 18 issues, they would recognize what truly is going on.  
 19 The education that was needed here is not just for us  
 20 to realize. We need to allow this to happen. It is  
 21 for the government and the military to be educated as  
 22 well, to understand how important these things are  
 23 and how disruptive their actions are here. Thank  
 24 you.

25 **008064**  
 UNIDENTIFIED PERSON: I would like to

TY

1 take this opportunity to thank HEPA and all the  
 2 people that have worked so hard. And I am proud to  
 3 say that these people have got a backbone from the  
 4 top of their head to their heel, and I think you have  
 5 done your country a great service to -- and I think  
 6 we need to show the people we elect and the people  
 7 that we hire to run our military that we are  
 8 important, too.

9 And the production of food and fiber is  
 10 equally important, and so I want to thank all of you  
 11 for coming tonight, and I want to remind the Air  
 12 Force and our elected officials, for everyone that  
 13 came here, there is 10,000 more out there that feel  
 14 the same way. Thank you.

15 COLONEL BURD: Ladies and gentlemen, we  
 16 are going to need to cut off the comments here. I  
 17 would like to allow this gentleman to speak, and then  
 18 if there is one other person who has a burning desire  
 19 to say something, please come forward, and then that  
 20 will be that, because we need to get packed up and  
 21 vacate the building.

22 **008065**  
 MR. MURPHREE: Please, Colonel, I was  
 23 just passed this letter. It is from the  
 24 administrator of the Fisher County Hospital District,  
 25 Ella Raye Helms. "To whom it may concern: Fisher

BR-2

1 County Hospital District provides health care  
 2 services to residents of Fisher and Kent Counties and  
 3 surrounding communities. Both Fisher and Kent  
 4 Counties are designated medically underserved and  
 5 health provider shortage areas. Fisher County is  
 6 also designated as a medical frontier county.

7 "Reliable emergency medicine and trauma care  
 8 are crucial in rural counties such as ours. We are  
 9 fortunate to have a well qualified staff available  
 10 for primary response to emergency situations.  
 11 However, we rely on transport to tertiary medical  
 12 facilities for patients who have traumatic injuries  
 13 or in life-threatening situations such as acute  
 14 myocardial infarction.

15 "Time is of the essence in life-threatening  
 16 situations. We prefer to transport critical patients  
 17 by air ambulance, since even a few minutes can make  
 18 the difference between life and death, or the  
 19 prognosis of a full recovery.

20 "If Fisher County is designated as a low-fly  
 21 training zone for military exercises, there will be  
 22 occasions when air ambulance flights will be delayed,  
 23 and people -- impeding patient care. This is not a  
 24 theoretical possibility, but it is a real scenario  
 25 encountered by hospitals in close proximity to

1 military training sites in New Mexico.  
 2 "Please reconsider the use for our lands for  
 3 low-flight military training."  
 4 Thank you.  
 5 COLONEL BURD: Sir, if you could call  
 6 out your name.  
 7 MR. MURPHREE: Randy Murphree.  
 8 COLONEL BURD: Thank you. 008066  
 9 MR. MOSELEY: Yes, sir, my name is  
 10 Dennis Moseley, M-O-S-E-L-E-Y.  
 11 I don't even own a handful of dirt I could  
 12 pick up, but I read a book, Bury My Heart at Wounded  
 13 Knee, where they took the Indians and took them off  
 14 their land. And we invaded slowly and we come in,  
 15 and I guess to make a long story short, we watched  
 16 Sitting Bull make his last stand out of Canada. And  
 17 it ripped the hearts out of those people, and it took  
 18 their land and it took their life. They were never  
 19 the same, but they hung onto their heritage, and they  
 20 were put on reservations. They were taken to Florida  
 21 where disease killed half of them. And like I said,  
 22 these people owned thousands of acres. They loved  
 23 that land and put their heart and soul into it.  
 24 And I think when you come in and you take a  
 25 group of people and you -- you are not taking their

TY

1 land from them, but you are taking their life from  
 2 them. What they have right now is their life, and  
 3 you are just ripping their hearts right out of them,  
 4 and it takes something out of them that you can never  
 5 put back.  
 6 And I have the greatest respect in the  
 7 world for the military. I am proud to say that when  
 8 our military goes to another country, we are  
 9 successful.  
 10 And I would just ask that you would take it  
 11 in your heart and your mind to just take a step back  
 12 and take a look and say, we have American people that  
 13 support us. Let's not do this to them. Let's find  
 14 another alternative. Thank you.  
 15 COLONEL BURD: Ladies and gentlemen,  
 16 there was one concept that kept running through my  
 17 mind as each of you were speaking this evening, and  
 18 that concept is civility. I want to personally thank  
 19 you for the civility that you have shown here tonight  
 20 and the way you have treated us. I personally  
 21 appreciate that.  
 22 And, ladies and gentlemen, this concludes  
 23 this public hearing, and thank you for your  
 24 participation and input. Please remember the public  
 25 comment period will extend through June 16, 1999.

1 This public hearing is adjourned. Thank you  
 2 again.  
 3  
 4 (PUBLIC HEARING ADJOURNED AT 8:57 P.M.)

 22  
 23  
 24  
 25

1 up. 008067  
 2 MR. MERONEY: Yes, sir. I'm Don  
 3 Meroney from Big Lake, Texas. And my first comment  
 4 has to do with the Realistic Bomber Training, and  
 5 underlining the word "realistic." To me, the low  
 6 altitude segments close to home bases are in  
 7 themselves not realistic. A 35-hour flight from  
 8 Louisiana to Iraq and then return mostly at high  
 9 altitudes, that's realistic. 16-hours missions from  
 10 England to Yugoslavia are realistic. I feel that  
 11 your present sites of South Dakota and Utah are much  
 12 more realistic than any of the other alternatives,  
 13 so I would favor Alternative A.  
 14 The next thing I'd like to comment on is  
 15 negligible to minimal, which is common terms in your  
 16 Draft statements. I've been flying in this area for  
 17 40 years, 20 of which as a crop duster. All this  
 18 low-level flying, I can guarantee you that the  
 19 effects on the people, livestock, and wildlife is  
 20 not negligible or minimal.  
 21 I've seen a girl thrown from a startled  
 22 horse. I've seen stock scattered during roundups.  
 23 I've seen deer running wildly, separated. And when  
 24 Bambi gets separated from her mother, that's the end  
 25 of her. I've had a pumper drop a \$100 gauge line in

PD-44

AO-28

AF-2

1 an oil tank due to when I -- getting startled when I  
2 pulled up over him in a sprayer. So these effects  
3 are not negligible nor minimal.

4 Third point I'd like to make, military  
5 aircraft fly over Big Lake at illegal altitudes on  
6 almost daily routine, some of them as low as 200 to  
7 600 feet above our airport out here, circle over the  
8 auditorium, and head back to the east. I don't --  
9 and when you think about Italy and some of these  
10 other things, I don't think we need any more  
11 activity in this area.

BR-2

12 The last comment I'd like to make, West  
13 Texas looks sparse to people that don't really know  
14 about it, but I can assure you there are many  
15 multitudes of civilian flights out here every day.  
16 We have pipeline pilots, highline patrol pilots, ag  
17 operations, pleasure flights, corporate operations,  
18 charter flights, cloud seeders. We've got people  
19 out here all the time. And this see and avoid  
20 nonsense, I don't think we can handle it.

21 And I appreciate the opportunity to speak.  
22 COLONEL BURD: I would like to call on  
23 Lad Lithicum. **008068**

24 MR. LITHICUM: Thank you, Colonel. I  
25 guess I'm not totally antagonist. I was in the Air

BR-2

1 Force myself and air training command. And I have  
2 good feelings about the Air Force.

3 However, I'm a little bit concerned about  
4 this extremely low-level flying. My son and I fly  
5 two small airplanes around in the area, and mainly  
6 in the sea zone and at the low levels. One of my  
7 planes flies about 60 miles an hour. And I don't  
8 believe I could avoid a B-1 bomber at 550 knots.  
9 There just would be no way I could even respond  
10 quick enough.

BR-2

11 You said to direct your comments about the  
12 environment. I'm kind of environment -- I've been  
13 here a long time and I don't anticipate having to be  
14 dodging these low-flying aircraft. We've got some  
15 low fliers now that do fly, like others have said,  
16 at a low altitude, lower than they should be. But  
17 we've been dealing with that. But a B-1 at that  
18 level just scares me to death.

19 I appreciate the opportunity to comment.  
20 The other thing I might say is we're  
21 conducting weather modifications operations in this  
22 area. It's mostly in the summer, but it's an  
23 ongoing item and I don't want -- I'd hate to see  
24 anything mess that up. It's kind of in the  
25 experimental stage. And we feel like we're doing a

BR-3

1 lot of good. And we sure don't want to have that  
2 cut back because of military operations.

3 I guess that's all I've got to say.

4 COLONEL BURD: I would now like to  
5 call on Dorothy and Jim Murray. It looks like  
6 Dorothy has indicated a desire to speak. **008069**

7 MS. MURRAY: My name is Dorothy  
8 Murray -- Dorothy McKinsey Murray. My family has  
9 ranches in southwest Texas for over 100 years. My  
10 grandfather brought the first shipment of cattle  
11 into Midland in the 1800s. I speak for my family  
12 who ranch over a generous portion of Pecos County.  
13 I speak for our land.

14 In a good year, it takes approximately  
15 seven acres of land to raise one sheep. It takes 31  
16 acres for each head of cattle. That's in a good  
17 year. We haven't seen many of those lately. If  
18 land is broken for a pipeline or an oil location or  
19 some other need, one can go back there 15 years  
20 later and the scar is still unhealed.

21 Low-level flights disrupts livestock and  
22 wildlife, as we've talked. It will endanger any  
23 rancher or worker on horseback or oil rig or pumping  
24 unit, as my husband does, on a daily basis. The  
25 ranchers and farmers in southwest Texas are strong

PD-4

1 and enduring. They are devoted caretakers of the  
2 land. They're good stewards.

3 There are other places where the military  
4 can train. I suggest Nevada. It already glows in  
5 the dark from the military. We have enough  
6 obstacles. Please don't break the rights of those  
7 people here.

BR-2

8 I do thank you.

9 COLONEL BURD: I would like to call on  
10 Jack Harris. **008070**

11 MR. HARRIS: My name is Jack Harris.  
12 I'm -- most of the comments I had have already been  
13 stated. But as a private pilot, I'm very concerned  
14 about the safety of low-level flights in and around  
15 this -- our airport. And like one gentleman stated,  
16 we see quite a bit of that right now. And it's a  
17 very real safety concern of mine.

18 And that's about all I have. Thank you.

19 COLONEL BURD: I would like to call  
20 Aldis Strautins. **008071**

21 MR. STRAUTINS: My name is Aldis  
22 Strautins. That's A-L-D-I-S, S-T-R-A-U-T-I-N-S.  
23 Thank you for letting me talk at this hearing. I  
24 represent the West Texas Weather Modification  
25 Association as the project manager and meteorologist

1 of that association. And we do have some concerns  
 2 with flying and low flight in the Texon, Alternative  
 3 C area, especially the expansion of it which would  
 4 encompass a lot of our target area for rain  
 5 enhancement.

6 West Texas Weather Modification Association  
 7 started -- had a program in the mid '80s and then it  
 8 began again in 1996 with seven underground water  
 9 districts, which include some of the counties -- and  
 10 about five of those are in the Texon or the proposed  
 11 Texon area expansion. Each of these districts pay  
 12 into the Weather Modification Program and pay for it  
 13 along with the city of San Angelo, and the state of  
 14 Texas also finances some of this program.

15 The proposed expansion, like I said, would  
 16 actually split our target area in two, especially  
 17 when you have flights operating in that area. And  
 18 it would make it difficult for us to operate going  
 19 from one section to another section, and it would  
 20 leave a whole large area of our target area that we  
 21 could not cover and see properly.

22 The West Texas Weather Modification  
 23 Association uses numerous aircraft. We've used a  
 24 Cheyenne II aircraft. We've -- Cessna 340s, Aztecs,  
 25 those were the top seeding aircraft. And we also --

BR-2

1 and also base seeding aircraft. We also have some  
 2 Comanches for base seeding aircraft. We operate  
 3 between 1,000 feet AGL up to 10,000 feet MSL for  
 4 base seeding. And we operate in an IFR condition,  
 5 which was not stated in the Draft that you  
 6 presented, which runs from 16,000 feet to around  
 7 22,000 feet mean sea level.

8 So this proposed Texon MOA expansion really  
 9 adversely -- I believe adversely would affect your  
 10 operation or could adversely affect our operation  
 11 and the local counties, West Texas Underground Water  
 12 Districts and city of San Angelo, and also the state  
 13 of Texas with the underground water that we are  
 14 trying to help enhance and recharge the aquifers  
 15 that way.

16 Thank you.

17 COLONEL BURD: I would now like to  
 18 call on Scott Holland. **008072**

19 MR. HOLLAND: Thank you, Colonel Burd.  
 20 My name is Scott Holland. I'm kind of wearing two  
 21 hats today. I'm the secretary/treasurer for the  
 22 West Texas Weather Modification Association, and I'm  
 23 also the general manager of the Irion County Water  
 24 Conservation District at Mertzon, or Irion County.  
 25 I attended the public scoping meeting held

BR-2

1 on February 6th. A lot of the concerns that Aldis  
 2 just raised were presented at that meeting. I did  
 3 receive your Draft Environmental deal here. I can  
 4 find cloud seeding mentioned in it one time. And we  
 5 did talk extensively that night, and I question this  
 6 because this is supposed to be an environmental  
 7 study. And I realize most environmentalists are  
 8 concerned with animals and things like that.

9 Agriculture is also a dying environment.  
 10 Unfortunately, a lot of these farmers and ranchers  
 11 need rain. And we're trying to do something about  
 12 it. That's why we think it is important.

13 In the socioeconomics part of the Draft  
 14 here, it talked about the decommissioning of the  
 15 electronic sites and building new ones. It did not  
 16 mention the fact that we had brought to light that  
 17 Texas Tech University in 1996 conducted a study in  
 18 the High Plains that with a 21 percent increase in  
 19 rainfall, a 15 county area would realize an economic  
 20 gain of about \$350 million. Granted, we're not in  
 21 the High Plains, but we should receive somewhere  
 22 around \$250 to \$300 million economic gain for the  
 23 entire region over this.

24 If we are limited in our cloud seeding  
 25 weather modification activities in this MOA, you've

BR-2

1 cut the heart out of it. And it's kind of hard to  
 2 go back as a manager of a groundwater district to my  
 3 voters and people at my board who hire me and say,  
 4 "I'm sorry. We couldn't do anything today to help  
 5 you because we were not allowed to fly in that  
 6 zone." And that is our concern.

7 Thank you, sir.

8 COLONEL BURD: I'd like to call on  
 9 David Wurtz.

10 MR. WURTZ: Sir, my comments have  
 11 already been made.

12 COLONEL BURD: The next commenter will  
 13 be Kay Kelley. **008073**

14 MS. KELLEY: Thank you. My name is  
 15 Kay Kelley. The last name is K-E-L-L-E-Y. And I'm  
 16 with the Trans Pecos Protection Group, which is a  
 17 nonprofit information organization. We are opposed  
 18 to the military's airspace expansion over private --  
 19 populated private property. And we network with a  
 20 large number of diverse people.

21 We feel that this Draft Environmental  
 22 Impact Statement cannot fully look into the  
 23 devastating effects these low-level realistic combat  
 24 training flights will have on West Texas. There is  
 25 a definite lack of concern for the physical,

BR-2

BR-5

1 economic, and psychological well-being of the people  
 2 on the ground. The damage done to the people,  
 3 structures, animals, and plants under these  
 4 low-level realistic combat training flights is not  
 5 compensable.  
 6 The only solution is to isolate them from  
 7 the human environment. We can see no compromise.  
 8 The military is in the business of death and  
 9 destruction and cannot be successfully mixed with  
 10 the people they are mandated to protect. We fully  
 11 support our military and want the best training  
 12 possible. There is a more reasonable location for  
 13 this training than over our homes, businesses,  
 14 schools, communities, and recreational areas.  
 15 And we'll be giving more comments through  
 16 written statements later.  
 17 Thank you.  
 18 COLONEL BURD: And our last speaker  
 19 will be Bryan Kelley. 008074  
 20 MR. KELLEY: My name is Bryan Kelley.  
 21 That's B-R-Y-A-N, K-E-L-L-E-Y, for the record. I  
 22 would like to ask if possible that we have a showing  
 23 of hands of how many in the audience have received a  
 24 copy of the RBTI Environmental Impact Statement, if  
 25 you would, please.

TY

1 What we have is an analysis of this  
 2 particular Environmental Impact Statement and we  
 3 find it to be identical to some 27 others that we  
 4 have done plus a total of Air Force regulations and  
 5 deregulations and EPA regulations, et cetera. We  
 6 find it to be insufficient along with the rest of  
 7 them.  
 8 What we'd like to do is point out that,  
 9 again, to be reiterate last night, this is an  
 10 unreasonable training program for where it is. The  
 11 U.S. Air Force and the Department of Defense Air  
 12 Forces have failed to address the proper  
 13 alternatives. They've left out the most important  
 14 one. They have left out by omission around 51  
 15 particular violations of the National Environmental  
 16 Policy Act and its council and environmental and  
 17 procedural regulations.  
 18 For the record, I would like to know if the  
 19 Air Force would have a meeting with us in order to  
 20 discuss it. This is our 17th attempt to sit down  
 21 with them and talk.  
 22 Thank you.  
 23 COLONEL BURD: And I'd just like to  
 24 note, as a rough estimate, when Mr. Kelley asked for  
 25 a show of hands, somewhere between a third and a

BR-3

1 half of the attendees here raised their hand.  
 2 That exhausts the list of individuals who  
 3 indicated a desire to speak. I would like to know  
 4 now if anyone who has not spoken that would like to  
 5 now speak, I'll give you that opportunity at this  
 6 time. Is there anyone who has not spoken that would  
 7 like to speak?  
 8 Sir, please come forward.  
 9 MR. LINDLEY: Thank you. 008075  
 10 COLONEL BURD: Sir, you'll be next.  
 11 MS. STOKES: My name is Joyce Stokes.  
 12 My father came to Glasscock County in 1903. We have  
 13 owned land in Glasscock and Reagan County since that  
 14 time. These Alternate A and B fly directly over our  
 15 land, directly over our house. And as I have stated  
 16 to this young man here, what would happen if my  
 17 husband was out riding a horse and one of these  
 18 airplanes came over and he was bucked off and I  
 19 wouldn't know where he was? I feel like that the  
 20 Air Force has not given enough recognition to people  
 21 that live in these areas. I mean, I'm -- the water  
 22 and everything else, but people live there, too.  
 23 Thank you. 008076  
 24 MR. LINDLEY: Thank you. Colonel  
 25 Burd, I am Clark Lindley out of Reeves County. As I

AO-62

AO-125

1 Reviewed the draft, I could not find any substantial  
 2 discussion of the effect on water resources and  
 3 soils beyond the discussion of the areas where the  
 4 emitter station and the other type of station are  
 5 located.  
 6 We have some concern about the emissions  
 7 from the airplanes in that we have no information in  
 8 the Draft as to the nature of the additives, as to  
 9 whether those are pollutants that may be  
 10 particularly toxic both to human beings and to  
 11 people.  
 12 But in Reeves County, we also have fruit  
 13 crops underlying the areas where the airplanes will  
 14 be flying. We don't see any studies in the Draft  
 15 indicating long-term effects on food crops, on the  
 16 soil, or on our underlying water resources. That  
 17 area, Loving County and Reeves County, where the 400  
 18 foot altitude flights will take place, that is part  
 19 of one of the nine major aquifers in Texas. And  
 20 it's unclear from anything in the Draft as to  
 21 whether there are pollutants in the fuels that would  
 22 ultimately in the long-run affect our underground  
 23 water resources.  
 24 We ask that -- the Draft doesn't have  
 25 enough information for us to make a judgment. We

1 don't see any long-term studies reviewed. And we  
2 think that those studies need to be done before you  
3 put at risk our soils for our farming, the breathing  
4 of people that lie -- underlie those areas, and any  
5 long-term risks to the water that we are dependent  
6 upon.

7 Thank you very much.

8 COLONEL BURD: Now, is there anyone  
9 else who has not had an opportunity to speak that  
10 would like to speak? 008077

TY

11 MR. TURNER: My name is Tim Turner. I  
12 live in Big Lake, Texas. My family ranches north of  
13 Stiles currently near the Texon area that's already  
14 being used and -- as an area for practices.

15 Over the course of my lifetime, I've  
16 noticed many, many times aircraft flying across our  
17 ranch at low altitudes. I was somewhat surprised  
18 when I came and visited with some of the Air Force  
19 people before the meeting tonight that there is a  
20 stationary practice line that crosses our ranch, and  
21 apparently there are hundreds of flights a year at  
22 500 feet or less that cross our ranch every year.

23 I believe that the Air Force needs a  
24 suitable place for practice. I'm supportive of  
25 that. However, I think that we currently have done

BR-3

1 manager.

2 If it was so minimal and the danger  
3 inconsequential, do it over Dallas. Do it over  
4 Houston. The reason you don't is because that's not  
5 true. It is dangerous. I have not been thrown from  
6 a horse, but it's only by the grace of God, because  
7 I ride every day.

8 Your routes are going to go over our home  
9 where I ranch. And it's going to be my  
10 responsibility to find out what day you're going to  
11 be flying over so I can arrange when I'm going to  
12 feed my cattle? I mean, this doesn't work.

13 I attended TCU. I'm well aware of the  
14 noise that B-52s make. I heard them every day. I  
15 lived in Fort Worth for an entire year. And it's  
16 not inconsequential. We are only that way because  
17 there's a small number of us. We're not Dallas or  
18 San Antonio or Houston where the outcry would be  
19 unbelievable. You're acting as though we don't  
20 count because, well, you know, it's just a few  
21 people. It is dangerous.

22 And you're going to be doing 10 to 12  
23 missions a day in the MOA. That's not just  
24 occasional fly-overs. That's hourly. That's daily,  
25 except on the weekends and on holidays, which is

1 more than our share in providing space for you to  
2 practice; therefore, I'd ask that you find another  
3 place to practice in addition to what you're already  
4 doing. I think we're already doing our share, and I  
5 wish you'd look at somewhere else.

6 Thank you.

7 COLONEL BURD: Please. 008078

8 MS. COPEKESSLER: My name is Cathryn  
9 Copekessler, C-A-T-H-R-Y-N, C-O-P-E-K-E-S-S-L-E-R.  
10 My father was raised in Sterling County. He moved  
11 to the ranch we have now when he was 46 years old.  
12 I have been on that ranch since I was six days old.  
13 I'm 52 years old right now. I have been thrown from  
14 a horse because of a low-flying plane and injured  
15 along about three miles from the house.

AO-2

16 We've had windmills destroyed by jet  
17 planes. We've had concrete tanks just torn apart by  
18 them. Part of your routes are going to go straight  
19 over my house. This will impact me extremely, and I  
20 am very against any changes. I do not want them  
21 coming any more over my house than what they do now.

22 Thank you.

23 008079

24 MS. SUDDOCK: My name is Robin Suddock  
25 and we're from Irion County. I'm the fourth  
generation to work at my ranch, and I am a ranch

1 manager.  
2 If it was so minimal and the danger  
3 inconsequential, do it over Dallas. Do it over  
4 Houston. The reason you don't is because that's not  
5 true. It is dangerous. I have not been thrown from  
6 a horse, but it's only by the grace of God, because  
7 I ride every day.

8 Your routes are going to go over our home  
9 where I ranch. And it's going to be my  
10 responsibility to find out what day you're going to  
11 be flying over so I can arrange when I'm going to  
12 feed my cattle? I mean, this doesn't work.

13 I attended TCU. I'm well aware of the  
14 noise that B-52s make. I heard them every day. I  
15 lived in Fort Worth for an entire year. And it's  
16 not inconsequential. We are only that way because  
17 there's a small number of us. We're not Dallas or  
18 San Antonio or Houston where the outcry would be  
19 unbelievable. You're acting as though we don't  
20 count because, well, you know, it's just a few  
21 people. It is dangerous.

22 And you're going to be doing 10 to 12  
23 missions a day in the MOA. That's not just  
24 occasional fly-overs. That's hourly. That's daily,  
25 except on the weekends and on holidays, which is

BR-3

1 really going to limit how I'm going to work my  
2 cattle as well. I really think it needs to be  
3 reconsidered.

4 I firmly believe that our military is  
5 well-trained. I firmly believe they need to be as  
6 well-trained and as safe as possible. Why can't you  
7 do it over the national parks? Because people  
8 wouldn't go to them because it wouldn't be a  
9 pleasant experience because of the noise. So don't  
10 think that we don't realize why you're doing it over  
11 us and not doing it over the other places.

12 Thank you.

13 COLONEL BURD: Would anyone else who  
14 has not spoken like to come forward and speak?

15 Would anyone who has already spoken like to  
16 make additional comments since we have the time for  
17 that?

18 MS. MURRAY: I have one brief comment  
19 I'd like to make from my seat. And that is that  
20 the --

21 COLONEL BURD: Could you state your  
22 name, please? 008080

TY

23 MS. MURRAY: My name is Dorothy  
24 McKinsey Murray. The United States government  
25 already owns almost 40 percent of the United States.

1 That seems adequate for training areas.  
 2 COLONEL BURD: Would anyone else like

 23  
 24  
 25

1 If you would like to turn in your written  
 2 comments at any time this evening, please place them  
 3 in the box provided in the comment area.  
 4 I would like to get started now, so we have  
 5 one official who has indicated a desire to speak, and  
 6 I would like to call on him now. And that's Herman  
 7 Tarin, Reeves County Commissioner. 00S081  
 8 MR. TARIN: Thank you for your time.  
 9 And I would like to really thank everyone else for  
 10 being here this afternoon. On behalf of Reeves  
 11 County, I would like to thank you for your input this  
 12 afternoon. I really appreciate you being here this  
 13 afternoon.  
 14 This afternoon, my concern that I have as  
 15 county commissioner, is to inform the public of  
 16 what's fixing to take place. I didn't state my name;  
 17 Herman Tarin. And on your graph, there is as a great  
 18 concern there. That really ignores the presence of  
 19 the Hispanic people in Saragosa, Brogado, and  
 20 Balmorhea. I have discussed this with Lynn B.  
 21 Quilles, which has promised that he would do  
 22 something about this. As part of the record, I would  
 23 like to let you know that this community is mainly  
 24 Hispanic, a very low-income community.  
 25 I disagree with the statement that there is

SE-5

SE-5

1 no violation of the Presidential Executive Order  
 2 1-28-98 on Environmental Justice. I believe that for  
 3 those that are here tonight, we probably remember  
 4 back in 1987, when this small community of Balmorhea  
 5 (sic) was leveled off by a killer tornado. And  
 6 visiting with these people in Saragosa has really  
 7 caused shock, bad memories. Because as you know,  
 8 according to your Draft, IR-178 runs right through  
 9 Saragosa, a populated area with about 500 people.  
 10 Also, Brogado is another community there  
 11 going through the same thing. Bringing these bad  
 12 memories to Saragosa is a terrible thing for them.  
 13 We are getting ready to celebrate the 12th  
 14 anniversary of that tornado. And back in their  
 15 hearts, they don't want anything like that to be  
 16 brought back up. These flights have caused a lot of  
 17 anguish, a lot of pain.  
 18 And my concern is that if we -- I have never  
 19 opposed the Air Force from training, but why do it  
 20 over populated areas? We do exist. And I would like  
 21 for those routes to be considered as a big change.  
 22 And like I said, Lynn B. Quilles has also told us he  
 23 will help us on this. And I really appreciate  
 24 anything that he can do for us.  
 25 I would also like to ask you to see, after

PD-17

GE-22

1 the meeting is adjourned, if the public can keep  
 2 their seats and there may be questions and answers.  
 3 Thank you.  
 4 COLONEL BURD: What I am going to do  
 5 now is I'll indicate the person I am calling on. And  
 6 then I will also, after that, indicate the next  
 7 person, so you can be ready to come on up. And I  
 8 will call your name after that person finishes.  
 9 So I would like to now call on Joe and Helen  
 10 Vernon. And after that, I will be calling on Steve  
 11 Huseland. 00S082  
 12 MR. VERNON: Joe Vernon, V-e-r-n-o-n.  
 13 The issue I want to address is one of the things  
 14 about your study; contacting people, talking to them.  
 15 I knew absolutely nothing about this until a week ago  
 16 Monday, and no one from the Air Force has yet  
 17 contacted me about it.  
 18 The effects of this, I have some firsthand  
 19 knowledge of what it will do. I work in the oil  
 20 field. I have been on locations where B-1s, F-111s,  
 21 all kinds of stuff much lower than 500 feet, much  
 22 faster than 250 knots. The numbers you show in the  
 23 increase of decibels is ridiculous; far exceed that,  
 24 far exceed it.  
 25 The presentation that you have here as far

1 as where your routes are to be in these emitter  
2 sites, one emitter site in particular affects me,  
3 No. 60, because I live right there. That comes back  
4 to never being contacted about that.

BR-1

5 Knowing what these -- the noise these planes  
6 make, I have got a small ranch there; cattle,  
7 chickens, horses. They won't stand for it. It's  
8 going to run them crazy. It's going to run me crazy.  
9 This is going to greatly affect my lifestyle, my  
10 ranch where I live, what I have worked for all these  
11 years..

BR-2  
AO-2

12 I am also a pilot. I use a Cessna 150 to do  
13 my work with. Collision avoidance, that's going to  
14 be a biggy. Trying to avoid vortices created by all  
15 of this, that's another thing. That's something you  
16 can't see. So I have got -- you know, you are taking  
17 away some freedoms I have got as a pilot. You are  
18 taking away some freedoms I have got as a citizen --  
19 I mean, a resident. I dare say, you wouldn't live  
20 under conditions like that.

BR-4

21 The future value of my property, I doubt  
22 seriously if anyone would be interested in property  
23 like that, not that I want to sell it anyway. That's  
24 the whole point. I don't want to move. I have  
25 worked all my life to live there.

1 So four things I want to put across to you.  
2 I have been deceived of the information about this  
3 whole ordeal. I feel I am being robbed of my  
4 freedoms as a private pilot and as a citizen. I am  
5 being robbed of my property. You are going to make  
6 my property worthless. You are going to tear it up.  
7 Shock waves are going to tear up the house. That  
8 won't work. And I am being robbed of my rights.

9 I see my time is up; but seriously consider  
10 these things. Thank you.

11 COLONEL BURD: Helen Vernon?

12 MR. VERNON: She isn't here. She is my  
13 wife.

14 COLONEL BURD: I would like to now call  
15 on Steve Huseland. And then after that, I will be  
16 calling on Sue Toone.

008083

17 MR. HUSELAND: Good evening, Colonel.  
18 My name is Steve Huseland. I am the vice president  
19 for the Southwest Region for the United States Pilots  
20 Association. I am the immediate past president of  
21 the New Mexico Pilots Association, an FAA safety  
22 counselor in Hobbs, New Mexico, Lea County. I am a  
23 private pilot, own my own aircraft, and use it quite  
24 extensively in this area of the country.

25 I am coming to support Alternative A; leave

1 it alone. We have an expression in aviation that you  
2 have heard, which is "If it ain't broke, don't fix  
3 it." And you people are trying to fix something that  
4 isn't broken. It's very simple to move the airplanes  
5 to where the airspace is that's currently available.

PD-2

6 I have encountered B-1 bombers on TDY of  
7 Dyess Air Force Base -- from Dyess Air Force Base,  
8 over in Roswell many times when there were military  
9 exercises being performed in our area. Move the  
10 airplanes to Nevada; move the airplanes to North or  
11 South Dakota. You are running B-2s out of Whiteland  
12 Air Force base up there. Run the B-52s out of there  
13 on a temporary basis, and forget about this.

AF-6

14 We, in New Mexico and West Texas, do not  
15 want any more noise-creating,  
16 environmentally-polluting aircraft in our  
17 environment. I am about as fed up as a pilot can be  
18 with encountering military aircraft at odd altitudes,  
19 day and night, not talking to anybody on the radio.  
20 It's dangerous and it's life threatening.

AF-2

21 The Air Force, according to my  
22 understanding, should be flying IFR minimums, a  
23 thousand foot HDL. They currently fly at 300 feet,  
24 they tell me. And I have observed personally  
25 aircraft well below 300 feet.

1 The military is continually gobbling up  
2 airspace. An example would be even after Reese Air  
3 Force Base closed in the Lubbock area, you came in  
4 and gobbled up airspace right over the City of Hobbs  
5 where I live. I can hear the stealth fighters  
6 practicing at night, up well past midnight. Your  
7 problem arises because of so many base closings. It  
8 is more convenient for you to fly locally here  
9 instead of areas in Utah, North and South Dakota, and  
10 Nevada, et cetera. You closed your bases for economy  
11 purposes, but you are still gobbling up airspace at  
12 the expense of the public. Move the planes to the  
13 airspace.

BR-4

14 As far as the economy goes, no one can work  
15 under conditions when you have B-1 bombers coming in  
16 at 300 feet at 500 miles an hour. You are going to  
17 stifle the growth of industry, whether it be  
18 agricultural, manufacturing, or otherwise, here in  
19 the Pecos area and in many of the other towns, as the  
20 gentleman before, Mr. Vernon, said. We don't want  
21 it. And we would appreciate it if you would consider  
22 Alternative A.

23 My last point is, why won't the Air Force  
24 agree or consent to a noise monitoring demonstration?  
25 Run a B-1 bomber over an open space at 300 feet at

1 500 miles an hour and stand there without earmuffs on  
2 and tell me how it sounds. Put your professional  
3 noise monitoring equipment down there. Let's really  
4 see what the decibel level is. Thank you.

5 COLONEL BURD: Now, I call on Sue  
6 Toone. And then after that, I will be calling on  
7 Chip Love. 008084

8 MS. TOONE: Hello. My name is Sue  
9 Toone, T-o-o-n-e. I live near Saragosa on a farm,  
10 and here is what I know. The routes; didn't know  
11 about any routes until one night in the middle of the  
12 night, a low-flying jet bomber flew over our house  
13 and scared us to death. And I have documented  
14 flights over our home and flights over Saragosa,  
15 February through July of 1998. And what an invasion  
16 of our privacy these jets are.

17 To the noise level, bottom line, we  
18 shouldn't have to contend with the noise level. It  
19 is awful. No matter where you are; if you are in  
20 your house, outdoors, driving your vehicle, it scares  
21 a body. The roar that sounds like the tornado we had  
22 several years ago, rumbles on and on in our valley.

23 Structural damage has occurred in the adobe  
24 part of our house; new cracks, doors won't close, and  
25 an unlevelled wooden floor. In the cinder block part,

CU-1

1 a large picture fell from the wall and broke the  
2 glass on the coffee table we've had there for 30  
3 years. A book about Indians fell from the shelf near  
4 the ceiling. My pictures in the hall move sideways.  
5 I have to straighten them. I have to push the cut  
6 glass things I have on the shelf back up on there.

7 And, No. 4, emissions; I have been out in  
8 the back yard when you have come across our home and  
9 farms. You were so low; but this time I saw you in  
10 the plane before I heard the noise. You were between  
11 our fence and the Turnbough's barn over here. And  
12 you were beginning your turn, and all this black  
13 stuff was coming out of your plane over on our yard  
14 and where I was. So I went in the house. And this  
15 is another blatant invasion of our property.

AO-11

16 No. 3, effect on animals. Another time I  
17 was in the yard when you came over our home and  
18 farms. This time I didn't see the plane, but I got  
19 the full effects of that horrid noise. The two owls  
20 that had lived in our tree for years flew out,  
21 seeming disoriented. Bottom line, they haven't come  
22 back. And it's a shame because we enjoyed the soft  
23 hooting during the night, and it did help control the  
24 rodents.

BI-4

25 Last, No. 6, is the pollution on crops and

1 farm workers. That bomber goes over our home, our  
2 farms, and the farm workers. We receive that  
3 pollution right away. And then our prevailing  
4 westerly winds brings all that pollution back because  
5 the plane is going in circles. And here all this  
6 stuff is coming out, and it goes all around. And all  
7 that stuff -- because it's coming from the west to my  
8 house, all that stuff is coming back on us.

9 Bottom line, I think it's awful that you  
10 want to add more pain and suffering and misery these  
11 things cost with this initiative. And we have no  
12 privacy, no peace, and no knowledge about the  
13 long-term effects of your pollutants. Thank you.

14 COLONEL BURD: I now call on Chip Love,  
15 and then I will be calling on Mack Arthur Pineda  
16 after that. 008085

17 MR. LOVE: Hello. My name is Chip Love  
18 and thank you for receiving my comments today. I  
19 ranch in Presidio County underneath this route, so I  
20 have experienced the planes firsthand.

21 I disagree with your Environmental Impact  
22 Statement on several issues. The EPA standards for  
23 the way the noise estimates are calculated, you said  
24 it's a day/night level. The problem with that is  
25 that might be suitable to an airport area where there

BR-1

1 is a constant noise. But when you go from a  
2 completely silent environment to an extremely noisy  
3 environment, the noise contrast is greater. And,  
4 therefore, the average system, I think, is  
5 inappropriate the way it's being used along these  
6 rural routes.

BR-1

7 You said that there is no impact on  
8 socioeconomic because the planes have been flying on  
9 these routes in the past. That does not take into  
10 account the type of airplanes being flown in the  
11 past. The newer planes are noisier, louder. They  
12 are faster. And that doesn't account for the types  
13 of planes you may be flying in the future, which  
14 could be louder.

AO-82

GE-29

15 The socioeconomic; I disagree with no impact  
16 because there is lots of areas it affects. It  
17 affects agriculture. It affects tourism. But this  
18 Environmental Impact Statement doesn't take into  
19 account future uses of this land. There may be other  
20 uses of this land that we haven't yet envisioned that  
21 these routes will hamper. And so that's -- what I  
22 don't like about the impact statement is it is  
23 static, not dynamic.

SE-1

AO-23

24 This Environmental Impact Statement does not  
25 consider other airplanes from other bases that are

AO-23

1 being considered along these routes. It only  
2 considers Dyess and Barksdale. And there are  
3 currently proposals from Holloman to fly aircraft  
4 along these routes. This Environmental Impact  
5 Statement only addresses those particular planes, not  
6 the other planes that may be coming through.

7 So I think this environmental assessment is  
8 flawed. I think there needs to be some more work  
9 done on it. And I would agree with the Option A  
10 for -- I had the -- in my opinion, the Air Force owns  
11 some of its own land. I think this is better suited  
12 for the Air Force's land rather than private  
13 property. Thank you for your time.

14 COLONEL BURD: I would like to call on  
15 McArthur Pineda. And then after that, I will be  
16 calling on Steven Pineda.

008086

17 MR. McARTHUR PINEDA: Good afternoon.  
18 I am speaking as a concerned citizen here. You know,  
19 I don't think anybody is questioning anybody's  
20 patriotic duty. I think everybody is real patriotic  
21 here, which it seems to be for this type of thing.  
22 But if there is some other place you can move, please  
23 do so. Because, you know, you are impacting this  
24 area quite a bit.

25 From what I have observed in the past ten

AO-1

1 years, working out in the canteloupe patch and the  
2 contract loading out there--you are asking for this  
3 proposal here--but in the past we have had all sorts  
4 of planes. I have got pictures of them. Some I took  
5 as far as SR-71s. The other planes have been flying  
6 over this area for years, coming down as low as 200  
7 feet. Because we threw a tennis ball at one time --  
8 we've got a picture of a crop duster coming by, and  
9 we would shoot those tennis balls up. So we decided  
10 to shoot them up, and I have got a picture of that  
11 thing coming up, and that tennis ball was going

12 higher than that damn airplane. And leaving a lot of  
13 pollution around there, we are concerned about this.  
14 And you ought to move that someplace else.

15 You know, this area, you know, we got a lot  
16 of agriculture, livestock, a lot of things; you know,  
17 communities like all these places. They were talking  
18 about Saragosa. You've got three or four little  
19 communities. Before you get to Saragosa, you've got  
20 Brogado. You've got lots of people living out there.  
21 You've got Saragoso there. You've got Brogado.  
22 You've got Balmorhea; a lot of people. And those  
23 people are scared. This thing has upset them, and  
24 this is going to impact them.

25 We have also got -- this shows that you've

AO-11

1 got -- certain planes are going to be flying this  
2 area. Like I said, SR-71s have been flying, I  
3 remember, since about 1989, when I first saw them.  
4 And we've got pictures of them. And there has been  
5 other planes right now currently over the City of  
6 Pecos. And I took some. They didn't come out. But  
7 you can see the identifying marks on the VF-17s. And  
8 they are doing maneuvers directly over the Pecos  
9 area, a populated area.

10 What I am concerned about, a lot of them --  
11 I think there is some German planes and one other  
12 nationality is going to be flying these planes  
13 overhead. Who is to say that they are not going to  
14 have nuclear weapons on board. We want some guaranty  
15 that they are going to have -- that this is not going  
16 to happen. We don't want another accident. We have  
17 had accidents in the past over here. We don't want a  
18 catastrophe, you know.

19 Dealing with the noise level, and the  
20 livestock, and so forth, and everything, and some of  
21 the aircraft fuel pollution, which also -- you know,  
22 it destroys vehicles. We have had some of that stuff  
23 out there. A lot of people -- as a matter of fact,  
24 the old boy that runs K & D Farms had a Cadillac out  
25 there; ruined his paint job, a complete new paint

PD-53

1 job, from that aircraft flying over it. And I am  
2 concerned about this.

3 Like I said, if you can move it someplace  
4 else, please do so. This is not the right area for  
5 it. We spend millions and millions of dollars, you  
6 know, moving the Air Force bases, closing them down  
7 and everything. And I think you can do better than  
8 this. This is not what we need here in West Texas.

9 One of these days you are going to get a  
10 rancher upset enough, he is going to take a weapon  
11 out there, it might even be a missile, and shoot the  
12 plane down. You know, you get somebody pissed off  
13 enough, they are going to do it. Thank you.

14 COLONEL BURD: I would like to call on  
15 Steven Pineda. And then after that, I will be  
16 calling on Clark Lindley.

008087

AO-41

17 MR. STEVEN PINEDA: Hello. My name is  
18 Steven Pineda. I would just like to comment on the  
19 various aircraft. Other than the ones that you have  
20 stated already, there will be the S-17 stealth  
21 fighter, the Apache helicopters, and other types of  
22 aircrafts. There is a new aircraft and it's not  
23 named. We don't know the name of it. It's a  
24 propulsion system. It's called a pulse propulsion  
25 system. And there is a gentleman here which has

1 taken pictures of it. And it leaves a trail of smoke  
2 rings. It's a series of -- like you are smoking a  
3 cigarette; it will blow a ring of smoke. They will  
4 have the propulsion like this.

5 This, as I stated to one of your officials,  
6 any and all aircraft under this proposal can use this  
7 airspace. And this, all of the jet, and the fuel,  
8 and the exhaust from this will impact the environment  
9 greatly. As well as it will be a detriment to the  
10 owl, also the American bald eagle.

BR-2

11 And, currently, you do have specific routes  
12 for your military aircraft, which it's going to  
13 interfere with crop dusters, also commercial jet  
14 aircraft, as well as aircraft used by other  
15 individuals, personal vehicles -- personal aircraft  
16 themselves.

17 And I don't believe that putting these  
18 proposed targeting sites is going to outweigh the  
19 effects where we currently are experiencing and the  
20 effects we are experiencing. And y'all should just  
21 leave it like it is. And you guys using military  
22 routes which are already in existence, using all  
23 sorts of military aircraft. And there is really no  
24 point in using the targeting except to get more  
25 experience for your jet fighters. Thank you.

1 COLONEL BURD: I would like to now call  
2 on Clark Lindley. And after that, I will be calling  
3 on Gloria Evans. **008088**

4 MR. LINDLEY: Colonel Burd, I am Clark  
5 Lindley, C-l-a-r-k, L-i-n-d-l-e-y. I would like to  
6 amplify on a point that I was making in Big Lake last  
7 night, in regard to the impact studies involving soil  
8 and water resources.

9 The study itself only discusses, in the  
10 Summary of Comparison Impacts under Table 4.6-1, the  
11 potential impacts on the construction sites. And I  
12 raised a concern that soil and water may be impacted  
13 by pollutants that are not properly evaluated in  
14 terms of the MALS studies that are projected at a  
15 elevation of 5,000 feet above ground level.

AO-11

16 The concerns that I have are that the actual  
17 flight elevations are estimated at 400 feet in Reeves  
18 County. We are asking for some clarification as to  
19 whether the pollutants that would be driven  
20 groundward eventually become a problem for our  
21 agricultural products, which include products like  
22 cantaloupe, bell pepper, onion, products of that  
23 nature. Does it impact on those agricultural  
24 products that are critical to the economic viability  
25 of this county? Be aware that the county is under

1 some pressure economically because of the drought,  
2 anyway.

AO-125

3 We are also concerned about the eventual  
4 impacts involving pollutants that may get into the  
5 aquifer. I have discussed this issue with Colonel  
6 Wheelis. And I would like to read into the record  
7 that in Reeves County and in Loving County, we have  
8 one of the nine major aquifers in the State of Texas.  
9 And the potential is that the TNRCC has looked at  
10 this area as a priority groundwater assessment area.

11 And as secretary of the proposed underground  
12 water conversation district, they have called me even  
13 in this last week, expressing concern about the  
14 quality and the quantity of the water that is  
15 available for the next 50-year period. We are  
16 particularly concerned about the ability of this area  
17 to remain able to use the aquifer that we have.

18 I have some additional concerns and I am  
19 not -- shall I quit at this time and resume after the  
20 others have spoken? Thank you.

21 COLONEL BURD: Gloria Evans. And after  
22 that, I will be calling on John Keifer. **008089**

23 MS. EVANS: My name is Gloria Evans. I  
24 live in Midland. We have ranching property in Reeves  
25 County and Jeff Davis County, where our son and his

1 son live full time.

2 I attended the initial meeting that the Air  
3 Force came -- when you came at Alpine the first time,  
4 and Fort Davis. Your presentation now is more  
5 polished, but the message is the same. The Air Force  
6 is taking over our airspace. I fiercely object to  
7 low-level flying over private property. West Texas  
8 is filled with hundreds of private pilots in small  
9 planes. And the airspace above the private property  
10 should belong to the landowners.

BR-2

BR-5

11 You Air Force personnel are here on an  
12 assignment. The folks at this meeting, and all of  
13 the other meetings that are taking place, are  
14 represented by people concerned about their homes,  
15 their families, and their livelihood. And the more  
16 flights that take place, the greater the risk. So I  
17 ask you, if a jet plane collides with a propeller  
18 driven private plane, which plane has the advantage?  
19 Thank you. **008090**

20 COLONEL BURD: John Keifer. And then I  
21 will be calling on Steve Jones.

22 MR. KEIFER: John Keifer. I represent  
23 myself and my wife. We are residents of Balmorhea.  
24 I would like to thank the Colonel and the Air Force  
25 for giving me this opportunity to talk.

1 My wife and I, we moved to Balmorhea a year  
2 and a half ago. We were residents of El Paso, Texas.  
3 Everyone in El Paso lives next to an airport. We  
4 moved to Balmorhea because of the lake and because it  
5 was quiet.

6 Our primary concern is the noise pollution  
7 from the jet aircraft flying over our homes, which  
8 are not even in your flight path, according to your  
9 flight charts. I can see that the airplanes have to  
10 make a turn, and they are probably overflying. I  
11 don't know what the terminology for this is, but they  
12 are not turning their aircraft soon enough. They fly  
13 over the City of Balmorhea during the daytime. And  
14 when it is dark at night, I don't know exactly what  
15 time it is, but it will wake you up out of a sound  
16 sleep. It is noisy.

17 My primary concern is the noise and, of  
18 course, disturbing the peace. I was overwhelmed with  
19 all of the paperwork. I have not had time to read it  
20 all. I have written a comment. I would like to say  
21 about my wife, she is American-German. She was born  
22 in Germany. And she has been diagnosed with post-war  
23 stress syndrome. And when the jets come over, they  
24 excite her very much. She takes medication for this.  
25 The only reason I am bringing it up is because she

AF-2

AO-18

1 said I wouldn't mention it. I did. Thank you.

2 COLONEL BURD: Steve Jones. And then I  
3 will be calling on Kay Kelley. 008091

4 MR. JONES: My name is Steve Jones. I  
5 am County Commissioner at Loving County, Texas,  
6 Precinct No. 3.

7 I would like to start off with thanking you  
8 for giving me this opportunity to speak this evening.  
9 I would like to commend the Air Force for what a  
10 great job they do preserving our country, keeping us  
11 safe and sound in our homes. I would also like to  
12 commend the Air Force and the military for their  
13 training exercises, but I think it could be done  
14 somewhere else.

15 I have some viable concerns. Being  
16 commissioner of Loving County, I might point out that  
17 Loving County is the least populated county in the  
18 United States, so habitation is not a great problem  
19 there. But if the corridor that you propose goes  
20 into effect for the training exercises, there is a  
21 concern as commissioner on land values and future  
22 habitation of the county. I think it will deter  
23 that.

24 Also, I would like to voice my concern about  
25 the effect that your proposed training exercises will

BR-4

1 have on ranching operations, which I am also a part  
2 of; livestock on my ranch, wildlife, and the  
3 employees. I think there will be a startle effect.  
4 In fact, I know there will be. Like everybody else  
5 has already said, that there is a startle effect from  
6 the noise of these aircraft. You don't see them  
7 coming. You hear them first. And whenever you look  
8 to see them, you have to look 300 or so feet in front  
9 of them, because the noise is behind them. They are  
10 traveling nearly faster than the sound.

11 I would like to agree with everything that's  
12 been said about the air pollution, the emissions from  
13 the aircraft and also the noise pollution. I would  
14 like to reiterate my statement about the startle  
15 effect, not only on wildlife and livestock, but also  
16 on human habitation.

17 Also, I would like to express concerns for  
18 migratory birds that come down from the north during  
19 the wintertime, going south, following one of your  
20 corridors along the Pecos River, which are waterfowl  
21 and morning dove. I don't think that your  
22 environmental statement has made an issue of that.

23 And I also would like to voice my concern  
24 for one of my most important environmental impacts  
25 that this will have, and that's the impact on my

BR-3

BI-2

1 life, my house, my home, my children, and my  
2 community.

3 I agree with Alternative A; move it  
4 somewhere else, especially, or mainly,  
5 federally-owned land. Thank you so much. 008092

6 COLONEL BURD: Okay. Kay Kelley. And  
7 then after that, I will be calling on Bryan Kelley.

8 MS. KELLEY: Thank you. My name is Kay  
9 Kelley. The last name is spelled K-e-l-l-e-y. I am  
10 with the Trans-Pecos Protection Group, which is a  
11 nonprofit organization which supplies information to  
12 anyone that can use it.

13 We oppose the expansion of the military  
14 airspace over the human environment. The military  
15 already controls almost 40 percent of airspace in the  
16 United States, with 35 or more proposals on the  
17 table. While we want our military to have the best  
18 training possible, we strongly feel that there is a  
19 much more reasonable location for these low-level  
20 realistic combat training flights, than over  
21 populated private property where they will have a  
22 huge detrimental effect on the people, on the ground,  
23 and with pilots.

24 This Draft Environmental Impact Statement  
25 does not properly address how these dirty, noisy,

BR-3

1 terrifying war machines are going to forever change  
2 West Texas. The Draft mentions our concerns but  
3 ignores their real impact. These low-level realistic  
4 combat training flights will cause headaches, stress,  
5 hypertension, sleep deprivation, lower immunity,  
6 hearing loss, and psychological problems,  
7 particularly in children. The startle effect can  
8 cause horses to buck uncontrollably and livestock to  
9 panic where they can run through fences or desert  
10 their young.

BR-2

11 Military bombers and the jets that fly with  
12 them pose a great danger to pilots in small planes  
13 and helicopters. Our border patrol, soil and water  
14 district pilots, customs pilots, cloud seeders, and  
15 crop duster pilots will be at risk, along with  
16 ranchers that use aircraft for game counts, checking  
17 waters, transportation, and gathering cattle.

BR-4

18 When one of these bombers or jets crashes,  
19 lives can be lost and fuels and toxic chemicals  
20 released. They will cause an immediate decrease in  
21 the land values, resulting in a loss of the tax  
22 revenues for our schools. This area will no longer  
23 be attractive to hunters, resulting in a loss of  
24 lease income. This income is critical to the  
25 survival of some ranchers. Diminished hunting

1 activity will also have a substantial effect on  
2 motel, restaurant, and supporting goods sales.  
3 On Page 3-10 and 3-11 in the Draft  
4 Environmental Impact Statement, we repeat the  
5 statement that "For almost nine years, the pilots,  
6 their crews, and their aircraft have successfully  
7 co-existed with the people and the environment of the  
8 RBTI study area." I guess the military's idea of  
9 successful and the people whose complaints have been  
10 ignored's idea of successful are not the same.

11 We are not antimilitary crackpots out here.  
12 We are patriotic, hard working Americans that are  
13 fighting for our homes, our lifestyles, and our  
14 constitutional rights. Remember, the military is in  
15 the business of death and destruction. The  
16 decision-maker needs to isolate these low-level  
17 realistic combat training flights from the human  
18 environment. We are not the enemy. Thank you.

19 COLONEL BURD: Bryan Kelley. And then  
20 I will be calling on William Wendt. 008093

21 MR. KELLEY: I would like to ask if  
22 everyone here in the audience who received a copy of  
23 this Draft Environmental Impact Statement, please  
24 raise your hands to be counted.

25 The only thing I have to comment on after

GE-22

1 Kay's comments would be that it's very important that  
2 all of us react to this Environmental Impact  
3 Statement by contacting the Air Combat Command with  
4 their comments, pro or con, whatever your opinions  
5 are. We would like to see you participate. If  
6 anything, the National Environmental Policy Act is  
7 participating in these federal legislation. It is a  
8 federal law. You are obligated to do this. If you  
9 would please, make a point of contacting your elected  
10 federal and state officials, doing the same thing.

11 My only comment is the study and the  
12 analyses that we have done relative to this  
13 particular program indicates there was insufficient  
14 notice when it first started. There was insufficient  
15 scoping at the time. It really didn't ever exist,  
16 and that's the second step. There has been an  
17 insufficient contact and information and -- well,  
18 mostly contact between the Air Force and the  
19 citizens. That's all I have. Thank you.

20 COLONEL BURD: William Wendt. And then  
21 I will be calling on Margaret Lindley. 008094

22 MR. WENDT: I want to thank you for the  
23 opportunity to speak this afternoon, and I thank you  
24 for having these meetings. I am definitely not  
25 against training. I am an EMT/paramedic, and I

1 understand training and how essential it is. I do  
2 have some concerns.

3 The first one is where I live, there at  
4 Saragosa and Balmorhea. One night I was sleeping  
5 very soundly. And in the early hours of the morning,  
6 a plane came over. And at first, it sounded like  
7 somebody dragging corrugated metal down a gravel  
8 road. And it got louder and louder. And pretty  
9 soon, I realized that it was a plane, but I couldn't  
10 understand how it could be so loud. And all of a  
11 sudden, the walls and the ceiling were shaking and  
12 the loud noise was deafening. And I thought, I have  
13 now ended my life; that plane is crashing into my  
14 home. And the walls and everything were shaking  
15 tremendously.

16 As it was, it didn't hit. But I immediately  
17 called the hospital and asked if there had been any  
18 reports of a plane down. I called the sheriff's  
19 office and the PD, also. Because I said, that plane  
20 had to have crashed. It could not be flying that low  
21 and pull up. And that's how low these planes fly  
22 over us. There is a lot of talk about the fact that  
23 they are 200 and 300 feet. But there was a man on a  
24 well drilling rig, and he was up 40 feet. And he  
25 looked out level. And from eye level, the plane went

AF-39

1 exactly eye level. These planes are flying  
2 tremendously lower than 200 or 300 feet.  
3 They also are crossing I-10 three different  
4 places in our area. I know what happens when these  
5 planes come across when you are driving. I have  
6 slammed on the brakes and swerved into the ditch a  
7 couple of times because of the fact that all of the  
8 sudden that "whoom," and it just -- it shakes your  
9 car.

10 One lady came into the hospital here about  
11 two weeks ago with an anxiety attack. She believed  
12 that her car was being picked up by a UFO because the  
13 car was shaking and vibrating, and she was believing  
14 that she was going to be transported.

BR-2

15 Another concern I have is with helicopters  
16 coming to rescue people that are in motor vehicle  
17 accidents. We have helicopters come out. And  
18 helicopters mixed with these low-flying jets -- I

AO-83

19 don't know; I heard a rumor today that there could be  
20 up to as many as 70 flights in a 24-hour period, if  
21 all of these other countries start flying this route.  
22 That would mean one every half hour, or less. If  
23 that happens, we are going to have a lot more  
24 pollution than what this environmental study has  
25 indicated.

AF-6

1 Also, children in school; we do have a very  
2 good community there in Balmorhea. And when these  
3 flights go out of their path -- like the other  
4 gentleman said, they are not staying in the path  
5 because of this curve. And they cannot maneuver that  
6 curve, and they are flying past the edge of their  
7 boundary and going right directly over Balmorhea and  
8 even to the south of Balmorhea. And this is - my  
9 home is outside of the boundary, too, just a little  
10 ways. But Saragosa is right in it.

11 And I would like to go ahead and suggest  
12 that could we not -- not have it go directly over  
13 Saragosa. Move the path north or south, in order to  
14 miss the populated areas. Thank you, sir.

15 COLONEL BURD: Margaret Lindley. And  
16 then I will be calling on Jim Scudday. 008095

17 MS. LINDLEY: My name is Margaret  
18 Lindley. I am a rancher. I have owned a ranch in  
19 Loving and Reeves County over which the planes will  
20 be flying if this goes into effect. And I thank you  
21 for having the hearing today.

22 The proposal to fly B-1 and B-52 bombers on  
23 low-level training missions over West Texas area has  
24 us crying out in terror. Our West Texas counties may  
25 not be worth much to you, but these are private-owned

BR-3

1 lands on which some poor sucker will have to make a  
2 living, and pay taxes and leases, and keep up the  
3 improvements.

AO-2

4 These are low-flying planes. The wind  
5 turbulence from the aircraft flying that close to the  
6 ground will spook the cattle, the horses, and the  
7 wildlife; which will tear up fences and water  
8 troughs. And then just from turbulence to the  
9 windmills, it will be unbearable and unaffordable.

BR-4

10 These planes have a devastating effect on  
11 ranching. I do not feel that the government has  
12 fully addressed the horrific impact bomber runs will  
13 have on our fragile economy, and the environment, and  
14 the quite unique area that we live in.

BR-5

15 The government has lands of its own in New  
16 Mexico, and Arizona, and other western states which  
17 they can very well use for this purpose, and they own  
18 the lands. Nothing has been mentioned about  
19 compensation over these private-owned lands where  
20 damage is done to the value of the lands.

AF-37

21 I have been ranching in this area for 58  
22 years. We have had experience with low-flying  
23 aircraft during World War II, and I know what the  
24 damage can do. And this will be much worse.

25 To find anyone or an entity in the military

AF-37

1 who is accountable to listen to the legitimate  
2 complaints by citizens is impossible. Please take  
3 your low-flying aircraft over the lands that you own  
4 in fee. I thank you for your earnest consideration,  
5 and I thank you again.

6 COLONEL BURD: Jim Scudday. And after  
7 that, I will be calling on B. R. Begay. 008096

8 MR. SCUDDAY: My name is Jim Scudday.  
9 I live in Saragosa. My biggest question is how the  
10 Environmental Impact Statement was written, and who  
11 wrote it, and what guidelines they were using as far  
12 as how correct it is.

AF-55

13 I know that these planes right now,  
14 presently, I would have to bet you that some of the  
15 pilots are using my house that sits out there by  
16 itself as a -- not primarily a target, but as  
17 something to pick a fly-by; that probably four or  
18 five times a month that a plane will fly right over  
19 the top of my house, right over the top of my house,  
20 sitting at about 400 or 500 feet at about 11:30 at  
21 night. And during the daytime, probably four or five  
22 times a week, planes will come flying right over the  
23 top of the house.

BR-3

24 And I don't think there has been enough  
25 study on loss of productivity and livestock. A lot

SE-5

1 of the people in this country, this area, are  
2 involved in ranching. And what impact do these  
3 planes flying over have on reproductivity in this  
4 livestock.

5 As far as impacts, support communities, that  
6 looking at y'all's flight patterns out there,  
7 everyone of them goes primarily over what the  
8 government would call socially disadvantaged  
9 populations, as well as economically depressed areas.  
10 I know that here in Balmorhea over the past few  
11 years, there has been a big reduction in the amount  
12 of migratory birds coming through, and especially  
13 dove. And dove hunting is a big business around  
14 there.

BI-2

15 And then there is a lot of talk there in the  
16 community now, with the lake out there, that it has  
17 been wintering grounds for lots of migratory birds,  
18 in trying to get some people coming into the area,  
19 birdwatchers, which is big business. Well, there is  
20 several birds that you just don't see out at the lake  
21 anymore.

22 And one of my biggest fears is if there is  
23 an accident, these planes fly right over the top of  
24 Saragosa and right over the top of Balmorhea and  
25 right over the interstate. And if one of them does

AO-16

1 have an accident, we have got real good medical  
2 personnel here, but one or two ambulances isn't going  
3 to cut it. There could be a big loss of life if  
4 there is an accident, because of the lack of medical  
5 response in this area. Thank you.

6 COLONEL BURD: B. R. Begay. And then I  
7 will be calling on Helen Weinacht. **008097**

8 MR. BEGAY: Good evening, sir. My name  
9 is Berta Begay, B-e-g-a-y. I live in Toyah, Texas,  
10 14 to 16 hours a day. And 8 to 10 hours a day, I  
11 live in Saragosa, Texas.

12 And this week in California, in some cities,  
13 they have already put regulations into effect  
14 regarding leaf blowers and the noise and the impact  
15 that leaf blowers make in communities. How much  
16 more is the effect of these big jets flying directly  
17 over us, than the effect of the noise of leaf blowers  
18 in California communities?

AO-4

19 If these pilots are truly the very skilled  
20 professionals they purport to be, they can learn  
21 structure avoidance. I am here almost with fear,  
22 trembling, because it's hard for me to talk like  
23 this. But I have no ill feelings against the Air  
24 Force. I have members of my family in the armed  
25 forces and have for years. I have great respect for

AF-6

1 the military. But carelessness, horseplay, jokes,  
2 pranks involving these big aircraft, there is no  
3 place for them. And when they fly directly over our  
4 structures, they can learn -- you said that they are  
5 learning terrain avoidance. I petition you to teach  
6 them to avoid structures, whether they be a hen house  
7 or a mobile home; whether they are any type of  
8 storage structure, whether it be a grain bin, or an  
9 oil field battery, dirt tank, any kind of water  
10 structure. Establish a limit on how close these  
11 aircraft can fly to all types of these structures,  
12 including living structures, flocks of hens, birds,  
13 herds of cattle.

14 On April 1, I was literally stunned. I  
15 could not even move as the mobile home I sat in  
16 trembled. I mean, it didn't shake; it trembled. The  
17 aluminum roof felt like it was going to come right  
18 off the top. And I was literally, literally stunned.  
19 And I have spoken to quite a few people that have had  
20 the same experience.

CU-1

21 We have a huge underground storm shelter  
22 under the Headstart School in Saragosa. Structure  
23 damage can involve dirt, cement, cinder blocks.  
24 Please consider rerouting your airplanes. Thank  
25 you.

BI-2

1 COLONEL BURD: Helen Weinacht. And  
2 then if Helen Vernon is here and would like to speak,  
3 I will be calling on her after we finish speaking.

4 MS. WEINACHT: My name is Helen  
5 Weinacht. Can you hear me? **008098**

6 COLONEL BURD: Yes.  
7 MS. WEINACHT: W-e-i-n-a-c-h-t. I am  
8 here, first of all, on behalf of the Balmorhea  
9 Chamber of Commerce.

10 The other night on TV, some guy  
11 said--talking about George Bush--that Texas is the  
12 11th largest economy in the world. The second  
13 largest industry in Texas is tourism. And nature  
14 tourism is a 20-billion-dollar-a-year industry. And  
15 we have had a little bit of talk about birds. Where  
16 Texas does this (indicating), that's a major flyway,  
17 and we are right in the middle of it. Of the 900  
18 birds, 300 of them are in Balmorhea.

BI-3

19 In all of the magazines that I read as a  
20 chamber employee, the Big Bend area is one of the top  
21 three destinations, because of bird watching, and the  
22 wildlife, and whatever people do in Big Bend. I  
23 can't help but think this would impact that. I don't  
24 know what a non-environmental subject is. I guess  
25 this would be environmental, the birds. It would

1 seem to me if that spotted owl can do what it did in  
 2 Oregon, that our 900 birds should be able to get  
 3 someone's attention.  
 4 My son-in-law is a graduate of the Air Force  
 5 Academy. I am very proud of his education. I am  
 6 very proud of the Air Force. I am very proud of my  
 7 son-in-law, but I don't want him to live with me.  
 8 Thank you.  
 9 COLONEL BURD: Helen Vernon, if you are  
 10 here and would like to speak, please come forward.  
 11 I have now exhausted all of the cards that  
 12 indicate the individuals who wanted to make comments.  
 13 I would like now to ask if anyone who has not filled  
 14 out a card and who has not had the chance to make  
 15 comments, if you would like to come forward now and  
 16 make some comments, you are free to do that since we  
 17 have some time.  
 18 Is there anyone who has not spoken that  
 19 would like to come forward and speak?  
 20 MS. EVANS: I wish to.  
 21 THE COURT: Please come forward. And  
 22 any of you who do come forward now, if you would  
 23 please clearly indicate your name. **008099**  
 24 MS. EVANS: Yes. My name is Charlotte  
 25 Evans. Can you hear me?

AO-26

1 COLONEL BURD: Yes.  
 2 MS. EVANS: I would wish to speak on  
 3 behalf of the children, and I wish that you would  
 4 keep this in consideration when you make your  
 5 decision.  
 6 Most of the children in this area, as you  
 7 know, it's a rural area, so they put in very long  
 8 hours. They get up around 6:00, if they are lucky.  
 9 And they do not get home until 5:30, or maybe after.  
 10 And your fly-bys in the middle of the night is very  
 11 disruptive. My child can wake up at least twice in  
 12 the evening, or at night. I feel as though she is  
 13 being robbed of her childhood, because by the time  
 14 she gets home, there is homework, eat, and then in  
 15 bed again. She is exhausted.  
 16 And I have been on a military base. My  
 17 sister and my brother-in-law are in El Paso right  
 18 now. So I do know the difference between a plane  
 19 coming in and landing and taking off and a  
 20 full-fledged fly-by. There is a great amount of  
 21 difference. And I just -- I just wanted to say that.  
 22 COLONEL BURD: Is there anyone else who  
 23 has not had a chance to comment that would like to  
 24 come forward now and make comments?  
 25 Is there anyone who has already made

1 comments that would now like to come forward and make  
 2 additional comments?  
 3 Please come forward. And then I will have  
 4 you up next. And if you could, again, state your  
 5 name when you come up. **008100**  
 6 MR. LINDLEY: I am Clark Lindley,  
 7 L-i-n-d-l-e-y. I would like to continue the remarks  
 8 that I was making earlier in order to be more  
 9 specific.  
 10 We would like to have the calculation  
 11 involving pollution at 400 feet, because those  
 12 flights actually are at 4000 feet rather than the  
 13 existing calculations in Table F, at 5,000 feet. And  
 14 we would like to have some information in regard to  
 15 the effect of pollutants, particularly on people who  
 16 have breathing conditions and on the conditions that  
 17 might exist for small, young children.  
 18 I have discussed briefly with Colonel  
 19 Wheelis a report that we have been handed in regard  
 20 to what his alleged -- and I do not know that it's  
 21 true; alleged to be a component of jet fuel. I  
 22 believe it's JP-8. But I want to at least read that  
 23 into the record.  
 24 "An extremely hazardous pesticide, EDB,  
 25 ethylene dibromide, was banned by the U.S.

AO-62

AO-66

AO-50

1 Environmental Protection Agency in 1983. But in  
 2 1991, the composition of jet fuel used by commercial  
 3 and military jet aircraft in the United States was  
 4 changed from JP-4 to somewhat less flammable JP-8. A  
 5 Department of Defense source says the move has saved  
 6 some lives; air crashes. Ethylene dibromide is a key  
 7 component of JP-8."  
 8 I am asking that in the environmental study,  
 9 that it be determined whether ethylene dibromide is  
 10 present. Am I going to be limited to three minutes?  
 11 COLONEL BURD: Yes. But after anyone  
 12 else who would like to make additional comments is  
 13 through, then I will give you another shot at it.  
 14 MR. LINDLEY: Okay; thank you. We want  
 15 to be assured that there are no other additives in  
 16 the JP-8 that ultimately has some damaging effects to  
 17 humans that would be in the areas immediately under  
 18 the flight patterns at 400 feet.  
 19 We are also concerned about the report that  
 20 fuels are dumped at some point in the flights. We do  
 21 not understand what the effect is on human beings.  
 22 And we would like to see some evidence that this act  
 23 is not going to be damaging to people, to water, or  
 24 to animals in the areas they are under. Thank you.  
 25 MR. VERNON: My name is Joe Vernon,

1 V-e-r-n-o-n. And I would like to continue and add to  
2 the comments I made earlier.

3 I think one of the big issues, at least to  
4 me, and I think should be to a lot of the people, is  
5 this study that was supposedly done. I think people  
6 need to know that probably most everyone here didn't  
7 know anything about this study, about this proposal,  
8 or even this meeting this evening, until the last 48  
9 to 72 hours. It was amazing to me the number of  
10 people that I talked to that knew absolutely nothing  
11 about it.

12 You know, we trust the government to take  
13 care of us. And that's -- you know, that there is  
14 one of the worse wrongs you can do. What are you  
15 trying to do to us that you don't want to tell us  
16 about it?

17 I don't want it to sound like I am against  
18 the government or against the military. I am all for  
19 it. I signed up to be in the Air Force. I am a  
20 pilot. I love to fly. I love aviation. I have got  
21 a son that just graduated, going into the Army.  
22 Sorry, it's not the Air Force. But he is going to be  
23 a helicopter pilot.

24 It's amazing to me the difference between us  
25 as civilians and, particularly, civilian pilots, the

BR-5

1 extensive training we go through to learn the  
2 limitations we have; and yet, the armed forces pay no  
3 attention to those. We want this. We are going to  
4 go get it. That -- I don't know. It creates so such  
5 distrust, it's unbelievable.

6 And as a lot of the people have said  
7 already, the government owns land everywhere where  
8 they can do this. And I want to remind you, they own  
9 those lands and you people, pilots included,  
10 everybody, you make your living off our taxes. Don't  
11 make me pay you to come in and take away my freedom  
12 and what rights I do have. That's not right.

13 And consider the safety issues. After all,  
14 if you are going to mess us up and take a chance of  
15 killing us, how much is that worth? You know, you  
16 are supposed to be here to protect us, not run us off  
17 and kill us. Thank you.

18 COLONEL BURD: Would anyone else like  
19 to make comments? **008102**

TY

20 MS. WEINACHT: Yes. My name is Helen  
21 Weinacht, and I wanted to speak to the 46 jobs that  
22 will be created in Reeves County. I think that's  
23 piddley compared to what the nature tourism can bring  
24 in.

25 And earlier, you mentioned something about

1 flying 600 miles before they got to where they would  
2 do the realistic training. And thank God, pilots are  
3 having to fly that far before they would take any  
4 sort of aggressive action. I don't think it's  
5 realistic just to go up and practice that. We want  
6 it that far away, do we not? Thank you.

7 COLONEL BURD: Would anyone else like  
8 to make any comments? Very well. **008103**

9 MR. LINDLEY: Clark Lindley,  
10 L-i-n-d-l-e-y. I was told after I finished speaking  
11 just a moment ago that I had made the mistake of  
12 saying that I wanted the studies of pollution levels  
13 at 4,000 feet. I intended to say 400 feet.

14 I would now like to begin to speak as chair  
15 of the committee appointed by Reeves County Judge  
16 Jimmy Galindo. During the scoping process, the  
17 County Commissioners Court prepared a letter dated  
18 March 31, 1998, addressed to RBTI EIS at Dyess Air  
19 Force Base, Texas. We sent it by certified letter on  
20 April 1st. I would like to read from that letter so  
21 that there will be a record of the position taken by  
22 the Reeves County Commissioners Court in regard to  
23 the Environmental Impact Statement.

24 "The council on environmental quality  
25 regulations state that local governments and the

AF-40

1 public have equal authority in the decision-making  
2 process relative to all federal government actions,  
3 relative to the national and human environment.  
4 Therefore, we ask and require that you respond to the  
5 following requests for information and take account  
6 of our requirements stated in this letter regarding  
7 methodologies and perspectives on issues to be  
8 developed in the Draft Environmental Impact Statement  
9 and in the Final Environmental Impact Statement.

10 "We are, by this letter, notifying you that  
11 we are requiring you to let us participate in  
12 reviewing methodologies, selection of studies,  
13 selection of organizations doing the studies, and  
14 development of the DEIS, and approval of the final  
15 FEIS.

GE-22

16 "The Reeves County Commissioners Court  
17 requests that you provide us notification of any EPA  
18 related hearings, public meetings, and provide us  
19 with information related to all environmental  
20 documents as required in the CEQ regulations.

GE-22

21 "We request that you provide us with a copy  
22 of the Draft EIS, all revisions, and a copy of the  
23 Final EIS. We ask that you provide us with a full  
24 statement of our due process rights in regard to each  
25 step of the RBTI process.

1 "As a part of the requirements of the CEQ  
2 regulations on the National Environmental Policy Act,  
3 please respond to the following questions and/or  
4 include their standards in the development of the  
5 Draft EIS and the Final EIS." Do you want me to --

6 COLONEL BURD: How many pages are you  
7 intending on reading?

8 MR. LINDLEY: Four, four additional  
9 pages.

10 COLONEL BURD: And this is something  
11 you just can't present in writing?

12 MR. LINDLEY: Well --

13 COLONEL BURD: I mean, I would like to  
14 note that 80 percent of the people attending the  
15 meeting have gone. And you are imposing on our  
16 goodwill by continuing to read something that you  
17 could just introduce in writing.

18 MR. LINDLEY: Well, evidently, you may  
19 feel that I am imposing on your goodwill. Does the  
20 audience feel that way?

21 AUDIENCE MEMBERS: No, no, no.

22 COLONEL BURD: Are you going to  
23 continue to follow us around and make these long  
24 presentations at the subsequent hearings?

25 MR. LINDLEY: This will be the only --

1 COLONEL BURD: If you do -- I am not  
2 suggesting that you not attend other hearings. But  
3 if you do, I would like you to organize yourself  
4 better, make better use of your time, and present the  
5 essence of what you have to present.

6 It's inappropriate for you to exploit this  
7 hearing to read a long document that you could submit  
8 for the record. And that's the point here, other  
9 than just simply -- what you are doing now is taking  
10 the opportunity to get up on a soapbox, which is  
11 something other than the purpose of this hearing.

12 I will permit you to read what it is that  
13 you have. But I want you to know I personally feel  
14 it's inappropriate for you to do this. Go ahead.

15 MR. LINDLEY: "As part of the  
16 requirements of the CEQ regulations on the National  
17 Environmental Policy Act, please respond to the  
18 following questions and/or include their standards in  
19 development of the Draft EIS and Final EIS.

20 "We request that all data in the EIS  
21 include the base line conditions prior to the  
22 development of the U.S. Air Force flights in Reeves  
23 County, and include all cumulative increases from  
24 that base line for current and all anticipated  
25 flights, thus showing the total cumulative

PD-35

BR-5

AO-84

AO-85

1 environment effects.

2 "Please provide full evidence of your legal  
3 authority underneath to be making current flights  
4 over the southern part of Reeves County. Please  
5 furnish us with documentation showing what additional  
6 incremental flights in Reeves County beyond the  
7 present proposed RBTI have been discussed or proposed  
8 by the U.S. Air Force.

9 "We request a history of complaints made to  
10 the U.S. Air Force regarding actual low-level flights  
11 and a complete statement of the procedure in making  
12 complaints that become a part of the historical  
13 records.

14 "In your analysis of the air pollution,  
15 please provide statements of increases in particulate  
16 matter at both the 10 and 2.5 micron levels. Please  
17 provide your analysis of increases in particulate  
18 matter based upon actual flights at elevations of 100  
19 to 300 feet, rather than at irrelevant higher  
20 altitudes. Base the figures on the immediate period  
21 of the overflight and not on longer periods such as  
22 an hour or 24 hours.

23 "In regard to the effect on stress levels  
24 in human beings, please review and include objective  
25 studies bearing on the immune system, the nervous

AO-1

AF-41

AF-42

AO-86

1 system, endocrinal system, and cardiovascular system.  
2 Please evaluate the effects on children, the elderly,  
3 and those with impaired physical and/or psychological  
4 conditions. Give particular attention to the effects  
5 on people with impaired lung conditions. What is the  
6 spectrum of potential effects upon each of the  
7 preceding of continuing day and night flights on the  
8 maximum number of flights proposed.

9 "Please include in EIS an estimate of the  
10 number of the close passes within 100 feet and 300  
11 feet of individuals walking on foot, riding horses,  
12 or driving a vehicle or farm equipment in the period  
13 of one year. Please base your environmental analysis  
14 on actual flight test data obtained on each of the  
15 proposed aircraft flying at their lowest flight  
16 levels above the ground, at their maximum training  
17 speeds, with measurements six feet above ground and  
18 directly under the flight paths.

19 "Please provide decibel levels, wind force  
20 levels and direction, and all EPA air quality  
21 parameters under these specifications. State how  
22 many aircraft flights will be made under maximum  
23 anticipated proposal on a weekday, weekly, monthly,  
24 and annual basis.

25 "Will in-flight refueling take place over

AO-86

1 Reeves County, and what amount of fuel will be lost  
2 or dumped? What will be the effect on humans,  
3 animals, and the land beneath? We request that you  
4 study the geology underlying the flight zone and  
5 determine potential effects of pollutants upon the  
6 water in the underground water table. What is the  
7 effect of pollutants upon surface water over the  
8 periods of a month, six months, a year, five years,  
9 and ten years?"

AO-125

10 I think that's probably as much as I want to  
11 attempt to read from this. We did not receive any  
12 response at all from the Air Force to the  
13 Commissioners Court of Reeves County and are still  
14 concerned that we are not being included in a  
15 participatory way. Thank you.

AO-125

16 COLONEL BURD: Is there anyone else who  
17 would like to make any comments? Yes? **008104**

TY

18 MR. TARIN: Herman Tarin. I just would  
19 like to note that -- let you know that the Court did  
20 appoint Mr. Clark Lindley to work on this issue, and  
21 we really would like to appreciate him and what he  
22 has done for us. As far as any response from the Air  
23 Force, we have not received a response at all, except  
24 a copy of the environmental draft that we received  
25 about three weeks ago. Thank you.

1

COLONEL BURD: Would anyone else like  
2 to make any comments? Ladies and gentlemen, that  
3 concludes this public hearing. Thank you for your  
4 participation and input. Remember, the public  
5 comment period will extend through June 16, 1999.

6

This public hearing is adjourned. Thank you  
7 kindly.

8

(Time is 7:31 p.m.)

9

10

11

12

13

14

15

16

17

18

19

20

21

22

23

24

25

1 recognized you and please address your remarks to me.  
2 Please speak clearly into the microphone,  
3 starting first with your name. Please spell it out  
4 if it's difficult to spell, and the capacity in which  
5 you appear if you are representing anyone other than  
6 yourself. This will ensure the Court Reporter gets  
7 an accurate record.

8 Each person will be allowed three minutes to  
9 speak. This time limit applies to public officials,  
10 spokespersons -- **008105**

GE-6

11 MS. SMITH: I would like to object to  
12 the three-minute time limit. There is no legal  
13 authority for that. NEPA does not set any limit.  
14 This hearing is for the public and is not under the  
15 means of the Air Force. I would urge the people who  
16 have taken the trouble to come here to make their  
17 comments recorded by the Court Reporter. And I would  
18 like this recorded by the Court Reporter. Those  
19 people have the right to speak as long as they want.

20 COLONEL BURD: Well, I am sure that all  
21 the remarks that are made, including unsolicited  
22 outbursts, will be recorded.

23 As I previously indicated, if you speak --

24 MS. SMITH: This is a hearing and that  
25 is a legitimate objection. I have a right to make an

1 objection. I have a right to make it on the record.  
2 COLONEL BURD: Anyone who desires to  
3 speak, as I have indicated, will be given an  
4 opportunity to speak after I have recognized you.  
5 Please address your remarks to me at that time.

6 As I indicated, each person will be allowed  
7 three minutes to speak. This time limit applies to  
8 public officials, spokespersons, and individuals  
9 speaking for themselves.

10 You do not have to speak for the full three  
11 minutes. However, if you choose to speak for the  
12 full three minutes, when you have only one minute  
13 remaining to speak, a yellow card will be raised.  
14 And then when your time has expired, a red card will  
15 be raised.

16 Out of respect for the others who would like  
17 to make comments, I ask that you please honor any  
18 request from me to stop speaking. If you think you  
19 have more comments than you can present in the time  
20 allotted, make the most important comments first. If  
21 you don't get a chance to voice all of your comments,  
22 you can and should submit them in writing.

23 If we have the time, we may give you an  
24 opportunity to expand on your remarks later at the  
25 end of the hearing.

1 You may have noticed that a Court Reporter  
 2 will record verbatim everything that is said tonight.  
 3 The transcript -- or today; excuse me. The  
 4 transcript of these proceedings will be become a part  
 5 of the record of the hearing and will be included in  
 6 the Final EIS. The Reporter will be able to make a  
 7 complete record only if she can hear and understand  
 8 what you say, so speak clearly and slowly. In  
 9 addition, if you have a written statement, the Court  
 10 Reporter would appreciate you handing it in so that  
 11 any names, places, references to scientific terms, or  
 12 other information can be recorded accurately.

13 Finally, I would like to remind you to limit  
 14 your comments to the Draft EIS. That is the purpose  
 15 of this public comment period. Also, I ask that you  
 16 avoid repeating what other speakers have said. There  
 17 is nothing inappropriate about agreeing with what  
 18 other speakers say, but to repeat the same thing just  
 19 delays others in making their comments. If you agree  
 20 with a previous speaker on a particular issue, you  
 21 can state your agreement. Of course, you may make  
 22 any comments you wish about the Draft EIS.

23 If you would like to turn in your written  
 24 comments, you can place those in the box provided in  
 25 the back of the room.

1 Now, we will start with comments now. We do  
 2 not have any elected officials, so I would like to,  
 3 from the cards that have been handed in, call now on  
 4 the individuals who have indicated a desire to make  
 5 comments.

6 And the first person I would like to call on  
 7 is Bernie Zelazny. **008106**

8 **TY** MR. ZELAZNY: My name is Bernie  
 9 Zelazny. That's B-e-r-n-i-e, Z-e-l-a-z-n-y. As  
 10 many of us here are, I am opposed to any flight  
 11 training in the area. It seems to me the best place  
 12 for the EIS is the trash; that there should be no  
 13 action; that they should move the aircraft closer to  
 14 the already set up testing and training areas and let  
 15 the pilots train there, as they have in the past.  
 16 That would eliminate all of this and the need for it.  
 17 It would cost us all a lot less in taxpayers'  
 18 dollars, and the training could take place as the Air  
 19 Force wishes.

20 COLONEL BURD: I would like to now call  
 21 on Steven Posner. **008107**

22 DR. POSNER: I am Dr. Steven Posner,  
 23 P-o-s-n-e-r. We are relatively new residents to  
 24 Alpine. My main concern is, speaking as a civilian  
 25 pilot, of these aircraft's safety in this area.

1 Generally, airflight safety is accomplished with what  
 2 the FAA calls "see and avoid," which works quite well  
 3 utilizing speeds under 250 knots, which the FAA  
 4 requires under 10,000 feet.

5 With nearly double the speed on these  
 6 Military Training Routes, "see and avoid" is an  
 7 impossibility. There is just no time for a B-1 or a  
 8 B-52, going six to eight miles per minute, to see a  
 9 small general aviation aircraft and to take evasive  
 10 action, for either aircraft. I know the Air Force  
 11 certainly doesn't want to lose any aircraft or any  
 12 personnel. Certainly, the civilian community doesn't  
 13 want to see that happen either.

14 Again, the FAA makes this rule for a reason  
 15 and that safety "see and avoid" will not operate at  
 16 air speeds that are planned for this Military  
 17 Training Route.

18 COLONEL BURD: I would like to now call  
 19 on Hal Flanders. **008108**

20 MR. FLANDERS: My name is Hal Flanders,  
 21 H-a-l, F-l-a-n-d-e-r-s. I agree with the civilian  
 22 pilot speaker, and I will leave that go. I don't  
 23 understand how the ranchers, DEA, border patrol, and  
 24 anyone else flying around down here can do any  
 25 avoidance, because their mission requires them to be

AF-43  
 BR-2

1 looking down all the time. They are not looking out  
 2 there for spots in the sky. And I don't think it's a  
 3 matter of if there is a collision, I think it is a  
 4 matter of when.

5 In addition, I am upset with the  
 6 environmental aspect of that many flights in this  
 7 area, which is already in serious trouble with air  
 8 difficulties, air particulate matter reducing  
 9 visibility. You know, if I understand it correctly,  
 10 when an airplane is flying level, it is not really  
 11 pouring gas, so to speak, out of the back end. But  
 12 when it's pulling up, which you must do if you are  
 13 going to be following the terrain, there will be a  
 14 lot of this and there will be dumping a lot of their  
 15 fuel on this ground here, which has already been  
 16 punished for a long time, and severely. So I don't  
 17 think we can afford environmentally more degradation  
 18 when we are fighting hard to try to clean up the  
 19 area. Thank you.

20 COLONEL BURD: I would like to call on  
 21 Dan Decker. **008109**

22 **TY** MR. DECKER: My name is Dan Decker,  
 23 D-a-n, D-e-c-k-e-r. I am a retired Air Force Tech  
 24 Sergeant, and I speak from experience on working on  
 25 these aircraft for 20 years.

AO-1  
 AO-5

26

1 First of all, I am here because this is the  
2 best show in Alpine today. Secondly, I am here to  
3 apologize to Colonel Burd and other Air Force  
4 personnel for some of the things they are going to  
5 hear by people who speak here today. And that is on  
6 behalf of the sane and patriotic citizens in Alpine.

7 I would also like to say that continuous  
8 training is required. It's not a nicety. It is a  
9 requirement. Their hours, their line hours, are  
10 continually being decreased. And they are  
11 continually being exposed to hostile environments.  
12 We have Air Force personnel, and Navy personnel, and  
13 other personnel right now under fire. Right now they  
14 are being fired at.

15 From 1947 until 1991, the military was  
16 deployed into a hostile environment eight times.  
17 That included Vietnam, Korea, and the Gulf War.  
18 Since 1992, the military has been deployed into a  
19 hostile environment 33 times. Our involvement  
20 worldwide is increasing.

21 One of the things that happens with pilots,  
22 Air Force pilots don't get paid a whole lot of money.  
23 Pilots with the civilian airlines do get paid a lot;  
24 \$50,000.00, \$60,000.00, \$70,000.00 and more for a  
25 pilot of a Boeing 747 or a commercial line. That's a

27

1 huge, huge draw to pull pilots out of the Air Force,  
2 trained pilots. So this need to continually train is  
3 something that is accepted.

4 During World War II, we were unprepared.  
5 Japan could have taken this country, or at least a  
6 huge portion of it, because we weren't ready. Since  
7 then, we have continued to be ready. These pilots  
8 need to train. They need to fly here. You don't  
9 want them flying over Dallas, do you, or Houston, or  
10 Los Angeles to train, to drop bombs. There is nobody  
11 out here to object -- or not to object; there is  
12 nobody out here in comparison that would cause -- if  
13 a plane crashed here, which one did a couple of years  
14 ago, it wouldn't hit anything. If it had been in  
15 downtown Dallas, several thousand people might have  
16 died. Bring it on, gentlemen.

17 COLONEL BURD: I would like to now call  
18 on E. L. Pitman. **008110**

TY

19 MR. PITMAN: Colonel, my name is Earl  
20 Pitman, P-i-t-m-a-n. Under the conditions that we  
21 find ourselves today in Kosovo and Yugoslavia, I  
22 think that the importance of what we are speaking  
23 about here today takes on new real incidence. And I  
24 would hope that as a community and as a nation --  
25 this is not something that just affects Brewster

28

1 County, or Alpine, or the West Texas area, but this  
2 affects the very core of our American way of life,  
3 and our democracy, and the freedom which all of us  
4 want to enjoy. And every person here is here today  
5 for the purpose of expressing an opinion about some  
6 aspect of their own freedom, personal freedom, or the  
7 national freedom. But I would hope that our  
8 pragmatism, and having lived and having read history,  
9 would not be overcome by what I would call causism  
10 and we would not be led astray by that and not  
11 understanding the real issue which we are dealing  
12 with here today.

13 I have reviewed the impact statement in  
14 fairly close detail. And I have found no pertinent  
15 impact that would really cause us as a community to  
16 be against it because of the fact that it would  
17 impact our community as a whole. It might impact  
18 some of us individually more than it does others, and  
19 we might not prefer that impact upon our own lives.

20 I worked for the state highway department  
21 for 32 years. That doesn't qualify me for anything  
22 except to say that during that time, in the early  
23 '50s, I was a part of establishing and locating new  
24 highways in this state, a long time before the  
25 interstate system was here. And it was amusing to

29

1 me, though I found it to be somewhat -- I couldn't  
2 rationalize it. And we would interview people and  
3 speak to them about where do you want this road? Do  
4 you want the road at all? Oh, yes, we want the  
5 road. We want to get out of this mud; and where  
6 would you put it? Well, we want to put it right out  
7 here in front of your house. No, I don't want it;  
8 put it over on my neighbor.

9 So I would just say to the Air Force today  
10 that whatever you do, you should pursue this until  
11 you implement B, C, or D. Because I balance my  
12 budget at home. I expect Brewster County to balance  
13 its budget, and I expect Washington to balance its  
14 budget for the benefit of us all. And when that  
15 takes place, then we are not going to see 40, 50, 60  
16 percent of air time training funds wasted in  
17 in-transit flight big as a ho hum, give me a donut  
18 and a piece of coffee (sic). Thank you, sir.

19 COLONEL BURD: I would like to call on  
20 Betsy Brown. **008111**

21 MS. BROWN: My name is Betsy Brown. I  
22 would first like to say that I don't think that any  
23 of us here are against pilots training. That's never  
24 been the question. The question is where. Also, I  
25 don't think any of us are saying don't do it over me;

AF-55

1 do it over my neighbor. We are more saying there are  
2 other places that there are no people, or very much  
3 fewer people, than there are here.

4 Basically, I am not, you know, really  
5 educated on this. I don't know the technical terms.  
6 I do know that these training flights impact me  
7 personally and very negatively. And I know the more  
8 they are, the more the flights there are, the more  
9 negative this becomes. And the number of flights has  
10 already increased tremendously in my lifetime out  
11 here, and I am not sure why. They fly right over our  
12 house. I am not sure why. They say they try to miss  
13 our house, and that's a little difficult to believe.  
14 We can call and complain. Maybe it does a little  
15 good for four or five days; then guess what, they are  
16 flying right back over our house.

17 I don't think it's necessary. That's the  
18 point. I don't think it's necessary for them to do  
19 this out here. I don't think it's necessary for them  
20 to increase the number of flights. I think it is  
21 necessary for them to train. I am patriotic. I  
22 don't want them to stop training. But I think there  
23 are better options, better alternatives, than over  
24 us. Thank you.

25 COLONEL BURD: I would like to now call

BR-5

BR-4

1 on Jack Brown. **008112**  
2 MR. BROWN: I am Jack E. Brown. I live  
3 in Presidio County, Texas, not far from here. We own  
4 private land there and try to get by with a cattle  
5 operation, which is not profitable. I think that's  
6 pretty well known. The Air Force is violating our  
7 rights. You are trespassing on our rights in using  
8 our air space and part of our property without  
9 compensation. I believe, traditionally, a landowner  
10 in this country owns rights under the surface and in  
11 the airspace above the surface, and that is not being  
12 respected.

13 Your flights, your training flights, are  
14 affecting our operation in a number of ways. Just  
15 one example, we have some guests. We have some  
16 paying guests. We have three different residences on  
17 our country. We have some hunters that pay us that  
18 help us stay in business. I think you can imagine  
19 what that might do to a hunter when he is stalking a  
20 trophy buck and one of your planes zooms down close.  
21 It scares him and scares his prey off.

22 You are affecting us in a lot of ways. Our  
23 livestock, our riding horseback, for example. I am  
24 not doing that at the present time. I am almost 83  
25 years old. And I was and really not too long ago. I

BR-3

GE-30

1 wouldn't dare get on a horse now at a time when one  
2 of your planes might come over, because it wouldn't  
3 take much to get me off and break my leg or  
4 something.

5 We support the training. We are patriotic,  
6 always have been. But we believe in private property  
7 rights. You started this and you continue it without  
8 consulting us about it. We don't have time to come  
9 to these meetings and do everything that we could do  
10 to protest this. We don't have any help. My  
11 daughter and I run those ranches, and we can't take  
12 time to do what we would really like to. Thank you.

13 COLONEL BURD: I would like to now call  
14 on Mimi Smith. **008113**

15 MS. SMITH: My name is Mimi Smith.  
16 That's M-i-m-i. I am the attorney for the  
17 Trans-Pecos Protection Group, which opposes the  
18 Realistic Bomber Training Initiative. And I would  
19 like to note, first of all, that the cards were not  
20 left in order, because I signed up long after Bryan  
21 Kelley. I oppose any violation of the process as set  
22 forth.

23 And I also strongly oppose and I am offended  
24 by the United States Air Force stopping our citizens  
25 from speaking. How dare you? And don't call me

GE-6

1 unpatriotic. My father was injured, and has suffered  
2 that injury the rest of his life, in World War II.  
3 My mother worked tirelessly as a volunteer in World  
4 War II. My nephew was in the Persian Gulf War. And  
5 I supported the soldiers when they were in Vietnam,  
6 so don't you dare call me unpatriotic.

7 The reason -- I was raised on a Houston  
8 military base. And the generals that used to come to  
9 my birthday parties when I was eight years, told me  
10 this: They said the lowest civilian outranks the  
11 highest military personnel, and that's why we are  
12 civilians. That was when the military respected  
13 civilians. How dare you hold up cards in front of  
14 these people. They've lived here for generations,  
15 generations. We have something to say. We are going  
16 to say it. And we are trying to be polite. And we  
17 have been treated like your servants, that we are  
18 supposed to sit here and obey and be silent and  
19 follow your rules.

20 This hearing is mandated by the NEPA. There  
21 are no three-minute rules. The Air Force is here  
22 because they have to be if they want to have their  
23 bomber initiatives or even if they even want to  
24 change them. And speaking of change, what most of  
25 you don't know, the so-called No-Action alternative

34

PD-40

1 is inaccurately misrepresented. If the Air Force  
2 wants to come up and say, well, this site has no  
3 action, therefore, there is no environmental impact,  
4 what they are not telling you is that the No-Action  
5 alternative is an action alternative to lower flights  
6 from the limits of 500 feet now, to 200 feet. And as  
7 many of you know, because you have looked out your  
8 windows and seen the faces of the German pilots, not  
9 the American pilots, flying these planes, they are  
10 flying at 200 feet.

11 The last speaker spoke of the dangers of  
12 horseback riding. Maybe that doesn't mean anything  
13 to somebody from San Antonio. But I am not so  
14 unemotional. It is extremely dangerous. So far, one  
15 of the planes has not come over at 100 feet; but I am  
16 on the ground if that happens. There is no way that  
17 we are surviving that. That's a tiny alternative.  
18 The only reason this area is proposed is because  
19 there is nobody to object. There is not enough of  
20 us. At least that's what it is believed. Texas,  
21 when it joined the Union, didn't make the deal that  
22 the other states made. And that's why there is so  
23 little federal land in the State of Texas. There are  
24 over six million --

25 COLONEL BURD: Mrs. Smith, your three

35

1 minutes has expired.

2 MS. SMITH: That's fine. There are  
3 over --

4 COLONEL BURD: As I have indicated to  
5 you, your three minutes has expired. Can I interrupt  
6 you a moment? What I would like to do is what I have  
7 done in each of the previous hearings we have done,  
8 which I am sure you are aware of in your capacity,  
9 and that is to go through all of the individuals who  
10 have indicated a desire to speak, and then ask if  
11 there is anyone who has not spoken that would like to  
12 speak and give all of those people three minutes --

13 MS. SMITH: The cards weren't even kept  
14 in order. I am not --

15 COLONEL BURD: Just a moment.

16 MS. SMITH: No.

17 COLONEL BURD: Just a moment.

18 MS. SMITH: No.

19 COLONEL BURD: Well, then, I am going  
20 to continue to speak over you --

21 MS. SMITH: That's fine. That's your  
22 Court Reporter's problem. And as you know, a Court  
23 Reporter can't take down both people. And this  
24 hearing is for that Court Reporter to take down the  
25 comments of the public, not the United States

36

1 military. The purpose of the hearing is only for our  
2 comments.

3 COLONEL BURD: Ms. Smith, can I ask you  
4 a question? Are you an attorney?

5 MS. SMITH: There is no legal -- yes, I  
6 am. And there is not legal authority to the  
7 three-minute limit; none.

8 MR. COLONEL BURD: Are you an attorney  
9 in the State of Texas?

10 MS. SMITH: Yes, I am. There is no  
11 legal authority for the three-minute limit --

12 COLONEL BURD: Are you aware of your  
13 ethical obligations?

14 MS. SMITH: There is no three-minute  
15 limit.

16 COLONEL BURD: I consider your behavior  
17 to be unethical.

18 MS. SMITH: There is no legal  
19 authority, and I will not obey it.

20 COLONEL BURD: The rules that we have  
21 established --

22 MS. SMITH: There are --

23 COLONEL BURD: -- and the rules I am  
24 employing at this hearing and all other hearings --

25 MS. SMITH: What is that --

37

1 COLONEL BURD: Fairness.

2 MS. SMITH: Fairness to who?

3 COLONEL BURD: I ask that you be fair  
4 and to give everybody a chance. Now, as an  
5 individual early on that has not --

6 MS. SMITH: Fairness to whom?

7 COLONEL BURD: To everybody here. You  
8 are going to be given all the opportunity to speak,  
9 but at the appropriate time.

10 MS. SMITH: There is plenty of time for  
11 everybody to speak.

12 COLONEL BURD: I am asking you to sit  
13 down. I will call you back up after everyone else  
14 has been given their three minutes.

15 MS. SMITH: The Court Reporter can't  
16 take anything down, which makes this hearing illegal.

17 COLONEL BURD: Would you please sit  
18 down?

19 MS. SMITH: No.

20 COLONEL BURD: You are creating a  
21 disturbance. I can see from your behavior that --

22 MS. SMITH: Are we going to act  
23 rationally? I will be finished in 30 seconds.

24 COLONEL BURD: I would like you to sit  
25 down. When everyone else is finished taking their

1 three minutes, I will give you another three minutes.  
 2 MS. SMITH: I just want 30 seconds.  
 3 COLONEL BURD: If you want longer than  
 4 that and no one else objects, I will give you  
 5 additional time.  
 6 MS. SMITH: Then I would ask that you  
 7 not --  
 8 COLONEL BURD: But it's not fair for  
 9 you to demand your rules. Who are you to demand your  
 10 rules?  
 11 MS. SMITH: My rules are designed by  
 12 the National Environmental Policy Act.  
 13 COLONEL BURD: I am simply telling you  
 14 that these rules are going to be enforced, and your  
 15 belligerence is not going to force me to deviate from  
 16 the rules that I have decided are fair.  
 17 MS. SMITH: Did you also decide not to  
 18 leave the cards in order?  
 19 COLONEL BURD: I am asking you to sit  
 20 down.  
 21 MS. SMITH: Did you also decide to  
 22 leave the cards out of order, because they were taken  
 23 out of order. Bryan Kelley was not allowed to speak  
 24 in the order in which he signed up. Thank you.  
 25 COLONEL BURD: I am asking you to sit

1 down. Thank you.  
 2 I would just like to say for everyone who is  
 3 here, that we have had several hearings and we have  
 4 several more hearings planned. We have had people  
 5 attending previous hearings who have attended some of  
 6 the other hearings. We have people here today who  
 7 have attended all of the hearings, which is fine.  
 8 The Kelleys, I expect to see them on our whole trip.  
 9 And I personally like the Kelleys. I have had some  
 10 good conversations with Mr. Kelley, and they are fine  
 11 people. I have no problem with anyone who has made  
 12 comments.  
 13 But what I have tried to do -- and I am real  
 14 sincere in this. I have tried to maintain fair and  
 15 consistent rules. We were in Snyder, Texas, and we  
 16 had over 450 people in attendance. And we had about  
 17 58 speakers, and we had a limited period of time.  
 18 And providing three minutes for each speaker without  
 19 taking any breaks gave us enough time to get through  
 20 all of those people.  
 21 Now, one of the concerns I have had is that  
 22 in an event like this where we have got a smaller  
 23 group, if I just say, okay, let's do away with the  
 24 rules and let people talk for as long as they want  
 25 to, the word would get around to these places where

TY

1 there are going to be larger groups, like where we  
 2 had them at Snyder. And that people -- then it would  
 3 then get out of control.  
 4 And these rules I have implemented for the  
 5 purpose of giving you all an opportunity to speak.  
 6 And at every hearing, I have ended with what I am  
 7 going to do here. And that is, giving you all an  
 8 opportunity to speak, even if you haven't filled out  
 9 a card. Even if you have already spoken, I am going  
 10 to give you additional opportunity to speak. So  
 11 nobody is going to be denied anything. 008114  
 12 I would like to now call on Earl Lively.  
 13 MR. LIVELY: I am Earl Lively, and I am  
 14 an old Air Force man from World War II. And I am  
 15 just -- I am probably not going to use up my whole  
 16 three minutes because I am not a public speaker. But  
 17 I remember what it was like in World War II, when I  
 18 was 19 years old and I entered the Air Force. We  
 19 were totally unprepared. And we certainly need for  
 20 our Air Force to fly and get training. And if they  
 21 can't fly and get training out here, where in the  
 22 world can they fly? I mean, they can't fly over  
 23 Dallas and Houston and places like that. So we need  
 24 this training.  
 25 And, also, I might say that I heard one of

1 the gentlemen speak about his cattle being scared and  
 2 all of that. I have flown right over cattle and they  
 3 haven't even looked up. And the same way with deer  
 4 and other animals. They don't even pay attention to  
 5 the planes. So I think that's a little bit on the  
 6 ridiculous side.  
 7 From my part, after all we have gone through  
 8 in World War II and these other places that our Air  
 9 Force has served, I am 100 percent for our Air Force.  
 10 And we need -- we need the room to fly, and we don't  
 11 need all this talk about people being against our  
 12 pilots flying and training. Even if they are German  
 13 pilots, they don't have room to fly over there  
 14 either. They need the room out here to fly.  
 15 So that's all I have got to say. As an old  
 16 Air Force man, I say gung ho.  
 17 COLONEL BURD: I would like to now call  
 18 on Gerald Puckett. 008115  
 19 MR. PUCKETT: Thank you, sir. I am  
 20 Gerald Puckett from Fort Stockton. I operate Puckett  
 21 Ranches, Limited. And on my country, I have what I  
 22 understand from the Abilene Country Club's rumors,  
 23 the Moscow waterworks you raid quite frequently. And  
 24 I have prepared a statement to read.  
 25 To the Senior Officer at the Air Force

BR-3

BR-5

1 Public Hearing at Alpine today: Subject is  
 2 startling. Thanks for the invitation to tell you my  
 3 side. For 20 years I have been hearing and watching  
 4 your trainees on your regular flights, day and  
 5 night. I haven't liked it but thought maybe, well,  
 6 patriotism. But German fliers; I served in World War  
 7 II to prevent that over my pasture. You are a  
 8 nuisance. You scatter livestock everywhere. You  
 9 have affected lactation. The calves are missing that  
 10 meal when you fly over.  
 11 Have you ever thought of making a financial  
 12 offer to compensate us? The oil patch has other  
 13 problems. Would you like to work on a high pressure  
 14 gas line under a drilling floor or inside a  
 15 compressor building and be startled by a fly-by? It  
 16 sounds like a ruptured gas line. It raises your  
 17 blood pressure.  
 18 Go to the many, many miles of federal lands  
 19 we have that don't pay taxes and leave us alone so we  
 20 can get our ad valorem taxes paid. Thank you, sir.  
 21 Any questions?  
 22 COLONEL BURD: As I previously  
 23 indicated, this public hearing is not an opportunity  
 24 for a question and answer session.  
 25 I would now like to know if there is anyone

1 who has not had an opportunity to speak; if anyone  
 2 would like to speak now from that group? Anyone who  
 3 hasn't spoken that would like to speak, please come  
 4 forward. Mr. Kelley? **008116**  
 5 MR. KELLEY: Thank you. I would like  
 6 everyone here, if you would please, remember what we  
 7 are here for, and that is to conduct a public meeting  
 8 relative to the Realistic Bomber Training Initiative  
 9 Environment Impact Statement.  
 10 In doing so, it requires that we all give  
 11 our comments. If you would, please, write to the  
 12 address that the Air Force has given us, giving your  
 13 comments, your opinions, pro or con; participate,  
 14 please participate. Write your federal and state  
 15 senators, write your federal and state  
 16 representatives; give them your opinion. It's very  
 17 likely somewhere down the road you are going to need  
 18 your opinion heard relative to this particular  
 19 proposal by the U.S. Air Force.  
 20 What we have done -- I am a spokesman, by  
 21 the way; Harold Bryan Kelley. I go by B-r-y-a-n,  
 22 K-e-l-l-e-y. What we have done with the Trans-Pecos  
 23 Protection Group to attempt, by executives, by  
 24 legislative, now in some cases through the federal  
 25 courts, to convince someone that the Air Force has

PD-7

1 for the past, say, 20 years, since about 1980, been  
 2 attempting to perfect a mistake. The mistake  
 3 was ever creating any military training routes over  
 4 the Trans-Pecos area. This, of course, is a national  
 5 problem. It isn't local at all.  
 6 We would like to see the Air Force move  
 7 their military training routes where they belong.  
 8 Stop trying to perfect a mistake. The mistake is to  
 9 fly over populated private property when we have some  
 10 six million acres of federally-owned land in  
 11 existence now where these flights can be conducted  
 12 without disrupting private property or too much of  
 13 the environment, really.  
 14 So if you would keep that in mind when you  
 15 contact your elected representatives. You can, in  
 16 this case, call us, get some of our literature. We  
 17 have our fax number on it, our telephone number, our  
 18 mailing address, our e-mail address. Contact us for  
 19 any further information. You may want to write to  
 20 the branches of the United States Air Force, to the  
 21 Department of Defense Air Forces, which include the  
 22 Marine Corp, the Navy, and the Army.  
 23 Contact everyone. When you do so, please  
 24 send your letters certified mail and return receipt.  
 25 Keep the receipt. It may be very important for

1 future litigation. Thank you.  
 2 COLONEL BURD: I had a card provided to  
 3 me. And I would like to now call on Norma Kiser.  
 4 And excuse me if I mispronounced your last name.  
 5 MS. KISER: It's Kiser. That's okay;  
 6 no problem. **008117**  
 7 Good morning. These comments are from the  
 8 Davis Mountain Trans-Pecos Heritage Association on  
 9 behalf of the members. And any comments are  
 10 addressed to Major Brent Adams, and it is in regard  
 11 to the Realistic Bomber Training Initiative Draft  
 12 Environmental Impact Statement.  
 13 Dear Major Adams: The Davis Mountains  
 14 Trans-Pecos Heritage Association represents  
 15 landowners owning hundreds of thousands of acres of  
 16 private land that will be impacted due to the  
 17 Realistic Bomber Training Initiative. Thus, our  
 18 association has an interest in the initiative on  
 19 behalf of these members. The United States  
 20 Constitution protects the sanctity of private  
 21 property ownership and guaranties these rights. That  
 22 protection is provided by many provisions in the  
 23 original Constitution framed in 1787, and ratified in  
 24 1788, and the Bill of Rights framed in 1789 and  
 25 ratified in 1791. Property rights are also secured

BR-5

1 in Section 1 of the 14th Amendment, which was framed  
2 in 1866, and ratified in 1868. Little doubt should  
3 exist as to the constitutional importance of property  
4 rights. Yet, we specifically address the federal  
5 government's apparent disregard for private property  
6 rights of the members of the Davis Mountains

7 Trans-Pecos Heritage Association. The RBTI invades  
8 the airspace of hundreds of landowners, bring undue  
9 interference with their right to the use, management,  
10 and peaceful environment of their land, which is  
11 being used without their permission. The Davis  
12 Mountains Trans-Pecos Heritage Association  
13 appreciates the opportunity to comment on the RBTI  
14 EIS. Please register our strong opposition to this  
15 initiative. And this is submitted by Norma Kiser,  
16 Executive Vice-president. Thank you.

17 COLONEL BURD: Is there anyone else  
18 who has not made any comments that would like to make  
19 comments? Please? And if you could, state your  
20 name, please. **008118**

TY

21 MS. FRANCES: My name is Cheryl  
22 Frances, Cheryl with a "C", Frances with an "E". I  
23 thank you for the opportunity to speak. I would just  
24 like to make a couple of points. I am here just as a  
25 citizen, landowner, taxpayer, voter, and

1 conscientious objector. Due to the history of this  
2 initiative that was referred to by Mr. Kelley, I feel  
3 that the details of this environmental impact  
4 analysis are acting as a distraction from the  
5 underlying issue. Also, due to current and  
6 inevitable future environmental impacts that will be  
7 and are being caused by this low altitude flight  
8 training over our private land, as well as state and  
9 national park land, I must object to all of the  
10 proposed alternatives, preferring what I would call  
11 Choice E, none of the above.

12 Lastly, I love my country. I love it very  
13 much, and this is why I cannot support the  
14 initiative.

15 COLONEL BURD: Is there anyone else who  
16 hasn't made comments who would like to make comments?  
17 Please? **008119**

TY

18 MS. EATON: My name is Leigh,  
19 L-e-i-g-h, E-a-t-o-n. The only thing that I have to  
20 say about this is if we need protection from our Air  
21 Force, where are we going to get it if they don't  
22 have any place to train? And what I am disappointed  
23 in today is the people here that did not show up for  
24 this; if they have a support, if they don't  
25 understand the issues, if they don't care what the

1 issues are here. But the only people who show today  
2 are the NIMBYs. If you don't know what that means,  
3 "Not in my back yard." But if your back yard is  
4 attacked, you are going to want some protection from  
5 our servicemen.

6 So I urge you to give this a little bit more  
7 positive view. Because I just learned a few days ago  
8 that these bombers have been flying over some of  
9 these areas for weeks, months, Monday through Friday.  
10 I'm go in the back country as much as I can. I stay  
11 outside. I have never heard one little noise from  
12 any aircraft. And I know for a fact that if they fly  
13 over a cow -- you can shoot a gun about that far from  
14 a cow's head, and if she is busy eating, she is not  
15 going to look up. I know this for an absolute fact.

16 So just give it a lot more consideration.  
17 We need these guys. We need protection. I am  
18 willing to give them some of my space so that they  
19 can protect us. Thank you.

20 COLONEL BURD: Is there anyone else who  
21 has not spoken that would like to speak?

22 Is there anyone who has already spoken that  
23 would like to make additional comments? Please? **008120**

TY

24 MR. DECKER: Again, my name is Dan  
25 Decker. One of the reasons they want to fly here, we

1 have one of the lowest population densities of any  
2 area in the United States. Any large area that makes  
3 a 40 to 80 in area, 40 to 80 or 90 nautical miles,  
4 you don't have any areas that large with nobody in  
5 it.

6 The question is disturb hundreds of people  
7 or disturb millions of people. That's the options.  
8 As far as disturbing the environment, the animals and  
9 the environment, I've raised Arabian horses. I no  
10 longer do so. Arabian horses are perhaps the highest  
11 strung horses of any kind of horses in the world. I  
12 lived right next door to an Air Force base. The  
13 other side of the fence was Ellis Air Force Base, the  
14 28th bomber unit, B-52 Hs & Gs. These horses never  
15 looked up. They don't have any natural enemies above  
16 their heads. They don't care what's going on above  
17 their heads. They hear the planes coming from a long  
18 way off, so it's a gradual, to them, increase in any  
19 noise that they might hear. It's not startling.

20 These planes are not going to be breaking  
21 the sound barrier. It's my understanding it's  
22 against the law to break the sound barrier over the  
23 continental United States. They have to go out over  
24 the ocean to do that. So that sudden noise is not  
25 going to be there for the animals. They don't care.

50

1 I would also like to address rudeness. I  
2 thought people in Texas were polite. If you are  
3 being rude, you are being rude. I don't care what  
4 your profession is or who you are, be polite.  
5 Everybody has an opportunity to talk. Don't go and  
6 hog the mic.

7 Addressing the issue of flying with other  
8 people from other countries. Right now, our men are  
9 flying with Germans, Frenchmen, Italians, and they  
10 have to practice together, both. All these countries  
11 have different ways of doing things. They must  
12 practice together; required.

13 A compensation; if you want compensation for  
14 it, you are talking to the wrong people. These  
15 gentlemen don't make law. If you want compensation,  
16 you need to talk to your congressman. That's where  
17 the laws come from. Thank you.

18 COLONEL BURD: Yes, sir?

TY

19 MR. BROWN: I am Jack Brown. Again, I  
20 want to make a few comments about patriotism, and the  
21 national defense, and things like that. I think you  
22 all know that our defense budget has been cut quite a  
23 bit in recent years. I am against that. I think the  
24 United States of America is in peril, particularly  
25 from China. I don't think we have anywhere near

008121

51

1 adequate protection from incoming missiles and so  
2 forth.

3 I have read that the Air Force is short of  
4 pilots. I would like to see them be at full  
5 strength, all the military forces of this country. I  
6 can prove that I have written the congressmen and  
7 different people, encouraging them to keep a strong  
8 national defense and not cut the budget for those  
9 things. I just want you to understand that, that we  
10 are patriotic. We support the Air Force. But we  
11 want them to make some changes in this low-level  
12 flying. Thank you.

13 COLONEL BURD: Is there anyone else who  
14 would like to make additional comments? Anyone else  
15 at all that would like to make any comments?

16 Well, ladies and gentlemen, this concludes  
17 our public hearing. Thank you for your participation  
18 and input. Please remember the public comment period  
19 will extend through June 16, 1999. This public  
20 hearing is adjourned. Thank you again.

21  
22 (Time is 11:55 a.m.)  
23  
24  
25

22

1 any names, places, references to scientific terms, or  
2 other information can be reported accurately.

3 Finally, I would like to remind you to limit  
4 your comments to the Draft EIS. That is the purpose  
5 of this public comment period. Also, I ask you that  
6 you avoid repeating what other speakers have said.  
7 There is nothing inappropriate about agreeing with  
8 other speakers, but to repeat the same thing just  
9 delays others in making their comments. In you agree  
10 with a previous speaker on a particular issue, you  
11 can state your agreement. Of course, you may make  
12 any comments you wish about the Draft EIS.

13 If you would like to turn in your written  
14 comments and you haven't already done that, please  
15 place them in the box provided in the comment area  
16 there in the back of the room.

17 And I do not have any cards indicating any  
18 official representatives indicating a desire to make  
19 comments, so I will move to the list of individuals.  
20 And, again, I would like to remind you of the  
21 three-minute time period.

008122

22 I would like to first call on K. J. Remme.

23 MR. REMME: I am Karl Remme, and I am  
24 one of the owners of the McCoy Land Cattle Company.  
25 And I hope that all of you will really consider how

23

1 short three minutes is to address this, and remember  
2 your opportunity to submit comments in writing.

3 A couple of significant factors that I would  
4 like to address following the cultural and heritage.  
5 One of the things we worry about considerably in the  
6 Agricultural Extension Services Center on grazing  
7 land and ranch management and other production  
8 stewardship programs, are some of the very important  
9 aspects of the agricultural production industry, and  
10 some of the terrible burdens that the landowners  
11 face, and some of the motivations for being in  
12 agricultural production. The ability for a nation to  
13 produce its own food is surely as important as its  
14 national defense. They are both extremely important.

15 In America, it's possible to own your own  
16 lands. And a lot of people who -- or most of the  
17 people who participate in agriculture have a very  
18 small return on assets. Those sorts of investments  
19 would make no sense except for the fact that the way  
20 of life, the cultural and inheritance benefits of  
21 raising families this way, and the extreme challenges  
22 of stewardship in this very complex production and  
23 natural environment are extremely challenging and are  
24 an award to themselves.

25 We don't want to end up like the Russians

PD-4

1 where nobody owns the potato patch and you get to end  
2 up with the Army digging the potatoes up. There is  
3 plenty of federal land in the western United States.  
4 I think that that should have been the No-Action  
5 alternative.

BR-4

6 I really do feel that these cultural and  
7 heritage impacts are of very great national  
8 significance. I think that inefficiently considered  
9 also has been the tremendous economic impact.

AO-87

10 Another fault of the EIS is that we get no credit for  
11 the consideration we have given the military in the  
12 past, where they have directly accumulated increasing  
13 noises. They have determined now that this  
14 cumulative noise is the reason to not consider the  
15 noise analysis for what they consider to be a small  
16 incremental increase in noise from this route. 30  
17 PDL, proposed daily noise accumulations--or the DNL,  
18 it is called--is about what the normal desert  
19 southwest is. Particularly jacked up to already 60  
20 of a factor of six. That's worth nothing to you now  
21 because it's considered to be so noisy from their own  
22 intrusions that it's not worth doing a noise analysis  
23 to consider the small incremental change. And mark  
24 my words, there will be another increment after that.  
25 Even the No-Action alternative puts in

AO-88

1 routes which are very new to us. The original IR-178  
2 left the area in the Big Bend park and headed off to  
3 the northwest. It's only recently that we have seen  
4 aircraft flying in Brewster. Now effected as an  
5 No-Action alternative and it's not charged as an  
6 (inaudible) --

TY

7 COLONEL BURD: I would like to now call  
8 on Emmett McCoy. 008123  
9 MR. MCCOY: I am Emmett McCoy, McCoy  
10 Land and Cattle Company. They say that a picture is  
11 worth a thousand words. This map appeared in the  
12 Fort Davis paper some time back. You don't have to  
13 get very close to see what it is. It shows  
14 everything in black that's federal land, land owned  
15 by the federal government. I don't think any of us  
16 would object to the Air Force flying over our land,  
17 but I mean the land that's black. That's our land,  
18 too; and yours, and mine. And there is certainly  
19 so much of it that I don't think hardly anybody  
20 realizes how much of the land is federally owned in  
21 the west.

22 The Alamogordo deal is in the middle of this  
23 black mark right here, that land all around it and  
24 all through here. And they have chosen to come down  
25 into Texas here and fly over our lands, private land.

GE-30

1 I have a lot of problem with that. Thank you.  
2 COLONEL BURD: I would like to now call  
3 on Tom Curry. 008124

4 MR. CURRY: Tom Curry, private citizen.  
5 The Big Bend area has always been a place where  
6 people can still live in peace and quiet away from  
7 the noise and the chaos of the cities and the  
8 industrial areas. The Air Force would like to change  
9 all of that. They want to turn our home into a  
10 Military Training Area. Make no mistake, these  
11 flights, one after another, will be extremely loud  
12 and dangerous.

13 Are these flights really necessary? Already  
14 the U.S. has more military weapons than just about  
15 every other country combined. This country spends  
16 more on the military in five hours than it does on  
17 health care in five years. We must be the most war  
18 mongering country in the world. And we, the people,  
19 the taxpayers, are sick and tired of breaking our  
20 backs paying for this.

21 I believe the purpose of this hearing is to  
22 find out how we, the community, feel about this  
23 proposed realistic bomber training. So let's take a  
24 vote. The Air Force can't vote, please. If you  
25 would like to see your home turned into a training

1 area for the Air Force, raise your hand. All  
2 opposed? Okay; Air Force, there is democracy in  
3 action. Maybe you should go back and tell the  
4 government you work for to try it sometime. Thank  
5 you.

6 COLONEL BURD: The next person, it  
7 looks like that it's just a last name indicated here,  
8 Daileen. 008125

9 MS. DAILEEN: Colonel Burd, I just have  
10 one name. My name is Daileen. I am here. I don't  
11 have anything prepared to say, but I do have a very  
12 strong feeling about having the Air Force, whatever  
13 form you come in, whether you are in jets, or  
14 bombers, or anything that flies over our head that  
15 makes noise.

16 This is one of the few last places on this  
17 planet where you can sit outside and hear the birds  
18 or watch the ants and be really quiet. I was in  
19 Arizona with a friend, and we went hiking for three  
20 hours to get back into the boonies. We were sitting  
21 there. We didn't talk on the hike. We were sitting  
22 there quiet, and "caboom"; and that was the end of  
23 the fun. Because when you live in an environment  
24 like this, you appreciate the quiet. You people that  
25 are in the Air Force live a high-stress job -- I

BR-7

1 mean, live in a high-stress environment. We used  
 2 to. The reason we don't anymore is because we chose  
 3 to move out here where it's quiet. I am sure there  
 4 is not one person in this room that can't say I came  
 5 from somewhere to get away from the noise, to get  
 6 away from the pollution that hits you every day; not  
 7 just one caboom that you hear out in the quiet.  
 8 We don't want any noise out here from the  
 9 Air Force over our heads. We really don't. We  
 10 appreciate what you are doing, but there is so much  
 11 land that you could fly over other than ours.  
 12 Tourism is on the increase out here, because  
 13 people are constantly wanting to come out here to get  
 14 away from what you people have to work in all the  
 15 time. And we would appreciate it very much if you  
 16 would let us have one spot on this planet that's  
 17 quiet so that the people who live here can appreciate  
 18 and stay that quiet; the people who visit here can be  
 19 in quiet. Thank you.  
 20 COLONEL BURD: I would like to now call  
 21 on Edward Holland. **008126**  
 22 MR. HOLLAND: Thank you. I would just  
 23 like to explain that there is severe problems with  
 24 this Draft EIS. The noise levels and the  
 25 environmental impacts are all based upon 500 feet

AO-57

AO-57

AF-2

AO-47

GE-3

1 above ground level. This is not the situation that  
 2 exists. Despite over a dozen complaints from me to  
 3 the Air Force about pilots violating the 500-foot AGL  
 4 restriction over structures, people in vehicles, they  
 5 continue to do it on a continual basis. Until all  
 6 the numbers in this report are changed to reflect  
 7 distances of 200 feet and full-power throttle  
 8 settings in these aircraft, it is no -- it is not at  
 9 all accurate; a severe technical flaw in this entire  
 10 process.  
 11 The second thing is that I attended all  
 12 these scoping meetings around here, or I should say  
 13 one in each series. The message that we gave to the  
 14 Air Force, overwhelmingly, was to move these flights  
 15 over federally-owned property. It is the  
 16 responsibility of the federal government to provide a  
 17 place for the Air Force to train. It is not my  
 18 responsibility to provide them a place to train.  
 19 The four alternatives selected in the EIS  
 20 completely ignore all this input. I don't understand  
 21 why, but it -- we have seemed to make a joke of the  
 22 entire process. Thank you.  
 23 COLONEL BURD: Now, I would like to  
 24 call on Karen Reimers. **008127**  
 25 MS. REIMERS: Thank you. My name is

GE-26

GE-22

1 Karen Reimers. I am a private resident of south  
 2 Brewster County. I also didn't really prepare a  
 3 comment today.  
 4 I have several problems with the Draft EIS  
 5 as it appears. The first being that I only received  
 6 my copies of it 12 days ago. And as I have a medical  
 7 disability and have had two minor medical crises  
 8 during this time, I have not had an opportunity to  
 9 review all of the voluminous data that was presented.  
 10 But I plan on making written comments to address each  
 11 issue, however.  
 12 I also have a problem with the format of  
 13 this meeting, in that I travel 70 miles each way to  
 14 attend each of these meetings. I have attended in  
 15 '96 and '98, and today. And there was not a  
 16 schedule published in the paper. I would have liked  
 17 to have attended this morning, had I known that  
 18 that's when the open house would have been. And I  
 19 could have had a question-and-answer session then.  
 20 But it just appeared that there would be two  
 21 sessions. And as I was driving a long distance, I  
 22 chose to arrive this afternoon. So I have not had an  
 23 opportunity to meet one-on-one for more  
 24 than about five minutes. And I do protest that as  
 25 well.

BR-2

1 Also, just in the cover of the Draft  
 2 Environmental Statement, the need for process is  
 3 described, and it's described as an open forum for  
 4 discussion. I am dismayed at the fact that there is  
 5 very little discussion going on here. Again, maybe  
 6 if I had been notified and would have attended the  
 7 morning session, we could have had a open discussion  
 8 about the issue. But discussion involves give and  
 9 take, both ways. And it appears to me that you are  
 10 making your presentation and we are making our  
 11 comments, and there is not really discussion and not  
 12 much opportunity for feedback.  
 13 Now, I am going to ask a question, although  
 14 I don't expect it to be answered. But it would  
 15 appear that any written comments that I address to  
 16 you will be answered in writing, which is what I read  
 17 again on the inside cover of the Draft EIS. And I  
 18 would hope that that would, indeed, occur.  
 19 My primary concern is airspace management  
 20 and air safety. These are the issues I have had the  
 21 most difficulty with, as a resident living very near  
 22 IR-178. We have conflicts with the INS border patrol  
 23 low-level flying missions. They have appeared before  
 24 you and stated that they have had near-miss  
 25 incidences with your aircraft. We have a certain

AF-10

1 amount of drug smuggling in the area. And these  
2 people do not file air plans. They do not call in  
3 the AGL in the air. And we have private aviation in  
4 the area.

5 Also, I have been attempting since 1976, to  
6 have my residence published on your maps as a low  
7 sensitive area. To date, it still has not been done,  
8 even though Captain Myers came to my residence and  
9 used his global positioning satellite and equipment  
10 to locate my coordinants. And I was assured at that  
11 time that that would be published.

12 So there are many flaws in the study, and  
13 there are many problems with the residents here  
14 regarding this EIS. And I would hope that we can  
15 address them in the very near future. Thank you very  
16 much.

17 COLONEL BURD: That exhausts the  
18 cards. Well, no, I have a couple of more cards;  
19 excuse me. I would now like to call on Bryan Kelley.  
20 008128 MR. KELLEY: I am Harold Kelley, Harold  
21 Bryan Kelley. I go by Bryan as an alias. I think  
22 everybody needs one occasionally. I am a spokesman  
23 for the Trans-Pecos Protection Group. I've met most  
24 of you, I think.

25 What I would like to bring up now is we

BR-5

1 object and complain about the U.S. Air Force flying  
2 those low-level realistic combat training flights  
3 over populated public property. We are told in our  
4 investigations and analyses, there are some six  
5 million acres of federally-owned public land that can  
6 be flown over. There is no reason that we can find  
7 not to move these flights to federal property.

8 We also have discovered in our analysis, and  
9 discoveries, and so forth, that over a period of two  
10 and a half years, that these flights are at 100 feet  
11 or 500 feet. Where they happen to be flying happens  
12 to be an invasion of our property. They are  
13 trespassing, by law. What I do mostly is legal work.  
14 My background is what I do. I do contract management  
15 as a profession, as a legal profession.

16 We have also found, to our amazement, that  
17 no one listens. The only buffer we have discovered  
18 now days is the National Environmental Policy Act.  
19 That requires that all of us participate. If you do  
20 not participate, then you are not playing the game or  
21 you are not in the game. What you need to do, by all  
22 means, is write to the Air Force and give them your  
23 opinion, whatever it is; write to your federal and  
24 state senators, your representatives; write to the  
25 FAA, the Federal Aviation Administration; write to

AO-2

1 the Environmental Protection Agency, the EPA;  
2 whatever you do to participate.

3 What we are trying to do is get the Air  
4 Force in the position as are our tank regiments who  
5 do not train on the ranches around here or in Coconut  
6 Park. We do not want the artillery battalions  
7 training in Coconut Park, your backyard, or your  
8 ranches. We see no reason in the world, logically  
9 speaking, why the Air Force would train on our  
10 property; on our property; not over it, on it.

11 You get down to 100 feet, I can guarantee  
12 you, you are going to have gale force winds and it's  
13 going to be extremely hazardous, physically  
14 hazardous.

15 If you would like more information, remember  
16 we have our organization to contact and Mr. Sforza.  
17 He is an aeronautical engineer and a test engineer;  
18 aeronautical and test engineer. He can give you all  
19 the physics of low-level combat training flights. If  
20 you need it, he will give you some information. Call  
21 us; write us. We would like to talk with you. Thank  
22 you. Thank you, Colonel.

23 COLONEL BURD: I would like to now call  
24 on Kay Kelley. 008129

25 MS. KELLEY: Thank you. My name is Kay

BR-4

1 Kelley, K-e-l-l-e-y. I am with the Trans-Pecos  
2 Protection Group, which is a nonprofit organization  
3 which supplies information to anyone who can use it.

4 We oppose the expansion of military airspace  
5 over the human environment. We have attended some of  
6 the other public hearings for this Draft  
7 Environmental Impact Statement in Snyder, Big Lake,  
8 and Pecos. Over and over, the people spoke to the  
9 tremendous damage they have already experienced from  
10 these low-level realistic combat training flights.

11 One man in Snyder brought up that a friend  
12 of his who sold real estate in the Big Bend area  
13 informed him that when one of these flights goes  
14 overhead while he is showing property, the potential  
15 buyers just get back in their cars. The impact will  
16 lower our real estate values, will lower our school  
17 taxes.

18 People spoke again and again of how these  
19 low-level realistic combat training flights have done  
20 physical, economic, and psychological harm that is  
21 not compensable.

22 While this Draft EIS is beautifully  
23 presented with its charts, pictures, and maps, the  
24 information about the environmental impacts in it is  
25 flawed. These are realistic real life people out

1 here. But this draft deals with is statistics and  
 2 percentages. The repeated use of words like "might,"  
 3 and "may," and "negligible," and "inconsequential"  
 4 when describing the impacts felt from the low-level  
 5 realistic combat training flights are insults to our  
 6 intelligence. Anyone who has ever been under, or had  
 7 a near-miss with, or had property damaged by, these  
 8 war machines can attest to a very definite negative  
 9 impact.

AF-44

10 This draft does not address the new wing of  
 11 the 37 B-1 bombers that is coming to Dyess Air Force  
 12 Base and where are these additional bombers are going  
 13 to be flying.

AF-6

14 One question I have never gotten an answer  
 15 to concerning the FAA, Federal Aviation  
 16 Administration's, regulation that require pilots to  
 17 fly 500 feet from people's structures or vehicles, is  
 18 how is the military going to avoid us when they don't  
 19 know where we are? These are active businesses  
 20 trying to operate under these low-level realistic  
 21 combat training flights. The bombers and jets flying  
 22 this fast and low are not going to be aware of other  
 23 aircraft and people working or recreating on the  
 24 ground until it is too late to avoid them.

25 The draft has not adequately given the

GE-41

1 alternatives required by the National Environmental  
 2 Policy Act. The Alternative A, which is supposed to  
 3 be the No-Action alternative, will have chosen  
 4 certain justified routes used for bomber training  
 5 that have not gone through the legal formation  
 6 process. Instead of being a No-Action alternative,  
 7 in reality, this draft has three alternatives of  
 8 low-level realistic combat training flights over West  
 9 Texas, and one in New Mexico, with continued flights  
 10 in Texas.

11 There is no plan to remove these flights  
 12 from West Texas that are already disrupting the  
 13 livelihoods and well-being of its residents and  
 14 visitors. Only a few citizens have received a copy  
 15 of the Draft Environmental Impact Statement and had  
 16 the time to read it, or went to the library to share  
 17 that copy of it, will, in fact, have a chance to see  
 18 Alternative A that is -- --

19 COLONEL BURD: Ms. Kelley, you are well  
 20 beyond --

21 MS. KELLEY: Do you have anyone after  
 22 me, Colonel?

23 COLONEL BURD: I don't know. I need to  
 24 ask. But you are well beyond your three minutes.

25 MS. KELLEY: Do you have anyone after

1 me, a card?

2 COLONEL BURD: I do not have any more  
 3 cards, no. But --

4 MS. KELLEY: Well, if you are going to  
 5 ask people, I would like to continue now instead of  
 6 sitting down.

7 COLONEL BURD: Well, I would like to  
 8 have you finish now.

9 MS. KELLEY: I am just about done.

10 COLONEL BURD: How much more time do  
 11 you need?

12 MS. KELLEY: Well, just two paragraphs.

13 COLONEL BURD: Well, I would prefer to  
 14 do is stick with the rules, as I have indicated. And  
 15 you have been at each one of these hearings, so you  
 16 are as well aware of these rules as I am.

17 MS. KELLEY: Uh-huh. I didn't see  
 18 anybody waiting.

19 COLONEL BURD: You also know that I am  
 20 very fair about allowing everybody to come back up to  
 21 make additional comments as long as we have the time.

22 MS. KELLEY: If you'd like me to do  
 23 that, I will.

24 COLONEL BURD: I would like to stick  
 25 with my rules.

TY

1 MS. KELLEY: Okay.

2 COLONEL BURD: So I would like you to  
 3 stop speaking now.

4 MS. KELLEY: Yes, sir.

5 COLONEL BURD: And what I would like to  
 6 know now, since I have exhausted all the cards, if  
 7 there is anyone who has not made comments who would  
 8 like to come forward and make comments now?  
 9 Apparently not. Yes? **008130**

10 MR. DECKER: My name is Dan Decker. I  
 11 was here this morning. I didn't sign up a card this  
 12 afternoon, because I didn't see any reason to repeat  
 13 information that you had already heard, which  
 14 apparently is being repeated again, and again, and  
 15 again at various locations, so you have several  
 16 copies of it.

17 One thing I haven't heard anybody talk about  
 18 is why we practice low-level. We are not the only  
 19 nation in the world with high technology now. Most  
 20 people have radar. We must practice flying,  
 21 low-level. Flying under the radar gets them there  
 22 without them knowing we are coming; make our bombing,  
 23 our strafing, or whatever they drop down behind --  
 24 below the radar, so they can't find us out. Don't  
 25 want these missions, these combat missions. One

1 way -- we want them to be able to fire again, so we  
 2 practice low-level. And you can't just say, okay,  
 3 guys, you're off to bomb a site, go out and go down  
 4 to the altitude -- at very low altitude and make your  
 5 bombing run or whatever happens, not without having  
 6 those people having practiced this particular  
 7 mission. It's a very difficult thing to do; very  
 8 difficult. You must practice. Where are you going  
 9 to practice? They choose a low population density  
 10 area for this. I saw the map one gentleman was  
 11 displaying for the federally-owned land in west  
 12 United States, western United States. It looked to  
 13 me like Denver belongs to the federal government, and  
 14 I know that that land is not owned by the federal  
 15 government. Private people own it as well. And you  
 16 can't have two owners of the same piece of property.

17 One question somebody else hadn't brought up  
 18 is the pollution from the aircraft. They are  
 19 skirting around the edges, but they haven't brought  
 20 it out yet. What comes out of a jet exhaust?  
 21 Anybody know? Mostly water. You burn a gallon of  
 22 fuel, you create more than a gallon of water. From a  
 23 high school chemistry teacher, she confirmed that.  
 24 Something else I was going to say is that the amount  
 25 of water is minuscule. There is even less pollution.

1 These aircraft are the cleanest fuel-burning engines  
 2 we've ever had in the history of the world. There is  
 3 very little pollution from them; very little. That's  
 4 all. Thank you.

5 COLONEL BURD: I have been handed a  
 6 card. The name isn't indicated here, but  
 7 representing Fox Canyon Ranch, if that person would  
 8 like to come forward. If you would, please state  
 9 your name when you begin your comments. 008131

10 MR. ROSS: I am Hunter Ross with the  
 11 Fox Canyon Ranch. We are located in northwest Jeff  
 12 Davis County, right south of the I-10/I-20  
 13 interchange. And we have had that military -- this  
 14 training route goes exactly right over both of our  
 15 ranch houses, and it's just -- basically, I am not  
 16 going to get real technical and detailed about it.  
 17 But for the last 20 years, ever since I have grown up  
 18 out there, these aircraft fly right over these  
 19 particular houses. It's a disruption, you know, to  
 20 our private rights out on this ranch.

PD-4

21 And one thing that I don't understand is  
 22 with all of the public land that is in New Mexico,  
 23 Oklahoma, and Arizona, Colorado, I don't understand  
 24 why some of this is not done in that area, you know,  
 25 with all of the public land. Texas is mainly 90, 95

1 percent private land. And anybody that -- I don't  
 2 know, you know, how many of these pilots or people in  
 3 the Air Force have ever owned private land of their  
 4 own, but it's kind of disruptive to -- and I am not  
 5 necessarily talking about the pollution effect of it,  
 6 but just -- I also do hunting guiding and outfitting.  
 7 And when you have people out there hunting and, you  
 8 know, you've got these low-level aircraft coming  
 9 over -- and I have had them so low that the pilots  
 10 have waved at me before, when I have been up on the  
 11 side of the mountain and they come by. And it's been  
 12 just a continual thing that's gone on.

13 And I don't know exactly all the details and  
 14 everything of what's going on. I wanted to come and  
 15 speak for, you know, our part of the ranch and for my  
 16 father, which he is out of town today.

17 But that's one thing, is with all the other  
 18 public land access in the United States, I just don't  
 19 understand why Texas, being all private land,  
 20 formally owned private land, why it has to be done in  
 21 Texas, with all the public land in southern New  
 22 Mexico and eastern New Mexico. I mean, all that area  
 23 down there is all public land. And, basically,  
 24 that's just my point. And so that's all I have to  
 25 say.

1 COLONEL BURD: I have a card and I  
 2 would now like to call on Anthony Sforza. 008132

3 MR. SFORSA: Hi. I am Tony Sforza. I  
 4 am opposed to the military flights in this area. I  
 5 feel the Air Force has not given this thing any true  
 6 alternatives. The alternatives you propose are  
 7 unacceptable, especially the ones on not training  
 8 your pilots. We think you should train your pilots.  
 9 That would be a ridiculous alternative.

PD-42

10 However, it seems like you are giving us a  
 11 choice between washing the dishes or taking out the  
 12 garbage. It's really not a choice. You haven't put  
 13 a viable alternative in this. There is really no  
 14 alternative to say why some private lands in Texas,  
 15 and it may interrupt their lifestyles, and it's going  
 16 to relatively dangerous for the people on the ground,  
 17 hiking in the hills that we do. And yet, you say  
 18 that's your only choice. To me, that's not  
 19 appropriate.

20 Another alternative should be looking at the  
 21 two-thirds of the western United States that is owned  
 22 by the federal government. It appears from my  
 23 reading and my research, that the only reason that  
 24 the Air Force is taking this tack is that when they  
 25 fly upon other (inaudible) lands, forestry lands,

1 they get into a lot of trouble with these big  
2 agencies that have millions of dollars. And you can  
3 look at the reports of the congress that have been  
4 funded by these agencies, probably at the cost of  
5 millions of dollars which we can't afford. So my  
6 perception, it may be true or not, is that there is a  
7 viable alternative you have not even considered. And  
8 that the reason you don't consider it is you would  
9 rather take on small communities like this, rather  
10 than take on major national agencies.

11 As far as your documentation, your MALS  
12 report, it's totally inaccurate. They are showing  
13 mission heights of 5,000 feet, instead of 100 feet  
14 where they are showing it. When we looked into the  
15 documentation, it shows that the MALS report they are  
16 using in their air pollution is totally inaccurate  
17 and does not apply at 100-foot altitude. They are  
18 assuming that information at 5,000 feet. That's the  
19 equivalent of me dropping a bucket of paint from  
20 5,000 feet versus 100 feet. I guarantee you are  
21 going to get covered with a bucket of paint if I drop  
22 it from 100 feet on your head. I doubt you are going  
23 to be covered with hardly any paint if I drop it from  
24 5,000 feet. Talking to the various people in the  
25 environmental agency, that is not a valid model.

AO-62

1 The other models you are using, they are  
2 also inaccurate. We've asked that you do appropriate  
3 tests that we can monitor. You refuse to do those.

4 In response to your integrity, we have had  
5 problems in Langley with Jayhawk aircraft flying over  
6 our site. When we reported it and we videotaped them  
7 flying over our site, we were told that they would be  
8 responsive. We wrote the FAA and sent the tapes to  
9 the FAA, and to the Air Force. The Air Force  
10 response was that they looked into it and there was  
11 no problem, even in the face of the videotapes  
12 showing them clearing our hilltops by 200 feet.

13 To date, I have not received any official  
14 response from the Air Force regarding that. And I  
15 think this is the response we can expect to get.  
16 Thank you.

17 COLONEL BURD: Ms. Kelley, would you  
18 like to make further comment? 008133

19 MS. KELLEY: I would like to continue  
20 where I was talking about the Alternative A,  
21 No-Action alternative.

22 There is no plan to remove these flights  
23 from West Texas that are already disrupting the  
24 livelihoods and well-being of its residents and  
25 visitors. Only the few citizens that received a copy

1 the Draft Environmental Impact Statement and had the  
2 time to read it, or went to the library to share that  
3 copy of it, will have had to see Alternative A as it  
4 has been presented in the latest RBTI newsletter  
5 brief and in this Draft.

6 Before this, the No-Action alternative A was  
7 illustrated by flights going only to the training  
8 areas far from West Texas. Most readers of this  
9 Draft EIS in the third newsletter will not understand  
10 the significance of Alternative A. For all of the  
11 people attending the hearings that had not read them,  
12 there has been no opportunity for the public to view  
13 Alternative A because the Air Force did not make a  
14 poster of it for the open house part of these  
15 hearings. They might erroneously think that the  
16 No-Action Alternative will solve this problem.

17 Another impact that is not properly  
18 addressed in this Draft EIS is the effect on  
19 waterfowl and migrating birds. Tourism is the second  
20 largest industry in Texas, with nature tourism  
21 bringing in over 20 billion dollars per year. The  
22 Big Bend has always been one of the top three  
23 tourist attractions in Texas, and birders love this  
24 area. No one wants to vacation in a war zone, and  
25 our economy suffers.

PD-33

BI-2

1 Again, we want the best training available  
2 for our military. These low-level realistic combat  
3 training flights need to be isolated from the hard  
4 working, patriotic Americans our military is supposed  
5 to protect. Thank you.

6 COLONEL BURD: I would like to know if  
7 there is anyone else who would like to make comments  
8 who has not made any comments?

9 And is there anyone who has made comments  
10 who would like to now make additional comments? Yes?

TY

11 008134 MR. DECKER: Dan Decker. I would just  
12 like to address the tourism thing. Perhaps the  
13 number one tourist location in the United States is  
14 Las Vegas, Nevada. On the northwest boundary of Las  
15 Vegas, Nevada is called Ellis Air Force Base. It is  
16 called the home of the fighter pilot. These bombers  
17 don't carry a candle as far as the noise and so forth  
18 as a fighter does, F-16s, and F-4s, and A-7s, and  
19 A-10s, and all those. Nobody that goes to Las Vegas  
20 knows that the fighters are there. They don't see  
21 it. The noise level is negligible. It just doesn't  
22 happen. That's all I have today. Thank you.

23 COLONEL BURD: Yes, Doctor, you wanted  
24 to make additional comments? 008135

TY

UNIDENTIFIED SPEAKER: Somebody has to

1 rebut some of the ridiculous comments made sometimes.  
 2 I was brought up in New York City. I guarantee an  
 3 F-4 could go over the Empire State building and I  
 4 wouldn't hear it, because I am hearing the  
 5 ambulances, and sirens, and everything else. Well,  
 6 in Las Vegas, Nevada, (inaudible). Have you ever  
 7 been in Las Vegas, Nevada? All you hear is bells  
 8 going off and the jingling and the jing-a-ling.  
 9 That's absolutely a ridiculous statement.

10 There has been documents in these reports  
 11 that have been funded and paid for by the federal  
 12 government and the National Park Service that  
 13 indicate that a wilderness area like this, the noise  
 14 impact is equivalent to 30 times what it is in a  
 15 city area.

16 Out at our place, it's so quiet that we can  
 17 hear a rooster crow a mile away, easily. I doubt you  
 18 would be able to hear a rooster crow in Las Vegas,  
 19 Nevada. If someone fires a gun off, we all go, "Who  
 20 is firing the gun?" It's a guy two hills across. We  
 21 are in a canyon area. Out here it is very quiet and  
 22 noise carries a very long ways. And when it's this  
 23 quiet, you notice the difference. Just like in this  
 24 room here, you can hear things pretty well and you  
 25 are getting an echo in here. If we had a big

TY

1 convention going on here -- you people have been at  
 2 parties. Sometimes you go hoarse talking so loud to  
 3 talk to your neighbor to two feet away. The  
 4 comparison is utterly ridiculous. Thank you.

5 COLONEL BURD: Is there anybody else  
 6 who would like to make any comments? Yes? **008136**

7 MS. Daileen: My name is Daileen, and I  
 8 would like to add one comment. About four years ago,  
 9 there were bombers that were coming over the Davis  
 10 Mountains. And I don't know why they were flying so  
 11 low, but they were about one times as high as the  
 12 trees are. And in the daytime, it was an irritant.  
 13 But at night when they came over, and I didn't even  
 14 know they were going to come over, I was so  
 15 frightened, had I not been in good health, it  
 16 probably would have thrown me into a heart attack.  
 17 And I don't know -- like the gentleman that spoke,  
 18 the quiet out here is very quiet. And when you have  
 19 something like that happen to you and you are not  
 20 used to it, it's very disrupting to the nervous  
 21 system. I mean, it took me about three hours to calm  
 22 down after these five bombers flew over, because I  
 23 wasn't aware that they were coming and I was sound  
 24 asleep. Thank you.

25 COLONEL BURD: Would anyone else like

1 to make any comments? Yes?

2 MR. LITTLEFIELD: I am very familiar  
 3 with these flights the lady was talking about.

4 COLONEL BURD: Sir, could you identify  
 5 yourself? **008137**

TY

6 MR. LITTLEFIELD: Gary Littlefield,  
 7 Fort Davis. I also experience those flights. And I  
 8 am a licensed pilot. I can judge altitudes quite  
 9 well. They were under 1,000 feet when they hit my  
 10 place. I was outside in the open, and it had the  
 11 effect of almost bowing me off my feet.

12 The reason the gentleman didn't see  
 13 airplanes over Las Vegas is because it's a very  
 14 restricted airspace. By the time they get into that  
 15 airspace, they are up pretty high. You wouldn't hear  
 16 them in here either necessarily. So, again, this is  
 17 not valid. Thank you.

18 COLONEL BURD: Would anyone else like  
 19 to make any comments? Yes? **008138**

20 MS. REIMERS: My name is Karen Reimers.  
 21 I am a resident of South Brewster County. Again, I  
 22 just want to reiterate that what we are talking about  
 23 here with the Draft Environmental Impact Statement  
 24 and with these hearings is the impact that this  
 25 training will have on the people who live here, on

PD-1

1 the land, on the animals, the waterfowl, on our way  
 2 of life. Let's not lose that focus.

3 I don't think anyone here would argue with  
 4 the military's need to train their pilots. I surely  
 5 wouldn't. I support them. I support their need for  
 6 training. I sometimes question their need for  
 7 low-level in light of our current technology and the  
 8 ground to air missile capability that most of the  
 9 world has these days, but I will leave that to  
 10 experts to debate.

11 It's just think that we need to look at the  
 12 environmental impact that it's going to have on the  
 13 people who live here and have their livelihood here,  
 14 and also the safety concerns that have not been  
 15 addressed.

16 My biggest problem that I have had has been  
 17 the military not following their own rules. If I  
 18 could just see them stay within their own guidelines  
 19 and follow their own rules, I would be 100 percent  
 20 behind this. As it stands right now, I can't support  
 21 it. That's all I have to say. Thank you.

22 COLONEL BURD: Would anyone else like  
 23 to make any comments?

24 Ladies and gentlemen, that concludes this  
 25 public hearing. Thank you for your participation and

1 input. Please remember that the public comment  
2 period will extend through June 16, 1999. This  
3 public hearing is adjourned. Thank you again.

5 (Time is 2:31 p.m.)

20  
21  
22  
23  
24  
25

1 will get back to you after everyone else has had a chance  
2 to speak.

3 You may have noticed that the court reporter  
4 will record verbatim everything that is said. The  
5 transcript of these proceedings will become a part of the  
6 record of the hearing. This will be included in the  
7 final EIS.

8 The reporter will be able to make a complete  
9 record only if she can hear and understand what you say,  
10 so speak clearly and slowly.

11 In addition, if you have a written statement,  
12 the court reporter would appreciate you handing it in so  
13 that any names, places, reference to scientific terms, or  
14 other information can be recorded accurately.

15 Finally, I'd like to remind you to limit your  
16 comments to the Draft EIS. That is the purpose of this  
17 public comment period.

18 As indicated, we would start with comments  
19 from elected officials and then individuals representing  
20 agencies.

21 In this case we have no specific elected  
22 officials here, but we have a couple of representatives.  
23 And I'd first like to call on Clint Henson who is from  
24 the New Mexico Department of Game and Fish. **008139**

25 MR. HENSON: Good evening. My name is Clint

1 Henson. I am a habitat specialist in the northeast  
2 area operations from the New Mexico Department of Game  
3 and Fish. Previous to that I was the Clayton District  
4 Officer.

5 First of all, I would like to discuss some  
6 omissions, I feel, from the Draft EIS. Omission of part  
7 of the Carson National Forest represented as the Valle  
8 Vidal unit. This area does have flights over it at this  
9 time, but the last three years that I have worked in the  
10 Valle Vidal areas and the Clayton area, I've seen two low  
11 level bombers.

12 This area is important for us as an elk  
13 habitat, deer habitat area. This area is a  
14 once-in-a-lifetime hunt area. If a gentleman is drawn or  
15 a lady is drawn for a hunt in this area he can only be  
16 drawn once in a lifetime. He does not have the  
17 opportunity to go back. This makes it a very prized area  
18 to hunt in New Mexico.

19 I feel that this would be significantly  
20 impacted.

21 Another area which was omitted was Clayton  
22 Lake, which is a large reservoir for migratory birds,  
23 primarily the Canadian geese. Also bald eagles and other  
24 falcons. They home probably between 250 and 4,000 birds  
25 over the winter.

ED-2

BR-4

ED-3

BR-2

1 Another area I'm concerned about is flight  
2 safety. The Department of Game and Fish flies very often  
3 through the year at low levels throughout all of this  
4 area, primarily April and October we fly the entire month  
5 on antelope surveys in small aircraft from anywhere from  
6 15 AGL to 1,000 AGL all throughout the MOA area.

7 February and March we fly deer and elk surveys  
8 in helicopters randomly all throughout this area.

9 Our hunt areas and hunt times run from  
10 September 1 through December for elk and deer. August,  
11 we have an antelope hunt where we again fly low level law  
12 enforcement activities. And I feel that this would  
13 impact all this.

14 Thank you for your time.

15 THE HEARING OFFICER: I'd now like to call on  
16 Rebecca Montoya, who is representing U.S. Senator Jeff  
17 Bingaman. **008140**

TY

18 MS. MONTOYA: Good evening. I'm Rebecca  
19 Montoya. I'm the constituent services representative for  
20 Senator Jeff Bingaman out of the Las Vegas office, and  
21 the areas that I cover are Mora, San Miguel, Harding,  
22 Colfax and Union County, which is the area that most of  
23 you live in.

24 The reason I have come is because of the number  
25 of calls that our office has received regarding this

1 issue. And I do thank the Air Force officials for coming  
2 to Roy and listening to your concerns. And basically I'm  
3 here to hear from you, our constituents, your concerns,  
4 so that I can bring that information back to the Senator  
5 before we pursue into this issue.

6 I'd like to hear all your comments from the  
7 constituents to, like I said, relate back to the Senator  
8 on your concerns.

9 Thank you.

10 HEARING OFFICER: Now I'd like to call on the  
11 group of individuals -- I'd like to first call on Jeffrey  
12 Lane. **008141**

13 MR. LANE: My name is Jeffrey Lane. I'm  
14 president of the Bell Ranch, which is the land underneath  
15 the RBTI program that we are talking about here today.

16 And I have sort of a note I wrote down here.

17 As I was reading through the Environmental  
18 Impact Statement one point made by that in regards to the  
19 La Junta County, those "emitter sites," quote/unquote,  
20 the land does not have the variable terrain needed for  
21 realistic terrain masking and terrain ordinance training.

22 Well, what that means to me is they are going  
23 to use our terrain for bomber training and so forth.  
24 That's obvious. It means that I'm going to have jet  
25 traffic along and under, within our beautiful canyons and

BR-3

1 I am also a pilot. One tends to veer off their, you  
2 know, course a little bit, or look, or whatever. And I  
3 was out with my young kids on horseback, and I did have  
4 an F-111 jet fly over the top of me. And it startled the  
5 Bejesus out of me, and my older son got bucked off. I  
6 was holding the reins of my other two horses when that  
7 did happen. Fortunately, nobody was hurt on that.

8 I believe -- Okay. Thank you.

9 HEARING OFFICER: Again, as I said --

10 MR. LANE: Can I keep going?

11 HEARING OFFICER: No. As I said, I'd like  
12 everybody to keep to the three minutes, and then when  
13 everybody has had a chance to speak, if you haven't had  
14 sufficient time I'll ask -- what I'm going to do is first  
15 ask if anybody who hasn't spoken wants to speak, and once  
16 all of those people have finished, then I'll ask that  
17 anybody who has already spoken if they want to come back  
18 up, and ask just raise your hands if that is the case.

19 Now I'd like to call on John Gard.

20 MR. GARD: I'll donate my time to let him  
21 finish his.

22 HEARING OFFICER: Well, that's not consistent  
23 with my rules. I'm not going to permit that. If you  
24 have some comments you'd like to make, come on up and  
25 make your comments.

1 rim rocks in our country that I, and all of us,  
2 appreciate.

3 This is a significant change to the quality of  
4 life to all who use or live or make their livelihood from  
5 this area.

6 I believe that there are many issues involved  
7 here, probably the most significant of which is, you  
8 know, our private property rights. Ironically, some of  
9 the same values which our military whose mission is to  
10 uphold and protect. And I, respectfully, you know,  
11 appreciate that very much, too, their protection.

12 These rights are very real and very important  
13 to those of us that work very hard to protect, preserve,  
14 and make our livelihood from these same lines.

15 It's an important issue or distinction here;  
16 that is, these land are privately owned and their value,  
17 like our mineral and our forage, our cattle, our  
18 wildlife, the beauty, the serenity, the water are all  
19 important considerations in determining, you know, this  
20 value, this value to us.

21 But along that note, I also have had  
22 experiences with jet aircraft in my lifetime on the Bell,  
23 my 25 years that I've been there. And on one such  
24 occasion I was out with my kids and -- I know this is  
25 not a common practice, but it does happen, and I know --

BR-5

**008142**

TY 1

MR. GARD: Thank you. We have two places that  
come under these in the northeast corner, and we have  
jets coming over on both sides of our house already now.  
And like Jeff says, they don't always stay on the course.  
Sometimes they are right over the house, and we have had  
our boy had lost a horse due to running him through the  
fence. And, I -- for one, I'm an ex-Air Force man, and I  
don't see why you can't stay out of northeast New Mexico  
where the biggest part of cattle in New Mexico are, the  
heaviest population is up in Harding County, Colfax  
County, and Union, and use the desert land that the  
government owns down here in the southern part of the  
state.

I know we got to take real care of that for the  
environmentalists, but I think the government should be  
having -- as much land as they have in Texas and New  
Mexico, they don't have to get up where the most of it is  
private land.

Thank you.

HEARING OFFICER: I'd like to now call on  
Thomas Mitchell, then after Mr. Mitchell I'll be calling  
on Martin Mosimann. **008143**

MR. MITCHELL: I'm Tom Mitchell. We have a  
ranch. We are basically in the middle of the racetrack  
that you have laid out. As was mentioned earlier, we

BR-2

1 have cattle that we are quite concerned about. We also  
 2 have an airport landing strip to the ranch that's right  
 3 in the middle of the race track, which is not marked.  
 4 I've gotten some information today to try to get that  
 5 taken care of. Sounds like with anything it will take  
 6 time.  
 7 I'm a helicopter pilot and I'm a single engine  
 8 instrument rated pilot. Flying out of that ranch with  
 9 the helicopter before we have had near misses with the  
 10 jets that were flying at that time, the F-111s.  
 11 It is a very real concern for us. We  
 12 understand that you have to have military preparedness  
 13 and training, but it's one of those things -- for us it's  
 14 a whole lot more personal because we are in the middle of  
 15 the noise zone.  
 16 That's it.  
 17 We also have an historic old Catholic church on  
 18 the ranch which has been overflowed also, and I'm not  
 19 quite sure how the -- I know they alluded to the  
 20 vibration and the noise earlier but these old structures  
 21 it doesn't take a lot of vibration, and we're also  
 22 concerned about that.  
 23 Thank you.  
 24 Martin Mosimann, and then Beckie -- **008144**  
 25 MR. MOSIMANN: Martin Mosimann, General Burd,

CU-1

BR-3

1 and my concern stems from self preservation. I ride  
 2 colts for a living. And I know there's rules these  
 3 airplanes are supposed to fly at a certain elevation.  
 4 Guarantee you, it's an individual thing, I believe, with  
 5 these pilots. They do not stick by the rule. They have  
 6 flown over my round pen. My round pen is just below a  
 7 bluff, and you don't know the plane is there until he's  
 8 right on top of you. It terrifies me; it has terrified  
 9 my horses. I couldn't hardly blame my horses when it  
 10 terrified me.  
 11 I have reported it before. I don't ever really  
 12 get a feedback to the disciplinary action that was taken.  
 13 I definitely have been hurt. I haven't been  
 14 hospitalized, but I have been hurt because of the -- a  
 15 particular instance, and I think it was four years ago.  
 16 I don't have the time documented but I'm sure your  
 17 records do. And so, yeah, my concern is self  
 18 preservation. I'm thinking of myself. And I'm kind of  
 19 consistent with Mr. Gard's beliefs, that if you have the  
 20 government land why not fly this aircraft over government  
 21 land?  
 22 Thank you.  
 23 HEARING OFFICER: Call Beckie Mosimann, and  
 24 after that I'll be calling on Frank Bond. **008145**  
 25 MS. MOSIMANN: Colonel Burd, my name is Beckie,

PD-7

BR-3

1 B-e-c-k-i-e, M-o-s-i-m-a-n-n.  
 2 I live at the east end of Wagon Mound at  
 3 the south base of the Los Vasas de Canjillon. For the  
 4 record, I would like to say I am in favor of  
 5 Alternative A, no action. My comment concerning the  
 6 Environmental Impact Statement concerns noise levels of  
 7 the aircraft and how it will affect our environment in  
 8 making a living.  
 9 We make our living in the cattle business and  
 10 also training horses. We have previously been under the  
 11 flight path of the fighter jets from Cannon Air Force  
 12 base and have been -- on several occasions had our  
 13 livelihood threatened by the low flying aircraft buzzing  
 14 the barn and the house and having a number of valuable  
 15 horses hitting the fence and facing potential injury,  
 16 which would prevent us from making a living if they were  
 17 injured.  
 18 Also, as Martin previously mentioned, he was  
 19 injured during a buzz, and if that injury had been  
 20 serious we could not continue making a living in this  
 21 part of the state.  
 22 I would appreciate the Air Force considering  
 23 one of the other areas that they have as a choice, and  
 24 preferably Alternative A, to fly where they are now.  
 25 Thank you.

GE-22

GE-2

BR-1

1 **008146**  
 2 HEARING OFFICER: After Frank Bond, I'll be  
 3 calling on Francisco Vallejos.  
 4 MR. BOND: Thank you, your Honor. First I'd  
 5 like to comment that the Draft EIS has not been received  
 6 by all the people on the list; therefore, I think you  
 7 have a procedural due process error by having these  
 8 hearings before people have actually received the Draft  
 9 EIS.  
 10 In the scoping hearings you had the scoping  
 11 hearings in Tucumcari and Clayton, and you admitted them  
 12 then, and I suggest you go back and have hearings now in  
 13 Tucumcari and Clayton, and I would also suggest Raton.  
 14 Without those, which are the biggest part of the  
 15 population of northern New Mexico, you are deliberately  
 16 omitting the greatest part of the population and the  
 17 greatest opportunity for comments.  
 18 Recommendations. Alternative A. Alternative A  
 19 does not mean no training, it means the continued  
 20 existing training, and by virtue of what we see in Serbia  
 21 obviously the pilots are being very well trained.  
 22 I turn to the issue of notice and turn to the  
 23 comments made by Dr. Weida in Snyder, and reiterate some  
 24 of those: that this review of the noise impact here in  
 25 northern New Mexico is on the basis of the faulty  
 analysis technology developed by Mr. Schultz in the

BR-1

1 1970's. It is not the best means of noise analysis that  
 2 is now available to the Air Force.  
 3 The noise conferences held in Brooks Air Force  
 4 Base gives the Air Force previous knowledge starting in  
 5 the beginning of this decade that there's far better  
 6 technology for the noise analysis because the results  
 7 that you have now where you have a single event in a  
 8 relatively quiet area give you ludicrous results when  
 9 you're talking about DNL averages over a 24-hour period,  
 10 analyzed and then taken spatially, horizontally and  
 11 vertically in terms of averaging that space over the MOA.  
 12 Also, using -- as something of a baseline that  
 13 Schultz did, where he took the urban ambient noise of the  
 14 places like, for example, Copenhagen, Paris, New York,  
 15 Chicago, it makes it ludicrous to think you can compare  
 16 that to here in New Mexico, and I think that must be  
 17 addressed and considered here.  
 18 As I said, what we are talking about is a  
 19 shocking, stunning, single example of a B-1 coming over  
 20 in a relatively quiet place. Anybody who would do any  
 21 on-the-ground analysis, which has not been done in the  
 22 EIS here, would come to a very different result on any  
 23 given day here in Northern New Mexico.  
 24 The Air Force has failed to do any  
 25 on-the-ground analyses of any kind of studies here.

BR-1

1 failed to do any noise studies on the impact within  
 2 northeastern New Mexico on humans, livestock and wild  
 3 life.

BR-4

4 And we are not talking about just threatened  
 5 and endangered species, we are talking about the hunted  
 6 species.

7 If you will consult the gentleman from the  
 8 Department of Game and Fish, you will begin to understand  
 9 the importance of hunting to the operations and to the  
 10 economy locally, and you must understand what this  
 11 landowner permit system is like within northern New  
 12 Mexico.

13 I'll continue my comments later. Thank you.

14 HEARING OFFICER: Thank you, Mr. Bond.

15 Francisco Vallejos, then have --

16 Reverend, I apologize. I thought that was a  
 17 first name and I didn't understand what that meant. 008147

18 FR. VALLEJOS: Father Francis V-a-l-l-e-j-o-s.

19 I'm the pastor of Roy, Mosquero, Wagon Mound.

20 I am the pastor of Harding County, a little portion of  
 21 San Miguel, and half of Mora. And in this area, just  
 22 Harding County, I have four churches, very historical  
 23 churches. One is in Bueyerros, the one I'm most concerned  
 24 about, 105 years old, a lot of history and a lot of  
 25 cultural history for New Mexicans. It's a beautiful

CU-1

1 structure, beautiful church constructed with lots of care  
 2 and lots of devotion, and the history that goes with that  
 3 as well as the culture of this part of New Mexico.  
 4 There have been flights over this area and  
 5 low-level flying, and there has already been structural  
 6 damage to the stone churches we have here in Harding  
 7 County. And I'm afraid a loss of these churches would be  
 8 a loss of a great part of history in this part of New  
 9 Mexico.  
 10 Daily I receive calls asking for baptismal  
 11 records, and the people talk to me about how important  
 12 that church is to them. There's not a big population in  
 13 Harding County, but in passing history there is a lot of  
 14 population that came out of this area, and this is a very  
 15 important to all these people.  
 16 So culturally, personally, these structures are  
 17 very important and vital to this area.  
 18 I still serve these churches. Three of them  
 19 just once a month, but we still have mass there. The  
 20 Bueyerros church, I have a mass once a week, every  
 21 Saturday, and Roy and Mosquero I have it every Sunday.  
 22 And this is just 50 miles of my parish.  
 23 And I'm really concerned.  
 24 There has been structural damage already done  
 25 to the church in Bueyerros. It's a church that is 105

1 years old, and any more flying over it I think we would  
 2 lose that church.

3 It's important for us. Thank you.

4 HEARING OFFICER: Thank you, Father.

5 I now call on Phil Bidegain. After that I  
 6 will be calling on Tamara Flowers. 008148

7 MR. BIDEGAIN: Thank you, your Honor.

8 Phil Bidegain.

9 I wish to address the EIS, as it's called in  
 10 NEPA, how many dimensions it does not address  
 11 sufficiently.

SE-5

12 I think a disproportionate burden will be  
 13 placed on a minority. Rural people are a minority in  
 14 this country and fast going away.

15 As addressing the noise in the Appendix G on  
 16 page G-13, I quote, "Large livestock have been reported  
 17 to respond to aircraft noise by sporadic jumping,  
 18 galloping, vocalization and random movement."

BR-3

19 I don't think it's addressed sufficiently what  
 20 happened if you are on one of those large livestock. I  
 21 think you've had examples talked to here.

BR-2

22 Also, I'd like to -- I would like to address a  
 23 concern over the helicopters. We have a helicopter on  
 24 our ranch near Tucumcari, and we have also had near  
 25 misses.

35

1 In closing, I would like to see the minority of  
2 rural people addressed a little more sufficiently.

3 Thank you.

4 HEARING OFFICER: Ms. Flowers. And I'll be  
5 calling on Chester Gallagher. **008149**

6 MS. FLOWERS: Yes. My name is Tamara Flowers,  
7 and I'm here representing my family ranch, F & F Cattle  
8 Company. We have four different ranches below the hill,  
9 ranging from below David Hill to Gallegos. And our  
10 concerns regard spooking of horses and cattle, not only  
11 in the pasture but when working cattle, and also when  
12 riding young horses.

13 Also we are concerned about a historical  
14 church, Catholic church, in Gallegos that's located  
15 there.

16 Thank you.

17 HEARING OFFICER: Chester Gallagher.

18 MR. GALLAGHER: Everything has been covered.

19 HEARING OFFICER: I'll call on Joe Culbertson.

20 **008150** MR. CULBERTSON: My name is Joe Culbertson.  
21 We have a family ranch east of here down in the valley in  
22 Harding County. Over the years we have had a lot of  
23 flights of F-111s and recently F-16s, and back in the  
24 '60s and '70s we had a B-52 route over our ranch. In all  
25 those years, fortunately -- and I say fortunately after

BR-3

CU-1

TY

36

1 hearing some of the stories -- we have had no mishaps.  
2 We have had a lot of flights over the -- while we were  
3 gathering cattle and over the corrals and had a few  
4 horses jump a little. Nobody has gotten bucked off, but  
5 I say we are fortunate and I understand other people have  
6 had problems.

7 I support the U.S. Air Force in their efforts  
8 and their training. I have to agree that the government  
9 has a lot of land that it seems like they could utilize  
10 more, maybe.

11 I like to see the jets, I like to see them  
12 flying and doing their maneuvers over the valley, but I  
13 know they can cause problems when they are flying low,  
14 and after listening to a lot of my friends and neighbors  
15 and their concerns here tonight, I stand with them.

16 HEARING OFFICER: I would now call on Ed  
17 Sanchez. **008151**

18 MR. SANCHEZ: Your Honor, I'm Ed Sanchez,  
19 retired Game and Fish, presently trying to make a living  
20 guiding.

21 I'll make this story, which is lengthy, as  
22 short as possible.

23 The Air Force actually ruined a high-dollar elk  
24 hunt for me, my client. This jet come over and buzzed us  
25 tree-top level, scared all the elk away. The weather

37

1 that particular day was perfect, we were stalking what I  
2 would classify as a 360 point bull elk. The date was  
3 October 19 of last year. Remember, this is a  
4 once-in-a-lifetime opportunity. I think the Game and  
5 Fish covered that quite well a while ago.

6 I was -- I called Kirtland Air Force Base,  
7 Cannon Air Force Base, and I got the runaround. This was  
8 really disheartening to me, knowing I'm a taxpayer trying  
9 to make it on what little retirement we do get after we  
10 serve.

11 Also, I did not get a response until I called  
12 Jeff Bingaman's office, and Ms. Montoya can verify this.  
13 Then we started getting results.

14 Now, then, my main concern is why cannot the  
15 Air Force coordinate season dates with Game and Fish.  
16 They were set two years prior. If they are going to  
17 buzz, you know, one of the prime game areas, why can't  
18 they coordinate and do it some other time than the  
19 hunters being out there.

20 And also, why do we have to go to our U.S.  
21 Senator to get any results?

22 I think that the prime wildlife areas should be  
23 kept only on the fringe areas, not in the heart of the  
24 prime game and fishing areas. It's a great disruption  
25 for wildlife in the calving areas, in the wintering

AF-45

38

1 areas, and in the hunt areas. And I rely on hunting and  
2 fish guiding as part-time for my livelihood.

3 I think my client is going to file with the  
4 SB-95.

5 Thank you.

6 HEARING OFFICER: Well that is all the cards  
7 that have been handed in, so what I'd like to ask now  
8 is --

9 And we have a volunteer.

10 AUDIENCE MEMBER: I had a card that was in  
11 there.

12 AUDIENCE MEMBER: I had a card.

13 MS. HEFNER: But I'll volunteer, anyway. And  
14 probably because I wasn't on the list, that means I get  
15 six minutes.

16 HEARING OFFICER: Please, I'd just like one  
17 person at a time, please.

18 MS. HEFNER: We are just getting loaded.

19 HEARING OFFICER: Let me explain something  
20 about the cards, because we have had a couple of other  
21 hearings where there have been a little bit of  
22 misunderstanding about the cards.

23 One of the things you have to do is check off  
24 that you wanted to speak, not just simply fill out a  
25 card, to be able to speak. So my guess is the reason I

1 don't have your card is that you didn't check that off.  
 2 But if you did, then I don't have an explanation as to  
 3 why I don't have the card. **008152**  
 4 MS. HEFNER: Probably someone was smart.  
 5 But...  
 6 My name is Tracy Hefner. I'm a rancher just  
 7 south of Wagon Mound, just south of the Mosimann ranch.  
 8 I have dealt with the flights of various  
 9 aircraft in the 25 years that I have been on the ranch.  
 10 The first time that I actually called the Air Force about  
 11 a flight -- we live in a canyon; it's a small, narrow  
 12 canyon -- what I assume was an F-111 dipped so low into  
 13 the canyon over my house that -- this is a 200-year-old  
 14 house, the walls are three feet thick -- dishes fell off  
 15 the shelves in that house, and the small children that I  
 16 had at a birthday party dove under the table.  
 17 I called Cannon Air Force Base, and at the time  
 18 the man that you got ahold of to talk about these  
 19 problems name was Major Menace.  
 20 Now Major Menace explained to me my patriotic  
 21 duty, and I listened very carefully, but he also  
 22 explained there was supposed to be some rules for those  
 23 pilots. And I can give you a list of numerous occasions  
 24 where we have been actually harassed by pilots. I mean,  
 25 these are young guys, these are the best pilots in the

AF-37

1 country, these are the hottest aircraft in the country.  
 2 I have a 24-year-old son and you don't have to say  
 3 anything else. I know how they drive. I have had them  
 4 not only buzz me on a horse, I have had them make a  
 5 circle before me and do the little wing wave. You know.  
 6 And the gesture that I gave back to them, I'm  
 7 sure they couldn't see.  
 8 But I would like to see the Air Force -- I  
 9 suppose Alternative A, but I would certainly encourage  
 10 the Air Force to make it far easier for us to let you  
 11 know when your pilots are going beyond your rules. And  
 12 also, I would like some feedback. I have probably called  
 13 in six or eight times to the Air Force. I have warned --  
 14 I now wear a watch so that I can find out the exact  
 15 second that that plane has gone over. I have copies of  
 16 all my telephone maps, so many I can send in a copy with  
 17 the map and pinpoint my exact location.  
 18 I have been run over by horses, I have been  
 19 bucked off of horses, and I have filed numerous reports,  
 20 and I have never had any feedback.  
 21 What I would like you to do is just give me one  
 22 of those pilots and let me put him on a two-year-old colt  
 23 and somebody that doesn't like him flying up there in the  
 24 air, and see how he likes it. It's no fun.  
 25 It's our livelihood. I have X-rays, I have

1 documentation. I would encourage you to be more  
 2 responsible for the pilots.  
 3 Thank you. **008153**  
 4 HEARING OFFICER: Yes.  
 5 MS. HAYOZ: My name is Loretta Hayoz. I'm a  
 6 lady of Harding County. I love my people here. I love  
 7 my county. I'm also speaking for San Miguel and all the  
 8 other counties involved.  
 9 What type of responsibilities can the Air Force  
 10 cover if there's damage done to any type of historical  
 11 site or any type of building that is damaged, because of  
 12 houses that are very elder here. There's elder windows  
 13 that need to be considered.  
 14 What type of surety will the Air Force have to  
 15 be willing to accept that type of a responsibility?  
 16 And what type a surety will the Air Force have  
 17 to the designation of the flights from 300 to 400 to  
 18 1,000 feet as stated on the book.  
 19 Also, what type of a surety is considered for  
 20 the cattle ranchers here in this area? There are gopher  
 21 holes out there. Cattle and horses do not see these  
 22 gopher holes. We have had a member that is totally  
 23 incompetent because of an issue that has happened. Not  
 24 the Air Force, of course. But this gentleman, who is my  
 25 cousin, totally incompetent. He is not able to do for

AF-15

1 himself anymore.  
 2 And this can happen.  
 3 HEARING OFFICER: Is there anyone else who has  
 4 not spoken that would like to come forth and make  
 5 comments?  
 6 (Note: No response.)  
 7 HEARING OFFICER: Now, Mr. Lane, you appeared  
 8 to not have finished your comments. Would you like to  
 9 have another three minutes? **008154**  
 10 MR. LANE: Okay.  
 11 Thank you, Colonel Burd.  
 12 I guess this is more, probably, reiterating of  
 13 some of the experiences that probably people have had  
 14 with the aircraft out there. And I guess my point is  
 15 that as with anything there are certain guidelines and  
 16 rules that we all abide by daily, and as a young pilot,  
 17 as a trainee, we tend to exceed those parameters  
 18 sometimes, from occasion to occasion, and I guess it's  
 19 just our concern that you all are aware of just exactly  
 20 what happens to those of us that happen to be on that  
 21 fringe, or underneath, or whatever.  
 22 I was talking about being out with my kids  
 23 gathering cattle, and I guess I'd like to go on and talk  
 24 about our livelihood.  
 25 I have a trail ride that I have each year, and

BR-7

1 it happens to be under what is referred to as the  
 2 racetrack. And people come to the trail ride because of  
 3 the -- because of the wilderness-type effect, the  
 4 quietness of the area. And there's no question that  
 5 that -- there would be an effect on those customers and  
 6 my business if I had significant bomber training runs  
 7 over the top of that. That would definitely, you know,  
 8 diminish the pleasure of being out here, because one of  
 9 the reasons why they come from the cities to our rural  
 10 areas is for its quiet and its peaceful ways, I guess.  
 11 I guess I'm not real excited about having these  
 12 bomber runs fly over my house, which my house is also  
 13 underneath this racetrack circle, at -- during the  
 14 nighttime hours, which it looks like the equivalent of  
 15 2,000 feet from a B-2 bomber might be the equivalent of  
 16 a chain saw.  
 17 Anyway, I mean those are little inconveniences,  
 18 and I believe that I, as we all do, put up with a lot of  
 19 that. I mean, that's part of the strength of the Air  
 20 Force and so forth. I just think that we are already  
 21 have numerous Air Force activities in this area, and, you  
 22 know, we are now considering possibly doubling that.  
 23 This is a significant renewed burden on us.  
 24 Anyway, I yield, and thank you all for that.  
 25 HEARING OFFICER: Mr. Bond, did you want to

BR-5

1 finish your comments? **008155**  
 2 MR. BOND: Thank you, your Honor.  
 3 Just for the record, I am a rancher with a  
 4 piece of property next to Mr. and Mrs. Mosimann.  
 5 Colonel Mason indicated that the Mt. Dora  
 6 Military Operations Area floor is 3,000 feet, but the  
 7 failure of that is that the new MTR that has been  
 8 created, IC-153, has a floor of down to 300 feet. And as  
 9 you heard in the hearings in Snyder, Texas, John Oudt  
 10 indicated and covered all those things to indicate that  
 11 with that understanding where a military training route  
 12 transects an MOA, in fact people have to understand that  
 13 these jets, whether they be fighter jets or military  
 14 bombers, have the opportunity, under all, some  
 15 circumstances to go all the way down to 300 feet, that  
 16 the impact is startling, it's shocking, and the results  
 17 are what you have seen described.  
 18 Also at hearings in Snyder, Texas, Mr. Rich  
 19 Anderson let you know that the low level flights through  
 20 his air spaces above his private property is trespass.  
 21 The Air Force has not offered any compensation for  
 22 trespass of private property through the overlying  
 23 airspace.  
 24 You have heard many comments this afternoon and  
 25 previously on the noise pollution and the nuisance it

1 creates and the damages people have already suffered.  
 2 What the Air Force is seeking to do, it seems to me, is  
 3 for the sake of the shortness of transit, for the sake of  
 4 convenience of the Air Force crews, and even for the  
 5 ostensible benefit of taxpayer dollars, you ask the rural  
 6 communities of Texas and New Mexico to shoulder  
 7 unilaterally that responsibility. And you smile when  
 8 Buzz Welsh told you if every colonel and general of the  
 9 Air Force would forego their retirement and thereby save  
 10 the government a lot of taxpayer dollars you might find a  
 11 whole lot more willing participants in this crowd and the  
 12 other crowds. But the fact is that is not the case, so  
 13 you ask the rural community and Mr. Lane and Mr.  
 14 Bidegain to shoulder this responsibility.  
 15 As you know, also, because I have been retained  
 16 as counsel for the Heap (phonetic) group in Texas, there  
 17 is similar counsel in New Mexico, this is a woefully  
 18 inadequate BIS for failure to do the kind of studies  
 19 that are necessary with the modern technology. You  
 20 either do your work now, you do your work later, but I  
 21 assure you, you will do your work.  
 22 And so I give you that particular guidance.  
 23 Thank you.  
 24 HEARING OFFICER: Is there anyone else who has  
 25 already made comments who would like to make additional

BR-4

BI-1

GE-2

1 comments? **008156**  
 2 Yes.  
 3 MR. HENSON: Clint Henson again, Game and Fish  
 4 department.  
 5 I would like to also add to Mr. Sanchez'  
 6 comment as far as guides and outfitters. Not only are  
 7 the hunters affected by this but also the guides who are  
 8 employed by them.  
 9 One of the things that I forgot to mention  
 10 about the Valle Vidal area that is so important to us is  
 11 that it is closed to all public between January and July,  
 12 and it seems strange to me that we would allow  
 13 disturbances of this nature through there during the  
 14 calving periods for elk when we do not allow any public  
 15 people to step out of the vehicle and walk.  
 16 I also find it strange that you did place this  
 17 meeting in this community. I know that it is more  
 18 metropolitan areas in Clayton and Raton.  
 19 Hopefully that the comments that are given here  
 20 tonight aren't just on how many people showed up. A lot  
 21 of these people had to travel many miles to get here to  
 22 speak tonight.  
 23 I would also like to ask for more scientific  
 24 information as far as not only noise but also for  
 25 emissions.

BR-5

AO-2

1 I believe that from eight to ten flights of  
 2 B-52s, the amount of emissions testing that was given in  
 3 the EIS was very insufficient. I didn't really see -- I  
 4 didn't see hardly any testing at all of that multitude of  
 5 flights over a given area. **008157**  
 6 Thank you.  
 7 HEARING OFFICER: Is there anyone else?  
 8 Yes, please come forward.  
 9 MS. HEFNER: Again, my name is Tracy Hefner,  
 10 and I would like to see the Air Force define the limits  
 11 on what airspace they are allowed to use over private  
 12 land.  
 13 When you're talking about airplanes that are  
 14 going 300 feet above the ground, and I have had people at  
 15 Cannon Air Force Base assure me that these planes often  
 16 fly over, and that you can take them off automatic pilot  
 17 and go as low as you dare to go, we have had occasion and  
 18 our neighbors to have occasion to have the heads of  
 19 windmills suddenly and unexplainably fly off the top of  
 20 towers. It is our feeling that it's possible this is  
 21 from jet wash from these jets since we see them cut very  
 22 close to windmills sometimes when we are out in the  
 23 pasture.  
 24 I have called in complaints to the Air Force  
 25 and they have asked me -- and when I described the plane,

AF-8

BR-5

1 they have asked, "Did you get the numbers on the bottom  
 2 of the plane?"  
 3 Well, I was face down in the dirt, so it was a  
 4 tough go.  
 5 But they have asked me, "How do you know it was  
 6 one of ours?"  
 7 We would like a little more respect. I would  
 8 like to -- you know, if you know when you're going to be  
 9 flying routes that are over our ranches, it would  
 10 certainly be helpful to us to know when that was going to  
 11 happen, because we could plan our work so that we weren't  
 12 moving a lot of cattle and we weren't in a dangerous  
 13 situation.  
 14 If we get hurt and we can't be out there with  
 15 our cattle, that is the end of our livelihood. And we  
 16 don't have any kind of, you know, insurance that's going  
 17 to pay our bills while we are laid up.  
 18 So I would like to be able to identify the  
 19 aircraft, I would like to know when they were flying, I  
 20 would like to know what you do when they fly below the  
 21 recommended levels, and I would like to know how much of  
 22 that airspace over my private land I can count as ours.  
 23 I can't even build a second story on a house in  
 24 Santa Fe because I'm in the way of someone else's  
 25 airspace, but I would like to know how much of that peace

BR-2

CU-1

1 and quiet am I entitled to for owning that land and  
 2 paying my taxes?  
 3 Thank you.  
 4 HEARING OFFICER: Would anyone else...  
 5 Yes. **008158**  
 6 MR. LANE: Could I just say one follow-up?  
 7 Again, my name is Jeffrey Lane. And I have an  
 8 air strip, actually two air strips on our ranch. I am a  
 9 Cessna 185 pilot, been a pilot for 20 years, and my air  
 10 strip happened to be underneath that racetrack cycle,  
 11 also. And obviously my concerns are with my safety up  
 12 there with the increased air traffic.  
 13 Thank you. That's my last comment. Thank you.  
 14 HEARING OFFICER: Would anyone else like to  
 15 make comments?  
 16 MS. HAYOZ: Just one more. **008159**  
 17 HEARING OFFICER: Yes.  
 18 MS. HAYOZ: This is just for the record, that  
 19 there are three historical churches that you must  
 20 consider.  
 21 HEARING OFFICER: And what was your name again?  
 22 MS. HAYOZ: Loretta Hayoz.  
 23 HEARING OFFICER: Yes. **008160**  
 24 MS. GONZALES: My name is Rita Gonzales, and  
 25 we have a ranch in Bueyeros, and I also wanted to comment

AF-37

1 that we have called numerous times about the planes  
 2 flying so low, scaring, you know, my nephews, the cattle.  
 3 And we have never ever gotten any comments back. No one  
 4 has returned our call. We have just been ignored.  
 5 I just wanted to get that for the record.  
 6 HEARING OFFICER: Would anyone else like to  
 7 make any comments?  
 8 (Note: No response.)  
 9 HEARING OFFICER: Ladies and gentlemen, that  
 10 concludes this public hearing. Thank you for your  
 11 participation and your input. Please remember the public  
 12 comment period will extend through June 16, 1999.  
 13 This public hearing is adjourned.  
 14 Thank you, again.  
 15 (Note: Hearing adjourned at 6:55 p.m.)

1 public comment period.

2 And if you have written comments and you want

3 to turn those in at the conclusion of the hearing, you

4 can put those in the box provided in the back of the

5 room.

6 I'd like to get started now and call on Eugene

7 Erb, who is Mayor Pro Tem.

8 Since you're mayor, if you would like to turn

9 around so that you can address -- 00S161

10 MR. ERB: You can leave it that way.

11 They see me enough.

12 Colonel Burd, thank you for the opportunity,

13 and I would like to represent the mayor and the Village

14 of Angel Fire and welcome you to God's country. We hope

15 you take full advantage of the environment that your RBTI

16 will impact as long as you are here.

17 I would encourage all of the population here

18 to be as specific and as cogent and as telling in their

19 remarks as they were last time, because I thought the

20 population did themselves proud here, and also to

21 represent themselves as professionally as they did last

22 time.

23 From the standpoint of me as an individual,

24 rather than mayor pro tem, I'll speak against the RBTI,

25 even though I spent a lot of my life analyzing the

1 sufficiency and the need for military tests and training

2 ranges and also training aircrew members in the Air

3 Force.

4 I applaud the Air Force for seeking low-cost

5 training, given the cost of the Department of Defense

6 today. I also applaud their efforts to assess the

7 environmental and operational impact. I think when I

8 look at the assessment, perhaps not enough is given to

9 what I would call the esthetic character of the impact on

10 areas, and I think the kind of comments you get from an

11 area like this reflects an intensity of feeling for this

12 area that needs to be recognized and perhaps isn't well

13 enough.

14 For example, I think the impact on native

15 people's sacred land is something that isn't recognized

16 as well as it needs to be; the intensity of the feelings,

17 I think, of people that have elected to live in this area

18 because of its unique character, perhaps differentiates

19 this area; and then third -- and I know you're going to

20 hear more on this from some people to my right -- having

21 taken people's youngsters that approach Philmont in the

22 numbers of several thousand per year, I think that is a

23 unique experience for young Americans that deserves to be

24 eliminated from impact by this kind of activity.

25 Most importantly, when I look at the results

BR-7

CU-4

BR-6

1 of your analysis, I find that the operational and

2 economic benefits generally are better for the Air Force

3 if they go elsewhere. The environmental impacts are less

4 if you go elsewhere than if you go to Alternative D, so I

5 look forward with great anticipation to whether you are

6 going to pick the status quo alternative or go to West

7 Texas.

8 Thank you.

9 HEARING OFFICER: I'd like to now call on the

10 individuals who have indicated a desire to speak. And

11 what I'll do is indicate the first person, then to give

12 you an idea who's on deck I'll indicate who I will be

13 calling on after that.

14 I'd like to first call on James Henschkei, and

15 then after that I'll be calling on Hoot Gibson. 008162

16 MR. HENSCHKEI: Colonel Mason, Colonel Burd,

17 I appreciate you letting us come and speak here.

18 I'm a retired biologist. Give me where I'm

19 coming from.

20 I question some of the accuracy on the part of

21 the study concerning the effect on the wildlife. My

22 concern is primarily pollution: noise pollution.

23 Many of us escape the urban lifestyle for the

24 peace and tranquility of some of these less traveled

25 byways.

BI-3

1 I served in the Navy during the Vietnam era. I

2 fully appreciate the need for training and the need for

3 practice. It is important that our young men and women

4 are well prepared when they are called on to protect our

5 national interest such as is happening in Yugoslavia at

6 this time.

7 How can we balance the needs of citizens to

8 taste a wilderness experience and the military's need

9 for preparedness? I propose the use of existing military

10 reservations. Why not use the White Sands Missile

11 Range?

12 What about Fort Hale that's abandoned near

13 Leadville, Colorado? I understand that it's totally

14 abandoned, although there's some public access to it at

15 the present time.

16 What about the Air Force Academy, Ft. Carson?

17 I understand none of the military bases are

18 being used for this type of training. Surely there are

19 sufficient military reservations scattered throughout the

20 U.S. to provide ample topography variations to properly

21 train our servicemen, including our airmen.

22 I have only two animals, a llama and a donkey.

23 Heck, they spook even they when they see another donkey

24 and a llama. What will a B-52 or B-1 do when they fly

25 over?

PD-4

BI-1

1 They addressed that the antelope won't be --  
2 pardon me, the prong horn. I watched a heard of prong  
3 horn be spooked by a few turkey. What are they going to  
4 do when a B-52 or a B-1 flies at 300 feet overhead? I've  
5 seen them go through fences when a car passes.

6 Let's make a deal. You don't fly low -- and I  
7 want to emphasize the "low" -- over public accessible  
8 land, private land, and we won't invade the military  
9 reservations.

10 I appreciate your time. And I'm sure you get  
11 all kind of static, but I really do appreciate the  
12 chance to speak.

13 HEARING OFFICER: I'll call on Hoot Gibson, and  
14 then after that Kelly Davidson. 008163

15 MR. GIBSON: Colonel, my name is Hoot Gibson,  
16 and I'm the president of the Angel Fire Property Owners  
17 Association and represent the 5700 property owners in the  
18 Angel Fire area.

19 We voiced our concerns over the  
20 environmental -- this coming over the EBTI proposal -- to  
21 the Secretary of the Air Force last year, and we have  
22 been very closely monitoring the EIS, and have only two  
23 real concerns with the EIS as we understand it has been  
24 presented.

25 The first one is that I don't believe that

BR-4

1 we've covered the socioeconomic aspects of the impact on  
2 the Moreno Valley as deeply as we should have. As I  
3 understand, most of the impact, the socioeconomic impact,  
4 was in terms of the land to be purchased and used at the  
5 sites that where the threat emitters were going to be  
6 installed. Here in the Angel Fire area we have just come  
7 out of a disastrous bankruptcy situation in the last  
8 several years, and I have considerable concern that the  
9 number of low-level flights that would be presented to us  
10 in this area hear would have a serious impact on the  
11 evaluation of the land in terms of its saleability;  
12 also, would have an impact on the number of visitors that  
13 would be coming into the area, which would have a serious  
14 impact upon the socioeconomic impact on the valley.

15 And I think we ought to go into that a little  
16 more deeply.

17 I also have some concerns in the assessment  
18 relative to the safety consideration.

19 One of the pieces of correspondence that we  
20 provided to the Secretary of the Air Force, and also to  
21 our political representative, is a listing of the number  
22 of bird strikes that have occurred over the last year to  
23 Air Force aircraft. As an example, from 1985 until  
24 February of 1988, 34,856 bird strikes occurred to Air  
25 Force airplanes in the United States, resulting in death

AO-19

AO-19

1 to a considerable number of people and over \$38 million  
2 worth of repairs that had to be conducted by the Air  
3 Force.

4 If you were to analyze that, we would then  
5 anticipate that 52.6 percent of these strikes occurred at  
6 below 500 feet. And I'm uses Air Force terms here, Air  
7 Force -- an Air Force document here. 52.6 percent of  
8 these would be analyzed where we could expect somewhere  
9 in the neighborhood of about 1367 bird strikes to occur  
10 at low-level flights in the coming year.

11 Here in the -- we just came out of a  
12 disastrous -- I'm sorry, am I over time?

13 Sir, I would like to present this, then, to  
14 your secretary for your records.

15 HEARING OFFICER: Or if you want to hold on,  
16 after we finish everyone else we'd be happy to call you  
17 back up.

18 Let's now call on Kelly Davidson, and then  
19 after that on Les Davis. 008164

20 MR. DAVIDSON: Thank you. I'm Kelly Davidson  
21 with the resort, and I'd like to welcome you to the  
22 resort and also thank you for this opportunity that you  
23 have provided for the community.

24 First of all, the owner of the resort is Tim  
25 Allen, who it is unfortunate could not be here this

1 evening, and he sends his regrets, but he does want to  
2 represent that the resort is supportive of the needed  
3 military training. I think you will learn from everybody  
4 in the community it's just Alternative D we feel is not  
5 realistic for this community.

6 Hoot Gibson made a reference to the  
7 socioeconomic impact in the community. We are fortunate  
8 that the industry here is based on tourism. That's a  
9 clean, non-polluting industry.

10 We are concerned about the impact of  
11 Alternative D, of what it will have on businesses, on  
12 jobs, on people being able to support their families,  
13 being able to continue to have their homes here. We feel  
14 there will be a loss, and there will be a negative impact  
15 because the resort is the main attraction, winter and  
16 summer, and provides businesses and earning power for  
17 people here in the community. We are afraid that will be  
18 lost.

19 The Second item we are concerned about is  
20 safety. We have an airport here, 8900-foot runway.  
21 Currently we have private pilots flying in here, and we  
22 are in the process right now of marketing that and  
23 increasing the usage of the airport through the Chamber  
24 of Commerce, the fixed-base operator and the resort so we  
25 will fly more flights, private pilots coming in here.

BR-4

AO-30

1 The resort is also in the process right now, in  
 2 negotiation to bring charter flights -- and this will be  
 3 coming for next winter -- and eventually commercial  
 4 flights.

5 So we are concerned about safety.

6 And lastly, we are also concerned about the  
 7 sound and the noise. Currently, we enjoy the sounds of  
 8 nature here, but we are concerned what 2600 flights a  
 9 year may represent.

10 And if I may have a moment to play this.  
 11 (Note: Tape played.)  
 12 2600 flights a year.

13 I'm sure you're used to it. I'm afraid people  
 14 wanting to come here and live here and invest probably  
 15 would not be.

16 Thank you for your time.

17 HEARING OFFICER: I'd like to call on Les  
 18 Davis, and then I'll be calling on James Smith after  
 19 that. **008165**

20 MR. DAVIS: Colonel, I am very pleased to  
 21 welcome you to Colfax County and the Moreno Valley, one  
 22 of the prettiest places in New Mexico.

23 I'm Les Davis, president and general manager  
 24 of the C.S. Cattle Company. Like all the rest of my  
 25 neighbors here, the C.S. Cattle Company, now entering

1 it's 126th year of operation, is concerned about the  
 2 effect of this bombing program on people, livestock, and  
 3 wildlife.

4 We have a unique position here. The C.S.  
 5 Cattle Company, my grandfather Frank Springer and his  
 6 brother Charles Springer, built the largest manmade  
 7 structure in the Moreno Valley. You might have heard of  
 8 the Eagle Nest Dam that forms the lake a few miles down  
 9 here. It's a gigantic concrete structure. It holds  
 10 80,000 acre feet of water. And at the time in 1980 when  
 11 the dam broke in Idaho and killed many people, every dam  
 12 in the United States had to have an engineering study,  
 13 complete engineering study. We hired Gordon Herkenoff's  
 14 (phonetic) firm in Albuquerque, a top-notch firm. They  
 15 examined, took core drillings, they gave a rating of AAA  
 16 to Eagle Nest Dam, the structure and its condition.

17 We have never had any test of what the ground  
 18 vibrations of heavy aircraft flying over is. I was  
 19 there a year ago and two jet fighters buzzed it, and I  
 20 guarantee that the ground shook.

21 Now, I have no -- We have no idea what the  
 22 effect of these planes would be on the dam. That is one  
 23 of our primary concerns and why we are appearing here, in  
 24 addition to our concerns about humans, other structures,  
 25 wildlife.

AO-12

1 Now, some people we heard at the other meeting  
 2 were anti-military. I am not anti-military. I'm a World  
 3 War II vet, went from France to Czechoslovakia with the  
 4 14th Armored Division, had wonderful training at Ft.  
 5 Sill (phonetic) as an artillery man, and I appreciate  
 6 good military training.

7 We want to figure out these routes where they  
 8 don't hurt people or things. And we are all for you,  
 9 but let's use lots of common sense in picking out those  
 10 routes.

11 Thank you, Colonel.

12 HEARING OFFICER: James Smith. And then I'll  
 13 be calling on Leigh Sprowls. **008166**

14 MR. SMITH: Colonel Burd, Colonel Mason, thank  
 15 you. I'm here for the community of Ute Park, which is  
 16 about 13 miles below Eagle Nest, equidistant from  
 17 Cimarron and Eagle Nest, and also directly under the  
 18 flight path in Section G/H in your proposal.

19 We are concerned in Ute Park. As we have had  
 20 in the past four months, the prevailing winds during the  
 21 fall and the winter and into the spring are from the  
 22 west, average gusts of wind, 25 to 40 miles an hour, with  
 23 occasional gusts to 50 or better. We are very concerned  
 24 as to what will happen to aircraft flying at 400 feet  
 25 over our valley when hit by a 50-mile-an-hour gust of

AO-6

1 wind from the side. Very hard to recover from that  
 2 instantly.

3 Due to the mountainous terrain that surrounds  
 4 our valley of Ute Park on all sides we are always  
 5 concerned that the aircraft that would come down over the  
 6 top of Baldy into the valley and experience technical  
 7 problems with the engines would have to be able to get  
 8 over the mountains on the other side, climb for 6- or  
 9 7,000 feet to get out, and we are very concerned we might  
 10 have a many-thousand-gallon fuel jettison over our  
 11 community.

12 We have 200 homes in the community, fifty of  
 13 those homes occupied year round and another 150 occupied  
 14 recreationally during the summer and during the ski  
 15 season.

16 In addition to that, a route over our valley  
 17 will go over two wildlife management areas and also  
 18 impact a state park which is right on the western edge of  
 19 our community.

20 Those are my comments, and I would like to also  
 21 enter this into the record, if I might. **008167**

22 Thank you very much.

23 MR. SPROWLS: Colonel Burd, I'm Lee Sprowls.  
 24 I'm here as a private citizen, and I would like to  
 25 discuss what I think is a threat to our biological and

AO-6

AO-50

AO-50

1 environmental resources that was not addressed.

2 I have recently become aware that in 1991 the

3 composition of jet fuel used by commercial and military

4 jet aircraft in the United States was changed from JP-4

5 to JP-8. A Department of Defense source says that the

6 move has saved some lives in air crashes because the

7 JP-8 is a little less volatile.

8 Ethylenedibromide happens to be a key component

9 of JP-8. Ethylenedibromide is an extremely hazardous

10 pesticide that was banned by the U.S. Environmental

11 Protection Agency in 1983, so I'm wondering why it's a

12 component of JP-8.

13 The 1991 edition of Chemical Hazards of the

14 Workplace warned that repeated exposure to low levels of

15 Ethylenedibromide results in general weakness, vomiting,

16 diarrhea, chest pains, cough, shortness of breath. On

17 and on, the maladies that can occur in humans, and I'm

18 sure also occur in animals and birds. It causes,

19 additionally, deterioration of the heart, liver and

20 kidneys, and hemorrhages in the respiratory tract, and

21 can result in -- all of these things can result from

22 prolonged contact with ethylene dibromide.

23 That is JP-8.

24 According to the EPA, EPA's hazardous materials

25 list, ethylene dibromide is a carcinogen and must be

1 handled with extreme caution. A seven-page summary of

2 the pesticide's extreme toxicity warrants that ethylene

3 dibromide may also damage the reproductive system. The

4 EPA also cautions that exposure can irritate the lungs,

5 repeated exposure may cause bronchitis development, or

6 cough, shortness of breath, it will

7 damage the liver and kidneys.

8 It is 5.6 times heavier than air, so my concern

9 is that we all know jet engines do not burn 100 percent

10 of their fuel. I know that the B-52 cannot jettison

11 fuel, but the B-1 can, if necessary, and they supposedly

12 only do that in emergency situations. Flying at 400 feet

13 or in that vicinity will not allow the residue from the

14 jet engine, from this JP-8, to dissipate like it would,

15 say at 40,000 feet. And it's probably not terribly

16 harmful at 40,000 feet, but at 400 I'm sure it will go

17 directly to the ground and contaminate whatever it is

18 contaminating there: animals, birds, or people.

19 And I don't think this is anything that we

20 really would like to see happen in our valley.

21 Thank you for my opportunity.

22 HEARING OFFICER: I would call on David Patton

23 and then on Ken Edens. **008168**

24 MR. PATTON: Sir, my name is David Patton.

25 I'm a resident here. I'm speaking for myself.

AO-5

BI-3

1 I have, and well over 1,000 of my neighbors in

2 Angel Fire and Taos have, already made clear all the

3 reasons these training flights should not take place

4 anyplace in this area, last year.

5 Among them were: Disturbance of wild life

6 breeding grounds; flying over designated wilderness

7 areas; flying through a major sandhill crane migration

8 route on a low level, with great likelihood of

9 encountering one of these large birds; crashing; flying a

10 bare mile from our elementary school in Eagle Nest; the

11 danger of major forest fires should the crash take place

12 in the dry conditions we have here; the continual

13 disturbance of wildlife, domestic animals, and people in

14 the area, not to mention the incredible impact on a

15 resort and real estate land based economy in this area

16 where people come to escape the stressful realities of

17 life in the city and in our modern world.

18 Would you spend \$300,000 to buy a house here so

19 you could listen to between 10 to 12 low-level bomber

20 flights daily?

21 Our senator and our congressmen and every

22 village and county government in the area, including Taos

23 and Picuris Pueblo, have all issued statements against

24 it, but this doesn't seem to be enough for the Air Force.

25 They make us wait in limbo for nearly two years for a

GE-8

GE-8

BR-4

GE-3

1 decision. They try to placate us by moving the route a

2 mile to the east.

3 The EIS states there is no appreciable

4 economic and social impact to be felt from these

5 flights. How can any true assessment of the impact

6 come to these conclusions? The socioeconomic impact

7 will be devastating. Devastating. And the

8 environmental impact be will be significant.

9 My wife and I have lived here for 20 years.

10 We have seen B-1 flights go through this valley in the

11 1980s when there was no input or warning, and they were

12 most disturbing.

13 My point is: How many good reasons do you need

14 to scrap this ill-conceived idea?

15 If you want community input, you got it last

16 year. Your minor changes and bogus impact statement are

17 not going on make us change our minds. If you truly

18 want our input, then heed it. Don't make a mockery of

19 it. If the military can force this on us no matter what

20 the consequence for this area and no matter what the

21 people here say, then you really won't be protecting our

22 democracy, you will be protecting a military state.

23 This really boils down to who has the power

24 here, the military or the people. I was under the

25 impression that it was supposed to be the people.

TY

1 I recommend for Alternative A, no action.  
 2 HEARING OFFICER: I'd like to call on Ken  
 3 Edens, and then after that Bill Spice. 008169  
 4 MR. EDENS: My name is Ken Eden. I live in  
 5 Ute Park. Mr. Smith has given you some of the stuff  
 6 about Ute Park, and I would just add that this is a  
 7 unique, beautiful place to live, abundant wildlife. I've  
 8 lived there for several years, and I would hate to see  
 9 this change.  
 10 But that said, let me tell you I support the  
 11 proposal that the Air Force is doing here. If this is  
 12 the best thing for the aircrews to train, if this is the  
 13 best place, then I support this. I don't always agree  
 14 with the politics, but I support our troops in combat.  
 15 Probably as we are speaking tonight we have pilots and  
 16 crews flying low-level combat flights in the mountains of  
 17 Yugoslavia. This country, on television, looks kind of  
 18 like our country. I think we owe it to these people to  
 19 give them the best possible equipment, the best possible  
 20 areas to train. I think anybody that has been in combat  
 21 will tell you that the more realistic your training can  
 22 be, the safer you are. You know, the more lives will be  
 23 saved.  
 24 I expect that most Americans would agree with  
 25 that, but what I'm hearing here tonight is do this

1 someplace else, it messes up the esthetics of this  
 2 beautiful place. And I agree with that. But how can we  
 3 be so selfish as to say, "Send this someplace else. It's  
 4 not me, not mine. It impacts the value of my property,  
 5 scares my dog."  
 6 Given our declining military budget, I would  
 7 like to see this money spent as effectively as it can,  
 8 and I trust the Air Force to develop a plan to do this.  
 9 Over the past several years we have had some  
 10 low-level jet fighters over Ute Park. I have never  
 11 heard anybody say it negatively impacted anything.  
 12 I suspect that there's few folks here that  
 13 agree tonight with my opinions, and I doubt I will change  
 14 anybody's mind, but if this is way to give the best  
 15 training for these aircrews that will save their lives,  
 16 let them do their jobs, then as far as I'm concerned,  
 17 bring them on.  
 18 Thank you.  
 19 HEARING OFFICER: Bill Spice. And then I'll  
 20 be calling ON Bob Ricklefs after that. 008170  
 21 MR. SPICE: Colonel, thank you very much.  
 22 My name is Bill Spice. I'm the national  
 23 director of high adventure programs for the Boy Scouts  
 24 of America, and also the general manager at Philmont  
 25 Scout Ranch.

GE-19

ED-4

BR-6

1 The position of the Boy Scouts of America and  
 2 Philmont has not changed. We believe the Air Force  
 3 should be the best trained, best equipped, best prepared  
 4 fighting force in the world. However, we find it hard  
 5 to believe that the best place to train your fighter  
 6 crews are over Philmont Scout Ranch.  
 7 When we last met as a group in this building we  
 8 were led to believe our comments were being recorded and  
 9 considered, only to find we were attending a  
 10 fact-gathering meeting and not a scoping meeting.  
 11 On pages 10 to 13 of the EIS there's no  
 12 reference to the meeting held at Philmont with Air Force  
 13 representatives.  
 14 As we read and reread the Draft EIS, there are  
 15 conclusions drawn that are not correct.  
 16 Page 4-76 you imply that there are very few  
 17 population centers affected. On any given day during May  
 18 through August, directly under the flight path shown  
 19 there, there are over 5150 young people living at  
 20 Philmont.  
 21 On page 4-81 you state that the initiative  
 22 would not threaten public safety. At any one time we  
 23 would have 120 youngsters hanging on rock faces doing  
 24 their rappelling, several climbing spar poles, and, more  
 25 importantly, over 160 on horseback.

AO-89

ED-5

CU-8

ED-6

1 On page 4-79 when we read table 4.2-12 you are  
 2 proposing to overly 114,000 of our 137,000 acres of  
 3 program. That is totally unacceptable, because this  
 4 means, according to your own calculations on page 4-81,  
 5 the estimated time of each flight over the Philmont  
 6 would be 3.3 minutes, and if there are a minimum of 16  
 7 flights a day, that equals 52.8 minutes, and in our  
 8 young people staying with us only 12 days, they will be  
 9 exposed to six and a half hours of noise and disruption.  
 10 So much for the mountain wilderness  
 11 experience.  
 12 Page 4-77 is incorrect. Philmont is not range  
 13 land. Over 60 percent of our property is wooded  
 14 terrain.  
 15 On page ES-5, Cultural Resources, there seems  
 16 to be no mention of our two national historic sites, the  
 17 Kit Carson/Maxwell Abreu house at Rayado, and the Villa  
 18 Philmonte.  
 19 Also, we can find nowhere what the effect of  
 20 low-level noise violations will have on the hundreds of  
 21 abandoned mines and semi-active mine shafts in these  
 22 mountains, including the two active gold mines at  
 23 Philmont that our youth tour each summer.  
 24 The last sentence that causes us great concern:  
 25 "Effects from aircraft emissions and potential of

AO-5

1 aircraft mishaps would be inconsequential for all  
 2 alternatives."  
 3 An aircraft coming down on our tent city, or  
 4 dumping fuel to gain altitude on cook fires and camp  
 5 fires is certainly not inconsequential.  
 6 HEARING OFFICER: I'd like to call on Bob  
 7 Ricklefs, and then I'll be calling on Doug Tappen  
 8 (sic). **008171**  
 9 MR. RICKLEFS: Thank you, Colonel Burd.  
 10 My name is Bob Ricklefs. I'm the ranch  
 11 superintendent at Philmont Scout Ranch.  
 12 Like most ranches in the area, Philmont has  
 13 abundant wild life, game animals. We have livestock. We  
 14 have a beef cow herd, we have 75 burros, we have a  
 15 buffalo herd which provides buffalo for our participants.  
 16 We also have 250 horses. These horses are used in the  
 17 summertime to provide rides for inexperienced people.  
 18 And when I say "inexperienced," this is probably the only  
 19 time this person will be on horseback. They know nothing  
 20 about it. But we have a very good safety record with  
 21 these people. In the summertime we might take out 9,000  
 22 people on horseback, most of those for their first time.  
 23 Alternative D concerns me greatly. On page  
 24 4-81 it states in part that flight operations would not  
 25 threaten public health and safety. And I feel that that

BR-3

AF-6

1 is incorrect. I've ridden these mountains, and I'm an  
 2 experienced horseman, and I have been on horseback with  
 3 an inexperienced horse when low-level flights -- the  
 4 smaller bombers that fly over occasionally, and I know  
 5 that horse grabs his tail. And I'm experienced enough  
 6 to know what's coming. These inexperienced people would  
 7 not know what to do. They would be as fearful as the  
 8 horse. And I'm greatly fearful that many, many people  
 9 in one horse ride could be dumped, dragged, bucked off,  
 10 et cetera.  
 11 At any one time during the day we might have  
 12 165 people horseback in various parts of Philmont. They  
 13 can be on horse rides in eight different areas of  
 14 Philmont. I believe that the startle effect of a  
 15 high-decibel low-level flight is going to be catastrophic  
 16 to our youth, and eventually may cause death or injury to  
 17 somebody who does not know what a horse is about.  
 18 I would also say it says that applicable  
 19 regulations would not be harmed. We looked up an FAA  
 20 regulation which says that you cannot fly over an  
 21 open-area assembly of persons. I would feel that 35  
 22 people on horseback would qualify as an open air assembly  
 23 of persons, and we feel that that does go against FAA  
 24 regulations.  
 25 Also, personally I would say that more than a

GE-26

AO-8

BR-6

1 year ago I wrote for the Draft EIS, and according to  
 2 NEPA regulations anybody showing interest in this is  
 3 supposed to receive that, and I did not receive my own  
 4 copy.  
 5 Thank you.  
 6 HEARING OFFICER: I would like to call on Doug  
 7 Patman, and then it will be Ron Bromley. **008172**  
 8 MR. PALMER: Colonel Burd, I'm Doug Palmer.  
 9 No one else can read my handwriting either, so that's  
 10 fine.  
 11 I want to continue with Philmont's statement.  
 12 The Draft says that noise levels will average between 62  
 13 and 68 decibels. The noise level of the B-52 at 300  
 14 feet is 117 decibels. This increased noise level will  
 15 greatly interfere with our staff as they instruct our  
 16 participants, and their safety can sometimes be dependent  
 17 on this instruction. Imagine trying to teach young  
 18 people to climb safely on a sheer rock face and having to  
 19 compete with these flyovers. If a participant can't hear  
 20 the information being passed along, he or she could  
 21 possibly be injured, or worse.  
 22 AG-13 you state that local residents will get  
 23 used to the flyovers and will be able to sleep through  
 24 them at night, much like living near a railroad track.  
 25 What you don't take into account is our participants will

BR-6

BR-6

1 be here for about two weeks, not enough time to get used  
 2 to it.  
 3 We have tents instead of housing. That record  
 4 says 20 percent of the flights will occur between 10:00  
 5 p.m. and 2:00 p.m. There's no doubt this will have a  
 6 serious effect on their health.  
 7 We have many questions and concerns still  
 8 unanswered. For instance, what is the negative effect on  
 9 wild life and domestic livestock? What would happen to  
 10 our radio system? Would there be an interruption of  
 11 our radio systems or yours? What happens, God forbid, if  
 12 there is a mishap? How can we shut down part of our  
 13 situation to investigate who is liable morally or  
 14 financially?  
 15 If you read the Federal Aviation Administration  
 16 Title 14 Code of Federal Regulations, Section 91.119,  
 17 minimum safety altitudes, if the FAA regulations apply to  
 18 the U.S. Air Force, we certainly have a conflict. Item  
 19 B, over congested areas, would also raise serious doubts  
 20 that the FAA would allow such flights.  
 21 Let me conclude. We are in total support of  
 22 our military. We want our men and women to be the  
 23 best-trained fighting force; however, we have tried to  
 24 share with you some of our beliefs how the RTTI  
 25 Alternative D is unwise and unsafe. Parents send us

1 20,000 young people each year. We are responsible for  
2 their health and safety. Please don't create a situation  
3 where we have to call a parent and tell them their child  
4 is severely injured or dead because of a fall, or being  
5 drug by a runaway horse, or what might be caused by  
6 low-flying Air Force bombers.

7 I may be the only person who has lived in both  
8 Alternative D in the Davis Mountains. I directed Buffalo  
9 Trail Scout Ranch for nine years, which is 12 miles west  
10 of Bal Morey (phonetic). I know a little bit about the  
11 environment out there, and I certainly know that is a  
12 much less populated area than ours.

13 And we would certainly recommend you to enjoy  
14 Texas.

15 Thank you very much.

16 HEARING OFFICER: Let's now call on Ron  
17 Bromley, and then I will be calling on Mark Anderson  
18 after that. **008173**

**TY**

19 MR. BROMLEY: Colonel Mason, Colonel Burd.  
20 Just one night out of 15 weeks 200 young  
21 people and adults sitting around a campfire in a pristine  
22 mountain wooded scene, an area shattered by the noise of  
23 a military aircraft flying at a very low level shattering  
24 their environment.

25 That is not safe. It will never be safe.

1 We have 30,000 people at Philmont each year.  
2 They would all be part of one of those campfires.

3 I defer the rest of my time to Bill Spice for  
4 closing comment.

5 HEARING OFFICER: Well, sir, I'd just like to  
6 remind you that everybody is going to be given an  
7 opportunity to speak again, so you don't need to defer  
8 your time. He will be given additional time. So if you  
9 have some more remarks to make, please make them.

10 (Note: No response.)

11 HEARING OFFICER: Very well.

12 I'll be calling on Mark Anderson, and after  
13 that Richard Mahalik. **008174**

14 MR. ANDERSON: My name is Mark Anderson, and I  
15 serve as director of program at Philmont Scout Ranch.

16 We brought two maps of our Scout ranch, and  
17 have them displayed here. Just for the record, one of  
18 the maps depicts -- or each map depicts the area in which  
19 the three sections of the MTR will fly through: E/F, F/G  
20 and G/H. And the maps that are displayed, one of the  
21 maps depicts the various places that we have staffed  
22 camps in the back country.

23 Our general manager a few moments ago indicated  
24 that 5100 people at any one time are camped in that  
25 corridor, roughly 111,000 of our acres are included

1 within the MTR area.

2 The second map that I show in front of us  
3 indicates the routes that the treks that our young  
4 people are hiking on, and as a person can look at that,  
5 they look at the various color combinations indicating  
6 those map trek routes, can see that probably 80 percent  
7 of those particular routes are within the E/F, F/G and  
8 G/H portion of the MTR corridor.

**BR-6**

9 The fact that very little was given to the  
10 population in the area -- and I understand that just  
11 because we are seasonal from May to the end of August, we  
12 do have a significant population in this Section D or  
13 Alternative D at any one given time.

14 There are other small communities and large  
15 communities that weren't taken into account with the  
16 Environmental Impact Statement. We feel like we are a  
17 significant community, and as Bob Ricklefs referred to a  
18 few moments ago in referring to the Federal Aviation  
19 regulation, we have a large group of people gathered in  
20 various spots along the ranch.

**AF-55**

21 Just to start at the top of the map in the  
22 E/F and F/G portion, we run from Baldy camp to Tom -- at  
23 10,000 feet of the 12,441 foot Baldy mountain where kids  
24 are gathered together for programs at that point, down  
25 through many staffed camps that Bob referred to with

1 horses, our Ponil, our Clark's Fork and Baulien area, as  
2 well as kids that are on what we call a cavalcade ride,  
3 which means for 12 days they are riding their horses.

4 So throughout their 12-day experience they are  
5 encountering roughly an average of ten flights per day at  
6 that particular time.

**BR-6**

7 We feel we are a significant community, as  
8 well as our neighbors around us are significant  
9 communities, and for that reason need to have more  
10 emphasis on that portion of the Environmental Impact  
11 Statement.

12 Thank you.

13 HEARING OFFICER: I'd like to call on Richard  
14 Mahalik, and then Ken Taylor. **008175**

**TY**

15 MR. MAHALIK: Colonel Burd, my name is Richard  
16 Mahalik, and I'm the associate director of program at  
17 Philmont Scout Ranch. Part of my responsibilities  
18 include personnel and hiring of our seasonal staff.

19 We have over 850 staff members that work at  
20 Philmont during the summer period, virtually from every  
21 state in the union. In fact, every state in the union  
22 except Hawaii.

23 Part of that staff, incidentally, are  
24 representatives from each of the military academies. I  
25 think we have about 25 members from the Air Force Academy

1 that will be acting as rangers and be here for this  
2 coming summer. In, fact two weekends from now about 65  
3 cadets from the Air Force Academy will be out there for  
4 some training, weekend training leading up to their job  
5 this summer.

6 When our staff come to Philmont they have some  
7 pretty high expectations. Those expectations are also  
8 true for the 30,000 participant that we have. Those  
9 expectations include a safe and healthy environment. I  
10 am personally concerned that they may not be able to get  
11 that if this program takes part over Philmont.

12 I would simply urge that you consider looking  
13 in different direction so that we can continue the  
14 program that we have for the young people of our  
15 country.

16 Thank you very much.

17 HEARING OFFICER: Ken Taylor.

18 Mr. Taylor?

19 AUDIENCE MEMBER: Ken Taylor had to depart.  
20 He wished to echo everyone else's concern on  
21 Alternative D.

22 HEARING OFFICER: Then I'd like to call to  
23 Cliff Bain, then after that Linda Vaughn. 008176

24 MS. BAIN: My name is Cliff Bain. I live  
25 north of Taos but I've spent much time in the last year

1 and a half helping to organize and inform my fellow  
2 residents of this area of just what this proposal would  
3 mean for our lives.

4 I'm not comfortable with your study or your  
5 conclusions. You are bound by the National Environmental  
6 Policy Act to study the cumulative impacts of this  
7 action, combined with existing use of the airspace, and  
8 any future use, and I don't think you've done that in an  
9 honest way.

PD-35

10 The existing route where I live north of Taos  
11 is primarily intermittent fighter planes; occasionally a  
12 pair of them will come over the ridge. And it may happen  
13 on two successive days, it may not happen for another six  
14 months. Sometimes some larger aircraft come, but I  
15 have never experienced -- although I've seen a B-52 fly  
16 over my house, I've never experienced them at anywhere  
17 close to the speeds that will be used in this realistic  
18 training.

19 So there's a real qualitative difference  
20 between what we experience now.

21 Your study shows that the increase for  
22 Alternate D is perhaps 15- to 1800 percent increase in  
23 flights, but what is particularly impactful is that you  
24 are creating a corridor, what, six to twelve miles wide  
25 something like that. These flights will be so

1 concentrated, in effect we will have a highway of B-52  
2 and B-1 bomber flights, 10 or more a day, day and night.  
3 Very, very concentrated.

LU-2

4 I don't know how you can consider -- well,  
5 perhaps communities elsewhere, we don't rise to the level  
6 of a community when we have a hamlet of several hundred  
7 people, but I don't know how you come up with five  
8 communities as your slide show has shown. There are  
9 scores of communities where people live, where livestock  
10 reside and wildlife breed, and you're completely changing  
11 the quality of life, the tranquility of the area within  
12 these zones.

BR-7

13 I certainly hope that your Final EIS will look  
14 at this.

15 You have not come here or sent people here to  
16 study what it's like, what impacts can be predicted in  
17 this area, and you just can't do this with statistics.  
18 You can't do this with studies from elsewhere. You have  
19 had plenty of opportunity to come and spend some time at  
20 Philmont and elsewhere, and it hasn't been done yet.

21 HEARING OFFICER: I'd like to call on Linda  
22 Vaughn, and then after that Mark Griffin. 008177

23 MS. VAUGHN: Colonel Burd, Lieutenant Colonel  
24 Mason, my name is Linda Vaughn, and I am the assistant to  
25 the chief executive officer of Angel Fire Resort.

1 However, I come here tonight as a 21-year resident of the  
2 Moreno Valley.

PD-36

3 I had a short -- a limited time to review the  
4 draft of the Environmental Impact Study, and I searched  
5 for information about Angel Fire, the fact that it is a  
6 resort. I searched for areas that would speak about  
7 Colfax County, and I couldn't find anything that  
8 specifically spoke to this area.

9 I did find on page 6-3 of the public  
10 involvement process a paragraph that reads: Post  
11 scoping public meetings. In this paragraph it states  
12 that it was -- that we actually followed the formal  
13 scoping period. And I do recall that you were invited  
14 after that scoping, that initial scoping period was held.

GE-3

15 It also mentions that over 370 people attended  
16 in Taos and about 180 in Angel Fire, and approximately 50  
17 commentors spoke at each location. However, I didn't  
18 find any information about the impact that these  
19 commentors had made.

GE-36

20 And I just wanted to be absolutely sure that  
21 with this particular hearing that we will be noted, and  
22 that you will have that opportunity to recognize that we  
23 are a resort area and we do have thousands of people who  
24 come here on a regular basis to enjoy the environment and  
25 to seek a little peace and quiet. Sometimes they come to

1 play, sometimes they come to just be quiet.  
2 But it's a beautiful place to live, to raise  
3 your children, and the impact that I think that this  
4 particular situation is going to have on the environment  
5 is what I'm most concerned about.

6 I appreciate your time, gentlemen.  
7 And I, too -- my son is a -- spent ten years  
8 in the Air Force, and I love you guys. You do a great  
9 service for your country, and I appreciate that very  
10 much. I will express the sentiments of one of the other  
11 gentleman that said, "Please enjoy Texas."

12 Thank you.  
13 HEARING OFFICER: I will call on Mark  
14 Griffin, then Jennifer Cavan. 008178

15 MR. GRIFFIN: Thank you, Colonel. My name is  
16 Mark Griffin, and I'm speaking as president on behalf of  
17 the members of the Cimarron, New Mexico, Kiwanis Club.

18 We strongly oppose Alternative D of the  
19 Realistic Bomber Training Initiative. While we fully  
20 appreciate the mission, we firmly believe Alternate D is  
21 ill advised. Nearly all the economies of the communities  
22 surrounding Cimarron -- Philmont, Ute Park, Rayado,  
23 Miami -- depend on the recreational and lifestyle  
24 opportunities of our area. Skiing, hunting, fishing,  
25 camping, ranching, tourism, viewing wildlife, and

1 retirement bring people to our area, keep us in business,  
2 and our communities alive.

BR-4

3 We believe the constant low-level bomber  
4 flights called for by the RBTI will adversely impact, if  
5 not curtail, these activities, and then the very survival  
6 of our small communities.

BR-6

7 We believe the direct flights over the Philmont  
8 Scout Ranch, the largest single economic force impacting  
9 our communities, will cause the facility to be less  
10 desirable due to the noise, safety concerns, and  
11 elimination of the wilderness experience amongst Scouts  
12 and Scout leaders who attend the programs at the ranch  
13 each year.

14 During each day from the beginning of June to  
15 the end of August there are about 5,000 additional people  
16 in Cimarron from all over the country arriving,  
17 departing, or participating in programs at Philmont, and  
18 thousands more visit in the non summer months, a total of  
19 about 30,000 Philmont visitors each year.

CU-2

20 We believe that direct flights over our  
21 museums, petroglyph sites, and two facilities on the  
22 National Register of Historic Places, the Villa Philmonte  
23 and the Rayado Community, which are among our area's most  
24 popular tourism sites, will endanger those sites and  
25 lessen visitations.

1 Just outside the corridor are two other sites  
2 on the Register: The St. James Hotel and Cimarron's Old  
3 Mill.

4 We believe the deer and elk herds that are so  
5 important to those who enjoy our mountains for either  
6 hunting or viewing will migrate away from the route,  
7 causing these activities to end.

BI-5

8 We believe the noise and low-level flying  
9 aircraft will cause our predatory bird population,  
10 including endangered species, to be adversely impacted.

11 We believe the many, many members of our  
12 communities involved in local ranching operations will be  
13 impacted as cattle, bison, and horse herds are disturbed  
14 by the flights.

15 We believe those who have retired to our  
16 communities because of the peaceful lifestyle will  
17 choose to relocate, further impacting our economy.

ED-5

18 Further, we believe the Draft EIS that has been  
19 prepared is full of inaccurate statements about the area  
20 considered as Alternative D. Our area is not  
21 "rangeland." We are a population center for much of the  
22 year. We do have cultural resources in the area, and we  
23 do have domestic and wild animals that will be impacted.

24 While there are currently overflights in our  
25 area, the proposed altitude deviations make this

1 precedent irrelevant.

2 We urge you to reconsider RBTI, and especially  
3 Alternative D.

4 Thank you.

5 HEARING OFFICER: I just have a quick  
6 announcement to make.

7 Is Ernest or Cheryl Lopez in the audience?  
8 There is an officer in the back of the room that would  
9 like to see you.

10 AUDIENCE MEMBER: Right here.

11 HEARING OFFICER: I'd like to now call on  
12 Jennifer Cavan.

13 Please forgive me if I am butchering your  
14 name. Looks like C-a-v-a-n.

15 Is there a Jennifer here?

16 (Note: No response.)

17 HEARING OFFICER: I'd like to then call on  
18 Betty Stisser, and after that Mark Thibeault.

19 So Betty is gone?

20 MS. STISSER: I'm here, but I don't choose to  
21 speak. Thank you.

22 HEARING OFFICER: I see. All right.

23 Mark Thibeault.

24 MR. THIBEAULT: I'm going to pass. Thank  
25 you.

1 HEARING OFFICER: Daniel Williams. **008179**  
 2 Then after that David Vackar.  
 3 MR. WILLIAMS: Colonel Burd, Colonel Mason,  
 4 welcome.  
 5 My name is Daniel Williams. I'm a retired  
 6 major from the National Guard, training officer for two  
 7 military units and director of operations for one.  
 8 I am by no means against the military, Air  
 9 Force, or against training. I believe that providing  
 10 our young people with the finest necessary equipment and  
 11 the finest training is absolutely critical if we are  
 12 going to send them into battle. However, I am convinced  
 13 that the RBTI Alternative D would have a devastating  
 14 impact on Northern New Mexico.  
 15 I have a number of concerns about the EIS.  
 16 The slide did say there were only four or five  
 17 communities would be overflowed and affected with  
 18 increased noise levels. There would, in fact, be  
 19 dozens. I have taken the coordinates provided to me by  
 20 Major Adams, have plotted those, and in only the first  
 21 third there are literally dozens of communities there.  
 22 The Denver Sectional Flight Chart posted in the lobby  
 23 shows these areas, and I will be submitting a copy of  
 24 that, and I respectfully ask that that flight chart in  
 25 its entirety be published in the Final EIS so that

LU-2

GE-35

1 people will be able to really see how their homes and  
 2 area is going to be impacted.  
 3 I do believe that the maps and the EIS are  
 4 grossly insufficient because of the lack of detail. When  
 5 you have got a map that represents several hundred miles  
 6 of air space, shown on an 8 1/2 x 11 piece of paper,  
 7 there's no way you can provide the kind of details that  
 8 you need.  
 9 The route has been referred to by a biologist  
 10 friend of mine as an aerial tour of the scenic and  
 11 wilderness areas of Northern New Mexico. I think that is  
 12 very accurate.  
 13 There are some changes in the route. Now,  
 14 Colonel Wheelis (phonetic) promised the Angel Fire  
 15 meeting that the route would not come within five miles  
 16 of Angel Fire, and in fact the changes in the route do  
 17 show it is now five miles east of Angel Fire ski area.  
 18 What that doesn't account for is that the town of Angel  
 19 Fire has annexed property to the east and that that, as  
 20 it's developed, will be closer to the route.  
 21 There is also a tremendous impact for Philmont  
 22 Scout Ranch. As these gentlemen have said, there are  
 23 over 20,000 campers that come every year. Many are not  
 24 used to being in wilderness areas. Many are first-time  
 25 riders. We are talking about an area -- As a Scout back

GE-35

ED-7

1 east, I dreamed of going to Philmont, and never had than  
 2 opportunity, and I look at the Scouts that are going to  
 3 come there and have what would be their first wilderness  
 4 experience for many of them shattered by the sound of the  
 5 bombers overhead.  
 6 If this area is selected, I do predict there  
 7 would be a huge public outcry from across the United  
 8 States from former Scouts, from Scout leaders, from  
 9 Scouts themselves, and I also predict there would be  
 10 headlines in many areas that read: U.S. Air Force versus  
 11 the Boy Scouts of America.  
 12 Sir, I do have a additional comments I'd like  
 13 to make later, if I may.  
 14 HEARING OFFICER: Yes. **008180**  
 15 David Vackar.  
 16 MR. VACKAR: Gentleman, my name is David  
 17 Vackar. I'm the general manager of the Vermejo Park  
 18 Ranch, Northern New Mexico, owned by Ted Turner of  
 19 Atlanta, Georgia.  
 20 We believe you have significantly understated  
 21 the environmental impacts through your EIS and totally  
 22 ignored the socioeconomic impacts for our region.  
 23 However I'll restrict my comments to just those impacts  
 24 to Vermejo Park.  
 25 It is 600,000 acres, of which 200,000 is your

1 northern pivotal point for your bombers coming from the  
 2 west across the Costillo peaks, coming across at 13,000  
 3 feet and then turning directly south to come across the  
 4 Valle Vidal, the units which don't even show on the maps,  
 5 to come across then towards Philmont and Angel Fire.  
 6 There are significant populations of bald  
 7 eagles, peregrine falcons, several other potentially  
 8 identified endangered species on Vermejo Park,  
 9 specifically, that I don't believe you have correctly  
 10 addressed. We have significant projects to protect the  
 11 Rio Grande cutthroat trout, which has been requested to  
 12 be listed under the Endangered Species Act, although at  
 13 this point has not been officially listed, projects up in  
 14 the Costillo basin.  
 15 We have significant populations of elk,  
 16 especially cows and calves, that spend the summer from  
 17 12- to 13,000 feet on those peaks over which you are  
 18 anticipating flying bombers at just a few hundred feet.  
 19 Wildlife, actually, in many ways can adapt  
 20 with overflights; however, we believe especially with  
 21 these cow/calf populations above the treeline, you have  
 22 not anticipated the nature of the impacts on these areas.  
 23 We have started discussion with New Mexico  
 24 Game and Fish to reintroduce Rocky Mountain Big Horn  
 25 sheep on the peaks. Flying over that certainly doesn't

ED-2

BI-5

BI-7

BI-1

1 bode well for that reintroduction in those areas.  
 2           Quickly, before the sergeant brings up his red  
 3 flag, I will also mention the socioeconomic impacts.  
 4           Basically, the EIS doesn't even recognize that  
 5 we have a lodge at 10,000 feet directly under your flight  
 6 path at which we have four staffers and 12 guests that  
 7 are there continuously from late May until the 1st of  
 8 November each year. In addition, in those areas we have,  
 9 in most cases right under the flight path, 10 guides and  
 10 10 hunters continuously from the middle of September to  
 11 the middle of December hunting elk in those areas. So  
 12 when you talk about no socioeconomic impact in our  
 13 region, well I can tell you specifically there will be  
 14 the loss of a considerable number of jobs on Vermejo Park  
 15 if those flights go through, because of the loss of  
 16 hunting and fishing guests we have coming into those  
 17 areas involved.  
 18           I believe that at this point we have no  
 19 information that would change our minds to significantly  
 20 oppose the designation of Alternative D as the preferred  
 21 alternative. Just like everyone else, gentleman, we  
 22 concur with the need to have the best-trained pilots in  
 23 the world, but as we assess the alternatives, without a  
 24 doubt Alternative D -- alternatives in West Texas make  
 25 much more sense than flying Northern New Mexico, and we

BR-4

1 will aggressively continue to bring that to your  
 2 attention and also to persuade our Congressional  
 3 delegation to help in that regard.  
 4           Thank you.  
 5           HEARING OFFICER: Terry Patton.           **008181**  
 6           MS. PATTON: I have a letter from Charles  
 7 Striker, who is a recent homeowner in this area. And he  
 8 couldn't be here because he lives in Kansas, but he  
 9 wanted a portion of this read, because it hasn't been  
 10 addressed yet.  
 11           He flies here from Kansas, and his concerns deal  
 12 with the local airport, so I'm going to read a portion of  
 13 his letter.  
 14           "We have purchased property due to the  
 15 attractiveness of the area and the access to it by flying  
 16 into the local airport (here in Angel Fire). We are very  
 17 concerned that the use of the Mt. Dora alternatives will  
 18 result in restricting the use of the airport due to the  
 19 anticipated restriction of air space while the low-level  
 20 military operations are active. Our experience with  
 21 other airports located in other parts of the country have  
 22 shown also that access" --  
 23           Let me see. Excuse me.  
 24           "... have shown that access to local airports  
 25 while the military operations are active is

1 significantly restricted. We have also experienced  
 2 considerable rerouting when military operations are  
 3 active.  
 4           "The unique location of the Angel Fire airport  
 5 with the high-altitude narrow mountain range, unusual  
 6 wind conditions and location in proximity to the Village  
 7 of Angel Fire make modifications to the access route  
 8 hazardous. The access to the east of Angel Fire is  
 9 restricted to a few areas. The flight route proposed by  
 10 the military will be in direct conflict with access to  
 11 the local airport. The elevations required to land at  
 12 Angel Fire is restricted by the FAA by oxygen  
 13 requirements at 12,000 and more than 14,000 feet MSL, and  
 14 will be further complicated by military restricted  
 15 airspace. It is expected that further restriction will  
 16 result in additional accidents at the main Angel Fire  
 17 airport."  
 18           Then the final paragraph:  
 19           "We spent a considerable time investigating  
 20 airport availability along the Rocky Mountains before we  
 21 selected Angel Fire as our choice as a resort area. I am  
 22 pleased to say the Angel Fire airport is uniquely located  
 23 and one of only two airports available along the eastern  
 24 Rockies that provides immediate access to local resort  
 25 areas. The airport is only one mountain ridge over the

AO-30

BR-4

1 plains, which virtually assures access. The restrictions  
 2 the military operations will place on the airport will  
 3 make this airport resource diminished and will force  
 4 other potential persons such as ourselves to move to  
 5 other areas where such restrictions are not present."  
 6           For myself, I would like to say that there are  
 7 definite problems with the EIS concerning the  
 8 socioeconomic situation in our area, and as the end of  
 9 this letter suggests, people will go elsewhere, and this  
 10 will be a ghost town and you can have it for 10 cents on  
 11 the dollar and fly all you want.  
 12           HEARING OFFICER: That exhausts all of the  
 13 cards that have been turned in.  
 14           What I would like to know now is if there's  
 15 anyone who has not spoken and would like to come forward  
 16 and speak.  
 17           Sir, you are raising your hand. Please come  
 18 forward.           **008182**  
 19           MR. BURNETT: Lieutenant, my name is Grove  
 20 Burnett, and I'm director of the Western Environmental  
 21 Law Center in Taos, New Mexico. We are a regional  
 22 public interest environmental law firm with an office in  
 23 Taos and an office in Oregon. We represent  
 24 environmental organizations, citizen groups, county and  
 25 municipal governments, and Indian tribes all across the

1 western United States.

2 I'm here tonight representing a coalition of

3 county and municipal and tribal governments here in

4 Northern New Mexico who are opposed to the proposal by

5 the United States Air Force. These counties include

6 Taos, Colfax, Rio Arriba. All these counties, their

7 county commissions have formally adopted resolutions

8 opposing this project and have submitted them to the Air

9 Force. In addition, members of this coalition include

10 the towns and Villages of Taos, Angel Fire, Red River and

11 Eagle Nest. It includes the tribes of Taos Pueblo and

12 Picuris Pueblo and the Angel Fire Resort.

13 As we have stated repeatedly, we support the

14 military in its mission, but our review of this project

15 leads us to believe without question that it's going to

16 have devastating impacts on Northern New Mexico, both its

17 human environment and the environment as a whole.

18 The first thing I would like to do is to

19 formally request, on behalf of all the members of this

20 coalition, an extension of the comment period for an

21 additional 30 days in which we may comment on the Draft

22 EIS, as well as other members of the public. Typically,

23 the Air Force and federal agencies will take more than a

24 year to develop a Draft EIS, and then provide the public

25 less than 90 days to review it and comment on it. We

AF-50

1 formally request that the period be extended until July

2 15, an additional 30 days, in which we can review this

3 document which is grossly deficient, underestimates the

4 impact of noise, impacts on wildlife and livestock.

5 The one distinctive thing that can be said

6 about the socioeconomic impact analysis is that it is not

7 one. You simply have not performed a professional

8 analysis of the impacts on the fragile economic base of

9 Northern New Mexico, and we urge you to provide us more

10 time to comment on the EIS.

11 Thank you for your attention this evening.

12 HEARING OFFICER: Is there anyone else who has

13 not spoken that would like to speak?

14 Yes. **008183**

15 MS. FRITH: I'm Marcia Frith, and I'm here

16 just to say a few words.

17 No one wants the Air Force training to be

18 better than I do. I have a son in the Air Force, my

19 husband served a career in the Air Force, and I was

20 blessed enough that he came back safely from Vietnam

21 because he was well trained.

22 Philmont is dear to my heart, not because I

23 have ever had a part in it but because I know that it's

24 one of the few organizations and places left that train

25 our young men to be patriotic. Even in the public

AO-55  
BR-3

BR-4

TY

1 schools not many of them say the Pledge of Allegiance any

2 more. I would hate to see a place like Philmont become a

3 place where parents wouldn't want to send their young

4 men, who might be the future of the Air Force. We have

5 young men and women in the Air Force who have been taught

6 to be Patriotic, and if they don't have that training

7 then we are hurting ourselves as a nation.

8 So I would ask that you consider the importance

9 of the future as it's begun at this stage. If this is

10 the best place to train our young men and women, then I

11 would just pray and ask that you consider not affecting a

12 place like Philmont.

13 Thank you.

14 HEARING OFFICER: Is there anyone else who has

15 not made comments that would like to make comments?

16 Yes. **008184**

17 MR. ROBERTS: Colonel Burd, I'm Jerry Roberts.

18 I live in Wichita, Kansas at this time. I'm a landowner

19 here in New Mexico, hoping to retire here in a few years

20 along with my wife. I live approximately five miles from

21 O'Connell Air Force base, which has a wing of B-1s at

22 this time. I believe that's seven planes. And we

23 continually have take-offs and flyovers that we hear

24 every day. We are quite used to it in a metropolitan

25 area. We have over 300,000 people. We are very proud of

1 them, we request them at festivals and things. They do

2 low level flyovers over one of our large river festivals

3 for our river's opening ceremonies. Very, very

4 impressive. It's an awesome sight. We used to have them

5 at 500 feet, which is right over our river. Very

6 impressive. Very loud. For safety reasons the Air Force

7 told us they had to go up to 1500 feet since they were

8 over a populated area, and still at 1500 feet parents are

9 cautioned to put their hands over the ears of the small

10 children because it's a very loud thing when it comes

11 down through there.

12 And we are virtually flatland, of course, out

13 in Kansas, and I really find it hard to believe that the

14 noise level down here -- where it's a pristine valley and

15 pretty much up-and-down area that we are going to trap

16 the noise, and we're talking about 3- to 400 feet instead

17 of 1500 -- that it's not going to affect very much the

18 wildlife, the economics, and the social lifestyle here.

19 If I had known of this years ago when we bought

20 the land, it would have been a very large consideration

21 to me whether we would have purchased the land here or

22 not, and now it's a large consideration of whether I want

23 to continue with my plans to build a home and actually

24 retire here.

25 So hopefully you will take that into

AO-90

BR-7

BR-7

1 consideration. And thank you for the time.

2 HEARING OFFICER: Is there anyone else who has

3 not spoken that would like to speak?

4 (Note: No response.)

5 HEARING OFFICER: I'd like to give -- Yes.

6 Please come forward. **008185**

7 MS. WOOD: Welcome colonels, and welcome Air

8 Force officials. We are glad you're all here tonight in

9 the beautiful Moreno Valley.

10 I haven't had much time to do my homework

11 today; I've been putting out the local newspaper. And I

12 do, as a newspaper publisher, know from the letters to

13 the editor we have received that there is a great concern

14 in this community about what will happen to our quality

15 of life. And I think that's one area of your EIS that is

16 flawed. I think that the comment that you can't measure

17 quality of life successfully is not really true.

18 I wish you could spend more time here in our

19 valley and hear the bugling of the elk, or the bird

20 songs, or the coyotes sing at night. It's something that

21 will be shattered if we have low-level bomber flights

22 through here day and night.

23 I also have concerns, as all of these other

24 people here have stated, for Philmont Scout Ranch and the

25 Boy Scouts of America who are trying to enjoy a

BR-4

1 wilderness experience.

2 I also think that New Mexico is a fragile

3 economy. This part of -- particularly Northern New

4 Mexico.

5 If you look at the statistics, we have a lot of

6 unemployment. This little area right here probably is

7 healthier than the Taos area or some of the other areas

8 that you will be flying over. But I do hope that you

9 will look again at quality of life and our economy and

10 try not to change the things that people here value so

11 much.

12 It's interesting to me that there's national

13 interest in what's going to happen in this area. We had

14 a Web site request today from Cornell University, who

15 wants to link to our newspaper and also use articles that

16 our reporter Jo Bynum has written.

17 And so I'm going to sit down, but please do

18 remember our quality of life.

19 Thank you very much.

20 HEARING OFFICER: Is there anyone else who has

21 not made comments that would like to come forward and

22 make comments?

23 Don't be shy. **008186**

24 Please.

25 MR. BLEVINS: Colonels, my name is David

AO-7

1 Blevins. I live in Cimarron. I'm just speaking as a

2 private citizen.

3 And I wasn't going to speak tonight, but

4 there's one thing that hasn't been really addressed, I

5 think, by the Air Force, and even people that have come

6 up here. It's one word: Fire.

7 I haven't heard much about fire. No. 10 on the

8 list of risks in the fact sheet, public safety, is a

9 risk, and it mentions forest fires.

10 Our state officials right now are worried to

11 death about the fire season this year. Could be next

12 year, too, who knows. Lightening strikes, we have enough

13 fires. There is going to be events -- with 2600 flights,

14 there is going to be a fire caused by an aircraft. You

15 can take that to the bank and put it in the bank.

16 And I thought there might be somebody from the

17 Forest Service come here tonight and talk about that. I

18 am very disappointed, because they are more qualified

19 than I am. But I know what it is to lose a home in a

20 fire, so I can speak from that point of view.

21 So fire -- and fires in these areas could just

22 about impact all these other things these people have

23 talked about tonight. If you have a big fire you can

24 forget the rest of the stuff.

25 So I think you ought to take those planes

1 somewhere else. I'm not anti Air Force. I put my time.

2 Military retired, 22 years active and reserves.

3 So I just want to have the chance to mention

4 that word "fire," and I hope our Forest Service -- Maybe

5 they were told to stay home. I don't know. But I think

6 they ought to speak up.

7 HEARING OFFICER: Sir, the court reporter

8 didn't get your name clearly. Could you just tell us

9 what that is?

10 MR. BLEVINS: David Blevins.

11 HEARING OFFICER: Thank you.

12 Now, is there anyone else who hasn't made

13 comments that would like to come forward and make

14 comments?

15 Very well.

16 Mr. Hoot Gibson, would you like another three

17 minutes? That doesn't mean that's all you'll get. That

18 just means we will continue this process until everyone

19 is completed. **008187**

20 MR. GIBSON: The second point that we thought

21 was underplayed or understated in the EIS was the issue

22 of safety.

23 What I had mentioned before is I took the Air

24 Force study that has recently been published on bird

25 strikes, and I analyzed that out, and in analyzing it, it

1 would appear to me like the Air Force this year is going  
 2 to suffer some 13,678 bird strikes, which could result  
 3 and probably will result in some aircraft losses.

4 As I look at the bird migratory patterns, I see  
 5 that the -- one of the major migratory patterns is right  
 6 in the path of Proposal D, my point being that I think  
 7 the Environmental Impact Statement has understated the  
 8 impact, or the potential for safety in terms of an  
 9 aircraft accident. And as was so eloquently pointed out  
 10 just a minute ago we had some devastating forest fires  
 11 in the Angel Fire area last year. The year before Red  
 12 River suffered the same type of thing. It appears like  
 13 this year and probably the coming year we are going to  
 14 have a very dry season, and a fire created as a result of  
 15 an aircraft accident would not only be devastating to the  
 16 aircrew but to the community, as well.

17 We think that the Environmental Impact  
 18 Statement has under estimated the impact that may result  
 19 as a result of the safety issue, and we certainly suggest  
 20 that you take this into consideration.

21 Thank you very much.

22 HEARING OFFICER: And Mr. Daniel Williams, did  
 23 you wish to make additional comments? **008188**

24 MR. WILLIAMS: Thank you, sir.

25 The first concern I've got has to do with the

BI-2

AO-61

AO-7

1 Chama River Canyon Wilderness Area. Looking at the  
 2 route, the route starts five miles north of the Chama  
 3 River Wilderness Area. The closest point is two miles  
 4 from it.

5 When I, at the January 29, 1999 meeting asked  
 6 at what altitudes the aircrews would cross this area, I  
 7 heard different attitudes. And it was interesting. When  
 8 I asked a Lieutenant, I heard altitudes of 5,000 feet,  
 9 and the higher the rank of the person I asked, the higher  
 10 the altitude I was told, up to the highest being 23,000  
 11 feet from a Lieutenant Colonel.

12 My concern here is simply that it's not  
 13 specified.

14 There is an existing route under that, and so  
 15 it's logical that after the aircrews have refueled,  
 16 generally the Abiquiu area, they will be cleared off by a  
 17 controller, they will descend, they will want to make the  
 18 entry point, which is again just miles northeast of that  
 19 wilderness area. Here is the catch. The area floor is  
 20 400 feet. If they do that, there is a danger of them  
 21 impacting peregrine falcons that are nesting directly  
 22 under the flight path.

23 So I ask that area, the minimum altitude to  
 24 pass over the Chama River Canyon Wilderness area be  
 25 raised to at least 5,000 feet and the point be moved to

AF-46

AF-46

1 at least 10 nautical miles northeast of the Chama Canyon  
 2 Wilderness area.

3 I did submit that in writing previously,  
 4 however did not see it reflected in the Draft EIS.

5 In addition, at the meetings that we had on  
 6 April 7 and April 9, we -- a number of people had  
 7 expressed concern about live ordinance being carried on  
 8 the aircraft.

9 I understand this proposal does not call for  
 10 delivery of ordinance, but I would ask the question: Is  
 11 it possible that an aircraft would be on the route  
 12 carrying ordinance which might, in the case of an  
 13 aircraft accident, be detonated or accidentally dropped?  
 14 And I was assured by Colonel Wheelis that, no, that would  
 15 not happen, that they absolutely would not carry it.

16 But we would like to see that in writing. That  
 17 is not in the Draft EIS, best I can tell.

18 Also, there is a ski resort, the Ski Rio ski  
 19 resort, which is within a half mile of the corridor. I  
 20 can show you where it is on the chart I have got plotted  
 21 outside.

22 But I'd ask that be considered. I know that  
 23 bomber aircrews tend to be extremely well disciplined,  
 24 yet there's always danger when you have airplanes and ski  
 25 lifts. They don't mix well.

AF-46

AF-47

1 Finally, regarding correspondence, I've seen a  
 2 letter from the BLM asking that RBTI Alternative D not  
 3 fly directly over Ute Mountain or within -- I'm sorry, I  
 4 don't have that letter in front of me. I believe it was  
 5 one to three miles of Ute Mountain during certain months,  
 6 the nesting season, I believe. That letter is not  
 7 included in the correspondence section of the  
 8 appendix. And I would refer you to Mr. Sam DesGeorges  
 9 with the BLM in Taos, New Mexico.

10 And sir, I have some additional comments if I  
 11 may later.

12 Thank you.

13 HEARING OFFICER: All right. I'll call on you  
 14 later.

15 Is there anyone who has already made comments  
 16 that would like to make additional comments?  
 17 Please. **008189**

18 MR. PALMER: As I mentioned earlier, I'm Doug  
 19 Palmer. Also, if I didn't mention it I'm the associate  
 20 director of programs, and I also direct the back country  
 21 operations.

22 One of the things that was not included in the  
 23 environmental impact study with any seriousness was the  
 24 culturally rich historic area. In the North Ponil  
 25 area -- in the North Ponil country we have the only

ED-8

CU-2

1 Tyrannosaurus Rex footprint ever discovered in the world.  
 2 We also have a number of tracks up there, one  
 3 of which is hanging in a mud stone formation overhang --  
 4 an underhanging formation that we are concerned that that  
 5 could fall at any time, and are really concerned about  
 6 the impact it might have if a bomber were to fly over.  
 7 Also, in the North Ponil country is one of the  
 8 few places in the Rocky Mountains where one can see the  
 9 famous clay layer. If you are familiar with the big  
 10 bang, the impact that probably put an end to the  
 11 dinosaurs, that is obvious in our North Ponil country.  
 12 We are concerned also there may be some  
 13 problems or could be some damage to the petroglyphs. And  
 14 it says in the EIS that there are no petroglyphs. In the  
 15 North Ponil country, there are several hundred documented  
 16 and mapped petroglyphs up there. Much of this work has  
 17 been documented by Harrison Goodcall (phonetic) former --  
 18 retired paleontologist with the USGS.  
 19 Thank you, Colonel.  
 20 HEARING OFFICER: Sir, do you want to make  
 21 comments?  
 22 MR. PATTON: Yes, sir. I'd just like --  
 23 HEARING OFFICER: Your name? **008190**  
 24 MR. PATTON: David Patton.  
 25 I'd like to address the Environmental Impact

BR-7

1 And I'm very disappointed, very disappointed in  
 2 the Environmental Impact Statement that was done for this  
 3 alternative. I don't know if it was as bad for the other  
 4 alternatives as it is for here, but if it was, you know,  
 5 I don't know what the Air Force is paying good money for  
 6 to have these Environmental Impact Statements done by  
 7 such incompetent people. I know that you are required to  
 8 do an Environmental Impact Statement, but you ought to  
 9 get somebody that knows what they're doing and will at  
 10 least come to communities like Angel Fire and Taos and at  
 11 least some of the major communities around here, and at  
 12 least talk to some people and get some input from those  
 13 people. Because the Environmental Impact Statement that  
 14 has been presented here is of no value whatsoever, as far  
 15 as I'm concerned.  
 16 Thank you.  
 17 HEARING OFFICER: Yes, the gentleman with his  
 18 hand up, please come forward. **008191**  
 19 MR. MSLZER: Thank you. I have not previously  
 20 spoken.  
 21 Please excuse me if stutter. I just wrote  
 22 this, and I don't have my reading glasses.  
 23 But I want to tell you that you can measure  
 24 quality of life. There are common mathematical tools to  
 25 do so. The fact that they were absent from the report I

LU-2  
 BI-3  
 AO-7

GE-37

1 Statement itself again, and how this came about.  
 2 I don't see the gentleman here that I talked to  
 3 earlier in the evening that was from the company in  
 4 Oregon that did the impact statement, he doesn't seem  
 5 to be here listening to our comments, but it's been  
 6 pointed out significant deficiencies in the Environmental  
 7 Impact Statement. Everything from the number of  
 8 communities affected, to the wildlife affected. As the  
 9 gentleman recently spoke of, the fire danger here, which  
 10 is very significant. Very significant.  
 11 And I'm also concerned that the whole process  
 12 taking place here is a very bogus one. The Environmental  
 13 Impact Statement is obviously bogus from a number of  
 14 standpoints. It's already been pointed out. I won't go  
 15 over that again.  
 16 One thing that I did notice that was said, the  
 17 Environmental Impact Statement apparently says there were  
 18 187 people at the meeting here last year in Angel Fire  
 19 and about 300 in the meeting in Taos.  
 20 That is also false. I was at both meetings.  
 21 There was clearly close to 1,000 people at the meeting in  
 22 Taos and close to 300 people here in Angel Fire.  
 23 So I don't know where they are getting their  
 24 facts and figures from, but on every count they seem to  
 25 be misleading.

AO-24

1 think is egregious. It's professionally offensive, also.  
 2 The tools that I have used to look at this  
 3 region show a fragility to the quality of life in  
 4 Northern New Mexico. It's a fragility of the ecosystem,  
 5 the local economy, and the at-home community.  
 6 That fragility is due already to the short  
 7 growing season, the scarcity of water, and our  
 8 remoteness. The RBTI, your Routine (sic) Bomber Training  
 9 Initiative will target the region's fragility with the  
 10 real possibility of killing, in the end, the human  
 11 community.  
 12 Thank you.  
 13 HEARING OFFICER: Is there anyone else who has  
 14 made comments that would like to make additional comment?  
 15 Sir. **008192**  
 16 MR. BLEVINS: David Blevins, again. Cimarron.  
 17 One thing I forgot to mention when I was  
 18 talking about the fires. It was more of a question.  
 19 These fire fighters, tankers, helicopters,  
 20 making retardant and water drops on to these fires -- If  
 21 we get a big forest fire in the training area where they  
 22 are making their training runs, how is that going to  
 23 impact? If they continue to make the runs on a schedule,  
 24 so many a day, how is that going to affect these  
 25 firefighters coming in and making these drops on these

1 fires?

2 I don't know the two can go together. So they

3 do not fly when you do? I don't know you can get them

4 out at the same time. So what are they going to do?

5 Just sit, let it burn?

6 I don't know. I think it's a big concern.

7 Thank you.

8 HEARING OFFICER: Is there anyone else that has

9 made comments that would like to make additional

10 comments?

11 Mr. Williams, did you want to come back up?

12 Sir, I'll call on you next. **008193**

13 MR. WILLIAMS: Thank you very much.

14 The gentleman that was just talking was talking

15 about fire. That is an incredible danger for Northern

16 New Mexico. What we have is a high mountain geological

17 environment where you've got a lot of trees, you've got

18 forests at a high area, and the catch is that the most

19 trees here are pinon trees, cedar trees that don't

20 require a lot of water. But there are a lot of trees

21 here. So it's not like the Pacific Northwest, for

22 example, where you fly. If a plane crashes, it's a wet

23 area that is not likely to catch on fire.

24 There is a huge concern throughout Northern New

25 Mexico, and actually all of New Mexico, for fire, and

1 because of the way that it's set in with the environment,

2 the danger is very, very real, and it's very difficult to

3 put out.

4 For example, I live in Taos Canyon between Taos

5 and Angel Fire. That is the not an area flown over by an

6 RETI, but it is typical of many of the areas where you

7 have the canyons. One of concerns is that a forest fire

8 in the canyon could sweep through the entire canyon and

9 be impossible to put out, because you have only one route

10 going through.

11 That's true of many of the areas the bombers

12 would be flying over. So a fire started as a result of a

13 crash could be incredibly devastating, and because we are

14 a rural area it would be difficult to put them out

15 because of limited resources. Very dedicated individuals

16 that would come to do that, but limited resources that

17 would have to be drawn on from many areas.

18 Another concern that I have not heard mentioned

19 at all are hot air balloons and gliders. These are

20 operated very frequently in Northern New Mexico. There

21 are a number of regional balloon rallies.

22 I offer that as a concern.

23 I do know that there are companies that have

24 balloon tours up and down the Rio Grande. So, as you

25 know, the balloons can't maneuver out of the way of the

AO-7

AO-91

1 bombers, the bombers have to go around. But I do feel

2 there is a danger both for the balloons and gliders.

3 Another is the floor of the route. There are

4 places where the RETI Alternative D route and on the

5 other alternatives show the floor being 200 feet. Over

6 and over we have been told that bomber operations for the

7 B-1s and B-52s would be 300 to 500 feet, so I ask why it

8 is that the floor is shown at 200 feet.

9 When I asked Major Adams, I was told the reason

10 is because there may be other types of aircraft that

11 would be using this route, they would be the ones using

12 the floor at 200 feet.

13 I ask that be clarified in the Final EIS. If

14 it shows 200 feet, in fact what you are giving us in

15 writing was different from what we are hearing verbally,

16 and the two need to be the same. We need to be

17 consistent.

18 I believe I'm about out of time, sir, but when

19 I may, I have additional comments.

20 HEARING OFFICER: Very well.

21 Sir, you wanted to make comment? **008194**

22 MR. COOK: I haven't spoken before. My name is

23 Harry Cook. And I don't wish to seem flippant or

24 antagonistic or anything of the kind, but when I read the

25 reports through the paper, we have our editor here, it

AO-57

TY

1 was as close as I got to reading about the statistics for

2 the thing.

3 And the Air Force is telling me this, and I

4 believe that. I come to this meeting, and I'm hearing a

5 lot of different things.

6 You guys didn't do your homework, obviously.

7 You have displayed very nicely, Colonel, your

8 meritorious service to this country, and very many of us

9 here have also served our country, me included, and one

10 of the things we served for and fought for was mom, home,

11 and apple pie. And there was a lot of other things that

12 go through your mind when you are sitting down in the

13 bottom of a muddy foxhole, and one of them occurred to me

14 while I was here. And I'm only going to change one word

15 of this quote.

16 This poem is known to all of us. You people

17 are going destroy it.

18 And it is: Home on the range, where the deer

19 and the antelope play. Where never is heard a

20 discouraging word, and the skies are not noisy all day.

21 HEARING OFFICER: Sir. **008195**

22 MR. THOMASON: I have not spoken.

23 My name is Jeff THOMASON. And welcome.

24 What I would like to address are the concerns

25 that have obviously been developed in the remarks of

1 people who are making the policy for the people, and how  
2 those concerns have been incorporated in this draft  
3 impact statement.

4 I am aware that the Department of Defense has  
5 entered into agreements with the various environmental  
6 groups creating policy with respect to process and  
7 decision making. In particular, the Department of  
8 Defense and the Nature Conservancy in 1996 issued a  
9 handbook for preserving biodiversity on military land,  
10 which lays out a detailed criteria and agenda for the  
11 decision-making process.

12 Of course, those criteria are relevant to  
13 bases, in particular.

14 I would be interested in just making a note for  
15 the record to see how those same kinds of standards in  
16 terms of soliciting stakeholder involvement in  
17 communities, landowners, people that enjoy the resources  
18 that are impacted by military land have been addressed,  
19 and so there would be consistency in the impact statement  
20 that we see and other decisions that are made relative to  
21 military land.

22 It's a very detailed study, and I think those  
23 standards are pretty well set out there.

24 Additionally, a program known as The Partners  
25 in Flight Program, which is designed to address the

AF-14

BI-9

1 impact of military flights on subtropical birds, I  
2 understand has a representative in the Department of  
3 Defense that coordinates that information and data. I'm  
4 not aware that any reference has been made to that  
5 coordinator in the Environmental Impact Statement, and,  
6 just for the record, I would think that would be  
7 significant in determining the impact, specifically in  
8 this region.

9 Thank you for the opportunity to comment.

10 HEARING OFFICER: Is there anyone else that  
11 would like to speak before I call on Mr. Williams again?

12 (Note: No response.)

13 Mr. Williams.

008196

14 MR. WILLIAMS: Sir, these will be the final  
15 comments I've got tonight, but thank you very much.

16 Regarding noise levels, one of my concerns -- I  
17 know there's -- the way the noise is calculated is  
18 averaged, and so you take a 24-hour period, look at what  
19 the noise is currently over that 24-hour period, and then  
20 have the overflights, and then look at it still over a  
21 24-hour period. And what I am concerned is that that is  
22 the real emphasis of the EIS is the DNL.

23 I'm not real familiar with the noise studies  
24 but when you stretch it out and you're looking at  
25 something that's going to last a matter of seconds, as

BI-9

AO-92

1 far as the overflights, but when you stretch it out over  
2 a 24-hour period of time, it's going to appear to be  
3 relatively low; however, I don't believe that will  
4 accurately reflects the impact it's going to have.

5 I was pleased to see a chart that shows the  
6 single event noise level, and would like to point out it  
7 shows noise from either B-1s and B-52s at 500 feet as  
8 being somewhere in the range higher than a chain saw,  
9 higher than a lot of the loud things we tend to hear:  
10 trains you are very close to, or a rock band.

11 The representation here told us what they sound  
12 like. What they didn't give us is an idea how loud it  
13 was on the ground. I was on the ground as an enlisted  
14 man working drop zones prior to getting a commission.  
15 When even one C-130 came across, even though we knew they  
16 were coming, it was still scary. It was a very scary  
17 thing.

18 I would ask more emphasis on the single event  
19 noise levels and impact.

20 Secondly, I would like to say thank you to  
21 Lieutenant Colonel Wheelis -- excuse me, Colonel Wheelis,  
22 Colonel Adams. These gentlemen, when I have asked for  
23 information, have done a great job of coming forward with  
24 it and been very professional throughout, and I  
25 appreciate that.

1 Thank you.  
2 HEARING OFFICER: Is there anyone else who  
3 would like to make comments?

4 Please.

5 MR. SPICE: Bill Spice.

008197

6 I don't believe you don't believe in deja vu  
7 all over again. I thought you might like to know in the  
8 last 40 years there have been two Air Force planes crash  
9 on Philmont Scout Ranch in the flight path on training  
10 missions.

11 Now, they both happen to be World War II  
12 bombers, but maybe there is some magical force in those  
13 mountains that are -- you know, we talk about blue lights  
14 on the mesa and aliens, so that you never know.

15 But let's just hope it's not deja vu all over  
16 again.

17 HEARING OFFICER: Would anyone else like to  
18 make any comments?

19 Last chance.

20 (Note: No response.)

21 Very well, ladies and gentlemen. That  
22 concludes this public hearing. Thank you for your  
23 participation and input. Please remember the public  
24 comment period will extend through June 16, 1999.

25 This public hearing is adjourned. Thank you

TY

1 have a written statement, the court reporter would  
2 appreciate you handing it in so that any names, places,  
3 references, or scientific terms or other information can  
4 be recorded accurately.

5 Finally, I'd like to remind you to limit your  
6 comments to the Draft EIS. That is the purpose of this  
7 public comment period.

8 If you have written comments that you would  
9 like to turn in at the end of this hearing, then there's  
10 a box in the back that you can place those in.

11 As I indicated, we will start with comments  
12 from elected officials. Following that period we will  
13 then take oral comments from those of you who have asked  
14 to speak.

15 Again I wish to you remind you of the  
16 three-minute time limit.

17 I would first like to call on Gustavo Cordova  
18 who is Town manager of Taos. **00S198**

19 MR. CORDOVA: Thank you. My name is Gustavo  
20 Cordova. I am the town manager of The Town of Taos, and  
21 I've been asked by the mayor and council to present their  
22 views on the proposal by the United States Air Force and  
23 how it will affect our community.

24 As governmental officials and leaders of our  
25 community it is our responsibility to ensure that the

1 quality of life for our citizens is not adversely  
2 affected by the actions of our federal, state  
3 and local governments. We have a duty to evaluate  
4 proposals from our state and federal partners and to  
5 determine whether or not they serve the interests of the  
6 taxpayers of our state.

7 This community has long been a strong supporter  
8 of our military and the needs for a well-trained  
9 national defense force. A great majority of our citizens  
10 have served in the armed forces of the United States,  
11 and many serve today. We recognize that military  
12 training is critical towards preserving a force that is  
13 capable of winning in the battle field.

14 As a field grade officer, myself, with the  
15 military reserves, I too, recognize the importance of  
16 training of our uniformed forces. I had the misfortune  
17 of serving in combat during the Vietnam war and witnessed  
18 firsthand the value of military overflights over the  
19 forward edge of the battlefield.

20 The United States Air Force proposes to select  
21 our community, along with others in Northern New Mexico,  
22 as a training ground to be used for preparation for  
23 combat in the battlefield. They also propose to expand  
24 the current overflights over our community, and do this  
25 at all hours of the day. Worst of all, the Air Force

1 proposes to conduct this training at altitudes just a few  
2 hundred feet above the ground. This would be a scary  
3 thought even for a small aircraft, but the proposals goes  
4 much further than that. It proposes that B-52 and B-1  
5 bombers, amongst other aircraft, fly at such a low  
6 altitude over our community.

7 Perhaps the United States Air Force is not  
8 aware that Taos, New Mexico, is one of the foremost  
9 tourist destination communities in the United States.  
10 Taos is well known across the country as the soul of the  
11 southwest. Taos is a place where tourism is the No. 1  
12 industry and the No. 1 employer. It is where art and the  
13 creation of art is a haven for some of the country's  
14 foremost artists. It is a place where people come from  
15 all over the country to ski, to whitewater raft, to  
16 vacation, and to enjoy the natural quiet of our beautiful  
17 environment.

18 Perhaps the United States Air Force is not  
19 aware that over 80 percent of our gross receipts come  
20 from tourism and tourism-related sources. Our fragile  
21 tourism base can easily become fragmented through the  
22 introduction of high-speed bombers flying over the  
23 environment that we have tried so hard to protect.

24 I do not see anywhere in the Draft  
25 Environmental Impact Statement where the Air Force

BR-4

1 proposes to make up the loss of tourism revenue or the  
2 significant economic loss that this bomber route will  
3 bring to our community.

4 The proposal by the Air Force will not create  
5 new jobs, not result in any economic benefits for our  
6 community, will not protect or enhance the fragile  
7 environment we have known all our lives; however, it will  
8 take away the natural quiet of our wilderness areas, it  
9 will be destructive to our tourism base, and it will  
10 change the quality of life in our community.

11 This morning the Taos County Intergovernmental  
12 Council met in open session at the Kachina Lodge in  
13 Taos."

14 HEARING OFFICER: Sir, can you --  
15 (Note: Outburst from several audience members.)

16 MR. CORDOVA: I just have one -- I'm here  
17 representing several elected officials. I'd like to  
18 finish my statement.

19 HEARING OFFICER: Well, since you are the only  
20 official appearing, I will -- notwithstanding the  
21 outbursts from the public, I will permit you to  
22 continue.

23 MR. CORDOVA: Thank you, judge.  
24 (Reading) This morning The Taos County  
25 Intergovernmental Council met in open session at the

1 Kachina Lodge in Taos. The Council consists of elected  
2 and appointed officials of Taos, Taos County, Taos Ski  
3 Valley, Red River, Angel Fire, Eagle Nest, Questa, the  
4 school districts, and the tribal governments of Taos  
5 Pueblo and Picuris Pueblo.

6 By unanimous vote of all of these communities,  
7 a formal resolution was passed condemning the proposal  
8 before you from the United States Air Force. The  
9 resolution will be mailed to all the members of our  
10 United States congressional delegation.

11 Our elected officials all agree that this  
12 proposal is very bad for Northern New Mexico, it is very  
13 bad for our tourism economy, it is very bad for the  
14 quality of life of our citizens.

15 Make no mistake about it, our elected officials  
16 are prepared to fight this proposal. We sincerely hope  
17 that our proud members of the United States Air Force  
18 will see fit to abandon any of the proposed overflight  
19 routes forever over Northern New Mexico."

20 Thank you.

21 (Note: Applause.)

22 HEARING OFFICER: Ladies and gentlemen, one of  
23 the dynamics I've noticed in the eight prior hearings  
24 that we have held is that people -- some people wait to  
25 make their comments, and once they make their comments

1 they leave. And that's one of the reasons I have  
2 implemented the three-minute rule. Nobody is going to be  
3 prevented from saying everything they want to say, but to  
4 give everybody a timely opportunity to make their  
5 comments -- And not everybody wants to make lengthy  
6 comments; some people make comments in the neighborhood  
7 of one, two minutes. And I've determined that three  
8 minutes is a reasonable period of time to accommodate  
9 everybody. But if you have comments that are longer than  
10 that, you will be allowed to make all the comments you  
11 want to make, but what I've asked you to do is please be  
12 considerate to others who may want to make comments and  
13 leave. And by extending your comments beyond three  
14 minutes, if I allowed everyone to do that, you're  
15 requiring those people who would want to make short  
16 comments and leave to sit here and wait for a much longer  
17 period of time than they would have to, otherwise.

18 I would now like to begin calling upon the  
19 individuals who have indicated a desire to make comments.  
20 And one of the reasons that we placed the microphone out  
21 here where we have is, if you recall earlier I said,  
22 "Please address your comments to me." The court reporter  
23 needs to be able to see you. In my experience as a  
24 judge, the court reporters have a much easier time taking  
25 down what's said if they can actually see the person

1 speaking, so if you turn around and are addressing the  
2 audience, it makes it harder for her to hear you, and she  
3 won't be able to see your face and see your mouth as it's  
4 moving.

5 I'd first like to call on Michele Hermann.

6 Just to give you an idea how we will be  
7 proceeding, after Michele I will indicate who's on deck.  
8 And the next person after Michele will be John Lathen.  
9 008199 MS. HERMANN: Good afternoon. My name is  
10 Michele Hermann, with one "l" in Michele and two "n"s in  
11 Hermann. I'm a resident of Abiquiu, New Mexico.

12 I did receive and read in tis entirety the  
13 Environmental Impact Statement. The concern that I have  
14 about the Environmental Impact Statement is that it  
15 equates issues like efficiency and less time in the air  
16 for bombers to travel with issues like the survival of  
17 endangered species and the quality of life for both  
18 humans and wildlife, in general, in Northern New Mexico.

19 Of all of the alternative sites that are  
20 discussed in the Environmental Impact Statement, only in  
21 Northern New Mexico do you have the number of endangered  
22 species who are threatened, the number of different  
23 special use areas whose use will be compromised by the  
24 flyovers, the industry based so much on tourism and  
25 enjoyment of the outdoors. And to sacrifice these

BI-5  
BR-4

1 qualities for the efficiency of saving time and money in  
2 the air and not having the trained pilots be away from  
3 their bases for a long time seems like a really  
4 disproportionate set of values.

5 I myself moved to Northern New Mexico because I  
6 wanted a quiet and a peaceful environment, and yet when I  
7 read the Environmental Impact Statement it seemed to  
8 discount the noise and the visual impact and, indeed,  
9 talked about the people in the wilderness might get joy  
10 and pleasure and excitement from being flown over at 200  
11 feet by bombers two thirds the size of a football field.

12 That made me really question the neutrality of  
13 this document, as I was led to question by the fact that  
14 the U.S. Fish and Wildlife Service has suggested there  
15 would be significant environmental impact here in  
16 Northern New Mexico, and yet the EIS seems to discount  
17 that.

18 So I very much hope that in considering  
19 alternatives that the alternative of no action on it will  
20 be selected and that the quality of life for humans and  
21 animals in Northern New Mexico will be given greater  
22 weight than the efficiency of shorter airtime for bomber  
23 training.

24 Thank you.

25 (Note: Applause.)

GE-38

TY

1 HEARING OFFICER: John Lathen. And then I  
 2 will be calling on Ann Lemogge.  
 3 John Lathen, are you here?  
 4 (Note: No response.)  
 5 Well then, Ann Lemogge.  
 6 Then after that I'll be calling on J. R. or  
 7 Joyce Franklin. **008200**  
 8 MS. LEMOGGE: Good morning. My name is an Ann  
 9 Lemogge. I live in Abiquiu, and I have recently begun  
 10 weaving at home. And I have noticed that just since I've  
 11 been home this last year that we're having flyovers over  
 12 Abiquiu, and they are absolutely horrible. You lose  
 13 total concentration. All my animals, outside and inside,  
 14 get terribly upset.  
 15 And I just wish you would listen to the Fish  
 16 and Wildlife. They also run up and down our rivers  
 17 counting eagles, and of course it's very disruptive to  
 18 the eagles when they are counting them. So I feel like  
 19 we are already being invaded just where I live.  
 20 And I'm not going to be living near Taos, and I  
 21 feel very sorry for these people, and I'm here to support  
 22 them.  
 23 HEARING OFFICER: J.C. or Joyce Franklin, and  
 24 then after that I'll be calling on Scott Thomas.  
 25 (Note: No response.)

1 HEARING OFFICER: Is J.C. or Joyce Franklin  
 2 here?  
 3 (Note: No response.)  
 4 HEARING OFFICER: Very well. Then Scott  
 5 Thomas. **008201**  
 6 MR. THOMAS. Hello. My name is Scott Thomas.  
 7 I want to thank you for being here today to hear our  
 8 comments about the proposed RBTI.  
 9 I have been a resident of Taos County for over  
 10 four years, and most of this time I have lived on Lama  
 11 Mountain, located 25 miles north of here and lies south  
 12 and west of the proposed flight path.  
 13 I am a member of the board of directors for the  
 14 La Lama Neighborhood Association, as well as a member of  
 15 the Lama Foundation, an intentional spiritual community  
 16 and retreat center.  
 17 All residents of Lama are opposed to this  
 18 flight path because it threatens the sanctity and  
 19 peaceful nature of Lama, especially the Lama Foundation,  
 20 whose livelihood as a retreat facility is dependent on  
 21 this sanctity and quiet.  
 22 As a sovereign and concerned citizen, I am  
 23 opposed to any proposal which further increases the  
 24 scope of military action here or abroad. The Air Force  
 25 use of weapons of mass destruction has caused extreme

GE-3

1 suffering worldwide, particularly in Iraq and Serbia  
 2 where people are dying by the thousands directly due to  
 3 air strikes, for no other reason than the need to  
 4 economically control regions for American corporate  
 5 interests.  
 6 We are told again and again by the military as  
 7 propaganda machine that these RBTIs are necessary to  
 8 train military personnel to protect our freedom, yet in  
 9 reality, the use of the military force only continues to  
 10 oppress and destroy freedom at home and abroad, and those  
 11 who refuse to the play the corporate game are eliminated.  
 12 No one is being fooled.  
 13 This is my third time standing before you,  
 14 having attended last year's public comment meetings in  
 15 which public comment was obviously and emphatically  
 16 opposed to this RBTI, making this and future comment  
 17 periods farcical and patronizing, the same thing done by  
 18 the Department of Energy about WIPP for over 20 years  
 19 with overwhelming public opposition.  
 20 You should have heard us the first time. No  
 21 military, period.  
 22 The people of Taos are strong, we are peace  
 23 loving, nature loving, and we love each other, and those  
 24 who share these values are welcome, but not weapons and  
 25 other expensive military toys. In my opinion, even the

1 National Guard Armory is an unwelcome enigma in this  
 2 town.  
 3 The U.S. Air force already claims 50% of all  
 4 U.S. airspace exclusively, and now wants more for its war  
 5 on the people. It wants to own everything, the land, the  
 6 sea, now the air, in the interest of national security,  
 7 which really translates as destruction of the planet for  
 8 profit, a game which we know has no winners, not even  
 9 corporations.  
 10 We know who you really work for, and we say:  
 11 No. We do not support the global enslavement and the use  
 12 of our tax dollars to do so.  
 13 Therefore, I humbly ask you to adopt  
 14 Alternative A, no action, in the interest of peace,  
 15 harmony, and the well-being of all living creatures  
 16 present and future.  
 17 Please remember what Chief Seattle told us in  
 18 his letter before selling land to the U.S. Government.  
 19 "We are children of the earth and what befalls  
 20 the earth befalls the children of the earth."  
 21 Her children include me, you, all of us.  
 22 Thank you.  
 23 HEARING OFFICER: Michael Andrews.  
 24 After Mr. Andrews I will call on John Painter.  
 25 MR. ANDREWS: Colonel, my name is Mike

008202

BR-1

1 Andrews, and I live in Arroyo Seco. I personally have  
 2 experienced a low-level B-1 bomber fly over in Vail  
 3 Creek, Mt. Belle Rouge (phonetic) River area.  
 4 In my opinion the EIS has several flaws. One  
 5 is related to the sound levels, to an averaging. The  
 6 nearest thing I can represent the flyover, to me -- I  
 7 didn't expect this at the time -- was a sonic boom, and  
 8 to say that you're analyzing the sounds and averaging and  
 9 modeling, is like saying a rifle shot can be analyzed by  
 10 a time averaging --  
 11 The EIS shows that the B-1 -- you experience  
 12 120 db at peak, yet modeling this is 40 to 50 db  
 13 average. It's just like saying the average from a rifle  
 14 would be no value.  
 15 This translates in comments on the EIS to the  
 16 fact that there was no impact on the socioeconomic  
 17 analysis. Our tourist-based economies in this area,  
 18 Northern New Mexico, will certainly be impacted.  
 19 At the time when I experienced the flyover it  
 20 was awesome. I mean, that is not a nice term to me, only  
 21 because this was: What the heck's happening? My God,  
 22 what was that?  
 23 That is how I see it more than an average, than  
 24 it was experienced by an individual.  
 25 In addition, I've been -- I have experience

BR-4

BI-1

1 a lot of wildlife in it. We have a lot of elk, deer, and  
 2 antelope that winter range on that particular ranch.  
 3 And I can tell you from personal experience that  
 4 overflights of aircraft do have an effect. They also  
 5 have an effect on the buffalo, in the fact that I think  
 6 sometimes the national guards will fly their helicopters  
 7 up in this area three or four at a time, and when they go  
 8 over that ranch fairly low, all the animals really  
 9 scatter around, because it does short of shock them,  
 10 initially.  
 11 And I would see your B-1 bombers at times  
 12 are -- I have observed them refueling overhead, and  
 13 they're at pretty high altitude at that point. And you  
 14 cans always tell it's a B-1 bomber, because there's a lot  
 15 of noise, even at that altitude, and when you would have  
 16 those much lower, I think you would have a much higher  
 17 impact on the wildlife, as well as these -- as well as  
 18 the buffalo.  
 19 And I had one experience one day. They have  
 20 very keen sight, as well as hearing. I was out feeding a  
 21 group of cows one morning, and all of a sudden they  
 22 looked up to the southeast, and then took off over the  
 23 hill very quickly.  
 24 And I was looking out across the land to see  
 25 what the problem was. Sometimes we have a hard time.

PD-1

PD-37

1 preparing EISs for a large oil company in the past, and I  
 2 would say there is another flaw in that usually it amazes  
 3 me on existing -- the no-action alternative is not  
 4 considered putting electronic sites in the existing fly  
 5 pass in Montana and around to the north, northern states,  
 6 which usually is required, in order for you to say no  
 7 impact by adding only the electric points.  
 8 So that there is another value in there that is  
 9 not addressed, is what would happen if the Air Force  
 10 would use that.  
 11 An operational consideration is being given  
 12 equivalent value to economic or to environmental impacts.  
 13 The fact that there is dead time in the flights going up  
 14 there. Well, that is an operational consideration that  
 15 is driving the EIS. It's not really being reflected in  
 16 terms of how it reflects the environment.  
 17 Thank you. **008203**  
 18 HEARING OFFICER: John Painter. Then after  
 19 Mr. Painter I will be calling on Dr. Thomas Meehan.  
 20 MR. PAINTER: I thank you. I've lived here --  
 21 My name is John Painter, and I've lived here in Taos for  
 22 32 years. I presently manage a ranch out on the west  
 23 side of the gorge river where we raise buffalo.  
 24 That area all the way from the Colorado border  
 25 down to where the ranch is and a little further south has

BR-4

1 The person who works for us comes -- walks to work over  
 2 the hills, and that will spook them, too. But I noticed  
 3 that particular morning 10 miles away by the gorge bridge  
 4 there was a hot air balloon going up, and one of those  
 5 animals had seen that, and off it went, and it just sent  
 6 the whole situation over the hill.  
 7 So I would like you to know from my own  
 8 personal experience that this will have an impact on the  
 9 wildlife and it will have an adverse one.  
 10 The other thing is I also feel it will have  
 11 economically an adverse impact, because the person who  
 12 owns the ranch spends quite a bit of money in this  
 13 community, and he came here for the peace and quiet and  
 14 not a lot of noise. And he was very upset when he heard  
 15 about this proposed route of the Air Force training  
 16 things. He says, "Oh, that's terrible to have that in  
 17 this area."  
 18 And I think that speaks for most everybody  
 19 here, is this, again, the way of life, and the relative  
 20 peace and quiet that we have here.  
 21 We are getting pushed on all sides by a lot of  
 22 other factors, too, which have an impact on the wildlife  
 23 and open spaces in this area.  
 24 Thank you.  
 25 (Note: Applause.)

1 HEARING OFFICER: Dr. Meehan. And after Dr.  
 2 Meehan, I will be calling on Arthur Schiller, I believe.  
 3 DR. MEEHAN: Good afternoon, Colonel. 008204  
 4 My name is Dr. Thomas Meehan, and I'm the head  
 5 of the department of veterinary services at the  
 6 Brookfield Zoo in Chicago. I have worked in the area of  
 7 veterinary area limited to zoo and wild animals for the  
 8 past 25 years, and I'm here to testify regarding the  
 9 proposed bomber training exercises to be held over the  
 10 area of the Bell Ranch in New Mexico.  
 11 The Bell Ranch houses a herd of 15 addax  
 12 antelope owned by the Brookfield Zoo. This species is  
 13 native to North Africa and is listed as critically  
 14 endangered by the International Union of Conservation of  
 15 Nature. Estimates also place the wild population at no  
 16 more than a few hundred animals. This herd has been at  
 17 the ranch since 1986 when Brookfield Zoo entered into a  
 18 cooperative agreement to maintain and breed endangered  
 19 hoofed animal species.  
 20 The ranch provides an opportunity to house and  
 21 raise animals in conditions similar to natural habitat  
 22 and more suitable for animals that may be available for  
 23 future reintroduction programs in the wild.  
 24 The herd is managed as a part of the Species  
 25 Survival Plan that maintains this species in captivity in

BI-1

1 cooperation among an international group of zoos.  
 2 Addax and other wild hoofed animal species  
 3 respond to sudden noise as a potential threat, and  
 4 respond by fleeing. Nondomestic hoofed animals are  
 5 considerably more sensitive to these stimulus than  
 6 domestic horses or cattle. Addax that are startled in an  
 7 open pasture setting could be expected to run, and risk  
 8 injury from running into fences or exerting themselves  
 9 sufficiently to cause indirect muscle or cardiac injury  
 10 and death. Young animals also may panic and leave the  
 11 areas where they have been hidden by their mothers, and  
 12 may becoming separated, risking starvation.  
 13 It is common practice in zoo settings to  
 14 desensitize species as the addax to sudden noise, by  
 15 providing background noise from a radio. When loud noise  
 16 is anticipated the animals would be held inside in a  
 17 familiar environment where the animals also feel  
 18 sheltered.  
 19 During my tenure at other zoos, I have had  
 20 experience with hoofed animals exposed to loud noises,  
 21 including planned firework displays or military flyovers  
 22 associated with airshows, including B-1 bombers. The  
 23 animals were held inside holding areas with masking  
 24 background noise, and did show evidence of being startled  
 25 by the associated noise.

1 We would not be able to place the addax at  
 2 Bell Ranch in holding areas or desensitize them with  
 3 background noise. Such tactics would be contrary to the  
 4 reason that they are located at Bell Ranch; that is,  
 5 maintaining the herd in the semi-wild environment.  
 6 It's my opinion that the sudden noise I have  
 7 experienced associated with these aircraft flyovers would  
 8 be sufficient to cause these animals to flee, and I would  
 9 anticipate a significant risk of injury or death to these  
 10 animals if these flights took place over Bell Ranch.  
 11 HEARING OFFICER: Arthur Schiller.  
 12 After that I will be calling on Richard  
 13 Fabbrini. 008205  
 14 MR. SCHILLER: Arthur Schiller,  
 15 S-c-h-i-l-l-e-r.  
 16 And I am here this afternoon on behalf of the  
 17 Lane family, who are the owners of the Bell Ranch, which  
 18 you just heard a few comments about.  
 19 The Bell Ranch is one of New Mexico's largest  
 20 beef cattle operations and comprises 286,000 acres in  
 21 Northern New Mexico. Approximately 10,000 head of  
 22 cattle are currently resident now on the ranch.  
 23 Much has been made in the EIS, and even this  
 24 afternoon, that the use of existing military training  
 25 routes minimizes the impact of these overflights.

BI-1

BR-7  
BR-4

1 With respect to the Bell Ranch, we would like  
 2 to point out the following: To date we have been subject  
 3 to very occasional F-16 overflights. This is on IR-07,  
 4 and it's approximately 100 or a little less than 100  
 5 flights per year. Under the proposal, as written, the  
 6 Bell Ranch would be subject to as many as 4,000 flights  
 7 per year, which results from both area TATB, which would  
 8 bring 1100 low-level bomber sorties over the ranch, more  
 9 than 200 what we term ultra-low-level bomber sorties  
 10 under routes AC/AD and AD/AE, and the relocation of the  
 11 Mt. Dora MOS will introduce, which currently does not  
 12 extend over the Bell Ranch but which is reconfigured to  
 13 encompass the northern portion of the Bell Ranch, would  
 14 introduce up to 2,250 bomber sorties, as well as 400 new  
 15 F-16 sorties than currently operate.  
 16 These would, in reconfiguration of the MOS, be  
 17 brought down under the Bell.  
 18 This, in our opinion, will result in a change  
 19 from less than 100 to more than 4,000 flights per year  
 20 over this ranch.  
 21 As we will demonstrate in written testimony,  
 22 which we will provide later, this abuse of the airspace  
 23 above the Bell Ranch will severely and materially  
 24 adversely affect the health, quality of life, and  
 25 economic viability of the family's domestic cattle,

1 managed and endangered species, and indigenous species  
 2 which call the Bell Ranch, which has been a piece of the  
 3 Heritage of the Southwest and is one of the original  
 4 Spanish Land Grants, home.

5 On the behalf of the Lane family, our  
 6 employees, vendors and neighbors, we vehemently and  
 7 strenuously oppose Alternative D or the RBTI.

8 Thank you.

9 HEARING OFFICER: Richard Fabbrini.

10 Then after that I will be calling on Michael  
 11 Abbey. **008206**

12 MR. FABBRINI: Thank you. My name is Fabbrini,  
 13 F-a-b-b-r-i-n-i. I also represent the Bell Ranch located  
 14 near Tucumcari.

15 And I just have a few brief comments.

16 First of all, I understand that this Draft EIS  
 17 was issued around the 19th of March. It took awhile for  
 18 it to reach me, and I've been studying it ever since. I  
 19 found it incredibly difficult to get through this amount  
 20 of material, to analyze it, study, and prepare for  
 21 today's hearing, and I think we should have been given  
 22 additional time, frankly, in order to get through this  
 23 and to be able to talk to others as to the meaning of  
 24 some of the points contained here.

25 Secondly, I observed today individuals asking

GE-22

1 questions of the United States Air Force. We certainly  
 2 appreciate that opportunity, but we cannot share with one  
 3 another what we have learned. And I think it would be  
 4 incredibly useful if the process were allowed so that we  
 5 could write our questions to the Air Force, you would  
 6 respond in writing, and then we could each see  
 7 everybody's questions and responses.

8 And I think that would be an incredibly useful  
 9 process.

10 Third, I found the maps in here to be woefully  
 11 inadequate. I mean, it is incredibly difficult for us to  
 12 pinpoint, and we tried our best -- and the debates  
 13 between each other as to where precisely these boundaries  
 14 fell on the Bell Ranch. And I think it would be really  
 15 important for us to get better maps. I see you have some  
 16 here, but I wish -- obviously, we have a limited  
 17 opportunity to review them today.

18 Finally, looking at the noise levels, we are  
 19 using all of the grassland on our ranch for our current  
 20 herd operations, and if we have any problems with noise  
 21 at all we, cannot confine our animals to a smaller area.  
 22 It's not going to work. Just looking at your Figure  
 23 G-1, a B-1 at 2,000 feet approaches the noise level of a  
 24 chain saw in your hands.

25 I mean, that is incredibly noisy. And that is

GE-11

GE-35

1 at 2,000 feet. I can just imagine all kinds of problems  
 2 it's going to have on our cattle operation.

3 My suggestion would be that the U.S. Air Force  
 4 provide a demonstration of these airplanes. Why not fly  
 5 B-52s, fly B-1s over the designated areas, publish it in  
 6 advance. Fly the minimum, at the lowest level, so we  
 7 can see how low it will be to the ground, and give us an  
 8 opportunity to be out there and observe it, and then give  
 9 us an opportunity to give comments.

10 Thank you very much.

11 HEARING OFFICER: Michael Abbey?

12 (Note: No response.)

13 HEARING OFFICER: Is Michael Abbey here?

14 (Note: No response.)

15 HEARING OFFICER: Ray Lutz.

16 (Note: No response.)

17 HEARING OFFICER: Is Ray Lutz here?

18 (Note: No response.)

19 HEARING OFFICER: Richard Wallick.

20 MR. WALLICK: I decline to comment, and will  
 21 submit in writing. Thank you.

22 HEARING OFFICER: Larry Bell.

23 MR. BELL: I'll be happy to forfeit my time at  
 24 this point.

25 HEARING OFFICER: Warren Spehar.

008207

1 MR. SPEHAR: I thank you. My name is Warren  
 2 Spehar, S-p-e-h-a-r. I'm a resident of Taos, have been  
 3 for about the past year or so.

4 Gentlemen, I come here to speak to you as a  
 5 fellow flyer, the first one, I think, this afternoon who  
 6 has addressed you. And I speak entirely for myself and  
 7 for no particular community except perhaps fellow pilots  
 8 who may have the same concern I do, which is essentially  
 9 one of safety.

10 Now, under the FAA rules, as I understand it,  
 11 as I understand this particular one, restricted air --  
 12 we are not flying in restricted airspace when we are  
 13 flying in the Taos vicinity, and the proposed corridors  
 14 that the Air Force would be using here for overflights  
 15 are in open airspace; that is to say, allowable airspace  
 16 for both civilian and military flights.

17 Now, the rule governing safety regarding dual  
 18 use airspace is the principle of the "see and avoid"  
 19 technique, as I understand it, for flying in VFR  
 20 conditions, which, for our audience, is under Visual  
 21 Flight Regulations.

BR-2

22 Now, I fly a glider. Okay? I am a general  
 23 aviation participant. I have a right to be in that air  
 24 space until I'm prohibited by the FAA, or some emergency  
 25 power by Congress or the president says not to be in that

BR-2

1 airspace.

2 Now, it seems to me to be unreasonable -- and

3 my appeal is not to the emotions here but to some sense

4 of rationale here. It's unreasonable to expect a general

5 aviation pilot in command of his aircraft at anywhere

6 from 500 feet AGL to 3,000 or 5,000 feet AGL to see and

7 avoid a military aircraft flying at 350 to 400 knots.

8 Okay?

9 We are confronting here a major issue of safety

10 given the number of overflights that the Air Force has,

11 is proposing here in this Alternative D.

12 And my concern is not only for my own safety

13 but for the safety of other general aviation pilots, as

14 well as for the safety of U.S. Air Force bomber crews.

15 But if there is a mid-air collision between a general

16 aviation aircraft and one of these military types, it's

17 almost a foregone conclusion that both aircraft and the

18 personnel on board will be lost.

19 Thank you for the opportunity, sir.

20 HEARING OFFICER: Burt Bota.

21 And after Mr. Bota I will be calling on

22 Harvey Blaustein. **008208**

23 MR. BOTA: Thank you, Colonel and all the

24 other officers at this endeavor. You can add me to your

25 list of aviators. I was in the military, an IISV, and I

AF-6

1 also flew as instructor for AOS pilots for 26 years

2 before I took early retirement in 1992, and I've been a

3 resident of Taos for the last three and a half years.

4 And my appeal to you is tacked onto all the

5 issues that have been raised here prior, in that it is my

6 experience as an instructor in relationship to the

7 corridors that exist, under the best circumstances during

8 military training, concentration lapses, the possibility

9 exists for an overfly of the military corridors. I've

10 seen time and time again in commercial aviation where the

11 intention of all three pilots in the cockpit plus the

12 jumpseat pilot, there have been transgressions of the

13 corridors that we attempted to fly in. Inadvertent,

14 obviously, but nonetheless actual.

15 So I am appealing to you if this were to be

16 approved, the military route, the MOA-D proposal, that

17 could exist. The possibility of overflying the existing

18 corridors could exist.

19 A kind of an example of this was for me really

20 indicated in that prior -- in fact, one or two days

21 prior, if I am not mistaken, to the last RBTI hearing,

22 there was a B-52 -- and I was flying for the Civil Air

23 Patrol at the time at Taos field. I think it was two

24 days prior to. We all stopped and looked as this B-52

25 came flying up the gorge at approximately 2- or 300 feet

AF-6

1 altitude -- and his timing couldn't have been worse --

2 and then flew out, I guess it was about on a north,

3 northeasterly direction right over the Pueblo.

4 And so everybody was very aware at that point

5 of the transgression, of some particular violation of

6 airspace right there.

7 So I just want to speak out again against the

8 proposal for the MOA-D.

9 There was a kind of a pop saying in aviation

10 when I was flying, "You have to kill somebody

11 before you get their attention," and unfortunately in

12 many instances that was the case, to get the

13 powers-that-be's attention to take a closer look at

14 safety violations or potential aviation problems.

15 Thank you very much for the opportunity to

16 speak. I do not want that to happen here.

17 (Note: Applause.)

18 HEARING OFFICER: Harvey Blaustein. Then I

19 will be calling on Fr. Chavez.

20 Harvey, are you here?

21 (Note: No response.) **008209**

22 HEARING OFFICER: Father?

23 FR. CHAVEZ: My name is Reverend Vincent

24 Chavez. I'm the pastor of Holy Trinity parish here in

25 Arroyo Seco, also chair of the Archbishop's Commission

CU-1

BR-3

1 for Historic Churches.

2 My experience with low-level flights came when

3 I was the pastor for Harding County. You had a hearing

4 in Roy on Monday evening; I was the pastor of that

5 county. And several of our historic stone churches in

6 that county used to be used as simulated bombing targets

7 for pilots, top gun pilots from Cannon Air Force Base.

8 And they would dip close to the churches, practically

9 graze the roof of the churches, and then ascend higher

10 into the air space.

11 Several of our stone churches there with real

12 foundations had major cracking due to the vibrations of

13 these low-level flights.

14 Also, I had to come in contact with several

15 parishioners out there, ranchers in Harding County,

16 patriotic American citizens who fought and served their

17 country, who would have their herd disrupted with

18 low-level flights.

19 And my concern is I've seen what low-level

20 flights do to stone structures, and Taos County doesn't

21 have too many stone structures, they are mostly out of

22 adobe with little or practically no foundations.

23 Most people that oppose these are, like I said,

24 loyal citizens of this country who appreciate their armed

25 forces; however, there is the concern for their

1 properties and their values, also as private citizens of  
 2 this country.

3 HEARING OFFICER: Eugene Dobos.  
 4 Eugene Dobos.  
 5 (Note: No response.)  
 6 Vicky Pfeiffer. **008210**  
 7 MS. PFEIFFER: Hi. My name is Vicky  
 8 Pfeiffer. And I didn't really come prepared to speak  
 9 today. I didn't think I was going to speak. But since  
 10 I'm here, I just wanted to say I moved here five years  
 11 ago. I lived in an area in Michigan where we experienced  
 12 low-level military aircraft flying over our homes. And  
 13 this was our reaction to it (indicating).  
 14 It was terrifying. It was really terrifying.  
 15 We were -- like, you would just be outside and be totally  
 16 afraid -- you didn't know what was going on. You felt  
 17 attacked.

18 So my main concern is the effect it's going to  
 19 have on the human beings. That's what I'm really  
 20 worried about.

21 Another main concern I have is for the Taos  
 22 Pueblo. I read recently it's a classified World Heritage  
 23 Site. It's the only one in the United States. The only  
 24 one.  
 25 And it just seems to me that we might be able

AO-45

CU-2

1 to find another flight path. Thank you.  
 2 HEARING OFFICER: Ed Slook. **008211**  
 3 MR. SLOOK: Good afternoon, ladies and  
 4 gentlemen, people of Taos.  
 5 It's too bad our cameras aren't here. I'd  
 6 like to see our cameras going, too. All this should be  
 7 public record. All this should be in the Library of  
 8 Congress.  
 9 We are setting a precedent here, and I think  
 10 most of you know what the outcome is going to be.  
 11 Four weeks ago, on a Sunday afternoon, I had a  
 12 C-4 transport buzz my place out on the mesa. And they  
 13 didn't fly 200 feet over my place, they didn't fly 100  
 14 feet over my place. They flew less than 50 feet over my  
 15 house.  
 16 Well, I'm an old warrior, and I can take it.  
 17 And I'm a veteran of peace. I've been shot at by the  
 18 police, and the bombers don't worry me, and the other  
 19 harassment doesn't worry me. What worries me is  
 20 escalation of the military, escalation of what are around  
 21 the world -- Am I going out now? (Referring to  
 22 microphone.) That's convenient.

23 What worries me -- What worries me is the way  
 24 that things are manipulated, and the way this meeting is  
 25 being manipulated by breaking it down into four groups of

GE-30

1 people -- today, tonight, Saturday morning, Saturday,  
 2 night -- instead of all at once, where we should all be  
 3 hearing one another's comments and we should all be able  
 4 to have it filmed.

5 Since we brought our own cameras here, this is  
 6 being filmed.  
 7 Let me focus for a minute.  
 8 Is this working now? I'd just as soon not use  
 9 it.

10 There's a lot of things I'd just as soon not  
 11 have, a lot of things I'd just as soon not see. And I  
 12 don't mind, personally, being harassed by the Air Force,  
 13 Army, Marines, what have you. They have all had their  
 14 shots at me. Let's not take it personal. Let's look at  
 15 the global effect. Let's look at who the 40 percent of  
 16 the airways are now owned by. Your comments in the EIS  
 17 study. And you're clamoring for more? Why say less?  
 18 I say a lot less. I say de-escalation. I say  
 19 put your planes in the hangars and do something  
 20 peaceful.  
 21 (Note: Applause.)  
 22 I'm not done.  
 23 I didn't bring a prepared speech, and I'm not  
 24 angry, but I'm here. I'm still alive. And I'm going to  
 25 put my words against your words and your planes any day

GE-30

1 of the week.  
 2 The people in Taos, the people in this country  
 3 are looking for peaceful solutions, and that does not  
 4 mean escalation with war planes, playing games in our  
 5 skies, playing games with our lives and our tax dollars.  
 6 There's plenty of other work to be done on this planet,  
 7 and it doesn't have to be done with killing machines.  
 8 You have to make these decisions now and hold  
 9 firm. It doesn't give. Your private concerns with these  
 10 planes, like I do, is one thing. If you are looking at  
 11 the global effect of the escalation of the war machine in  
 12 our skies and everywhere else, then the message has to  
 13 be: We don't want it.  
 14 (Note: Applause.) **008212**  
 15 HEARING OFFICER: Dr. Yamamoto.  
 16 Mr. Yamamoto. After him, Alex Carpenter.  
 17 MR. YAMAMOTO: Thank you very much today be  
 18 here.  
 19 The '95 in --  
 20 (Note: Reporter unable to understand accent.)  
 21 ...of your human life.  
 22 The American president supported us. He say  
 23 American citizens once again to lead beginning of the new  
 24 United Nations Charter.  
 25 I memory for the war B-52. Is important for I

TY

1 am a child, Korean War. All American military come to  
 2 our land to practice, to war practice. My grandma,  
 3 grandpa growing water melon. I am on the other side on  
 4 the (inaudible) bam into fence. All military come to our  
 5 land, eat our water melon. It's good for to eat, but  
 6 everybody after military test going to war never come  
 7 back.

8 What's going on right now in this world?  
 9 Say 50 years ago United Nation come to this  
 10 world. More and more and more are (inaudible) separate.  
 11 Something wrong.  
 12 Today, right now, people have to change  
 13 consciousness to win all life.

14 Behind your eyes, everybody have a fear as a  
 15 human being. I hope grow for peace right now. This is a  
 16 world emergency. Always temporary (inaudible), didn't  
 17 represent of human life. Today good sleep, to take  
 18 tomorrow be wonderful new human being.

19 That's what I want. That why I want human  
 20 being, respected.

21 Before you come to United Nations all living  
 22 being in the world united. Why separate? Why killing  
 23 the people?  
 24 I pray for global peace now. Global peace  
 25 now.

TY

1 Mayor Taos, '95 declare global peace zone.  
 2 Global peace zone is military language. You should know  
 3 what means, this symbol as a human being.

4 HEARING OFFICER: Alex Carpenter, then after  
 5 Alex I'll be calling on Aromi Hiro(phonetic). **008213**

6 MR. CARPENTER: Thank you for hearing my  
 7 words. Family, thank you for being here.

8 Much is necessary. All over here, the pain,  
 9 the sorrow, killing each other. Why?

10 Not only talk to you. Even find my ownself.  
 11 Your own people fight with me. I am not here fight with  
 12 you. Please understand what being said. Very important.  
 13 People dying other side of the world right now because of  
 14 war. They fly here, they fly there.

15 You have family. You love them. People  
 16 dying. You have family. You love your family like I  
 17 love my family. Why? Why we want kill each other? I  
 18 want to know. I want to know.

19 My grandmother's back pushed to the ground by  
 20 the oppressor man, push her down, down. Oppressorman,  
 21 see what you doing. Oppressor man is creating a ruin.  
 22 Oppressor man, here what I say. I saying, "Oppressor  
 23 man, change your ways now. Her body is not a commodity.  
 24 Her body is not a commodity. Not a product to be bought  
 25 and sold. Not to be mined for oil and gold. She gives

1 what she's got to give so we can live. Why bomb? Why do  
 2 that bomb to Mother Earth? Mother Earth keep us  
 3 alive. Why? Why drop bomb on Mother Earth. Without  
 4 Mother Earth we all die. Why commit suicide?"

5 Please. Please wake up to the truth of what  
 6 happening here. No fight, please.

7 Here what I say.  
 8 Does that mean my time over? One minute left?  
 9 Someone else have one minute, then.

10 HEARING OFFICER: Aromi Hiro. Did you wish to  
 11 speak? **008214**

12 MS. HIRO: I came from Japan, and I love Taos.  
 13 I love New Mexico, and I love Taos' nature. And we have  
 14 the same sky as us, so in that maybe we don't need some  
 15 culture so much.

16 I'd like to find some skill and knowledge from  
 17 ancient, so -- and I came here.

18 So we have same earth. Thank you.

19 THE COURT: Tuyo Setara.  
 20 (Note: No response.)  
 21 I hope I'm pronouncing this right.  
 22 Tuyo Setara?  
 23 (Note: No response.)  
 24 Charlie Myers.  
 25 MR. MEYERS: Good afternoon. I am a resident

TY

ED-2

1 of Tres Piedras, New Mexico, vice president of the Tres  
 2 Piedras Neighborhood Association, and a member of the  
 3 Taos County Planning Commission.

4 I come here with a number of concerns. I'm  
 5 going to try to be brief and get right to the point with  
 6 them.

7 In your analysis of your proposed flyway over  
 8 Rio Arriba, Taos, and Colfax County, I notice that  
 9 you've missed quite a few different wildlife sites and  
 10 flyways that exist within this area. Most importantly  
 11 include San Antonio Mountain, the sandhill cranes that  
 12 regularly migrate to the south during the spring -- I  
 13 mean in the fall, and in the spring head back north, and  
 14 the Valle Vidal.

15 Not once are any of these things really  
 16 mentioned ore gone into in detail, so let me give you a  
 17 little bit of an idea what areas we are talking about  
 18 here.

19 San Antonio Mountain is a very significant  
 20 winter wildlife area with up to 5,000 elk that winter  
 21 there every year. It's part of what's identified by the  
 22 New Mexico State Game and Fish Department as Unit 52,  
 23 which is just about the most popular elk hunting area in  
 24 the entire state, and it's well known throughout the  
 25 country as one of the best elk hunting areas that is in

ED-9

1 the United States. The proposed flight route goes  
 2 directly over and includes San Antonio Mountain.  
 3 The sandhill cranes that migrate back and forth  
 4 do so over the course of the months of October, November,  
 5 into December, during the fall, and in the spring during  
 6 the months of February/March, primarily.  
 7 That is a significant amount of times.  
 8 These -- How many minutes do you get?  
 9 AIRFORCE SERGEANT: Total of three.  
 10 MR. MEYERS: These birds fly almost exactly in  
 11 the type of elevations that you are proposing to fly in.  
 12 Thirdly, the Valle Vidal, which is a special  
 13 management unit within the Carson National Forest, is one  
 14 of the most significant wildlife areas in this entire  
 15 state. It's -- it has a significant amount of elk, wild  
 16 turkey, bear and bison. And nowhere do you mention this  
 17 in your document, and yet this is an extremely  
 18 significant area which your proposed flight path would go  
 19 directly over.  
 20 As a member of the Tres Piedras community, I'm  
 21 pretty surprised that nobody from the Air Force has ever  
 22 contacted our community, which is actually one of the  
 23 communities that would be flown over. Our community is  
 24 rather small, but a lot of people live in the area that  
 25 you have identified as what you're going to fly right

BR-3

1 over. Many of them are ranchers, many people have  
 2 horses. I own horses. I have livestock, also. And I  
 3 have seen how when airplanes fly low horses are  
 4 particularly susceptible to be spooked.

GE-22

5 And a lot of people from that area are not  
 6 going to come here, because they are 40, 50 miles away  
 7 and they don't feel like they have been included in this  
 8 process.  
 9 I don't think you have done enough outreach to  
 10 the communities of Tres Piedras, Costilla and Amalia,  
 11 which are on your flight path, and I would suggest that  
 12 you contact these communities directly, as we're the ones  
 13 who you're going to -- actually proposing to fly over,  
 14 and you'd get a lot more significant commentary from  
 15 people who aren't as willing to drive all the way over  
 16 here to Taos to make comments to you.  
 17 I think that, in general, our neighborhood  
 18 association is against this idea, that we feel it's going  
 19 to have a terrible impact on some of the basic aspects of  
 20 our lifestyle, which is peace and quiet near the national  
 21 forest of the United States.  
 22 And I think you have to look a little more  
 23 closely as to what areas you are flying over, as some of  
 24 them are very significant recreational areas that people  
 25 from all over the country come to enjoy.

TY

1 Thank you.  
 2 HEARING OFFICER: I'm having trouble reading  
 3 the last name on this particular card.  
 4 D-e-l-e-c-a-s-t-r-o?  
 5 MS. BELCASTRO: Belcastro. 008216  
 6 Thank you for giving me the -- Opportunity to  
 7 speak. I come from Spokane, Washington, Fairchild Air  
 8 Force Base. I know what it's like for people to have to  
 9 live in -- I can't even describe it. Just a weird  
 10 energy, like -- there's -- I don't know.  
 11 And I just wanted to say I want peace. And  
 12 that's all I have to say.  
 13 HEARING OFFICER: I'd like to finish with the  
 14 cards, then the court reporter indicated a desire for a  
 15 break.  
 16 Bjorn Halberson.  
 17 (Note: No response.)  
 18 HEARING OFFICER: Is Bjorn Halberson here?  
 19 (Note: No response.)  
 20 HEARING OFFICER: Jean Harrison. 008217  
 21 MS. HARRISON: I'm Jean Harrison, and I've  
 22 been in Taos 38 years, and I'm a native of New Mexico,  
 23 grew up near Cannon Air Force Base.  
 24 I'm mad. And I have a lot of friends here, and  
 25 I want them to speak, too, because I know they are very

AO-27

1 upset.  
 2 Nobody has mentioned the snow and avalanche  
 3 problems. You're going to be flying right over Ski Rio,  
 4 which can cause a lot of avalanche. You're going to be  
 5 flying over Valle Vidal, you're going to be flying over  
 6 Philmont. You're asking for big trouble, the National  
 7 Boy Scout place there.

PD-4

8 And nobody's talking peace at all. The  
 9 military isn't. There's not a Defense Department of  
 10 Peace. We have a Department of War.

GE-3

11 I think it's about time that people stand  
 12 up -- I have grandchildren. I've never done anything  
 13 like this before, but I can't sit back and not do it.  
 14 I know you have your job to do, but so do we.  
 15 I think maybe you think this is a nice place to  
 16 come and fly. Why don't you go to the White Sands  
 17 Missile Range and maybe a few of those missiles might --  
 18 for practice, I mean.  
 19 It's a very serious thing that's happening  
 20 here, and the people are against it. I don't think it's  
 21 going to make any difference. If you want this, you're  
 22 just going to go ahead and do it.  
 23 I did hear, though, that maybe the Air Force  
 24 might be a little more in tune with what the people  
 25 want, and I just hope that you will think twice about

1 this. There's no need for this.

2 I know with the B-1's and the B-52 --

3 What is that card? What does it say?

4 AIR FORCE SERGEANT: One minute remaining.

5 MS. HARRISON: Thank you.

6 -- that you're going to push this through

7 because you think you need the practice.

8 Well, that's unfortunate, because I feel that

9 we should not be talking war, and that we should be

10 trying to live together in peace.

11 And the United States is not doing that. This

12 is all for the corporations, for the industrial complex.

13 They are making a billion dollars a day. And you guys

14 are earning your money -- I don't know what you get paid,

15 but you get paid a lot more than people in Taos County.

16 We came here with three little kids, no jobs,

17 in '61, to do what we wanted to do.

18 Thank you.

19 HEARING OFFICER: What I'd like to know

20 before I decide whether to take a break or not is if

21 there's anyone else, just so I can get a show of hands

22 how many people would like to make comments who haven't

23 made comments, or people who would like to make

24 additional comments.

25 I'd like to go ahead and give the court

1 reporter a break, because she is experiencing a need for

2 that. It's a job I wouldn't like to have, myself. It's

3 a very difficult job from what I've seen of it.

4 Five minutes, then we will pick up from there.

5 (Note: Short recess taken.)

6 HEARING OFFICER: Ladies and gentlemen, we

7 would like to continue on now, so if you could please

8 take your seats.

9 I know some of you have come in late so you

10 don't have the benefit of my initial explanation of how

11 we are conducting the comments portion of this, so I'd

12 just like to go back over that a little bit.

13 We would like to limit your comments to three

14 minutes. That does not mean that that is the only amount

15 of time that you'll get to speak. I now have five

16 additional cards with names of persons who would like to

17 make comments, so when you come forward to make your

18 comments, if you could just state your name, speak

19 clearly and slowly so we can understand and the court

20 reporter can take down accurately everything that you've

21 said.

22 And the sergeant to my right will be holding up

23 a card, and when you have spoken for two minutes, he will

24 hold up a yellow card to give you the warning that you

25 have a minute remaining, and then he'll hold up a red

1 card when your three minutes has expired.

2 As you should have noted, I won't stop you if

3 you continue going past that, but I will say you're

4 taking away time from the other individuals who are

5 waiting patiently for their turn to speak.

6 And please remember that even though you stop

7 at three minutes, I'll call you back up if you want to

8 continue on and give you another three minutes, and then

9 I'll ask if you have more, and if you want to speak for

10 more than that additional three minutes, I'll let you do

11 that as long as there's no one else to speak.

12 Ultimately, we will stay here until everybody has had the

13 opportunity to say everything they want to say. 008218

14 So I'd now like to call on Gretchen McGregor.

15 MS. MCGREGOR: My name is Gretchen McGregor.

16 I'm a resident of Taos since 1982. I'm in school now,

17 going to medical school and am an EMT, Emergency Medical

18 Technician.

19 And my concern with the EIS, I feel it has

20 inadequately addressed the potential health risk if there

21 were an accident.

22 I would assume that with the proposal, the

23 flight route that's being proposed, it covers nine

24 counties in Northern New Mexico, which is nearly 30

25 percent of our state. New Mexico is the second most

AO-16

BR-4

AO-13

1 fatal state in the United States due to long transport

2 times, and we only have one Level 1 hospital in the

3 entire state. And so I would assume that proposing 2,600

4 flights per year over, let's just take for example,

5 Philmont Ranch, which has a very high population density

6 in the summers with Boy Scouts, pack animals, and if

7 there were an accident there, the EIS should somehow

8 address the potential effect of trying to get injured

9 people to a hospital on time. And I don't see anywhere

10 in the EIS the health impact of an accident.

11 We are also the poorest state in the United

12 States, and because we have 80 percent of our income

13 based on tourism, it would seem that this amount of

14 overflight is going to completely wreck the economy even

15 further, an economy that's already extremely poor

16 compared to other places.

17 I also had spoken with, I believe his name was

18 Duane Williams, the man who is in charge of putting

19 together the corridor, and he told me -- we talked about

20 the natural amphitheatre effect of the Taos mountains.

21 And even though it's not flying right over the Town of

22 Taos, I asked him, "Won't everybody hear the flights?"

23 and he said, "Yeah, everybody will hear the flights."

24 When a commercial airliner flies over at,

25 whatever, 10,000 feet, we hear them. Every person in the

1 valley hears them. And the fact that he already conceded  
 2 that everybody is going to hear a plane that has a  
 3 185-foot wingspan with eight jet engines, flying 200 to  
 4 500 feet above ground level, it seems like the sound  
 5 analysis, no matter how it's been tweaked, basically  
 6 right up front we are all agreeing that everybody is  
 7 going to hear that.

8 And I know that has a very bad impact on  
 9 children. Countries like Germany have banned such  
 10 low-level flights, and send their pilots here to train  
 11 because of the bad effect on children.

12 Thank you.

13 (Note: Applause.)

008219

14 HEARING OFFICER: Mr. Arthur Palish.

TY

15 MR. PARRISH: Thank you kindly. My name is  
 16 Scott Parrish. I would just like to say in case it  
 17 hasn't happened yet, I'd like to thank you, y'all. I  
 18 was raised on an Air Force base, McGuire Air Force Base  
 19 and various other places, and I would like to say thank  
 20 you for the initiative you are taking and the measures  
 21 you are going through to find a good place to put your  
 22 bombers.

23 I was really -- actually, growing up Air  
 24 Force, I liked the sound of B-52s when I was young,  
 25 always liked the idea of people who would actually go

1 through any amount of trouble to protect my life and  
 2 welfare and well-being.

3 In a community like this, there's a lot going  
 4 to be said about who actually has the right to lean  
 5 against you, say hello to you, and that sort of thing.  
 6 It's a different sort of thing for tone, it's more of the  
 7 ear than the eye, and it's something you have to work  
 8 around some days. So to actually say there's generalized  
 9 opinion about you actually have the right or the  
 10 responsibility to protect my life or my well-being is not  
 11 something a lot of people have taken into account.

12 I'd like to actually say thank you to both the  
 13 Air Force and the community here, because the dissonance  
 14 in this argument is very well stated, in that a lot of  
 15 people would actually like to see the people who are  
 16 running Serbia right now come to its best peril. I  
 17 think the idea that people who wear stripes in the Air  
 18 Force, or other insignia that would actually go out and  
 19 defend us against like people on Slobodan Milosovich,  
 20 it's not something heard in your opinion. Like, inside  
 21 the body. My people, my father and other people in my  
 22 family have protected myself and such as others from such  
 23 tyranny.

24 There is a lot of people here that don't really  
 25 believe in noise. The generalized opinion is that they

1 are poor, that they might not want the sound because it's  
 2 really on their nerves.

3 So on the one hand to say, yeah, sure you are  
 4 taking the time to account for our own protection, and on  
 5 the other end that, you know, because it is such a poor  
 6 place it might be just another strain on our nerves, that  
 7 is something that maybe hasn't been taken into account.

8 I, on my part, would like to say thank you to  
 9 both the community and the Air Force.

10 HEARING OFFICER: Grady Taut.

008220

11 MS. TAUT: I'm from -- My name is Grady Taut.  
 12 I'm from Tierra Amarilla, which is considerably west of  
 13 here.

14 Where you're flying is just beside where I  
 15 live. You are not flying directly over me, but I do have  
 16 airplanes, some C-130s, fly over me at 400 feet, and they  
 17 rattle my cupboards, and they are annoying and loud. And  
 18 when I'm walking, they run the elk off and run the deer  
 19 off. And they just take off, and how they keep from  
 20 getting injured, I don't know.

AF-6

21 I also know that sometimes flights always don't  
 22 stay on path, and as close as we are to your flight  
 23 pattern, it concerns me that you're flying so close to  
 24 us.

25 Based on what the last lady said as far as the

1 noise, I'm going to hear you. And I know your airplanes  
 2 are considerably louder than the C-130.

3 But I would like to thank you for the  
 4 opportunity to at least talk and tell you I just don't  
 5 want you flying over my area. I just don't want it.

6 Thank you.

7 HEARING OFFICER: A.G. Deherrera.

008221

8 MR. DEHERRERA: My name is Gus Deherrera. I  
 9 served with the Air Force, and I've always looked upon  
 10 the Air Force with pride. And I recognize the need for  
 11 training our airflight crews, I just don't like the idea  
 12 of using good land for a test range or a training range.

13 I live in Tres Piedras, and I'm president of  
 14 the Tres Piedras Neighborhood Association. I live right  
 15 underneath the westernmost part of the proposed range.

BR-1

16 And two concerns that I have. One of them over  
 17 here is I just know that jet engines are much louder than  
 18 the report indicates that they are.

BI-2

19 No. 2, there's a migratory bird route that runs  
 20 parallel to highway 285 and intersects, or would  
 21 intersect this proposed flight path, and it appears to me  
 22 it would not be very wise, you know, to put in a training  
 23 range that would collide with migratory birds.

24 And so I just wanted to make you aware of that,  
 25 and would ask you to look into that to see how serious

AF-6

AF-8

1 that is.  
 2 And that's it. Thank you.  
 3 HEARING OFFICER: Michael Hays.  
 4 MR. HAYS: Hi. **008222**  
 5 A couple of things. One is that I'm very  
 6 concerned that I know that people don't -- that we are  
 7 talking about human beings that fly these machines. And  
 8 I know some of the people that are flying them now, kids  
 9 that are raised here that are fighter pilots down in  
 10 Portales and places. And I watched them grow, and I know  
 11 they are very well trained, but I also know they commit a  
 12 lot of errors. And I also know their egos really get  
 13 involved when they go they get in these wonderful  
 14 machines so wonderful to fly.  
 15 I remember living here in Taos when somebody  
 16 flew through the gorge in a fighter and tore the hell out  
 17 of the gorge and themselves and hit a wire. And they  
 18 weren't supposed to be there, but, by God, they were  
 19 there. And they raised a lot of havoc.  
 20 So there is a lot of human error. A fighter  
 21 flew through here the other day. Some of the people  
 22 might have heard it here. And that was not a bomber,  
 23 just a fighter, and it scared the hell out of me. It  
 24 was, "What the hell is this thing coming real low through  
 25 the Taos Valley?"

1 I don't know if that was in the flight path,  
 2 but it was there, and it came through here last week.  
 3 And I wondered what that was all about.  
 4 So I know you have good intentions, and I know  
 5 you have to train your people, but I'm really concerned  
 6 about the human element, because people really make  
 7 mistakes, and it's costly. And then it's, "Oh, I'm  
 8 sorry, we didn't really mean to do that."  
 9 And, you know, human things happen. They are  
 10 not going to stay within the flight path, because they  
 11 are human beings and they get excited.  
 12 The other thing is I'm a therapist here in  
 13 town, and I'm really concerned about the people. The  
 14 people that live here have a different mission than the  
 15 people that you represent. I understand you live in an  
 16 urban area, live in Air Force bases, you live in noise,  
 17 you've been trained all your lives to -- that the mission  
 18 is the most important thing, and your mission is very  
 19 important to you. And at times it's important to us,  
 20 too, but we are not always in full agreement with  
 21 that. But our mission is different here. The people --  
 22 I can't read. Two minutes? Three minutes?  
 23 One minute?  
 24 The mission is different here.  
 25 We have a different use for technology. Some

1 of us have moved here, some of us were born here. My  
 2 kids were raised here. They have a different reason for  
 3 being here, and they are more earth based, and they want  
 4 to be more earth based, and you're going to fly through  
 5 here and really disturb the families, disturb the kids,  
 6 and it's going to have a major impact. I don't care  
 7 what you say, it's going to have major impact. People  
 8 aren't going to like it. People are going to get really  
 9 upset.  
 10 The only thing I hope will get through to  
 11 people is to keep on electing people that just vote down  
 12 appropriations for you people all the time. I am  
 13 certainly going to do it, mobilize all my efforts to make  
 14 sure I vote against all appropriations to people as much  
 15 as possible, because I don't want you in my community.  
 16 No offense. I just don't want you here.  
 17 HEARING OFFICER: That exhausts all the cards  
 18 that have been turned in, so what I would like to know  
 19 now is if there's anyone who has not come forward to  
 20 make comments who would now like to come forward. Please  
 21 come forward, the lady in the back. **008223**  
 22 MS. JACOBS: Thank you, Colonel.  
 23 I have trouble reading this. I wrote it this  
 24 morning, so just bear with me.  
 25 I'm a newcomer to Taos, but I lived under

AO-18

1 flight paths of Tinker Air Force Base and Will Rogers Air  
 2 Force Base in Southeast Oklahoma City from birth to age  
 3 32. Because of my early experiences, I want to speak out  
 4 for the children of Northern New Mexico and how this may  
 5 directly affect them in permanent, negative psychological  
 6 ways.  
 7 I was born during the height of World War II in  
 8 1943. My earliest memories include chronic national  
 9 community fear of being bombed, and when planes flew  
 10 through over us at normal level, time stood still while  
 11 we checked to see if our insignia was on the wing.  
 12 War and threat of war was the primary topic of  
 13 conversation, and it's that way today. Our children are  
 14 watching newscasts, and among the significant persons in  
 15 their environment these children are impressionable, and  
 16 they hear talk of war non-stop.  
 17 Children do not understand the difference  
 18 between potential danger and actual danger. Imprinting  
 19 our future generations with low-level intrusive bombers  
 20 is sending them one message: That they are in imminent  
 21 danger.  
 22 The proposed flights will directly imprint tiny  
 23 children, teaching that there is no safe place, no safe  
 24 time, and no way of staying safe. Cults use the same  
 25 thought to brainwash their victims. Wartime torture,

1 from what I've understood, works using that method, as  
 2 well.

3 We already know what happens to children who  
 4 grow up in families where abusive dynamics explode and  
 5 where there's no safe place, no safe time, and no way of  
 6 escape. Some only permanently -- Excuse me. Some not  
 7 only become permanently hypervigilant, wary, depressive,  
 8 and unaware of their personal boundaries, but they will  
 9 also suffer physical exhaustion, especially through their  
 10 adrenal glands and the fight-or-flight syndrome. Some  
 11 chronically violated children, such as this would violate  
 12 our children, may even become psychotic as a result of  
 13 it.

14 If our Air Force explodes upon our skies in  
 15 terrifying, threatening overflights -- and that's the way  
 16 children will see it, trust me, I've been there, I lived  
 17 it, will the Air Force be willing to pay the ultimate  
 18 price for having emotionally raped Northern New Mexico's  
 19 most vulnerable asset? Children acquiesce to power, but  
 20 they don't understand it.

21 HEARING OFFICER: There was a lady that was --  
 22 Yes.

23 MS. WALTERS: Okay. Oh, you were not speaking  
 24 to me?

25 HEARING OFFICER: That's all right.

008224

1 MS. WALTERS: I'm Anna Walters, speaking for  
 2 myself only.

3 I recently moved here. I retired from the  
 4 government. Twenty seven years of the 33 were with the  
 5 Air Force, so I do appreciate your mission.

6 I was in Germany for the last 15 years. I've  
 7 seen a lot, and a lot of changes when I was over there.

8 I came here because it is physically a  
 9 beautiful place, but primarily because it's a place of  
 10 healing. This is a very unique place in the world. I  
 11 would hate to see it ruined. I believe that the State  
 12 of New Mexico has been -- has done their patriotic duty  
 13 to the country. A lot of nuclear testing has been done  
 14 here. There's not enough money in the world to clean up  
 15 the nuclear waste here. I do believe that this place  
 16 should be spared additional disruption. And of the whole  
 17 state, Northern New Mexico is the most beautiful.

18 And I think the reason that the place has been  
 19 chosen for so much of this kind of work is because it's  
 20 densely populated -- I mean not densely populated. We  
 21 have very few people here, and a lot of the people that  
 22 are here are very poor. Some of them have to work three  
 23 jobs to stay here, to remain in this area. And this  
 24 would extremely affect them economically, but more than  
 25 that, spiritually, and the healing place that so many

BR-4

1 people have come to would not be the same.

2 And I would -- I think equal value should be  
 3 given to this type of problem. I really believe that  
 4 this would ruin this area of the country, and I think we  
 5 have done enough before.

6 Thank you.

7 MS. CHRIST: I'm sweating. **008225**

8 Hello. My name is Susan Christ. I live in San  
 9 Cristobal, New Mexico, and I'm here representing myself.  
 10 And because I live here, I represent the people that I  
 11 live around.

12 The comment that I had today was regarding the  
 13 BIS, about the RETI training over Northern New Mexico and  
 14 its direct socioeconomic impact on the people in  
 15 Northern New Mexico.

16 The comment I have is that we are a very  
 17 interdependent people and group of communities here.

18 If the Boy Scout Ranch that has 30,000 visitors  
 19 a year is impacted, so is the Town of Taos. The person  
 20 who hunts on Vermejo Peak comes and send their children  
 21 to the Boy Scout Ranch. Following their hunt, their  
 22 children come and go to the Boy Scout Ranch in the  
 23 summer; their parents come and golf and have a good time  
 24 in Angel Fire. Then in the fall or the late summer they  
 25 come and they visit historic Taos, and they raft in the

1 Rio Grande River, which we all admire. Then the people  
 2 go and they hunt up on San Antonio, and then they ski in  
 3 the winters in Red River, in Angel Fire, in Taos. And we  
 4 all like our wonderful restaurants and our local grocery  
 5 stores and all the people that support these things.

6 So we are very much an integrated hoop in  
 7 Northern New Mexico, that if one part of our hoop is  
 8 disrupted, the domino effect affects us all.

9 If the people stop coming to Angel Fire, those  
 10 few people don't come to Taos. If they don't come to  
 11 Taos, we can't send them to beautiful Santa Fe or to the  
 12 beautiful pueblos for their art ware.

13 We are all interconnected in this Northern New  
 14 Mexico community, and I feel that the low-level flyovers  
 15 would have an adverse effect on the economical balance of  
 16 this state. I request that you not have them here, and  
 17 that you choose to select a different alternative from  
 18 Northern New Mexico.

19 Thank you. **008226**

20 MR. SCHINLUND: My name is Gus Schinlund, and  
 21 I've been living here for about three years.

22 I worked for a long time for mass media. We  
 23 are in a very serious crisis in terms of the information  
 24 that we receive about military actions, about our  
 25 government, about our political systems. We are -- and I

BR-4

TY

1 would like to stand with what the previous speaker said  
2 about the interconnectedness. We are all interconnected.

3 We have a highly effective, sophisticated  
4 propaganda system which is advocating killing, bombing,  
5 warfare over an indefensible situation.

6 This, to me, is part and parcel of that  
7 process. It is injurious to us all. We have replaced,  
8 in the words of Susan Griffin, a very fine poet and  
9 thinker, "responsibility with respectability."

10 With all due respect to the armed forces,  
11 there's no more responsibility for our actions. We are  
12 aggressively promoting warfare. Our leaders are  
13 aggressively lying to the public about it. And we are  
14 all part of that process. If we do not wake up now,  
15 there will not be a future for any of us.

16 So I plead to you to think and to feel, to  
17 connect this (pointing to head) with this (pointing to  
18 heart) your heart, and consider your actions as  
19 sovereign individuals in a time of crisis.

20 Thank you.

21 HEARING OFFICER: I've just been handed a  
22 card.

23 Mary Ann Calvert, would you please come  
24 forward? **005227**

25 MS. CALVERT: My name is Mary Calvert. I've

1 lived -- I've lived north of Valdez, New Mexico, for 25  
2 years, and I have repeatedly observed overflights on  
3 Flight Pattern 1147. And it's a training route which I  
4 have reported to various Air Force bases over numerous  
5 years, and I have never, except once, received a positive  
6 response from any Air Force official. The positive  
7 response I received was due to a B-52 overflight two days  
8 prior to the last RBTI hearing. On that day we had a  
9 B-52 flying a technical -- Let's see. It was an  
10 instruments data check, and he was flying approximately  
11 200 feet over the Valdez rim. And I was literally  
12 frightened to such a degree that I hit the floor thinking  
13 there was an incoming to my dwelling.

14 During the previous 20 years I had contacted  
15 four Air Force bases and had never received a response,  
16 either according to the officials about what or who could  
17 be flying at such a low altitude, or where the aircraft  
18 was stationed, or how I could even pursue this issue even  
19 further. The FAA neither, or the local areas that are  
20 supposed to be notified when one of your flights drops in  
21 below 3,000 feet had never been notified, and neither had  
22 any of the Air Force bases that these aircraft had come  
23 from.

24 My concern is that when we start having 2600  
25 overflights in Taos County, that numerous of these

AO-93

1 flights will be dropping into other training routes and  
2 flying sorties without any oversight, without any  
3 scrutiny, without any enforcement, and without any safety  
4 for the public. And I have serious concerns for both the  
5 citizens and the wildlife that live in this area, and I  
6 would hope that you consider removing the RBTI  
7 Alternative D, from your list of proposed training  
8 routes.

9 Thank you very much.

10 HEARING OFFICER: Is there anyone else who has  
11 not made comments that would like to?

12 Yes, sir.

**005228**

13 MR. HALVORSEN: I haven't prepared anything in  
14 an organized way to say, but I've lived here about 21  
15 years. I guess the math is very simple that it works out  
16 to seven flights a day. Is that correct? 2600 a year.

17 I had a similar experience to the gentleman  
18 who was just speaking, coming out from Arroyo Hondo, that  
19 hill heading south, and a plane came over so low that it  
20 appeared to me to be below the treetops at the top of the  
21 valley, Arroyo Hondo. I mean, of the bottom of the  
22 valley. It probably was 200 feet. It didn't look like  
23 it was going to hit my car, but it was a huge plane, very  
24 low, and very loud, and very scary. And I had my little  
25 boy with me then, so that's probably got to be probably

AO-93

AO-15

1 10 or 11 years ago.

2 A good friend of mine who had lived in  
3 Farmington for years told me today, when she was there  
4 planes going over vibrated the buildings so badly that  
5 they cracked one to two inches wide. This is school  
6 buildings in Farmington.

7 The computer has probably churned out all this  
8 information already, but I don't know.

9 The Rio Grande Valley has been one of the two  
10 flight paths for the sandhill cranes for, they figure,  
11 three or four million years, and they are still flying up  
12 to Canada on that pathway, as somebody mentioned. They  
13 winter down in Bosque del Apache.

14 And I don't want to sound cynical or  
15 simplistic, but I, too, am concerned about how carefully  
16 the homework has been done by the military -- or the  
17 government, in any event.

18 And I remember that in the early '50s they  
19 tested in Nevada, the nuclear tests. When soldiers were  
20 sometimes asked to witness them within a mile of ground  
21 zero, they were given sunglasses and skin cream. And  
22 the fall-out from that went over the southwest corner of  
23 Utah, St. George and all.

24 Anyway, just one more person making my little  
25 speech. I don't expect it to have a big impact, but

BI-2

1 maybe cumulatively we will make some impression on the  
 2 people who make this decision.  
 3 Thank you.  
 4 HEARING OFFICER: Could you spell us your  
 5 name?  
 6 MR. HALVORSEN: My name is Bjorn Halvorsen,  
 7 H-a-l-v-o-r-s-e-n.  
 8 HEARING OFFICER: We had a card, called you  
 9 earlier.  
 10 Is there anyone else who has not made comments  
 11 that would like to come forward and make comments?  
 12 MS. HARRISON: I've already made one, but I  
 13 want to ask questions.  
 14 HEARING OFFICER: Well, when we first started,  
 15 one of the things that I said was that this would not be  
 16 a question-and-answer session. That does not mean that  
 17 questions posed are inappropriate. If you have questions  
 18 you want to pose for the record, any of you, certainly  
 19 you can ask questions as a part of your comments, but we  
 20 will not answer any of your questions this evening.  
 21 008229 MS. HARRISON: Well, what is your schedule for  
 22 answering, for showing us a flight schedule, the  
 23 electronic stations you're going to build? I understand  
 24 there's to be five of those. What time schedule can  
 25 we --

PD-39

PD-10

1 HEARING OFFICER: What I would like you to do,  
 2 ma'am, is if you would like to make additional comments,  
 3 please come up now and make those comments, and if you  
 4 have questions to pose as part of your comments, please  
 5 make those.  
 6 If you could restate your name for us.  
 7 MS. HARRISON: It's Jean Harrison.  
 8 And I would like to know your flights -- where  
 9 we can expect this. I've heard so many different places.  
 10 And I didn't realized it was this close to Taos. I knew  
 11 it was going to be over the Chama area. I'm hearing now  
 12 it's not, it's going to fly -- and I read also that if  
 13 you choose this, you are going to have five electronic  
 14 stations where you simulate actual war flights. I'd like  
 15 to know more about this.  
 16 And I imagine there's a lot of things you won't  
 17 tell us, but maybe you could be as honest with us as you  
 18 could. We all would appreciate it.  
 19 Thank you.  
 20 HEARING OFFICER: Is there anyone, whether you  
 21 have made comments or not, that would like to come  
 22 forward and make comments?  
 23 Yes. 008230  
 24 MS. RYAN: My name is Nancy Ryan, and I live  
 25 out at Tres Orejas, which is not far west of Tres

BI-1

1 Piedras. And I'm trying to build up on the buffalo  
 2 ranch, which has already been discussed.  
 3 There aren't many buffalo ranches left, and  
 4 animals like that are like people, because we are  
 5 animals, too, and I feel -- I heard on the radio, I think  
 6 about a month ago, they went and did military exercises  
 7 in Oakland, California, right in the middle of the city,  
 8 and now we are going to be a war zone here.  
 9 I thank you for the opportunity to say that.  
 10 At least I could speak about what I feel. I have nothing  
 11 to say about what's going on now that our government is  
 12 doing that, I have had nothing to say about this, but I  
 13 have to listen to how sound affects people in Belgrade.  
 14 How will that sound affect communities here?  
 15 Please, listen to us. Listen to the numbers of  
 16 us. You're like us. You respond to sound, I'm sure, the  
 17 way we do, the way the animals do here. When the earth  
 18 starts vibrating, we start vibrating.  
 19 Thank you very much.  
 20 HEARING OFFICER: Is there anyone else who  
 21 would like to come forward and make comments?  
 22 I would like to remind you that at 18:30, 6:30  
 23 this evening, we will have another open house, and at  
 24 19:05 or 7:05 we will begin our second public hearing  
 25 with an introduction, then the Air Force briefing, and

GE-30

GE-6

1 then the comments period for that hearing will start at  
 2 approximately 7:30 a.m.  
 3 So I'd like to ask one more time at this  
 4 hearing if there's anybody that would like to make  
 5 comment, please indicate now.  
 6 Yes, sir. 008231  
 7 MR. BELL: My name is Larry Bell, and I'm from  
 8 Abiquiu, and my comment has more to do with the actual  
 9 structure of this meeting, the way the dynamic is set up.  
 10 It seems like giving a larger time frame is a way of  
 11 dividing and conquering. It seems to me there's more  
 12 strategy that has to be looked at in the way these  
 13 meetings are held that I would call into question.  
 14 It's always -- seems like there is the polished  
 15 brass sitting -- you know big guns sitting behind a  
 16 barricade, and then you have your P.R. point men out here  
 17 trying to outflank the enemy. And I would just like to  
 18 invite whoever it is that's writing the manuals to do a  
 19 little sensitivity training, instead of having it  
 20 confrontational, or trying to outflank.  
 21 Allowing three minutes for public discourse is  
 22 really offensive to me, it really is, and I think it's a  
 23 way of muzzling the opposition, and I think it's designed  
 24 more tactically than it is for open dialogue. I think if  
 25 you would take off your uniforms and come out from behind

1 the desk and rub elbows with us common folks, you might  
 2 hear. It might be more honest interaction.  
 3 And I just am offended by the fact it's broken  
 4 up into such a big time frame that you don't get a  
 5 collective response to a very overpowering and imbalanced  
 6 event that's happening in our community.  
 7 Thank you.  
 8 MR. SLOOK: I do have a question for you.  
 9 HEARING OFFICER: Could you tell us your name,  
 10 sir? **008232**  
 11 MR. SLOOK: My name is Ed Slook.  
 12 And the question is: Basically, I'd like to  
 13 get some copies of what you have in that camera for this  
 14 community, and for the archives for the Library of  
 15 Congress, so that none of these comments are lost  
 16 strictly to the military.  
 17 And since you can't answer me on that, well  
 18 then, we are going to keep the pressure on 'til we get a  
 19 copy of it.  
 20 Thank you.  
 21 HEARING OFFICER: Is there anyone else who  
 22 would like to come forward and make comments? **008233**  
 23 MR. CALVERT: My name is Maury Calvert, and  
 24 I'd like to read you an excerpt from a letter that I  
 25 wrote as an editorial to the Taos News.

GE-36

1 (Reading) On February 12, 1998, I received a  
 2 letter from Tinker Air Force base in Oklahoma stating  
 3 that the B-52 aircraft operating within the lateral and  
 4 vertical confines of the low-altitude training route did  
 5 not violate any operating instructions; however,  
 6 effective immediately the Tenth Flight Test Squadron has  
 7 agreed to halt all training operations over Taos, Blue  
 8 Lake Wilderness, and Angel Fire areas. These areas will  
 9 no longer be flown over by any aircraft owned by the  
 10 Tenth F -- flights, "flts."  
 11 I have photographs to refute their denial that  
 12 it was operating within the vertical and horizontal  
 13 confines. My photographs were sent to the flight test  
 14 squadron.  
 15 On January 29th at the Realistic Bombing  
 16 Training Initiative scoping meeting held in Taos, I  
 17 questioned the pilots of the airplane who had flown this  
 18 training route, and they had no information or  
 19 familiarity with this area. I was not reassured by their  
 20 knowledge of the area and insensitivity to the citizens  
 21 concerned.  
 22 During the summer of 1992 this route was  
 23 frequently utilized by B-1, F-4G and F-22 aircraft. Many  
 24 phone calls and complaints yielded only vague information  
 25 and denial of any ability to track the movement of

1 aircraft in transit. Seemingly they can drop in any  
 2 training airspace and independently conduct exercises at  
 3 the pilot's discretion. If this is the case, it would  
 4 account for the numerous flyovers which have occurred at  
 5 Taos Ski Valley, the low-level flights over the ridges of  
 6 Gavalon Canyon which I have observed.  
 7 Has anyone in Taos ever received a satisfactory  
 8 response or acknowledgement of any complaints which have  
 9 been filed with the appropriate authorities? The  
 10 question I would like to pose to you is: Who is the  
 11 enforcement agency that I could contact when there are  
 12 low-level flyovers on this existing training route and  
 13 other areas. I've seen the pilots' heads in aircraft  
 14 above Gavalon Canyon, and they have flown so close to the  
 15 ridge that, you know, I could identify two different  
 16 heads within the aircraft. That's far too low for my  
 17 comfort level, and I would like to know from you who I  
 18 could contact when I observe these low-level, dangerous  
 19 situations.  
 20 If you could respond to me, I'm at P.O. Box  
 21 2364, Taos.  
 22 Thank you very much, sir.  
 23 HEARING OFFICER: Is there anyone else who  
 24 would like to come forward and make a comment? **008234**  
 25 MR. THOMAS: My name is Frank Thomas. I am a

AF-8

AF-37

1 local area pilot. I've only been here several years,  
 2 and I'm somewhat discouraged by what I've heard.  
 3 I fly regularly from Taos to Durango, which  
 4 crosses the line of flight of the Brazos Pass. I spoke  
 5 to someone earlier today and I was assured if I called  
 6 the FAA I would have plenty of notice about when  
 7 these flights would occur. From what I'm hearing now,  
 8 I'm not so sure I could depend on that.  
 9 My little airplane would be a bug on their  
 10 windshield if they hit me.  
 11 And I do want to make it clear that if this  
 12 does occur, the Air Force has to let us know when they  
 13 are taking that route.  
 14 Thank you.  
 15 HEARING OFFICER: Is there anyone else who  
 16 would like to make comments?  
 17 (Note: No response.)  
 18 Ladies and gentlemen, that concludes this  
 19 public hearing. Thank you for your participation and  
 20 input. Please remember the public comment period will  
 21 extend through June 16, 1999.  
 22 This hearing is adjourned.  
 23 (Note: Proceedings adjourned at 11:40 a.m.)  
 24  
 25

AF-48

1 this individual first.

2 And that is Cathleen Michaels. 008235

3 MS. MICHAELS: Good evening. Do I face this

4 way?

5 My name is Corn Bringer, and I'm a

6 representative of Media Council. And it's a coalition of

7 Native American representatives who are professionals in

8 the media industry. And we are from all the nations

9 across the country in North America, and our concern

10 is -- and a representative of also Taos Pueblo -- a

11 violation of the sacred skies, and the infringement that

12 it brings to us during our ceremonies. Every day is a

13 ceremony to us, and it's just not an option to have these

14 bombers training here.

15 I am aware that your program in Colorado

16 Springs probably offers you the same terrain, that you

17 really don't need Taos, and it's not advisable.

18 Karmically, it's just not correct. Thank you.

19 And that's as constructive as it can get.

20 HEARING OFFICER: There were a couple of other

21 remarks, I wanted to make. You may have noticed that the

22 court reporter will record verbatim everything that's

23 said tonight. The transcript of these proceedings will

24 become a part of the record of the hearings and will be

25 included in the Final EIS. The court reporter will be

CU-4

1 able to make a complete record only if she can hear and

2 understand what you say, so speak clearly and slowly. In

3 addition, if you have a written statement, the court

4 reporter would appreciate you handing it to her so that

5 any names, places, references to scientific terms, or

6 other data can be recorded accurately.

7 Finally, I would like to remind you to limit

8 your comments to the Draft EIS. That is the purpose of

9 this public comment period.

10 If you would like to turn in written comments

11 at any time, either during the hearing or afterwards,

12 there is a box in the back of the room where you can

13 place those comments.

14 And I'd like to remind you of the time

15 constraints we are operating under, and I'd like to call

16 on the first individual Eric Kuerschner.

17 And at all of the previous hearings I butchered

18 several individuals' names, so please forgive me if I do

19 not pronounce it correctly. 008236

20 MR. KUERSCHNER: You did fine. My name can be

21 butchered, but not the EIS.

22 HEARING OFFICER: I'll be calling Clifton Bain

23 after this.

24 MR. KUERSCHNER: My name is Eric Kuerschner. I

25 am a resident of Taos and also an economist, and I had

1 the privilege of working on what I believe was the team

2 that did the first Environmental Impact Statement in the

3 United States, Skid Morse & Merrill (phonetic). I joined

4 them after they completed the Baltimore study on the

5 (inaudible) freeway.

6 I have also worked with Simmer, Gonzales &

7 Fresca (phonetic).

8 I'm sorry. I also worked for Gonzales, Simmer

9 \* Fresca, can who got the 1991 AIA award.

10 I wish to address only the economic components

11 of the Draft EIS, specifically for pages 109 through 113,

12 and then Appendix I.

13 I realize this is both a draft, and NEPA is a

14 nonbinding statement, but the biggest point I wish to

15 make is I totally believe in the process of economics,

16 the science of choice, and all these subjective

17 statements that you've heard can be quantified and put in

18 the hat of a positive or negative. And it's only through

19 this process that I think we will come to some rational

20 conclusion of, A, whether any of the alternatives really

21 improve the situation; and then, B, which one of those

22 is really the best, by noticing how much it exceeds that

23 situation.

24 Okay. The other point I wish to make is that

25 all costs are subjective. And this is what's really

1 difficult to relate and is the major flaw in this study.

2 For example, you can't look at a Mark McGuire 70th home

3 run ball and notice Rawlings is on it, and call up the

4 company and ask for the price of that.

5 One minute? Okay. You'll get a written

6 statement from me.

7 AUDIENCE MEMBER: I will happily concede three

8 minutes of my time to the gentleman speaking. Is that

9 possible?

10 HEARING EXAMINER: Well, as I said, I'm not

11 going to stop anybody, so this gentleman can talk for the

12 next two hours, if that is what you want.

13 MR. KUERSCHNER: Thank you, both audience and

14 judge.

15 I have had the opportunity, if I have a little

16 bit more time, I'm not going to be -- I'll be quick, but

17 not quite as brief. No. 1, I want to thank you, both the

18 colonel and the judge and the consultants, the staff that

19 was brought with -- I mean, this is the right way to do

20 things. I have made some contacts with both the

21 consultants and the person that did the selection

22 process, and I have offered -- you know, we are going to

23 work this thing out to the best interest of both the Air

24 Force and the Town of Taos. I can assure you that

25 Senator Dominici is also aware of this problem.

SE-2

1 Basically, his concerns are exactly as mine. I intend to  
2 cooperate fully with him and assist him in what  
3 economists exist that are capable of doing non-market  
4 evaluations, because all these subjective causes that  
5 have been mentioned can be quantified. This is the  
6 reason they got me here, because I affected to be talking  
7 about methodology and whether we were talking about \$15  
8 million costs or \$25 million costs.

9 And I'm -- you know, what can I say when I see  
10 those costs are negligible? There's a really serious  
11 flaw coming in. And I think economics is the tool to  
12 help put this in a rational perspective.

13 The only place that I noticed that there was  
14 any real economic analysis was in the case of where you  
15 discussed income as being an impact. In my opinion, while  
16 that is a real methodology, the actual methodology used  
17 is flawed. It actually overstates the impact because you  
18 can't -- if a person is employed in Texas putting gas in  
19 a plane and he is no longer required, you can't consider  
20 that a loss to Texas any more than you can consider the  
21 guy putting the gas in New Mexico as a gain. Each of  
22 those guys, if they are paid their market value, will go  
23 to their next best alternative, and the effect should be  
24 trivial. What is not trivial is these non-market  
25 evaluations.

BR-5

1 As you know, the FAA owns the airspace above  
2 300 feet, so there's no real way, just like the Mark  
3 McGuire ball, you can't look and say is it \$10 new or \$5  
4 used. If it's a used baseball, we are talking about a \$5  
5 item. We know it went through the market. While the  
6 value is subjective, it's real in every sense of the  
7 word. This is a million-dollar item you are talking  
8 about.

9 And I noticed this over and over, when  
10 engineers get involved in evaluating studies like a Van  
11 Gogh painting, you can say you are looking 75 cents worth  
12 of canvas, say the paint is, say, 30 cents worth of  
13 paint, and say 90 cent item. You run it through  
14 Christie's and find you are talking about a \$45 million  
15 item.

16 I am pointing out this is the magnitude of the  
17 mistakes being made, and I think if we all work together,  
18 we have the same interest at heart, counting all the  
19 beans, but we have to know what a bean is and know which  
20 hat to put them in.

21 I will more than help you select competent  
22 people that are able to do this.

23 Two types of studies, since if you go to an  
24 engineering approach that I would recommend you look  
25 at -- contingent evaluation is one. There I recommend

1 Ron Mendelson (phonetic) in Vail. He's worked on the  
2 Valdiz studies, using that process of going around and  
3 asking people what -- Am I done?

4 -- by asking people what would they be willing  
5 to throw into the hat to not have an oil spill.

6 And he came up that people putting their money  
7 where their mouth is were willing to throw \$30 into the  
8 hat. Multiplying with a number of people, he came up  
9 with the \$4 billion settlement in Valdiz.

10 This is the type of error in analysis that we  
11 are talking about.

12 Another way of doing it is --

13 AUDIENCE MEMBER: Next speaker, please.

14 MR. KUERSCHNER: Thank you.

15 HEARING OFFICER: Clifton Bain then Marcy  
16 Pierson. 008237

17 MR. BAIN: My name is Clifton Bain. I'm a  
18 resident of Arroyo Hondo just north of here.

19 We have all experienced military overflights.  
20 They happen where I live irregularly. Quite frequently,  
21 if you count through the whole year, but nothing like  
22 what you have planned for the route that runs through Rio  
23 Arriba, Taos County, Colfax County, Guadalupe County and  
24 Harding County.

25 What you have planned is a highway, a highway

AO-55

1 for B-52s and B-1 bombers flying at 2- to 500 feet, with  
2 incident sound levels of 117 decibels, while your chart,  
3 which is supposed to appease us with an average of 64  
4 decibels, is dishonest.

5 (Note: Applause.)

6 Even your analysis tells us we are going to  
7 experience some 1800 percent increase in flights for this  
8 area. And that impact is going to be quite concentrated  
9 if you are within anywhere close to these areas that we  
10 treasure as our wilderness.

LU-2  
ED-10

11 You say there are five communities that are  
12 overflowed by this route, and there are scores of  
13 communities. They may not be communities like Abilene,  
14 but they are communities that are not resigned or  
15 accustomed to ever hearing this kind of destruction of  
16 our tranquility, not to say the impact on the wildlife,  
17 the impact on our economy.

BR-4

18 We struggle for a living up here, and it's a  
19 pretty fragile economic system. And it's based on  
20 visitors, it's based on people who choose to live here at  
21 a great sacrifice in terms of economic opportunity. And  
22 they do it for one reason: They do it because we want  
23 to enjoy our contact with the earth, we want to know  
24 ourselves in that way.

25 And you're going to take that from us. And

TY

1 we're going to do everything in our power to stop that  
 2 from happening.  
 3 (Note: Applause.)  
 4 HEARING OFFICER: Marcy Pierson, it looks like,  
 5 then I'll be calling on David Kruskil. 008238  
 6 MS. PIERSON: Cliff just spoke for me. I'm  
 7 going to let that be my record.  
 8 HEARING OFFICER: You're Marcy?  
 9 David Kruskil, then Ron Gardiner.  
 10 Yes. 008239  
 11 MR. KRUSKIL: My name is Dave Kruskil. I live  
 12 up about five miles south of that strip that you're  
 13 suggesting, and I work in that area quite a bit. I know  
 14 a lot of people in that area, and I deliver gas to them.  
 15 I'm aware that in times of war they use these  
 16 low flights over people with the specific idea of  
 17 demoralizing and destabilizing those cultures, and I  
 18 think that would happen here. I know that would happen  
 19 here.  
 20 I'd like to reiterate what Les said. This is  
 21 not an area where people are going to habituate. These  
 22 people didn't decide to live around an airport or Air  
 23 Force base, they moved here because they wanted to live  
 24 in nature with peace and quiet. They didn't want that.  
 25 I wouldn't have lived here if this was going on

BR-1

1 or if I knew this was going to go on. I wouldn't have  
 2 thought of living here.  
 3 And I also thought that it was deceptive, your  
 4 playing with figures, with decibels, and people barely  
 5 know what decibels are, but then to throw these other  
 6 terms on is quite confusing.  
 7 I felt like kind of like you are saying you can  
 8 come and hit me with a baseball bat and say, well, since  
 9 there was five hours you didn't hit me with a baseball  
 10 bat, then you were the just caressing me.  
 11 (Note: Applause.)  
 12 And I can tell you that people are struggling  
 13 here, and that amount of money you're talking about to do  
 14 whatever you have to do is not that much when you think  
 15 of the loss to the community which lives on tourists,  
 16 basically.  
 17 I find this a violent assault on the community  
 18 I think it's very serious.  
 19 (Note: Applause.)  
 20 And it's a very beautiful place, and a very  
 21 unique place, and people are very excited and passionate  
 22 about living here. That's one wonderful thing about it,  
 23 among others. And I can't imagine anyone living here for  
 24 a week's time and suggesting doing to this area what  
 25 you're suggesting doing to it.

BI-5

1 I can't imagine that.  
 2 So thank you.  
 3 (Note: Applause.)  
 4 HEARING OFFICER: Ron Gardiner, and then Gail  
 5 Viola. 008240  
 6 MR. GARDINER: Judge and my neighbors, good  
 7 evening. My name is Ron Gardiner. I represent the Rio  
 8 Grande River Restoration Nonprofit Group. I'm a  
 9 long-time field biologist here in Northern New Mexico.  
 10 I've had the privilege to conduct many of the field  
 11 surveys of the birds of prey along the Rio Grande Wild  
 12 and Scenic River corridor.  
 13 As Alternate D exists, it's pretty much  
 14 a tour of all the sensitive wildlife breeding areas in  
 15 Northern New Mexico. You probably couldn't hit many more  
 16 sensitive areas along the Southern Colorado/Northern New  
 17 Mexico greater bioregion than Alternative D. With no  
 18 doubt Alternative D will have adverse impacts on birds of  
 19 prey, birds that you yourself in the branch of service  
 20 have taken the design from, and taken a lesson from in  
 21 learning how to fly.  
 22 Yes, people live here for the purposes of  
 23 being connected to Northern New Mexico, and the deep part  
 24 of that is its wildness.  
 25 One of the aspects of wildness here is it is

BI-5

1 just one of the few places that harbors this kind of  
 2 landscape still yet in the southwest region.  
 3 Alternative D starts on the Rio Chama Wild and  
 4 Scenic Wilderness area over peregrine falcon areas that  
 5 are protected under the Threatened and Endangered Species  
 6 Act. It goes on a tour of antelope and elk habitat on  
 7 the way to San Antonio Mountain, and crosses the Wild and  
 8 Scenic River corridor around Ute Mountain in Sunshine  
 9 Valley. That area is probably one of the highest density  
 10 areas in the southwest left. I emphasize "left."  
 11 I have conducted surveys in this area for about  
 12 13 years and I have recorded behavior and nesting  
 13 productivity. I can assure you that the jets that used  
 14 to fly across the corridor had impacts, and they are  
 15 recorded in the BLM documents here in the Bird of Prey  
 16 Monitor Survey at the local Taos Resource Area.  
 17 Under the multiple use management of BLM and  
 18 the Forest Service there are special management scenarios  
 19 such as wilderness and threatened/endangered species  
 20 breeding areas.  
 21 Alternative D stands at counter purposes of  
 22 managing federal lands and also stands at counter  
 23 purposes of protecting public resources.  
 24 And yes, people do live here, make sacrifices  
 25 so they can have this in their life. Without this in

1 their life, it would be quite a void.  
 2 So thank you very much. Please take --  
 3 (Note: Applause.)  
 4 MS. VIOLA: I have nothing to say --  
 5 HEARING OFFICER: Gail Viola.  
 6 MS. VIOLA: Yes. -- beyond what he has. No  
 7 one could improve on that.  
 8 HEARING OFFICER: Robert Hughes and then  
 9 Carilene Newby.  
 10 Robert Hughes.  
 11 MR. HUGHES: I'll give my time to the next  
 12 person.  
 13 HEARING OFFICER: And Carilene Newby. After  
 14 Carilene Newby I'll be calling on Dean Fulver. **008241**  
 15 **TY** MS. NEWBY: My name as Carilene Newby. I  
 16 moved to Taos four months ago because it is peaceful,  
 17 undeveloped, has less versus more, technologically  
 18 speaking, and has miles of peaceful undeveloped  
 19 surrounding wilderness, and because my maternal  
 20 grandparents are from here.  
 21 For many years now my major source of pleasure,  
 22 inspiration, and joy has been to spend time in the  
 23 wilderness because of the loving acceptance and wisdom it  
 24 offers me. Trees, animals, rocks, open space, rivers,  
 25 mountains, air and sun have all contributed to years of

1 healing for me.  
 2 I speak out against low-flying, ear-splitting  
 3 airplane noise which shatters the rare peace Taos and its  
 4 surrounding wilderness have to offer.  
 5 There are many like myself who wish to be far  
 6 away from much of modern technology with its noise  
 7 pollution. That is why we choose to live here. I have  
 8 visualized this area free of intolerable airplane noise,  
 9 and my daily prayers are for love, peace, and harmony to  
 10 be present here and globally.  
 11 Thank you.  
 12 HEARING OFFICER: Dean Pulver.  
 13 MR. PULVER: I'll pass my time on to the next  
 14 person.  
 15 HEARING OFFICER: Antonio Trujillo, and then  
 16 after that Manuela Maeder. **008242**  
 17 MR. TRUJILLO: My name is Antonio Trujillo.  
 18 I'm from Questa, New Mexico.  
 19 It's not the first time a superior force has  
 20 come into New Mexico with promises of not affecting a  
 21 pepper or an onion or anything like that. Interestingly  
 22 enough, they were always based in Texas and La Junta,  
 23 Colorado.  
 24 The things that I remember are that a lot of  
 25 people died. Things were changed to this day. A lot of

**PD-4**

1 the national forests or the land around our communities  
 2 were nationalized. Large areas were turned into military  
 3 bases in later years. They are still there. They were  
 4 blasted 'til their aquifers are no good anymore.  
 5 I don't see why those areas, they have the same  
 6 altitudes, and the mountains are just as high, and they  
 7 are already affected and off limits to most of the  
 8 population.  
 9 This is just a ploy to get towards more areas  
 10 and affect more of the population and cause more distress  
 11 so that people in power can have more to be able to have  
 12 their thumb over.  
 13 HEARING OFFICER: Manuela Maeder, then after  
 14 that Christina Sporrong. **008243**  
 15 MS. MAEDER: Hi. My name is Manuela Maeder.  
 16 I work in Taos County as a massage therapist, and I want  
 17 to speak about different factors. For one, I work I in  
 18 tourism, like so many other people here do. Anything  
 19 that's going to have an impact on tourism here is going  
 20 on put a lot of people out of work. It's already hard  
 21 enough to make a living here, and tourism is definitely  
 22 one thing that helps us out in this area.  
 23 New Mexico is already one of the poorer states  
 24 in the country. There's a lot of people here who are  
 25 unemployed and a lot of people on welfare, and I don't

**BR-4**

1 think it would be wise to do anything that would increase  
 2 the struggle in this state.  
 3 New Mexico already has been the target for many  
 4 military actions. We had the first atomic bomb dropped  
 5 here, we have Los Alamos. We have a lot of different  
 6 military things here. The last thing we need is to be  
 7 the target of another military project.  
 8 (Note: Applause.)  
 9 The other thing I want to address, speaking as  
 10 a massage therapist, I'm working in the healing  
 11 profession, and New Mexico is probably one of the most  
 12 important places as far as alternative medicine is  
 13 concerned. There's a lot of massage schools here,  
 14 acupuncture schools, traditional Native American healers,  
 15 and this area has attracted a lot of healing people  
 16 because there is a special spiritual energy about this  
 17 place that I do not like to see -- that I don't like to  
 18 see destroyed.  
 19 So I would like to invite everybody from the  
 20 Air Force to come to New Mexico and to experience the  
 21 relaxing and the healing parts of New Mexico, and to  
 22 leave your airplanes at home.  
 23 Thank you.  
 24 AUDIENCE MEMBER: Christina Sporrong made a  
 25 written statement, will pass her time to the next person.

1 HEARING OFFICER: Dwarka Bonner. Then I'll be  
 2 calling next Tanya Valentine. **008244**  
 3 MR. BONNER: Good evening. That is D-w-a-r-k-a  
 4 Bonner.  
 5 And it's something I am not well prepared to  
 6 do, to get up and speak now. I think many people in this  
 7 room must be experiencing that, and I'd like to thank  
 8 everybody who has gotten up to speak. I think it's  
 9 really important, even though it's intimidating, and  
 10 especially so because I feel that I fear that it's really  
 11 not significant to these proceedings what I may have to  
 12 say. I say that because what little opportunity I've had  
 13 to look over the materials already, I've seen that it  
 14 doesn't seem -- there's some standards can be set for how  
 15 much disruption in one's life is acceptable, and then we  
 16 can be told: Well, here's the Environmental Impact  
 17 Statement, and this impact to your lives, this impact to  
 18 the lives of animals, people, and plants is acceptable,  
 19 And whatever we may feel about it really doesn't seem to  
 20 matter at that point, which is so unfortunate, because  
 21 the quality of life here is everything to all of the  
 22 beings living here in this region.  
 23 And -- I don't know what to say. I hope that  
 24 somebody will look at this statement, and the  
 25 Environmental Impact Statement and consider -- you know,

BR-7

1 we all live in this country, by and large overall with an  
 2 elevated level of stress. The stress of noise,  
 3 background noise, violence, military violence around the  
 4 world, so much stress that is somehow accepted as an  
 5 acceptable standard that moreover can be -- How do I go  
 6 on? This standard -- I don't believe the standards of  
 7 this impact statement are appropriate. They are not a  
 8 high enough standard.  
 9 (Note: Applause.)  
 10 HEARING OFFICER: Tanya Valentine. Then I'll  
 11 be calling on Dallas McClemons. **008245**  
 12 MS. VALENTINE: I'm Tanya Valentine. I live  
 13 in Taos. I hadn't planned to talk.  
 14 So first I wanted to say, statistically  
 15 speaking if you know what someone wants to hear,  
 16 inevitably somewhere there is a statistic that will back  
 17 that up. And I think that's what your impact statement  
 18 has done. In that twisted little pamphlet is a statement  
 19 that says that one of the species affected is the  
 20 peregrine falcon. That is on the federal endangered  
 21 list. It's also on the state endangered list. And one  
 22 day I think I would like to have a child, and the thing I  
 23 would dread to have happen is to have that little girl  
 24 come up to me and say, "Mommy, what did a peregrine  
 25 falcon used to look like?"

TY

1 I don't want to have to open a book and say,  
 2 "I'm sorry, I can't show you, but here's a picture,"  
 3 because the Air Force of the United States of America  
 4 made a bad decision.  
 5 HEARING OFFICER: After Dallas McClemons, I'll  
 6 be calling on W. L. Welsh. **008246**  
 7 MR. McCLEMONS: Good evening. My name is  
 8 Dallas McClemons. I live in Upper North Colonias, just  
 9 north of Taos. I run a little horse operation. Prior to  
 10 the horses I was 37 years with the Federal Aviation  
 11 Administration in airspace and procedures.  
 12 I, too, find that this report is somewhat  
 13 flawed. Mr. Bain, who was up here earlier, spoke about  
 14 the single event noise level versus the DNL, and I find  
 15 it very difficult to ascertain how you can put a DNL,  
 16 which is a daylight/nighttime noise average, on a route  
 17 that basically has single-event noise levels throughout  
 18 the daytime.  
 19 DNL originally was set up to use at airports,  
 20 major airports where there was an established noise  
 21 pattern. And they would make a footprint of this noise  
 22 pattern and subsequently put monitors all over the place,  
 23 and where there was great impacts of noise the airport  
 24 authority bought up the houses and the land.  
 25 I see no proposal for this along this route

BR-1

1 using DNL.  
 2 Another deception in the report that was very  
 3 obvious to me, it's on page 4-18, and it's stated that,  
 4 reference wake turbulence -- and I think the general  
 5 population probably doesn't understand wake turbulence,  
 6 but as a pilot and somebody that would like to fly across  
 7 these areas, wake turbulence is a very big factor.  
 8 The report says that at cruising altitudes wake  
 9 turbulence can cause handling difficulties for following  
 10 aircraft. Especially when a small aircraft trails a  
 11 larger, the FAA states or dictate the safe following  
 12 distances and procedures for landing and take-off behind  
 13 these airplanes.  
 14 Ladies and gentlemen, small aircraft behind a  
 15 "BuF," which is a B-52, in wake turbulence is five miles  
 16 at 2,000 feet.  
 17 Thank you for the time.  
 18 So I think that is a misconception.  
 19 And after reviewing the summaries of the  
 20 comparisons of Alternative D, which is the Mt. Dora, I  
 21 find it has the most environmental impacts of any one of  
 22 the proposals.  
 23 It would appear this proposal should be  
 24 eliminated without further consideration.  
 25 (Note: Applause.)

AF-49

GE-3

1 We call these proposals, when I was with the  
2 FAA, throwaways. I would urge you to throw it out as  
3 soon as possible, save our taxpayers the time and money  
4 of these dog-and-pony shows.

5 (Note: Applause.)

6 HEARING OFFICER: W.L. Welsh. Then I'll be  
7 calling on Trudy Healy. 008247

8 MR. WELSH: My name is Lowbetz Welsh, and I  
9 just moved here from Gallup, New Mexico, where a stealth  
10 bomber crashed into the Zuni Mountains three years ago.  
11 So I think the environmental impact here is fairly  
12 serious.

13 The other thing is that the noise level of the  
14 bombing flights, it's going to cause a lot of stress with  
15 everybody, because noise is stress, and this kind of  
16 stress is going to be pretty severe.

17 But I think the plan is a very poorly  
18 worked-out plan on the part of the Air Force, in the  
19 sense that the environment and the terrain is really very  
20 unpredictable. The winds here can be quite terrible and  
21 quite unpredictable, and it's going to create some loss  
22 of life for those doing these bomber training flights.

23 I don't have a lot more to say, but I think  
24 it's a desecration of the sacred mountains, and I think  
25 that in itself is probably enough to make everyone

AO-18

PD-45

AO-6

1 realize it's not the right thing.

2 But keep in mind that three years ago a stealth  
3 bomber, which is supposed to be a highly -- a real  
4 high-tech bomber, did crash in the Zuni Mountains. And  
5 it was all covered up. A short little notice in the  
6 Gallup Independent about it, but nothing was ever heard  
7 about that afterwards.

8 So I hope that this bombing plan will not  
9 proceed any further, that you will find some other area  
10 that's more suitable to make the noise.

11 Thank you.

12 HEARING OFFICER: Ms. Healy, then after that  
13 Roberta Flowers. 008248

14 MS. HEALY: Yes. My name is Trudy Valerio  
15 Healy, and I live right here in Ranchos de Taos.

TY

16 My voice is as simple as the sound of the  
17 trickle of the acequia. I'm a daughter of a mayordomo of  
18 two acequias in Ranchos De Taos. When I was small and  
19 fishing, my dad was leaning on his shovel early in the  
20 morning, silhouetted against a clear, quiet New Mexico  
21 sky. He said, "Jita, when you grow up you won't impress  
22 me if you drive up in a Cadillac with a mink coat,  
23 because your only wealth is this." He points to the  
24 water, he points to the sky, as we quietly listen to the  
25 trickling sounds of the water.

1 You must know we will not give up this wealth.

2 (Note: Applause.)

3 HEARING OFFICER: Roberta Flowers. After  
4 Roberta Flowers, Edmund Healy.

5 MR. HEALY: I'll concede my time. 008249

6 MS. FLOWERS: Judge, please be advised this is  
7 not barren desert land but a thriving community. Most of  
8 our income is from tourists who come from all over the  
9 United States and the world to enjoy our peaceful valley,  
10 fresh clean air, year-round sunshine, and to visit, among  
11 other attractions, over 100 art galleries and quality  
12 museums. Taos has been an artists' community since 1898,  
13 with more artists in residence than are in Paris, France.

14 Two, Taos Pueblo. The Tewa tribe of Native  
15 Americans have been in residence here for centuries.  
16 Their living structures, as are many here in Taos,  
17 including my own, are of adobe construction.  
18 Subjected to the stress of vibrations of large low-flying  
19 bombers, these adobe structures will crumble.

20 There is also an AAA class ski resort, Taos  
21 Ski Valley. I'm sure you are aware of the recent tragedy  
22 that occurred in Italy concerning a low-flying plane.  
23 True, it was another type plane, but once the corridor is  
24 open it will be available to other types of planes, I  
25 have no doubt.

CU-1

AO-13

1 There's an old Mid-Eastern expression which is  
2 applicable today: Do not allow the nose of a camel into  
3 your tent, because the body will soon follow.

4 Since the United States is not in a declared  
5 state of war with a foreign power, or in immediate danger  
6 of invasion by any such foreign power, your proposed  
7 operation does not supersede our rights as U.S. citizens.

8 (Note: Applause.)

9 I am aware that your allegiance is to other  
10 superior officers in the U.S. Air Force, but other higher  
11 powers are in place. For one, the U.S. Senate. For  
12 another, the U.S. judicial system.

13 Under the U.S. Constitution every U.S. citizen  
14 is guaranteed the right to life, liberty, and the pursuit  
15 of happiness. Your proposed operation will infringe upon  
16 all of these rights. Our source of income will be  
17 destroyed because tourists will not visit here in a war  
18 zone of your making, our homes will be destroyed, and our  
19 peaceful way of living will not be possible.

BR-4

20 It was my understanding the purpose of the U.S.  
21 Air Force is to protect us from foreign invasion. I  
22 assure you no foreign invader could do more damage.

23 (Note: Applause.)

24 HEARING OFFICER: Mr. Healy?  
25 MR. HEALY: I'm conceding my time and position

1 to the Taos County Planner who, according your rules,  
2 should have already been called.

3 HEARING OFFICER: David DiCicco. 008250

4 MR. DICICCO: My name is David DiCicco. I am  
5 the planning director for Taos County -- Still.

6 Taos County for the last four plus years has  
7 been working on a comprehensive plan involving  
8 neighborhood associations throughout the county. We  
9 currently have 33 active neighborhood associations, three  
10 associations on deck to become recognized and present  
11 their plans. Twenty three neighborhood associations have  
12 adopted their plans to the Taos County Comprehensive

BR-7

13 Plan. All expressed a desire to maintain the  
14 rural/agricultural quality of life here in Taos County.

15 Four of the neighborhood associations currently  
16 in the comprehensive plan will be directly flown over,  
17 and six others are within a few miles of the path.

BR-1

18 I also want to talk about the inappropriateness  
19 of using the average DNL numbers for sound levels in the  
20 Environmental Impact Statement.

21 I was the -- I taught acoustic at Arizona  
22 State, at the university there for five years, and I do  
23 have some figures on acoustic noise that may be  
24 interesting to you.

25 There are -- I first want to let you know that

1 acoustic noise sound levels, decibel levels, are a  
2 logarithmic progression. In other words, a 120-decibel  
3 noise is not twice as loud as a 60-decibel. A 70-decibel  
4 is twice as loud as 60-decibel noise.

5 The long term exposure to noises of 80 decibels  
6 or more causes permanent hearing loss. Short-term  
7 exposure to 100 decibels cause permanent hearing loss.  
8 The pain threshold is 110 decibels. At 120 decibels  
9 instantaneous hearing loss, permanent hearing loss  
10 occurs.

CU-1

11 When you state in the Environmental Impact  
12 Statement that no vibration from low flyovers will effect  
13 historic sites, I want you to remember that all sound is  
14 vibration. All structures, animals, and biological  
15 entities are subject to the effects of vibration.

16 If efficiency is your true goal, you have the  
17 technology to use any terrain to simulate any other  
18 terrain, or even just use simulators.

19 Thank you.

20 (Note: Applause.)

21 THE COURT: Grove Burnett. After that Seth  
22 Rolland. 008251

23 MR. BURNETT: Good evening again. I'm Grove  
24 Burnett. I'm an attorney and director of The Western  
25 Environmental Law Center, a non-profit public action

1 environmental law firm with offices in New Mexico and  
2 Oregon.

3 We have an office here in Taos, our southwest  
4 office, with six lawyers. We all live here in Taos. We  
5 represent citizen groups, environmental organizations,  
6 municipal and county governments and Indian tribes on a  
7 wide range of environmental issues across the western  
8 United States.

9 Our office represents a coalition of municipal  
10 and county governments that are opposing this project.

11 This coalition includes the county commissions  
12 of Taos, Rio Arriba, Colfax, the Town of Taos, the Town  
13 of Angel Fire, Red River, Eagle Nest, and the Angel Fire  
14 resort.

15 All of these governmental agencies, including,  
16 I might add, also the Pueblos of Taos and Picuris Pueblo,  
17 have banded together to oppose this dreadful project.

18 It is clearly ill conceived and flawed.

19 And let's be clear about what this project is.  
20 Is it not a new proposal you're advancing here. You are  
21 already conducting this flight training in Utah and  
22 Wyoming. It's important to understand that these flights  
23 originate from Texas and Louisiana and that you're  
24 currently having to fly to Utah and Wyoming to do this  
25 training. This proposal really is about one of

1 convenience for the Air Force of relocating what you're  
2 already doing to Northern New Mexico in order to save one  
3 hour of flying time. That's what this is really all  
4 about, and nothing more. There are no issues of national  
5 security involved here, because no one is proposing to  
6 cancel this project in any way.

7 We are saying this is not the appropriate place  
8 to do it. There is clearly nothing that can be more  
9 antithetical or repugnant to the way of life here in this  
10 valley and these mountains than your proposal to have  
11 B-52s thunder through our skies.

BR-7

12 We intend to continue our opposition, to  
13 coalition against this project, including taking the Air  
14 Force to court, if necessary, to challenge it.

15 (Note: Applause.)

16 It's clear that we are united in our  
17 opposition. Every single town, every village, every  
18 town, every citizen has said no to the bombers in  
19 Northern New Mexico.

AF-50

20 We request, finally, an extension of the  
21 comment period until July 15 in which to submit comments  
22 for the public record. You spent a whole year preparing  
23 a Draft EIS and then put it out to the public -- in some  
24 cases late, I might add; some people haven't even  
25 received the Draft EIS yet -- and then give us less than

1 90 days to comment on it. It is only fair that we be  
 2 given an additional 30 days to July 15 to comment.  
 3 Thank you very much.  
 4 (Note: Applause.)  
 5 HEARING OFFICER: Seth Rolland.  
 6 AUDIENCE MEMBER: He's not here anymore.  
 7 HEARING OFFICER: Lyra Geroy.  
 8 Next I'll be calling on Arthur Schiller. 008252  
 9 MS. GEROY: My name is Lyra Geroy, and I've  
 10 lived in Taos County for 13 years.  
 11 And I feel like it's our right as a citizen of  
 12 this country, and our duty to stand up and speak out  
 13 against atrocities that are about to happen when we see  
 14 this happening, and I feel like this initiative would  
 15 indeed come into that category.  
 16 I feel like your impact statement doesn't have  
 17 any real depth to it, doesn't really address the issues  
 18 here.  
 19 We have a precious environment here in Northern  
 20 New Mexico, one of the few precious environments left on  
 21 the planet and in this hemisphere.  
 22 People come from all over the world. And why  
 23 do they come here? They come to experience something  
 24 unique, beautiful, a healing place where they can have a  
 25 peaceful reunion with the natural world that they can't

TY

1 find in very many places left anywhere.  
 2 What you're proposing would irrevocably damage  
 3 those opportunities for all of those people to experience  
 4 something very precious in their lives, and very  
 5 important.  
 6 As such it's so important for us to stop it and  
 7 choose another alternative.  
 8 The only acceptable alternative is Alternative  
 9 A. Do nothing. Continue to do your training where  
 10 you're doing it now.  
 11 I recently went on a special journey to a  
 12 desert environment which was south of Phoenix. It was  
 13 called Table Top Wilderness. And I went there to go on  
 14 retreat and to be alone with the desert.  
 15 And it was a very pristine desert, and it was  
 16 beautiful in many ways, but it was marred for me, very  
 17 much marred by what I experienced in the sky every day.  
 18 There was low-level military flyovers, and it was  
 19 unbelievable the way that it marred my experience of  
 20 peacefulness that I had come to the desert to experience.  
 21 And this is what I really pray: That you will  
 22 hear our voices. We are all united in saying, "Please,  
 23 no."  
 24 Thank you.  
 25 HEARING OFFICER: Arthur Schiller, and then

1 Richard Fabbrini. 008253  
 2 MR. SCHILLER: I am Arthur Schiller. I did  
 3 testify earlier this afternoon, but there are things that  
 4 bring us back. And one, they are -- I'm here on behalf,  
 5 as I said this afternoon, of the Lane family of the Bell  
 6 Ranch. And what they are, get at the heart of this book,  
 7 which is nothing more than a patchwork of assumptions  
 8 made by individuals sitting in an office somewhere who  
 9 clearly have not visited our communities, have not talked  
 10 to the landowners, have not really done much other than  
 11 resource materials without any correlation to the reality  
 12 here in New Mexico.  
 13 This afternoon we commented on an assumption  
 14 made that existing military -- the fact that an existing  
 15 military training route was in place somehow could be  
 16 correlated to the impact of the proposal. I think when  
 17 we talked about changing overflights from 100 to over  
 18 4,000 we showed the fallacy of that assumption.  
 19 Next we talked about the issues in here dealing  
 20 with the effect on wildlife and other -- and the native  
 21 habitat. Haven't addressed clearly the realities here.  
 22 I believe that Dr. Thomas Meehan, who addressed you  
 23 earlier, taught us differently, that there are realities  
 24 here that you do not know and have not taken into  
 25 account. Assumptions were made that were false.

1 There have been assumptions made about sound.  
 2 I won't go into what everyone else said here, but there  
 3 are assumptions made here based on 20-year-old laboratory  
 4 models. Those assumptions, I think by what you have  
 5 heard here from professionals in the field, tell you that  
 6 those assumptions are false.  
 7 We also made a proposal earlier that someone  
 8 roll out several of those bombers and fly these routes  
 9 and let people hear what they sound like.  
 10 Finally there are assumptions made, and these  
 11 are addressed briefly earlier but they are probably on  
 12 the level of the most blatant incorrect assumptions made,  
 13 and that is the socioeconomic part of this discussion,  
 14 where, one, any economic effect on anything other than a  
 15 scoring site was not considered, that there could be no  
 16 economic effect from overflights over rural lands.  
 17 Someone sat in an office and made that determination. I  
 18 see no reference to either discussion with real estate  
 19 professionals, local residents, or anything else.  
 20 It may have taken a year, but what it took a  
 21 year for was to come up with clever language that sounded  
 22 good. It didn't take a year to do the research, to  
 23 understand what this proposal meant and what its effect  
 24 was.  
 25 The only appropriate thing at this time would

BR-1

BR-4

1 be to withdraw the draft and start over.  
 2 Thank you.  
 3 HEARING EXAMINER: After Mr. Fabbrini, I will  
 4 call Betsy Morrison. **008254**  
 5 MR. FABBRINI: My name is Richard Fabbrini,  
 6 and I'm also here representing the Bell Ranch, which is  
 7 near Tucumcari.  
 8 I know this process only allows for us to make  
 9 comment and it doesn't provide for you to give us  
 10 responses, but I'd like to include in the record just a  
 11 few examples of things I just don't understand after  
 12 having read as much of this as I possibly could in the  
 13 time that I have.  
 14 For example, if the environment is truly a  
 15 controlling factor, I don't know how you could possibly  
 16 choose Alternative D when the Draft EIS clearly states on  
 17 page ES-3 that it is the least desirable in the areas of  
 18 airspace and aircraft operations, land management use and  
 19 biological resources. And that's especially true in  
 20 light of the fact that Alternative A has a negligible  
 21 effect in all of these areas.  
 22 And it seems to me that if you do consider  
 23 Alternative D, it must be because from a military point  
 24 of view, not an environmental point of view, there is an  
 25 advantage. And we haven't heard what that is, and I

PD-18

1 don't understand why that is. It seems to me after  
 2 looking at 72 options and narrowing it down to three, you  
 3 must have an idea of, from a military point of view,  
 4 which option is most favorable, and I don't understand  
 5 why you can't share that with us.  
 6 Secondly, I don't know why you haven't  
 7 considered just leaving the current training routes alone  
 8 and just moving the bases out of which these planes fly  
 9 in. I don't understand that. And if the answer to the  
 10 question is because in the last few years we closed some  
 11 bases that we otherwise could have used, I don't  
 12 understand why the environmental impact of closing those  
 13 bases and factors that are considered in here weren't  
 14 brought up at that particular point in time.  
 15 Thirdly, I don't understand how we can impact  
 16 the Bell Ranch in such a significant way and have no  
 17 mention of that in here. And I say that because we are  
 18 impacted in multiple ways. First of all, your TATE  
 19 approach to the MOA comes right across the Bell Ranch.  
 20 What you refer to as "the racetrack" covers yet other  
 21 parts of the Bell Ranch. You have expanded the MOS in  
 22 one corner, and that impacts yet other parts of the Bell  
 23 Ranch. And all of that is on top of data your existing  
 24 AR-107 already covers, and crosses the Bell Ranch, and  
 25 you have the F-16s currently flying across the Bell

PD-2

PD-2

PD-18

ED-11

1 Ranch.  
 2 I think that's significant.  
 3 Finally, I don't understand why as part of this  
 4 process, rather than me just putting all these in the  
 5 record there isn't some way where we can submit written  
 6 questions for you, and allow you to respond to them in  
 7 writing in a way that everyone in the communities and  
 8 elsewhere can share and read those responses.  
 9 HEARING OFFICER: After Ms. Morrison, I'll  
 10 call Ron Gersten. **008255**  
 11 MS. MORRISON: I'm Betsy Morrison. I live in  
 12 El Rito, New Mexico.  
 13 And in October of 1985 I took a wilderness trek  
 14 with my horse from Salida, Colorado, to the eastern edge  
 15 of the Sangre De Cristos, and then I crossed over Music  
 16 Pass to the Sand Dunes. It's approximately 100 miles,  
 17 and I walked and my horse carried the pack.  
 18 I had no idea I was on the Air Force bomber  
 19 flight path for training, and the first time I heard the  
 20 noise, I hit the ground. I thought it was the end of the  
 21 world. I had no idea.  
 22 And then I realized I was still alive. I got  
 23 up, and the next day the noise happened again, and I was  
 24 able to see they were the Air Force bomber things flying  
 25 down the valley.

GE-11

1 And this happened quite a few more times. And  
 2 one time there was a little bridge across a creek, and  
 3 that's -- the noise didn't come up on you -- it doesn't  
 4 come up on you, it explodes, and you have no preparation  
 5 for it. And the next time we were on a little bridge  
 6 across a river, and my horse flipped out and knocks me  
 7 off the bridge, and I hurt my shoulder. I was fine, but  
 8 I felt sorry for the people of that valley, because it's  
 9 a beautiful valley, and it totally impacted the valley, I  
 10 thought.  
 11 I did have a lot of questions.  
 12 There is a lot of back country skiers that ski  
 13 all over these mountains, and they were told from  
 14 Silverton to Ouray, Colorado, there is a bad avalanche  
 15 path, and you're told not to get out of the car and slam  
 16 the door or it can create an avalanche. And I thought,  
 17 "What will these bomber things do for the avalanches?"  
 18 Thank you.  
 19 (Note: Applause.)  
 20 THE COURT: After Ron Gersten, I'll be calling  
 21 on Carmen Acosta. **008256**  
 22 MR. GERSTEN: Ron Gersten. I've lived here  
 23 four or five years, and I moved from New York. And I  
 24 point that out because I grew up about 10 miles from  
 25 Kennedy Airport, and it was noisy. And we got used to

BR-1

AO-27

BR-7

LU-2

1 it, but it was a lousy thing to get use to, reduced our  
 2 quality of life.  
 3 One of the reasons I have left to come to a  
 4 place where the people cared about noise not about night  
 5 life, not about making money. We, certainly most people  
 6 came here 500 years ago or five years ago, or were here  
 7 forever, stayed here. I don't think for economic reasons  
 8 but because of the quality of life that you're  
 9 threatening to take away.  
 10 I'm amazed that I now am here and worried about  
 11 B-52 bombers coming through where I lived. When I lived  
 12 in New York they wanted to fly the Concorde from Kennedy  
 13 Airport, and they do, but only allowed them on the  
 14 condition they turn their jets off when they coasted into  
 15 the airport and when they were flying they went straight  
 16 out over the ocean so that not one house was impacted by  
 17 it. That was in a place -- and I point this out because  
 18 you say -- It's crazy to me, or wrong to me, the idea of  
 19 communities affected, only five, or whatever you say.  
 20 Certainly if you flew over Nassau County, where I'm from,  
 21 there would be hundreds of communities affected, but how  
 22 can you really study that, because these would be people  
 23 who chose those lives, chose to make money, and did not  
 24 care as much about the noise. You have five communities,  
 25 here maybe only five people, but they are people who

TY

1 chose happiness in this place, and you're trying to take  
 2 that away.  
 3 At a time when our Air Force, when we are in  
 4 Kosovo fighting, and I agree with that, to defend the  
 5 quality of life these people have and have chosen, we are  
 6 threatening, with our own taxpayer dollars, to come into  
 7 a place in this state, this country of America where the  
 8 people who live here overwhelmingly don't want you.  
 9 So how about our quality of life?  
 10 I want to point out how wrong it is here in  
 11 Taos, where we make these economic decision factors and  
 12 weight them to our airport -- we could have an  
 13 international airport here, but the people don't want it.  
 14 And we would all be much more wealthy.  
 15 What are you going to do for us?  
 16 HEARING OFFICER: We have a special request  
 17 from an individual, who has a young child who would like  
 18 to make comments, and leave with that young child. So I  
 19 think that is reasonable to let this person go now.  
 20 And I'd like to call on Kali Little. **008257**  
 21 MS. LITTLE: My name is actually Kali,  
 22 K-a-l-i, and I just wanted to make a point of saying that  
 23 I've practically lived here since I was born, and I mean  
 24 I think that only idiots would be able to know that the  
 25 world isn't working like that. There shouldn't be war.

GE-30

1 It should only be peace.  
 2 That's pretty much it.  
 3 (Note: Applause.)  
 4 HEARING OFFICER: Carmen Acosta.  
 5 MS. LITTLE: You can't have Taos.  
 6 HEARING OFFICER: Carmen Acosta, are you here  
 7 and would you like on to speak.  
 8 (Note: No response.)  
 9 HEARING OFFICER: Marilyn Hoff, then I'll ask  
 10 Kim Buehre. **008258**  
 11 MS. HOFF: My name is Marilyn Hoff. I am -- I  
 12 live near Arroyo Hondo, and I'm a mere citizen of Taos  
 13 County and work at the library.  
 14 I've been to a lot of EIS hearings, and I'm  
 15 always struck by the fact that the terms are defined in  
 16 advance by the EIS. We are not supposed to comment  
 17 except on the EIS, which is a document that's created by  
 18 people under the employ of the people with a vested  
 19 interest in doing whatever it is they want to do.  
 20 So I feel like I'm going to be breaking your  
 21 rules and saying that one of the important things I think  
 22 that's happening when these bombers are flying over Taos  
 23 County is that they are training young men to drop  
 24 nuclear weapons on other human beings.  
 25 I don't support that.

BR-2

1 (Note: Applause.)  
 2 I'd like to propose a different alternative to  
 3 the action alternative and the new action alternative. I  
 4 would like to propose a retroaction alternative, which is  
 5 we abolish nuclear weapons from the United States  
 6 arsenal.  
 7 (Note: Applause.)  
 8 Then there will be no need for these flights  
 9 menacing this neighborhood, the neighborhoods in Texas,  
 10 the neighborhoods in Wyoming, the neighborhoods all over  
 11 the world over, which the United States keeps trying to  
 12 be a bully.  
 13 (Note: Applause.) **008259**  
 14 HEARING OFFICER: You're Kim?  
 15 MS. BUEHRE: My name is Buehre, B-u-e-h-r-e.  
 16 To save time, I'll say I agree totally with  
 17 everybody who spoke before me. I want to present one  
 18 small perspective from my own point of view.  
 19 I'm a certified flight instructor for  
 20 sailplanes. I have done a lot of sailplane rides and  
 21 instruction around this area, which is a part of the  
 22 tourist industry, and of course my concern for myself and  
 23 other general aviation pilots is we don't get run over by  
 24 these flights. And although you say there will be a  
 25 minimum impact on small aircraft, if I or any one of my

1 friends get run over, it won't be minimal to me or my  
 2 family, or hopefully my friends.  
 3 But I'll just tell you one story. There  
 4 were -- there was a routine training flight on sailplanes  
 5 around the Black Forest, Colorado -- and I read this in  
 6 Source Magazine several years ago -- where an instructor  
 7 and a student were in a sailplane, heard a loud boom, and  
 8 saw a fighter flying away from them. And they landed  
 9 back at Black Forest Airport, and they noticed that  
 10 their wingtip wheel was missing, which was a string and  
 11 a little wingtip wheel. And later, the story is, the Air  
 12 Force jet pilot found that wheel embedded in the leading  
 13 edge of their fighter jet, and that the pilot flying the  
 14 fighter never even saw the glider. It's like the glider  
 15 is going so slow, and he was going so fast, he didn't  
 16 even see him, didn't know it happened. He might have  
 17 felt a slight bit of unusual turbulence.  
 18 That is my perspective and point of view. I  
 19 agree with the gentlemen who mentioned that the wake  
 20 turbulence is a serious factor for general aviation.  
 21 Thank you.  
 22 HEARING OFFICER: Julie Sabia, and then I'll  
 23 call on Neal Thielke. **008260**  
 24 **TY** MS. SABIA: My name is Julie Sabia. I live  
 25 off of Highway 64 in Tres Piedras. I moved here from

1 Southern California. When I lived in Southern  
 2 California, I became used to noise pollution. When I  
 3 moved to Northern New Mexico, one of the reasons I moved  
 4 here and my partner and I built our house here was to get  
 5 away from that kind of a lifestyle.  
 6 Several years ago I experienced my first -- I  
 7 had my first experience with a military overflight out  
 8 here in my house. The windows rattled, the roof rattled.  
 9 I actually thought it was an earthquake. I thought,  
 10 "God, I'm back in Southern California," ran outside, and  
 11 there was a military plane flying over our house.  
 12 I'd like to know how many people here have  
 13 experienced an overflight. It's not that we don't know  
 14 what goes on. And I think what most of us are concerned  
 15 about is that the noise levels will increase, they will  
 16 be more frequent occurrences, and the flights will be  
 17 lower.  
 18 And I think this should stop right now.  
 19 Thank you.  
 20 I'd just like to note when that question was  
 21 asked, it looked like the vast majority of the audience  
 22 raised their hands. **008261**  
 23 **TY** MR. THIELKE: My name is Neal Thielke. I live  
 24 in Llano San Juan. I've been a resident here for 19  
 25 years.

1 If you bear with me, I'd rather read off of my  
 2 statement than loose it and have to leave the auditorium.  
 3 We have an endangered species here that needs  
 4 our concern and our respect. I would be relieved if  
 5 others would speak up also for Vietnam Vets. More Nam  
 6 vets have died of suicide since their return than died in  
 7 combat. I've had personal friends check out early  
 8 because their ability to heal and endure and feel safe  
 9 was too fragile to cope with violation.  
 10 I honor all of these survivors who are here  
 11 with us tonight and vow to work with you, and I vow to  
 12 work with you to do whatever is necessary to defeat this  
 13 absolutely unacceptable proposal.  
 14 Thank you.  
 15 (Note: Applause.)  
 16 HEARING OFFICER: Mr. Slook. And after Mr.  
 17 Slook, I'll be calling on Matthew Higginbotham. **008262**  
 18 MR. SLOOK: Good evening. Good evening my  
 19 fellow Taosenos. First time I've ever said that.  
 20 I spoke a little earlier today here and I told  
 21 them about the C-4 transport that flew 50 foot or less  
 22 over my place on the mesa four and a half weeks ago.  
 23 And you talk about nervous. Why, I've been  
 24 real nervous since then, and at least 120 decibels right  
 25 in my face wasn't nice.

**AO-61**

1 I'd like to know for the record, eventually,  
 2 just how many accidents, how many situations, how many  
 3 losses of fuel, parts, people has occurred in all the  
 4 other places in this country with these military flyover  
 5 training missions, and I'd like that answer before you  
 6 start talking about doing them here.  
 7 (Note: Applause.)  
 8 I'd like to mention also the two stealth  
 9 bombers, who two weeks before this recent attack on Iraq  
 10 came flying behind me -- and I live on the Rim Road, as  
 11 everybody knows, because you're visiting me with your  
 12 bombers, right across the gorge, a mile down from me  
 13 where the eagles fly, a family of seven eagles that I go  
 14 to visit, and these two stealth bombers came up behind me  
 15 and I heard a lot of the swoosh, there was no noise  
 16 because, you know, they have the technology now to make  
 17 them silent. And I heard a swoosh and what, and turned  
 18 around, and there is a stealth bomber going across the  
 19 Mesa and another one right behind it. And they both dive  
 20 right down to the gorge where the eagles, down there five  
 21 or six seconds, I counted it, and up and away off towards  
 22 Los Alamos.  
 23 So now there is a record of it, isn't there.  
 24 They were real fast. And you got to be fast,  
 25 huh?

1 No, you don't have to be fast.  
 2 And, you know, I'm not going to be fast with  
 3 this. I'm going to talk until I find something that I  
 4 think we are all going to agree on, and that includes the  
 5 Air Force.  
 6 Now, I'm not going to talk long. I love you  
 7 all and I've been doing peace work for 30 years, and I  
 8 don't want it to get in the way of this little mosquito  
 9 that is coming to us, wearing us down, dividing us in  
 10 these four sessions, and wearing us down in our time, in  
 11 our everything else that we have left after years and  
 12 years of military dominance.  
 13 (Note: Applause.)  
 14 I'd like to make it perfectly clear that not  
 15 just because I'm a peace activist, and not just because  
 16 you're not happy with big planes and invading your  
 17 peaceful life, well, I want you to remember that all over  
 18 the world people are dying because they let this kind of  
 19 thing continue.  
 20 I don't have to remind you people here. You're  
 21 way above me. I love you all. I know how this thing is  
 22 going to work out, and I know that the Air Force will  
 23 finally see the light, and if it's not our light, it will  
 24 be light of God or the light of their own spirit leaving  
 25 this realm of existence.

1 Thank you all for coming here. Keep up the  
 2 good work. Don't let this happen. God bless.  
 3 (Note: Applause.)  
 4 HEARING OFFICER: Matthew Higginbotham, and  
 5 then after that I'll call on Stephanie Harrison. **008263**  
 6 MR. HIGGINBOTHAM: Hi. My name is Matthew  
 7 Higginbotham.  
 8 I don't think I will be able to beat that.  
 9 Well, over the years I've gone through several  
 10 areas of the country, visited several areas, lived in  
 11 several areas. And Montana was one of them. Then  
 12 Spokane, Washington, was another, and now I'm down in  
 13 Northern New Mexico.  
 14 Well, south side of Montana, on the side of  
 15 Belle Fouché (phonetic) -- I think that's how you  
 16 pronounce it -- two years ago a B-1 bomber crashed.  
 17 Spokane, Washington, two and a half years ago a B-52  
 18 crashed. And now I'm here in New Mexico, and I thought,  
 19 "I hope it's not following me."  
 20 And then another speaker mentioned that the  
 21 Zuni Mountains, another B-1 crashed, as well, or stealth  
 22 bomber.  
 23 First of all, I want to mention I respect you  
 24 coming out like this, setting up the information outside,  
 25 providing water, sitting here, filming. In some ways it

1 seems like a formality, and I hope that it's working,  
 2 what we're saying is -- what you're writing down is going  
 3 to be taken to the Secretary of the Air Force, who I  
 4 guess makes the final decision. I hope it's not just  
 5 him. I hope there is a hell of a team of people that are  
 6 making that decision with him.  
 7 I would like to mention I talked to an officer  
 8 out there about the decibel ratings. He told me the  
 9 pilots in the planes, the B-1 bombers, wear ear  
 10 protection. Now, that was a revelation to me. And when  
 11 I realized that these B-1 bombers are going to be over at  
 12 800 feet, that's what I was told, outside of Questa, just  
 13 north of Questa a few miles at 800 feet, less than what a  
 14 hot air balloon flies, that's amazing.  
 15 Okay. One minute.  
 16 Decibel 120. That's ear shattering.  
 17 So if the pilots wear ear protection, what  
 18 about us on the ground?  
 19 Questa, 800 feet. That is really bizarre.  
 20 Okay. One last thing. Your decision, your  
 21 last decision-making process is called ROD. That really  
 22 struck me. ROD. It's so straight. You know. Let's  
 23 being more flexible here.  
 24 (Note: Applause.)  
 25 Okay. Time is up. Thanks.

GE-39

AO-20

1 HEARING OFFICER: After Stephanie Harrison,  
 2 I'll call on Rachel Ryer. **008264**  
 3 MS. HARRISON: Hi. I feel like many of the  
 4 people here. I feel very nervous coming up here and  
 5 trying to explain how this might affect this community  
 6 and the environment around here.  
 7 I grew up here. I was born here. I'm bringing  
 8 my own kids up here. And it -- I do feel that we are a  
 9 little bit worn down not only in this community but just  
 10 trying to make a living. I've been waiting tables,  
 11 raising two kids, and the whole thing, and now instead of  
 12 being home with my kids, I'm here talking to you to try  
 13 to get you to understand, as are many people, that this  
 14 is not really okay for you to come here and fly bombers.  
 15 I mean just -- It blows my mind. You know, we  
 16 are actually considering flying bombers in this area.  
 17 These are not airplanes that just, oh, yeah, let's go  
 18 train, like pilots flying from here to there and carrying  
 19 people. These are carrying bombs that we are going to go  
 20 kill other people with. I mean, that is the whole  
 21 purpose of a bomb.  
 22 And I know that is probably illegal to talk  
 23 about right now since this is an Environmental Impact  
 24 Statement and we are not supposed to talk about what  
 25 bombs are actually for, but that is part of the purpose.

BI-5

1 (Note: Applause.)

2 And, in addition, environmentally it seems that

3 there has been a number of people who have said, you

4 know, environmentally this is going to impact the bald

5 eagles, impact the peregrine falcons, this is going to

6 impact the spotted owl. We have a forest that can't be

7 used for timber because of spotted owl, but, you know, we

8 are going to be able to fly bombers over them?

9 I mean, I realize you all are just are trying

10 to do your best, and whatever that is -- I'm sorry, you

11 know, I question it, but I realize that you're just

12 coming along and trying to -- just a reaction there.

13 We are all just trying to do our best, you

14 know. And part of the best is really doing no harm

15 before you decide to do harm.

16 You know, bombers today might have just hit a

17 refugee camp in Kosovo. You know, maybe, maybe not. We

18 are not really getting the full impact, we don't really

19 know for sure. But what if they did. What if it just

20 happened, people are killed.

21 It matters. It matters. And we need to

22 understand that, you know, this matters. And it's not

23 just about whether, you know, what's convenient for the

24 Air Force. It's about what are you doing, and

25 questioning that before you decide, you know, whether

1 you're going to impact economically a small Northern New

2 Mexico community.

3 How convenient we don't have money. You know,

4 how convenient it's not, you know, Arizona or near

5 Phoenix, or whatever. It doesn't really matter, you

6 know. It's very nicely put together there, but, you

7 know, it does matter. And regardless of whether, you

8 know -- regardless of whether you -- you are doing your

9 job. Please try to reach in your heart. Understand that

10 it matters whether you are flying bombers. That matters.

11 And when you're affecting this community, and we're all

12 struggling and the people who are out here, it took a lot

13 to get us out. And there's a lot of people that are, you

14 know, native New Mexican Spanish, have been here 200

15 years. There is not a huge representative of those

16 people here, and it's because everybody is working hard

17 to try to just make it, and fighting this is just way

18 more than we need to be doing.

19 So I just really appeal to your hearts and your

20 sense of, you know, community and humanity, to think

21 about what the whole impact is, not just on each

22 community and not just go to Texas or go to some other

23 place. Think about the whole thing before you make

24 decisions about moving more bombers around.

25 Thank you.

AO-1

1 (Note: Applause.)

2 HEARING OFFICER: Our court reporter has

3 indicated a desire for a break in a moment, but I'd like

4 to let you go ahead. I'd also like to let you know we

5 have an hour. I have 30 cards that remain. 30 times

6 three minutes is 90 minutes. That is an hour and a half.

7 008265 MS. RYER: Good evening. My name is Rachel

8 Ryer. I've lived in Taos for eight and a half years, and

9 I live in San Cristobal just out of town.

10 My main concern is with the population of

11 multiple-chemical-sensitive people in Taos County. This

12 is a haven for people who are extremely sensitive to

13 small, even small quantities of chemicals. It's an

14 increasingly recognized disease which is debilitating and

15 life threatening, similar sometimes to chronic fatigue

16 syndrome, asthma, M.S., creates a complex, overpowering

17 reaction to even minor quantities of chemical after a

18 prolonged or intense exposure to a chemical. Benzenes

19 are especially disruptive to the majority of

20 environmentally ill.

21 How often would the addition of the pollution

22 from these jets cause someone to be confined to their

23 home or commit suicide due to this systemic immune

24 nervous disorder?

25 These MCS sufferers are dependent upon

AO-1

AO-1

BR-3

1 Organically grown produce to maintain their health.

2 Spraying from chemical pollutants will alter the quality

3 of local produce, yet the EIS does not address this

4 concern.

5 How much pollution will migrate from the water

6 shed into the water table we drink and from there leach

7 into our soils far from the original site in the air.

8 This is also not addressed.

9 Many Taos resident drink surface water, either

10 collected from their roofs or acequias. I wonder about

11 the cumulative effects over time of ingesting the

12 pollution that comes down through this water. I cannot

13 believe that it is insignificant.

14 Another concern I have is with a specific part

15 of the route. The beginning of the route is only between

16 6 and 8 miles from the Christ of the Desert Monastery

17 northwest of Abiquiu, New Mexico. This is a secluded

18 community of contemplative Benedictine monks, not to

19 mention the wildlife that lives there. The terrain in

20 that area is cliff and rock, which will reverberate with

21 echoes of the planes.

22 In this wilderness area and Ghost Ranch, as

23 well as other parts in these eastern mountains in Taos

24 County, pack animals are used, and there could be

25 possible accidents as have been described before.

BR-1

1 There are a couple of studies that I don't know  
 2 much about but I think are very important, which one.  
 3 from a German study that indicated that low-level flights  
 4 caused post traumatic stress syndrome in inhabitants, and  
 5 there's a study called the Goose Bay, Labrador did an  
 6 independent study in Canada, that I'd like to mention and  
 7 see if you could address it in their findings.

BR-2

8 Also, one quick note about the hot air balloons  
 9 that fly in this area along with the sailplanes that fly  
 10 in this area.

11 Thank you very much.

12 HEARING OFFICER: We will take a break.

13 (Note: Ten-minute recess taken.)

14 HEARING OFFICER: Ladies and gentlemen, I'd  
 15 like to get started again.

16 I've had a couple of requests from individuals  
 17 with children to be permitted to go ahead in and make  
 18 their presentations, so hopefully I won't create a riot  
 19 by allowing these individuals to speak now.

20 I'd like to now call on Franco Mares. **008266**

21 MR. MARES: Good evening, your Honor, Lieutenant  
 22 and respected members from the military.

23 My name is Franco Mares. I was born here in  
 24 Taos, New Mexico. My parents were born here in Northern  
 25 New Mexico. Their parents were born here in Northern New

BR-7

1 Mexico, and I represent hundreds of my personal family  
 2 who could not be here tonight. And I represent thousands  
 3 of my friends who could not be here tonight, who live  
 4 around the world. All of these people love Taos, and  
 5 part of what they love about Taos is our skies. They are  
 6 very sacred and important to us, the people who live  
 7 here.

8 I represent our old people, our elders, the  
 9 adults here in Taos who work hard, have three or four  
 10 children and could not be here tonight because they are  
 11 home taking care of their children.

12 I represent our children who appreciate the way  
 13 of life we have here as being unique, magical, spiritual,  
 14 mystical.

15 And again, the people from around the world  
 16 who love Taos. They number in the millions. They come  
 17 here, they enjoy what they share here with us. It's  
 18 something very special, something you don't find  
 19 everywhere, judge, everywhere.

20 I would like to do something right now. It's  
 21 for the record, and I would like the court reporter to  
 22 show the audience.

23 Is there anyone in this room that thinks  
 24 Alternative D is acceptable to the people of Taos County  
 25 or Northern New Mexico?

1 There is nobody here.  
 2 Do we all stand united in agreeing, say "aye,"

3 if you agree that we don't want this military project or  
 4 any more military projects in Taos, over Taos, or around  
 5 Northern New Mexico everyone.

6 (Note: Audience response.)

7 Loud and clear.

8 Your Honor, with all due respect I think the  
 9 "Ayes" have it.

10 We do not want Alternative D. We do not agree  
 11 with military solutions. We don't think a war brings  
 12 peace and that war weapons create peace. We believe that  
 13 peace and peace of mind bring peace.

14 Our families have sent our families to serve in  
 15 the military to preserve our way of life, and our way of  
 16 life includes clear quiet skies day and night. In  
 17 Northern New Mexico we have suffered toxic fall-out from  
 18 Los Alamos and White Sands, and more military projects in  
 19 our area and more overflights in our area are  
 20 unacceptable. We want less overflights. We have  
 21 suffered overflights, like you said, since the 1940s, we  
 22 would like no more of that. The societal, economic, and  
 23 cultural impacts are devastating.

24 We could have -- the good people of Taos  
 25 rejected a larger airport because of the impact on a

TY

1 600-year-old adobe masterpiece called The Taos Pueblo,  
 2 and all of the adobes that all the Spanish families have  
 3 built for the last 3- or 400 years.

4 This land is sacred to the Native Americans,  
 5 and by "land," I mean and the skies, too, are sacred to  
 6 the Native Americans, the Spanish Americans and millions  
 7 of Americans who visit here to share the magic and peace  
 8 of mind and the prayerful spirit that can be found here  
 9 in Taos, New Mexico.

10 We don't want Alternative D. We think that no  
 11 action or a lot less military action would be much more  
 12 acceptable to the people around here. We all stand  
 13 united here, as you saw, and we appreciate your  
 14 consideration and you honestly taking the message of we  
 15 don't want any military bombers in our area. Please take  
 16 that to your leaders.

17 (Note: Applause.)

18 HEARING OFFICER: Patricia Michaels.

19 And then after Ms. Michaels we will be back on  
 20 track. **008267**

21 MS. MICHAELS: Thank you for giving me this  
 22 headstart.

23 I am representing Taos Pueblo, as well as my  
 24 children. A lot of people -- well, my only two questions  
 25 are: What are you guys still doing here, and who invited

1 you back? We don't want you here ever again, not unless  
 2 you're here to enjoy a wonderful meal with us, but not  
 3 with the bombers, not with the uniform. We are all  
 4 wearing very important uniforms we wear day-to-day, but  
 5 we just accept one another as humble individuals.  
 6 We are all important people in this house  
 7 tonight, and we don't go around with pompous attitudes  
 8 that ones of us is better than the other.  
 9 We can't have our sacred skies disrupted or  
 10 destroyed.  
 11 I am a taxpayer. I put myself through college  
 12 so that I could come back to my village and be  
 13 self-employed and raise my children traditionally,  
 14 whereas all my native people have fought to keep what we  
 15 barely have left, and our people will be damned if you  
 16 take away our sacred rights and parts of our sacred  
 17 rights to be able to still have our language and to have  
 18 our ceremonies. And with noise destruction that you will  
 19 bring into our community, we will not be able to teach  
 20 our children what is most valuable to us, and that is a  
 21 sense of peace and love.  
 22 And it's already hard enough as it is in the  
 23 communities, and the influences that are from the outside  
 24 world. But for our Pueblos, enough is enough. We don't  
 25 need any more disruptions we, don't need another thing to

1 face for our children.  
 2 (Note: Applause.)  
 3 Thank you.  
 4 HEARING OFFICER: Beau Haworth.  
 5 (Note: No response.) **008268**  
 6 HEARING OFFICER: Jonathon Kushner.  
 7 MR. KUSHNER: Good evening. I just want to  
 8 quickly say that I moved to Taos because of the -- for  
 9 the peace and quiet. I've lived all over the country.  
 10 I've lived on the east coast, I lived in the northern  
 11 Rockies, and the central Rockies, and I chose Taos  
 12 because it is a peaceful place. Also because of the  
 13 access to the wilderness lands that we have, the whole  
 14 Latir Peak Wilderness and the Wild and Scenic area, the  
 15 river, the Rio Grande canyon that was designated by  
 16 Congress to be a special place where you can go and get  
 17 away from modern civilization.  
 18 And I feel if I am backpacking in Wheeler Peak  
 19 or rafting or kayaking on the Rio Grande, to have these  
 20 planes fly overhead is a travesty.  
 21 I want to quickly go over a little story that  
 22 happened to me. I was leading college students on a  
 23 canoe trip on a wild and scenic river in Montana. This  
 24 is the only section of river that is still like Lewis and  
 25 Clarke saw it. We were peacefully canoeing down the

1 river, when I'm not sure if it was a B-1 or a B-52 bomber  
 2 came up over the canyon walls, dropped down, and flew  
 3 over us, I'd say about 100 feet overhead, completely  
 4 disturbing our wilderness experience, flew up the canyon  
 5 and disappeared.  
 6 Well, when I heard about bombers flying  
 7 overhead, that's the first image that came to my mind.  
 8 It shook everybody in that party. Here we were in a  
 9 beautiful place and we thought what would Lewis and  
 10 Clarke have thought if a B-52 bomber came overhead and  
 11 flew over them?  
 12 I moved here from Boston, and when I was living  
 13 in Boston, two to three days a week aircraft would fly  
 14 over my house. They were coming from Logan International  
 15 Airport. It was very disturbing morning, evening and  
 16 night to have these planes fly overhead, and I thought by  
 17 moving to a place like Taos, which is far from the  
 18 Albuquerque airport, that I would eliminate this type of  
 19 thing.  
 20 Also, quickly, Philmont. You're going to fly  
 21 over Philmont? I was a Boy Scout. I never got to go to  
 22 Philmont when I was a Boy Scout, but I had this image of  
 23 this wilderness place, this great place. And to have  
 24 bombers flying over there would be so disruptive, and if  
 25 I was a Scout there, would shatter my opinion of this

BR-6

1 wilderness area.  
 2 Then the last thing I want to say is: Why  
 3 Taos? Why this beautiful place with wild and scenic  
 4 rivers and wilderness areas? Why do you have to fly over  
 5 these areas? There's a lot of other areas in the United  
 6 States that are unpopulated and not designated by  
 7 Congress to be special places.  
 8 Thank you.  
 9 (Note: Applause.)  
 10 HEARING OFFICER: Ed Strange. Then I'll be  
 11 calling on Judy Martin.  
 12 (Note: No response.)  
 13 HEARING OFFICER: Judy Martin.  
 14 (Note: No response.)  
 15 HEARING OFFICER: Pete Makerewicz. **008269**  
 16 MR. MAKEREWICZ: Just Pete will do.  
 17 I'd like to talk about environmental impact,  
 18 and the most endangered species, human beings.  
 19 I'm from Angel Fire, and I live about a quarter  
 20 of a mile away from The Memorial. I suffer from Post  
 21 Traumatic Stress. I flew missions in Vietnam, and what  
 22 you do are doing here is a travesty.  
 23 Agent Orange, you also had some studies, and  
 24 it don't cut it, plain don't cut it. You guys are  
 25 messing with the Great Spirit, and it's going to blow

PD-17

TY

1 back on you.

2 Noise levels you guys portrayed here, I mean a

3 guy was saying there was no less than on the screen.

4 I'm part of the environment. My brothers are

5 part of the environment. We all suffer and we are tired

6 of it.

7 You guys already eliminated Alternative A on

8 your study here that I saw, and to me Alternative A is

9 the only alternative.

10 All this is basically unnecessary. You're

11 considering doing this because, you know, build up

12 military force and whatnot, test out more equipment.

13 This's already been tested. And, you know, I saw this

14 article in the paper about you don't want to have this

15 lax deal come over, over Yugoslavia, you got to stay all

16 ready. We don't need Clinton's diversion anymore, man,

17 is what it amounts to. If he can't own up to it, be

18 accountable for his things, don't put it up on us. I'm

19 up here to gain some peace after 30 years, and you guys

20 are blowing it.

21 (Note: Applause.)

22 HEARING OFFICER: Mary Simonini. **008270**

23 Then I'll call on Scott Machardy after that.

24 MS. SIMONINI: I'm Mary Simonini, spelled

25 S-i-m-o-n-i-n-i, and I'm here to talk about -- well,

TY

1 first of all I'm a Licensed Clinical Social Worker and a

2 psychotherapist in private practice, as well as at Taos

3 Mental Health, so I am working with people daily that are

4 dealing with stress in their lives and how it affects

5 them mentally, physically, spiritually and emotionally.

6 And so I'm going to talk about the terminology

7 you use that we humans will "habituate" to the noise

8 level, and your minimalization of the noise level that is

9 here for we as humans.

10 In your draft of the EIS, it's, you know,

11 basically we humans are going to habituate. However, as

12 I was reading it, it was very interesting because I got

13 to the section about wildlife, and here is what you said.

14 "Aircraft overflights and the associated noise

15 can effect wildlife directly. Wildlife responses may

16 include increased movement after an overflight, avoiding

17 or leaving areas where overflights occur, changes in

18 foraging patterns, and arousal of species-specific

19 defensive behaviors; for example, the fight or flight

20 response."

21 You go on to say: "The primary concern with

22 aircraft overflights and the associated noise is the

23 startle effect. For example, this occurs when birds are

24 surprised by sudden unexpected loud noises and leave the

25 nest or perch suddenly. Positive/negative impacts from

1 this behavior include the expulsion of eggs or nestlings

2 from the nest as the parent leaves suddenly, increased

3 creation (sic) of eggs or young when parents are off the

4 nest, and eggs or young may become chilled if the parent

5 is off the nest."

6 You also go on: "Adult peregrines have been

7 known to step on eggs or young and occasionally kick

8 young out of the nest following rapid exit following

9 gunshots and other explosions."

10 Are we humans not, in fact, a species in the

11 wildlife kingdom?

12 We do not habituate. Okay? We are a part of

13 this wildlife kingdom.

14 I'm going to quote a man by the name of Hansel

15 Yee (phonetic), who is a stress researcher, and stress as

16 a person's response to the demands of his environment.

17 He goes on to state: This syndrome has three

18 stages. One, the alarm stage; two, the stress-resistant

19 stage; and three, the stress-exhaustion stage. The first

20 stage of the alarm reaction is the fight-or-flight

21 response. And many hormones are activated at that point,

22 and affect our physiological balances. When threatened

23 we are ready to fight or flee, then when the danger has

24 passed, our bodies regain their normal physiological

25 balance.

1 That is the first step.

2 The second stage is called the stress-resistant

3 stage.

4 In this stage more distinct changes begin to

5 occur in our bodies. And this is as there is a buildup

6 of stress. Okay? We don't just have one stressor, we

7 have a buildup, a cumulative effect.

8 With continued resistance, part of our bodies

9 become exhausted. For example, during this stage there

10 often is considerable increase in colds or 'flu or

11 bacterial infection, because the thymus, spleen, and

12 lymphatic organs shrink or begin to atrophy. Headaches,

13 continued heartburn, stomach cramps, low energy are some

14 of the symptoms.

15 It is at this stage we begin to see patterns

16 emerge, tendencies towards deadly stress-related

17 disorders.

18 The third stage is the exhaustion stage. The

19 amount of energy we have for resistance to stress is

20 limited as human beings and wildlife, and when it's used

21 up, the stress exhaustion stage occurs.

22 So, we do not habituate. To you it may look

23 like we do. Okay? I mean, we numb out as human beings.

24 We do because we can only take so much, but what's going

25 on inside is real. Okay? And people are affected. We

1 are affected. I see it daily. I know it in myself.  
 2 My husband and I live in the mountains, and two  
 3 years ago when we moved there, there was -- I was there  
 4 by myself. I was outside, and all of a sudden I heard  
 5 this incredible noise I had never heard before in my  
 6 life. And all of a sudden just above the treetops was a  
 7 bomber going through our canyon. I had never experienced  
 8 that before. I almost hit the ground. I mean, talk  
 9 about fight or flight. It was really frightening.  
 10 And this was a pilot, and many of us probably  
 11 remember, that was trying to impress his girlfriend up at  
 12 Taos Ski Valley and went through the gorge, went over the  
 13 ski valley, and went through our canyon.  
 14 I felt the response of that, and I do not want  
 15 that here in this area or anywhere. And none of us do.  
 16 (Note: Applause.)  
 17 HEARING OFFICER: Scott Machardy. I'll be  
 18 calling on Morgan Farley after that. **008271**  
 19 MR. MACHARDY: My name is Scott Machardy, and I  
 20 live here in Taos north of town. I'm here to add my  
 21 voice to the unanimous voices of the rest of the people  
 22 present and the voices of my family to those of us that  
 23 cannot tolerate, will not tolerate, and cannot accept  
 24 this alternative and the effects that it will have on  
 25 this region: the pollution, the mental pollution that

1 this causes, the pollution of our air, and the sound.  
 2 All the implications.  
 3 This is a very fragile environment, a  
 4 high-desert environment. It's not difficult being a  
 5 person -- it's difficult being a person and surviving in  
 6 this area. It always has. It's difficult being  
 7 wildlife, it's difficult being plant life here. The  
 8 water is scarce, the air is thin, the economic  
 9 opportunities are very precious here.  
 10 I've already -- I'm a builder. I've already  
 11 witnessed the loss of I think 10 jobs that could have  
 12 been -- that could have happened here due to a client of  
 13 mine that sold their property and decided not to build  
 14 here because of the threat that this alternative imposes  
 15 on the community.  
 16 And as a builder I see that the architecture --  
 17 and I've witnessed the architecture here, and it's my  
 18 personal opinion and professional opinion that these  
 19 buildings here are fragile. Taos Pueblo is a World  
 20 Heritage site and it just cannot be disturbed.  
 21 And one thing you don't do, and if you have  
 22 lived in Taos for any length of time, one thing you don't  
 23 do is you don't disturb the ceremony and the sacred space  
 24 of the Taos Pueblo.  
 25 There is a ceremonial cycle that goes on among

BR-4

CU-1

1 these people, these traditional people that have lived  
 2 here for centuries that is so important on a global basis  
 3 that just that alone has global implication, in my view.  
 4 That and the Taos people and the other  
 5 indigenous people in this area are precious to us  
 6 precious to the planet.  
 7 The other thing is from knowing the people of  
 8 Taos I know that this will never -- they will never let  
 9 this slide. They will never go away. Our resistance to  
 10 this will never go away, and the Air Force will feel it.  
 11 No matter how strong the Air Force is, this will not go  
 12 away, and I believe that the Air Force will regret this,  
 13 choosing this alternative if they do, and I encourage the  
 14 Air Force to remove this alternative and all the other  
 15 alternatives, park the B-1 bombers, park the B-52s,  
 16 recycle it and turn it into something that offers a  
 17 benefit to the people of this world, most of which are  
 18 below poverty level.  
 19 (Note: Applause.) **008272**  
 20 HEARING OFFICER: Morgan Farley, and then I'll  
 21 be calling on Rex Estell.  
 22 MS. FARLEY: My name is Morgan Farley. I live  
 23 in a log cabin on 20 acres of wooded land in the  
 24 mountains in El Rito, which is eight miles north of  
 25 Questa, right between the Rio Grande Wild and Scenic

1 River and the Latir Peak Wilderness, and on the edge of  
 2 your flight path.  
 3 I'm a licensed clinical psychotherapist and a  
 4 published writer. Like everyone who else who has spoken  
 5 tonight, I am opposed to the Northern New Mexico route.  
 6 My reasons are personal and passionate.  
 7 I first settled here in 1975. I moved back to  
 8 this remote rural area from the city precisely because it  
 9 offered me the silence and the freedom from intrusion  
 10 that I needed to accomplish my work as a writer.  
 11 I made great sacrifices to make this change. I  
 12 was willing to accept a loss of income, loss of  
 13 professional status, to give up the comfort and ease of  
 14 city life, to leave my clients and students, my neighbors  
 15 and my friends, all for one thing: quality of life.  
 16 The bombers will destroy the very quality that  
 17 I came here for.  
 18 I came here, first of all, for silence.  
 19 Silence is not simply the absence of noise, silence is a  
 20 crucial medium for depth and truth in human perception  
 21 and communication.  
 22 I came here for safety.  
 23 I came here for privacy and solitude.  
 24 I came here for peace of mind.  
 25 I came here for empty skies. Skies empty of

BR-7

1 human signs, skies that a writing student of mine, a  
 2 little girl, described as: Full of the mind of God.  
 3 Most important of all, I came here to live in a  
 4 place that is still pristine and wild, to experience the  
 5 natural world largely unaltered by human purposes.  
 6 This way of life feeds me and inspires me. As  
 7 a serious writer committed to seeking a vision of how to  
 8 live, how to best be human in this world, I have claimed  
 9 this place and this total solitude as the reward and the  
 10 balance for the 30 years I have spent in service to this  
 11 society as a mother, a psychotherapist, trainer and  
 12 teacher.  
 13 I have paid my dues. Now I feel strongly  
 14 called to write, and I have changed my whole life in  
 15 order to have the conditions that will give clarity and  
 16 depth to my writing so that it will be useful to other  
 17 people. If I can't have the quality of life I need here,  
 18 I may have to move again, but I built this cabin with my  
 19 own hands, I have cared for and tended and protected my  
 20 land for 23 if years. I planned to pass it on to my  
 21 daughter, who wants to live here one day. This lands is  
 22 my home, my nest egg and my legacy. I am opposed to  
 23 anything that damages its beauty or its value.  
 24 I have been deeply happy here. This is my  
 25 personal version of the pursuit of happiness, which is a

AO-61  
 BR-4

TY

1 right I am guaranteed by our Constitution.  
 2 I believe our government was designed to uphold  
 3 and protect the freedom of its citizens to create lives  
 4 worth living. The Air Force was not created to endanger  
 5 our lives and damage our environment nor to diminish the  
 6 value of our land. My life matters to me and to the  
 7 founders of this country.  
 8 The lives of my neighbors matter just as much.  
 9 Let the Air Force do what it was created to  
 10 do: Protect our freedom to live good lives in the place  
 11 we have chosen.  
 12 (Note: Applause.)  
 13 HEARING OFFICER: Rex Estell.  
 14 (Note: No response.)  
 15 HEARING OFFICER: Sammy Swenson. **008273**  
 16 MR. SWENSON: Hello. Thank you. Thank you.  
 17 It's nice to be here. I don't have anything  
 18 prepared. My name is Sammy. I'm from Maine, northeast,  
 19 and I'm coming through visiting Taos.  
 20 And thank you.  
 21 I find it kind of interesting, you know,  
 22 talking to the people here that are representing the Air  
 23 Force and taking comments, but I'd like to just open up  
 24 the mind by talking to everyone.  
 25 It's an interesting life. I'm grateful for

1 this life. You know, every day I think we wake up and,  
 2 you know, we go along our way, and, uhmm -- and there's  
 3 this war going on, and, you know, it's like we want to  
 4 try to live a more peaceful way of life. You know,  
 5 that's, I think, maybe the new way we should start moving  
 6 things, is a peaceful way of life.  
 7 And global peace zone is something I'd like to  
 8 say something about. The mayor of Taos back in 1995  
 9 declared Taos to be a global peace zone and --  
 10 (Note: Applause.)  
 11 -- which is a good thing. And I'm doing this  
 12 global peace walk where we're respecting people, walking  
 13 for -- you know, walking in peace. And we are going to  
 14 be doing that coming up through town, and maybe you will  
 15 see us with our flyers running around, and we will maybe  
 16 go to Washington and try to get the message to  
 17 Washington. You know, to the people. Because, I mean,  
 18 that's what we should do.  
 19 And I read this draft report and I'd like to  
 20 focus on it a little bit.  
 21 I looked up the contents, you know -- and,  
 22 like, I know some things, so I looked at the contents. I  
 23 found socioeconomic. Maybe that's something that has  
 24 information? And I looked at it, and there wasn't so  
 25 much information here.

1 So I took out one of the pages and I made a  
 2 little bomber.  
 3 (Note: Flying paper airplane.)  
 4 That is what I think of this new idea. Just  
 5 let it fly, let that fly away and just, you know, migrate  
 6 the planes back to the hangars, or turn the planes into  
 7 houses, you know.  
 8 And we can't protect -- we cannot protect our  
 9 freedom with war. It's not going to happen. The only  
 10 freedom is peace. If we can realize this, then we don't  
 11 have to do the war thing.  
 12 And that's what's happening rights now in  
 13 1999/2000. We don't want World War III, don't want it.  
 14 So the message is live a peaceful way of life, and we are  
 15 going to walk it.  
 16 So everyone, thank you. Thank you.  
 17 We will talk more later, and I'd like to thank  
 18 the people of Taos for really representing the true  
 19 voice.  
 20 Thank you.  
 21 HEARING OFFICER: This next card says, "Three  
 22 Toads."  
 23 So do we have Three Toads here? **008274**  
 24 MR. THREE TOADS: Hello, gentleman.  
 25 HEARING OFFICER: Are you Mr. Toad?

1 MR. THREE TOADS: No, I'm his brother. I'm  
 2 Three Toad's brother.  
 3 But this toad thing is -- the toad thing is  
 4 there because with all the military flyovers, we got to  
 5 go underground.  
 6 The nuclear radiation is so high above ground  
 7 now because there was an accident five years ago. There  
 8 was a serious accident, and one of the bombs went off.  
 9 Not in Bosnia, not in Korea, not in Vietnam, but right  
 10 here at home. So it's time we take this serious, as  
 11 serious as you guys can get. It's real important you  
 12 take this serious. And I think that serious equals mass.  
 13 The more serious we get, the stupider we get as humans,  
 14 and it's real important not to be stupid as humans. It's  
 15 real important some days. You ever get up in the morning  
 16 and it's a serious day? Oh, so serious. You know.  
 17 And I've just got to say something about  
 18 seriousness. No. Being a toad lives underground, flying  
 19 around, flying a jet airplane could cause a crash, you  
 20 know.  
 21 One rave event and that stealth fighter down to  
 22 the ground. Right? I mean chewed up in the jet engine  
 23 and stuff. One little accident and all the bombs hit the  
 24 deck and they all smash lives.  
 25 Los Alamos is bad enough. I have a friend from

1 the reservation who has as vision of the three nuclear  
 2 blasts coming up from Los Alamos.  
 3 AUDIENCE MEMBER: We don't respect those  
 4 visions anymore.  
 5 MR. THREE TOADS: Clear the air. No more  
 6 accidents. Military, government are notorious for not  
 7 having accidents, but they are notoriously great for  
 8 having a lot of accidents. You know? I mean, just, "One  
 9 of those things that happen. Too bad."  
 10 You know, "We lost a few men over here," you  
 11 know, "the invasion of Europe and the Netherlands," and  
 12 then the Germans go ball up all the people. Military  
 13 people don't know it all, it seems.  
 14 So peace to the ravens, to the turkey vultures.  
 15 A blast to turkey vultures that one of your jets never  
 16 hit one, and the beautiful sandhill cranes. The sandhill  
 17 cranes came gliding over right at the level you guys  
 18 want on. All the lightening I heard last night, it  
 19 wasn't the lightening at all, just the boom of jets.  
 20 That's tough when I have to hear jets night and  
 21 day. It's a mad bomber's disease. It's seriously time  
 22 for mad bomber's disease. The cows in Europe are nothing  
 23 compared to mad bomber's disease.  
 24 I'm going to shut up, and I hope you guys take  
 25 it to the leaders and say: Okay. We are going to pick

BI-2

1 another spot. Panama. All those places are good. We  
 2 already have them.  
 3 Okay. Are you taking me serious? Do you take  
 4 me serious? Please take me serious.  
 5 HEARING OFFICER: Mr. Toad, I take you  
 6 seriously. **008275**  
 7 MS. LANOFF: Somehow I feel I've been here  
 8 before three or four times already. I'm an interfaith  
 9 minister as well as a healer, as well as a store owner,  
 10 as well as a resident of this town.  
 11 You have listened, but I question have you  
 12 heard, from our officials, elected and otherwise, from  
 13 our elders, from all the nationalities and people of this  
 14 place, from our community, our individuals, our children.  
 15 You have heard us speak for the ones that cannot speak:  
 16 our animals, our plants, our rivers, our space, our air.  
 17 But have you heard?  
 18 You may have listened, but I think everyone in  
 19 this room wants to know: Are you really listening? Does  
 20 this go back, and does it matter?  
 21 Because its matters to us.  
 22 What parts of no don't you get? How many ways  
 23 must we tell you no? Because there's not a person that  
 24 has been in this room or has left this room that won't do  
 25 whatever it takes to get you to understand the word no.

TY

1 And it's not just no for Taos. It's no for  
 2 every other part of your plan.  
 3 But I speak for who is here. You have heard us  
 4 talk about all our sacredness, all our specialness.  
 5 When did we become a nation of, "We, the Air  
 6 Force, we the military?" I thought this was about "We,  
 7 the people."  
 8 And we, the people of Taos, say no.  
 9 (Note: Applause.)  
 10 HEARING EXAMINER: Donna Lanoff.  
 11 Linda Murray Pacheco.  
 12 (Note: No response.)  
 13 Brian Rod.  
 14 MR. ROD: I made my comments in writing,  
 15 instead. Thank you.  
 16 HEARING OFFICER: Mark Gould.  
 17 (Note: No response.)  
 18 Charlie McGarity. **008276**  
 19 MR. MCGARITY: Okay.  
 20 Hello. I've a question about the objectives of  
 21 the EIS statement. It seems that it's in the best  
 22 interest or in the vested interest of the Air Force. You  
 23 know, this is your proposal, so it's in your interest to  
 24 have it fly, if you will, and yet you're the same ones  
 25 preparing the EIS.

GE-39

1 So how can there be objectivity there when  
 2 you're preparing this for yourselves to say: Hay, it  
 3 looks good. Let's go ahead and do it.  
 4 So for this to be an objective report it needs  
 5 to be done by a separate party and not by you guys.  
 6 The other thing is the last meeting I was at  
 7 here in Taos down at the Civic Plaza there was every  
 8 entity in this area was unified, as far as I know the  
 9 only time in New Mexican history, the Jicarilla Apache  
 10 Pueblo, Taos Pueblo, there was the CNA, there was the  
 11 County Commissioners, there was the mayor of Taos.  
 12 Everybody. And everybody was unified in saying that we  
 13 don't want this.  
 14 And if you guys are here to supposedly protect  
 15 democracy, then you have to start listening when there is  
 16 a unanimous democracy saying we don't want this.  
 17 Another issue that I think is pretty obvious  
 18 here, which I think is a genuine lack of respect from the  
 19 Air Force, is that you're proposing to take something  
 20 away from our community, something that I think a lot of  
 21 people have eloquently stated tonight, and you're not  
 22 proposing to put anything back. You're taking away,  
 23 you're thieves, and we all resent that.  
 24 And if you don't feel a warm welcome here, it's  
 25 because you're not respecting us and not offering to put

GE-3

1 anything back for what you're taking.  
 2 The other thing I'd like to -- I've noticed the  
 3 EIS quickly brushed aside the sort of human impacts of  
 4 having, what is it, 2500 huge bombers flying 300 feet off  
 5 the ground over us every year, sort of said, "Well  
 6 you'll, habituate, this is no problem."  
 7 We are humans and we're part of the ecosystem  
 8 and we are part of our environment, and we will be  
 9 impacted by this, and our feelings and opinions are  
 10 things that you're not measuring, but they are still  
 11 going to be impacted. You're looking at how it might  
 12 impact wildlife and how it might impact, you know, the  
 13 trees. And we're feeling an impact, too, and we are  
 14 stating it, and your report brushed it aside. Oh, the  
 15 public's ignorant. They don't understand it won't hurt  
 16 them, it will be okay.  
 17 But this is wrong. We are part of the  
 18 environment and we will be affected, and we are letting  
 19 you know that.  
 20 And the last thing I'd like to say is if this  
 21 is something that's being economically evaluated, I think  
 22 you should take into account what one of the men said  
 23 tonight, which is that Taos may be small but we have got  
 24 a lot of fight in us, and as long as the Air Force  
 25 decides to put this program here in this part of New

GE-30

1 Mexico, you can believe me we will fight it 'til it's  
 2 gone. And it will cost a lot of money, but the people  
 3 here don't let things go. We have a lot to protect, and  
 4 we will definitely do everything we can to protect it.  
 5 (Note: Applause.)  
 6 HEARING OFFICER: Lisa O'Brien. 005277  
 7 MS. O'BRIEN: Hi. My name is Lisa O'Brien, and  
 8 one of the things that's really difficult about being  
 9 here really late at night is everyone who spoke before me  
 10 said absolutely everything I needed to say. My best  
 11 friend, Charlie McCarrett, just took the last thing on my  
 12 list.  
 13 I also have an eight-year-old son who has taken  
 14 to drawing on his arms, so I'm getting a little nervous.  
 15 Just very quickly, I need to speak to this  
 16 entire process of these hearings.  
 17 There's a part of me when I walked in this  
 18 evening I couldn't help but feel that the four people  
 19 involved in this hearing felt less intimidated by the  
 20 hundreds of people sitting here. There is an incredible  
 21 inequity of power in this room at this moment.  
 22 The fact that you set the tone, make the rules,  
 23 tell people how long they can speak, what we can speak  
 24 about is not okay.  
 25 There is not a day that I wake up in Taos

1 that -- I feel incredibly privileged by living here. I  
 2 resent the fact that you feel that you can come in and  
 3 take what is convenient for you to take. It's not about  
 4 privilege that I see here, it's about entitlement, and  
 5 that is not okay.  
 6 I also feel along that line the importance of  
 7 the give and take. Again, I moved to this community and  
 8 the one thing I felt very strongly from Day One is I  
 9 can't just come here and take from it, I have to give  
 10 back to it.  
 11 So along with my friend Charlie, I ask: What  
 12 is it that you give back here? It's very clear what you  
 13 will take.  
 14 And in the spirit of give and take, I would  
 15 like to do two things. One is extend a portrait that my  
 16 son has been working on all evening to your timekeeper;  
 17 and two, I would like to extend a very gracious  
 18 invitation to anyone that's here in uniform: If you  
 19 would like to come to my home for a free hot meal, I  
 20 welcome that. And part of what I would like to share  
 21 with you, I would like to bring you to my home where I  
 22 get my power from the sun and I get my water from the  
 23 rain and I would like you to walk outside with, me and I  
 24 would like you to listen to the silence.  
 25 Thank you.

1 (Note: Applause.)

2 HEARING OFFICER: John Ussery. **008278**

3 HEARING OFFICER: Actually, John Ussery.

4 I'm from El Rito, the one between Abiquiu and

5 Ojo Caliente, about an hour's drive from here.

6 I'm a board member of the Rio Arriba Family

7 Care Network, which represents 25 health care providers,

8 and I'm the chief information officer for Las Clinicas

9 Del Norte, which has clinics in Abiquiu, Ojo Caliente,

10 and El Rito. And not too many of our, oh, 7,000 clients

11 are able to come.

12 We are spread out over 40 communities and a lot

13 of them under the flight path. And I want to address not

14 just, you know, the health concerns but some process

15 ones.

16 I did notice -- First I saw the Draft EIS was

17 in the lobby, so I haven't been able to research it too

18 thoroughly. And the new nearest location of a reading

19 room is an hour from my house, so the availability of the

20 information was not great.

21 But I did glean a couple of things that I have

22 to object to.

23 First, I just want to say this is a land that

24 we love. Many of us are immigrants from elsewhere, and

25 we came here for a reason. This land is a beautiful,

GE-26

1 lovely place to live, but a tough one to make a living

2 in. And we put up with a lot. But for good reason,

3 because this is a land of quiet and grandeur and beauty

4 and peace.

5 I'll have something more to say about the peace

6 a little further.

7 We want to keep it the way it is.

8 Actually, we have enough overflights already.

9 I did a little stop motion of a plane flying by, the

10 trail became the only cloud in the sky as it spread

11 across. We are impacted already, but not at 300 feet 10

12 times a day. That's going to really make it worse.

13 But there are some things in here I did get

14 out, briefly. There's identified scenic resources or

15 vistas within visual range of each of the electronic

16 scoring sites, and no -- the activities aren't expected

17 to preclude existing land uses or continued use or

18 occupation, nor will there be any adverse effects of the

19 land use, recreation resource or individual settings.

20 I really disagree.

21 I mean, I think a lot of ranchers, fishermen

22 and tourists who come here for this grandeur, or the

23 ranchers who are trying, hoping that their sheep will

24 reproduce and not give stillborn due to the shock

25 syndrome. Our humans aren't going to benefit much,

BR-4

1 either.

2 And I really got the sense of peace from

3 everyone here, but there's a lot of people who aren't

4 here, you know -- and I say if you read our news some of

5 the traditional means of expression announce like through

6 burning, bomb building sites, and -- Okay. And shooting

7 at cars, and a lot of disruptive activities. And it does

8 say that at 65 decibels 12 percent of people would be

9 highly annoyed.

10 I'm afraid this will include -- since you are

11 planning 64 decibels, I think it's going to include a lot

12 of people who just happen to have 30.06s out there, and

13 although this is not the group that would do it, I think

14 you guys better prepare for something like that.

15 But back to health effects.

16 I have a friend with post traumatic stress

17 disorder, and she jumps enough at loud noises that aren't

18 in the 64 decibel range, and if you want to impact her

19 and the rest of us with that kind of noise ten times a

20 day, it's not going to help us.

21 And the other thing that I pointed out during

22 work periods, the best enforced law in the state:

23 Murphy's Law, that things will go wrong.

24 I don't wish anything else to anyone, but I

25 want you to be aware when you're bringing that kind of

AO-18

1 weaponry over us in terrain that is prone to fires and

2 other things, one accident can take out a huge area of

3 the most precious land in the world.

4 (Note: Applause.) **008279**

5 HEARING OFFICER: Gretchen McGregor.

6 MS. MCGREGOR: My name is Gretchen McGregor.

7 I'm a resident of Taos since 1982. I have my degree from

8 the University of California, Berkeley, in environmental

9 sciences. I spent a lot of time learning how to govern

10 an impact statement, although that is not the area I work

11 in. And, no disrespect intended, but this is insulting,

12 this Environmental Impact Statement.

13 Certain values have been knowingly corrupted.

14 I'll give an example in a moment. There's intentional

15 errors, of omissions, wilderness areas that weren't even

16 mentioned in here, and also the final conclusion being

17 stated negligible impact is -- I mean, even a high school

18 student if you introduced a problem in a class and said

19 here is a pristine area, you're going to introduce 2,600

20 flights, B-52 bombers, 160-foot wingspan, imagine two

21 thirds of a football field with eight jet engines, and we

22 are going to fly these not once a month, not once a

23 week, but 10 times a day during the daytime and the

24 night, do you think -- What is the right answer, multiple

25 choice? There will be some impact? There will be no

BR-1

1 impact? There will none of the above? Or there will be  
 2 impact?  
 3 Again, I'm not saying this to be insulting, but  
 4 I find the Environmental Impact Statement to be  
 5 insulting. Knowingly corrupted values.  
 6 The gentleman before me was just speaking about  
 7 64 decibels. If you actually read the Environmental  
 8 Impact Statement and you don't dilute the decibels, which  
 9 has been explained tonight, I don't want to go into that,  
 10 we are talking about underneath the corridor 120  
 11 decibels.  
 12 This produces instantaneous loss of hearing.  
 13 This is a knowing corruption of the values, and basically  
 14 this will drive human populations out of the corridor.  
 15 We know there's no one who can exist at that sound level.  
 16 David DiCicco, the county planning director,  
 17 also pointed out, and this is a very important point I  
 18 want to make -- and I know it's late, most people have  
 19 left. This is a logarithmic scale, which means starting  
 20 at 60 decibels, 70 decibels is 10 decibels more, it's  
 21 twice as much. 80 becomes four times as much as 60. At  
 22 90, you get my point, is 8 times as much as 60.  
 23 If you go all the way up the logarithmic scale  
 24 to 120 decibels that represents 64 times the amount of  
 25 noise as 60 decibels.

LU-9

1 This is what I'm stating as knowingly  
 2 corrupting the values.  
 3 I understand my time is up.  
 4 If I could have another one minute just to read  
 5 into the record. I think it's very important that we  
 6 actually state into the public record some of the areas  
 7 that have been excluded from this list, because these are  
 8 wilderness areas that we have talked a lot tonight about.  
 9 The Carson National Forest Rio Grande Wild and  
 10 Scenic River area.  
 11 The Uroco (phonetic) Wildlife Area.  
 12 The Chama Wilderness Area.  
 13 Elliott Barker Wildlife Area.  
 14 The Valle Vidal.  
 15 The Colin Neblett Wildlife Area.  
 16 Cimarron Canyon State Park.  
 17 Santa Rosa State Park.  
 18 Santa Fe National Forest.  
 19 Villa Nueva State Park.  
 20 Summer Lake State Park.  
 21 Kiowa National Grasslands.  
 22 Rio Brancas National Grasslands.  
 23 The fact that these haven't even been  
 24 mentioned is just -- it's not acceptable. The money has  
 25 been spent producing a draft report that doesn't include

SE-5

BR-4

1 these, and I want them included in the record, and they  
 2 need to be addressed in any natural report. How can we  
 3 sum up the impact without addressing these parklands?  
 4 As far as the final conclusion of negligible  
 5 impact, it's nauseating to hear that. It's insulting.  
 6 We may be poor but we're not dumb. New Mexico  
 7 has the highest per capita of PhDs in the United States.  
 8 And I just want to read, because it was  
 9 incorrectly stated in the EIS, and this is last thing  
 10 I'll say.  
 11 Taos County has 27 percent of its population  
 12 living below the poverty line. 27 percent. We have 18  
 13 percent unemployment.  
 14 To propose that this will have no impact, no  
 15 socioeconomic impact is absurd, and I think you're  
 16 wasting time and money, and I really would like you to go  
 17 back to the drawing board and do a professional job  
 18 that's deserving of this area and the quality of the  
 19 people and wilderness here.  
 20 Thank you.  
 21 (Note: Applause.)  
 22 HEARING OFFICER: Patrick Halladay. **008280**  
 23 MR. HALLADAY: Good evening.  
 24 I would just like to say that the major issue  
 25 to me seems to be here quality of life and the purpose of

BR-7

1 the American military I think seems to be to protect our  
 2 quality of life, but in a paradoxical fashion in their  
 3 effort to protect our quality of life they seem to be  
 4 destroying it. That arouses many questions in my mind.  
 5 I'd like to say regarding quality of life, too,  
 6 that people are used to a certain esthetic around here,  
 7 and I don't know that the Air Force or any military  
 8 appreciates that esthetic, and it's kind of hard to  
 9 define esthetics to people who are numb to it. I suppose  
 10 you'd have to live here.  
 11 But there are some people who feel that what is  
 12 happening with these planes is a form of terrorism. And  
 13 that's something that comes up in the news more often  
 14 these days: Domestic terrorism. That's paranoia that  
 15 comes up. The government seems to be worried that  
 16 somebody, maybe it's a Moslem fundamentalist or somebody,  
 17 is going to blow up buildings, and actually that does  
 18 happen, but I feel that we already have a lot of domestic  
 19 terrorism, and you are the perpetrators.  
 20 (Note: Applause.)  
 21 Regarding domestic terrorism, like begets  
 22 like. Bad actions create bad Karma, and somebody who is  
 23 not able to habituate is going to take a -- is going to  
 24 make a reaction that is along the same lines. It's going  
 25 to be labeled domestic terrorism, but they will be

1 fighting you in defense of their quality of life.  
 2 I work outdoors. I plant trees on the Indian  
 3 reservations Bureau of Land Management, National Forest,  
 4 private land. I'm outdoors an awful lot. I've been  
 5 doing this for 15 years, and I've never been on any  
 6 single job where I have not been terrorized by your  
 7 planes.  
 8 Every time -- I don't have post traumatic  
 9 stress disorder, I'm not a veteran, but, every time, my  
 10 heart jumps in my throat. And I'm sure it is the same to  
 11 all the animals and wildlife living out there.  
 12 And we don't like it. It's not esthetic.  
 13 Every time I hear it, for 15 years now, I think  
 14 this is an incredible lack of respect. You guys are  
 15 really pushing it, and now you are talking about doing  
 16 more. That's like, really, pushing it.  
 17 That is what I had to say. You guys are  
 18 really pushing it. I'm not going to be a domestic  
 19 terrorist but you're going to get some flak from  
 20 somebody.  
 21 HEARING OFFICER: Shane West. Then after Mr.  
 22 West, I'll be calling on Daniel Williams. **008281**  
 23 MR. WEST: Check the decibel levels.  
 24 Just kidding.  
 25 I love you Three Toads.

TY

1 I don't know what I'm going to say. Great  
 2 spirit brought me here tonight, and I don't know, I guess  
 3 really all I have to say -- Spirit is filling my heart --  
 4 is that esoterically and all that stuff -- I went to  
 5 college and all that stuff and studied noise. I'm a  
 6 music major. And I don't like the environmental impact  
 7 of these things. And I studied esoterically, and what  
 8 I've read and talked with people from Tibet and guys from  
 9 East India, and the Hopi Indians, that this is the heart  
 10 chakra of the Earth Mother, and that might be something  
 11 to be taken into consideration.  
 12 I don't know. I love my earth. I love this  
 13 planet. And I guess the big thing was they opened up the  
 14 pyramids, you know, the other day -- and I was out  
 15 praying with my medicine drum. I saw a large, giant red  
 16 pyramid come down. They said on T.V. a couple of days  
 17 later it looks like we migrated from this planet to that  
 18 planet, because there are pyramids on Mars the same exact  
 19 shape as the ones in Egypt and China. They all match up  
 20 to the constellation Orion.  
 21 It's kind of interesting if anyone is  
 22 interested.  
 23 But anyway, this is the heart chakra of the  
 24 earth, and that's all I really have to say, except I love  
 25 you guys, and good night.

1 HEARING OFFICER: Daniel Williams.  
 2 After Mr. Williams, I'll be calling on Juan  
 3 Montes. **008282**  
 4 MR. WILLIAMS: Sir, thank you very much for the  
 5 opportunity to speak again.  
 6 Most of the people I've had the opportunity to  
 7 meet last year -- My name is Daniel Williams, as you  
 8 know, a retired a major from the National Guard.  
 9 As a former military officer I very much  
 10 understand the need for military training and respect  
 11 that, respect the fact, love the fact we live in a  
 12 country where people can share their ideas and nobody  
 13 will go to jail for what they have said tonight.  
 14 My position is a little different. I'm not  
 15 opposed to the military and I'm not completely opposed to  
 16 RBTI. Admittedly, I wouldn't want to be living under it,  
 17 no matter where it was, but frankly my concern is  
 18 Northern New Mexico and what I believe would be  
 19 devastating impacts.  
 20 During my comments at the meeting at Angel Fire  
 21 last night, I mentioned a letter from the BLM. I was  
 22 able to get a copy of this today. It was addressed to  
 23 the RBTI EIS, To whom it may concern.  
 24 "After reviewing the Realistic Bomber Training  
 25 Initiative, we have the following comment: Recommend no

1 flyovers between April 15 and September 15 in the Ute  
 2 Mountain area."  
 3 For whatever reason this letter is not included  
 4 in the correspondence section of the annexe of the EIS.  
 5 And the route does go directly over Ute Mountain.  
 6 It goes on to say, to reference information  
 7 which I don't have available now, I'm going to try to  
 8 that get the additional information to go with that.  
 9 So I would like to submit this with my  
 10 comments.  
 11 In addition, regarding whooping cranes,  
 12 whooping cranes are on the threatened/endangered list,  
 13 considered to be very near extinction. They are  
 14 mentioned in the EIS, but there are two specific routes  
 15 for migration. One directly follows the Rio Grande,  
 16 another crosses the Valle Vidal shortly after the route  
 17 turns to the southeast. So at least those two areas the  
 18 bombers would be flying directly across the route of the  
 19 whooping crane, and because they are so limited that does  
 20 increase the threat to them.  
 21 I was quite concerned that the EIS says  
 22 negligible impact regarding socioeconomics.  
 23 Most of Northern New Mexico, the dollars for  
 24 this area and the economy for this area are 90 percent  
 25 tourism, so it would actually have a tremendous impact.

ED-8

BI-2

BR-4

1 When people have a choice of coming to a  
2 vacation area to camp, to hike, to ski, and they have a  
3 choice of having 10 to 12 bomber flights overhead each  
4 day, 15 to 20 percent of those being at night, why should  
5 they come here when they can as easily go somewhere a  
6 short ways away. So it would, in fact, have a huge  
7 impact. And for there to be no cultural impact, if again  
8 showing negligible impact regarding culture, that is --  
9 that is not honoring the people of Taos Pueblo and what  
10 they hold sacred and what so many people actually do hold  
11 sacred.

12 I do understand the need for training, I honor  
13 and respect that, but I do ask you look closely at those  
14 areas.

15 I know we would not have time for additional  
16 comments tonight, sir, but if I could just take a moment  
17 I would like to thank the people for coming out tonight.  
18 As a team I do believe that we will defeat this proposal  
19 for Northern New Mexico.

20 But I'd also like to thank you for being  
21 respectful. You have expressed your opinions, but in a  
22 respectful way, honored the three-minute time limit, and  
23 I'd like to encourage people to make sure you not only  
24 say I disagree, I don't want it here, but say why.  
25 Because the possible important request. This is a

1 scientific study, and the emotion makes us feel good to  
2 express it but, it won't make a difference to whether it  
3 happens. So make sure you say why.

4 Finally, please come back to the Kachina Lodge  
5 on Saturday. Being here, whether you speak out, whether  
6 you write your comments, it is very important.

7 So thank you very much.

8 HEARING OFFICER: Juan Montes.

9 (Note: No response.)

**005283**

10 HEARING OFFICER: Michael Berral.

**TY**

11 MR. BERNAL: The last name is not Berrel, it's  
12 Bernal, and I represent the Red Willow people, indigenous  
13 people to this area.

14 And it's good to see you people here talking  
15 about this situation that is very critical to our area.  
16 And I'm a rancher and I'm a local contractor also, so me  
17 and my father we run cattle, run like 30-40 head of  
18 cattle. And we have horses, too, and a bunch of, like,  
19 dogs and cats and stuff like that. So I believe that  
20 this flyover that you guys are proposing is totally  
21 uncalled for. This area, and all other areas, too. Not  
22 just in our area. Throughout the United States and  
23 throughout the continent, because, you know, these tax  
24 dollars that is being wasted for this type of situation  
25 should be used elsewhere to help the homeless people, to

1 help the people that are in poverty that need -- the  
2 people in Kosovo right now that the United States  
3 government has intruded on, for what reason.

4 You don't give the people the full picture of  
5 the reason why we're there, why my tax dollars are  
6 restoring other people's lands that is sacred to them.  
7 That is sacred to us, here, too.

8 The people that have moved here to Taos to be  
9 in my valley, I've lived here 36 years and my ancestors  
10 have lived for thousands of years. We haven't been  
11 raised here as a reservation. We grew up here as the  
12 water grew here and the trees and all the animals and  
13 all the living things.

14 And I just want to -- I just want to express  
15 myself in that way, because I am deeply concerned of the  
16 happenings in this area, and in other areas, too.

17 Mother Earth is very special to me, and all the  
18 living things on Mother Earth. I am -- We are living  
19 things. You have a heart. I have a heart. We breathe  
20 the same air, we have the same feelings.

21 Maybe not.

22 We go to bed, we wake up feeling the same way.  
23 Like, you know, like Three Toads said, you know,  
24 seriousness. You guys have a serious job. I know that.  
25 I realize that. But so do we as your constituents.

1 So I just, you know, I have a plea that you  
2 guys can stop everything. Stop this world war that is  
3 going on. You know, mostly effecting poor people,  
4 indigenous people throughout the country, throughout the  
5 world.

6 So it's -- you know, you have to realize -- you  
7 got to think about our younger generation that is coming  
8 up, like my daughter here. She stayed up to 10:30 at  
9 night just to be here to support my little family and my  
10 Red Willow people.

11 So I just -- you know, I just want to say, you  
12 know, you can consider my words.

13 And I want to thank all the people that are  
14 here tonight, too, you know, that there's a lot of the  
15 folks I never see around Taos and stuff, but, you know,  
16 these are the people, real people that stay up late here  
17 and really want to fight for what's really ours.

18 You know, we are all one people, not all  
19 separated. This is the way the government made us to be,  
20 for everybody to separate from each other. We all need  
21 to come together as one.

22 That's all I have to say tonight.

23 HEARING OFFICER: Mark Thomas.

24 (Note: No response.)

25 HEARING OFFICER: Alicia Johnston, I believe.

TY

008284

1 MS. JOHNSTON: First of all, I just want to  
 2 come here and speak on behalf of Mother Earth. And I  
 3 find it sad that we all have to come here and speak on  
 4 behalf of Mother Earth, because you guys can't hear her  
 5 screaming to back off.  
 6 And it's unbelievable that you're willing to  
 7 destroy the earth and -- you know.  
 8 But the point is what is that saying to the  
 9 rest of the people, the people in the United States, the  
 10 very people that you are trying to get to support you.  
 11 And there's a saying that if you kill two people you're a  
 12 murderer and you go to prison, but if you kill two  
 13 million people, you're a hero and you win.  
 14 So you expect people to support you so that you  
 15 can become heroes, and -- I forgot what I was going to  
 16 say.  
 17 But I just find it appalling that you think  
 18 that technology is the way when your sole provider is our  
 19 Mother Earth. And sooner or later it's not going to  
 20 matter if there's a government, it's not going to matter  
 21 if there's an Air Force or if there is anything, because  
 22 Mother Earth is not going to allow us to stay here any  
 23 longer. She is not going to keep providing for us so  
 24 that we can destroy her. It's not right for her to have  
 25 to endure the pain we are putting on her.

AO-27

1 Thank you.  
 2 (Note: Applause.)  
 3 HEARING OFFICER: Nick Rizzo. 008285  
 4 MR. RIZZO: Hi. How y'all doing?  
 5 I'm not from around here. I'm from Florida.  
 6 There is an Air Force base here, Patrick, I believe.  
 7 There is a forest called Ocala National. I spent a lot  
 8 of time out there as a kid. All right? They had these  
 9 flyovers there, and I remember the first time I heard one  
 10 and I literally pissed my pants.  
 11 Don't exactly think that's very safe around  
 12 here, due to the fact that there are mountains and then  
 13 there's something called an avalanche. And it happens  
 14 when a stable top part of snow gets on an unstable bottom  
 15 part, and it can be triggered by noise, and 64 decibels  
 16 which I doubt that's even close to what it really is, I  
 17 think it's more like 100, 120. They are loud. I'm  
 18 pretty sure you all know. You are all probably Air  
 19 Force, I see you all got wings, so you all know it's not  
 20 exactly quiet. And I don't see how you guys can sleep  
 21 through it at night.  
 22 Basically, what I say you do with your  
 23 Project D or whatever it is, turn it into Project E,  
 24 "eliminate" it, and don't come through here, just quit it  
 25 altogether.

TY

008286

1 I mean, bombs are made for one purpose, as  
 2 someone already said, and that's to kill. And it all  
 3 comes back one day to you.  
 4 Thank you very much.  
 5 HEARING OFFICER: This individual has already  
 6 spoken but he submitted a second card so possibly wanted  
 7 to make additional.  
 8 Jonathon Kushner.  
 9 (Note: No response.)  
 10 That exhausts all of the cards.  
 11 And it's 10:30.  
 12 I'd like to remind all of you that we do have  
 13 two more hearings that are set for this Saturday. One  
 14 begins at 10:00, and the second one begins at 1:00 p.m.  
 15 And that's at the Kachina Lodge. Both of those will be  
 16 at the Kachina Lodge Convention Center.  
 17 And with that knowledge, that you have those  
 18 two opportunities on Saturday to make comments, I would  
 19 like to know if there is anyone who has a burning desire  
 20 to make comments now before I end the hearing.  
 21 I don't want to cut anybody off. If you  
 22 absolutely have a burning desire to say something  
 23 tonight, then I want you to come forward.  
 24 If you can tell us your name.  
 25 MR. BELHORE: This is really unexpected. Hi.

1 I'd like to speak to the people and to you.  
 2 My name is Douglas Belhore (phonetic), and I  
 3 teach English for a living for the University of New  
 4 Mexico. I know I don't look like it, but a lot of people  
 5 in Taos don't look like the standard American.  
 6 I've taught at 13 colleges and universities so  
 7 I think lot about language. I talk a lot about  
 8 pronouns, and I hear "us" and "them" and "you," and it's  
 9 a drag. And I wish, you know, we could talk together.  
 10 I don't think we are on different sides. You  
 11 know what I am saying?  
 12 We. We.  
 13 And all I wanted to say is at the University  
 14 of New Mexico, a friend of mine is teaching a class  
 15 called The Philosophy of Peace.  
 16 There is endless programs in Northern New  
 17 Mexico centered around peace, and we should celebrate it  
 18 and should be damned proud, because it doesn't exist in a  
 19 lot of parts of this country.  
 20 And I think what you are hearing tonight is we  
 21 don't want to go into the next millenium wasting our  
 22 money in violence. We are really into peace, and we  
 23 believe in it, don't we?  
 24 Peace. Anything can happen. It can.  
 25 MS RYER: You mentioned a burning desire, and

AO-16

1 I couldn't resist. **008287**  
 2 My name is Rachel Ryer. I spoke before.  
 3 My land that I have built my house on was part  
 4 of the large fire that happened in 1995 or 1996, I can't  
 5 even remember. But one gentleman did mention that a  
 6 crash would have a devastating effect, and that is in the  
 7 thousands of acres in just, you know, a small area.  
 8 One spark lit the fire that destroyed the Hondo  
 9 area forest. **008288**  
 10 Thank you.  
 11 MR. CHAVEZ-ROZE: My name is Guillermo  
 12 Chavez-Roze, and I can talk about noise pollution. I  
 13 come from San Diego. I've been here for 12 years, 13  
 14 years.  
 15 And my school, San Diego High School, was built  
 16 right in the route of the transportation of these huge  
 17 planes. Across from my house is Coronado Island. You go  
 18 to the beach, and during the time that you are there  
 19 resting, you get to hear all of these airplanes coming.  
 20 So we avoid going to the beach.  
 21 Our school was soon to have better windows, our  
 22 City College in San Diego was reconstructed for adequate  
 23 soundproofing, and that did not work. No matter how much  
 24 people talk about staying one of the finest cities in the  
 25 United States, they couldn't do much about noise

1 pollution. That problem still exists. Education in  
 2 those campuses were displaced -- And this is just  
 3 commercial planes. What about these heavy planes, the  
 4 ones you are talking about bringing here to this valley?  
 5 They will be more disruptive.  
 6 And just like people mention throughout this  
 7 night and the morning -- I came here to hear the  
 8 comments -- all the comments was: We don't want this to  
 9 happen in this valley.  
 10 There's no guarantee by even the highest -- and  
 11 I mean the president, can guarantee there will be no  
 12 accidents. That's the truth. That is the truth of this  
 13 whole thing.  
 14 The pilots? I wanted to join the Air Force. I  
 15 worked for United Way in San Diego. I talked to many  
 16 veterans, I had many veteran friends, I honor the  
 17 services. You guys had taken a lot of -- people on here,  
 18 but you are not the person responsible.  
 19 The higher -- not even the president will be  
 20 responsible. This desecration of the sky is very  
 21 truthful. It is a true desecration. Here people are  
 22 sending prayer to the heavens. If planes come by and say  
 23 maybe that plane would take my prayer to the heaven.  
 24 When we look at this Air Force as the guardians  
 25 of the heavens and do the right work and protect the

AO-61

1 world. That is what you are here for, is protect us, not  
 2 to hurt us.  
 3 HEARING EXAMINER: Is there anyone else with a  
 4 burning desire to make comment this evening?  
 5 (Note: No response.)  
 6 Very good.  
 7 Ladies and gentlemen, that concludes this  
 8 public hearing. I'm going to remind you of the two  
 9 hearings we have on Saturday. I encourage you to come  
 10 out for that.  
 11 I thank you for your participation. Please  
 12 remember the public comment period will extend through  
 13 June 16, 1999.  
 14 This public hearing is adjourned.  
 15 (Note: Hearing adjourned at 10:35 p.m.)

1 (NOTE: From 1:00 p.m. until 2:33 p.m. no record was made.)  
 2 THE HEARING OFFICER: We have a court reporter  
 3 here, and she's going to take down everything you say.  
 4 MR. MARK BLAKEMORE: Okay.  
 5 THE HEARING OFFICER: And so the first thing  
 6 you should do is tell us your name. **008289**  
 7 MR. MARK BLAKEMORE: Mark Blakemore,  
 8 B-L-A-K-E-M-O-R-E. I was looking at where -- where you're  
 9 holding these meetings, and it seems like there is a -- it's  
 10 hard to tell from this map, but if you look on the larger  
 11 one, there is a -- there is a pretty -- I don't know how to  
 12 say. It's a pretty -- it's a pretty strong community that  
 13 lives in the Chama Valley, and it looks like there is no  
 14 meetings -- this would probably be the closest meeting for  
 15 any of those people. And some of them are going to be  
 16 directly affected, they're underneath the proposed flight  
 17 line. And I think that it's sort of a stretched imagination  
 18 to imagine that they would drive to Taos, or even to here,  
 19 for that matter, to attend one of these meetings.  
 20 And I also wonder whether they have been -- what the --  
 21 the -- how this information was disbursed to them that these  
 22 meetings are taking place, and if those people ever got that  
 23 information, and how they're expected to know about this. So  
 24 that's about it.  
 25 I just think you need to -- you need to -- especially

GE-2

1 looking at that map, you need to see some of these smaller  
2 towns where -- where this is going to be flying over, I -- I  
3 doubt that they even know about it. So --

4 THE HEARING OFFICER: Have you expressed that  
5 to any of these other --

6 MR. MARK BLAKEMORE: I mentioned it to a  
7 couple of them and they said, you know, "Get out and tell  
8 people." But, you know, it's a ways. I'm not going to drive  
9 down there and sound the alarm, but I just think there needs  
10 to be some -- some way to let -- inform people in that whole  
11 Chama Valley that, you know, this is taking place or that  
12 it's -- that it's a proposal.

13 THE HEARING OFFICER: It would probably be  
14 good to get the word to them before Saturday, because we're  
15 having two meetings in Taos on Saturday.

16 MR. MARK BLAKEMORE: Right. There is a -- let  
17 me show you that other map. There is a couple of towns that  
18 are directly -- they're, like, within the flight line that  
19 have, like, a very strong ethnic community, Hispanic, that  
20 they've already had problems with authorities over land  
21 grants and that sort of thing, and I suspect that this is  
22 going to come as a big shock to them when they find out that  
23 this is a -- not -- first of all, I doubt that many of those  
24 residents even knew of this proposal, and secondly, I doubt  
25 that -- doubt that they've had a chance to get to any of

GE-40

1 these meetings just because of the location of them.

2 I think that you might want to think about -- you know,  
3 I don't know if it's too late to have more meetings, but you  
4 might want to have one closer to those people that are  
5 affected in that area. That's about it. So --

6 THE HEARING OFFICER: If -- if you wanted to  
7 make any other comments or if you know of anybody that, you  
8 know, you could mention to them that they have this meeting.

9 MR. MARK BLAKEMORE: Uh-huh (affirmative).

10 THE HEARING OFFICER: The public comment  
11 period for submission of written comments extends until the  
12 16th of June.

13 MR. MARK BLAKEMORE: Yeah, I saw that, so --  
14 so what's their -- what's their method of making comment at  
15 this point? Let's say that they're not willing or they're  
16 not able to drive to Taos. This meeting is, you know,  
17 obviously today and there is not much of a turn out. What --  
18 what options do they have for making comment?

19 THE HEARING OFFICER: I would say their best  
20 option, possibly their only option would be to submit written  
21 comments to the address that --

22 MR. MARK BLAKEMORE: That would be through one  
23 of these forms or just -- I got this from the table.

24 THE HEARING OFFICER: The form should indicate  
25 the address, and I'm not sure exactly what it is. It might

1 be this. These are all the same.

2 MR. MARK BLAKEMORE: I don't know. No, they  
3 look a little bit different.

4 THE HEARING OFFICER: They should have a  
5 document, if you ask -- oh, here it is.

6 MR. MARK BLAKEMORE: Oh, no, it's here.  
7 Written comments. Oh, no, this is February. That's not it.

8 THE HEARING OFFICER: I would say that lady up  
9 at the table over there --

10 MR. MARK BLAKEMORE: Okay.

11 THE HEARING OFFICER: She definitely is going  
12 to have addresses. She's probably got the document she can  
13 just hand you that has the address on it --

14 MR. MARK BLAKEMORE: Okay.

15 THE HEARING OFFICER: -- maybe a label she can  
16 stick on one of these. But this, this particular document,  
17 here, has the public hearing schedule. So, after two  
18 meetings in Taos, we only have a meeting Monday in La Junta,  
19 Colorado and then Harrison, Arkansas.

20 MR. MARK BLAKEMORE: Okay. So these meetings  
21 are pretty much over --

22 THE HEARING OFFICER: That's right.

23 MR. MARK BLAKEMORE: -- after the two in Taos?

24 THE HEARING OFFICER: That's right, realistic  
25 opportunity to people in New Mexico to attend a public

1 hearing after today will be these two meetings, one in the  
2 morning and one in the afternoon, in Taos.

3 MR. MARK BLAKEMORE: Okay.

4 THE HEARING OFFICER: And then other than that  
5 my recommendation would be to submit written comments. As  
6 far as any priority, you know -- here is the address.

7 MR. MARK BLAKEMORE: Okay. That's it right  
8 there. Okay.

9 THE HEARING OFFICER: Langly. There is no  
10 priority given to any particular type of --

11 MR. MARK BLAKEMORE: Comment.

12 THE HEARING OFFICER: Right, comment.

13 MR. MARK BLAKEMORE: Okay.

14 THE HEARING OFFICER: Same priority is given  
15 to written comments as is given to verbal comments.

16 MR. MARK BLAKEMORE: Okay. Well, maybe that's  
17 the best way to go, then, just get some of these and --

18 THE HEARING OFFICER: Well, we had a --

19 MR. MARK BLAKEMORE: This may not be the right  
20 one because -- oh, okay. I think that's the same address.

21 THE HEARING OFFICER: Yeah, that could be.  
22 That looks like the same.

23 MR. MARK BLAKEMORE: Yeah.

24 THE HEARING OFFICER: Maybe that's the best  
25 way to do it. Okay. Thank you.

1 If you'd like to make comments please come forward.  
 2 Please. This is a very informal way we're doing this, here.  
 3 At our previous hearings we've had a formal opening of the  
 4 hearing after the open house and I introduce myself, explain  
 5 the ground rules, and then we have a presentation by  
 6 Lieutenant Colonel Mason to describe what we're doing.  
 7 Since there are so few people here, we're just allowing  
 8 people to come forward and make whatever comments you want to  
 9 make, and that will be taken down by a court reporter.  
 10 MS. MARY AITKEN: Okay. Mary Aitken, **008290**  
 11 A-I-T-K-E-N. I wish I had a pen because I use it to organize  
 12 my thoughts better. One of my concerns was that there is no  
 13 public meeting in the Chama Valley. And if you look at a  
 14 map, that flight line enters the southern end of the Chama  
 15 Valley, and it doesn't so much affect the reservation -- in  
 16 some ways I know it does, but it affects the Chama Valley far  
 17 greater, and there is no public meeting in Chama, Tierra  
 18 Amarilla, Cebolla. All those cities there would be far more  
 19 affected, and I think that's why there is not a lot of people  
 20 here. And I understand there were -- press release went out,  
 21 but people from Chama aren't likely to come here, or T.A. or  
 22 -- so that's one of my concerns.  
 23 My other concern is this wild and scenic area, the Chama  
 24 River, where the -- is the entering point, the flight line,  
 25 that's a -- a valued recreational area. And it is also

GE-2

BR-4

BR-4

1 national forest that continues to fly over, over Canjilon  
 2 Lakes and then over the Brazos Pass and in that area. And in  
 3 this area the economy is -- there is not much economy. It's  
 4 largely based on guiding, on game, fishing, lumber, those  
 5 kinds of things. And I know that there would be some effects  
 6 in that area from such low lying -- low flying planes.  
 7 My third concern would probably be related to that.  
 8 It's just that elk hunting is a huge business here, and it is  
 9 on the reservation, too, and I didn't see in the  
 10 environmental impact statement, you know, how -- I know some  
 11 animals do flee, some don't, whatever. But my -- my concern  
 12 would probably be big game and how they would be affected by  
 13 -- by this, because it's a multi million dollar business in  
 14 this area. And that's all.  
 15 THE HEARING OFFICER: Thank you.  
 16 MS. MARY AITKEN: You're welcome. So there is  
 17 -- is there a chance that there could be a meeting in Chama  
 18 or in the Chama Valley somewhere?  
 19 THE HEARING OFFICER: Any time soon, no. We  
 20 have a schedule that we're going to complete here shortly,  
 21 and the last two hearings we have in New Mexico are in Tacs  
 22 on Saturday.  
 23 MS. MARY AITKEN: Uh-huh (affirmative).  
 24 THE HEARING OFFICER: And after that we move  
 25 to La Junta, Colorado, and meeting there on Monday, and

1 meeting on Thursday in Arkansas, and that's the end of this  
 2 particular trip. And my role as a hearing officer is  
 3 detached from the RBTI proposal process and the command  
 4 representatives, and I'm not part of the command at all.  
 5 MS. MARY AITKEN: Uh-huh (affirmative).  
 6 THE HEARING OFFICER: So that particular  
 7 question will better be put to one of the other Air Force  
 8 people here. They are in the position to be able to state  
 9 that, whether there is any plan or any possibility for these  
 10 hearings.  
 11 MS. MARY AITKEN: They said just to pass -- to  
 12 pass the sheets out, you know, to pass these out. And that  
 13 -- because they're not.  
 14 THE HEARING OFFICER: Realistically, that's  
 15 the best way to insure that comments are submitted.  
 16 MS. MARY AITKEN: Uh-huh (affirmative).  
 17 THE HEARING OFFICER: And the deadline, as you  
 18 probably know, is 16 June, for sure, written comments to that  
 19 address here at the bottom of the sheet.  
 20 MS. MARY AITKEN: Right. Okay. Is this a --  
 21 oh, you have to have your name and address. Okay.  
 22 THE HEARING OFFICER: Thank you.  
 23 MS. MARY AITKEN: Thank you.  
 24 (NOTE: From 2:46 p.m. until 2:56 p.m. no record was made.)  
 25 THE HEARING OFFICER: If you'd like to make

BI-1

1 comments for the record you can make verbal comments.  
 2 MS. BERNIE LADD: I don't know yet.  
 3 THE HEARING OFFICER: This has nothing to do  
 4 with your comments if you decide to make them, this is just  
 5 the report I do. My job in this is to act as the hearing  
 6 officer. I'm not connected with the other Air Force  
 7 representatives here. They're part of the command. My  
 8 normal job is a military judge. Where we have a big group of  
 9 people, I act as the hearing officer and try to keep things  
 10 going smoothly and make sure everybody has the opportunity to  
 11 make comments.  
 12 So, if you do have something that you'd like to say,  
 13 what you should do is sit down and just tell us what you --  
 14 what you think of this. And we'd like to know your name. **008291**  
 15 MS. BERNIE LADD: My name is Bernie Ladd. To  
 16 me, I don't care if you guys use it. It's --  
 17 THE HEARING OFFICER: How do you spell your  
 18 last name?  
 19 MS. BERNIE LADD: Ladd, L-A-D-D. And as long  
 20 as it doesn't bother my elk and my deer, doesn't matter to  
 21 me. We tried to -- tried to stop them from putting in that  
 22 airport over here, but it don't do us any good, so I'd say go  
 23 for it, because they never listened to us before, you know,  
 24 before when we wanted to stop an airstrip put in here. And  
 25 we didn't want it put in here, but nobody listened to us.

1 Out of, like, 30 -- there was a meeting, a public hearing,  
2 you know, for our little airstrip. And out of the 30 people  
3 there was, like, 27 that objected, and yet they still put it  
4 in.

5 So our council is not listening to what we have to say  
6 so, therefore, I'm going to go the opposite way and say, "Go  
7 for it." That's all I have. So that would be my -- you  
8 know, my -- as long as it doesn't go over my house, I don't  
9 care. Thank you.

10 THE HEARING OFFICER: Thank you.  
11 (NOTE: From 2:59 p.m. until 5:20 p.m. no record was made.)

12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23  
24  
25

1 slowly. In addition, if you have a written statement, the  
2 court reporter would appreciate you handing it in so that any  
3 names, places, references to scientific terms or other data  
4 can be recorded accurately.

5 Finally, I'd like to remind you to limit your comments  
6 to the Draft EIS; that is the purpose of this public comment  
7 period.

8 If you'd like to turn in your written comments at any  
9 point, either during this period or at the conclusion, there  
10 is a box in the outer office or in the outer room, there,  
11 where you can place your written comments.

12 I'd like to get started now with our only public  
13 official, and that is Ralph Reyna, who is a Taos Pueblo  
14 Council Member. **008292**

15 MR. RALPH REYNA: My name is Ralph Reyna, and  
16 I'm from Taos Pueblo, a council member for the tribe, and I'm  
17 a retired Air Force sergeant. And I'm here representing my  
18 tribe, and also for myself.

19 I am quite concerned about the military flights that are  
20 taking over over the northern part of New Mexico, and all the  
21 environmental things that we are worried about. The trees,  
22 the rivers, all the streams around the -- around the  
23 tributary, here.

24 The Town of Taos, the Pueblo, are well known world over.  
25 People come from all over the world to visit the Pueblo and

1 also the Town of Taos. Also, the Pueblo is listed under the  
2 world heritage list, and also the church in Ranchos de Taos  
3 also is a known area.

4 In an environmental area I'm quite concerned, all the  
5 headwater starts in our reservation, the lakes, Blue Lake,  
6 Bear Lake, Star Lake, and other small lakes in that area.  
7 That's where the water comes from, and if they get polluted,  
8 we don't want to contaminate the whole Town of Taos or any  
9 animals, wildlife, trout, eagles and falcons. They -- they  
10 come down to the Rio Grande area for their nesting time.

11 And quite a few times I have seen B-1 bombers and KC-135  
12 flying so low over the Pueblo on the western end of our  
13 reservation, and it -- oh, it's quite a nuisance to hear all  
14 that big noise.

15 Also, the -- back in 1994 a delegation of us went down  
16 to Clovis, New Mexico to oppose the military training flight  
17 that they used to have with F-111's intruding over our  
18 reservation, intruding into our religious doings in August,  
19 flying so low we -- you could almost reach up and touch the  
20 tail of the aircraft. The Colonel at that time told us that  
21 they'll abide with our proposal that they move their training  
22 route farther east from the reservation, from Angel Fire on  
23 east all the way up to east of Eagle Nest, and not touching  
24 the boundaries of our reservation.

25 I am very thankful that you gave me opportunity to speak

AO-1

1 my -- my -- my opposition about this military training  
2 flight. I know it's very important to have our men ready for  
3 any combat that they might come upon in the future. So I  
4 thank you very much.

5 THE HEARING OFFICER: Now I'd like to turn to  
6 that group of individuals who have indicated a desire to make  
7 comments. And the first person I'd like to call on is John  
8 Acker. John Acker? **008293**

9 Well, the next person, Andy Wasowski.

10 MR. ANDY WASOWSKI: Thank you for this  
11 opportunity. I have it in written form, I'll leave it here.  
12 My name is Andy Wasowski. I live in Valdez. When I was a  
13 kid going to Sunday school, I heard about something called  
14 original sin. Now, the nuns were pretty evasive about what  
15 original sin was, but I heard later it was supposed to be  
16 sex. When I grew up, I started to see the world and  
17 experience life and I reached my own conclusion about what  
18 original sin really is. It's the inherent dumbness of our  
19 species.

20 Now, think about it. We were given an incredibly  
21 beautiful world to live in, everything we could want, and in  
22 our dumbness we mess it up at every opportunity. We build  
23 impressive industries and turn out consumer products that  
24 we've all become addicted to, but with consequences. In  
25 doing this, we've polluted our rivers, oceans and made air

1 unfit to breathe. That's dumb. We develop high-tech means  
2 for commercial fishing to feed our hungry and we wind up  
3 emptying our oceans of the very fish we need. That's dumb.  
4 We think we know better than mother nature. Back in 1920 our  
5 government imported kudzu from Asia to be used for erosion  
6 control and it worked. So well that today they call kudzu  
7 the vine that ate the south. That's dumb.

8 We're continually only solving one problem to create newer  
9 and bigger ones. We're supposed to be a logical species, but  
10 as someone once said, if we were truly logical, men would  
11 ride side saddle. We think we can do anything we want  
12 without there being serious consequences. We cut down rain  
13 forests to create new farmlands, and in doing so we are  
14 literally cutting out our lungs. We develop genetically  
15 altered crops that can withstand pesticides that eradicate  
16 milkweed. But milkweed is a major food source for monarch  
17 butterflies. So, as a consequence, our grandkids may grow up  
18 never having seen a monarch. Now, what causes this  
19 dumbness? Well, in the words of Vice President Al Gore,  
20 it's our focus on short-term exploitation at the expense of  
21 the long-term health of the system, itself.

22 So now we're talking about training bomber pilots by  
23 flying over terrain that is in many ways environmentally  
24 fragile, and the consequences of that may well be destroying  
25 or seriously harming wildlife, livestock and the eardrums of

BR-4

1 the residents below. Certainly the consequences will include  
2 harming the tourism industry here, a major economic factor in  
3 our community. Often we don't even know the ultimate  
4 consequences of our actions. The domino that falls at the  
5 end of the line is often years, even decades away from that  
6 first domino that gets tipped over.

7 Now, I'm not one of those who view the DOD as an evil  
8 empire. I am neither a hawk nor a dove. I'm an -- I think  
9 of myself as a pragmatic realist. I served in the Marine  
10 Corps and I understand the need for a strong national defense  
11 and the kind of realistic training that makes it possible.  
12 But as a pragmatic realist, I have great doubts that  
13 environmental impact studies will truly reveal the ultimate  
14 long-term consequences of this fly-over training. There have  
15 been many studies in the past that have reached conclusions  
16 that in the end have proved to be false. Do you remember the  
17 Edsel? Ford Motor Company built it because extensive market  
18 research said it would be a big seller. As Yogi Berra once  
19 said, "What gets us in trouble is not what we don't know,  
20 it's what we know for sure that just ain't so."

21 I hope the powers that be won't wind up making another  
22 dumb decision based on short-term exploitation at the expense  
23 of a long-term health of Taos. Thank you.

24 My wife couldn't be here, but she asked me to give you  
25 this.

1 THE REPORTER: Thank you.  
2 (NOTE: Mr. Andy Wasowski handed the reporter a document that  
3 reads as follows:

4 "April 15, 1999. **008294**

5 "To the US Air Force:

6 "The Taos area is not Everywhere USA. It is a  
7 very special place because of its unpolluted skies,  
8 its exceptionally clear air, its mountains, its  
9 beautiful native architecture, and its tranquility.  
10 People move here from all over the U.S. and all  
11 over the world because of these qualities. They  
12 come to heal medical problems, to join  
13 contemplative religious sects, to create paintings,  
14 sculpture, and literature.

15 "Tourists come here because of the artists,  
16 Taos Pueblo, the health professionals, the skiing,  
17 and the natural beauty of the land.

18 "If the skies are filled ten times a day -- or  
19 even once a day -- with bomber maneuvers, there  
20 will no longer be clear skies, exceptional light,  
21 healthful air, contemplative religions and artistic  
22 work being created. Then there will be no  
23 tourists, no art galleries, no B&Bs, and no high  
24 real estate values.

25 "The economy of Taos County will be destroyed.

BR-7

BR-4

1 One of the last spiritual and artistic refuges in  
2 America will be destroyed.

3 "Please do not fly over our clean skies."

4 Signed, "Sally Wasowski.")

5 THE HEARING OFFICER: Like to call on Ron  
6 Gersten. **008295**

7 MR. RON GERSTEN: I'm Ron Gersten. I own some  
8 land in El Rito and in Taos. I spoke the other day, was  
9 going to try to address some other things, mainly the  
10 Environmental Impact Statement and it's irrelevancy, in my  
11 opinion.

12 The impact statement talks about what costs to the  
13 economy of Taos would occur. I wonder if it takes into  
14 account the costs people have already given up to live in  
15 Taos where it's quiet? I left a higher paying job in New  
16 York to live where it's quiet. I'm sure other people have  
17 done similar things.

18 My other question to you is, given the opportunity in  
19 some of these other alternatives -- because I think it's very  
20 important that we do have our Air Force trained, and I think  
21 this whole initiative is probably a good thing. I wonder  
22 about the other alternatives. Given the chance to have a big  
23 airport there, if they thought tourism would come to their  
24 areas and bring more money, too, the people would have said,  
25 "No, we don't want that"? Because in Taos we've done that.

BR-7

1 We've -- your impact statement you say -- I want to know,  
2 is -- are you measuring the money that we're willing to give  
3 up to live in a beautiful, quiet place? Because that seems  
4 relevant and important.

BR-4

5 As far as it not having a direct effect economically is  
6 insane. We talk about the tourism that we could lose for the  
7 people that do make the little bit of money they make here.  
8 And I say if somebody is making very little money and you  
9 take away very little from them, it may appear on your impact  
10 statement that it was very little effect, whereas it's a big  
11 effect on people that don't have much to begin with but their  
12 quietness, which is why they came here.

13 So I just feel that it would be a gross violation of  
14 democracy for you to come here against the expressed  
15 opposition of the people who live here. And I feel, while it  
16 is a necessary thing, the RBTI, if you can't find a place  
17 where the people and the occupants of that place want to have  
18 it, then perhaps, sadly, you can't have it. Or perhaps you  
19 have to look to other alternatives, maybe you fly over the  
20 Gulf of Mexico and you have a simulator that if you go under  
21 1,000 feet the plane blew up, but -- who knows.

PD-20

22 But I'd like you, please, please don't come to this town  
23 where the people have expressed that they do not want you  
24 here.

25 THE HEARING OFFICER: William Brown?

008296

1 MR. WILLIAM H. BROWN, JR.: My name is William  
2 H. Brown, Jr. I live in the community of El Rito, Latir, at  
3 the base of the Latir Wilderness, and overlooking the  
4 southernmost part of the San Luis Valley where the Rio Grande  
5 Wild River area is located.

BI-3

6 I'm a veteran of 13 years of being an officer in the  
7 United States Army and reserves, and I know very much what  
8 you're talking about when you need to have your troops  
9 trained properly. However, I speak to you today as a person  
10 who is not only a veteran, but also a victim of low level  
11 flying, because prior to moving to Taos County I lived on the  
12 eastern shore of Maryland, and we were plagued for years by  
13 low level flights, by the -- both the National Guard and the  
14 Air Force. It was very disruptive to us. It was very  
15 disruptive to our farm animals and to wildlife in the area.  
16 And I speak of this because I know this firsthand.

BR-7

17 So I ask you today to please take this into  
18 consideration when you think of this area. And I'd like to  
19 speak very much for the area that we live in, because mainly  
20 my area is composed of ranchers, artists, composers,  
21 musicians and writers. And we came there, all -- all of us  
22 came there basically for the same reason, for the piece and  
23 quiet of this area. And we want it to remain this way. And  
24 I do hope that you will take this into consideration. This  
25 is one of the most beautiful areas in New Mexico.

1 We recently took a trip into southern New Mexico and  
2 Arizona, and this is just -- has to be one of the most  
3 beautiful places in the world, so we hope very much that you  
4 will take our comments to heart and not come to our area.

5 Thank you.

008297

6 THE HEARING OFFICER: Elana Lombard?

7 MS. ELANA LOMBARD: Hello. I -- when my

8 daughter and I were sitting here and you commented that her  
9 babbling might disrupt this meeting, it occurred to me that  
10 that's a lot less noise than having B-1 and B-52 bombers  
11 flying over your -- the place you live every day, ten times a  
12 day. And you've asked me to move back, and I would do so  
13 respectively -- respectfully. But I can't ask one of these  
14 loud jets to -- to move because it's disturbing my piece,  
15 it's just going to keep coming.

BR-7

16 And, yeah, my family moved here from the San Francisco  
17 Bay area where we made a ton more money, like the younger  
18 gentleman said, and we are struggling to live here, but we  
19 live here because it is such a beautiful and peaceful place,  
20 and a place that I wanted for my child, and to grow up and it  
21 would be peaceful. Anyway, I just don't want all the noise  
22 of the city and all that stuff to -- to disrupt her -- her up  
23 bringing.

24 And also I think about the endangered species that are  
25 trying to live out in the wilderness and, you know, you're

1 trying to protect we, the people of America. We are not  
2 threatened and endangered. Yet, there are these animals that  
3 are threatened and endangered. And what are we doing? We're  
4 not trying to protect them more, we're going in flying over  
5 them which is going to disrupt their mating habits, their  
6 feeding habits, critical activities for their livelihood to  
7 exist as a species.

BI-5

8 So, what's more important? You know, if we were that  
9 threatened of a species, I'm sure our government would do a  
10 lot to try and protect us. I think the other species on this  
11 planet are very critical and support us in ways that we will  
12 never know. And not only for our living, but also for our  
13 peace and -- and quality of life. So I would like that  
14 quality of life for my child and her children, et cetera.  
15 Thank you.

008298

16 THE HEARING OFFICER: Angie Cantu?

TY

17 MS. ANGIE CANTU: I'm Angie Cantu, and I've --  
18 I'm an outsider, myself, but I've lived here since 1946. I  
19 came here by the fact that I got married to somebody from  
20 here, and I have raised a healthy family here, no complaints,  
21 no sick people. We've all gone to higher education, and some  
22 -- my husband, my two sons were in the military, my  
23 granddaughter is there now. She's going on to -- she's  
24 finishing training this weekend and then going on to the  
25 airborne, and who knows where from there.

1 But I am for the people that are trying to come and  
2 train here, and I think that they should come and train here  
3 because they need the proper environment and terrain to train  
4 on. And I don't see -- I really don't see that much of a  
5 problem, because planes have been flying over this area for  
6 many years. And my daughter lives by the airport in Los  
7 Angeles. She's never complained there, nothing has fallen  
8 down over there, and I doubt that buildings and the Pueblo --  
9 and our own adobe building here in town hasn't fallen down  
10 yet, and I don't think it's going to.

11 So, I am for you to come and fly here over this area,  
12 and I'm sure that my husband, who was a very public minded  
13 person, would have given you the go ahead, too, but he's long  
14 gone now. And I am for you to come and train here because  
15 this is -- this is a necessary terrain that you need to train  
16 on. I'm for it. Thank you. **008299**

17 THE HEARING OFFICER: Agnes Anderson?

18 MS. AGNES ANDERSON: Thank you for giving me  
19 this opportunity. You haven't finished your Environmental  
20 Impact Statement yet, have you? I mean, they haven't  
21 finished the whole thing? Because when I was at the meeting  
22 last year, I had mentioned one of the things that I was  
23 worried about was not only the noise factor, but also the  
24 fact that we have homes in Taos, and in Taos County, that are  
25 hundreds of years old that have been owned by the people who

GE-10

1 have moved here, the Spanish, and then we have our Native  
2 Americans.

CU-1

3 The Pueblo is documented to be 800 years old, but  
4 they're constantly remodeling it and readobeing it because it  
5 is a fragile adobe, just like all the homes that are in this  
6 area are.

7 Now, this morning I was told that you would be flying in  
8 an area approximately 10 miles from Taos, and in the area  
9 going up toward the -- Costilla, the Costilla area.

10 UNIDENTIFIED VOICE: Questa.

11 MS. AGNES ANDERSON: This is all a very  
12 fragile area. And we hear the bombers and the jets flying  
13 over, and they're way up there now, and so if you are only 10  
14 miles away from us, we'll hear you.

15 Now, this state, the people in this state have always  
16 been military people. They've been in the Air Force, they've  
17 been in the Army, they've been in the Marines. Going back to  
18 World War II, most of the people in the Bataan Death March  
19 came from the State of New Mexico. So, these are people who  
20 are not against the military. None of us are. We know you  
21 need the training sites, but we ask that you don't do it here  
22 in our area.

**008300**

23 Thank you.

24 THE HEARING OFFICER: Teri Luduigson?

25 MS. TERI LUDUIGSON: Good morning. My name is

1 Teri Luduigson, L-U-D-U-I-G-S-O-N, and my husband and I live  
2 out on Hondo Mesa.

3 I wanted to make four points. Some of them are  
4 repetitive, perhaps, but maybe some things bear repeating.  
5 The first point is one that was brought up in the review here  
6 this morning, and that is in the executive summary. The  
7 greater impact for Alternative D, which is the area that  
8 includes Taos County, is, without exception, consistent and  
9 substantially relative to the Alternatives B and C.

10 Number two, the concept of habituation was introduced in  
11 the Environmental Impact Statement draft report as a reason  
12 that humans will not be adversely affected. Habituation is a  
13 technical term much researched in the field of experimental  
14 psychology. Unfortunately, it's not a simple concept.  
15 Habituation in the face of a continuous, predictable stimulus  
16 is one thing, but habituation in the face of a sudden burst  
17 of sound perceived as being very loud, which is also very  
18 unpredictable, is quite another. Furthermore, it isn't  
19 necessarily true that habituation is achieved without cost.

20 Number three, computer simulation and it's potential for  
21 training wasn't an issue that was introduced at previous  
22 public hearings. I understand that the Air Force has some  
23 reservations about it. I have to point out, however, that if  
24 NASA could train and mount successful space flights without  
25 realistic training, which was obviously not achievable, then

PD-5

1 why cannot the Air Force do this? The ability to change and  
2 flex a training program is infinite in computer simulation.  
3 Efficiency would be maximized, it seems to me, far in excess  
4 of the efficiencies alluded to in the alternative suggested  
5 here. From my point of view, it seems that computer  
6 simulation would offer important benefits as conflicts mount  
7 around the world. Computer simulation might offer hope for  
8 more effective outcomes in post cold war conflicts where our  
9 strategy seems to consist primarily of hitting at gnats with  
10 hugely expensive sledge hammers.

11 Computer simulation might offer relief to the increasing  
12 invasiveness this high-tech equipment poses for the private  
13 lives of the populous. Perhaps some innovative thinking is  
14 called for.

15 I see you raised the red flag. May have one more minute  
16 to finish my last point?

17 THE HEARING OFFICER: As I said earlier, I'm  
18 not going to stop anybody from continuing past the  
19 three-minute point. It's just notice to you how long you're  
20 going.

21 MS. TERI LUDUIGSON: Okay. Thank you.

22 Point four is the economic impact issue. This did seem  
23 to be given very short shrift, and I certainly didn't see any  
24 analysis that satisfied me that the subject was seriously  
25 addressed. But perhaps the conclusion that the noise level

1 was inconsequential since humans, interestingly enough, in  
 2 contrast to the animals, under the apparent assumption that  
 3 we are not animals, which I found rather astounding -- but  
 4 the conclusion that humans would habituate, perhaps this  
 5 meant that the economic impact was not worthy of serious  
 6 effort and, in fact, I think this was suggested in the  
 7 introductory review of the EIS.

8 I think you've seen in your base, here, that this is a  
 9 very diverse community, but we are held together by a common  
 10 thread, and that is love for this land and its peaceable use.  
 11 People don't stay or come here to make money. You've heard  
 12 that over and over. But people do stay here for generations.  
 13 They come back after being educated in the best universities  
 14 the country has to offer. They move here and stay and suffer  
 15 the inconvenience and expense and low incomes for that common  
 16 thread.

17 Yes, we have something like 24 percent of our population  
 18 living below the poverty level. Yes, we have unemployment  
 19 that's four times the national average. And yes, we have no  
 20 super highway, so all our goods and services are more  
 21 expensive; that includes housing, food, clothing. So we make  
 22 less money, we have fewer assets, and we pay more for what we  
 23 have. The potential economic impact on a community that is  
 24 special, fragile and existing on the edge should be given  
 25 serious consideration. Will tourists have prehabitated to

BR-4

1 the noise levels?

2 On a personal note, would my husband and I have joined  
 3 this community a year ago, purchased a home with the assets  
 4 we were lucky enough to build elsewhere, if we had known  
 5 about this threat to a place that we have loved coming to for  
 6 30 years? Huh-uh (negative). But we didn't know. Is that  
 7 economic impact and are we unique?

8 Thank you very much.

9 THE HEARING OFFICER: Mary Lowe? Mary Lowe  
 10 here?

11 Ed Slook. Ed was here earlier.  
 12 Gordon Saunders? **005301**

13 MR. GORDON SAUNDERS: I would like to thank  
 14 the Air Force for giving us this opportunity to vent our  
 15 concerns. I know that you have a lot at stake. I hope that  
 16 you will return to your bases convinced that we do have a lot  
 17 at stake here.

18 My concern stems from the two planes that are involved.  
 19 I don't know if anybody has raised this issue before, but the  
 20 B-52 was first flown when I was a young man in my early 20's.  
 21 In three weeks I turn 60. I'm old. The B-52 is old.  
 22 Commercial airlines usually get rid of their airplanes  
 23 between 15 and 20 years; I think I'm right on that. And I  
 24 have had short trips on some trans Atlantic flights on some  
 25 planes that are about 15 to 20 years old. Some of them are

AF-51

1 pretty scary and the planes were beat up and half the age of  
 2 the B-52's that are now flying.

3 I have read a number of times that the B-52's are kept  
 4 flying by cannibalizing old planes that are in even worse  
 5 condition. This is not reassuring, especially if it is  
 6 anticipated that these huge craft will be put down within 300  
 7 feet of the ground at times. B-52 was conceived as a high  
 8 altitude bomber. What purpose could be served by flying it  
 9 at 300 feet?

10 The B-1 has a checkered history at best. It was killed  
 11 as out of date and too expensive in the Carter years, then  
 12 revived by the Regan administration and Bill, in spite of  
 13 some levels of protest that came from high levels in the  
 14 military. It did not fare well early on, going down like a  
 15 winged duck on a shooting gallery because the ground  
 16 avoidance system was defective and the plane plowed into  
 17 objects, like the mountains in Taos, with disturbing  
 18 regularity. While I assumes that the avoidance system has  
 19 been corrected probably with laser technology, the bad  
 20 weather can affect even laser guidance systems as has been  
 21 amply demonstrated in the Gulf War and in Kosovo.

22 Your own officers have admitted that Alternative D is  
 23 probably the most controversial option, and it is not hard to  
 24 see why the ecology of the area is already fragile,  
 25 population growing and the ancient adobe structures certainly

AF-51

PD-1

CU-1

CU-1

PD-1

1 stand to be damaged by vibration generated by low level  
 2 flights.

3 Finally, if these two craft were to be phased out, I  
 4 assume that they're old enough that they must be facing phase  
 5 out, I shudder to think of the noise levels and speed factors  
 6 that will accompany any replacement craft. They will be  
 7 faster, more maneuverable, louder, and because of these  
 8 attributes, more dangerous to those on the ground, whether  
 9 they be friend or enemy.

10 The Air Force has a reputation of being one of the most  
 11 rational and responsive branches of the military service.  
 12 Here is a golden opportunity to reinforce that public  
 13 assessment. If Alternative D is chosen, you will generate  
 14 permanent animosity in this region. That is hardly an  
 15 objective worthy of consideration by the Air Force.

16 I'm almost done. Regardless of how much money is saved,  
 17 hate to think what the taxpayers would be footing in the way  
 18 of costs for 2600 flights a year. Why not cut back on the  
 19 number of flights and affect the savings that way?

20 Those are my concerns. Please add those to those that  
 21 have already been expressed. Thank you.

22 THE HEARING OFFICER: Tony Trujillo.  
 23 MR. TONY TRUJILLO: Good morning, Colonel  
 24 Burd.  
 25 THE HEARING OFFICER: Good morning.

TY 1

008302

MR. TONY TRUJILLO: I'm from Questa. I'm here to speak for my nephews and nieces, two of which are -- have been living there for the last six months tending their grandparents, right underneath the proposed flight plan over the general area near Amalia. All my nephews and nieces have attended the Rio Costilla Ski Area. That's a recreation area.

I'm not here to speak for the adobes, I've moved an -- enough of them all my life that a little more work won't hurt, but it's all been at that poverty line, too. It helps to add more work and with more people coming in, it's -- it's better. Living around here is better. But if they're going to be turned away by this, that's being proposed by Air Force, that the -- the -- the smallest parts that I'm concerned about.

I'm standing up here because under the constitution there is -- there is this part that says that we are guaranteed to a republican form of government, that's where any ill is addressed. And that's what NEPA and all these things have to do with, if I'm right. You being the judge, you probably have a little better idea. As far as having that right, I've sat here because a lot of my kinsmen and family members have been decorated, both posthumously and in person, for what they did for the armed services in world struggles.

The -- the fact that I am here should be enough, in protest of this, for it not to happen if the constitution is read right as we shall not have to surrender our homes to the military for -- for housing or any other thing. And the intrusion of the noise is a trespass, and there is -- any sharp lawyer I think can argue it out. You have enough room. You have the technology, you have the ways and means to get around it.

All this is, usually, in government, first problems that are things that -- that the Colonel -- I forget what this Colonel's name is -- mentioned the first thing is that they have to get rid of their budget or allow for their budget. That's what I've seen in government mostly.

But all that aside, there is a stronger sense that you should not do this than you should, and I just hope it works out that way.

THE HEARING OFFICER: Punya Upadhyaya? And excuse me if I mispronounced your name. 008303

MR. PUNYA UPADHYAYA: That's fine. It's always fun to figure out how to say it. Punya Upadhyaya, P-U-N-Y-A U-P-A-D-H-Y-A-Y-A.

Good morning, Colonel, ladies, gentlemen. Thank you for this opportunity to share our feelings and thoughts. As you've heard already, people do very irrational things to come to Taos; all right. We give up jobs, we give up money,

We give up opportunity so that we can come here. And there is what is -- I heard your presentation, I'm sorry I didn't get your name. I realized that the military is making similar irrational efforts to come to Taos. Can't blame them. It's a lovely place and there are many ways in which we would welcome your presence here.

But as I look at it, my focus here, it shifts on the comparison in terms of B and C versus Alternative D, and I'm really struck by the incredible discrepancy that I see here for Example D: 30 special use land management areas that are affected. Under Alternatives B and C two will be affected. The number of endangered species that will be affected are quite -- you mentioned three, your document out there mentions seven to nine. There is one mentioned in Alternative B and C.

In terms of reduction based flight time or not knowing how you're framing it, but the flight time that it takes the bomber as you get to the place where they're actually doing the training. You only save 45 percent of that as against 70 percent influences, or 89 percent more option. I mean, that seems to be the most technologically or economically compelling reason to actually create alternatives, and I'm struck by how we even got in the ballpark with that kind of savings. I mean, statistically speaking, that is significantly irrational.

BR-1

In terms of the data you supply us, I am again very struck by the average data you're using about DNA levels. Averages are not the point, the point is the event, so the use of statistical averages seems unfair. What are the differences there? And again, I'm struck by how, in terms of our public use areas are affected significantly, about public use areas and other areas. Again, our average levels are significantly higher than the DNA changes that are going to take place in other areas.

And when you said -- I was struck by how you dismissed the environmental justice issue when you said that the noise levels did not have necessarily much of an issue. There is pollution, there is vibration, there is residues, there are particulates and so on that are -- which will significantly affect us. For two reasons we're trying one significant effort: One is to develop an economic alternative focused on organic agriculture, not big in our numbers but it's big in our heart, and that will get affected.

And thirdly, a lot of people come here because they're chemically sensitive and so on, and it would help them, and you would destroy part of the reason they've come here.

Lastly, concerned about the safety record. Last, safety risk. And in terms of the pollution and -- a large plane falling down on you would have a significant impact.

So we do have concerns and hope that you will take them

AO-1

AO-1

AO-61

1 into account and make a rational choice. Thank you.

2 THE HEARING OFFICER: Stephen Kelley. 008304

3 MR. STEPHEN KELLEY: I've got a written

4 statement I'd like to present. It doesn't take an

5 Environmental Impact Statement to understand the damage that

6 will be done by low-flying bombers to Taos. The idea of

7 desecrating the peace of northern New Mexico with low-flying

8 jet practice, land which is laying virtually undisturbed in

9 its natural state for eons, is out of the question.

10 Those of us who live in Taos are given the rare

11 opportunity to exist in creation as God created it before it

12 was screwed up by the greed and bungling of man. As was

13 eloquently pointed out at last year's hearing by our mayor,

14 Taos is a global peace zone and, as such, is certainly as

15 important to keeping of the peace as preparation for war. To

16 violate this peace with low-flying jet bomber practice is to

17 destroy our very peace that our Air Force exists to protect.

18 Many people who have traveled extensively on the earth

19 consider this among the most beautiful and unspoiled

20 locations on the planet. It has been suggested that the Air

21 Force should stick to areas that have already been ruined by

22 their flights. To suddenly invade this area which has lain

23 for centuries undisturbed merely because the terrain is

24 appropriate, because the Air Force wants to save a few bucks

25 on gas, and two hours' flight time that are required to fly

BR-7

1 to other areas is no good reason for being here.

2 Already they are flying here. Many reports come in of

3 low-flying jets well below the 300-foot ceiling. Pilots,

4 contrary to what they might feel, are not Gods in the sky,

5 and unlike Gods, they are subject to errors in judgment, as

6 was evidenced by the training flight shenanigans in Italy for

7 which the Air Force took no responsibility. This sort of

8 impunity in taking responsibility for one's own actions does

9 not bode well for anywhere that the Air Force might fly.

10 Low-flying jet practice is not just a question of

11 preserving old adobes and the cracks that might damage them.

12 What needs protecting here is peace, peace for the people,

13 peace for the animals and peace for the land, itself.

14 There is only one winner in this situation, peace or its

15 disruption by war. As Lieutenant Curry suggested not long

16 ago in the February 11th edition of the Taos News, hoping

17 that we might buy this, "It's a win-win situation," he says,

18 "because we'll keep the integrity of our training

19 requirements while taking into consideration the needs of the

20 Taos Pueblo," totally ignoring the resounding no that greeted

21 him last spring from all the citizens of Taos.

22 His other statement was, "Without sacrificing our own

23 training purposes, we were able to mitigate the route a bit

24 to make both parties happy." Mitigating the route a bit will

25 not satisfy the people of Taos.

CU-1

1 Thank you.

2 THE HEARING OFFICER: Chris Pieper? 008305

3 MR. CHRIS PIEPER: I thank you for this

4 opportunity to speak, and I appreciate that it must be

5 difficult for you to come here.

6 I grew up under Moffat Field in the Bay Area where there

7 is a lot of over flights. And you do become habituated to

8 the noise because you live in an industrial area, and so the

9 impact of the flight is not that significant. I've also

10 spent a lot of time in eastern California in the desert, and

11 in the mountainous terrain of the Sierra Nevada where I have

12 backpacked, and you become habituated to the level of quiet

13 and then when a bomber comes over it is very disruptive.

14 Much more disruptive than it is in an area where there

15 already is a lot of white noise, a lot of noise generated by

16 an industrial area.

17 This area that you're talking about flying over is known

18 for its silence, the darkness of the night sky, and a

19 peacefulness of the surroundings. The Valle Vidal has been

20 called the Yellowstone of the southwest. And there is no

21 question in my mind that these flights will have a profoundly

22 negative impact on this area. Lot of people do come here

23 because this area is clean, there is less noise than other

24 areas.

25 And so to cause the least disruption, I would highly

BR-7

1 recommend that you choose another area. And I hope that when

2 you come to make this decision, that you use -- you use your

3 rational faculties and determine that this is an

4 inappropriate area to come.

5 I teach at Taos High and enjoy it very much. Teach

6 science there, and I know that my students -- thank you --

7 resoundingly oppose this initiative. So I -- I am here

8 partly representing them, myself and my family and this whole

9 community.

10 So thank you for this opportunity to speak, and good

11 luck. 008306

12 THE HEARING OFFICER: Helen Visarraga.

13 MS. HELEN VISARRAGA: Good morning. Thank you

14 for this opportunity to talk to you this morning. I am -- my

15 family is originally from this region for 300 years. The

16 culture here has suffered enough oppression, this is just

17 another form. I'm a social worker in the community. I serve

18 as the out-patient clinical director for Taos-Colfax counties

19 in serving the families and children, and I am here today

20 representing the families and children of this community.

21 The B-52 bomber is a symbol of violence. It's a symbol

22 of destruction. We do not need any more symbols of violence

23 and destruction here. We are in the midst of high racial

24 tensions in this community and in the surrounding areas. We

25 have had a lot of violence here. We have had a lot of racial

TY

1 tension. This impact of having B-52 bombers here would only  
 2 escalate that social tension.

3 It's important for the Air Force to recognize that you  
 4 have other alternatives, we don't. The families and children  
 5 here do not have other alternatives. They can't just move,  
 6 move away, and find another place to live.

7 Many writers, myself included -- I'm a writer and a  
 8 poet -- we come here, they come here to -- to take advantage  
 9 of the consciousness of the peaceful setting, the quiet  
 10 environments and the cultural diversity. And we, as a  
 11 community -- many of the agencies involved here in -- the  
 12 agencies against violence include the judicial, the  
 13 legislative, the social factors, agencies that represent  
 14 families and children, the police department, the state  
 15 department, many other factors are involved here in  
 16 representing to you the need for you to encourage the federal  
 17 government to find another alternative to having B-52 bombers  
 18 influence and impact our peaceful community.

19 So it is from my heart, and as a representative of  
 20 (Spanish spoken).

21 Let me interpret that. I want you to record this. And  
 22 make sure that you are aware of the consciousness of the  
 23 people that is being impacted here in the elements of  
 24 violence, of destruction and abuse that you will be  
 25 enhancing, should this project be allowed to continue.

1 Thank you. **008307**

2 THE HEARING OFFICER: Annegret Pollard?

3 MS. ANNEGRET POLLARD: Good morning. Thank  
 4 you for this opportunity to address the issue.

5 First off, I would like to ask each of you who is on  
 6 this hearing panel -- madam, you also -- the two officers,  
 7 then -- have either one of you ever been living as civilians  
 8 in an area where these kinds of flights take place, and have  
 9 you ever been bombed or strafed yourselves? Which is, after  
 10 all, the end result of what this training is supposed to  
 11 achieve. Sir, would you please answer me this question?

12 THE HEARING OFFICER: I believe you came in  
 13 late. And one of the things I indicated is that this public  
 14 hearing is not a question and answer session, so if you have  
 15 questions that you wish to state as a part of your comments  
 16 that's perfectly acceptable, but we will not be answering any  
 17 of these questions in this forum.

18 MS. ANNEGRET POLLARD: Thank you. I would  
 19 assume then that you have not, and I would like to suggest  
 20 that the experience of these overflights, which I have had in  
 21 other places in this world, in Europe and in other places in  
 22 this country, are extremely dangerous to people, even when  
 23 they get used to them. They're especially damaging to  
 24 children who incorporate this kind of perception. And we  
 25 never really quite get over that for the rest of their lives.

AF-18

1 I have been bombed. I have been strafed. And it is an  
 2 experience I probably share with other people who live in  
 3 this community, and I can tell you that it is something  
 4 unforgettable.

5 The second issue I have is that I think the military,  
 6 the Air Force in this case, is being quite wasteful. And I  
 7 don't think that the military services are really ever called  
 8 to account to be economical in their thinking because  
 9 everything you want is provided, and then more.

10 Thank you.

11 Wastefulness in simply picking up on another area which  
 12 already has low over flights. I have seen these machines  
 13 myself, daytime and nighttime, helicopter formations were  
 14 coming through here, is rather disturbing for all of the  
 15 reasons the other people have already mentioned.

16 And the last thing, I thought it is curious that the Air  
 17 Force has not yet found a way, with all the brains working  
 18 for it in this high technology game, to establish a virtual  
 19 reality. Walt Disney might be helpful with this, too, to  
 20 establish training grounds on white sands or wherever and use  
 21 your very best computer programing to enable these pilots to  
 22 learn what can be marked even to differentiate between a pig  
 23 and a person, to -- to do this in areas already destroyed by  
 24 these exercises, rather than picking on areas such as Taos or  
 25 northern New Mexico or any new area which would be destroyed

1 by this in their character as they are.

2 Things are difficult here for people, and I don't think  
 3 the Air Force should even consider adding this area to waste.

4 Thank you very much. **008308**

5 THE HEARING OFFICER: Todd Thompson?

6 MR. TODD THOMPSON: Good morning, gentlemen.

7 I just wanted to make my comments brief, but I'm basically  
 8 opposed to the choice of this particular -- this particular  
 9 location for the RETI. I think both of your other  
 10 alternatives present less of a hazard and impact to people on  
 11 the ground, as well as the overall environment, not that I am  
 12 for this particular activity at all, in general. But if it  
 13 has to be done somewhere, I think the other two alternatives  
 14 are much better locations.

15 I would just like to say I have been living in Taos  
 16 County area for 20 years. And during that time, I have had  
 17 experience with military over flights in a number of  
 18 different conditions. When I lived north of Questa there is  
 19 evidently a fighter plane route that flies through there, and  
 20 a number of times we had sonic booms and broken windows, this  
 21 kind of thing. It would be very difficult for the home  
 22 owners to recover their damages, even though they did try and  
 23 pursue that line. So that has been ongoing for at least 20  
 24 years that I know of in Taos County.

25 We are also subjected to training routes evidently from

AF-15

PD-5

1 a National Guard unit out of Curtland Air Force base in which  
2 I have personally experienced C-130's flying anywhere from  
3 looks like 50 to 300 feet above the ground north of the Taos  
4 airport area, what's known as Hondo Mesa. I've woken up with  
5 one of these C-130's right there in front of my front windows  
6 and my kids screaming, you know, "Daddy, we're going to be  
7 bombed," or whatever. And this happens on a regular basis  
8 every few months.

9 I've also been down in the Rio Grande Gorge near Arroyo  
10 Hondo when two or three Blackhawk helicopters will be coming  
11 up through the gorge at a very low altitude, terrorizing the  
12 wildlife, the human life, the people down there using the  
13 river, terrorizing my children in this case. And as recently  
14 as last September I've seen training exercises over the Rio  
15 Grande Gorge, again in the Taos airport landing zone. And  
16 I've talked to people at the Taos airport. This is in  
17 violation of requests they've made to these National Guard  
18 training units in which two -- in which three or four C-130's  
19 fly in a figure eight pattern varying their location.

20 And all of this is to say that Taos County is already  
21 subjected to a very high level -- an amount of training  
22 missions by other air units, whether out of New Mexico or  
23 Oklahoma or wherever. We don't need to be subjected to any  
24 more; okay? What we have is enough. It's terrorizing to the  
25 people, to the wildlife.

1 And if you take into account in your environmental  
2 assessment all of the other impacts that are affecting Taos  
3 County in terms of the military air flights, then for sure  
4 yours doesn't need to be added to all of that. So,  
5 appreciate it.

6 Thank you. **008309**

7 MS. JANE RING: Jane Ring. I bought a house  
8 in Taos six months ago, and I came here to heal from a death  
9 in my family, as well as my own healing process from a recent  
10 illness, and the bombers would substantially destroy that  
11 peace and the healing that's happening.

12 A lot of houses that are built here incorporate solar  
13 energy. The entire side of my house is all glass, so -- I  
14 know that you can't answer questions, but my question is how  
15 will these flights affect the glass in my house?

16 Also, a lot of people that live here are artists. I'm a  
17 photographer, and substantial source of my income is from  
18 photographing the landscape and the wildlife. And I'm  
19 concerned not only for the welfare of the wildlife, but the  
20 fact that B-1 bombers would affect them when I'm trying  
21 photograph them.

22 I do acknowledge the importance of your mission, and I'd  
23 like to encourage you to find a location to do this that is  
24 far away from people and wildlife.

25 Thank you.

BR-7

AO-12

BI-3

**008310**

1 THE HEARING OFFICER: Shirley Shepherd?

2 MS. SHIRLEY SHEPHERD: I came rather late, and  
3 my remarks will be brief, but I do believe that this is a --  
4 not a terribly necessary operation. And as a person living  
5 in a so-called democracy, I believe that all of us should  
6 have a voice, rather than just having military tell us what  
7 to do.

8 Now, I also have had teenagers and they have taken  
9 driving lessons, not at any risk to their lives, which I  
10 think young bomber pilots might have in a training mission of  
11 this kind. I think that the driving lessons are given in a  
12 simulator situation in which the young driver is inside a  
13 pretend car and they can tell when they're doing something  
14 wrong or something that is going to cause their death. I do  
15 not want young bomber people trained in my backyard to crash  
16 and die in a mission that I think is futile at any cost.

17 Thank you.

18 THE HEARING OFFICER: That exhausts all the  
19 cards that have been filled out by people indicating a desire  
20 to speak. I'd like to know now if there is anyone who has  
21 not spoken that would like to? Yes? **008311**

22 MS. KATIE WOLFMAN: Thank you. My name is  
23 Katie Wolfman. I live in San Cristobal, five miles south  
24 of -- of Questa where your airplanes will be flying and that,  
25 just to let you know, I'm totally opposed to having you come

PD-5  
AO-61

AO-16

1 here.

2 The issue I want to raise this afternoon is fire. In my  
3 village two years ago someone was burning their trash, put it  
4 out, went to church, but the trash can was very hot. It  
5 started a fire that caused 200,000 forest acres to be burned.  
6 Only one little, teeny trash can. We were there, me and my  
7 vecinos, within 20 minutes, but we have no water. We only  
8 had shovels. There is no fire fighting equipment in this  
9 entire county, except in this little town. Any plane that  
10 crashes would start a humongous fire. We are very dry here.

11 This was a terrifying event, maybe as traumatic as war.  
12 Within an hour, the fire was 3,000 feet above our little  
13 heads with our shovels. It took ten days for them to be able  
14 to contain the fire, because to get in the mountains, even  
15 with helicopters -- thank God they came, one time I certainly  
16 was glad to see them come, even though certainly they were  
17 noisy, had to come and lay their slurry.

18 This is not a safe environment. We have no emergency  
19 care. We have no fire care. This is not a good place to  
20 train. You are putting your pilots in places that are very  
21 risky, with the ground flows of air, everything else that  
22 comes from each valley, our information, our sense knows.  
23 This is a foolish place to train, this puts your people who  
24 are my relatives in your service at risk. It puts us who  
25 live here on the ground at risk.

1 We ask you not to come here. Thank you.

2 THE HEARING OFFICER: Is there anyone else who

3 has not made comments who would like to come forward now and

4 make comments? Is there any -- yes? **008312**

5 MR. GEORGE SHEPHERD: Yeah. My name is George

6 Shepherd. My wife just spoke a moment ago. We both have

7 lived here for five, six years. I just want to make a point

8 that I'm sure has been made many times before, that is, if

9 you are in a home, by the news that we've been reading, that

10 tragic crash and loss of life in Italy -- and sure that the

11 Air Force knows that this is a heavily skied area with many

12 ski tows, and that apparently accidents happen from this kind

13 of low flight that you plan to make over this area.

14 And that not only taking into account, but I can assure

15 you gentlemen that if anything like that should happen in

16 this area that happened in Italy, it will not be as easy a

17 sentence in terms of those who were responsible.

18 Politically, democratically, we will hold those responsible

19 for any kind of accident of that type.

20 Thank you.

21 THE HEARING OFFICER: Is there anyone else who

22 has not made comments who would like to make comments?

23 Mr. Williams?

24 MR. DANIEL WILLIAMS: Sorry I had not turned

25 in a card, so --

AO-61

1 THE HEARING OFFICER: Thank you.

2 MR. DANIEL WILLIAMS: Thank you. **008313**

3 My name is Daniel Williams. The -- certainly the

4 gentlemen at the front know me. I've made comments in Angel

5 Fire, I spoke four times that night, and once at the Taos

6 meeting the other evening. There -- as far as my background,

7 as I've said previously, I retired from the Air National

8 Guard as a major. I was a director of operations for one

9 unit and operations change officer for two units.

10 The normal RBTI, if I can say that -- anyway, it really

11 does makes sense from an Air Force training prospective, if

12 we're going to send our young men and young women to war, it

13 is important to provide the kind of training they need. And

14 so my personal position is not in opposition to the military

15 and military training, and it's not even to RBTI. It is,

16 however, a very strong opposition to Alternative D, because

17 I'm convinced that while the training would be realistic and

18 would be very beneficial training, it doesn't justify the

19 devastation that would occur to northern New Mexico as a

20 result of this route.

21 Something I would like to point out is that while I do

22 not want to wish the low level overhead bomber flights on the

23 good people of Texas, the other alternatives do make more

24 sense than does Alternative D. And one of the key things

25 there is that there are already bombers there. In looking at

1 the numbers, it appears that because of the number of flights

2 that are in existence on the other routes, it would be

3 approximately a 66 percent increase versus if this were to

4 happen in northern New Mexico. For us it would be

5 approximately an 1800 percent increase.

6 While there are flights on the existing routes, it's a

7 few flights per week, where we would now be talking about 10

8 to 12 flights per day on average of six days a week.

9 In addition, Kenamen Air Force base, which owns IR-109

10 which much of the proposed IR-153 covers, has established

11 their 84 noise sensitive areas in northern New Mexico. I do

12 not have the data in front of me to know exactly where those

13 are, but I would ask that you contact Kenamen Air Force base

14 to find out where they are and ensure that those are examined

15 for the EIS.

16 They're -- in the final thing, sir, I'd like to ask,

17 that the public comment period be extended from 90 days to

18 120 days. As you know, it takes roughly a year for the Draft

19 EIS to come out after all the comments are done, another six

20 months or so for the Final EIS to come out. And yet,

21 originally the public comment period was going to be only 45

22 days. In my opinion, the -- that -- rather than simply being

23 to streamline the process, what that would be designed to do

24 is to limit public comment.

25 So we appreciate the fact that it was extended to the 90

PD-38

AF-50

1 days but, sir, we will ask that you extend it to 120 days as

2 Senator Bingaman and others have asked. And the reason is to

3 allow people to go through a very thick document. Most

4 people are not familiar with the technical aspects, and it

5 gives them a chance to go through and really see what kind of

6 impact it might have. And as we -- as I did point out

7 previously, there were two areas that it showed no impact,

8 whatsoever: One being the socioeconomics, and because of the

9 tourism this would have an incredible impact. The other had

10 to do with -- with the cultural resources. And again, that

11 does not reflect or honor the -- the culture of the people of

12 Taos Pueblo, their areas they hold sacred and so on.

13 So from my position, I'm not opposed to RBTI to do

14 military training, but simply to Alternative D. And the

15 thing that does make sense about this is that the routes or

16 the flights are already taking place. What we're really

17 talking about is simply bringing them closer, save maybe

18 about three flight hours per mission, and in so doing at

19 \$10,000 per flight our saving \$30,000 per flight and millions

20 of dollars, and millions of tax dollars which, in fact, are

21 our tax dollars.

22 So, I'm not asking to you do away with RBTI, simply to

23 choose an alternative that has a lesser impact and realizing

24 that this alternative, by your own, is -- through your own

25 study you can see that it clearly has the highest impact, and

BR-4

1 we believe a far greater impact than what the study shows.  
 2 Thank you.  
 3 THE HEARING OFFICER: Is there anyone else who  
 4 has not spoken that would like to come forward and make  
 5 comments? Now, of those -- and I'd like to remind you that  
 6 in less than an hour we're going to start our second public  
 7 hearing, and you'll be given an opportunity during the  
 8 comment period in that hearing to make comments if you have  
 9 additional comments. But if anybody has a burning desire to  
 10 make additional comments and you've already made comments, I  
 11 will permit you to do so now before we take our lunch break.  
 12 MR. RON GERSTEN: I just wanted to --  
 13 THE HEARING OFFICER: Could you restate your  
 14 name again? **008314**  
 15 MR. RON GERSTEN: I'm Ron Gersten. I just  
 16 wanted to briefly address the fact that it seems so important  
 17 to the proposal that this is a place that already has all  
 18 these existing flights. I'd like to also point out that  
 19 we're not asking for questions, here, but that I think the  
 20 overwhelming majority of the people here would love to see  
 21 those routes diminished rather than increased. So I think  
 22 that takes away from a little bit of the "Well, this is  
 23 existing stuff going on." We don't like it going on, for the  
 24 most part is what I've heard.  
 25 And I also wanted to point out or ask without an answer,

AF-6

1 that as a ski instructor I teach children up on the mountain.  
 2 And I had one incident this year while I was up on the  
 3 mountain where a fighter, and I don't know what kind, came  
 4 flying very low right up a trail called Bamby, wung up around  
 5 the ridge, looked like it was going to hit it. But one of my  
 6 kids, one of the group of four, was crying and wanted to go  
 7 back inside because he was scared.  
 8 I'd ask, was that one of the existing flight paths or  
 9 would we admit that people who are flying these planes, just  
 10 like myself who sometimes blows off a stop sign, sometimes do  
 11 things they're not supposed to do and, therefore, go off  
 12 these routes into some of the more sensitive areas like the  
 13 Pueblo lands that you carefully avoided going around them  
 14 this time. So last -- I guess you changed the route from  
 15 last year. So, it could happen, and I just wanted to point  
 16 that out.  
 17 Also, that allowed the people that are in the age I  
 18 believe that would be flying these jets insurance companies  
 19 consider the highest risks for autos because -- not because  
 20 they're not coordinated and can't handle it, because at that  
 21 age a lot of people sometimes do things that they shouldn't,  
 22 like to show off, and perhaps end up cutting the wire. I  
 23 just wanted to point that out.  
 24 And then as far as the economic impact, I just wanted to  
 25 state, I did mention I own land in El Rito up north of here.

BR-4

1 It borders the Latir Wilderness. I believe I paid a little  
 2 extra because it bordered the Latir Wilderness, which you are  
 3 now wanting to fly over. So, I believe you all have access  
 4 to my address, but I just wanted to state that if, in fact,  
 5 you do pick Alternative D, please contact me. I have a cabin  
 6 with five acres that I would be very willing to sell to  
 7 anyone, you know, probably at a lot less than I paid. So  
 8 keep that in mind when you say there is no economic impact  
 9 possible here.  
 10 Thanks.  
 11 THE HEARING OFFICER: Would anyone else like  
 12 to make any additional comments?  
 13 Ladies and gentlemen, that concludes this public  
 14 hearing. Thank you for your participation and input --  
 15 MR. GREGORIO VICINTE: Wait just a minute,  
 16 please.  
 17 THE HEARING OFFICER: I have one person who  
 18 would like to make comments. **008315**  
 19 MR. GREGORIO VICINTE: My name is Gregorio  
 20 Vicinte. And last time I mentioned to you about this flight  
 21 patterns that you have established for this area, and these  
 22 buildings, all the buildings in the surroundings areas,  
 23 mountains and cliffs, that would be effectively disturbed by  
 24 the sounds of the jets. And like I said before, you -- you  
 25 have no guarantee for any citizen of this area that there

AO-61

AO-61

TY

1 will not be no accidents.  
 2 You cannot guarantee us, but you can prevent this. And  
 3 prevention is the key of this thing. Prevent the accidents.  
 4 Who knows how far we're going to go on to this war that is  
 5 going on right now, so you do need to have a place. You  
 6 do -- you need to have a good understanding of what are you  
 7 doing in this area. And by us coming here to listen and to  
 8 talk and to testify whatever our feelings are is not going to  
 9 be enough. You have to do the rest. You have to provide us  
 10 protection.  
 11 THE HEARING OFFICER: Is there anyone else  
 12 that would like to make comments? Mr. Williams?  
 13 MR. DANIEL WILLIAMS: Thank you very much,  
 14 sir. If I may, I didn't address the comments regarding the  
 15 EIS, but if it's all right to you, I would like to give some  
 16 information to the crowd just for a moment regarding the EIS.  
 17 Would that be all right?  
 18 THE HEARING OFFICER: Would you like to make  
 19 comments?  
 20 MR. DANIEL WILLIAMS: Yes, your Honor. Thank  
 21 you.  
 22 THE HEARING OFFICER: If you would like to  
 23 make comments, you may make comments. **008316**  
 24 MR. DANIEL WILLIAMS: There's somebody who  
 25 mentioned they were not here to ask questions, and certainly

1 that is true in terms of the Air Force responding to many  
 2 comments today. However, what we can do is we ask -- ask  
 3 questions, and part -- as part of the EIS, the Air Force is  
 4 required to answer every one of our questions. And so the  
 5 questions are very important, not necessarily just for the  
 6 meeting here and verbally, but write them down. If you've  
 7 got five questions, you don't have to know the answers to  
 8 those, ask the questions. And that would be included in the  
 9 Final EIS.

10 So, I've got a list that I will be submitting that has  
 11 75 different questions on it, and those I can -- I can  
 12 reasonably expect to be included. So, anything you've got  
 13 questions, pose it as a question and write it down. But  
 14 what's most important is -- is the written comments. Those  
 15 are what -- that's what's going to be available to the  
 16 decision maker.

17 Writing letters is -- is incredibly important. Make  
 18 sure whatever you write goes to the EIS, but in addition to  
 19 that, make sure that you send a copy to our legislators.  
 20 We've got the addresses out at the table. And there is a  
 21 route, if you want to see where this -- or a map which shows  
 22 where this will be on the route in relation to your homes and  
 23 areas that you care a lot about.

24 But in addition to writing your legislators and the --  
 25 submitting comments to the EIS, another thing that would be

1 very valuable is send your comments to the Secretary of the  
 2 Air Force, Mr. P. Whitten Peters. The Acting Secretary of  
 3 the Air Force will be the ultimate decision maker. He'll be  
 4 getting a briefing and a recommendation, but what you submit  
 5 to him -- he doesn't normally get the letters from the  
 6 individuals. You can send them to him so that he will know  
 7 how you feel and he will, therefore, not be insulated from  
 8 the feelings of the people here, so --

9 Sir, thank you very much. I appreciate it.

10 THE HEARING OFFICER: Is there anyone else  
 11 that would like to make any comments? **008317**

TY

12 MS. HELEN VISARRAGA: I have just one last  
 13 one. My name is Helen Visarraga. I would like you, as you  
 14 go into your deliberations, and in promoting your mission,  
 15 which I think the military wants to keep peace for our  
 16 Citizens -- but please also keep in mind that -- do not -- in  
 17 the process of keeping the peace for the nation, that we  
 18 don't wage war on its own citizens; okay? **008318**

19 MR. PAT LAWRENCE: Good morning. My name is  
 20 Pat Lawrence and I live in Questa. I'm not real good at  
 21 speaking in front of people and I almost didn't want to come  
 22 up here, but I can't let this opportunity go by.

23 It's a wonderful presentation you folks have made out  
 24 there, and took a lot of work. I met some nice folks that  
 25 work for you out there. I'm not here to talk about whether

1 we need to teach these kids how to fly planes and go over --  
 2 and the politics involved in -- in any of the reasons why you  
 3 need to train.

PD-4

4 I'm here to say that I think there are other places you  
 5 can train, and obviously environmental impact statements are  
 6 often skewed. They're very ambiguous. They can be twisted  
 7 and test cases from Nevada and Arizona. You can color it any  
 8 way you'd like. The problem is you can't -- can't take an  
 9 area and put down its essence of what it is. If you were to  
 10 make an Environmental Impact Statement, I would suggest that  
 11 some of the men that designed this route -- Secretary of the  
 12 Air Force, perhaps -- could put on civilian clothes, hike  
 13 with my daughter and me down into the gorge one day and note  
 14 that there is no planes flying overhead, a rare occasional  
 15 meeting with another person, perhaps. It's a quiet,  
 16 beautiful, pristine area that's already been set aside for us  
 17 by our government for this pleasure. You can't -- you can't  
 18 define the essence of this place unless you've experienced  
 19 it.

20 I brought my daughter and son today. I want them to see  
 21 that the Air Force, maybe you're willing to listen to this,  
 22 maybe you're willing to listen to the intangible spirit of  
 23 this place, if you will. And I want her to see if you  
 24 listen. She's a witness, eight years old today, to whether  
 25 you will listen. She's asking me if we're going to move if

1 this happens. We will, of course. We may have to. Once you  
 2 destroy this place by flying over it, you can tell me that  
 3 the deer wouldn't be scared, that the herds will stay and  
 4 anything you want. But when you take away the essence you'll  
 5 take away the spirit and the soul of this place, and it will  
 6 be dead. And you won't care because you've never been there,  
 7 and you'll be -- you'll be happy to know that you've trained  
 8 a few more kids to kill people. And you'll destroy one of  
 9 the most beautiful places in the country.

10 And if you decide to take this route, my daughter is my  
 11 witness that we tried, and you didn't listen.

12 Thank you.

13 THE HEARING OFFICER: Is there anyone else who  
 14 would like to make any comments?

15 Ladies and gentlemen, that concludes this public  
 16 hearing. Thank you for your participation and input.

17 Please remember the public comment period will extend  
 18 through June 16, 1999.

19 This public hearing is adjourned. Thank you again.  
 20 (NOTE: A recess was taken from 12:19 p.m. until 1:26 p.m.)

21 THE HEARING OFFICER: Ladies and gentlemen,  
 22 we'd like to get started now so any of you who are out there  
 23 who can hear me and would like to come in and attend the  
 24 public hearing, please come on in and take your seats.

25 I'm Colonel Mike Burd and I will be the presiding

1 recorded accurately.

2 Finally, I'd like to remind you to limit your comments

3 to the Draft EIS; that is the purpose of this public comment

4 period. If you have written comments that you'd like to turn

5 in, there is a box in the outer room that you can place them

6 in.

7 UNIDENTIFIED VOICE: Sir? This lady has to go

8 back to work, she's just off for lunch, and she wants to know

9 if she could please speak, Renee Hardy. She didn't sign up

10 because she didn't think she had time.

11 THE HEARING OFFICER: Well, I assume no one

12 objects to that, so --

13 MS. RENEE HARDY: I've got to go back to work,

14 yeah. Okay. Well, I just want to say --

15 THE HEARING OFFICER: Could you state your

16 name, please? **008319**

17 MS. RENEE HARDY: Yeah, my name is Renee

18 Hardy. I'd just like to say I really appreciate you guys

19 holding this, and I guess one of the first things I was

20 wondering about is, like, the third Bill of Rights -- yeah,

21 Bonnie just brought this. Yeah. I was wondering, this -- it

22 says, "No soldier shall at any time of peace be quartered in

23 any house without the consent of the owner, nor in time of

24 war but in a manner to be prescribed by law." So I just

25 wondered how that would fit into, you know, bombers flying in

BR-5

BR-5 1 our airspace, which I kind of consider our home.

2 And I guess the other thing which comes up a lot is

3 about, you know, you guys setting up the Environmental Impact

4 Statement. That just seems like a conflict of interest. So

5 I just wanted to bring up those two things. And then, I'm

6 really opposed to the bombers flying over northern New

7 Mexico. You know, I'd like you to consider another site or

8 just make use of what you're doing now.

9 So, at any rate, thank you very much. Yeah.

10 THE HEARING OFFICER: I'd like to now turn to

11 the cards that have been handed in. And we have -- I have 15

12 cards right now, so we have plenty of time for everyone to say

13 what they'd like.

14 I'd like to first call on C. L. Anderson-Whiteaker.

15 MS. CHERON ANDERSON-WHITEAKER: Good **008320**

16 afternoon, sir. My name is Cheron Anderson-Whiteaker,

17 C-H-E-R-O-N, last name W-H-I-T-E-A-K-E-R. My father is

18 Lieutenant Colonel Andrew Anderson, U.S.A.F. retired. I

19 guess that would make me an Air Force brat, so I'm not

20 unsympathetic to what you would want to do, but I do have

21 some very strong concerns.

22 I live in Amalia, New Mexico, in a 50-year-old hunting

23 cabin. When the route of the training flights was changed

24 last fall, in early winter, it resulted in over flights of

25 the Valle Vidal Unit at Carson National Forest and the

GE-39

1 communities -- impoverished communities of Amalia and

2 Costilla.

3 The statements that I have read reported in our little

4 paper say that there will be up to 2600 flights a year, 15

5 percent of which will be nighttime flights between 10:00 and

6 4:00 in the morning. We're a rural ranching/farming

7 community. We're up with the sun and we go to bed with the

8 sun. And 15 percent of the flights occur at night, it means

9 we'll get 52 nights a year of corrupted sleep.

10 Another thing that concerns me is the effect that these

11 flights that occurred in November, December and January had

12 on my show dogs, my racing dogs. And from what I

13 experienced, I can understand what would happen to the

14 livestock and the game in the area that the residents depend

15 on for their livelihoods because there is no reliable

16 employment in the area.

17 And finally, having come to New Mexico from Nevada, I am

18 well aware that there is suitable terrain and bases available

19 that would accommodate this type of training without

20 disturbing socially and economically depressed areas.

21 Thank you.

22 THE HEARING OFFICER: I would like to now call

23 on Jane Tate. **008321**

24 MS. JANE TATE: Air Force personnel and fellow

25 Taosenos, in World War II my three brothers served in the

AO-26

BR-3

PD-4

1 armed forces. My name is Jane Tate, T-A-T-E. Four people in

2 my immediate family built World War II aircraft for years.

3 Two of my cousins died in World War II bomber flights, so I

4 deeply respect being so well defended by the U.S. Air Force.

5 I do see some current issues to address. About ten

6 years ago the first Environmental Impact Statement for Taos

7 Airport expansion was rejected by the Santa Fe court since

8 one of the prospective builders created his own EIS. This

9 type of conflict of interest it seems is now repeated via the

10 Air Force's contracted drafting of the EIS for RBTI. The

11 current EIS for Realistic Bomber Training Initiative was

12 designed to fit Air Force desires, obviously side-stepping

13 and understating the vast, well documented potential hazards

14 to humans, animals and plants.

15 Our Taos mayor, Fred Peralta, has cited fear of forest

16 fires being generated by Plan D flights. These hazards would

17 undoubtedly be compounded by significant economic depression

18 in an already impoverished area.

19 In the June, '98 Air Force newsletter I read that public

20 hearings in January and February of 1998 regarding RBTI

21 conducted in four states, including New Mexico, drew only 535

22 citizens, grand total. Captain Kangaroo taught me how to

23 count, so I noticed that in this time period Taos meetings

24 alone were attended by 800 people, virtually all opposed to

25 Plan D. Too bad that some outside monitoring of RBTI protest

BR-4

GE-3

GE-3

1 letters can't be done. The FDA last year stopped an evasive  
 2 organic food labeling plan after receiving thousands of  
 3 protest letters.  
 4 Five years ago I began an informal study of sanctuary  
 5 trauma. This was to isolate symptoms of a person who felt  
 6 safe until some quick and unexpected invasion happened to  
 7 him, sometimes repeatedly. Rapists and gunshots were some  
 8 typical invaders. Some dominant post trauma symptoms are:  
 9 Number one, a quick retreat when similar sounds occur; number  
 10 two, dangerous isolation for self-protection since a trust  
 11 was broken; number three, fear of a close relationship,  
 12 including sex and parenting; number four, in extreme traumas,  
 13 violence and destruction when a victim is approached in the  
 14 same or similar manner to where the original invasion  
 15 occurred.  
 16 My son-in-law suffers a serious hearing loss after  
 17 two-week summer artillery practices in the Washington desert  
 18 east of the Cascade Mountains. The National Guard issued  
 19 earplugs to him which he neglected to wear. Under Plan D  
 20 which calls for 2600 flights per year, would all of us have  
 21 to wear earplugs 24 hours a day? Since 15 percent of these  
 22 flights would occur between 10:00 p.m. and 6:00 a.m. very  
 23 little silence could be assured.  
 24 My pediatrician in Houston said that my children  
 25 wouldn't be prone to ear infections when they were older,

AO-47

1 that the ear drum would grow stronger. How are we to protect  
 2 infants and young children from flights as low as 200 feet  
 3 with sounds hitting 130 decibels?  
 4 Rather than increase overflights in northern New Mexico,  
 5 I think current flights should be reviewed and reduced by the  
 6 Air Force.  
 7 Considering the sad prospects of the aforementioned, I  
 8 would call Plan D of RBTI a potential rage to the ear drums  
 9 with permanent damage so serious, some as serious as bullet  
 10 wounds.  
 11 Loss of sleep is another large factor in this  
 12 impossible, unworkable, inhumane battery of offenses offered  
 13 to us in Alternative D. I say scrap it.  
 14 THE HEARING OFFICER: Like to now -- I'd like  
 15 to now call on Giovanna Paponetti. **008322**  
 16 MS. GIOVANNA PAPONETTI: Thank you for the  
 17 opportunity to say a few words to people.  
 18 I believe strongly that the possibility of this  
 19 Realistic Bomber Training Initiative program proposal would  
 20 be disastrous in northeastern New Mexico. The primary  
 21 CULTURE, Native American, has been here since the beginning  
 22 of time. The Hispanic culture, of which there are 65 percent  
 23 in Taos alone, of Taos residence, has been here 400 years.  
 24 This is home to these people. They have no where else to go.  
 25 They depend on the tourist economy to make their meager

BR-4

1 living. They get by.  
 2 People other than the Native Americans and Hispanics  
 3 come here by choice. The lifestyle is healthy. People learn  
 4 to live on a shoestring budget and accept it because the  
 5 meaning of life has more value. In the Taos area one learns  
 6 to live simply. Tourists love to come here because it is one  
 7 of the few places left to get away from noise and the  
 8 lifestyle they are used to. Many retired here because it is  
 9 a place of their dreams to spend their final years.  
 10 I am also concerned with our native wildlife, many of  
 11 which have dwindling numbers already, the devastating effect  
 12 noise will have on them. Part of our economy depends on  
 13 them, as well. Hunters come from out of state, as well as  
 14 the cultural aspects of the local people who hunt. This  
 15 project will negatively affect us in every way, the lifestyle  
 16 of the very old community.  
 17 Come to New Mexico as a visitor, enjoy our resources and  
 18 our people, and then say to yourselves, "Is this a place we  
 19 want to destroy?" There is no other place in the United  
 20 States like New Mexico, and I hope it stays that way.  
 21 Thank you. **008323**  
 22 THE HEARING OFFICER: Bonnie Banneau?  
 23 MS. BONNIE BANNEAU: It's Bonnie Banneau, and  
 24 I think I have more than three minutes so I hope that you  
 25 will indulge me.

1 UNIDENTIFIED VOICE: I'll cede her my time.  
 2 I'm on there to speak.  
 3 MS. BONNIE BANNEAU: Well, you know, I just --  
 4 instead of coming and speaking four different times, because  
 5 I was in attendance Wednesday night and I was in attendance  
 6 this morning, but I didn't try to sign up for four different  
 7 three-minute periods, I'm just going to carry on and try to  
 8 do it all in one fell swoop, here.  
 9 And just -- the last lady was discussing the hunters and  
 10 hunting season. Now, there is so many impacts and, you know,  
 11 you can't really write them down in a book because every  
 12 person is going to be impacted differently in their own life.  
 13 And, you know, some people probably just won't even notice,  
 14 but a lot of people are really going to care. And say, like,  
 15 these hunters they go out once a year with their guns and  
 16 their -- frequently -- alcohol to shoot at little critters  
 17 and big critters running around.  
 18 And I've been in those forests when there is low flying  
 19 planes, and any herd of critters is going to fly away. And,  
 20 you know, irritated hunters, they shoot at helpless little  
 21 birdies. I mean, I would not exactly recommend hunting  
 22 season as a good time for doing your -- I mean, it could be  
 23 even increased danger of people just getting totally  
 24 irrational and people do get totally irrational when they're  
 25 traumatized. People's good senses just fall apart, you know.

1 My father was in the Air Force, too, during World War  
 2 II, and we lived near a base when I was small. And it's  
 3 probably the most violent years of my life, both of my  
 4 parents in separate incidents almost killed me and I almost  
 5 committed suicide all within, like, the border of an Air  
 6 Force base. It was an -- it was just the anger, the sense of  
 7 there being hostility in the air, that people are training to  
 8 kill, you know, that there -- their weapons on many -- on  
 9 many of these planes, it -- it creates anger and fear and --  
 10 and just the aura that comes with it.

11 And many people talk to you about emotions and feelings,  
 12 and this is definitely an environmental impact. This is an  
 13 environmental impact in a state with a very high rate of --  
 14 of domestic violence. Just April 8th and 9th we were here in  
 15 this very room at a conference on the effects of family  
 16 violence on children. And New Mexico has a the most poor  
 17 children per capita in the nation. 70 to 85 percent of  
 18 incarcerated violent offenders grew up in violent homes or  
 19 were abused as children. Only five states have higher teen  
 20 violent death rates than New Mexico. New Mexico's infant  
 21 homicide rate is twice the national average.

22 Only two states rank lower than New Mexico in school  
 23 testing scores. 40 to 70 percent of children who live in  
 24 homes where domestic violence occurs are physically abused  
 25 themselves. These are just a few of the issues we discussed

AO-18

1 here, and the effects of violence on children.

2 As I -- a year ago on April 22nd, there was a low flying  
 3 bomber that came over the school in Arroyo Hondo.  
 4 Fortunately, it was lunch time and it was not testing time,  
 5 but this is going to effect children's ability to be tested.  
 6 Tests you know that's going to disrupt, especially -- there  
 7 is a lot of what they call ADD where kids have a hard time  
 8 paying attention and doing their homework.

9 And as Renee said about quartering the military in our  
 10 homes, this is like having the military flying through our  
 11 attic at loud volumes any time. This is going to affect  
 12 people's ability just to concentrate and do their work. And  
 13 the first thing right in the bill of rights has to do with  
 14 the congress shall make no law representing or establishing a  
 15 religion or prohibiting the free exercise thereof.

16 The abridging of freedom of speech or of the press or  
 17 the rights of the people to peaceably assemble and petition  
 18 the government for redress of grievances, and you're hearing  
 19 a lot of grievances here and we're petitioning you for  
 20 redress on the -- especially the freedom of religion, because  
 21 if you say you're going to fly over six days a week, and  
 22 people who worship on Sunday are not going to have jet  
 23 fighters flying over when they're doing their weekly prayer  
 24 services, because the meditators meditate every day of the  
 25 week.

1 People at the pueblos, Native Americans, believe that  
 2 every day is sacred, that ever moment is sacred, that our  
 3 whole lives are sacred and every living creature is sacred.

4 I was very upset by the "no adverse impact because of  
 5 the noise" philosophy. I mean, that's totally ridiculous,  
 6 you know. That doesn't respect people's feelings at all.  
 7 Everybody is ready to say we think there is adverse impacts  
 8 to having low flying loud noises coming over our heads, and  
 9 just to pretend that this is not part of what your -- your  
 10 realm is, we can just throw it out under the -- this is not  
 11 an environmental justice issue. And I understand that  
 12 environmental justice is more of a pie in the sky idea than  
 13 it is something that -- it's not really possible to implement  
 14 it, from what I could figure out.

15 I spent a long time talking to a lady there in Texas  
 16 yesterday morning. I almost cried because it was, like, it's  
 17 a policy guidance document, but meanwhile we have a siege on  
 18 New Mexico. The federal government is moving all the nuclear  
 19 weapons production facilities from contaminated places like  
 20 Rocky Flats and Hanford and Savannah River and Frenal and Oak  
 21 Ridge and they're moving all the nuclear weapons production  
 22 facilities to Los Alamos and Sandia, which means we have an  
 23 increased buildup of pollution from that, and also an  
 24 increased number of trucks. We have at this point about  
 25 three vehicles a week with radioactive stuff cruising around

AO-94

1 our highways, and if they -- when they get WIPP in full swing  
 2 it's going to go up to like at least ten vehicles a week.

3 And many of these highways with radioactive waste and  
 4 bombs and bomb components are going to be crossed by your  
 5 proposed Flight D and possibly the other Flight A patterns,  
 6 and I suggest that you pay attention to where radioactive  
 7 waste trucks and student pilots are crossing.

8 My impression was that if your airplane gets in trouble  
 9 you can try and land it on a highway. And, I mean, I don't  
 10 know what kind of training there is regarding the question of  
 11 do -- are any of these people told they can land on highways  
 12 and do you designate the highways with nuclear bombs and  
 13 nuclear waste and let them know exactly what's going on or,  
 14 you know, just don't tell them and it won't hurt them.

15 But as the government, you have the duty and  
 16 responsibility to those who you govern, you know. The  
 17 government it's elected, and even though the Air Force  
 18 obviously was never elected and is sort of paid for by our  
 19 elected officials, they have the duty and responsibility to  
 20 us to take care of our planet, and it just seems like the  
 21 weapons industry is going totally wild in New Mexico, between  
 22 the -- the bombs and the radioactive waste, and this in the  
 23 north.

24 And you are really endangering our land of enchantment  
 25 and we hope that you will kindly back off. And I think that

1 it would be good to learn to practice peace. I think that  
2 the practice of peace is a very important part of having a  
3 peaceful world, and that your not going to make any friends  
4 if you have enemies and you kill them and you're just making  
5 more enemies. And the only way to end war is by making  
6 friends and showing compassion. And I think that all these  
7 issues you shouldn't just pigeon hole and say, "This fits our  
8 program and we have to relate to it," and this is out there  
9 and we can't relate to it because everything that people say  
10 has to do with how it impacts the lives, which is the  
11 environment of our existence here on this planet.

12 Gracias. **008324**

13 THE HEARING OFFICER: Justin Reid?

14 MR. JUSTIN REID: My name is Justin Reid. I'm  
15 a resident of Colorado and not of this area, but I have been  
16 attending all the meetings that I can to express myself about  
17 what is happening or what I'm afraid will be happening if  
18 this plan is developed.

19 I don't really think that it makes much sense to argue  
20 about whether or not you should train for this kind of work.  
21 It makes a lot more sense just to say, "well, as long as you  
22 have to do that, please do it in a way that is the least  
23 expensive in terms of damaging the human spirit." And I say  
24 to you that consideration is the most important consideration  
25 you have to consider.

PD-4

1 I would take your aircraft to where it does not affect  
2 any human beings if you could. To -- sorry. To define that  
3 place, all you have to do is look at the map of the United  
4 States and see who owns what property. United States owns,  
5 as one of the speakers mentioned, something like 80, 85  
6 percent of the land in Nevada. Hey, go do it there. That's  
7 the place to do it. It may cost you a little more money, but  
8 the Air Force has never worried too much about that kind of  
9 thing. Go where it really makes some sense to go, and where  
10 you don't impact the human creature.

11 Thank you.

12 THE HEARING OFFICER: Mary Jo Carey? Cliff  
13 Bain? **008325**

TY

14 MR. CLIFF BAIN: My name is Cliff Bain. I  
15 live in Arroyo Hondo. Everybody who has spoken in the last  
16 week that I have been present for has given you a lot of  
17 really good reasons not to do this thing here. I'd like to  
18 talk about something that is perhaps outside of the narrowest  
19 scope of this EIS study process, and it has to do with needs  
20 assessment.

21 Now, you did address needs assessment in there,  
22 basically saying that we have airplanes, pilots need to know  
23 how to fly them so that they can return from their mission  
24 safely. But I'd like to push it a little further and put  
25 into the record a broader context for that need.

1 Right now the United States is at war in Yugoslavia and  
2 Iraq using a technique of air power and using these similar  
3 aircraft, and a lot of other kinds of aircraft, to basically  
4 project U.S. military power wherever we seem to -- our  
5 leaders seem to feel like it needs to be demonstrated. Of  
6 course, it's not demonstrated, it's -- this isn't the threat  
7 of it, these are bombs falling and killing people.

8 And I would just like -- I don't feel more secure. I  
9 don't think there are very many people in Iraq that feel more  
10 secure, and I sure as -- don't think there are very many  
11 people in Kosovo who feel more secure because NATO, largely  
12 made up of U.S. aircraft and armaments are dropping bombs. I  
13 think that there is a need for the U.S. to be involved in the  
14 world, dare say that, intervene, but it's too easy for us to  
15 do this with bombers. It costs us very little, except by way  
16 of tax money. It is actually costing us our -- the -- the  
17 means that we could be using to rebuild our country and  
18 taking care of our -- educating our people and feeding our  
19 people. All that money is going down a rat hole, as far as  
20 I'm concerned.

21 But just looking at the narrow, the aims of the use of  
22 military force, national defense and security, I don't think  
23 it's doing the job. And I'd just like to finish by saying  
24 that I sincerely hope that we can draw the line here in  
25 northern New Mexico, and be successful in deterring you from

TY

1 appropriating one more chunk of United States airspace for  
2 this activity.

3 But I hope that if we are successful there, or even if  
4 we're not, that we continue to find ways to draw the line and  
5 to rethink how we can take care of these ostensible  
6 humanitarian objectives in a way that is successful and less  
7 harmful to ourselves, to the people who happen to be at the  
8 receiving end of these bombs. **008326**

9 THE HEARING OFFICER: Gloria LaRiva?

10 MS. GLORIA LARIVA: My name is Gloria LaRiva.  
11 I'm born and raised in Albuquerque, New Mexico, and I'm here  
12 representing the International Action Center which is a  
13 national organization committed to opposing U.S. intervention  
14 abroad, which we see as strictly for geopolitical and profit  
15 making interests of the 70,000 military contractors, each of  
16 whom is not willing to give up their stake in the profits  
17 that they make, regardless of how many people are killed.

18 I am very much in support of the statements that people  
19 have made here from the Taos region for the environmental and  
20 human concerns, the impact on them. I think they know best  
21 what is needed here, and that is the elimination of these  
22 flights to make sure they don't take place.

23 I would like to address the immediate environmental  
24 concern that I have, and that is in agreement with the  
25 previous speaker, that people are dying in Yugoslavia, and

1 people are dying in Iraq from these bombings. I just  
 2 returned from Iraq, from Yugoslavia. I was in Yugoslavia  
 3 from the fifth to the ninth day of the damages. I was in  
 4 Belgrade, in Novi Sad. I was in the villages that have been  
 5 hit by cruise missiles and I saw people dead in the  
 6 hospitals, young people, older people, in comas from the  
 7 blast of the bombs. Factories which were targeted.

8 And when you think about this, the whole tactic of  
 9 bombing is against civilian infrastructure, and the military  
 10 never admits the first reason why they're doing this. They  
 11 have to cover it up because the people remember Vietnam. But  
 12 as war progresses, the military has come out with the truth  
 13 about what this war is really for and who the targets are.  
 14 And every day they keep saying, "We're going to widen the  
 15 array of targets," when, in fact, civilians have been killed  
 16 from the first day.

17 The bombs that hit Novi Sad on the 24th of March within  
 18 hours of the bombing, within three hours of the bombing by  
 19 the United States, killed people. And I saw them in the  
 20 hospitals.

21 I would like to say that you have four alternative plans  
 22 in the bombing patterns. I don't believe that any state, any  
 23 people, should be subject to these flights. They're  
 24 terrorizing. I live right now in San Francisco where the  
 25 Blue Angels fly over on Fleet Week to show their prowess, and

1 there is nothing more terrifying than to have these flights  
 2 over. They may be for show purposes, and it can't make --  
 3 you cannot help but think about those flights that come over  
 4 to show off how they can fly, and what it means for a people  
 5 to live in other countries and know that those flights mean  
 6 death.

7 That -- the sad thing about this is that most of the  
 8 bombs that have hit Yugoslavia, they apparently don't even  
 9 hear the planes, it's just a blast from the sky. There is a  
 10 piece of literature that you put out here that says bombers  
 11 played an essential role in the gulf war destroying Iraqi  
 12 airfields and communication facilities, as well as  
 13 neutralizing enemy ground troops. This is a tiny part of  
 14 what you hit. And I went to Iraq twice. My video is showing  
 15 here at the film festival, "Genocide By Sanctions." Within  
 16 eight hours the U.S. Air Force destroyed 95 percent of the  
 17 water facilities for the whole civilian population of Iraq.  
 18 Within 24 hours all electricity, all water, all sewage was  
 19 wiped out. Those targets were planned way ahead of time.

20 And this new war is the same. After their people are  
 21 bombed and obliterated, we'll see then sanctions imposed on  
 22 them, enforced by the United States military under the  
 23 reaches of NATO.

24 So I would like to just end by saying that the  
 25 International Action Center today is having demonstrations

1 throughout the United States. There are several thousand  
 2 people in San Francisco, I just called them. There are over  
 3 10,000 people in New York City. There are people  
 4 demonstrating in over 150 cities and towns, as well as here  
 5 in northern New Mexico, and I want to express our support for  
 6 the people of Taos, and New Mexico, in what I know will be a  
 7 growing anti-war movement. And I just urge us all to join  
 8 together, to join hands, and to say that these trillions of  
 9 dollars being planned to spend for more jet fighters we need  
 10 at home.

11 Ten percent of the fourth graders in the Native  
 12 population of New Mexico, only ten percent, have reading  
 13 literacy ability; only 26 percent of other children of color  
 14 in New Mexico. And we are one of the most militarized states  
 15 in the country. Why is it that there is no trickle down in  
 16 this state? Why is it that the army picks or the military  
 17 picks the least populated, the most disenfranchised states as  
 18 New Mexico? But I'll tell you what: We have a lot more  
 19 consciousness in this state than you realized, and we're  
 20 going to put up a fight. **008327**

21 THE HEARING OFFICER: Ted Strowhal?

22 MR. TED STROWHAL: Hi. I don't have any  
 23 prepared statement. I'm going to restrict my comments to  
 24 whether we should have this bombing training area in northern  
 25 New Mexico.

1 I grew up on Air Force bases, mostly SAC bases, and they  
 2 were some of the best years of my life. However, I know that  
 3 B-52's rock your world when they fly by. I was up on a lake,  
 4 Sanchez Lake in southern Colorado, sleeping on a boat about a  
 5 year ago and heard a rumbling that sounded like a freight  
 6 train coming. And I looked up and I couldn't see the sky,  
 7 all I saw was the bottom of an airplane. In the morning,  
 8 everything on that boat was covered with a black, oily soot.

9 This isn't as wide ranging as the war in Kosovo, but  
 10 this is where I live. This is a bad place to be having a  
 11 bomber training mission. They're not going to be able to  
 12 stay in the corridors that you guys have outlined. I don't  
 13 know what the Environmental Impact Statement reads, I haven't  
 14 looked at it. But it's going to make a mess out of this  
 15 place.

16 I work construction. Most of the houses that we're  
 17 working on, most of the new construction are retired people  
 18 moving in here. Right now we're living off tourism. This  
 19 place has potential as a retirement destination. Everything  
 20 that this county depends upon is -- is tied to the mountains,  
 21 to the quiet, to the environment. And I've been to west  
 22 Texas, and there is just not a whole heck of a lot down  
 23 there. It's hard to find a tree down there. And I haven't  
 24 looked at the demographics, I don't believe there is that  
 25 many people.

BR-4

1 I think you guys need this. I think you've got good  
2 reasons for setting up another training range. I think this  
3 is the worst possible place to do it. You guys are flying  
4 over Cimarron Canyon, Heron Lake, Canjilon Lake.

5 One thing I agree with that everybody has said is that  
6 the State of New Mexico has given its pound of flesh, as far  
7 as military installations, and I think it's time for somebody  
8 else to buck up.

9 **008328**

10 Thank you.

11 THE HEARING OFFICER: Alex Carpenter?

TY

12 MR. ALEX CARPENTER: Hello, relatives. Thank  
13 you for being here to hear what we have to say today.

14 How many more people have to die? This country, here --  
15 founded on murder. Right now there is people dying all over  
16 the world. How many more people do we have to kill before we  
17 wake up to see what we're doing? I mean, people are dying in  
18 Iraq right now. People are dying overseas right now. These  
19 planes will be practicing to kill more people. Why? Why?  
20 Why do we want to practice killing more people? You want to  
21 practice, why don't you just practice on me now, I mean.

22 Mother Earth keeps us alive. Without Mother Earth we're  
23 all dead. So why -- why put bombs on what keeps us alive?  
24 Sad part is the tax dollars that we pay, it goes to this war  
25 machine, so we can't just go like this, "It's your fault."  
We can't do that, it's our personal responsibility. And

1 that's the sad thing to think about, that if we're confirming  
2 that this government -- that we're helping kill people, I  
3 don't want to think about that. But do we have to?

4 I think we have to think about that in this age. Right  
5 now so many people are dying. We know what we're doing, this  
6 is genocide. Genocide is happening now. So why? Why would  
7 we agree to conform to genocide? I mean, why? Why do we  
8 want to kill more people? I mean, we've already seen so many  
9 people die. How many more do we have to see until we want  
10 peace, you know?

11 What do these planes do for us? They're not helping us.  
12 I mean, I was in the Mojave Desert and I saw a plane fly buzz  
13 right over my head, barooooom; right? Buzz right over my  
14 head, and it scared me. I was defending the valley because  
15 we didn't want nuclear waste put in that valley, in a sacred  
16 valley of the indigenous people. And we stopped, but the  
17 planes, they flew over us and it made me hit the ground,  
18 covered my ears. It scared me from my life. Should have  
19 seen it.

20 So, these planes are flying around practicing to bomb  
21 people. Practicing to bomb people? You know, why? Why  
22 practice to bomb people, you know? We're killing each other.  
23 We're killing ourselves. It doesn't make any sense. Nobody  
24 -- nobody wins a war. For bombing these people overseas, for  
25 what? For oil, for money? This country is founded on

1 murder. This country wants to continue with murder.

2 The creator is watching us all and knows what's  
3 happening, sees what's going on. We can't continue to kill  
4 each other because we're killing ourselves. We're all a  
5 family, you know. We're all a family. We're bombing the  
6 people overseas. They'll -- we're bombing innocent people  
7 and families. You have an -- a family. You have a mother,  
8 fathers, we're all daughters and sons of somebody, you know.  
9 Same type of people we're killing overseas. Doesn't make  
10 sense.

11 Please, please find peace in your heart. Please. Thank  
12 you.

13 **008329**

14 THE HEARING OFFICER: Allen Ferguson?

15 MR. ALLEN FERGUSON: Good afternoon. I am a  
16 writer of novels and an attorney. I want to focus on the  
17 specific aspect of the Draft Environmental Impact Statement  
18 that had to do with the effects, the potential effects of low  
19 level bomber flights on the Taos County economy. And it  
20 sounded to me from what Lieutenant Colonel Mason said, as if  
21 the statement ignored some of the real potential negative  
22 effects; specifically, the effects on the artistic community  
23 and on the tourist industry.

24 The artistic community in Taos, unlike in many anywhere  
25 else in the country, I think more than anywhere else in the  
country Taos has a very high proportion of artists: Writers,

BR-4

1 painters, sculptors, film makers and so forth. I know from  
2 my own art, which is writing, that I need long periods of  
3 silence in order to create a novel, in order to write a  
4 chapter, and rewrite a chapter and make sure that it's  
5 correct. I know that whenever there are loud noises, even a  
6 car going by on the street if its muffler is bad or  
7 something, it interrupts my thought process and my creative  
8 process. If there were bombers flying overhead it would do  
9 that to a much greater extent, I think. And that's true, I  
10 think, of many, many artists in this community.

11 A large proportion of the tourist dollars, as well as  
12 other dollars that come into this community, come in because  
13 of the art, here. I believe that the Air Force needs  
14 seriously to look at the artistic aspect of the economy in  
15 Taos County, and gauge in ways that I don't think you've  
16 looked at yet, the potential effect on artists, not only  
17 writers, but also painters, sculptors, film makers and other  
18 artists, of the noise levels and the frequency of noise that  
19 would happen if these bomber flights were -- were regular in  
20 this area.

21 There is also a direct impact on the tourist industry.  
22 As somebody else pointed out, tourists come here from New  
23 York, Houston, L.A., San Francisco, all over the country and  
24 all over the world, for that matter, to escape the noise and  
25 commotion and hubbub of the cities. If they come here and,

1 instead, incur noise levels that exceed those that they find  
 2 in New York or L.A., they're much less likely to come, I  
 3 think. And I don't get the sense that the Air Force has  
 4 seriously considered that impact.

5 Finally, I would like to say that I was a Boy Scout in  
 6 the early '60's and came to Philmont Scout Ranch in Cimarron  
 7 from a big city and hugely enjoyed the wilderness experience.  
 8 There are lots of Boy Scouts from all over the country who  
 9 come here to Philmont for that purpose. There are also many  
 10 other groups and organizations and individuals who come to  
 11 New Mexico for wilderness experience. Wilderness experience  
 12 would not be the same. As a 14 or 15-year-old Boy Scout, I  
 13 would not have had the wilderness experience I had if there  
 14 had been bombers flying overhead while we were out camping in  
 15 the high mountains and by the high lakes.

16 Thank you.

17 THE HEARING OFFICER: Shirley Girard?  
 18 Shirley Girard? Toni Boersig? Toni Boersig? Lumina  
 19 Greenwall? **008330**

20 MS. LUMINA GREENWALL: Hi. My name is Lumina  
 21 Greenwall, and I am highly opposed to the RBTI in this area,  
 22 or actually in any area, but especially in this area. I have  
 23 lived here now for over seven years. I came here for the  
 24 reasons of the peace, the quiet, the wilderness. I'm a  
 25 photographer, and a Reiki master and practitioner, and

BR-6

AO-94

1 about different factors that have not been considered, so I  
 2 would like to be very specific in what -- what I anticipate  
 3 seeing in the final draft: Provision for crossing over the  
 4 alternative route, bringing in nuclear waste from the other  
 5 facilities, nuclear facilities. The route is Route 285, New  
 6 Mexico Route 285. The flight corridor crosses directly over  
 7 that. I mentioned this a year ago, and we were promised that  
 8 whatever we mentioned would be included in the draft, which  
 9 it wasn't. And I think careful consideration should be made  
 10 in the final that you are, in fact, crossing that.

11 That's been news to some of the military officers who  
 12 I've spoken with, and that makes me very nervous that you are  
 13 not even aware that you are, in fact, crossing the WIPP  
 14 route, which brings in the nuclear waste.

15 Second, I'd like to have entered in the public record  
 16 that New Mexico is the second most fatal state in the United  
 17 States. I'm also an EMT and what "second most fatal state"  
 18 means is that any accident or health crisis that can arise,  
 19 in any state you're going to be in better shape than you are  
 20 in New Mexico, unless you're in Alaska. And the reason for  
 21 this is not that we don't have great EMT's and physicians  
 22 here, but that we are in the category -- not rural, but  
 23 frontier. And I'd like that to be in the record.

24 Thank you. I'd like that to be in the record, as well.  
 25 And I can't imagine coming up with a Final Environmental

BR-7

AO-16

AO-7

BR-1

1 bombers blasting overhead would absolutely destroy my -- my  
 2 peace of mind, my reason for being here.

3 And, you know, people who move here do not move here to  
 4 make their fortune. We very often give up jobs that are  
 5 highly paid in order to live here in a place that is pristine  
 6 and beautiful.

7 And I was an Air Force wife, I lived on a base, I know  
 8 what those planes sound like when they come overhead, and  
 9 they are just an assault. They're an assault on your  
 10 hearing, on your soul and on your mind. And I beg you,  
 11 please, this area does not need your bombers. Please take  
 12 them elsewhere. To Nevada where you already are doing  
 13 training exercises, where it is wide open. Not here, please.

14 Thank you.

**008331**

15 THE HEARING OFFICER: Gretchen McGregor?

16 MS. GRETCHEN MCGREGOR: My name is Gretchen  
 17 McGregor and I've been a resident of Taos since 1982. I have  
 18 a degree in environmental science from the University of  
 19 California, Berkeley, and I've spoken twice before, but I  
 20 feel that I haven't been specific enough for addressing what  
 21 I would like to see in the final draft, or the Final  
 22 Environmental Impact Statement.

23 I find the draft to be woefully inadequate. In the  
 24 presentation you said that all appropriate environmental  
 25 factors have been considered. We have been hearing for hours

1 Impact Statement without addressing the lack of health care  
 2 facilities that we have at stake. I'd also like to enter  
 3 into the record that we have one Level One hospital in the  
 4 entire state. A Level One hospital is a hospital that has a  
 5 designated operating room and trauma unit for any type of  
 6 accident that could occur.

7 Specifically, I'd love to see in the final draft an  
 8 assessment of, if there were an accident, a crash of one of  
 9 these B-52's, let's take just for example over the Philmont  
 10 Boy Scout Ranch where we have the highest concentration of  
 11 population which will be exposed to these low level flights.  
 12 I'd like to see an example that addresses how we would  
 13 provide for emergency medical services, not only for the  
 14 children, but for the pilot, as well. I can't imagine a  
 15 final impact statement not addressing the lack of health  
 16 facilities in this state as one of the environmental factors.

17 I know I've run out of time. I'd like to just quickly  
 18 also ask for fighting of fires. In other words, if a B-52 or  
 19 B-1 bomber did crash, how much fuel would be on board, and  
 20 how big of an explosion could we anticipate and how much, if  
 21 it were over a wilderness area, of a fire would be ignited.  
 22 Again, I think it needs to be included.

23 The last thing I would like to ask for is we know, we've  
 24 seen your DNL model of sound which gets the sound down to  
 25 below 60 decibels which is the legal limit. In speaking with

BR-1

1 the military officers we know that the decibels, in fact, the  
 2 actual real noise is 120 decibels, which if humans are  
 3 exposed to that we -- we will suffer instantaneous loss,  
 4 permanent damage of hearing. And so, in addition to the DNL  
 5 model which we've been seeing is very low or acceptably low,  
 6 which we know it isn't, I'd also like to see the final  
 7 conclusion of the assessment of the actual noise, the real  
 8 noise, along the flight corridor, because I think that you  
 9 need to include both of those models, even though the DNL  
 10 model is the more accepted modeling for sound.

11 And finally, just -- I know this isn't possible, but  
 12 we've already experienced fly overs since the 1940's and we  
 13 all know that they fly outside of their corridor. They fly  
 14 over the Taos Pueblo. They fly over the ski valley, and  
 15 that's why a lot of the residents here are very -- we don't  
 16 trust that there is any accountability for staying within the  
 17 flight corridor. And if there is any way that that could be  
 18 assessed within the final draft, I think that would be  
 19 appreciated by everybody.

20 Thank you. 008332

21 THE HEARING OFFICER: Shane West.

22 MR. SHANE WEST: Good afternoon, gentlemen.  
 23 How many minutes do I have? Three?

24 THE HEARING OFFICER: Well, that's just a  
 25 guideline.

1 MR. SHANE WEST: Guideline? Good.  
 2 Man, I didn't think I had anything to say, you know,  
 3 just like last time. It was like -- last time all I talked  
 4 about pretty much was the -- you have a -- videotaping, I  
 5 should turn it over.

6 UNIDENTIFIED VOICE: Music, music major.

7 MR. SHANE WEST: I'm a music major, so I'm  
 8 kind of familiar with some of the effects of sound, and jeez,  
 9 where to start. The heart program, the global changes,  
 10 Freedom of Information Act? You know, Ralph Nader was  
 11 addressing Stanford University at a commencement address a  
 12 couple of years ago for the Green Party and said, "What's the  
 13 difference between ignorance and apathy? I don't know, and I  
 14 don't care." You know, so maybe that's the whole point, no  
 15 one knows anything and no one really cares, you know.

16 And each person here must represent at least 100 people,  
 17 you know, I figure, because your average citizen doesn't give  
 18 a -- doesn't care. You know, doesn't show up, doesn't bother  
 19 to take the time to do something like this, you know. And I  
 20 mean, I feel kind of silly. I mean, what do I know? I  
 21 always wanted to be a pilot in the Air Force but, I don't  
 22 know, I guess I went crazy and played music instead. And now  
 23 look at me.

24 But anyway, Mayor Ted Peralta -- I really like that  
 25 there has been a lot of really educated and well informed

BR-4

1 things, and I'm not real good at things like that, but  
 2 sometimes I take notes.  
 3 Economic depression. Over 800 people were opposed to  
 4 that, I suppose, and the FDA and the food -- labeling  
 5 impoverished over 100 areas that -- that we live in, you  
 6 know.

BI-2

7 The migratory patterns, I put a star by that one. I  
 8 think that's a pretty important thing to consider is the  
 9 migratory patterns of the elk and the other four-leggeds and  
 10 the winged ones that we have around here. What was the --  
 11 the experiment, I believe it was 1944 they found a drawing in  
 12 the pyramids of Egypt and they reproduced this drawing with  
 13 an experiment with sound. And here we go back to the study,  
 14 it's an experiment with sound. And with this experiment,  
 15 they -- they put musical instruments around a 50-ton block  
 16 and levitated this 50-ton block. And some 15 to 20 yards  
 17 that they moved this 50-ton block with sound.

18 Yeah, Freedom of Information Act. Yeah. Universe was  
 19 spoken into existence. This is the east gate of the  
 20 prophecies of more than one culture. I'm a stutter -- I'm a  
 21 stutter -- I stutter a lot. I'm a studier of existential  
 22 drama -- is many -- and in all I have underlined eight times  
 23 in all Aboriginal cultures this is prophesied. Sound is very  
 24 important, universe was spoken into existence. It's the  
 25 essence of all magic. Hopi Land, Hope Villa, the Black

1 Hills, Mount Rushmore. There is nothing sacred, praise God,  
 2 nothing is sacred. Therefore, everything is sacred. And I  
 3 do believe the great spirit is going to take care of all  
 4 this, no matter if anyone cares to show up at any of these  
 5 meetings and really has anything truthful or insightful to  
 6 say or not.

7 It is rumored that the FBI stole the White Buffalo from  
 8 the Cotanish, but it was returned on the morning of the third  
 9 day. The government does believe in psychics, that's why  
 10 they hired them in the last war to figure things out. And  
 11 that's how they figured a lot of things out was by consulting  
 12 your local psychic. In fact, they have vested thousands upon  
 13 thousands of dollars in training people on what they call far  
 14 seeing training.

15 My time is complete, so I'll finish up with Antone -- I  
 16 think it's Antoine Girl Red Tea invented the transporter  
 17 beam. He's the same fellow that invented the laser beam.  
 18 He's also figured out how to program crystals, little  
 19 crystals we all carry around in our pockets, and use them  
 20 as -- because the -- they're binary thinkers, they can now be  
 21 used by computers by inscribing letters of the Caballa on its  
 22 surfaces. Inappropriate.

23 Oh, yeah, you can buy a clone for \$200,000. This is now  
 24 a fact, you can buy a clone for \$200,000. Why don't they  
 25 clone their soldiers? Because this is an attempt at slavery?

LU-9

1 I think so. Inappropriate addresses environmental factors,  
 2 guys.  
 3 She talked about Route 285. The lady here the other day  
 4 was talking about several areas in national parks that you  
 5 didn't even address in your -- in your flight path. And I  
 6 like the part where she said this is a -- this is categorized  
 7 as a frontier, and no hospitalization. What about it? What  
 8 about the emergency medical services?  
 9 I guess that's all I have to say. Inhale to the chief;  
 10 right? God bless Bill Clinton. **008333**  
 11 THE HEARING OFFICER: Elizabeth Cunningham?  
 12 MS. ELIZABETH CUNNINGHAM: My name is  
 13 Elizabeth Cunningham. I'd like to talk of things of  
 14 intrinsic worth, things that you can't put a value on, a  
 15 monetary value on. I would like to speak about the creative  
 16 process as one of those.  
 17 People come here to escape the noise of the city, to  
 18 have the quiet to think and to read. It's sort of a negative  
 19 space compared to the positive space of being very hectic in  
 20 many places. There are artists, writers, academicians,  
 21 people from corporations and from cultural institutions that  
 22 come here for the peace and quiet that we offer here.  
 23 At present I think there is one in seven people in Taos  
 24 that are artists, and they come from people who have been  
 25 here for generations, from the Pueblo people, Hispanic

PD-4

TY

1 environment. William duVries, a very respected naturalist  
 2 who has written a wonderful book called, "Enchantment and  
 3 Exploitation," said that studies that are done on the  
 4 environment only give us the minimum impact it might have.  
 5 If you think about the rain forest disappearing in one  
 6 percent a year it doesn't seem like much, but in 100 years  
 7 there will be no rain forests left.  
 8 You do have Nevada. You do have in the Air Force other  
 9 corridors that have been, but will not be as impacted as some  
 10 of your own statistics have shown this area would be  
 11 impacted. And we would appreciate it if perhaps you would  
 12 expand on those. It would be more cost effective and it  
 13 would leave us the peace here that does tie into both our  
 14 economics and our aesthetics.  
 15 Thank you very much.  
 16 THE HEARING OFFICER: I'm sorry, but I can't  
 17 make out the last name of the next individual. But it's  
 18 Gunther, and it's N-A-C-H-T-A-B. **008334**  
 19 MR. GUNTHER NACHTAB: I guess there is only  
 20 one Gunther here. Gunther Nachtab.  
 21 THE HEARING OFFICER: Could you spell that,  
 22 please?  
 23 MR. GUNTHER NACHTAB: Yes. My name is Nachtab  
 24 Nachtab. Nachtab doesn't sound real Irish, does it? It's  
 25 Birish, that's where it came from. Birish means Bavarian.

1 people, from Anglo people as the others are called, and who  
 2 have been here for a long time, and those that are continuing  
 3 to move here and be drawn here for the same reasons that  
 4 artists have always been drawn here, for the beauty, the  
 5 nature, the tranquility and the quiet.  
 6 Taos hosts over 30 artists a year at the Wurlitzer  
 7 Foundation who come here for the quiet in order to create and  
 8 bring that creativity back and their products of those  
 9 creativity books, scores of music, compositions, orchestras,  
 10 back to the United States as part of our cultural fabric. I  
 11 have been a member and on the board of the Taos County  
 12 Historical Society. My husband is the co-director and  
 13 curator of the Kit Carson Historic Museums. These are two  
 14 institutions that are dedicated to preserving the history and  
 15 culture of Taos, and through this presentation to help  
 16 educate the people of this community and make it continue to  
 17 be the viable community that we know.  
 18 Bombers have not been a part of this, historically. We  
 19 appreciate them not coming. Another entity that I speak for  
 20 is the silence. I think this is one of the most rapidly  
 21 disappearing valuable assets that is never talked about and  
 22 never defended that we have here. It's part of the  
 23 wilderness and wilderness connotes an undisturbed environment  
 24 that includes the human race.  
 25 I think there is one other thing to speak to is the

NORTHERN COURT REPORTING

1 Well, ladies and gentlemen, thank you for the  
 2 opportunity to talk here. I -- I think a lot has been said  
 3 that I can only repeat, and I will only repeat it for my --  
 4 from my own experience. I became a resident of Taos County  
 5 in '91, moving here from Washington D.C., a very populated  
 6 area with lots of air traffic over your heads. And one of  
 7 the reasons I'm here is because I couldn't stand the air  
 8 traffic any more.  
 9 I don't know if your impact studies have ever  
 10 investigated what it does to people, really. I would say I'm  
 11 probably a victim of air traffic over my head. It's been  
 12 a -- years -- many years ago, during the war, when realistic  
 13 bomber training was done over my head in Germany and the  
 14 bombs dropped on me and I had to run for cover. Today I'm  
 15 here, and the realistic bomber training is coming back to me?  
 16 You want to kill me now because you couldn't kill me then?  
 17 A lot of people run away because that noise affects you. And  
 18 even if I could probably run away today again, lots of little  
 19 kids couldn't run away when you have the training here. And  
 20 they will be affected, maybe the way I was affected.  
 21 As an artist and nature lover I'm here and I like really  
 22 to have this area being protected rather than being  
 23 destroyed, as realistic bomber training probably would do it.  
 24 And it couldn't be realistic enough because you, I hope,  
 25 won't drop bombs. That would be true realistic. And how

1 unrealistic the training is that you have today, I  
2 understand, because the bombs that are dropped in Yugoslavia  
3 do not hit the targets only, they hit the innocent people.  
4 And you can never be truly realistic unless you stop it, and  
5 find other ways of supporting a government to prevent any  
6 other war.

7 Thank you very much.

8 THE HEARING OFFICER: Ed Slook? **008335**

TY

9 MR. ED SLOOK: Jeez, I -- I want to say, I  
10 don't know you people that are here. I love all you people  
11 that are here. I love you Air Force guys, too. There is a  
12 few things in your environmental impact study that really  
13 amazed me.

14 The flight operations would not be expected to preclude  
15 existing land uses or continued use or occupation of an area,  
16 prevent recreational uses, threaten public health and safety  
17 or be inconsistent with and applicable regulations. Flight  
18 operations could, however, be perceived by the affected  
19 public as negatively affecting their quality of life.  
20 Perceived as negative? Could be? Could be perceived as  
21 negative?

22 You know, I don't have a whole lot to say because there  
23 is -- so many beautiful people here have said so many  
24 beautiful things, it's beyond my comprehension, my learning,  
25 my knowledge and my wisdom to even add to anything that's

1 been said to you people, to the Air Force, to our government.  
2 I think they get the picture. I think the picture will  
3 eventually be a shrinking picture of the military that we now  
4 see.

5 I think that some of the military people, themselves,  
6 that I have spoken to here are ready for new work in a new  
7 age, in a new millennium, in a new world, where the focus of  
8 war and muscle and power is diminishing, in which we  
9 spiritually grow, where there is energy and light in this  
10 specific area where we got them now, to tell them in your  
11 beautiful words that you are beautiful personas, and in a  
12 beautiful way.

13 Ahoy, Great Spirit. Here are all these prayers. Nomas  
14 De. **008336**

15 THE HEARING OFFICER: Three Toads?

16 MR. THREE TOADS: Hello. How are you today?

17 THE HEARING OFFICER: Good. Welcome back,  
18 Mr. Toads.

19 MR. THREE TOADS: Yes.

20 LIEUTENANT COLONEL MASON: Good to see you.

21 MR. THREE TOADS: And who is this lady?

22 THE HEARING OFFICER: That's the court  
23 reporter.

24 MR. THREE TOADS: She's the court reporter?  
25 Okay. And this gentleman, you got center stage.

1 UNIDENTIFIED VOICE: Appreciate it.

2 MR. THREE TOADS: You got center stage.

3 Who are you? What's this -- sound man, huh? Oh, the  
4 video camera? God, maybe I could share this with you, I --  
5 you know, pan the whole audience, and for everybody here,  
6 pretty exciting video, hey? You know, you have a camera  
7 thing going on in town right now, the movie picture show.  
8 You guys got to make sure to spend some nights there. Get on  
9 the roster to see the latest, and -- and -- from -- Hollywood  
10 has brought us.

11 But, anyway, I get to stand now. I get this microphone,  
12 huh? Does it disconnect? Hey? God, what beautiful people  
13 out here, for sure. You're right, Dog Man. Good people.  
14 Taosenos. It's so beautiful to be part of Taos and share  
15 Taos County, view of the wilderness and view of the land.  
16 And the land -- so big out here, and keep that big landscape,  
17 you know. This is -- this is so filled already with, you  
18 know, jet trails 17 in the morning or 18, coming from the  
19 west and going to the east and going to Texas. To Texas.  
20 God, we're on the major route to Texas. Flying with the Air  
21 Force and just all these trails going every which way, man.  
22 All those airplanes are flying high. I can't imagine if they  
23 were flying low.

24 And flapping along in my raven wings, I mean -- I'm  
25 actually a raven and not a toad. But anyway, I'm flapping

1 along my raven wings and a hang glider, and here comes a jet  
2 flying underneath the gorge bridge and cooks my balloon and  
3 my hang glider. I mean, that's what this is on the wake of.

4 Last year at this time somebody knocks a tram out of the  
5 sky in Italy. I mean, that's what you guys are -- here last  
6 year when you showed up, that's what had happened just before  
7 or just after you came here, you know. Major disaster for 21  
8 people in a gondola in Italy, you know. I think the  
9 governments are capable of accidents and they're capable of  
10 big accidents. Not just little ones, big ones.

11 And WIPP coming to the state. And, you know, there I am  
12 in my fighter plane and I want to hit the WIPP, that's my  
13 target, you know simulator target, because I'm playing a  
14 game, a war game. So who knows what my -- disaster might  
15 come out of this one, huh?

BR-7

16 From New Mexico we have a pristine wilderness area here,  
17 we have a lot of people involved in agriculture, a territory,  
18 maybe that's the way you're treated, you know, it's  
19 expendable or something. It's a frontier, and it is truly a  
20 frontier, and a beautiful frontier. And the people here  
21 really like it here that way. There is no train coming  
22 through town, you know, no train tracks. You don't have to  
23 hear the train couplings and uncoupling all night long. The  
24 noise level is down. You can see the stars all night, you  
25 know, they're clear.

1 And so you guys come here from Texas for vacation; okay?  
2 You're invited to New Mexico for vacation, and when you leave  
3 Texas, you know, you come over here to New Mexico. You enjoy  
4 where it's quiet, you know, I hope. This isn't Nevada, this  
5 isn't the saline desert of California where the jets fly over  
6 at 100 -- you know, 100 feet, 50 feet sometimes, you know.  
7 I've been there, seen those jets flying over real close.

8 And life acts like a game sometimes, but hopefully it's  
9 a game of life, not a game of death. With that I'll shut up.  
10 And I hope you guys make a good decision and make it right,  
11 because we don't need to be a subdivision off of Texas, you  
12 know, Langley Air Force Base. **008337**

13 THE HEARING OFFICER: Stacey Huddleston?

14 MS. STACEY HUDDLESTON: I've noted that I need  
15 more than three minutes.

16 THE HEARING OFFICER: I don't remember if you  
17 were here at the beginning of this when I talked about the  
18 three minutes and what the NCO next to me is doing with the  
19 card?

20 MS. STACEY HUDDLESTON: Right, that you give  
21 the time up and --

22 THE HEARING OFFICER: I previously said that  
23 I'm not going to stop anybody when they go past three  
24 minutes.

25 MS. STACEY HUDDLESTON: Okay. I request that

AO-61

AO-61

1 the Final EIS include the possible impacts that had been  
2 proven over and over to be true and realistic over a minimal  
3 of the past 15 years. Other areas that were pristine have  
4 suffered immense damage since the '60s. To my knowledge, you  
5 have documented each, and perhaps civilian comments on those  
6 areas. This information should be included as the realistic  
7 impact.

8 I have listed a number of things to be included. They  
9 are as follows: A public record of all Air Force, military,  
10 Air National Guard jet, helicopter, B-52 and B-1 crashes in  
11 the past 15 years from California, Texas, Kansas, New Mexico,  
12 Colorado, Utah; and the record of how many died, civilian and  
13 military. The damages should be realistic, should be listed  
14 in a realistic full spectrum of impact with compensation  
15 costs of people who survived, their medical records, land  
16 damage, building damage, psychological damages,  
17 environmental, et cetera. This would have to include air  
18 shows, low military training, planes colliding mid-air,  
19 refueling and other maneuvers in the air and on the ground.

20 Crashes due to migratory birds, alarmed reaction of one  
21 bird causing the others to fly up, getting caught in their  
22 engines, crashes due to negligence. Also, the casualties  
23 resulting from little losses, incidents where fighter jets  
24 lose parts of their equipment like bombs, external flight  
25 recorders, fuel fill tanks and the likes.

1 Included with this, the impact of such an accident in or  
2 near residential areas, watersheds, wildlife sanctuaries,  
3 nuclear plants, and how these disasters would be dealt with;  
4 a full cost evaluation of each disaster and the possibilities  
5 of forest fire, contamination, cleanup of the land and water  
6 disasters. Plan of emergency compensations for residents.

7 Also, the medical availability of emergency care and/or  
8 the cost of creating medical facilities that would more than  
9 humanly accommodate such an accident. A record of the last  
10 15 years to be included of complaints from citizens about the  
11 violations of the trainings, and what solutions were offered  
12 to the citizens complaining; include the research and the  
13 cost of keeping track of low level flights and reports on  
14 violations, and what was the outcome within the deciding  
15 military jurisdictions regarding these violations?

16 The EIS, without a doubt, should include possible  
17 damages caused by air blasts. A scenario including the  
18 devastation in other cities and towns where the U.S. has  
19 practiced low level flights; how many roofs have been torn  
20 off, how many cathedrals have caved in or sustained damage  
21 from flights coming too close? How many families, how many  
22 were compensated? How many dead?

23 This scenario should also include avalanches. Cost and  
24 compensation of possible damages to the population and land  
25 and air should be included. The EIS should include a report

AO-49

BR-5

AO-2

1 on the lowest level flight zones, time schedules, expected  
2 expenses, fuel capacities, expense and loss, all chemicals  
3 carried and used for general functions of the planes, and  
4 descriptions of storage vessels and their capacities  
5 concerning accidents.

6 Along with the chemical breakdown, liquids, vapors, et  
7 cetera, should be a list of toxic effects on human, animal,  
8 plant and other living, life giving forces. The amount of  
9 oxygen burned up over the duration of flights, in a timely  
10 fashion, for example, how many millions of gallons of air per  
11 second is used during take off, during the first five  
12 minutes, the next five minutes, et cetera. This should have  
13 a comparative chart along with it as concerns the amount of  
14 oxygen produced in a day by the surrounding force.

15 And air report of fuel drizzle or rain should have  
16 details of what chemicals would be thrown out during every  
17 hour of flight for each flight intended. The percentages of  
18 chemicals and concentration, percentages of chemicals blown  
19 out at low level flight training, as well as high level  
20 training needs to be examined. This report should be  
21 inclusive of mid-air refueling over unpopulated land and  
22 residential areas.

23 It should include how much fuel is lost, what kind of  
24 storage tanks are used, leaks, damage on ground and off,  
25 estimated millions of gallons that will leak into the ground.

AO-66

1 A 15-year report of comparisons from other areas already  
 2 experienced in low level training should be included with the  
 3 contamination report on the soil and water. This should also  
 4 include fuel that would be dumped through exhaust, fall  
 5 during emergencies when a training has more than the minimal  
 6 amount of fuel and needs to prepare to land. Any such  
 7 dumping of fuels needs a full spectrum report on hazards,  
 8 costs, damage possibilities, long term effects on living  
 9 forces. It needs to be inclusive of possible toxic liquids  
 10 and reports on ricocheting explosives similar to the F-16's  
 11 hydrazine that may be used on the bombers, and their harmful  
 12 effects to humans and natural life.

AO-5

AO-95

13 The environmental destruction costs can be quite  
 14 devastating to forests, lakes and field. The human exposure  
 15 reports should include ray burns, skin contact, organ damage,  
 16 central nervous system damage, what the lethal dose is and  
 17 how much will be carried on each bomber and what each  
 18 container is made of, et cetera.

19 A report should include an area survey of heart patients  
 20 and doctors as concerns increase rates of heart circulation  
 21 diseases and areas with low level sounds that cause problems  
 22 with not only heart sensitivities, but disturbances in  
 23 intestinal tract and other organs. Other problems to be  
 24 included would be premature contractions of pregnant women  
 25 leading to spontaneous abortions. Low level sound is

1 characterized by extremely high levels of noise, very steep  
 2 increases and decreases, and energy concentration, and highly  
 3 sensitive areas of the air. Because the noise burst is  
 4 coming fast and without warning, the body has no way to  
 5 prepare, medical and psychological concerns need to be  
 6 addressed.

AO-20

7 A report on the psychological stress and physical  
 8 alterations or disturbances that pilots experience should  
 9 also be included. What effects, what the effects of an  
 10 accident due to human failure; what speeds do they travel;  
 11 what if they lose consciousness; how many quit or die?

12 Children have been the most affected in other areas  
 13 where low level training has gone on. Studies should be  
 14 included from Europe, Canada and America as to the mental and  
 15 emotional damages inflicted on children to be included from  
 16 previous reports; how many children have been found with  
 17 threshold hearing levels impaired by 30 percent or more; how  
 18 many children won't go outside on clear days because they're  
 19 perfect days to fly? How many can't sleep or wake up  
 20 screaming? How many have thrown themselves on the ground  
 21 when they've seen a bird fly by? How has this affected their  
 22 behavior at home and at school?

AO-18

23 The impact on children must be addressed. This should  
 24 include the toxic effects in the air, sound, emotional,  
 25 physical, behavioral, environmental, social and agricultural.

1 Migrating birds who are disturbed have a hard time  
 2 eating generally, eventually will not be able to migrate or  
 3 even survive the migration. The loss of my birds due to the  
 4 low level flights and the increased amounts of deaths that  
 5 occur when high speed low level flights should be estimated  
 6 and the impact of this should be evaluated. The loss of a  
 7 flock of birds' lives in this case may indicate a crash or --  
 8 and loss of other lives. This should be a complete picture  
 9 in the environmental evaluation.

BI-2

10 A Freedom of Information report should be included to  
 11 reveal details of military realistic training practices in  
 12 keeping with the Air Force's goal to balance itself with the  
 13 environment and traditional land uses. A review of all  
 14 communities, city councils and private organizations that  
 15 have filed lawsuits, their cost and results should be  
 16 included; the cost effectiveness of tax dollars going towards  
 17 creating public resistance, and the cost of the communities  
 18 organizing in opposition; evaluating the time of public spent  
 19 going to meetings, emotional stress, physical stress,  
 20 expenses of contacting the people, following advertising, TV  
 21 fliers, writing complaints, forming demonstrations when  
 22 necessary, et cetera.

23 They're not free to be living their lives. They're  
 24 spending time and money to fight the system that is  
 25 sacrificing us to protect us in the future, while

1 realistically training to kill others in other places. This  
 2 is not the life we strive for.

3 What is the report on creating public resistance and  
 4 what is the impact? We deserve the right of physical  
 5 security, the free development of our personalities and the  
 6 undisturbed use of property. Silence in the sky and peace on  
 7 earth. This is the irrevocable decision that should be made.  
 8 Dismiss all the alternatives and redirect your services to  
 9 humanity. Low level flights frighten, sicken and kill. This  
 10 is the Realistic Environmental Impact Statement that has been  
 11 proven. Keeping the communities informed and involved is not  
 12 the decision process that the public is looking for. A clear  
 13 no has been given by this area and many owners again and  
 14 again.

15 Every ten years or so you come up with a new way to get  
 16 our airspace. I suggest that you add the alternative to do  
 17 nothing, to decrease the airspace you have available and then  
 18 to make an irrevocable decision to never try this again.  
 19 The location doesn't matter. It could be Canada, Turkey,  
 20 Germany or in the American southwest. For wherever fighter  
 21 jets play, for wherever fighter jets play the impacts on  
 22 human health, wildlife and wilderness can be environmentally  
 23 devastating and all too frequently deadly. Do not proceed.

24 Where is Major Brent Adams and where is the  
 25 representative of the NEPA, the Draft EIR is a failure.

008338

1 THE HEARING OFFICER: Josh Lazoroff?  
 2 MR. JOSH LAZOROFF: I do not give permission  
 3 for my image to be filmed. Okay, can you move the --  
 4 UNIDENTIFIED VOICE: Stop the film?  
 5 THE HEARING OFFICER: No, don't stop the tape,  
 6 but point it somewhere else.  
 7 MR. JOSH LAZOROFF: That's fine, you can point  
 8 it somewhere else.  
 9 Thank you for allowing us to have some measure of choice  
 10 in regards to military procedure. However, the choice you  
 11 offer is very narrow. Saying, "We want your input in  
 12 deciding where to conduct these training missions," doesn't  
 13 allow us to say that we don't want these training missions,  
 14 whatsoever. Given what the United States is responsible for,  
 15 historically and presently, should this discussion even be  
 16 taking place?  
 17 The U.S. demonizes those people in countries that are  
 18 not in line with our national interests. And I venture to  
 19 say that our natural interests do not include me. Yet, if  
 20 our government would apply the same set of standards to  
 21 ourselves in regards to atrocities and war crimes, terms such  
 22 as "murderers" and "Nazis" would be applicable. Let us first  
 23 address what we are responsible for before we even discuss  
 24 future action towards any aggression, any form of aggression.  
 25 Thank you.

GE-3

008339

1 THE HEARING OFFICER: Tim Cudahy?  
 2 MR. TIM CUDAHY: I'm a particularly bad public  
 3 speaker. I've been to -- I think this is about the fourth or  
 4 fifth meeting, now, and I've pretty much chickened out every  
 5 time, this being my last chance. I don't think I'll be able  
 6 to live with myself, because I live directly under the path  
 7 of the proposed RBTI, Proposal D, I believe it is. I know a  
 8 lot of people have claimed to live directly under the path,  
 9 and they probably believe that without knowing exactly where  
 10 that path goes. But I do know where that path goes, and I  
 11 live just a few short miles from the Colorado border on  
 12 Highway 522, and that is directly under the path that you're  
 13 proposing.  
 14 I have a million things I'd like to say, and I probably  
 15 won't remember even half of them. I'm particularly grateful  
 16 to the last woman who spoke, who covers all the technical  
 17 details of the inadequacies of the Environmental Impact  
 18 Statement, because I'm not prepared to do so. And I've been  
 19 advised to not speak from my emotions, but to speak on  
 20 technical terms so that you have to address those in your  
 21 final report and all that, but I'm going to -- I'm going to  
 22 try and speak from my heart anyway.  
 23 I noticed in speaking with some of you and some others  
 24 in the armed forces that many times you believe from the very  
 25 bottom of your heart that you are doing a dirty job that

TY

1 somebody has to do. I know that sometimes the response is,  
 2 "I also wish I lived in a perfect world where these things  
 3 didn't have to happen, and where my job wasn't necessary."  
 4 And I know that often times you believe all these things.  
 5 But I know that if you are really being honest, and in the  
 6 bottom of your heart you also must know that the power that  
 7 this country is exercising around the world is not always  
 8 just. It is often evil. And I believe that if you look down  
 9 in your heart, I don't think you have to look that deep to  
 10 know that that's true.  
 11 And I think it must be very difficult for you to be in  
 12 an institution that carries out some of the atrocities around  
 13 the world that are being carried out, not to protect  
 14 democracy, but to -- to protect the assets of the people who  
 15 form foreign policies and pull the strings. You must know  
 16 that that's true.  
 17 So I would suggest from the bottom of my heart, to your  
 18 heart, that you look at -- in yourselves, and if you see that  
 19 even a fraction of what I'm saying is true, that you redirect  
 20 what you are doing with your lives, and that you encourage  
 21 whoever is about to step in your place, because somebody will  
 22 step in your place obviously, that they do the same. The  
 23 armed forces of the United States and other countries are  
 24 doing a horrible -- horrible things to innocent people.  
 25 And yeah, a lot of times there is someone like the

1 current Milosevic or the current Hussein or whoever who are  
 2 very bad and terrible people, but this is not -- this is not  
 3 countries with just one person in them. They have hundreds  
 4 of thousands and often millions of people, and they're the  
 5 ones who are under your bombs. This is completely  
 6 unacceptable and I would just encourage you to please  
 7 redirect your lives, use the knowledge that you gain from the  
 8 positions that you do have and make this world a truly better  
 9 place. It has to happen sooner or later.  
 10 I think that's all I have to say. And I think -- I  
 11 think you must know that -- that the -- that the game is  
 12 getting late, as -- as pilots.  
 13 I do remember one other thing I wanted to say. As  
 14 pilots who fly all around the world, either you or your  
 15 superiors must see that the global patterns, the weather  
 16 patterns, are getting fierce and intense. And that the --  
 17 and that the system, the -- the economy, the way the economy  
 18 has been set-up in an unsustainable way, largely based on  
 19 creating waste and using up all the natural resources -- and  
 20 whether or not the natural resources ever will actually be  
 21 used up or not I think is questionable. I think actually  
 22 that the sink capacity of the earth, that is, the ability of  
 23 the earth to actually absorb the amount of waste that's being  
 24 created by this unsustainable system is what's going to choke  
 25 us all in the end.

1 And I don't think that the end is that far away. I'm  
 2 not one of these apocalyptic people who think that the Y2K is  
 3 going to end our life as we know it in a few short months,  
 4 but I do think that we are in the final years, and that  
 5 things will change. So I want to encourage you to please go  
 6 back to the people, and -- and tell them that, you know,  
 7 we're just too embarrassed to come in front of these people  
 8 and tell them that the effects on our bodies and their lives  
 9 are going to be negligible and that they'll habituate to it.  
 10 That we're just too embarrassed to go to them and -- and say  
 11 that, that the -- that the environmental impact is acceptable  
 12 and that they're going to learn to live with it. And that --  
 13 and that we're just too embarrassed to go to them and say  
 14 that we -- that the Air Force actually needs to do this to  
 15 keep the world safe for democracy.

16 That's all I wanted to say. Thank you.

17 THE HEARING OFFICER: Joe Rael? 008340

TY

18 MR. JOE RAE: Good afternoon. My name is Joe  
 19 Rael, native of Taos, New Mexico. I've got a few thoughts  
 20 too, but some of them may not make perfect sense. But  
 21 they're in my heart, also.

22 Welcome, U.S. Military. Welcome to my skies. Welcome  
 23 to my home. I live in the greatest country in the world.  
 24 Who do I thank for this? My God, my creator. I kneel down  
 25 and give thanks each morning. Yet who guarantees these

1 freedoms I enjoy? The brave, proud women of -- men and women  
 2 of the U.S. Military. I salute you. You risk your very  
 3 lives so that I may live my life each and every day. I am  
 4 the kid you see on the ground with his eyes wide, his heart  
 5 pumping life in each movement, his thumbs up in a salute to  
 6 the most patriotic people in this country.

7 You risk your very being to protect our rights and  
 8 liberties as we know them. I am grateful and appreciative of  
 9 your sacrifice. To the veterans and active duty personnel of  
 10 the armed forces of the U.S., I thank you and am grateful of  
 11 your great contributions.

12 Taos and northern New Mexico have a long and honorable  
 13 tradition of serving our country from World War II. Maybe a  
 14 lot of you have heard of the Bataan Death March. The second  
 15 world war my father served proudly, and Korea, Vietnam,  
 16 Persian Gulf and now the present conflict in the Balkans.  
 17 There are people who are willing to fight for peace, justice  
 18 and freedom, which we as a people generally take for granted.  
 19 The very fact that we are able to assemble here today and  
 20 speak our mind is a very special and rare opportunity. I  
 21 take this time to honor and offer my gratitude to you men and  
 22 women.

23 We live in the very special and unique place here on  
 24 earth. I was born and raised here and am willing to share my  
 25 skills, my land, my life with you so that you may be better

1 prepared to do your job. There are some places here that are  
 2 sacred to my brothers, although there are others. The two  
 3 that come to mind are Blue Lake and Taos Pueblo that I may  
 4 ask you to honor and reserve these. The land in which we  
 5 live is so vast and wide that surely we can accommodate your  
 6 needs and insure ours.

7 I love to see you in the skies, and ask you to always be  
 8 there. Though the general sentiment of this community seems  
 9 to be of a negative nature, rest assured that there is a  
 10 huge, though mostly quiet segment of our community that stand  
 11 behind you in every aspect. The people who have fought for  
 12 this country know more than the detractors in this audience  
 13 can ever hope to know. There is a simple difference between  
 14 right and wrong, proper and improper, and moral. You work  
 15 for justice, and I thank you for that.

16 To the people who seem to be anti everything, you need  
 17 to stop and think about what you have, and who is responsible  
 18 for it. It was not given to you, it was earned. I am quite  
 19 ashamed of our civic leaders, and you do not seem to realize  
 20 that we have a need to share our resources with the very  
 21 people who are allowing us to enjoy and prosper in this great  
 22 land. The price we pay is minuscule compared to the benefits  
 23 which we receive. The risks we face from these operations  
 24 are absolutely tiny when compared to the everyday challenges  
 25 we face.

1 I demand that the mayor of Taos, the governor of New  
 2 Mexico, the president of the U.S. allow and grant the U.S.  
 3 military the right opportunity to train to be the best they  
 4 can be. They represent us, you and me. This day and age is  
 5 more and more in need of people who respect and honor God,  
 6 the flag, and the U.S. Constitution. The minority of people  
 7 who are actually insuring our way of life is small, but  
 8 they're among the greatest people on earth. Though I, as  
 9 you, wish this world was a loving, peaceful and caring place,  
 10 history has shown that the world is in a constant state of  
 11 turmoil. We can strive for the -- a better world, but the  
 12 fact of the matter is that right now we need to be strong to  
 13 survive.

14 I firmly believe that the surest way to avoid conflict  
 15 is to be constantly prepared for it. We owe it to the many,  
 16 many people who have died -- yes, died -- to insure our  
 17 freedom. Would you give your life so that others may live?  
 18 That, my friends, is a huge sacrifice, yet there are many  
 19 men and women doing this very thing 24 hours a day, seven  
 20 days a week, 365 a year right now. I enjoy -- enjoy all that  
 21 we have, yet be aware that we must give in order to receive.

22 So, I declare that my skies are open to all friendly  
 23 craft, may you soar to great heights, keep us free, and  
 24 always remember that there are people here who love, honor  
 25 and respect what you do and what you represent. May God

1 bless you and always keep you safe. You're welcome in my  
2 home.

3 Thank you.

**008341**

4 THE HEARING OFFICER: Carol Miller.

5 MS. CAROL MILLER: Does this come off? I want  
6 to sit down because I feel like and equal to you, and this  
7 way -- thanks.

8 I wear many hats. I am a public health care worker, and  
9 I just spent two days in the microbiology workshops where we  
10 looked very carefully at social ecology from the global level  
11 to the cellular level. And what I learned is that there is  
12 no way for the Air Force, for any of us to predict the  
13 unintended consequences that might result from this  
14 tremendous change in our communities.

15 On the health plan of the Picuris Pueblo, the tribal  
16 council submitted testimony and resolution opposing the  
17 flights. I'm a health planner for a clinic in Tierra  
18 Amarilla which provides a lot of trauma care. And when we  
19 submitted our testimony from the clinic, the Air Force told  
20 us they didn't know that there was a health facility very  
21 close to the flight path. That shows the kind of work that  
22 was not put in on the front end.

23 I think you should know that there are trauma centers  
24 with helicopter flights in and out with critically ill  
25 patients. And we were told that we could not be prenotified

AO-24

1 of what the flight path would be when there could possibly be  
2 an emergency helicopter on the way in.

3 I am opposed to this because I think that the military  
4 has enough airspace already. At a hearing in December of '97  
5 we were told that there were scheduling conflicts of migrant  
6 services and that that was why the Air Force is looking for  
7 some of its own airspace closer to where the planes are now  
8 located. And I feel that that's a Pentagon issue to work out  
9 how to best share the existing airspace, that already exists,  
10 rather than moving and expanding into other communities.

11 I think that we have documentation about problems with  
12 miscarriages and stillbirths among animals, and there is some  
13 of us in the public health community that believe that that  
14 would also happen in human births. And I think that that is  
15 reason enough to not extend low level flights over  
16 communities where there are a lot of people living, giving  
17 birth, and enjoying what we have here.

18 I just want to say that the amount of money that this  
19 will cost to extend these flights -- I work in public health  
20 so I'm very sensitized to the sacrifices that we're making so  
21 that a greater proportion of our government and our so-called  
22 booming economy can go into the military while it's cutting  
23 programs everywhere for people here: Education, health care.  
24 Many people do not know that rural health care in New Mexico  
25 is very threatened this year, and that some of the clinics we

AO-24

1 rely on may, in fact, be closing.

2 I urge you not to put these flights anywhere, but to use  
3 existing airspace that you already have. Thank you.

4 THE HEARING OFFICER: Fritz Davis? **008342**

5 MR. FRITZ DAVIS: Good afternoon. If I could,  
6 first, I would like to know who I'm addressing here. Would  
7 you identify yourself, sir, please?

8 THE HEARING OFFICER: You came in late.

9 MR. FRITZ DAVIS: I did, I'm sorry.

10 THE HEARING OFFICER: My name is Colonel Mike  
11 Burd. I'm a full-time military judge. I've had no  
12 involvement in the development of the RBTI initially, the  
13 proposal, or the Draft EIS. I'm here merely to act as a  
14 moderator or a hearing officer.

15 Sitting to my left is Lieutenant Colonel Greg Mason, who  
16 is a B-1 instructor pilot at Dyess Air Force Base. And he  
17 gave a briefing earlier, at the beginning of the hearing,  
18 about the RBTI.

19 MR. FRITZ DAVIS: Thank you. Appreciate it.  
20 I want to commend the Air Force, first of all, in their  
21 decision to eliminate the Blue Lake and Taos Pueblo area from  
22 consideration. Having said that, I also must say that I  
23 support Senator Bingham's opposition to these flights for  
24 several reasons.

25 Now, one, from a natural standpoint, from an

BI-20

BR-4

1 environmental standpoint, I believe that to say that the  
2 impact is going to be negligible is a vast understatement of  
3 the situation. I have requested a copy of this proposal, and  
4 I want to read it in full, myself. I've only been -- found  
5 pieces and parts here and there. But I would urge  
6 reconsideration or more careful study of the environmental  
7 situation.

8 I also have concerns from an economic standpoint. I  
9 think sucking an eagle into the jet engine is not going to be  
10 good for the engines. And I think that's a very good  
11 possibility. I don't know if that's been considered or not.  
12 Eagles, buzzards, large birds that do great damage can cause  
13 great havoc, as I'm sure you're aware.

14 Also have considerations at this point about the  
15 economic impact of these flights. Currently in Taos County  
16 the unemployment rate is 11.3 percent. That is as of  
17 February of this year. That's down slightly from this same  
18 point last year when it was 11.5 percent. Colfax County, the  
19 economic impact, the unemployment rate, 7.5 percent. I think  
20 that in an area where tourism is a large consideration, where  
21 people come to mountains to get away from noise, I think the  
22 impact is going to be a lot greater than it has originally  
23 been considered.

24 And I grew up in Wichita, Kansas so I know the sound of  
25 a B-52. I also know the sound of a B-1. They're magnificent

1 airplanes, I must confess. I still have to go outside when I  
2 hear one going over to see what I'm looking at.

3 I do believe that there needs to be closer  
4 considerations, more realistic considerations of what impact  
5 upon wildlife and what impact economically on an already  
6 pressed economic area, as I believe the national unemployment  
7 level -- for Taos County is approximately what, a third of  
8 what the unemployment level is here. And in Colfax County  
9 it's about three-and-a-half points less. So I think damage,  
10 damage needs to be considered much more carefully than it has  
11 been currently.

12 I thank you gentlemen for your time. Appreciate it.  
13 And I also must say that I understand the needs for these  
14 flights, in that preparedness is a part of our modern world,  
15 whether we want to admit it or not. However, I would urge  
16 you to look again, very carefully, at what the ultimate  
17 injury to our area will be.

18 Thank you.

19 THE HEARING OFFICER: Cory Boyd. **008343**

20 MR. CORY BOYD: Good afternoon. I've lived  
21 here and seen many things. I've seen some bald eagles, I've  
22 seen some golden eagles. I've seen many rare and endangered  
23 birds in this area. And I think that this is a consideration  
24 that needs to be considered in the impact statement, because  
25 I feel that there is a real hazard of a bird getting sucked

BI-5

1 in an engine.

2 I live under the flight route D-84, which is a low level  
3 training route right now currently in the state. A few times  
4 in the past we've been woken up around 9:30 at night, between  
5 9:30 and 10:00, by a bomber coming over our house. This has  
6 happened a couple of times at night and a couple of times in  
7 the day. In the past time that -- the daytime, when they  
8 pass by I saw the crew, the fly crew in the cockpit passing  
9 by at eye level. They weren't 200 feet in the sky, they were  
10 approximately 150 feet off the deck. That is not -- not a  
11 safe level to be flying. That is not a safe level. With a  
12 160-foot wing span on a plane, if it banks, if it makes a  
13 hard turn it's going to eat it.

14 We live in an area where there is no electricity, there  
15 is no well, there is no water supply. If there was a crash,  
16 it would be entirely devastating to our community, to our  
17 houses, to our lifestyle. I urge you to take that into --  
18 into account in your decision that we're going to make.

19 I hear things about protecting our freedom and  
20 protecting our national interest, but what does this really  
21 mean to me? Protecting other people's freedoms; what about  
22 them when you're dropping your bombs on them, you know, the  
23 bombs that we pay for with our tax dollars? What happens to  
24 them? You know, most of those people have nothing to do with  
25 what's going on. Most of those people don't even know the

AO-16

1 big wig that's getting the money from our military,  
2 protecting our national interest.

3 What about the people in Panama, Honduras, Nicaragua,  
4 Guatemala, El Salvador that have been killed, destroyed by  
5 our military? What about the hungry and homeless in our own  
6 country when -- at a time when 12 billion more dollars is  
7 being allocated for our military spending, when most people  
8 in the United States can't even get welfare to receive food  
9 stamps for more than about three months? 120 dollars. At  
10 one point I heard a comment on the radio about Kuwait and how  
11 bad the situation is. People there from their government  
12 receive \$120 a month for food, at a cost one-half of our  
13 costs for food. And yet they say that that is enough. They  
14 say that that is unjust.

15 Well, in a free country where people are starving,  
16 25,000 people every year are dying from hunger in our  
17 country, where do you find your justification to take  
18 \$12,000,000 and put it into a military which is killing,  
19 raping and destroying people? Is insuring the freedom of a  
20 few privileged people, notably the five percent that make the  
21 rules and control our congress and our law decisions, are  
22 they worth slaughtering millions of people?

23 I, myself, received no benefit from the national  
24 interest of protecting of the military. I'm sorry, but I  
25 feel that without the military it would be no different than

1 what it is today, except people would be fed.

2 Thank you.

3 THE HEARING OFFICER: Billie Bolton? **008344**

4 MS. BILLIE BOLTON: Hi. Thank you for being  
5 here today. I read in the EIS that it said that we should --  
6 that the people of Taos County would habituate to the noise  
7 that these bombers would make flying 200 or 500 feet over our  
8 towns, and I just want to say that to me we shouldn't have to  
9 habituate to this sort of thing. That level of noise and  
10 that kind of disturbance to me is psychological terrorism,  
11 and for us to have to make this sacrifice in order for the  
12 military to have the added convenience of not having to  
13 travel as far to do its testing I think is -- is not  
14 acceptable. This -- this is our land, this is our  
15 communities, and I don't think that you should be allowed to  
16 expand the military flights that we already have. Ten  
17 flights a day is just way too much.

18 And the constitution guarantees us the life, liberty and  
19 the pursuit of happiness. And the pursuit of happiness to me  
20 includes peace of mind. Now, we were not responsible for the  
21 building of these bombers and I don't think it should be our  
22 responsibility and our sacrifice to provide a place for the  
23 testing, that the military already has plenty of test  
24 grounds. And I don't believe that this expansion should be  
25 made at all, so I would ask military to stay with the

AO-13

1 no-action alternative, and to consider the -- this is a --  
 2 this is a land that people will fight to their last breath to  
 3 protect the quality of life. And I think that -- that you  
 4 know we won't stop here.

5 So, thank you.

008345

6 THE HEARING OFFICER: Alva Morrison.

7 ALVA MORRISON: Thanks for being here, fellas.  
 8 I know you have had to listen to an awful lot. Just want to  
 9 add my two cents, because I'm here to support the no-action  
 10 alternative. And I'm aware of how much military flights from  
 11 the U.S. Air Force and other air forces have been expanding  
 12 all around the western part of the country recently, and it's  
 13 a deep, deep concern for me. I don't think it's necessary  
 14 for us to have to bear the increased burden. I don't mind  
 15 seeing the occasional jet flying over, you know, up in the --  
 16 way up in the sky. It's all a different thing when you're  
 17 coming in at 200 feet.

18 And I'm aware that it's not just the U.S. Air Force,  
 19 that the reason for -- I know the previous speaker mentioned  
 20 the conflicts between the different services, and that it's  
 21 not just the U.S. Air Force, that we've got all kinds of  
 22 other countries coming in here, depending on what the  
 23 latest -- you know, whatever the current administration  
 24 happens to be, what their foreign policy is.

25 I'm a ski instructor up here in the north, and we had

TY

1 the Singapore Air Force coming in here to go skiing this  
 2 winter. Well, I think it's fine if they want to go skiing,  
 3 but I don't think that my health and my -- and my peace of  
 4 mind should have to suffer for whatever bloody -- blood  
 5 thirsty dictatorship happens to be in good with whatever the  
 6 current administration is.

7 And I think, for that reason, if there is conflicts in  
 8 the use of military airspace right now, we should thin out  
 9 some of the use of the current airspace to get rid of those  
 10 conflicts. I don't think we need to add to anybody's  
 11 suffering that's going on all over the western part of this  
 12 country.

13 And as far as this business of people habituating to the  
 14 noise of these jets, that's a joke. And that's a big ol'  
 15 hole in that EIS and it's going to get taken into the  
 16 courtroom and torn up to shreds because we're not going to  
 17 habituate to that kind of noise. It's going to cause extreme  
 18 health and psychological damage. And I for one am never,  
 19 ever going to habituate to the noise of the Singapore Air  
 20 Force flying at 200 feet over my head.

21 Thanks a lot.

22 THE HEARING OFFICER: I've now gone through  
 23 all of the cards that have been turned in, and what I'd like  
 24 to do is take a break, short break, and then when we come  
 25 back, probably no more than ten minutes for the break, then

1 I'll ask if there is anyone who has not made comments that  
 2 would like to come forward and make comments.

3 After that I will ask if there is anyone who has made  
 4 comments that would like to make additional comments. And we  
 5 will do that until everyone has said everything they want to  
 6 say. But I would like to take a ten-minute recess.

7 (NOTE: A recess was taken from 3:47 p.m. until 4:01 p.m.)

8 THE HEARING OFFICER: I'd like to call the  
 9 hearing back to order. And we have a public official who has  
 10 indicated a desire to speak, so I would like to now call on  
 11 Erlinda Gonzales, who is Town of Taos Council Member. 008346

12 MS. ERLINDA GONZALES: Good afternoon. My  
 13 name is Erlinda Gonzales and I'm here as an individual, but  
 14 also as a council member, the Town of Taos Council. As a  
 15 government body we have opposed the flights, the proposed  
 16 flights, and I would just like to speak on -- on that note,  
 17 because I feel that this would endanger what we enjoy today,  
 18 the tranquility that we have in the community. And for  
 19 myself, I can say that we have a beautiful, unique town, a  
 20 beautiful city, a beautiful county, and I think the noise, in  
 21 itself, would be an issue.

22 But also what it would do to our wildlife, to our few  
 23 farms that we have left, few ranchers. But also just what it  
 24 stands to take away from us in the way of tranquil community.  
 25 So I just stand here before you and ask that you not bring

TY

1 these flights over our community.

2 Thank you.

008347

3 THE HEARING OFFICER: Sylvia Rennie?

4 MS. SYLVIA RENNIE: My name is Sylvia Rennie.  
 5 I'm also the secretary of the Latir Neighborhood Association.  
 6 That means we live right under this flight path that you're  
 7 proposing. I also was at the meeting at the Sagebrush in --  
 8 on Wednesday evening, and I was struck how many stories were  
 9 almost identical. And it became very repetitive and I found  
 10 that it was, in fact, very moving that so many people should  
 11 repeat the same story.

12 I had a tremendous job in a big city. I made good  
 13 money, I had a good position, and I couldn't stand the  
 14 commotion, the noise, the hectic life. They particularly did  
 15 not habituate. They did not get closer -- you're saying we  
 16 will -- to this noise. One doesn't. One loses hearing, one  
 17 has lost it. If one is getting stress syndromes, one's got  
 18 them.

19 There was a psychotherapist on Wednesday evening also,  
 20 also said this thing is cumulative, getting stress, getting  
 21 distress over and over again makes matters worse and worse,  
 22 one doesn't get used to it. I also am not a refugee from the  
 23 cities, but relatively late in life I found that I could make  
 24 my own decisions. I found a very quiet place to live, and I  
 25 am now in my last third of my life, more or less, and I'd

1 really like to spend it in peace and quiet. And I find it  
2 appalling that I should suddenly have to come to meetings in  
3 beautiful weekend afternoons like this to fight bomber noise.

4 I very much hope that after all these meetings, after  
5 all the letters people have written and e-mailed and phone  
6 calls people have made, you do grasp and understand and  
7 sympathize that we cannot stand the thought of you doing this  
8 to us.

9 We've also been told that it's the pattern of the  
10 flights and the flying time which is expensive. Well, as  
11 somebody pointed out the other night, if that isn't a  
12 consideration, why don't you move your bases up towards Utah  
13 instead of having all of these flights suddenly thundering  
14 through our valleys?

15 So, I just wanted to add my voice to all the other  
16 people who said, "We've had the noise, we couldn't stand it.  
17 We have found a place without the noise." Please, let us  
18 live in peace and quiet.

19 Thank you. **008348**

20 THE HEARING OFFICER: Lorena Shalev.

21 MS. LORENA SHALEV: Hi. I wanted to address  
22 the issue of the fact that bombing is against international  
23 law and, therefore, the training of bombers in our area  
24 cannot be therefore justified according -- so I wanted -- I  
25 don't know, do you give any answers to these questions or is

PD-2

1 this just a public comment time?

2 THE HEARING OFFICER: The latter.

3 MS. LORENA SHALEV: Okay. The other -- I  
4 don't remember all of the things I wanted to say. So there  
5 was that question. The other thing is also whether or not it  
6 really makes any difference that all the people are opposed  
7 or the animals are opposed whose voices you cannot actually  
8 hear? Does it actually change anything that you have this  
9 amount of opposition in an area, and what -- is there truly a  
10 democracy here and do we have a void.

11 Blessings.

12 THE HEARING OFFICER: Ladies and gentlemen,  
13 that goes through the cards that were provided to me. I'd  
14 now like to ask is there anyone who has not made comments  
15 that would like to come forward now and make comments? Yes?  
16 And if you do chose to come forward, if you'd please state  
17 your name? **008349**

18 MR. GENOA BLIVEN: My name is Genoa Bliven. I  
19 may be one of the few people here who live closest to your  
20 proposed route through Sunshine Valley. Federal government  
21 went through a lot of expense to create the Wild and Scenic  
22 River designation north of Questa, invested over a million  
23 dollars in creating the Wild and Scenic River park there.  
24 That stretch of the Rio Grande is one of the only truly  
25 pristine wildlife areas left in this area.

GE-3

1 There are nesting areas for Golden Eagle where the nests  
2 themselves are over 300 years old, and they are probably the  
3 size of your house, because every year the eagles add more to  
4 their nest. Those particular eagles, those golden eagles, as  
5 well as bald eagles nest there and they will rise to meet and  
6 challenge a B-1, a B-1 bomber. You're proposing that you're  
7 going to fly 800 feet over there nesting area, and they will  
8 challenge a B-52 or a B-1. They weigh around 35 or 40  
9 pounds.

10 And that event would occur about two-and-a-half miles  
11 from my house. You'd be coming my way. I don't particularly  
12 appreciate your lack of foresight in even thinking about  
13 doing something like that. I don't like it at all. First of  
14 all, it seems like a very confused priority to -- for the  
15 federal government on the one hand to create a wildlife  
16 sanctuary to spend taxpayer dollars and reserving an area for  
17 peace and quiet -- thanks -- and then to turn around and to  
18 completely propose a completely contradictory use for the  
19 same peace of land. I don't get it.

20 That's all.

21 THE HEARING OFFICER: The court reporter has  
22 asked if you would spell your name?

23 MR. GENOA BLIVEN: First, G-E-N-O-A is the  
24 first name, and B-L-I-V-E-N.

25 THE HEARING OFFICER: Is there anyone else

BI-5

1 that has not made comments that would like to come forward  
2 and make comments? **008350**

3 MR. JOSH ALLEN: Hi. I haven't really read  
4 through all of your information. My name is Josh Allen.

5 THE HEARING OFFICER: Could you state your  
6 name please?

7 MR. JOSH ALLEN: Josh Allen. But I have a  
8 general sense of what's your plan, and I'm absolutely opposed  
9 to it. And I feel incredibly angry and frustrated that this  
10 proposal is going through, and I feel an urge to kind of pin  
11 my anger on you, but I don't want to do that. I want to just  
12 acknowledge that you are all very good human beings, like all  
13 of us, but I feel like you don't have some important  
14 information or you're not acting with full integrity.

15 And not only do I not support this proposed route, I  
16 don't support any route in this country, and I think it's  
17 important to kind of -- for all of us to really look at this  
18 issue, and think about human life and to do the right thing,  
19 and I don't believe that it's the right thing to kill other  
20 human beings, and I don't believe it's a good thing for the  
21 military to go actively recruit working class people,  
22 especially working class men and people of color. And I see  
23 a very kind of racist and classist component to the military  
24 system, and I would just appeal to all people to really think  
25 clearly about this issue, and not support the military's

TY

TY

1 involvement in New Mexico, and throughout the world.

2 Thank you.

3 THE HEARING OFFICER: Is there anyone else who

4 has not made comments that would like to come forward and

5 make comments? Mr. Williams? **008351**

6 MR. DANIEL WILLIAMS: Good afternoon. My name

7 is Daniel Williams. Many of those -- many -- certainly the

8 gentlemen up front all have heard me speak because I've made

9 comments four times: In Angel Fire, in Taos previously, and

10 then earlier today.

11 What I'd like to add to my previous comments, if I may,

12 is to emphasize, and this is for the benefit also of those of

13 you in the audience, that in the EIS on page 263 what it does

14 point out is -- a chart here says expected operational

15 outcomes of implementing Alternatives B, C or D, and it does

16 compare each of the alternatives. And the real key is if we

17 look down into the third column, actually the third road, it

18 says for Alternative B that it would be a 26 percent increase

19 from the proportion of combat training time as opposed --

20 let's talk about as opposed to time that is spent flying to

21 the areas where the training will be conducted.

22 Alternative C, a 26 to 29 percent increase in proportion

23 to combat training time. And then finally for Alternative D

24 an 18 to 26 percent increase in proportion of combat training

25 time, so much -- what that really means is of the three

AO-12

1 alternatives, the one that would benefit the Air Force the

2 least operationally is Alternative B, this particular

3 alternative.

4 And there are two key parts, understand, to the

5 decision or two key things to look at. One is the

6 operational benefit. The other is the environmental impact.

7 Other parts of the EIS have already shown in the executive

8 summary that, in fact, this alternative does have the highest

9 impact and it does show it as being significantly higher than

10 the other two alternatives. But, in addition, this shows

11 that the benefit to the Air Force also is higher on the other

12 two alternatives.

13 The chart on the executive summary -- for the benefit of

14 anyone wanting to look at that EIS, this chart is on page

15 ES-3, and it shows diamonds to reflect the effect. And for

16 Alternative D it's showing two diamonds under "Airspace," and

17 air -- two diamonds under "Land Management Use," and one

18 diamond under "Biological Resources," versus the other two

19 alternatives which show one diamond each in each airspace

20 aircraft operates, one diamond in a land management use and

21 negligent impact in all other areas.

22 So while many of us do feel that the EIS -- it does show

23 a significantly lower impact than we're convinced it would

24 have. Again, the EIS itself does show a higher environmental

25 impact for this area, but it also shows a higher operational

1 benefit to the other two alternatives. So, based on that,

2 two of the very basic reasons for making a decision, two of

3 the key things to look at, the other alternatives, do make

4 more sense. And I don't say this to wish this on the people

5 of Texas by any means, but again to stress that this

6 particular alternative, the northern New Mexico alternative

7 is -- would be the least effective and the least beneficial

8 for the Air Force.

9 Thank you.

10 THE HEARING OFFICER: Is there anyone else who

11 has not made comments who would like to come forward and make

12 comments? Yes?

13 MS. JASMINE SANDERS: You need my name?

14 THE HEARING OFFICER: Yes. **008352**

15 MS. JASMINE SANDERS: Jasmine Sanders. I just

16 wanted to say that I was just over the -- at the pow wow

17 celebration, and some of the women from the Pueblo who

18 couldn't be here asked me to say that they grew up with these

19 bomber jets flying over the Pueblo, and that the huge

20 enormity of the sound had a negative impact on their ears,

21 and also on the structure of the historical homes on the

22 Pueblo. And they're absolutely opposed to having this

23 initiative go further, and so am I.

24 THE HEARING OFFICER: Anyone else that has not

25 made comments that would like to make comments? Is there

BI-1

1 anyone -- yes?

2 MS. LORENNIA SHALEV: Can I add --

3 THE HEARING OFFICER: I was just going to call

4 on individuals who have already made comments, if they'd like

5 to make additional comments, so please. **008353**

6 MS. LORENNIA SHALEV: Hi. I did go to Angel

7 Fire at the previous time, before you produced the EIS in --

8 in order to speak. And on my way home I met a whole herd of

9 elk on the road. And afterwards when I tell people about

10 that they said, "Well, maybe you're meant to be a

11 spokesperson for them because they cannot speak."

12 And it is really important that in areas where the

13 wildlife are to be protected, and have specific areas like

14 the Valle Vidal, and that -- that breeding grounds where

15 people aren't even allowed, no cars were allowed. And yet

16 these bombers were going to come over and interfere with

17 these specially protected breeding grounds.

18 And so on behalf of the animals, again, I'd like to make

19 and another plea.

20 THE HEARING OFFICER: Ma'am, what was your

21 name again?

22 MS. LORENNIA SHALEV: Lorenna Shalev.

23 THE HEARING OFFICER: Could you spell your --

24 MS. LORENNIA SHALEV: L-O-R-E-N-N-A

25 S-H-A-L-E-V.

1 THE HEARING OFFICER: Thank you. Is there  
2 anyone else who would like to make additional comments?  
3 Anyone at all? Would anyone like to make any additional  
4 comments? Mr. Williams? 008354

TY

5 MR. DANIEL WILLIAMS: Daniel Williams. Sir, I  
6 understand -- I know that we're getting close to the end of  
7 the day, here, and I know that 5:00 o'clock is a scheduled  
8 time, and may I just make a request as a citizen that if we  
9 take a break and we could reconvene so that anybody else that  
10 does come in later would have that opportunity? We'd  
11 appreciate that.

12 THE HEARING OFFICER: That's reasonable.  
13 Colonel, was there anyone out there?

14 UNIDENTIFIED VOICE: No one in the outside  
15 room or hallway, Judge.

16 THE HEARING OFFICER: Mr. Williams has asked  
17 that we take a break in case someone shows up, and I think  
18 that's a reasonable request. So let's take a break, and what  
19 I'd like to do is just stand in recess until we get one or  
20 two additional individuals. So, I won't adjourn this hearing  
21 until 5:00 o'clock. So, we are in recess.

22 (NOTE: A recess was taken from 4:20 p.m. until 4:58 p.m.)

23 THE HEARING OFFICER: Ladies and gentlemen, I  
24 would like to resume our hearing, so I'm calling the hearing  
25 to order.

1 I'd like to know if there is anyone else who would like  
2 to make any comments? Yes? 008355

3 MR. DAVID KRUSELL: Try to do this better than  
4 the last time.

GE-7

5 Hi. Name is David Krusell, X-R-U-S-E-L-L, and I'd like  
6 to say that, to me, if you come into an area and propose to  
7 do a study with your rules, and you write your own  
8 environmental study on it, which is, you know, obviously  
9 subjective because the Air Force obviously would like to be  
10 in one of these three areas, that I think it entails an  
11 obligation to really be impeccable in what you are doing.  
12 And I-- I don't think that's the case, here.

ED-2

13 I think that's the omission of, you know, half dozen  
14 wilderness areas, vast wilderness areas, Latir, Valle Vidal,  
15 it's an -- even a -- omit those from your study, I think is  
16 -- is certainly not impeccability.

BI-5

17 I think to mention that you are going to be impacting a  
18 few -- at least a few species of rare or endangered birds,  
19 and then you just say, "Well, we're going to do that," but at  
20 the end, you know, your final decision is that's okay, and  
21 not even saying anything about it, I don't think that is in  
22 good faith. I think to come into an area and not even go  
23 down and talk with the people, you know, to -- to find out  
24 the area with your dog, to talk with those people, I don't  
25 know where you are going to do it. And investigate and just

1 do studies with secondary work on computers or reports is --  
2 is not in good faith.

3 And I think that in a situation like this it would be  
4 obvious that you would want to fly these planes over the  
5 area, and certainly the people of Taos County would be more  
6 than willing for you to run five or ten jets over so that we  
7 could come out and see what it's about so that we would know  
8 what we're talking about, and I think that would be -- make  
9 things much clearer for everybody because then everybody  
10 would know exactly what we were talking about.

11 So I don't think that -- I don't think that there has  
12 been good faith there. I think that you'd kind of like to  
13 slip in here as easy as possible, and I don't think that's  
14 right.

PD-2

15 And I think that in terms of, you know, travel all that  
16 distance, you know, being separated from your training  
17 grounds up north and having to go all that distance, I think  
18 there should have been some foresight on this years ago, and  
19 that could have been taken care of. If I own a -- you know,  
20 let's say a fishing industry, and I don't do it in Utah and  
21 then expect, you know, to get mail across California and get  
22 to the ocean. I use some good business sense. And I think  
23 that could have been done easily back in the good old days.  
24 And I hope that the statement looks on.  
25 So thank you.

1 THE HEARING OFFICER: Would anyone else like  
2 to make comments? Please? 008356

3 MR. RICHARD ARTHURE: My name is Richard  
4 Arthure of Ranchos de Taos. And after speaking with some of  
5 your officers next door I understand that what they're  
6 proposing is to have flights of bombers at 400 feet, and to  
7 increase the number of flights to up to ten flights a day  
8 where they now have, if I understood correctly, something  
9 like 50 flights a year, or less than one a week.

10 This is an extraordinary increase. And to have these  
11 flights at such a low altitude, 400 feet, I know that the  
12 noise level would be really intense and that it would be a  
13 very serious disruption of not only wildlife, but human life.  
14 And that's really something that should not be done.

BR-7

15 I know, after discussing it with my friends in this  
16 area, that people that I've spoken with are very strongly  
17 opposed to these flights. They effect the quality of our  
18 life here in Taos County. And the impact on wildlife cannot  
19 be understated -- is being understated and should not be.  
20 Cannot be overstated, perhaps I should say.

PD-1

21 So, for these reasons, and also it's come to my  
22 attention that something like 75 percent of the land mass of  
23 this country is already covered by different flight  
24 corridors. There is absolutely no justification for having  
25 these low level flights of only 400 feet, which would be, I

1 know, an almost deafening noise. There have already been a  
 2 great many flights in this area, and the area of Southern  
 3 Colorado, around the Herfano Valley that I personally have  
 4 witnessed, and here over New Mexico. And there is much too  
 5 much of this military over flights already. To ask for more  
 6 of them, and to increase it up to a level of ten flights a  
 7 day, this very low altitude, would be an intolerable invasion  
 8 of this county, and a way that would be completely  
 9 unacceptable.

10 So I urge you to -- not to go through with this project.  
 11 And I urge you to consider the needs and the rights of those  
 12 who live in this county, in this area, both humans and  
 13 animals and birds. Please. There are many, many air  
 14 corridors right now that are controlled by the military, the  
 15 Air Force, more than enough. To intrude further, and to this  
 16 beautiful land, and to destroy the peace of this land in the  
 17 way it is proposed would be completely unacceptable.

18 Thank you for your attention.

19 THE HEARING OFFICER: Spell your name, please.

20 MR. RICHARD ARTHURE: Yeah, it's Richard  
 21 Arthure, A-R-T-H-U-R-E.

22 THE HEARING OFFICER: Would anyone else like  
 23 to come forward and make comments? **008357**

24 MS. TAMMA SIPES: My name is Tamma Sipes, and  
 25 I just want to speak for my own personal experience recently

AF-8

TY

1 in El Salto, which is outside Arroyo Seco. It was an early  
 2 morning and it was quiet, beautiful morning. And suddenly  
 3 there was a jet flying very low, probably around 300 feet,  
 4 over where I live. And it was extremely disturbing. I can't  
 5 imagine what a bomber would do. I can't imagine the impact  
 6 of a large plane.

7 This was a fighter, a small fighter. He didn't belong  
 8 there and you had no control over him. He was flying out of  
 9 your control. And how do you account for that? How can that  
 10 -- what happens if one of these guys, this -- the bomber who  
 11 is 22 years old and decides he wants to play? What happens  
 12 to the people below, to the land, to the animals? I just  
 13 think it's outrageous that you've chosen a place of peace as  
 14 this is, to do this.

15 Would you -- I'm going to ask you a personal question.  
 16 Would you, if you were retiring from the service, choose to  
 17 live in a place where bombers were practicing? I want you to  
 18 think about that. I know what your answer would be because  
 19 nobody in their right mind would want to live there.

20 Thank you.

21 THE HEARING OFFICER: Would anyone else like  
 22 to come forward and make comments? Yes? **008358**

23 MR. ELLIOTT LIBMAN: Yes. I got out for about  
 24 three hours, but you guys didn't. And I was here before, and  
 25 I was the one that -- I said the government doesn't have ears

1 when you wouldn't say anything, and you said that this was  
 2 not a dialog.

3 And what I -- I have been kind of walking around and  
 4 seeing people, and in the other room. All I can say to  
 5 people was I don't trust the government because that was the  
 6 only way -- that was the only way to be honest, to start a  
 7 conversation. And then I felt sort of funny, you know,  
 8 because it's not that personal, but yet it is.

9 I was out in the lobby and there is a woman who works  
 10 for the -- you know, for the Air Force. And I said to her,  
 11 "It's not, like, a personal thing."

12 And she said, "It's not, like, a personal thing," but  
 13 people tend to take it out on you guys personally and it's  
 14 not your policies. But we, the people, never get to talk to  
 15 the people who make the decisions, and they talk to the  
 16 people who pay for the politicians' elections, campaigns, and  
 17 that's where our policies are coming from, the corporations,  
 18 and you know it.

19 And -- and the woman -- the woman outside, we talked a  
 20 little bit and, you know, there was like a connection that we  
 21 had. And I -- there was a guy there that she worked with and  
 22 I felt like that, you know, she was going to get in trouble,  
 23 you know, because she was, like, talking about her feelings,  
 24 that it's a difficult job, because it is. And so -- you  
 25 know, so I left. And when I came back I said to her, you

1 know, "We all -- we need to get jobs that we really feel in  
 2 our hearts."

3 And she said, "I did, and I am." And I think that what  
 4 happened was there is a denial that happens. There is a --  
 5 there is like a -- right now the people do not trust the  
 6 government. This is terrible.

7 I was born in 1949, before the '50s. But I was -- I  
 8 was -- came of age in the late '60s. And you're, like, "I  
 9 want to get out of here, and I don't want to hear this," but  
 10 how are we going to heal and change our values? We have to  
 11 learn to live together, multiculturalism, multiethnicity.  
 12 But right now the interests of the money have -- they've  
 13 always been that way.

14 I'm Jewish, you're black, you know that. I mean, yeah,  
 15 you're in a tough place right now. Hell, you -- I mean, I  
 16 don't know.

17 I'm really -- I got to my house, and then I came back,  
 18 and I -- I felt like I just wanted to talk about that because  
 19 I think that's what's real. It's going on in this county,  
 20 with the county government, and -- and right across town,  
 21 Howard Zen. This is like the Howard Zen RBTI day. You know,  
 22 the real -- we -- are we going to change our priorities so,  
 23 instead of making decisions -- I'm sorry, I'm going to go on.  
 24 Not too much longer, though -- not make decisions based on  
 25 economic expediency. That's what runs western civilization.

1 It's called reason and logic, and it's tied to technology,  
2 but it really benefits a few people who are really rich, and  
3 they own the media and they own the military.

4 And I'm done.

5 THE HEARING OFFICER: Sir, the court reporter  
6 has asked for your name.

7 MR. ELLIOTT LIBMAN: Oh, I'm sorry. My name  
8 is Elliott Libman. I've been a psychotherapist for Taoe  
9 Mental Health for six years. I work with people who are  
10 traumatized, and I'm not sure if that meant to you that, "Oh,  
11 this guy can be discounted." But I don't believe you. I --  
12 I look -- I mean, I want to believe you, you know. You're a  
13 good guy. But you would not want to put it in your backyard.  
14 RBTI, I mean, NIMBY, NIMBY, not in my backyard. Everybody  
15 who makes these decisions, and not you maybe, live in places  
16 where they don't put the nuclear waste, where they don't put  
17 the sledge.

18 And the rich people live in these palaces with gates.  
19 And western civilization has been about freeing people. The  
20 American Revolution was about it. But now we invade and kill  
21 indigenous people and -- and take their land. And we need to  
22 change it and we need to change it with love and real heart.  
23 Our heart gets tied with deceit, and our self-interest takes  
24 over.

25 MR. DAMON SHYMANSKI: Good afternoon. My name

1 is Damon Shymanski. I work with the local youth  
2 organization, and I just wanted to share something that  
3 really kind of brought my attention to this and really  
4 solidified my opposition to the proposed training route.

5 I went about three weeks ago on a float trip down the  
6 Chama, which is just below the Abiquiu Dam where the flights  
7 begin. And I was with five local youth on a trip where we  
8 went down and planted cottonwoods down the Chama River, which  
9 is a native species that has been taken over by the tamarisk.  
10 And on that trip -- it was three days long -- we saw two bald  
11 eagles, the likes of which I have never seen in all my days.  
12 And the crew, who was mostly local young men, grew up here,  
13 also had never seen anything like that.

BI-5

14 And so it really got me to thinking about the habitat of  
15 that area, and not just that area, but all over the training  
16 region that is proposed. I think that any time you have that  
17 many flights -- it's a massive increase. And if you have  
18 that many flights going through an area, species are going to  
19 be disturbed, people that live there are going to be  
20 disturbed.

21 And you'll find, I think, throughout this community,  
22 that we're united in our opposition to this. And I would  
23 hope that as an organization, as any business would do, they  
24 would consider the public's opinion of their practices and  
25 how that's going to effect not only what kind of people join

1 that organization, but also the public's view of that  
2 organization. You know, if people vote for how politicians  
3 are going to spend dollars, it might influence in the future  
4 what kind of funding the Air Force gets.

5 And I think that you really need to think about the  
6 impact that ten flights at 400 feet are going to have, not  
7 only on the people of the area, but the habitats of the  
8 region, and the future of the Air Force, for that matter.

9 Thank you.

10 THE HEARING OFFICER: Would anyone else like  
11 to come forward and make comments?

12 MS. CYNTHIA AGNEW: I have a really --

13 THE HEARING OFFICER: Could you tell us your  
14 name? **008360**

15 MS. CYNTHIA AGNEW: Cynthia Agnew. Just a  
16 comment on what he said is that northern New Mexico, I think,  
17 in comparison to the other areas, makes the large majority of  
18 their income from the natural assets that are here. And  
19 that -- that is the one thing that we really have. And  
20 tourism, the attraction of, you know, growth of -- socially  
21 is reliant on those habitats and natural beauty that we have.

BR-4

22 THE HEARING OFFICER: Yes?

23 MR. GALEN GOLDSMITH: How long do I have to  
24 speak? You have a timer.

25 THE HEARING OFFICER: Well, we use as a

1 guidelines three minutes, and -- but --

2 MR. GALEN GOLDSMITH: Okay.

3 THE HEARING OFFICER: -- I haven't cut anybody  
4 off, so -- **008361**

5 MR. GALEN GOLDSMITH: My name is Galen  
6 Goldsmith. I live in Albuquerque. In this particular  
7 incidence of the new training routes, I was told it was going  
8 to be being done Monday through Fridays. And there are  
9 families that have to get up to go to school in the morning,  
10 people have to get up and go to work. And I kept getting  
11 told that is sounds about as loud as a chainsaw, but from  
12 your own environmental impact, 117 decibels from a B-1 at 300  
13 feet, that's more -- close to the 123 decibels of a rock  
14 band.

15 Now, when I turned 21 I had a criminal citation for  
16 having a rock band play at my 21st birthday party and it was  
17 only 10:00 o'clock at night. And these are going to be  
18 happening at 1:00 in the morning and over populated areas,  
19 and it just seems ridiculous that this is not going to have  
20 an impact on a community. I mean, people need their sleep.  
21 And these are -- these are -- that's really loud.

AO-26

22 And then, more in general, in general towards the need  
23 for Air Force. A few years ago I met the last person to drop  
24 a bomb on U.S. soil, a Japanese man, and he was about 60  
25 years old. The Japanese during World War II thought that

169

1 they could start major forest fires in the Pacific northwest.  
2 They didn't know it was a rain forest, so it didn't work.  
3 That was sometime in the mid '40s, I suppose. That was the  
4 last time we had a bomb dropped on our soil. And before that  
5 I guess it would be under the Polk administration, and that  
6 was questionable whether that was U.S. soil or Mexican soil.

7 And it is a question of need for this. I mean, the  
8 military grew tremendously during the cold war, but -- the  
9 cold war is over, but during that time when the military was  
10 a major industry, lots and lots of monied interests got into  
11 it. I mean, it's a major industry in the United States, and  
12 so now the cold war is over and so now we have terrorists,  
13 which I suppose weren't there before, but now they're just as  
14 big of a threat as the U.S.S.R. was. And we have ethnic  
15 cleansing that we need to protect.

16 So, in regards to ethnic cleansing, if I could mention  
17 I'm very much against the idea of ethnic cleansing, very much  
18 against how in 1974 the U.S. support the -- and support Jimmy  
19 Carter gave them. More records when they began a campaign of  
20 genocide that ultimately killed 200,000 Israelis, which was  
21 done with U.S. weapons, with U.S. military equipment. I'd  
22 like to say that I -- I'm very much against the ethnic  
23 cleansing that goes on in Israel, although at a much lower  
24 grade. U.S. entirely supports everything that the Israeli  
25 government does, it seems, regardless of the effect on the

170

1 Palestinians.

2 When Benjamin Netanyahu came to power and announced that  
3 since the newly elected government, all of the previous peace  
4 agreements of the Palestinians were null and void, they don't  
5 matter because it's a new government. That is ethnic  
6 cleansing in itself.

7 And so I'd just like to wrap it up by saying that I  
8 question the fact that we're in Kosovo because of trying to  
9 stop ethnic cleansing and the -- question the regimes that  
10 we've supported in the past, and I really strongly question  
11 the need for such a tremendous war machine when the U.S.S.R.  
12 is no longer really a threat to us any more, and making up  
13 new enemies just to justify the people that don't want to  
14 lose the business and the industries of creating all these  
15 weaponry.

16 THE HEARING OFFICER: Would anyone else like  
17 to come forward and make comments?

18 UNIDENTIFIED VOICE: Would you? Do you have  
19 anything you want to say?

20 UNIDENTIFIED VOICE: Are you allowed to speak  
21 to us about -- we're people. We're both Americans; right?  
22 Why are we on the other side of the fence? **008362**

TY

23 MR. SAMMY SWENSON: Okay. Hello. Good to see  
24 you guys here today again. I was here Wednesday. We have  
25 the meeting, there was a lot of people here Wednesday, and it

171

1 was real nice to see. And I hear --

2 THE HEARING OFFICER: Could you tell us your  
3 name?

4 MR. SAMMY SWENSON: Oh, nice to meet you. My  
5 name is Sammy Swenson. I'm from Maine, in the East Coast.  
6 And, yeah, I'm coming here to Taos to do a global peace walk  
7 where I just happened to be having this coming up April 22nd,  
8 but I'm going to talk a little about my understanding of  
9 maybe why I'm here talking.

10 And I guess if you look at, like, people and, you know,  
11 we're all people living on the earth. And the earth has some  
12 resources. And we're trying to live in harmony with the  
13 earth, so I'd like to start out with that and my own humanity  
14 must live a peaceful way of life and we can make things work.

15 So, starting off with that note, maybe from a long time  
16 ago, you know, people have wars and fighting amongst  
17 themselves. You know, we've evolved, you know, as creatures  
18 maybe, from whatever your belief is. And we've come  
19 together, but wars have continued.

20 And now here in 1999 is the war still happening because  
21 we're -- we're still fighting over resources. It's a  
22 general, basic understanding. But when is it going to end  
23 and what's going to stop it or what's -- what are we trying  
24 to come to? What's the point?

25 You know, we have this -- we have the bombing routes

172

1 that we want to do, or the training routine, and that's --  
2 that's another part of the whole puzzle that's happening.  
3 But ultimately we know what we have to do and we have to do  
4 it soon or else we're going to, you know, be in more trouble  
5 than we already are because, you know, the -- the Endangered  
6 Species Act, you know, and all the pollution that's  
7 happening, and the lot of this stuff that's happening. You  
8 know, we all know what's happening, and the time is running  
9 out.

10 UNIDENTIFIED VOICE: They don't believe it  
11 because they're insulated from it. They don't get any of  
12 that.

13 MR. SAMMY SWENSON: We're all trying to  
14 believe it, but it's not real to them. It's like a general  
15 feeling, you know, the general feeling if we could get  
16 together and channel, like, a general feeling of "Okay, we  
17 know a direction that we're going to move in." People, in  
18 general, you know, all as one.

19 We're going to declare a global peace zone, United  
20 States. Maybe this year. We're going to walk to Washington.  
21 We're going to tell them about this. We're going to get  
22 people to come together, and -- "Global peace zone 2,000,"  
23 how does that sound? We could declare the earth to be global  
24 peace zone 2,000 and, you know, continue that prayer and  
25 just -- hey, who knows. It could happen, you know. It's,

1 like, a good idea.  
2 So instead of complaining about, you know, the war  
3 that's happening, I want to offer some positive solutions and  
4 I'd like to thank these guys for taking so much, you know, of  
5 the heat that you've put yourselves in, you know. And in the  
6 way of -- but I'd like to just say, you know, thank these  
7 guys. Shake their hands, pass the peace, and -- all right.  
8 Thank you very much.

9 THE HEARING OFFICER: Would anyone else like  
10 to come forward and make comments? Yes? **008363**

11 MR. CLIFF BAIN: I'm Cliff Bain. Thank you  
12 for a further opportunity. I just wanted to relate a  
13 conversation I had with a Mr. John Schuler out in the lobby  
14 about an hour ago. He is a -- works at Cannon Air Force  
15 Base, civilian employee in charge of airspace management,  
16 something like that. And he pointed out a couple of things  
17 that we here in Taos have needed to know.

AO-65

18 And one of them is that if a -- if an air -- a military  
19 aircraft is outside of a designated Military Training Route,  
20 they are not permitted to fly fast -- faster than 250 -- what  
21 do you guys go by, not miles but the other one? In any  
22 event, about 280 miles per hour. So what that tells me is  
23 that what all of us who have lived here in Taos have  
24 experienced, which are jet fighters flying really fast and  
25 really low -- there doesn't happen to be any military

1 training routes in this -- to the east of Ojo Caliente.  
2 UNIDENTIFIED VOICE: This is how we get rid of  
3 it all.

4 MR. CLIFF BAIN: No, I'm talking about  
5 accountability, first step. Because we're talking about a  
6 military training initiative that has some rules, it has some  
7 parameters. And people here in Taos feel like that things  
8 are being violated, but we don't know what the actual rules  
9 are. So he's going to send me, you know, a -- the FAA's  
10 publication that lists all the routes. And this is an FAA  
11 law. And he says that -- I mean, a regulation.

AF-43

12 And he says that a pilot that flies faster in an area  
13 that -- that's not a Military Training Route, even if they  
14 are under visual flight regulations, are not permitted to fly  
15 faster than 250 nautical miles per hour, so they're breaking  
16 the law. So this is useful to know. And I hope that we can  
17 all get informed and know the right places to begin to take  
18 the first steps towards accountability.

19 And the other thing that's interesting, that relates  
20 specifically to this RBTI program, is he says that there is a  
21 memorandum of understanding, an agreement between the New  
22 Mexico Fish and Wildlife Service, perhaps the federal. He's  
23 going to send me this, I don't have it yet. But that if  
24 there is a nesting site identified for a bald eagle, a  
25 peregrine falcon or any other threatened or endangered

1 species.  
2 A specific location is mapped by GPS, and it's marked on  
3 the charts. And the agreement is that an aircraft will avoid  
4 that, will rise to 200 -- 2,000 feet to avoid this.

5 Now, we haven't heard in all the explanations of this  
6 RBTI that if, in fact, there are nesting sites identified  
7 along this quite long route that we can be assured that the  
8 aircraft will cease to fly at 400 or 200 or 500 feet above  
9 ground level and rise to 2,000. And I just wanted to get  
10 this into the record so that in your Final EIS you can assure  
11 me that this, in fact, will happen.

12 Thank you.

13 THE HEARING OFFICER: Would anyone else like  
14 to come forward and make a statement?

15 UNIDENTIFIED VOICE: I have a question. Does  
16 anyone answer questions?

17 THE HEARING OFFICER: What I informed everyone  
18 of at the beginning of the hearing is that this hearing is  
19 not a debate, nor is it a question and answer session. I've  
20 also previously added that questions are certainly  
21 appropriate, to the extent that you think they are, as a part  
22 of your comments. So if you have a question that you would  
23 like to pose as a part of your comments, that's certainly  
24 appropriate to raise any question that you have. We will not  
25 be answering any questions.

**008364**

1 MS. TAMMA SIPES: My name is Tamma Sipes. Has  
2 there been a dialog about this, or has it always been just  
3 comments? Can that be answered? No, I guess. The answer is  
4 no.

GE-30

5 One thing I would just like to comment on, and actually  
6 my comments are not for you, but they are, too, also for you.  
7 It's been amazing to me to sit in this room. I'm a  
8 psychotherapist. It's been amazing for me to sit in this  
9 room and feel the level of depression, both on this side and  
10 on this side. It's like the powerlessness of both sides,  
11 appears to me incredibly sad. We seem to be locked in a  
12 spiral that none of us can get out of, and I -- I really  
13 believe that it's pathetic. And it -- it touches my heart.

14 It's very hard for me to sit here and feel that energy.  
15 It's -- we all feel like there is nothing we can do. I mean,  
16 they're going ahead in their usual way, and we are, too.  
17 But, it seems so useless. And it seems so sad. The fact  
18 that people can name what it is that is our malady means that  
19 we're starting to maybe see how to get through it, so the  
20 fact that there is this depression, that's the beginning, the  
21 recognition of it. Each person that has that feeling, how to  
22 -- how to heal. **008365**

TY

23 MR. ELLIOTT LIEMAN: We -- we're -- we've  
24 been -- the civilization has been taken over by western  
25 capitalism. Indigenous cultures have been wiped out. There

1 is a sustainable waste. It has been wiped out, the  
 2 multinational corporations often enacted by the military.  
 3 And we need to create a world that's based on trust. And  
 4 dominator society -- there is a book by Rita Eisner called  
 5 "The Challis And The Blade." Before the patriarchy there was  
 6 a matriarchy, and it was a partnership because when women are  
 7 in control they don't have to prove anything, it's a  
 8 partnership. When men are in control -- because it's --  
 9 because women control the sexual encounter. Men are -- the  
 10 man is young and healthy, he's always ready. A woman  
 11 controls it and she's more in her heart.

12 It's funny because we don't know how to deal with  
 13 sexuality. That's what stopped me. I wasn't going to say  
 14 it, but it's the truth. And we need to heal. From the  
 15 theaters that indigenous people get lured into our -- into  
 16 the economic system by all the gadgetry and then the fear  
 17 that we live by goes into their hearts, and we need to -- we  
 18 need to create in our hearts the purity and the sacredness  
 19 that has all -- this all of our -- all of our ethnicities go  
 20 back to and know. And it's real.

21 MR. SHANE WEST: Well, I guess it's the  
 22 closing comments. I came in at just the right time. I  
 23 figured you'd have been long gone by now.

24 THE HEARING OFFICER: Mr. Shane, could you  
 25 state your name again?

008366

TY 1 MR. SHANE WEST: Yes. My name is Shane West.  
 2 And I hope you gentlemen have a safe journey back to  
 3 wherever you head. And man, I like the guy that was just  
 4 up. The ethnicity and the roots and everything, that's where  
 5 it's at; right?

6 And I guess one thing that I wish I had harped on a  
 7 little more while I was up here, pardon the pun, is a harp  
 8 program, you know, the effects of sound waves and the -- are  
 9 very, very real. It's what holds the universe together, and  
 10 the harp program is designed to -- so they can see all these  
 11 aircraft everywhere; is that right, gentlemen, something like  
 12 that? But it's also the -- the same system can be used to  
 13 what they call stealth fighters, and it is a -- what do they  
 14 call it? It's a -- basically, it's an engineered bias. It's  
 15 computerized, but it's bioengineering. So we can catch  
 16 computer viruses now in our system that can be controlled by  
 17 radar, okay. And this may sound like a bunch of crap, but  
 18 you know what, it's the truth. Isn't that weird?

19 Isn't that amazing how far technology has come? We can  
 20 now transport from here. They have a transporter beam just  
 21 like on Star Trek. The same guy who designed it has -- has  
 22 had figured out how to program crystals by inscribing letters  
 23 of the Hebrew alphabet, the Caballa, on the surfaces, the  
 24 sides of it.

25 It's amazing how far our technology has come. I mean,

1 we've known about the pyramids on Mars for 30 years, but no  
 2 one talks about them. We're all -- and we need to respect  
 3 this planet. And main thing being the noise from the planes,  
 4 and the middle of the heart chakra of this planet which is  
 5 the Four Corners area, might not be a good thing. It's kind  
 6 of like if you got a pacemaker, stay away from a microwave.

7 Now, all these bombs that they're dropping, you know, as  
 8 a person who gets up and prays a lot, when those bombs went  
 9 off in India I felt it, you know. The earth kind of went  
 10 into shock for a few weeks, and I had a dream about a turtle  
 11 who's shell was cracked. And I think together, if we all try  
 12 to start getting some confidence and some thought towards --  
 13 every thought, every thought we think manifests itself in  
 14 reality, that we are images of God, that we're co-creators  
 15 with Christ, whatever you want to call it. The power of our  
 16 manifestation, it matters what we think. It matters what we  
 17 do to the earth. It matters that we care about its chakras  
 18 and things like that.

19 Look at all the changes we've gone through in 150 years  
 20 on this one continent alone. That's got to effect the  
 21 electromagnetic grid, whatever you want to call it, got lots  
 22 of scientific explanations for it in a lot of different  
 23 books. But the point is this is the heart chakra of the  
 24 earth and I just wanted to reiterate that point.

25 And God bless you gentlemen. Have a good one.

1 THE HEARING OFFICER: Yes?

2 MS. JASMINE SANDERS: Hi. I spoke before  
 3 at -- I had --

4 THE HEARING OFFICER: Your name? 008367

5 MS. JASMINE SANDERS: Jasmine Sanders. I  
 6 just -- I work with young people in this community, and I  
 7 also moved here from Philadelphia. And I'm -- now that I got  
 8 a little more information about the level and the noise and  
 9 all this stuff that's going to go on here, I just -- and I  
 10 want to write -- write this down because I heard this is the  
 11 most effective way to do, but I'll just say for now that I  
 12 think that we all need to think about the impact that this  
 13 kind of level of noise is going to have on the young people  
 14 in this community.

15 And this whole concept of habituation to noise and any  
 16 level of trauma or invasiveness that -- that any of us  
 17 experience, but particularly young people that are at a  
 18 sensitive point in their lives, that habituating to any level  
 19 of trauma means shutting off a part of yourself to deal with  
 20 it. And that impacts on young people's ability to think  
 21 clearly about what's going on, which is what happened to all  
 22 of us, that we all got a lot of misinformation and got shut  
 23 off from our ability to think clearly about what's going on  
 24 in this country, and in the world.

25 And that's what we're all trying to do now, get clear

AO-18

1 information about what is really going on and what we can do  
 2 to make changes. And I had an interesting talk with Major  
 3 Pettaway out there which for me confirmed how confused, in  
 4 particular, I think young men that are brought into the  
 5 military at all different levels and given -- I've heard the  
 6 same exact words from most of the young men that I've met in  
 7 the Air Force and different sections of the military, which  
 8 to me says when I really try to have a conversation and hear  
 9 someone's individual thinking, that people are very cut off  
 10 from their ability to think clearly about what their true  
 11 thoughts are about the information that's in front of them.  
 12 And I think that as people that need to think about this next  
 13 generation, and -- one minute? Thank you -- that we need to  
 14 think about this noise level thing, and the effect it's going  
 15 to have on young people.

16 But even beyond that, we need to think about what kind  
 17 of information and what kind of -- what kind of situation  
 18 that the young people in this part of the world, and all over  
 19 the world are being given with the state of affairs right  
 20 now, and how we're explaining things, and the level of  
 21 hopelessness we're introducing into the lives of young people  
 22 are at a younger and younger age, and particularly boys. And  
 23 I think that's something we all need to not only think about,  
 24 but commit our lives to building relationships with young  
 25 people where we're really listening to them and giving them a

1 chance to have this space to stay really open in their hearts  
 2 to experiencing life with the full information that they  
 3 deserve to have.

4 Thank you. **008368**

TY 5 MR. STEVE LAMAR: Hello. My name is Steve  
 6 Lamar. 1986 I was in the army. I was a tanker, combat arms,  
 7 under Regan. I was in the National Training Center in Fort  
 8 Irwin. And during that month I went through a lot of hell,  
 9 and jets flying very close to the tank, got gassed, sleep  
 10 deprivation, the whole, you know, war simulation. And I'd  
 11 like to know when the war is going to end? The war -- there  
 12 is a war on the people right now, that I see.

13 And, you know, people come here to live in peace and  
 14 harmony, to be in tune with the Great Spirit, and we don't  
 15 need jets flying over our houses. We don't want you here.  
 16 It's just plain and simple. People in this community do not  
 17 want the Air Force here. **008369**

TY 18 MS. HOPE: My name is Hope, and I just wanted  
 19 to continue Steve's thought. Was -- I was talking to the  
 20 Major outside and he was saying how, really, in all the areas  
 21 that you all have been looking at to have your training, that  
 22 there has been about 80 percent of the population that didn't  
 23 want it there. And that struck me as, you know, kind of  
 24 expected. That is, you know, people don't want it.

25 And I just think it's a difficult situation, because you

1 have these things and you need to train with them, but people  
 2 don't want it in their homes. And it seems like that's a  
 3 really tough situation for everybody because, you know,  
 4 ideally, in my -- in my world I don't think I'd want these at  
 5 all. I don't think I'd want the military and I don't think  
 6 anybody would want to have to have the military. I don't  
 7 think anybody would want to be at war and nobody would want  
 8 to fight and nobody would want to kill and nobody would want  
 9 their family killed.

10 And so now we've gotten to the point where we have these  
 11 weapons and we have this military and so you can't have  
 12 weapons and so -- not know how to use them, so you want to  
 13 train, train people to know how to use them. And where to do  
 14 that?

15 But I think I just wanted to express the part of the  
 16 matter for me is just that it seems like nobody really  
 17 wants -- wants this to happen, and that to look at that a  
 18 little more often and to pray for that, and I'm sure you all  
 19 do as many -- much as we do, is pray for there to not be war  
 20 so that our children can grow up happy and free, and their  
 21 children and their children and their children. And this  
 22 world needs to be a better place.

23 And, you know, it seems like there is consistently new  
 24 wars popping up here and there around the world, like it's  
 25 always happening. One ends and another one starts,

1 supposedly. But I think if we just keep in our heart that  
 2 we're just praying for the end of this, and if we keep our  
 3 focus on that, that these issues, that these issues, you  
 4 know, can bring us together, and having forums to talk and  
 5 share, share what we believe in at this time. And that we  
 6 can work together and keep praying together.

7 And that there is going to be global peace walk here on  
 8 the 23rd to the 26th. We're going to walk from Taos to Santa  
 9 Fe, where Taos is a global peace zone. And I think that's  
 10 something to be honored. We were looking at where to have  
 11 these jets flying. Is that -- this is an established global  
 12 peace zone and Santa Fe is establishing themselves as one  
 13 also this year, so we'd like to see, you know, more peace and  
 14 less, you know, jets and more peace for our children, and  
 15 more a possibility for us to envision that kind of world with  
 16 less military.

17 So, thank you. And there is also going to be an Earth  
 18 Day. In the morning there is going to be a planting tree  
 19 ceremony with a -- peace -- at 7:30 in the morning and a  
 20 peace parade that day at noon hiking from the Kit Carson  
 21 center to the bypass.

22 UNIDENTIFIED VOICE: Date?

23 MS. HOPE: And so the walk will start at  
 24 the -- the -- oh, the date? Earth Day, which is Thursday.  
 25 And the peace walk starts on Friday and goes to Monday and

185

1 goes from Taos to Santa Fe connecting the two global peace  
2 zones. So, thanks.

008370

3 MR. JOSH ALLEN: Hi. This is Josh Allen  
4 again. And I also work with young people, and I would like  
5 to speak on behalf of this oppressed group of people that  
6 aren't represented here today.

7 And I would -- I'm curious, like, how do you expect  
8 young people to habituate to this kind of activity going  
9 around in the air? And I just -- it brings to mind of a  
10 newborn baby and what that -- I've seen newborn babies and  
11 how they react to sudden sounds, and it's absolute terror.  
12 And you are -- I do not support anybody having to habituate  
13 to terror and to war. I think it's -- it's inhuman.

AO-18

14 And I also know that there are people in this world that  
15 realize that war is not the last resort and that are  
16 organizing for peace, and that are figuring out how to listen  
17 to each other and use our own human resources of sharing our  
18 hearts with each other and working towards peace, and that --  
19 we've all been denied this as young people, and denied the  
20 exploring and claiming all of this ability to negotiate and  
21 to share and be vulnerable and to share ourselves, and that  
22 we can reclaim this. And that war is never the last resort.

23 And also, on the behalf of the young people, and boys --  
24 I also work a lot with boys -- is that we are training,  
25 conditioning boys for the military and -- and I -- I think

186

1 that's absolutely inhumane, and that has got to stop.

Thank you.

008371

2 THE HEARING OFFICER: Name again, sir?

TY

3 MR. RICHARD ARTHURE: My name is Richard

4 Arthure. You're going on about how terrifying those sounds  
5 can be. I was born two months after the beginning of World  
6 War II, in England, about 60 miles north of London. And some  
7 of the very first sounds that I heard as a young child were  
8 the sounds of bombers flying over. German bombers. And it  
9 is a very terrifying sound, one that I never forget. It's  
10 very traumatic for anybody, young or old; certainly for a  
11 young person it's very, very terrifying. We must not allow  
12 this to happen, to destroy the quality of our life in this  
13 community. We must find every means possible to prevent this  
14 from happening and destroying the peace of our lives in this  
15 community.

16 I don't wish upon anybody here, any living being, what I  
17 went through as a young child hearing those bombers flying  
18 low over London and -- and the area where it was, it was a  
19 mission site. Stress, of course; it was a target. And there  
20 were military aircraft flying low and they would cause great  
21 terror.

22 Don't allow this to happen, I beg of you, all of you,  
23 and you gentlemen. Please, don't do this to us. There is  
24 enough disturbance, enough warfare in the world. There are  
25

187

1 enough bombers already. More than enough.

Thank you.

008372

TY

3 MR. DAVID KRUSELL: My name is David Krusell.  
4 I'd like to say one last thing. This experience has been  
5 kind of a wake up call for me. I was in the military very  
6 young, and pretty unconscious about what's going on. But  
7 I've never had really a lot of interaction with it or paid  
8 that much attention to it. I'm not -- I accept violence in  
9 -- in -- a certain amount of war as a reality that we still  
10 have in our life at our present development, so I'm not even  
11 expecting it to go away, or it just seems like a reality that  
12 we're going to be with for quite a while and have been with  
13 for a long time.

14 The wake up call was about I just realized, you know, I  
15 kind of unconsciously knew it, but now that we're the only  
16 super power and there is really no contenders for I don't  
17 think a long time, it's like -- it's a really serious  
18 situation, because we really have no -- nothing on the other  
19 side to push against. And it's a -- I remember Eisenhower  
20 said that, "Watch out for the American military. You know,  
21 keep your eye out." But I think this is a time when you have  
22 to worry about that because there is no limit and people that  
23 go into the military to spend their lives often times really  
24 are excited about war and things happening. I believe that's  
25 a reality, and things can get out of hand. That's -- in that

188

1 way.

2 I think, you know, technology where it is is really  
3 scary in that sense, in -- in the particular field that you  
4 gentlemen are in, because you're up there in the sky  
5 thousands of feet, and you never meet those people. You  
6 know, I mean, what, in Iraq were tens of thousands of people,  
7 you know, atomized and the people that were -- did that  
8 didn't see those people or know anything about them. They  
9 were just like little -- like little figures on an electronic  
10 game, you know.

11 And, you know, I'm not saying that this needs to be done  
12 or whatever, I'm just saying that the very distance of -- the  
13 people can be at when they're killing each other now is a  
14 serious situation. And I think it's really in this time when  
15 -- when the -- the power over the rest of the world is so  
16 much that we can demonstrate what we can do to people, I  
17 think it's really a challenge to the citizens and to the  
18 military to be able to limit themselves and to be able to see  
19 clearly what they're doing.

20 And I think this is a small instance of that, of -- you  
21 know, when we get up here and we're talking about -- are we  
22 over the level where we're, you know, losing our hearing or  
23 not losing our hearing? It's just like we're already at a  
24 really bizarre level to be even talking about that, when  
25 we're talking -- when we're at that level.

1 So, thank you. **008373**

2 MS. LORENNIA SHALEV: Another little comment.

3 As a mother I felt very strongly for those people who also

4 work with children, that the impact of panic upon a young

5 child is devastating. And all -- is the military proposing

6 to compensate our children, us, for the psychological --

7 physiological effects of this? Is there any recourse for

8 compensation for those people who feel they cannot any longer

9 live in this area if it becomes a Military Training Route,

10 and have to move?

11 My father was in the Air Force, and he's the one who

12 actually said to me, "Ask them for compensation."

13 THE HEARING OFFICER: And, ma'am, could you

14 state your name again?

15 MS. LORENNIA SHALEV: Lorennia Shalev. **008374**

16 MR. ALEX CARPENTER: Okay. I'm Alex Carpenter

17 from earlier. I just wanted to say that for us to be at war

18 with anybody, we're probably at war within ourselves first,

19 because if we have peace in ourselves then we don't have to

20 fight with anybody else, you know, because everybody helps

21 each other along in this life. And the only way we fight

22 with anybody, anybody, would have to be like something wrong

23 in me, you know, to make me want to act that way.

24 So, you know, it's like I just ask that we recognize,

25 you know, the struggle in ourselves, you know, and search for

BR-5

TY

1 that peace within ourselves so we can feel a little bit

2 better about, you know, what we do and then, you know, take

3 it from there.

4 So thanks.

5 THE HEARING OFFICER: Would anyone else like

6 to make comments? **008375**

7 MR. THREE TOADS: Yeah, these are my closing

8 comments. Close it down. Let's close. How you doing?

9 Good.

10 THE HEARING OFFICER: And Mr. -- you're

11 Mr. Three Toads; right?

12 MR. THREE TOADS: No, it's Two Ravens. Two

13 Ravens. Yeah, I fly into jets. Some of my brothers have and

14 they've died from it, you know, other ravens, you know. And

15 out here at the landfill, we can't have the landfill where it

16 is because they fly into the jet, when the jets come,

17 whenever that is. Hopefully it's not too soon.

18 But at this point Taos doesn't have an -- a train

19 station and nor does it have the airport, real big, you know.

20 Big hangar's being built out there, though. Is that you

21 guys' or somebody else's hangar? Wonder whose hangar that

22 is. There is a lost hangar out at the airport, great big

23 one.

24 But anyway, what I have to say is a prayer for the --

25 for the next generation to come. They may have -- evolve to

TY

1 their higher selves and we here today evolve to a higher

2 status, if -- there is a higher status available to us if we

3 reach for them. I look forward to -- to, you know, your

4 children surviving well, and your children. And they're not

5 hybrid, they're not clones, that they're people, as we

6 experience today.

7 And as much as we tout technology, as much as

8 Westinghouse and General Electric would build nuclear

9 radiation plants all around us when we know it's not healthy,

10 and that's a very sick thing to do is to move into a

11 nonsurvival situation, you know, and be in a zone or an area

12 where you don't survive well. And, you know, being on the

13 corner of the Harbor Freeway and the Santa Monica Freeway and

14 all the cars are roaring by day in and day out, airplanes are

15 flying over, people are landing at LAX Airport, and it's kind

16 of a crazy world. And the craziest part of it is that we're

17 the co-creators of that world.

18 And so I really do want to say a prayer today to the

19 people of Taos Valley, and of Taos, for -- that their

20 children and their children and their children may survive

21 and may survive well with -- children of all of the people of

22 earth have a right to evolve to their higher places.

23 And this is a prayer for the children, and we're the

24 children, too. We get older. May we know more, and come

25 from a wiser place. And so I'm just going to shut up for a

1 minute and just say a prayer, silent prayer.

2 May all of us focus, you know, within ourselves and find

3 our spot as our center and it will come from there, and

4 realize that this is an evolutionary path we're on, so as our

5 children to come.

6 Thank you very much for this space and this floor.

7 Thank you for all the kids on earth, may they survive well.

8 And it's a trying time. Price of freedom is constant

9 vigilance. It's vigilance on the people's part to keep track

10 of. The people who we supposedly pay, here, we pay their

11 salaries, and they run all over, do crazy wars, killing

12 Yugoslavians right and left. Seems unfair. With children

13 and mothers, refugees from the land, they're bombed along

14 with the train that they were on. So, a special prayer for

15 those today. Those are refugees.

16 And hopefully the military doesn't chase us out of Taos

17 Valley because it's a beautiful valley. It's our valley.

18 And yeah, we're all just kids. We've got them buzzing

19 around, you know, playing war games between us. But now

20 we're adults and we can be wiser than that and maybe --

21 Thank you today for your time.

22 THE HEARING OFFICER: Would anyone else like

23 to make any comments? **008376**

24 MS. MARY SIMONINI: My name is Mary Simonini,

25 and I spoke the other night regarding habituation, that we

TY

1 humans habituate. I'm a psychotherapist and in private  
2 practice and also at Taos Mental Health. So, once again, as  
3 I said the other night, I work with people daily that are  
4 dealing with stress.

5 I would just like to share, there is a woman whose name  
6 is Barbara Brennan, and she is a physicist and she worked for  
7 NASA. And she went on and left NASA and went on to, first of  
8 all became a psychotherapist, and eventually moved into the  
9 area of healing on many different levels, both physically,  
10 mentally emotionally and spiritually. She's at a very famous  
11 school back east, a four-year school. And she has two books  
12 out called "Hands Of Healing," and "Emerging Light." And  
13 she works with the energetic level of we humans and just of  
14 life, of everything, in terms of animals, humans.

15 And in her book she talks about -- I've actually met  
16 her, and she's done some healing on me, and she's incredible.  
17 She's just incredible. But in one of her books, she talks  
18 about people living in cities versus living in rural areas.  
19 And she -- she talks about how the stress level -- you know,  
20 certainly cities are fun and exciting and there is a lot we  
21 get from cities, you know, and we all -- even those of us in  
22 rural areas like to go to cities and -- and get what we get  
23 there.

24 However, she -- she talks about how people don't live as  
25 long -- generally, people do not live as long in cities

1 because of the stress level, because of the noise level.  
2 And people in rural areas generally -- of course, you know,  
3 nothing is absolute -- but generally live longer because  
4 there isn't the stress and the noise level. We've -- we  
5 either -- there are people that are here, have been here,  
6 have been born here or people have moved here because we want  
7 this rural area. We want less stress, we want less noise  
8 level. And your bringing the bombers in does effect us,  
9 would effect us, cellularly, you know, all the way:  
10 Emotionally, physically, mentally and spiritually. So I just  
11 wanted to state that.

12 THE HEARING OFFICER: Would anyone else like  
13 to make any comments?

14 UNIDENTIFIED VOICE: We love you. Daniel  
15 Williams stepped out to the men's room and he asked me to  
16 tell you that he would like to comment again. So, he should  
17 be back momentarily.

18 THE HEARING OFFICER: Would anyone like to  
19 make any comments while we're waiting for Mr. Williams?

20 MS. LORENNIA SHALEV: Lorennia Shalev, again.  
21 I'm on the board of the Latir neighborhood association. We  
22 are situated about five miles south of the corridor that goes  
23 across the Rio Grande and then below the Colorado border.  
24 And we're about 40 miles from the hospital, so that if there  
25 is any casualties from a crash it would be very difficult for

008377

AO-16

1 people to get adequate treatment in time, so that's another  
2 consideration. I think there is nobody in that area that I  
3 know who is in support of the military over flights.

4 Thank you.

5 THE HEARING OFFICER: Mr. Williams? 008378

6 MR. DANIEL WILLIAMS: Sir, thank you for the  
7 opportunity to speak again. As I have said many times  
8 before, my name is Daniel Williams.

9 Colonel Burd, Colonel Wheelis, Lieutenant Colonel Mason,  
10 Major Adams, I want you to know that we truly do appreciate  
11 you being here. I appreciate the fact that you've come and  
12 helped professionally, courteous everybody on the team has  
13 been and it has been inspiring and I mean that sincerely,  
14 regarding the impact that the Draft EIS shows in Alternative  
15 D.

16 There are a couple of birds in particular, the bald  
17 eagles and the peregrine falcons have been at Philmont it's  
18 been at times transitory, sometimes migratory, sometimes  
19 nesting, but that has been a concern.

20 Regarding the noise studies, I've taken a close look and  
21 I've noticed that for Alternative D, there are a number of  
22 areas that show less than 45 DB. My understanding is that is  
23 not based on actual measurements, but based on nationwide --  
24 nationwide model. And what I'd like to suggest is that it  
25 may be very -- way under 45 DB, and I'd like to use an

1 example.

2 In the northwestern part of the state near the Four  
3 Corners area there is a place called Shiprock, which looks  
4 like a sailing ship, and it's held sacred by the Navajo  
5 people. But it's -- to get there I had to drive probably  
6 seven or eight miles on dirt roads, and once I finally got  
7 there, there -- nobody else was around except for just my  
8 wife and I, but it's the quietest I've ever experienced.

9 It's the first time I've ever been anywhere that when I  
10 held my breath I could hear nothing. There was no wind and  
11 no insects, no rustling of grass. And so -- and we've got a  
12 number of areas that by virtue of the fact that it is a high  
13 desert environment, that it's much quieter because of being  
14 dry than areas that are wetlands, for example, where you've  
15 got frogs and a lot more insects and so on.

16 So I would like to suggest that we're well below the 45  
17 DB mark. In comparing the three alternatives, Alternative B  
18 shows three different areas that are less than 45 DBs;  
19 Alternative C shows one area that is less than 45 DB;  
20 Alternative D shows 28 areas that are less than 45 DB. So  
21 I'd like to suggest that there is a tremendous difference in  
22 the impact that RBTI would have here versus elsewhere.

23 If I may, I'd like to compliment those of you who have  
24 come out that have spoken, that have written your comments.  
25 I'm very, very proud to be a part of the Taos community, and

AO-16

BI-5

1 the sincerity that has been shown very eloquently indicates  
 2 this.

3 I would like to encourage people, please do write. Not  
 4 just writing your comments here which is important, but write  
 5 to the Secretary of the Air Force, the ultimate decision  
 6 maker, and a man that in my opinion is -- tends to be  
 7 sheltered or insulated from the voice of the people. Not on  
 8 purpose, but by the fact that he has a lot of other things to  
 9 do.

10 UNIDENTIFIED VOICE: Who is he?  
 11 MR. DANIEL WILLIAMS: It's Mr. F. Quentin  
 12 Peters, and we've got his address on the mail out sheet  
 13 there. Also, please write to our legislators. We're proud  
 14 that Senator Bingaman has opposed this from the beginning.  
 15 Congressman Udall has opposed it since he came into office.  
 16 And Senator Dominici, who initially did not take a stand, is  
 17 now beginning to ask questions and it appears that he may, in  
 18 fact, take a stand against this, as well.

19 And finally, what I would like to say to those of you on  
 20 the Air Force team, and I mean this very sincerely and I know  
 21 that this has been echoed by many people, while it's true we  
 22 don't want the bombers over our skies as a general rule, you  
 23 as individuals are very welcome. We'd love for you to come  
 24 back. And there is an area in particular called the Valle  
 25 Vidal which is directly under this route that is a catch and

1 release trout fishing area that is -- that is such good  
 2 fishing it's not unusual for people to catch 50 trout in a  
 3 single day, and there are not a lot of places that can claim  
 4 that. If the bombers don't come, you come and I'll take you  
 5 fly fishing, and that's a promise.

6 Thank you.

7 THE HEARING OFFICER: Would anyone else like  
 8 to come forward and make comments? This is your last chance,  
 9 so if anyone would like to make additional comments, please  
 10 come forward now.

11 Ladies and gentlemen, that concludes this public  
 12 hearing. Thank you for your participation and input. Please  
 13 remember the public comment period will extend through June  
 14 16, 1999.

15 This public hearing is adjourned. Thank you.  
 16 (NOTE: Hearing was concluded at 6:09 p.m.)  
 17  
 18  
 19  
 20  
 21  
 22  
 23  
 24  
 25

1 it in so that any names, places, references to scientific  
 2 terms, et cetera, can be recorded accurately.

3 Finally, I'd like to remind you to limit your  
 4 comments to the Draft EIS; that is the purpose of this  
 5 public comment period. Also, if you would like to turn in  
 6 written comments, there is a box over in the back corner of  
 7 the room where you can place your written comments.

8 I would like to call on the first public  
 9 official, Dan Noller, the City Manager of La Junta.

10 MR. NOLLER: You want us to come forward there?  
 11 THE HEARING OFFICER: Yes. **008379**  
 12 MR. NOLLER: Okay. Thank you. I appreciate the  
 13 opportunity that you have given us to let us comment on the  
 14 Environmental Impact Statement. Looking at the  
 15 Environmental Impact Statement I think there are some  
 16 serious errors that have been made in the socioeconomic  
 17 impact that that would have on the city of La Junta.

18 And from that standpoint I would like to go  
 19 back and briefly explain what has taken place over the past  
 20 twelve years, and I'll start back further than that, 1960.  
 21 The Air Force located their Bomb Plot, as we have always  
 22 called it here locally in La Junta, and it was operated as  
 23 a temporary facility for the better part of 30 years. I  
 24 think it was 1988 when they built the permanent facility.  
 25 They expended somewhere in the neighborhood

SE-3

1 of 10 million dollars worth of funds to do this, and  
 2 whenever the Air Force tells me they need some money and  
 3 they spent money like that, it makes me wonder if they have  
 4 gotten their ducks in order.

5 Anyway we had 120 employees out there at one  
 6 time. And that's probably been the better part of ten  
 7 years ago, and I think those figures could be verified.

8 Now when we look at the environmental impact that has on  
 9 the city, the economic impact on the city, it only analyzes  
 10 the employees that are currently out there.

11 We have already lost 90 employees and many of  
 12 those employees are the type of employees that got  
 13 involved, and we were very appreciative of that, with the  
 14 operation of the city and the county. They were on the  
 15 Sheriff's posse, on the police reserves, and also served in  
 16 like volunteer firemen, things like that, which is very  
 17 helpful to the community. So we think that the economic  
 18 impact on the community is going to be more than just  
 19 negligible; we think it would be a severe impact. And we  
 20 think that that ought to be looked at.

21 We would also encourage that the Air Force  
 22 think about selecting Alternate A. You have already got  
 23 the investment made here in the community, and it would be  
 24 -- make the most sense to us that this be the alternate  
 25 that would be pursued.

1 It is my understanding that you are getting  
2 somewhat a lot of resistance in other areas that do not  
3 wanted flyovers in those areas, and I don't think -- it  
4 would be my opinion that La Junta is not an area that has  
5 given a lot of problems about that. We have been very  
6 supportive of the military here in the past and would like  
7 to continue to be supportive.

8 So we would like to have consideration given  
9 that you use Alternate A, don't change that, don't go to a  
10 new site. And if not, if that is not possible, that you  
11 consider the idea of using this for an inclement weather  
12 course, where you run through La Junta and have backup when  
13 you can't run other sites.

14 I think that pretty much covers the points I  
15 would like to make. And with that, I thank you.

16 THE HEARING OFFICER: Thank you. I now call on  
17 Robert Freidenberger, who is a member of the La Junta City  
18 Council. **008380**

TY

19 MR. FREIDENBERGER: Yes, sir. You did very well on  
20 the name; most people butcher that one up. I'm speaking as  
21 an individual and a member of the city counsel, and Mr.  
22 Noller echoed a lot of my comments or I will echo his.

23 I think that the Alternative A should be  
24 looked at a little closer. I think that the Environmental  
25 Impact Statement in regards to the social and economical

1 findings may be a little bit in error. And I also feel  
2 that possibly Alternative A should be looked at with some  
3 modification.

4 When you do an Environmental Impact study, it  
5 wasn't required back in the days when the first bomb plot  
6 was set up here in La Junta. And I think that  
7 consideration should be given to an impact statement on a  
8 modified Plan A. It's my understanding that you need 240  
9 miles of varied terrain. And I'm wondering if looking at  
10 Alternative A, Subchapter 1, if you will, a modification of  
11 our site. And I don't think that was looked at. And I  
12 think that if the routes around the existing site with the  
13 existing infrastructure and expenses that are already here  
14 might be looked at.

15 I think that Mr. Noller spoke well. I can  
16 remember in the early days that the Air Force bought a lot  
17 of turkeys in Cheraw, but I think that the routes have  
18 changed and there is very little feedback that I have heard  
19 coming back against the Air Force flying their low level  
20 runs and so forth. And so I would encourage you to look at  
21 Alternative A, and I know it's a little bit out of line in  
22 regards to the current Environmental Impact Statement as it  
23 currently exists, but I would encourage you to look at  
24 modifying your Alternative A to address those issues. And  
25 I thank you for your time.

1 THE HEARING OFFICER: I would like to now call Rick  
2 Klein, who is the Assistant City Manager for La Junta.

3 MR. KLEIN: Thank you. I, too, have the same  
4 comments as far as what Mr. Noller did and Mr. **008381**  
5 Freidenberger did. I think one of the reasons why  
6 currently you do not have anybody within the audience is  
7 when I was looking through the paper, I didn't see it  
8 advertised. The only reason I knew is because I did get a  
9 draft Environmental Impact Statement.

GE-22

10 I don't know if the community really knows  
11 that they have this opportunity, so I don't know if you are  
12 getting a real true representation of how this community  
13 feels because I'd hate for you to feel that nobody cares  
14 because everybody I know in this community does care. They  
15 were saddened when the military pulled out. They were  
16 definitely saddened about Lockheed, all that, just like Mr.  
17 Noller when the military pulled out.

18 I mean, we had people on police and fire  
19 reserve and they were the highly trained ones. They were  
20 the people that came in that had the background, that had  
21 first aid, C.P.R., and they were vital to our community.  
22 The income levels of the people, even with Lockheed, they  
23 are -- with the pending site when it talks about less than  
24 one percent -- when you look at the median area income of  
25 this area, and you look at the income of the military

1 personnel and the Lockheed personnel, they are a lot  
2 higher. They have spendable cash for a community. So is  
3 it less than one percent? I bet it's a lot higher, and so  
4 I would love to see you look at the Appendix A a little bit  
5 harder.

SE-3

6 When they talk about this, when they talked  
7 about realistic bomber position, realistic bomber training,  
8 well, if you look at Kosovo, and you look at Iraq, look at  
9 the distances from the bases to when they -- before they  
10 drop the bombs. These people have been in the air for a  
11 long time before they drop the bomb. So you want it to be  
12 more realistic. This is realistic, what you have. Look at  
13 maybe a modification like Mr. Freidenberger stated. There  
14 is training where you could come and fly and get the  
15 variety pack that you are looking for, and it will be  
16 realistic. Thank you very much.

17 THE HEARING OFFICER: I would like to call on Doyle  
18 Davidson. **008382**

TY

19 MR. DAVIDSON: Thank you very much, Colonel. My  
20 name is Doyle L. Davidson. I'm retired here in the  
21 community. I am chairman of the military affairs committee  
22 for this community. And we are very much interested in  
23 what is going on here today.

24 I can remember back in 1960 when a Captain  
25 Smith from Lowery Air Force Base came down here looking for

1 a site to put in just like we have out here and that was  
 2 the very start of that.

3 The community has always been behind the  
 4 military. The community has -- when the blue suiters were  
 5 out there in the facility, we always had a picnic for them  
 6 every year. We took care of them if they had some problems  
 7 military affairs in the city would help them out with those  
 8 problems. And we loved the military and we loved them  
 9 flying over here.

10 Now, I know you have gotten a few complaints  
 11 from ranchers around here. And, yes, I know those  
 12 ranchers. I was born on a ranch myself. Most of them I  
 13 don't think are real serious, and I don't think you have  
 14 got a lot of them. And I think they have been a minimum  
 15 right here in this community.

16 I notice on your charts that you put up there  
 17 you have displayed on most of those routes a creation of 48  
 18 jobs will be created with these shifts that you are going  
 19 to make. We've got the jobs right here in La Junta, and we  
 20 would like to take keep those jobs as long as we can.

21 And I would just like to make a statement in  
 22 closing. We have got the best pilots in the world right  
 23 now in those B-52 bombers that are over in Kosovo. Where  
 24 did they train? Right out of here. Thank you very much.

25 THE HEARING OFFICER: That exhausts all the cards

1 that I have been provided, so I would like to know now is  
 2 there anyone who has not made comments that would like to  
 3 come forward now and make comments?

4 Is there anyone who has made comments that  
 5 would like to come forward and make additional comments?

6 Very well, ladies and gentlemen, that  
 7 concludes this public hearing. Thank you for your  
 8 participation and input. Please remember the public  
 9 comment period will extend through June 16, 1999. This  
 10 public hearing is adjourned. Thank you again.

11 [Hearing was adjourned at 6:27 p.m.]

1 box. If you have written comments, you can place  
 2 those at any time in that box back there.

3 If we don't have any public officials present,  
 4 I'd like to call on the first individual, David Smith.

5 MR. DAVID M. SMITH: My name is David M. Smith and  
 6 I'm representing both myself as well as members of  
 7 Saint Paul United Methodist Church. I would like to  
 8 thank Colonel Burd and Lt. Colonel for this  
 9 opportunity to address issues for the record with DIS,  
 10 and to maybe call on some intangibles to which you may  
 11 not be aware that may have a bearing on the decision  
 12 making process. I'm speaking in favor of Alternative  
 13 A, which is no change in the current Bomber Training  
 14 Initiative status.

15 We live in fairly unique community, a very small  
 16 community, and if you were to take and pluck  
 17 individuals out of a larger community like Dallas,  
 18 Kansas City, St. Louis, Denver, probably those  
 19 individuals would scarcely be missed in the leadership  
 20 of those communities, particularly in the  
 21 organizations into which they had become entrenched.  
 22 Our culture here is one of which is primarily an  
 23 agrarian way of life. Recently we have been blessed  
 24 in having a certain measure of success in  
 25 manufacturing products. But, even those, with the

1 loss of Levi Strauss Company moving out, it means that  
 2 this small community has lots of blue collar  
 3 employment, both at home on the farm as well as in  
 4 manufacturing. When you take people out of our  
 5 community who are largely salaried employees who are  
 6 largely in leadership capacities within the community  
 7 and in their local churches and in several charitable  
 8 organizations that can have a debilitating impact on a  
 9 smaller community. In our case I know of situations  
 10 that would have an impact on other publicly held  
 11 organizations, such as the Boone County Shelter for  
 12 Battered and Abused Women, the local Share and Care,  
 13 where people who work for this particular process, if  
 14 they were removed from our community, would be  
 15 extremely difficult to replace. And, I can speak for  
 16 our little church in which one of our members, if  
 17 outplaced and taken from this community, would leave  
 18 us in a very difficult situation. He serves on five  
 19 commissions within the church. Those situations are  
 20 one thing when you have large churches in large  
 21 communities where you can find lots of people. In  
 22 this community finding leaders isn't a happening  
 23 thing. And so, consequently, I ask you to seriously  
 24 consider Alternative A for this community, for our  
 25 particular congregation it is extremely important that

AF-52

1 we retain the leadership in the community and no  
 2 change would be a blessing to us.  
 3 Thank you again for this opportunity to address  
 4 you.  
 5 HEARING OFFICER: I would like to call on Rick  
 6 Waldon.  
 7 **008384** RICK WALDON: My name is Rick Waldon. I work at  
 8 the radar site. I'm for Alternative A. From what  
 9 I've seen and from the previous meeting this evening  
 10 the only people we serve are B-52s from Barksdale, B-  
 11 1's from Dyess Air Force Base. No one takes into  
 12 consideration the fact that we serve Little Rock Air  
 13 Force Base, several C-130's. As a matter of fact,  
 14 we're here tomorrow if you ever want to come by. We  
 15 serve Tinker Air Force Base. We get some E-3's from  
 16 Tinker. We serve (inaudible) Air Force. We're not  
 17 strictly a B-52 Barksdale, Dyess Air Force Base type  
 18 of site as some of the other sites are. So, I think  
 19 you should take into consideration that we are  
 20 centrally located where we are right now. (inaudible)  
 21 I also heard that the Air Force wants to fly low, get  
 22 down into the mountains and stuff. I understand that.  
 23 From what I've seen in Kosovo it looks like the stress  
 24 is on high level bombing. We're more than capable for  
 25 15 hours a day to take all the high level bombing you

1 can get. You can't get enough high level bombing  
 2 people. (Inaudible)  
 3 But, what I can say is we're more than willing to  
 4 take all the activity we can give you. We don't serve  
 5 only Barksdale and Dyess, we service several bases.  
 6 I'd like that to be taken into consideration for  
 7 Alternative A. Because I live here in this community,  
 8 I want to stay in this community. Whether the site  
 9 moves or not is really not an issue with me, but there  
 10 are people here that are here because of this job.  
 11 And, like the pastor said, there are people who here  
 12 who don't want to have to leave this community.  
 13 That's basically all I've got to say. I'm for  
 14 Alternative A and I'd like for you to at least look  
 15 into the basis that we've operated on. (Inaudible)  
 16 That's all I have to say. Thanks.  
 17 HEARING OFFICER: Ladies and gentlemen, that  
 18 exhausts the list of cards. What I'd like to know now  
 19 is if anyone else would like to make comments. Please  
 20 come on up if you have any comments you would like to  
 21 make.  
 22 **008385** DENTON YORNES: Thank you, Colonel. I appreciate  
 23 your concern about our community.  
 24 HEARING OFFICER: Tell us your name.  
 25 DENTON YORNES: My name is Denton Yornes and I

TY

1 live down at Western Grove. My wife and I own the  
 2 land where the tracking station is located, so we've  
 3 enjoyed the military and the civilian population since  
 4 the day the start of the program about six years ago.  
 5 We've thoroughly enjoyed the Air Force and the concern  
 6 that you have displayed to us. We appreciate that  
 7 very much. I am of antiquity as far as airplanes are  
 8 concerned because I was a Navy pilot in World War II  
 9 getting my commission in Pensacola. I stayed there  
 10 for a year and a half as a flight instructor. And  
 11 then, I went to Honolulu and (inaudible) Bay and I  
 12 flew air/sea rescue units. That's my background as  
 13 far I'm concerned. But what I'd like to emphasize on  
 14 my report is that we have had a marvelous relationship  
 15 with the military and the dignity with which they have  
 16 recognized the environmental impact, the concerns, the  
 17 economics involved. And we certainly appreciate these  
 18 two gentlemen that have made their presentation. But,  
 19 I would just like to emphasize the fact that we have  
 20 enjoyed a relationship with the military and with the  
 21 contractor that was just something to be really proud  
 22 of. And, I just wanted to emphasize the fact, as the  
 23 leasor to the Air Force. They have been a marvelous  
 24 implement in providing this, not only the technical  
 25 side of it from the standpoint of having a part in the

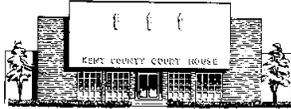

1 community. And, I appreciate what the pastor had to  
 2 say. He certainly is more eloquent than I am as far  
 3 as speaking, but I just wanted you to know we've had a  
 4 marvelous relationship and we'd like to support Plan  
 5 A. Thank you, sir.  
 6 HEARING OFFICER: Would anyone else like to come  
 7 forward and make comments?  
 8 Would anyone that has already made comments like  
 9 to come forward and make additional comments. Last  
 10 chance for comments.  
 11 Ladies and gentlemen, this concludes our public  
 12 hearing. Thank you for your participating and input.  
 13 Please remember the public commentary will extend  
 14 through June 16, 1999.  
 15 This public hearing is adjourned. Thank you.

 Langley AFB, VA 23665-2769

Dear Major Adams:

On May 24, 1999, the Kent County Commissioners Court passed a resolution opposing the establishment of the Lance Military Operations Area as proposed by the United States Air Force.

**BR-3** The resolution identifies the fact that aircrafts (B-52,B-1) are extremely noisy and will present a startle effect on livestock, wildlife and people. Also noted in the resolution are the concerns of air pollution and a decrease in hunting and tourism in the eight county area.

**BR-4** The negative effects on agricultural production and recreational uses will cause a severe loss in property value. Kent County and the seven other counties in the proposed MOA will not benefit by the addition of jobs being created and in fact, could well have a loss of economic stability.

Please consider this passage of the fore-mentioned resolution by the Kent County Commissioners Court when determining the location of the Military Operations Area for the United States Air Force.

Thank you very much.

Sincerely,  
  
 Tommy Stanaland  
 Kent County Judge

**REALISTIC BOMBER TRAINING INITIATIVE**

**Public Hearing Comment Sheet**

**Location:** La Junta, Colorado  
**Date:** May 19, 1999

Thank you for providing your comments on the Realistic Bomber Training Initiative Proposal.

A serious error has been made in the environmental review that shows no significant effect on the social/economic environment of our community with the potential closing of the local Lockheed Martin facility. At one time this facility employed about 120 people. At the time it was turned over to Lockheed in 1996, the employment was 67. Lockheed employs about 30. In addition to a major loss of payroll dollars to an area that is already economically distressed, other considerations were not addressed. Previously employees had been very active in local volunteer organizations such as the Chamber of Commerce, Police Reserves, Volunteer Firemen, Sheriff's Posse, local church and civic organizations. The loss of these volunteers has been a severe hardship on the social structure of the community. The local school system has also suffered a severe hardship with the substantial loss in funding associated with the loss of the children in the schools. The review process was grossly negligent in addressing these impacts. I am sending a copy of this to our congressional representatives to make them aware of how poorly this environmental assessment was conducted. I am assuming we paid to have this review completed and should expect to get a thorough report.

RE: TX-R-19990406-0001-50-00 / REALISTIC BOMBER TRAINING INITIATIVE DEIS

Dear Major Adams:

**TY** Your environmental impact statement for the project referenced above has been reviewed. The comments received are summarized below and are attached.

TxDot-Aviation Division, Texas State Soil and Water Conservation Board, had no comments as well as Rio Grande Council of Governments, sent in an article from a local newspaper in Alpine, Texas where area residents and ranchers told the U.S. Air Force in no uncertain terms that they don't want low flying bombers added to an established flight training route that snakes through the Far West Texas sky. TNRC reviewed the draft Supplemental Programmatic Environmental Impact Statement prepared by the Air Force related to a proposal to establish realistic bomber training near Barksdale Air Force Base in Louisiana and Dyess Air Force Base in Texas, have no comments to offer on this document.

We appreciate the opportunity afforded to review this document. Please let me know if we can be of further assistance.

Sincerely,

Dear Major Adams,

RE: RBTI-Realistic Bomber Training Initiative

It has come to my attention, through a constituent of mine in Northeast Ohio, that the Air Force is currently considering routes for training missions in New Mexico. My constituents have informed me that one of the routes under consideration would take low flying planes over Philmont Boy Scout Ranch in Cimmaron, New Mexico. They are very concerned about the potential dangers to scouts should this route be chosen.

BR-6 On their behalf, I am writing you to inquire about the safety considerations you are looking into in regards to this route over the Boy Scout Ranch. It is my understanding that Senator Bingaman of New Mexico is actively involved in this issue. Please keep me up to date with developments concerning this issue.

Thank you for your time and consideration. If you have any questions, please call my District Director, Chris Hess, at 1-800-447-0529. I remain

Very truly yours,

Steven C. LaTourette

The Honorable Charles Stenholm  
U. S. House of Representatives  
Room 1211, Longworth House Office Bldg.  
Washington, D. C. 20515

Dear Congressman Stenholm,

It was a pleasure seeing you at the Air Force hearing last evening. Thank you very much for coming.

BR-4 The purpose of this letter is to put into writing some of my concerns about the realistic bomber training initiative (RBTI). As I stated last night, the economic impact on the value of the ag land concerns me very much. I made reference to a real estate broker in the Big Bend area telling me that more than once he has had people lose interest in buying property after witnessing low flying aircraft in the area.

AF-36 Another concern is the fact that people tell me that the Air force is unresponsive to complaints and resorts to even more low flights over their homes after they complain. I would be glad to discuss this in more detail if you would like.

Lastly, to summarize last night's meeting, I heard 13 elected officials make comments and not one was favorable to the RBTI. I heard over 40 citizens make comments on the record and not one of those were in favor of the RBTI. I am confident that you will see to it that the people of West Texas are treated fairly by the Air Force.

Thank you again for coming

Sincerely,

David Holt

RESOLUTION IGC 99-2

TY A RESOLUTION OF THE INTERGOVERNMENTAL COUNCIL OPPOSING THE LOW LEVEL UNITED STATES DEPARTMENT OF DEFENSE MILITARY TRAINING FLIGHTS OVER THE ENVIRONS OF THIS POLITICAL JURISDICTION.

WHEREAS, the United States Department of Defense has proposed that a military training route through Taos County be expanded for the purpose of military training exercises; and

WHEREAS, the proposed route would go through the Taos Pueblo Wilderness area and in the vicinity of the historic Taos Pueblo which is a world heritage site; and

WHEREAS, Taos County is recognized nationally as a tourist destination and resort community due to its tranquil environment; and

WHEREAS, the noise levels that would be created from such low flying aircraft would result in a nuisance to the citizens of Taos County and have a significant environment impact on the designated wilderness areas.

NOW THEREFORE, be it resolved by the Intergovernmental Council that in order to preserve the cultural heritage and values of this, our unique and diverse community, do hereby declare that low level United States Department of Defense military training flights over the environs of this political jurisdiction are unacceptable to the citizens herein.

BE IT FURTHER resolved that copies of this resolution be submitted to the members of the New Mexico Congressional delegation and the Governor of the State of New Mexico requesting their immediate assistance and support in requesting that the United States Air Force eliminate further consideration of this proposed military training route.

Resolved, this 14<sup>th</sup> day of April, 1999 at the regular meeting of the Intergovernmental Council.

(940) 678-5012  
FAX (940) 638-3802

Gentlemen:

BR-4 My schedule in Austin would not allow me to be here this evening to express my opposition to the use of the eight counties, seven of which I represent, for low level training. This training would diminish property values, increase noise and discourage economic development in an already economic disadvantaged area.

While I am very much for a strong, well trained military, I feel that there are already enough well situated areas to provide adequate training sites.

Your consideration of the wishes of the people of the 70th District is greatly appreciated.

STATEMENT FOR THE RECORD

My name is Gustavo Cordova, I am the Town Manager of the Town of Taos. I have been asked by the Mayor and Council to present their views on this proposal by the United States Air Force, and how it will affect our community.

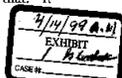

As governmental officials and leaders of our community, it is our responsibility to ensure that the quality of life for our citizens is not adversely affected by the actions of our federal, state, and local governments. We have a duty to evaluate proposals from our state and federal partners and determine if they serve the interest of the taxpayers of our state.

This community has long been a strong supporter of our military and the need for a well trained national defense force. A great majority of our citizens have served in the armed forces of the United States, and many serve today. We recognize that military training is critical towards preserving a force that is capable of winning in today's battlefield.

As a field grade officer with the military reserves, I too recognize the importance of training our uniformed forces. I had the misfortune of serving in combat during the Vietnam war, and witnessing first hand the value of military overflights over the forward edge of the battlefield.

PD-39 [The United States Air Force proposes to select our community along with others in Northern New Mexico as a training ground to be used for preparation for combat in the battlefield. They also propose to expand current overflights over our community, and do this at all hours of the day.

PD-40 [Worst of all, the Air Force proposes to conduct this training at altitudes just a few hundred feet above the ground. This would be a scary thought even using a small airplane. But the proposal goes much further than that. It

009008

proposes that B-52 and B-1 bombers amongst other aircraft, fly at such a low altitude over our community.

Perhaps the United States Air Force is not aware that Taos New Mexico is one of the foremost tourist destination communities in the United States. Taos is well known across the country as the soul of the southwest.

Taos is place where tourism is the number one industry and the number one employer. A place where arts and the creation of art is a haven for some of the country's foremost artists. A place where people come from all over the country to ski, to white-water raft, to vacation, and to enjoy the natural quiet of our beautiful environment.

Perhaps the United States Air Force is not aware that over 80% of the gross receipts of our community come from tourism, and tourism related services. Our fragile tourism base can easily become fragmented through the introduction of high speed bombers flying over the environment we have worked so hard to protect.

BR-4 [I do not see anywhere in the draft environmental impact statement where the Air Force proposes to make up the loss of tourism revenue, or the significant economic loss that this bomber route will bring to our community.

SE-4 [The proposal by the air force will not create new jobs. It will not result in any economic benefit for our region. It will not protect or enhance the fragile environment we have known all our lives.

BR-7 [However, it will take away the natural quiet of our wilderness areas, it will be destructive to our tourism base, and it will change the quality of life in our community.

This morning, the Taos County Intergovernmental Council met in an open session at the Kachina Lodge here in Taos. The Council consists of the elected and appointed officials of Taos, Taos County, Taos Ski Valley, Red River, Angel Fire, Eagle Nest, Questa, the school districts, and the tribal governments of Taos Pueblo and Picuris Pueblo.

By unanimous vote of all the communities, a formal resolution was passed condemning the proposal before you from the United States Air Force. The

009008

resolution will be mailed to each of our members of the United States congressional delegation.

Our elected officials all agree that this proposal is very bad for Northern New Mexico. It is very bad for our tourism economy. It is very bad for the quality of life of our citizens.

Make no mistake about it. Our elected officials are prepared to fight this proposal. We sincerely hope that our proud members of the United States Air Force see fit to abandon any of the proposed overflight routes over Northern New Mexico. Thank you.

Comment #9009 was misnumbered and is not part of the official document.

Re: Draft Environmental Impact Statement (DEIS), Realistic Bomber Training Initiative (RBTI)

Dear Major Adams:

The document referenced above has been reviewed by Texas Parks and Wildlife staff and the following comments are provided.

The Department appreciates the incorporation of the location of state facilities within Special Land Use Management Area Maps for use in evaluating the various alternatives.

Flight operations associated with Alternative B, IR-178/Lancer Military Operations Area (MOA) and Alternative C, IR-178/Texon MOA, will occur over portions of Department land. This land was acquired to allow public recreation for an increasing number of people who are seeking quiet solitude within an atmosphere of esthetic landscape beauty, and for wildlife management purposes. Since low level flight operations by high performance jet aircraft have been documented to have definite adverse effects on esthetic recreational pursuits, the Department cannot support these alternatives, unless and until adjustments are made to avoid these areas.

BR-2

As we have stated in previous correspondence, please be aware of flight operation parameters conducted by pilots of this Department. This information is provided to identify potential for midair collisions between Air Force and Department aircraft. Department wildlife surveys and law enforcement flights are conducted under VFR flight rules with single and multiengine STOL type aircraft at altitudes of 100'-300' AGL. These flights typically operate from sunrise to 11:00 a.m. and from 6:00 p.m. to dark at airspeeds below 100 knots

To manage and conserve the natural and cultural resources of Texas for the use and enjoyment of present and future generations.

 Page 2

and on routes which follow lines of longitude and latitude by dead reckoning, loran, or GPS over an entire county. The wildlife survey flights occur primarily during the months of August, September, and October. Department aircraft are also used for night law enforcement surveillance during November, December, and January under VFR flight rules at altitudes of 3000'-4000' and at airspeeds below 150 knots. Dissimilarity of aircraft and operational mission dictates caution for aircrews of our organizations.

The Department appreciates the opportunity to comment on the DEIS.

Sincerely,

Andrew Sansom  
 Executive Director

Dear Major Adams:

RE: REALISTIC BOMBER TRAINING INITIATIVE: DRAFT ENVIRONMENTAL IMPACT STATEMENT; DEPARTMENT OF THE AIR FORCE, IN COOPERATION WITH THE FEDERAL AVIATION ADMINISTRATION; MARCH 1999

This transmits New Mexico Environment Department (NMED) staff comments concerning the above-referenced Draft Environmental Impact Statement (DEIS).

AIR QUALITY

The areas of the proposed training in New Mexico are currently in attainment for all National Ambient Air Quality Standards (NAAQS). The DEIS, however, does not adequately address impacts to air quality for the reasons stated below.

Even though military aircraft operations are not regulated by the State of New Mexico, the proposed Realistic Bomber Training Initiative (RBTI) program apparently significantly increases emissions, especially of NOx, in the air quality control regions over which the flights are proposed. New Mexico will likely be required, by the Regional Haze Rule, to restrict activities in order to protect mandatory Class I areas during the best 20 percent and worst 20 percent of days. Potential for the proposed Regional Haze Rule to affect proposed training operations should be addressed.

AO-96

NOx is a major contributor to regional haze. Potential impacts to two nearby mandatory Class I areas (Pecos Wilderness Area and the Wheeler Peak Wilderness) are not addressed in the DEIS. Both of these areas could be impacted under Alternative D. Under Alternatives B and C, potential impacts to Carlsbad National Park, also a mandatory Class I area, should be addressed. Prevailing wind direction for different times of the year should be included and show where the emissions are being blown.

AO-97

Major Brent Adams  
 June 7, 1999  
 Page 2

009011

AO-98

Maps of the alternatives show baseline and proposed concentrations of air pollutants (Figures 4.1-11, 4.1-13, 4.1-15, and 4.1-17). It is unclear from where the baseline concentrations of pollutants are derived. The source of these data should be identified.

Maps of the proposed Alternative D should include the towns of Mora and Las Vegas, which are both very close to the proposed training route. Class I areas should also be shown on maps of the aircraft emissions for all alternatives where appropriate. For example, Figure 4.1-11 should show the Salt Creek Wilderness and the Carlsbad Caverns National Park. The towns of Carlsbad, Artesia, Clovis, Hobbs and Lovington should also be shown on this figure.

OTHER IMPACTS

The proposed action for which the DEIS was prepared to address is the construction and/or expansion (depending on the alternative) of the ground based Electronic Scoring System (ESS) used by the US Air Force as Part of the RBTI.

The proposed action is the construction of manned and unmanned fenced enclosures, sites and pads for the deployment of mobile ESS "emitters" (electromagnetic "radar" type antennas) used during test and training flights to simulate threats, and assess pilot and systems responses accordingly.

Project areas in New Mexico include SE NM from Roswell to Jal, and/or NE NM from Taos to Clayton to Santa Rosa.

The immediate hazard associated with these emitters is possible human exposure to high-energy radio waves during operation. This potential hazard has been addressed in the design of the sites which establish a 400-ft exclusionary perimeter within a chain link fenced compound from the emitter (measured from the center of an 800ft by 800ft footprint).

The other immediate potential hazard associated with the RBTI is increased exposure to aircraft noise, which is meticulously addressed in the document.

Finally, an identifiable long-term environmental impact that may be of regulatory concern is possible surface water erosion due to construction activities associated with site development.

We appreciate the opportunity to comment on this document. Please let us know if you have any questions.

Sincerely,

Gedi Gibas, Ph.D.  
 Environmental Impact Review Coordinator

Texas Department of Agriculture Comments on the Draft Environmental Impact Statement produced by the United States Airforce for the Realistic Bomber Training Initiative

Introduction and Statement of the Department's Interest

The Texas Department of Agriculture is the Texas agency charged with promoting and furthering the State's agricultural interests. The Texas Department of Agriculture joins in the comments of McCoy Land & Cattle Company, et al., and of Professor William J. Weida regarding the Air Force Draft Environmental Impact Statement (DEIS) for its Realistic Bomber Training Initiative (RBTI), and offers additional considerations on behalf of the agricultural interests of the State. While the Texas Department of Agriculture recognizes the importance of a well-equipped, well-trained military, and fully supports the necessity of bomber training, TDA nevertheless requests the consideration of alternatives that would be less destructive to agricultural interests.

Comments

- I. The department concurs with the comments by McCoy Land & Cattle Company, et al., and Professor William J. Weida concerning a lack of citations to and analysis regarding certain noise data and studies. Professor Weida's comments appear to demonstrate that the DEIS evaluation of noise may have been based upon incomplete analysis and out-of-date or unsuitable methodology in order to justify a predetermined decision. According to those comments, the USAF has selectively used noise-modeling methods and data to support a predetermined outcome, rather than employing the type of objective analysis that would lead to the fully-informed, "hard look" decision required by the National Environmental Policy Act (NEPA). In order to ensure that a fully-informed, environmentally responsible decision will be made on the basis of objective criteria, we agree that the USAF should address the issues, data, and studies described in Professor Weida's comments and demonstrate why this information is not relevant or material to the environmental noise issues addressed within the DEIS.
- II. Recognizing the critical need for adequate training of the USAF's bomber crews, we believe that existing facilities and airspace over public lands could be expanded to accommodate the USAF's training objectives without the significant impact that RBTI would impose on the citizens and private property of West Texas. We note that the DEIS contains only a perfunctory and conclusory discussion regarding Federal Aviation Administration (FAA) approval of additional military airspace in connection with existing facilities at Harrison (Arkansas), La Junta (Colorado), Belle Forche (South Dakota), and Granite Peak (Utah) and the use of airspace over public lands. Because the reasons for rejecting expansion of Harrison, La Junta, Belle Forche, and Granite Peak and for discounting FAA approval of additional airspace are not fully articulated in the DEIS, the department believes that the DEIS does not meet the requirements of NEPA and the regulations of the Council on Environmental Quality (CEQ). With the preceding observations in mind, the department

BR-1

PD-41

009012

TDA Comments on RBTI DEIS  
June 15, 1999  
Page 2 of 4

requests that the USAF consider more fully the possibility of obtaining FAA approval for additional air space in connection with the aforementioned facilities and restructuring RBTI MOAs and MTRs for airspace over public lands. If after such consideration the USAF maintains its conclusion that expansion of those facilities is not feasible, we ask that the DEIS include a detailed and thorough explanation of that decision as required by NEPA and the CEQ.

III. As an alternative, the department suggests that the USAF consider other reasonable alternatives that would shift a significant portion of the planned RBTI sortie-operations away from West Texas. A careful review of the DEIS clearly shows that it does not address all reasonable alternatives. The only alternatives fully explored by the USAF are the no action alternative and several permutations of a single alternative involving the expansion of certain existing West Texas MOAs and MTRs, while entirely decommissioning the current MOAs and MTRs in Harrison and La Junta, described as having "less varied terrain," and making little or no use of the Belle Forche and Granite Peak facilities. By considering only the alternatives of no action or the complete transfer of all training activities to the West Texas region, the USAF has failed to evaluate alternatives that would provide significant training opportunities while mitigating the impact of RBTI on West Texas.

PD-42

PD-4

PD-43

No alternatives have been considered that settle for something less than the perceived maximization of the proposed training program over varied terrain. For example, alternatives could be developed that provide for continued use of the existing MOAs and MTRs at Harrison and La Junta, having the less varied terrain, and moving only a small portion of the sortie-operations to the West Texas areas with the more varied terrain. This would reduce the impact on West Texas citizens while still providing a significant amount of sortie-operations over areas with the more desirable land features. The DEIS does not explain why existing MOAs and MTRs in Harrison and La Junta must be entirely decommissioned. Reasoned analysis indicates that bomber crews will, from time to time, be required to conduct sortie-operations and combat missions over terrain that is not varied. Conducting some training sortie-operations over the less-varied terrain associated with the Harrison and La Junta facilities would still meet most or all of the training objectives described in the DEIS, while providing additional realistic training opportunities and reducing the negative impacts of RBTI on the West Texas natural and human environments. The failure to consider such alternatives, that incorporate some training over non-variable terrain, would appear to contradict the USAF's stated objective to provide mission realism in bomber crew training.

Additionally, the DEIS describes no alternatives that provide for continued sortie-operations over the longer routes to Granite Peak and Belle Forche. The USAF has itself opined that "bomber crews . . . [have flown] halfway around the world to launch cruise missiles and other ordnance at facilities for weapons of mass destruction in Iraq." Since the justification for the training initiative is to provide mission realism, it would seem reasonable to incorporate such long-range mission training into RBTI objectives, rather than relying entirely on the shorter, varied-terrain missions planned for the proposed modified MOAs and MTRs in West Texas. The necessary realism for such long-range missions (where bomber crews must endure long, relatively inactive and uneventful transit times before fully active combat situations) can only be accomplished by providing for sortie-operations to remote

PD-44

009012

TDA Comments on RBTI DEIS  
June 15, 1999  
Page 3 of 4

locations such as the Granite Peak and Belle Forche areas. Making use of those areas would meet seemingly necessary and vital training objectives. Moreover, by diverting some of the newly proposed short-range, varied-terrain sortie-operations to long-range mission training, the negative impacts of RBTI on West Texas residents could be moderated.

PD-12

In short, the DEIS should, at minimum, be amended to consider alternatives that incorporate additional mission realism objectives while mitigating negative impacts on the West Texas environment. The lack of such alternatives may indicate that the environmental impact statement was prepared with a predetermined outcome in mind, rather than for the purpose of taking a fully informed, "hard look" at the matter as contemplated by NEPA and the CEQ. The department believes that a detailed and thorough evaluation of additional alternatives, based upon the considerations outlined above, will ensure a more complete and sensible decision regarding the implementation of RBTI.

BR-4

The DEIS does not address certain economic and implementation factors which are crucial to a thorough analysis of the potential environmental impacts of RBTI on the West Texas environment. Of considerable importance are the potential impacts of RBTI on property values, recreational activities, and land use. Yet, the DEIS contains no analysis regarding the potential effects on the environment from possible drops in area property values as a result of RBTI.

As known to the department, in its capacity as a state agency involved in the development and implementation of land use policy, and as described by McCoy Land & Cattle Company, et al., many of the affected properties are currently used for traditional farming and ranching activities as well as recreational activities such as hunting, bird watching, wildlife observation, hiking, camping, and other outdoor activities. Decreases in property values as a result of the RBTI could adversely affect the preceding activities by discouraging property owners from continuing to use or make their lands available for these traditional area activities.

Given the USAF admission, in the DEIS, that overflights can produce a high level of annoyance, a reduction of interest in use of these lands for such traditional activities is likely as a result of the proposed increase in sortie-operations. As a result of lost income from such reduced interest, property owners could abandon traditional land uses in favor of commercial ventures designed to overcome lost property value. Thus, area land owners may be forced, by economic considerations, to develop their properties in a manner incompatible with maintaining wildland and wilderness sanctuaries for the birds, wildlife, and plants of the region. In other words, the impact on property values from RBTI could negatively affect the biological diversity and wilderness/wildland resources of the affected West Texas region as property owners are forced away from traditional land use. The department is of the opinion that NEPA and the CEQ regulations require inclusion and evaluation of this potentially significant impact.

Finally, the DEIS does not expressly address the potential problems associated with concentrating an increased number of flights into a smaller area and the possible environmental consequences of such concentration. Under all three alternatives to the no action plan, the airspace to be used would decrease substantially while the number of

TDA Comments on RBTI DEIS  
June 15, 1999  
Page 4 of 4

009012

AO-99

overflights would increase. For example, under Alternative B affected airspace would be reduced by 2674 square nautical miles—a nearly 20% decrease. Even without an increase in the number of overflights, the affected area would experience a concentration of negative impacts. Since an increase of overflights would occur under the proposed RBTI program, the effect of concentration is a highly significant factor that should be expressly and thoroughly evaluated and described. The increase in the number of overflights experienced on average by a person or animal within the affected areas should be expressly stated in a manner that is straightforward and understandable. The DEIS does not provide such analysis and, as a result, prevents meaningful evaluation of RBTI's impact by members of the public.

For all of the above reasons, the department is of the opinion that the DEIS shows insufficient consideration of all significantly relevant factors related to the decision to implement RBTI in West Texas. Absent such analysis, we believe the DEIS should be withdrawn and a new DEIS prepared that addresses the issues raised in these comments.

Langley Air Force Base, VA 23665-2769

JUN 11 1999

Dear Major Adams:

In accordance with our responsibilities under Section 309 of the Clean Air Act, the National Environmental Policy Act (NEPA), and the Council on Environmental Quality (CEQ) Regulations for Implementing NEPA, the U.S. Environmental Protection Agency (EPA) Region 6 office in Dallas, Texas, has completed its review of the review of the U.S. Air Force Realistic Bomber Training Initiative (RBTI) Draft Environmental Impact Statement (DEIS), for proposed activities in western Texas and southeastern New Mexico.

Overall we found the DEIS to be a clear, concise document that is reader-friendly and reasonably complete. Our specific comments focus on the need for the Air Force to provide more complete analysis of noise impacts and airspace management issues, and to provide references and citations to support the DEIS analysis.

EPA rates this proposed action as "EC-2," i.e., EPA has "Environmental Concerns and Requests Additional Information in the Final EIS." We have identified several environmental concerns that need to be included in the FEIS to complement and to more fully insure compliance with the requirements of NEPA and the CEQ regulations. Our classification will be published in the Federal Register according to our responsibility under Section 309 of the Clean Air Act, to inform the public of our views on proposed Federal actions.

Detailed comments are enclosed with this letter which more clearly identify our concerns and the informational needs requested for incorporation into the FEIS. If you have any questions, please contact Mike Jansky of my staff at 214-665-7451 for assistance.

EPA appreciates the opportunity to review the DEIS. We request that you send our office five copies of the FEIS at the same time that it is sent to the Office of Federal Activities, EPA, 401 M Street S.W., Washington, D.C. 20460.

Sincerely yours,

Robert D. Lawrence, Chief  
Office of Planning and Coordination  
Compliance Assurance and Enforcement Division

**DETAILED COMMENTS  
DRAFT ENVIRONMENTAL IMPACT STATEMENT (DEIS)  
REALISTIC BOMBER TRAINING INITIATIVE**

**Background**

The purpose of the Realistic Bomber Training Initiative (RBTI) Draft Environmental Impact Statement (DEIS) is to satisfy requirements of the National Environmental Policy Act (NEPA) to evaluate the environmental effects associated with a proposal to establish bomber training assets. The U.S. Department of the Air Force (Air Force) is the responsible federal agency; cooperating agencies include the Federal Aviation Administration (FAA) Southwest Region, Fort Worth Air Route Traffic Control Center (ARTCC), and the Albuquerque ARTCC.

The DEIS describes the environmental effects of establishing assets for the bomber RBTI within approximately 600 nautical miles (nm) of Barksdale Air Force Base (AFB) in Louisiana and Dyess AFB in Texas. The RBTI seeks to improve realistic training opportunities for B-52 and B-1 bomber aircrews while maximizing effective combat training time. Currently, long flight times required to reach existing training assets result in inefficient use of available limited flying hours.

The RBTI is a proposal to develop an Electronic Scoring Site (ESS) system consisting of airspace and ground-based assets that provide a sequence of training activities resembling combat. Specifically, the Air Force proposes to establish and modify airspace and ground-based facilities in either southwestern Texas or northeastern New Mexico to support realistic integrated bomber training.

The proposed project's fundamental purpose and need is to develop and modify the airspace and ground-based assets to provide B-52 and B-1 bombers with training that simulates combat situations to the greatest degree possible. It is the responsiveness, range, and combat capability that make the bomber force a key asset to national defense. Bombers are an integral part of the Air Expeditionary Force mission concept which seeks to provide rapid, responsive, and reliable air power through a bomber's speed, mass, and long-range reach.

Fundamental bomber combat missions involve a range of activities, including air refueling, flying at high-altitudes to the combat theater, avoiding enemy threats by penetrating enemy air defense systems, delivering ordnance from the proper position, maintaining the aircraft's geographic position and timing to stay in formation with other aircraft, and returning safely to base. To accomplish those tasks, bomber aircrews must be constantly prepared. Integrated realistic training requires a combination of airspace and ground-based assets that are linked and arranged to provide a sequence of events resembling actual combat. The RBTI would ensure that bomber aircrews possess the skills and readiness for combat that: (1) mirrors combat events; (2) links a realistic sequence of training activities into a cohesive mission; and (3) hones aircrew teamwork.

Currently, the Military Training Routes (MTR), Military Operations Areas (MOA), and

009013

2

associated Air Traffic Control Assigned Airspaces (ATCAA) that are most frequently used for bomber training are in southwestern Texas and northeastern New Mexico; ESS systems in Arkansas and Colorado as well as remote ranges and ESS systems in other parts of the western United States are also part of the existing training network.

**Detailed Comments**

**GENERAL**

**Alternatives**

PD-45

The Purpose and Need of the proposed action and alternatives may support the consideration of other alternatives. Specifically, (1) expansion and/or upgrading of the Smoky Hill Range in Kansas; (2) expansion and/or upgrading of existing emitter and ESS sites in use by adding improved MTR linkages and MOAs; (3) increased use of mobile emitters than can be repositioned as required to optimize training. We suggest that the Final EIS add discussion on why these potential alternatives were not considered or do not meet the stated purpose and need.

**Executive Summary**

GE-14

On p. ES-3, the table summarizing environmental effects is vague in its use of symbols to identify the "magnitude" of effects. It is particularly unclear as to what "magnitude of potential adverse effects" means. There is no reference provided with this table for the reader to determine the level of "significance" of effects, such as that provided for some resource impacts in Table 2.6-1.

BI-21

Also, based on comments provided by the US Fish and Wildlife Service (FWS) (January 27, 1998) on potential effects to threatened and endangered species (see Table 4.3-1 and Appendix H), it would seem that Alternative D should show a more serious level of adverse effect than is currently reflected in the table. This assumes a double black "diamond" represents a higher level of adverse effect than one black "diamond."

**Scope of Study**

PD-46

The DEIS does not address the environmental effects of increased flight times from Barksdale and Dyess AFBs to the proposed realistic training areas. The potential impacts on airspace management, air quality, and safety should be discussed in the Final EIS.

**Definition of Resource Analysis**

GE-15

On pp. 2-58 to 2-59, Sec. 2.5.2 of the DEIS, the justification for the dismissal from further analysis of hazardous materials and waste, transportation, and ground safety requires a more thorough justification, including citations or references to support the decision. For example, the

<p style="text-align: center;">009013</p> <p style="text-align: center;">3</p> <p>document states that "Environmental baseline surveys were conducted at each of the proposed emitter sites..." but does not provide citations for those studies. Such studies should be cited in the FEIS.</p> <p><b>NOISE</b></p> <p><b>Noise (Tiering Documents)</b></p> <p><b>AO-100</b> [ On pp. 4-2 to 4-14, Sec. 4.1.1, Appendix G, there is no mention in the DEIS of other EISs that have been prepared to address the noise effects resulting from B-52 and B-1 operations. Reference to such reviews should be included in the EIS. For example, reviews of the decision to base those aircraft at Barksdale and Dyess AFBs.</p> <p><b>Noise Measurement Metrics and Analysis</b></p> <p><b>AO-101</b> [ On p. ES-3, 4<sup>th</sup> paragraph, pp. 4-5 to 4-14, Sec. 4.1.1, pp. 4-19 to 4-26, Sec. 4.1.2, and pp. 4-29 to 4-34, Sec. 4.1.3, pp. 4-38 to 4-42, Sec. 4.1.4, pp. 4-46 to 4-50, Sec. 4.1.5, and Appendix G, the term DNL should be defined in the Executive Summary as it is used, as well as the rationale for using this metric. The use of DNL and Onset-Rate Adjusted Day-Night Average Sound Level metrics appear to downplay the effects of short duration noise spikes that would occur with low level flights of heavy bombers. Averaging tends to mask the effects of single noise events and of intermittent spikes. The FEIS needs to provide more substantial analysis of single event noise spikes and their effects on humans, livestock, and wildlife, with specifics by sites for the alternatives. Onset rates of up to 150 dB per second, and overflight noise levels of up to 117 dB indicate potentially severe noise events. The FEIS should specifically address effects on residences, farms, ranches, and other assets that lie within the MTRs, MOAs, and IR routes contained within the proposed action and measures to be taken to avoid, minimize, and mitigate any adverse effects.</p> <p><b>Noise Thresholds</b></p> <p><b>SE-5</b> [ On p. ES-4, 5<sup>th</sup> paragraph, the FEIS should indicate the statutes and analysis that support the conclusion that there are no adverse impacts at 65 DNL, and that indicate no need for further analysis given maximum expected noise levels of 65 DNL.</p> <p><b>Representative Aircraft Noise Levels</b></p> <p><b>AO-103</b> [ In reference to p. 4-6, Table 4.1-1 and p. 4-8, Figure 4.1-3, Table 4.1-1 lists L<sub>max</sub> levels for selected aircraft at various altitudes. Figure 4.1-3 lists sound exposure limits for aircraft at various altitudes. The source(s) for these values should be indicated, as well as whether the B-1 and B-52 aircraft models listed in this table are identical to those that are expected to use the proposed MOAs and MTRs. Please address in the FEIS.</p>	<p style="text-align: center;">009013</p> <p style="text-align: center;">4</p> <p><b>Noise Operating Procedures</b></p> <p><b>AO-104</b> [ On p. 4-60, Sec. 4.2.2, the document states that "the Air Force has established special operating procedures to avoid overflight of specific locations considered to be sensitive to aircraft noise." The FEIS should describe those procedures, identify those locations, and reference the specific guidance or procedure.</p> <p><b>BIOLOGICAL RESOURCES</b></p> <p><b>Threatened and Endangered Species</b></p> <p><b>BI-22</b> [ In reference to p. ES-4, 2<sup>nd</sup> paragraph, this paragraph states that "field surveys... did not identify any threatened, endangered, or sensitive plant or animal species; therefore construction and ground operations would not impact these species." This conclusion should be supported by current field surveys that indicate the lack of presence of threatened and endangered species. The conclusions drawn in the DEIS must also be based on an assessment of habitat quality (i.e. whether the habitat is considered to be critical habitat by USFWS and/or state fish and game agencies). A copy of the Biological Assessment prepared for the FEIS should be included to assist the reader in reviewing the Air Force's analytical conclusions. A concurrence letter from the USFWS should also be included.</p> <p><b>BI-22</b> [ On p. 4-89, the fifth sentence of the first paragraph of this section states that "Surveys of the candidate emitter sites and Electronic Scoring Sites demonstrate that none of these species or their habitat would be affected by RBTI." A reference for the document should be included in the FEIS describing the methodologies used for these surveys. It should also state whether USFWS concurs with such findings.</p> <p><b>Wetlands</b></p> <p><b>BI-22</b> [ In reference to pp. 4-1 and 4-84, the conclusion that there are no wetlands in the project area that would be effected by the proposed action should be supported with a letter of concurrence from the U.S. Army Corps of Engineers or a wetlands delineation map. Please provide this information in the FEIS.</p> <p><b>Biological Resources</b></p> <p><b>BI-23</b> [ On pp. 4-89, 4-95 and 4-106, the discussions of environmental consequences of airspace and flight operations do not provide sufficient detail to establish the precise impacts on each of the endangered species within the impact areas of each alternative. This discussion should be revised such that the ranges of each of these species in relation to the affected airspace are shown clearly on maps. Such depictions would allow determination of the total area of each species range that may be affected by the overflights, particularly the areas that may be newly overflown under each alternative. In each case where the range of a threatened or endangered species intersects an</p>
<p style="text-align: center;">009013</p> <p style="text-align: center;">5</p> <p>overflight area, especially new overflight areas, please provide detailed information on the number of overflights, the noise associated with each overflights, and the expected effect on the affected species, based on past studies (e.g., no affect or abandonment of the area). Again, these issues may have been addressed in the Biological Assessment, and it would assist the reader to have the Biological Assessment (and the subsequent USFWS Biological Opinion) for the proposed action. Please address in the FEIS.</p> <p><b>Electromagnetic Effects on Wildlife</b></p> <p><b>BI-24</b> [ In reference to Sec. 4.0 of the DEIS, the statement does not address the potential effects of the proposed new emitters and of conducting electronic combat operations on wildlife. In particular, the FEIS should address potential radiation hazards to birds.</p> <p><b>Biological Resources - Migration Flyways</b></p> <p><b>BI-25</b> [ On pp. 4-17, 4-36, 4-44, and 4-50, Sec. 4.1, pp. 4-84 to 4-108, Sec. 4.3, and in Sec. 4.1, Alternatives B, C, and D are noted as not overlying or intersecting "any major migration flyways or water bodies where birds congregate." In Section 4.3, reference is made several times to migratory bird species (e.g., waterfowl, whooping cranes, and bald eagles) occurring within the proposed bomber training areas. If migratory bird routes for this region are well documented, such as those used in developing the Bird Avoidance Model (pp. 4-17), then they should be overlapped with bomber training routes and shown on a map. This would be particularly useful in better understanding the potential impacts on such species and also the potential for bird-aircraft strikes, as described in Section 4.1.</p> <p><b>CULTURAL RESOURCES</b></p> <p><b>Number of Identified Sites</b></p> <p><b>CU-9</b> [ On page ES-5, 1<sup>st</sup> paragraph, the DEIS lists the number of National Register-listed properties, but does not address whether there are other sites that may be eligible for listing that require additional investigation. Please clarify in the FEIS.</p> <p><b>Mitigation of Impacts on Cultural Resource Sites</b></p> <p><b>CU-10</b> [ On p. ES-5, 1<sup>st</sup> paragraph, the DEIS states that effects on cultural resource sites under Alternatives B, C, and D "could be avoided in most cases or mitigated to insignificant levels" but does not list any mitigation measures that will be taken, or how those measures will reduce or avoid potential impacts on cultural resources. Mitigation measures should be identified in the FEIS.</p>	<p style="text-align: center;">009013</p> <p style="text-align: center;">6</p> <p><b>Consultation with the Texas and New Mexico State Historic Preservation Officers (SHPOs)</b></p> <p><b>CU-11</b> [ In reference to p. 4-120, Sec. 4.5.1, the DEIS states that the results of field investigations have not yet been submitted to the Texas and New Mexico SHPOs for evaluation and that Section 106 consultations have not been completed. This process should be completed prior to the issuance of a Final EIS so that the public has complete information on the proposed action. If the SHPO consultations are not expected to be done in time for completion of the FEIS, a statement should be added to Section 4.5 identifying that the proposed action will not be undertaken until consultations are completed and that specific measures are taken, as appropriate, to reduce, avoid, or mitigate any adverse effects the proposed action might have on historic properties.</p> <p><b>CUMULATIVE EFFECTS</b></p> <p><b>Cumulative Airspace Impacts</b></p> <p>On p. ES-5, 3<sup>rd</sup> paragraph and pp. 2-16 to 2-17, the FEIS should address current and anticipated future civil aviation activities in the affected area to ascertain whether there will be cumulative effects on airspace. For example, an analysis of existing and proposed civil aviation jet routes and instrument flight rules (IFR) and visual flight rules (VFR) routes should be included. The cumulative uses of proposed and nearby airspace identified on pp. 2-16 to 2-17 should be assessed for impact.</p> <p><b>AIRCRAFT OPERATIONS</b></p> <p><b>Ordnance Usage</b></p> <p><b>PD-47</b> [ In reference to p. 1-2, Sec. 1.2.1, "1<sup>st</sup> side bar", the FEIS should clarify whether any inert ordnance is expected to be employed under the proposed action. If so, these actions must be assessed for impacts.</p> <p><b>Optimum vs. Current Sorties</b></p> <p><b>PD-48</b> [ In reference to p. 1-10, Sec. 1.4, Figure 1.3-3 and p. 1-15, Sec. 1.6, Figure 1.6-1, the figures comparing optimum vs. current sorties (and later, optimum vs. current vs. proposed) do not indicate the sources for how an "optimum" sortie was determined, the sources for the characteristics of current sorties, and the sources for the characteristics of proposed sorties. The FEIS should indicate, at a minimum, the year(s), source document(s), aircraft type(s), base origin(s), and training area(s) that were analyzed to produce these figures. Additionally, Figure 1.6-1 should indicate which alternative (B, C, or D) was assumed.</p>

009013	
7	
	<p><b>Low Altitude Flights</b></p> <p><b>PD-49</b> In reference to p. 1-12, Sec. 1.4.1, Figure 1.4-1 and 1<sup>st</sup> "side bar," this reference is the first time that the DEIS mentions that aircraft in MTRs may fly as low as 300 feet AGL. This key fact should be disclosed in the Executive Summary.</p> <p><b>Required Airspace and Ground-Based Assets</b></p> <p>On pp. 2-3 to 2-8, Sec. 2.1.1, the DEIS should indicate sources of the operational requirements that generated the specific needs for airspace and ground-based assets. For example, Operational Requirements Documents (ORD), training manuals, or other such Air Force documents that define B-52 and B-1 training requirements. These references are important to establish the lineage of the training requirements stated in the FEIS.</p> <p><b>AF-53</b></p> <p><b>Required Airspace Assets</b></p> <p>On p. 2-4, Sec. 2.1.1, the description of the minimum required airspace assets for MTRs, MOAs, and ATCAAs should include a reference to Appendix A which provides a detailed study of how these criteria were established. Please clarify in the FEIS.</p> <p><b>GE-16</b></p> <p><b>Aircraft Safety</b></p> <p>In reference to p. 4-44, Sec. 4.1.4 and Table 4.1-17, the FEIS should explain the following statement made in the 4<sup>th</sup> paragraph, "The estimated years equate to 0.02 percent probability of a B-52 Class A mishap per year and a 0.07 probability for B-1s." This conclusion is not clearly supported by the figures for IR-178 in Table 4.1-17 that the estimated years between mishaps for the B-52 and B-1 are 45 years and 15 years, respectively. The probability for B-52 is given in terms of a percent and the probability for the B-1 is not given in terms of a percent. It is suggested converting both to a percentage figure of 7 percent and 2 percent, respectively.</p> <p><b>AO-105</b></p> <p><b>Impacts on Civil Aviation</b></p> <p>In reference to pp. 4-28 to 4-29, Sec. 4.1.3, pp. 4-37 to 4-38, Sec. 4.1.4, pp. 4-45 to 4-46, Sec. 4.1.5, the DEIS does not provide analysis of the impacts of the proposed action on civil aviation. The referenced section describes proposed changes to the airspace structure in the region but does not address potential impacts caused by the proposed substantial increases in airspace usage. For example, p. 2-35 states that under Alternative B (Lancer MOA), a total of 2,350 annual sortie-operations would occur, as compared to the current usage of 206 annual sortie-operations. The FEIS should consider the potential impacts of this increased usage for all alternatives.</p> <p><b>AO-106</b></p>

 <p>United States Department of the Interior</p> <p>OFFICE OF THE SECRETARY Office of Environmental Policy and Compliance Post Office Box 649 Albuquerque, New Mexico 87105</p> <p>April 30, 1999</p> <p>ER 99/260</p> <p>Major Brent Adams RBTI EIS Project Manager HQ ACC/CEVP 129 Andrews Street, Suite 102 Langley AFB, Virginia 23665-2769</p> <p>Dear Major Adams:</p> <p>The U.S. Department of the Interior has reviewed the Department of the Air Force, Realistic Bomber Training Initiative (RBTI), Draft Environmental Impact Statement (DEIS) of March 1999. In this regard, the following comments are provided for your consideration.</p> <p>It is our understanding that the RBTI, designed to increase training opportunities for aircrews flying B-1 and B-52 aircraft from Dyess Air Force Base, Texas, and Barksdale Air Force Base, Louisiana, consists, briefly, of the following proposed elements:</p> <ul style="list-style-type: none"> <li>Modifications and additions to existing Military Training Route (MTR) airspace in Texas and New Mexico used generally for low-altitude navigation training activities;</li> <li>Modifications and additions to existing Military Operations Area (MOA) airspace in Texas and New Mexico used for medium to high altitude training and maneuvering;</li> <li>Increased flights by B-1 and B-52 aircraft in the identified airspace;</li> <li>Acquisition of several 15-acre parcels under MTR and MOA airspace for construction and operation of an Electronic Scoring Site system; and</li> <li>Closure of existing Electronic Scoring Site systems in Arkansas and Colorado.</li> </ul> <p>We support the training mission of the Air Force and the expressed purpose of the subject initiative to provide realistic training scenarios to prepare flight crews for real combat. However, our mission and legal mandates cause us to be concerned about the effect of the RBTI on lands and trust resources managed by several Bureaus within the Department of the Interior. These concerns are discussed below.</p>	

009013	
8	
	<p><b>Sortie-Operations</b></p> <p><b>PD-50</b> In reference to p. 2-21, Table 2.3-2, Appendix B, the figures listed in the referenced table and Appendix B for sortie-operations are not cited for source and dates. The FEIS should indicate the year and time period for the baseline (Alternative A) sortie-operations, the assumed projection year for Alternatives B, C, and D, and provide a comparable projection under Alternative A, for all aircraft types. In addition, the Appendix B tables should indicate the number of hours of usage for each area.</p> <p><b>PD-51</b></p> <p><b>Airspace Management, Noise, Aircraft Emissions and Air Quality, Air Safety for Alternative A: No-Action</b></p> <p>In reference to pp. 4-19 to 4-27, Sec. 4.1.2, the description of the affected environment and the baseline conditions do not include the areas outside of the primary MTR, IR-178. For example, there is no discussion of the ESSs in Colorado and Arkansas. Analysis of the No-Action Alternative should include a full analysis of these areas.</p> <p><b>GE-17</b></p> <p><b>OTHER</b></p> <p><b>Emitter Safe Distance</b></p> <p>In reference to p. 2-30, Sec. 2.4.1, the third paragraph under the heading of "Ground Operations" states that: "For the proposed emitters, the safe distance has been established at 350 feet." A reference for this figure should be added that explains the rationale for this distance, and provides a thorough discussion of any health and safety concerns that are associated with the proposed emitters. Any relevant data on the safety records associated with past uses of the proposed emitter types should be included in the FEIS.</p> <p><b>PD-52</b></p> <p><b>Electromagnetic Spectrum Effects</b></p> <p>In reference to Sec. 4.0, the DEIS does not address the potential effects of the proposed new emitters and conducting electronic combat operations on the electromagnetic spectrum. In particular, the FEIS should analyze potential impacts on frequency management and frequency allocation, and assess interference issues.</p> <p><b>Land Management and Use; Alternative A, No-Action</b></p> <p><b>LU-10</b> On pp. 4-56 to 4-61, Sec. 4.2.2, the DEIS describes primary land use but does not include population figures or population density statistics under the MOAs, MTRs, and ATCAAs. These figures are important for determining the number of human receptors in the vicinity of the flight path. Please include in the FEIS.</p>

009014	
2	
	<p><b>Endangered Species</b></p> <p><b>BI-11</b> We request that the discussion about threatened and endangered species be clarified and corrected. The references to an ongoing consultation with the U.S. Fish and Wildlife Service (FWS) are in error. FWS records indicate that species information was requested from and provided by the FWS Ecological Services Field Offices in New Mexico and Texas more than 1 year ago. The latest, March 25, 1998, communication received by the FWS from Ogdan Environmental and Energy Services clearly stated that no determination regarding the need for consultation under the Endangered Species Act had been made. Thus, the statements that the Air Force is currently in consultation with the FWS (page 4-85) should be corrected. It is recommended that a more recent list of threatened and endangered species be used in your analysis; species have been proposed for listing and listed since the original December 1997 request for information. We also recommend that the consultative process required by the Endangered Species Act be completed prior to final decision so that potential options will not be precluded. In this regard, please contact Regional Director (ES-TE), U.S. Fish and Wildlife Service, PO Box 1306, Albuquerque, New Mexico 87103-1306.</p> <p><b>BI-26</b> Subsequent environmental documentation should also contain data relevant to the northern aplomado falcon. Portions of the proposed action within southeastern New Mexico and west Texas overlay historic habitat for the falcon. Without an opportunity to review the field data documenting the surveys conducted for this species in this area, we cannot support the characterization of the species' use of the region as a rare migrant or visitor (page 4-90). The same rationale applies to such designated sensitive species as the ferruginous hawk, loggerhead shrike, burrowing owl, white face ibis, swift fox, and Texas horned lizard. The document presents no data concerning the stability of populations of these species, specifically their distribution and abundance within that habitat. We cannot concur with the conclusions presented in the document without reviewing the data upon which the impacts of the proposed action have been assessed.</p> <p><b>BI-27</b></p> <p><b>Identification of Land Units</b></p> <p><b>LU-11</b> Land units Congressionally designated and managed by a number of Bureaus of the Department of the Interior should be clearly identified. Maps outlining specific units of National wildlife refuges, National parks and monuments, etc., do not appear in the DEIS. Various units, administered by the National Park Service (NPS), that were omitted may be impacted by the proposed action, including Capulin Volcano National Monument, Fort Union National Monument, Big Bend National Park, Santa Fe National Historic Trail, Lake Meredith National Recreation Area and Alibates Flint Quarries National Monument.</p>

<p style="text-align: right;">009014</p> <p style="text-align: center;">3</p> <p><b>LU-12</b> Specific references to impacts on units of the National park system are lacking. Neither a negative declaration nor a description of impacts for any unit (except for acknowledging an impact from Alternative A on Big Bend National Park) can be found in the document. For example, Capulin Volcano National Monument appears to be on the edge of the Mt. Dora MOA. Currently, there are few military aircraft operations visible or audible at the National Monument. The National Monument was established in 1916 to protect Capulin Volcano and to provide the public with the opportunity to learn about this classic volcanic feature. Capulin Volcano is the focus of a volcanic field that extends almost 85 miles from Raton to Clayton, New Mexico. The Mt. Dora MOA overlies a large portion of the Raton-Clayton Volcanic Field. Almost 70,000 people visit Capulin Volcano annually. In addition to geology, other important elements of the Monument's significance include air quality, night sky, and the scenic vistas. The panoramic view from the top of Capulin Volcano is a significant part of the visitor experience. Portions of three other states (Texas, Oklahoma, and Colorado) as well as the Sangre de Cristo range of the southern Rocky Mountains, over 50 miles to the west, can be seen from the volcano's summit. The potential effect on the scenic vista and visitor experience at Capulin Volcano from 2,668 annual sortie-operations in the Mt. Dora MOA cannot be evaluated with the information provided in the DEIS, primarily because the exact location of the MOA compared to the National Monument is not clearly presented.</p> <p>Pages 3-9 to 3-10 acknowledge that people seeking isolation and natural beauty in recreation and tourism in the study areas in New Mexico and Texas may find noise from non-natural sources "unpleasant intrusions." This statement may be true for the effects on units of the National park system. In addition it may be that such noise also adversely impacts the legislated purposes of parks and monuments.</p> <p>The discussion of Aircraft Noise Assessment Methods (pages 4-5 to 4-14 and pages 4-23 to 4-24) has limited relevance to assessing impacts on federal lands or resources, such as natural quiet (i.e., the natural soundscape unaffected by human noise sources), or on a park visitor's experience, which may range from a few hours to a few days at most and may occur mostly out of doors seeking such things as solitude, tranquility, and the natural environment (including natural sounds). This limited relevance is probably also true for other outdoor recreation and natural areas. While the NPS is still evaluating the utility of noise metrics to assess impacts in the very wide variety of park units, some matters are becoming clear. We support the use of <math>L_{max}</math> and SEL metrics in combination with Percent Time Audible and one-hour <math>L_{eq}</math> metrics which have proven to be important for assessing noise impacts on most National park resources and visitors. The cumulative metric Average Day-Night Sound Level (DNL), which is an annualized 24-hour average relevant to residents of an area, has no relevance at all to impacts on a visitor's experience or federal resources. For example, if a visitor's once-in-a-lifetime visit to a NPS area includes a 100+ dB aircraft event of even a few seconds, it may be one of the most memorable parts of the visit, regardless of the event's effect on the DNL. Whether that memory is positive or negative, it will not be part of the purpose of any of the parks or monuments in the study area, so it will detract from the intended visitor experience.</p>	<p style="text-align: right;">009014</p> <p style="text-align: center;">4</p> <p><b>PD-53</b> We are concerned about the cumulative effects of all the military airspace changes being considered in New Mexico and Texas. It is also unclear how aircraft may move from one set of MTR's and MOA's to another and how aircraft may transit into and out of the set of MTR's and MOA's being considered in this DEIS.</p> <p>In addition, the following specific comments, questions, and concerns relate to Alternative "D" unless otherwise specified:</p> <p><b>Military Overflights</b></p> <p>The incidents of military aircraft overflights of Capulin Volcano National Monument have been significantly reduced in recent years. We appreciate the willingness of the Department of the Air Force, especially Cannon Air Force Base, to work with the NPS and would count on continued cooperative efforts on the issue of military overflights.</p> <p><b>PD-54</b> We are concerned, however, about an increase in military aircraft overflights at Lake Meredith National Recreation Area by the addition of Instrument Route (IR)-153 section WAWB. The impacts from increased numbers of aircraft following the Canadian River drainage should also be analyzed in subsequent environmental documentation.</p> <p><b>Airspace and Aircraft Operations</b></p> <p><b>PD-55</b> We recommend the elimination of the MOA airspace over Capulin Volcano National Monument by the reconfiguration of the Mt. Dora MOA. It is unclear whether secondary MTR IR107/VR108 and Visual Route (VR)1175/1176 would still continue within former MOA airspace over or near Capulin Volcano, New Mexico. The significant increase in the level of use within the Mt. Dora MOA is not sufficiently considered. Substantial discussion of the increased aircraft activity within the MOA was lacking. For example, how long will aircraft typically operate within the MOA? How many planes and how many sortie-operations would be occupying the MOA at the same time? Annual sortie-operation is projected to increase from 379 to 2,668, almost exclusively by bomber aircraft (2250). There are almost no bomber aircraft currently using the Mt. Dora MOA. Without knowing the distance of the MOA from Capulin Volcano, New Mexico, it is difficult to evaluate concerns about noise and visual impacts resulting from an increase in annual sortie-operations from 379 to 2,668.</p> <p><b>PD-57</b></p> <p><b>PD-58</b> Aircraft use is concentrated in segment AB-JK of the proposed IR-153. We are concerned about the projected total sortie operations and resulting noise and visual impacts for segments HI/IJ located near Fort Union National Monument. A total of 3,100 operations are projected from a baseline of 440 operations. The effects of this increase should be analyzed in future environmental documentation.</p>
<p style="text-align: right;">009014</p> <p style="text-align: center;">5</p> <p><b>AO-107</b> Further discussion of how the DNL ratings were achieved is necessary. Part of the calculations included factoring the annual sortie-operations divided by 12 for a monthly average (p.4-9); yet there will be approximately 260 fly-days (much less than 365 days) per year (p.4-21). Would a daily average rather than monthly average provide a more accurate factor for determining noise effect? Further discussion should also be provided describing how the DNL ratings were determined for sections of IR-153 that are estimated to receive more than 2,668 sortie-operations per year, such as sections HI/IL with 3100 projected sortie-operations.</p> <p><b>Land Management and Use</b></p> <p>As stated above, it was difficult to identify the affected environment from the maps provided. We were unable to identify federal land units on the map of Special Use Land Management Areas in Figure 4.2-8. Knowing the distance of Capulin Volcano National Monument from the proposed adjustment of the Mt. Dora MOA, the distance of Fort Union National Monument from sections HI/IL, and the distance of Lake Meredith National Recreation Area from section WAWB of the proposed IR-153/Mt. Dora MOA would assist in evaluating impacts and effects in subsequent environmental documentation. It appears that a greater number of special land management use areas (13) will be affected in Alternative D than in the other alternatives, and these areas will experience significant increases of 10 -16 DNL in noise.</p> <p><b>Socioeconomic and Environmental Justice</b></p> <p><b>SE-5</b> We question the analysis and conclusion that adverse impact would not occur because none of the proposed airspace exceeds a noise level of 65 DNL (p. ES-4). There are problems using the DNL standard in a largely rural setting. The changes in noise level affecting some communities or in some cases isolated residents are significant. While there are fewer communities affected in this alternative, the change in noise levels is greater. The rural communities within the affected area are generally composed of low income and minority populations. There has been little involvement of citizens in the rural communities of Union County or the gateway community of Clayton, New Mexico, in the development of this DEIS. Public meetings were held in Angel Fire, New Mexico, which is a 3-hour drive from Clayton, of which at least an hour is on mountainous roads.</p> <p><b>GE-22</b></p> <p><b>Cultural Resources</b></p> <p><b>CU-12</b> Again, without knowing the proximity of Fort Union National Monument to IR-153 sections HI/IL, it is not possible to properly evaluate the consequences of the alternatives to this National park unit. The assessment focuses on the impact of noise levels and possible physical</p>	<p style="text-align: right;">009014</p> <p style="text-align: center;">6</p> <p><b>CU-13</b> damage to properties listed on the National Register. Some Register-listed structures will be subjected to an 18 DNL increase and some noise levels would reach 62 DNL. This is a significant change. Even though the noise may not physically damage the historic properties, there may be a negative effect on the historic setting and visitor experience of those historic resources.</p> <p>Within the DEIS, there is insufficient consideration of the noise and visual intrusions to the Santa Fe Trail, a National Historic Trail. Significant segments of the Cimmaron Route and Mountain Route lie within the affected area. Also, there is no mention of the consideration of National Historic Landmark sites, such as the Clayton Complex, which includes McNee Crossing, Rabbit Bars, Turkey Creek Camp, and Mt. Dora. Subsequent environmental documentation should analyze the effects of the alternatives under consideration on the historic setting and visitor experience of these sites.</p> <p>Thank you for the opportunity to comment on this DEIS. We trust these comments will be of use during subsequent environmental documentation.</p> <p style="text-align: right;">Sincerely,            Glenn B. Sekavec          Regional Environmental Officer</p>

<div style="text-align: center;"> <p><b>009015</b></p>  <p>GOVERNOR Gary E. Johnson</p> <p>STATE OF NEW MEXICO</p> <p><b>DEPARTMENT OF GAME &amp; FISH</b></p> <p>Village Building P.O. Box 75112 Santa Fe, NM 87512</p> <p>Visit our Web Site (www.nm.gov) at: <a href="http://www.nm.gov/dgaf">http://www.nm.gov/dgaf</a> For more information or to contact the Director, call 1-800-662-9111</p> <p>STATE GAME COMMISSION Walter H. Byrnes, Chairman Jill Riel Aurita Haggard Les C. Cobb, V.P. Steven C. Emery Robert G. Galt Steve Price A. Alvarado, III Stephen E. Ober Foncia V.V. Cia. J. Clanton F. Haggard, III George A. Ortega Sandra Kelly</p> <p>DIRECTOR AND SECRETARY TO THE COMMISSION Gerald A. Maracchini</p> </div> <p style="text-align: right;">June 16, 1999</p> <p>Major Brent Adams RBT EIS Project Manager HQ ACC/CEVPP 129 Andrews Street, Suite 102 Langley AFB, VA 23665-2769</p> <p>Re: Realistic Bomber Training Initiative Draft Environmental Impact Statement.</p> <p>Dear Major Adams:</p> <p>The New Mexico Department of Game and Fish (Department) has reviewed the Draft Environmental Impact Statement (DEIS) for the Realistic Bomber Training Initiative (RBTI). Clint Hensen and Mark Watson, Department wildlife specialists, attended public meetings for this project. The RBTI proposes to establish an Electronic Scoring Site System consisting of linked military airspace and ground-based components for B-1 and B-52 bomber training within approximately 600 nautical miles of Barksdale Air Force Base (AFB) in Louisiana and Dyess AFB in Texas. The Air Force proposes to use existing and new military airspace and ground-based components in either west Texas or northern and northeastern New Mexico, depending on which alternative is selected.</p> <p>Three action alternatives were identified. Proposed locations for Alternative B: IR-178/Lancer MOA and Alternative C: IR-178/Texon MOA are almost entirely in west Texas, with only a small portion of airspace extending into New Mexico. Alternative D: IR-153/Mt. Dora MOA is proposed in northern and northeastern New Mexico, with eastern portions of the Military Training Route (MTR) extending into west Texas.</p> <p>Should Alternative D be selected, the Air Force anticipates an average of ten B-1 and B-52 bomber flights per day, 260 training days per year, at a minimum of 300 feet above</p>	<div style="text-align: right;"> <p><b>009015</b></p> <p>Major Brent Adams      2      June 16, 1999</p> </div> <p>ground level (AGL) through the northern New Mexico MTR. Currently, approximately one jet fighter overflight per day at 100 feet AGL or above occurs in the existing MTR.</p> <p>The Department has three major concerns with Alternative D (primarily with the establishment of the new Instrument Route (IR) 153 within this MTR): 1) the large number of ecologically sensitive Special Land Use Management Areas in the flight path and adverse impacts on sportsmen and recreationists; 2) potential direct, indirect and cumulative adverse impacts on wildlife, including big game and threatened, endangered and sensitive species; and 3) a deficient cumulative impacts analysis and the safety of our personnel conducting seasonal aerial wildlife surveys.</p> <p>1) <b><u>SPECIAL USE LAND MANAGEMENT AREAS AND IMPACTS ON SPORTSMEN AND RECREATIONISTS:</u></b></p> <p>Page 4-81 of the DEIS states: "Flight operations would not likely affect land use, recreation resources, or visual settings under the airspace." Page 4-83 states: "None of the alternatives would have more than minimal effects on land use, recreation resources, or visual settings." The Department strongly disagrees with both statements as explained in the following section.</p> <p>Alternatives B and C would overfly two Special Use Land Management Areas (e.g. state parks and wildlife areas, Wild and Scenic Rivers, etc.), whereas Alternative D would overfly thirteen (or seventeen; the DEIS is contradictory with regard to this issue; see page 4-76). Ecologically sensitive Special Use Land Management Areas in New Mexico in the flight path for Alternative D include: 1) the Urraca, Colin Neblett and Elliot Barker Wildlife Areas owned by the Department and managed for wildlife habitat and hunting opportunities; 2) Villanueva, Cimarron Canyon, Sumner Lake, Chocosa Lake and Clayton Lake State Parks; 3) the Rio Grande Wild and Scenic River; 4) Kiowa National Grasslands; and 5) portions of the Carson and Santa Fe National Forests. Ute and Conchas Lakes State Parks are close to the proposed flight paths, but are not analyzed in the DEIS.</p> <p>Should Alternative D be chosen, the frequency of overflight disturbance throughout most of the New Mexico MTR and the intensity of overflight noise disturbance will increase substantially. Increased low-altitude overflights of ecologically sensitive Special Use Land Management Areas will subject hunters, fishermen, non-consumptive wildlife users and wildlife to noise levels 10 DNL above current baseline levels (DNL is the Day-Night Average Sound Level, which sums individual noise events and averages noise levels over a 24 hour period). Federal agencies have adopted guidelines for noise analyses, and most consider noise levels at or above 65 DNL unacceptable to residential, recreational, cultural and other human use areas. At 65 DNL, approximately 12% of the exposed population would be highly annoyed. Humans may perceive changes of 3 DNL or more,</p>
<div style="text-align: center;"> <p><b>009015</b></p> <p>Major Brent Adams      3      June 16, 1999</p> </div> <p>even below 65 DNL, as degrading their environment and/or negatively affecting their quality of life (DEIS p.4-56). For proposed IR-153, which contains 38 segments and most of the airspace outside of the higher altitude Military Operations Area (MOA), over half of the segments will have a noise level of 60 DNL or above. Noise levels will increase by more than 10 DNL in 22 segments. The highest noise levels and greatest change would occur in segments AB-GH of the route (northern New Mexico), the most ecologically sensitive segments that include our wildlife areas. In the western half of the MTR, 4 to 10 percent more people could be highly annoyed (DEIS p.4-46).</p> <p>The Elliot S. Barker, Colin-Neblett and Urraca Wildlife Areas are owned and managed by the Department for wildlife habitat and hunting opportunities. These areas provide habitat for mule deer, elk, turkey, bighorn sheep and numerous other wildlife species. Critical winter habitat areas occur on the Colin-Neblett, which receive concentrated wildlife use during winter months (Colin-Neblett Wildlife Area Management Plan; August 24, 1984). The Elliot S. Barker Wildlife Area is located within the Valle Vidal Management Unit, and contains both summer and winter habitat for big game species. This area provides important winter habitat for a substantial number of residential and migratory elk, which generally occupy the area in December and stay until April (Elliot S. Barker Wildlife Area Management Plan; August 24, 1984).</p> <p><b>LU-14</b> The Valle Vidal Management Unit was not identified within the DEIS as a Special Use Land Management Area. The Valle Vidal is managed by the Department in cooperation with the Carson National Forest as critical elk calving and wintering habitat. The Valle Vidal is designated as a once-in-a-lifetime opportunity elk hunting area, and closures are in effect from January 1 to July 1 in a portion of the unit to prohibit human disturbance. The Valle Vidal falls under segments BC to CD of proposed IR-153, which are only 4 nautical miles wide, and would experience 2,660 sortie-operations per year. This increased frequency and intensity of low-level overflights will adversely affect the hunting, fishing and nonconsumptive wildlife experiences for New Mexico sportsmen and recreationists in this area, and possibly adversely affect elk migration and reproduction.</p> <p><b>LU-15</b></p> <p><b>BI-28</b></p> <p><b>LU-16</b> The DEIS also fails to identify the Latir Peaks Wilderness Area as a Special Use Land Management Area, which also falls under segments BC-CD. The Latir Peaks Wilderness Area has been identified as suitable Rocky Mountain bighorn sheep habitat and is currently being considered for reintroduction bighorn in 2000. The DEIS should analyze potential impacts to the Valle Vidal and Latir Peaks Wilderness Area and incorporate these areas into the Special Use Land Management Areas tables.</p>	<div style="text-align: right;"> <p><b>009015</b></p> <p>Major Brent Adams      4      June 16, 1999</p> </div> <p>2) <b><u>IMPACTS ON WILDLIFE:</u></b></p> <p>The Department is concerned with the potential adverse impacts of low-level overflights on big game, waterfowl, and threatened, endangered and sensitive species.</p> <p>With regard to this issue, page 4-106 of the DEIS states:</p> <p>"Potential sources of impacts to wildlife from aircraft overflights are the visual effect of the approaching aircraft and the associated subsonic noise. Any visual impacts would be most likely to occur along those portions of IR-153 that are below 1,000 feet AGL (e.g., segments AB-11), the altitude accounting for most reactions to visual stimuli by wildlife (Lamp 1989; Bowles 1995).</p> <p>"IR-153 would experience an increase of approximately 1 to 10 sortie operations per day, depending upon the segments flown. The potential for impacts to wildlife and birds would be greatest where the segments permit flight altitudes below 1,000 feet AGL but above 300 feet AGL. Of the 38 segments on proposed IR-153, 30 would permit overflights below 1,000 feet AGL (Appendix C, Table C-3). It is estimated that approximately 80 percent of the flight activity along these segments would occur below 1,000 feet AGL. None of the flight activity in the proposed Mt. Dora MOA/ATCAA would be below 3,000 feet AGL and it should not affect wildlife. As a result of the program of consultation, the USFWS has raised concerns regarding the effects of low-altitude overflights on threatened or endangered bird species.</p> <p>"Studies of subsonic aircraft disturbances on ungulates, in both laboratory and field conditions, have shown that effects are transient and of short duration, and suggest that the animals habituate to the sounds (Workman <i>et al.</i> 1992; Krausman <i>et al.</i> 1993, 1998; Weisenberger <i>et al.</i> 1996). Similarly, the impacts to raptors and other birds from aircraft low-level flights were found to be brief, insignificant, and not detrimental to reproductive success (Smith <i>et al.</i> 1988; Lamp 1989; Ellis <i>et al.</i> 1991; Grubb and Bowerman 1997). Based on these studies, the evidence would suggest that Alternative D flight operations would not result in significant, adverse impacts to wildlife or threatened, endangered or sensitive species. Historically, and at present, most (about 90%) of the area and wildlife under proposed IR-153 has been subject to low-altitude military overflights."</p> <p>Other literature sources suggest that low-level aircraft overflights can negatively impact wildlife populations. Concerning possible adverse effects of low-level overflights on wildlife, the National Park Service (1994 p.10.2) states:</p> <p>"In general, wild animals respond to low-altitude overflights, although the manner in which they do so depends on life-history characteristics of the species, characteristics of the aircraft, flight activities, and a variety of factors such as habitat type and previous exposure to aircraft. The primary concern stemming from these low-level overflights related to wildlife is that the flights may cause physiological and/or behavioral responses that in turn reduce the wildlife's fitness or ability to survive. Overflights may cause excessive arousal and alertness or stress. If chronic, stress can compromise the general health of animals. Overflights may interfere with raising young, habitat use, and physiological energy budgets. Indirect effects on wildlife such as accidental injury, energy losses, habitat avoidance and abandonment are very difficult to detect, but some experts suspect they occur."</p>

<b>009015</b>	Major Brent Adams 5 June 16, 1999
<p>Concerning the effects of low-altitude overflights on wildlife, the National Ecology Research Center (1988 p.13-15) states:</p> <p>"Differences in noise from low-altitude subsonic overflight and high-altitude supersonic overflight include the increased duration of noise from a low-altitude overflight, the greater probability that noise from low-altitude overflights will be accompanied by visual perception of the aircraft, and the broad-band frequency distribution of jet engine noise (about 200-20,000 Hz) versus the low-frequency noise of sonic booms (with most of the sound energy between 15-50 Hz).</p> <p>"Animal species differ greatly in their response to noise of various characteristics and duration. Individual animal response to a given noise event or series of events also can vary widely, due to a variety of factors, including time of day and year, physical condition of the animal, physical environment (such as whether the animal is restrained or unrestrained), the experience of the individual animal, and whether or not other physical stressors (e.g. drought) are present."</p> <p><b>BI-29</b> A substantial body of literature documents impacts to domestic animals and wildlife in laboratory and field settings of simulated and actual aircraft noise and overflights. Borg (1981) found that in general, animals appear to be more sensitive to noise disturbance than humans. Effects to wildlife from low-level overflights and sonic booms may include: 1) direct physical auditory changes such as eardrum rupture and temporary and permanent hearing shifts (Beagley 1965; Majeau-Chargois et al. 1970; Reinis 1976); 2) lowered reproductive rates (Calef 1974; Gunn and Livingston 1974; Harrington and Veitch 1992; and others); and 3) behavioral changes such as decreased ability to obtain food, interference with mating, and habitat avoidance (Stockwell et al. 1991; McCourt et al. 1974a; Schweinsburg 1974a and 1974b; Gollop et al. 1974b). See Table I for a partial list of studies of effects of simulated and real aircraft noise and sonic booms on wildlife and domestic animals.</p> <p>The conflicting research findings on the effect of noise and low-altitude overflights on wildlife populations suggest that extreme levels of noise can have serious adverse effects, but that below a certain threshold no or minimal disturbance is detectable. The Department believes that the intensity, frequency, duration and timing of the proposed low-level overflights may have substantial negative impacts on wildlife populations, should Alternative D be chosen.</p>

<b>009015</b>	Major Brent Adams 7 June 16, 1999
<p>Page 4-50 of the DEIS states: "Neither the existing nor proposed airspace in Alternative D would overlie or intersect any major migration flyways or water bodies where birds congregate." This statement is inaccurate, represents a poor understanding of the area under analysis, and is contradicted by information contained in the DEIS. Page 4-103 of the DEIS recognizes the importance of the Rio Grande flyway to migrating whooping cranes. This flyway also supports thousands of sandhill cranes, snow and Canadian geese, waterfowl and other birds in annual spring and fall migrations to Bosque del Apache National Wildlife Refuge and points further south. The DEIS fails to acknowledge the use of Sumner, Cochas, Ute and Clayton Lakes State Parks, and Rio Grande, Pecos and Canadian Rivers as significant wintering areas for migratory waterfowl and eagles. These areas will all be in or near the flight paths for Alternative D if selected. These facts undermine the DEIS assertion (p.4-50) that even with increased sortie-operations, the potential for bird-aircraft strikes in IR-153 and Mt. Dora MOA would be negligible.</p> <p>Section 4.3.5, page 4-101 states: "Most of the wildlife occurring under Alternative D airspace consist of those species associated with mixed grasslands. As described previously under Alternative A: No-Action, many of these wildlife species are habitat generalists able to adapt to a range of habitats...Due to the arid nature of the region, the abundance and diversity of resident and migratory wildlife are greatest around riparian areas, lakes, reservoirs, and ephemeral playays." These statements are inherently contradictory. Many different habitat types will be impacted by the selection of Alternative D, including montane, lacustrine, riverine and riparian habitats. Because most vertebrate wildlife species in New Mexico are reliant on riparian and aquatic habitats for food, water and cover, these species are not able to adapt to a wide range of habitats. Of the 867 species of vertebrates known to occur in New Mexico, 479 (55%) rely wholly or in part on aquatic, wetland or riparian habitat for their survival. Fifty-one of the 96 species that are listed by the state as threatened or endangered are associated with these habitats (NMGF 1997). The reliance of much of the state's wildlife on aquatic and riparian habitats within Special Land Use Management Areas in the proposed MTR emphasizes the potential adverse impacts on wildlife.</p> <p style="text-align: center;"><u><b>THREATENED, ENDANGERED AND SENSITIVE SPECIES</b></u></p> <p>The DEIS cover sheet states: "Alternative D would result in continued and increased low-altitude overflights of known or suspected habitat for federally-listed threatened and endangered bird species: peregrine falcons, Mexican spotted owls, and bald eagles. No cumulative impacts are expected." Table 2.6.1 on page 2-61 of the DEIS states that for Alternative D, the project will increase by 10 low-altitude overflights over three peregrine falcon nest areas, wintering bald eagle areas, and Mexican spotted owl habitat. The table states that the U.S. Fish and Wildlife Service considers low-altitude overflights as potentially significant to these species. The Department is also concerned about the</p>	

<b>009015</b>	Major Brent Adams 8 June 16, 1999
<p>potential direct, indirect and cumulative impacts to these species. Several recent reports have suggested that spotted owls may be susceptible to disturbance-induced stress, which could be contributing to population declines (Wasser et al. 1997; Malakoff 1997). Although the literature is again divided concerning the impacts of low-altitude overflight disturbance on certain raptor species, testing for similar intensity, frequency, duration and timing of overflight disturbance is difficult. We believe that extrapolating study results to situations with more intensive low-level overflight conditions would not be valid.</p> <p>3) <u><b>CUMULATIVE EFFECTS AND DEPARTMENT AERIAL SURVEYS</b></u></p> <p>Due to the incremental increase in low-altitude overflights of northern New Mexico by various branches of the military, the Department has previously requested that cumulative impact analyses be conducted to adequately analyze past, present and reasonably foreseeable future projects. To our knowledge, none have been done. It is our understanding that Sections 1502.16 and 1508.7 of the National Environmental Policy Act (NEPA) regulations require federal entities to consider direct, indirect, and cumulative impacts of the proposed project on the affected environment. CEQ regulation 40 CFR1508.7 states: "Cumulative impact" is the impact on the environment which results from the incremental impact of the action when added to other past, present, and reasonably foreseeable future actions regardless of what agency (Federal or non-Federal) or person undertakes such other actions. Cumulative impacts can result from individually minor but collectively significant actions taking place over a period of time."</p> <p>Page 5-2 of "Chapter 5-Cumulative Effects" states: "Known past and present actions that might result in cumulative effects are all Air Force activities." We disagree with this statement, since the Air National Guard proposed to establish a low-level training route over northcentral New Mexico, which the Department commented on in a letter dated 24 June 1990. To our knowledge, these flights still occur. The Department also routinely conducts aerial big game population surveys that overlap much of the areas to be overflown by proposed IR-153. These survey flights were not analyzed as part of the cumulative analysis for this project. The Department is concerned that the increased number of low-level flights will pose a hazard to Department personnel conducting routine aerial big-game surveys if Alternative D is selected.</p> <p>Page 5-2 of the DEIS also states: "The flight operations of each of these actions [USAF] have been incorporated into the analysis in this EIS as part of the baseline conditions in the affected airspace environment for the No-Action Alternative and the action alternatives, then incorporated into the analysis for each of the alternatives." It is our understanding that this approach does not fulfill the intent of NEPA cumulative analysis requirements. By considering all existing activities as baseline conditions, past and present activities are not analyzed. If this method were valid, each new project would essentially start with a "clean slate", and have no previous impacts to consider, since any</p>	

<p style="text-align: right;"><b>009015</b></p> <p>Major Brent Adams 9 June 16, 1999</p> <p>previous impacts would now be considered existing baseline conditions. In support of this apparent position, page 5-1 states: "The time frame for cumulative effects starts in early 2000 when airspace changes proposed under RBTI would most likely be implemented and would continue into the foreseeable future."</p> <p>The Department believes that a more rigorous analysis is needed to determine possible long-term cumulative effects of past, present and future Air Force and other aerial operations in northern New Mexico on sportsmen, recreationists and wildlife. NEPA (40 CFR 1508.27.7) states that: "Significance cannot be avoided by terming an action temporary or by breaking it down into small component parts."</p> <p>In closing, the Department's primary concerns are the intensity, frequency, duration and timing of proposed low-altitude overflights, primarily in the proposed IR-153 of Alternative D, and the project's potential adverse impacts on recreationists and wildlife, including big game, water fowl, raptors, and other sensitive species. Alternative D will have the most adverse impact on wildlife resources and recreational users of Special Use Land Management Areas and would result in the most change from baseline conditions (page 4-52).</p> <p>We appreciate the opportunity to comment on this DEIS. Should you have any further questions regarding our comments, please contact Mark Watson, Habitat Specialist of my staff at (505) 827-1210.</p> <p style="text-align: right;">Sincerely, <i>Tod W. The RBTI, designed to increase training opportunities for aircrews flying B-1 and B-52 aircraft from Dyess Air Force Base, Texas, and Barksdale Air Force Base, Louisiana, consists of the following proposed elements:</p> <ul style="list-style-type: none"> <li>Modifications and additions to existing military training route (MTR) airspace in Texas and New Mexico used generally for low-altitude navigation training activities;</li> <li>Modifications and additions to existing military operations area (MOA) airspace in Texas and New Mexico used for medium to high altitude training and maneuvering;</li> <li>Increased flights by B-1 and B-52 aircraft in the identified airspace;</li> <li>Acquisition of several 15-acre parcels under MTR and MOA airspace for construction and operation of an Electronic Scoring Site system; and</li> <li>Closure of existing Electronic Scoring Site systems in Arkansas and Colorado.</li> </ul> <p>Our comments deal solely with the discussion of threatened and endangered species within the document, a narrative that is greatly in need of clarification and correction. The references to an ongoing consultation are in error and should be corrected. Our records indicate that species information was requested from and provided by the Fish and Wildlife Service Ecological Services Field Offices in New Mexico and Texas more than one year ago. Indeed, the latest (March 25, 1998) communication received by the Fish and Wildlife Service from Ogden Environmental and Energy Services clearly stated that no determination regarding the need for consultation under the Endangered Species Act had been made. Thus, the statements that the Air Force is currently in consultation with the Fish and Wildlife Service (Page 4-85) should be corrected. We also recommend that a more recent list of species be</p> <p><b>BI-11</b> <b>BI-30</b></p>
---	---

<p style="text-align: right;">009016</p> <p style="text-align: center;">2</p> <p>utilized in your analysis: species have been proposed for listing or are under review for determining if a proposal to list is warranted since the original December 1997 request for information. We have enclosed a current list of species for the following counties: Colfax, Eddy, Guadalupe, Harding, Lea, Mora, Quay, Rio Arriba, San Miguel, Taos, and Union.</p> <p><b>BI-26</b> The Fish and Wildlife Service also requests an opportunity to review the data upon which the statements concerning the northern aplomado falcon in the draft document are based. The portions of the proposed action within southeastern New Mexico and west Texas overlay significant historic habitat for the falcon. Without an opportunity to review the field data documenting the surveys conducted for this species in this area, we believe that the characterization of the species' use of the region as a rare migrant or visitor is biologically unsupported. Without reviewing those data, we also cannot agree with such blanket statements as those in the last paragraph of Page 4-90, concerning such designated sensitive species as the ferruginous hawk, loggerhead snake (we assume this is loggerhead shrike), burrowing owl, white face ibis, swift fox, and Texas horned lizard. The document presents no data concerning the stability of populations of these species, specifically, their distribution and abundance within that habitat. Without reviewing the data upon which the impacts of the proposed action have been assessed, and based on our own records, the Fish and Wildlife Service cannot concur with the conclusions presented in the document.</p> <p>Should you have any questions concerning these comments, please contact this office at your earliest opportunity.</p> <p style="text-align: center;">Sincerely,</p> <div style="text-align: center;">  <p>Jennifer Fowler-Propst Field Supervisor</p> </div> <p>Enclosures</p> <p>cct(w/o enc): Geographic Assistant Regional Director, AZ/NM, Fish and Wildlife Service, Albuquerque, New Mexico Geographic Assistant Regional Director, TX/OK, Fish and Wildlife Service, Albuquerque, New Mexico Regional NEPA Coordinator, Ecological Services, Fish and Wildlife Service, Albuquerque, New Mexico Field Supervisor, Austin Ecological Services Office, Austin, Texas Field Supervisor, Arlington Ecological Services Office, Arlington, Texas</p>	<p style="text-align: right;">009016</p> <p>Colfax</p> <p>Black-footed ferret, <i>Mustela nigripes</i>, E Fringed myotis, <i>Myotis thysanodes</i>, SC Long-eared myotis, <i>Myotis evotis</i>, SC Long-legged myotis, <i>Myotis volans</i>, SC New Mexican meadow jumping mouse, <i>Zapus hudsonius luteus</i>, SC Occult little brown bat, <i>Myotis lucifugus occultus</i>, SC Swift fox, <i>Vulpes velox</i>, C American peregrine falcon, <i>Falco peregrinus anatum</i>, E Arctic peregrine falcon, <i>Falco peregrinus tundrius</i>, E (S/A) Baird's sparrow, <i>Ammodramus bairdii</i>, SC Bald eagle, <i>Haliaeetus leucocephalus</i>, T Black tern, <i>Chlidonias niger</i>, SC Loggerhead shrike, <i>Lanius ludovicianus</i>, SC Ferruginous hawk, <i>Buteo regalis</i>, SC Mexican spotted owl, <i>Strix occidentalis lucida</i>, Mountain plover, <i>Charadrius montanus</i>, PT Northern goshawk, <i>Accipiter gentilis</i>, SC Piping plover, <i>Charadrius melodus</i>, T Southwestern willow flycatcher, <i>Empidonax traillii extimus</i>, E Western burrowing owl, <i>Athene cunicularia hypugea</i>, SC White-faced ibis, <i>Plegadis chihi</i>, SC Arkansas River shiner, <i>Notropis girardi</i>, PE w/CH Flathead chub, <i>Platyphlois (=Hybopsis) gracilis</i>, SC Plains minnow, <i>Hybognathus placitus</i>, SC Texas horned lizard, <i>Phrynosoma cornutum</i>, SC Dwarf milkweed, <i>Asclepias uncialis</i> var. <i>uncialis</i>, SC</p>

Langley AFB, VA 23665-2769

Dear Major Adams:

**BR-6**

I have personally reviewed the Air Force's proposed Realistic Bomber Training Initiative (RBTI) and the Draft Environmental Impact Statement, with appendices, regarding Alternative D in northern New Mexico. As you know, I have been a firm, consistent supporter of the armed forces in the United States, and I believe strongly in the need to further improve training and support for our military personnel. Programs like RBTI are essential to such training, and I support them vigorously.

I could not, however, be more strenuously opposed to the selection of Alternative D - and I urge you in the strongest possible terms to consider some other alternative.

I have been a volunteer in the programs of the Boy Scouts of America for my entire adult life. For more than fifteen years, I have been a volunteer at Philmont Scout Ranch in Colfax County, New Mexico - the largest and most famous Scouting facility in the world. I spend several weeks every year in the Sangre de Cristo Mountains of Philmont; have hiked, camped and fished there, and know its terrain as well as I know my own back yard.

Philmont lies directly in the path of Alternative D. Low-level overflights by B-1s and B-52s would destroy its usefulness for the wilderness camping and hiking experience that has made it world famous, and from which more than a half million young people have left with a greater appreciation for our natural environment and their own resourcefulness. Though Colfax County is sparsely populated, there are more than 5000 young people in the mountains of Philmont on any given day - some on horseback, some rappelling or mountain climbing, some engaged in spar pole climbing. Their safety would be compromised, and their wilderness experience destroyed should these flights be approved. For all practical purposes, the single largest asset of the Boy Scouts of America would be rendered useless for the purpose it was acquired more than sixty years ago should Alternative D be selected.

Thank you for your consideration of my views. Please contact me personally if you would like to discuss the matter further.

Sincerely yours,  
  
Edward A. Pease  
Member of Congress

RE: Draft Environmental Impact Statement

Dear Major Adams:

Please enter Brewster County's objection, in the strongest possible terms, to the Draft Environmental Impact Statement ("DEIS") for the Realistic Bomber Training Initiative ("RBTI"). Although the Air Force may have complied with the technical requirements of the National Environmental Policy Act ("NEPA"), you have clearly not complied with the spirit or intent of the Act. The intent of the Act is that all proposed governmental actions should be considered in light of their impact on people and the environment; that is the only reason NEPA was passed and continues to have relevance. Both the people of our County and all aspects of our environment will be significantly impacted by the cumulative effect of the RBTI and the activities in Instrument Routes 102, 141, and 178. We urge you to follow the "No-Action Alternative" (Alternative A) and leave the people, livestock, wildlife, values, and quality of life intact in Brewster County.

**AF-54**

**BR-5**

Although some initially doubted the rationale and justification of low-level bomber training, which was claimed to be critically needed, the recent conflict in Kosovo has proven the Air Force's logic to be both hollow and false. It is very clear that our military commanders do not consider it an appropriate tactic or risk of war to expose our pilots, our personnel, and our equipment to the hostile responses that low-level flight in combat entails. If, in an actual war or other conflict, our bombers will operate only at 15,000 to 40,000 feet or above, why is it appropriate to terrorize our citizens at an altitude of 300 feet? Why is that training necessary? Aside from the reasons for the conflict in Kosovo, which are unclear, the lessons the conflict taught are crystal clear: The bombers of the United States Air Force are not going to be flying low in war. Why do we therefore need to train them in peacetime to use tactics that they will not be called upon to use in war? Perhaps, rather than acquiring new property rights by utilizing private property for a public purpose, the Air Force should consider rewriting its training manual and revising its tactics.

Since NEPA requires an evaluation of the environmental consequences of proposed action, environmentally it is inane dissembling to claim that a sound level of 117 decibels will have minimal effect on livestock, wildlife, or the quality of life. Too many personal and commercial anecdotes, as well as scientific studies, belie this. The DEIS has taken average noise levels over

Brewster County does not discriminate on the basis of race, color, national origin, sex, religion, age and handicapped status in employment or the provision of services.

009018

Major Brent Adams, RBTI EIS Project Manager  
June 16, 1999  
Page 2 of 3

A prolonged period and within a large area to ameliorate the impact effect by claiming that the build-up and the dying-down of the maximum sound level moderates its effect, as does the fact that there will be lateral variance within the route. This approach may sound logical, but it is not real life. Neither a deer nor a human reacts to the sound of an aircraft approaching or leaving or flying somewhat to the side as detracting from the impact of its flying directly overhead at 300 feet and 550 knots. There are no "averages" in time and space in real life experience that lessen the maximum impact of the noise.

**BR-1** The DEIS spends ten pages explaining "the cumulative energy average noise metric" and the "Day-Night Average Sound Level". Your explanations are hard to follow, to say the least. The reason they are hard to follow is that they make no sense to real people in a real life situation. What counts is the maximum sound level. To honestly measure the impact, the DEIS should measure the maximum sound level. You have not done so, as a result of which all of your explanations are irrelevant.

Much of the DEIS ignores the real concerns and real reactions to your proposal by real people. To compare the sound of a B-1 at 500 feet with the sound of a chain saw defies common sense; yet Figure G-1 blithely makes that comparison. Similarly, to claim that an F-16 at 5,000 is like a garbage disposal means to a normal person that the Air Force is merely justifying its preconceived results. The DEIS is a finely crafted document that could just as easily be written before you began the process. Perhaps it was.

**AO-70** Your cavalier dismissal of any problems with aircraft emissions and air quality with the statement that "[b]ecause military aircraft are mobile and cover very long distances over many different areas, they commonly contribute little to the total emissions in a region." This, too, is the explanation of averages, exactly like your amelioration of the sound impact. The fact that emissions will dissipate does not mean much to the family that is forced to smell the emissions emanating directly over their house. Nor does it impress the eco-tourist who thought he was going to one of the last pristine places in Texas.

Also disturbing is the claim that safety is not a realistic concern because "[f]light safety is of paramount concern to the Air Force." Undoubtedly that is true, just as it is true that "[your] aircraft accidents have steadily declined." Nevertheless, you do acknowledge that what you euphemistically call "Class A Mishaps" do occur and, in fact, will continue to occur. Since a Class A Mishap involves "loss of life, permanent total disability, [or] total cost of more than \$1 million", the fact that they are rare is of small comfort to the people living under the RBTI route.

**AO-61** It is also revealing that the Air Force presents reams of data to justify its denigrating of any safety concerns and then recites that "[t]hese data are only statistically predictive and actual mishaps result from may factors." Why is it acceptable to inflict the danger of any Class A mishap — any whatsoever — on private citizens?

009018

Major Brent Adams, RBTI EIS Project Manager  
June 16, 1999  
Page 3 of 3

Typical of the circular logic repeatedly employed by the DEIS is the statement that "[m]ilitary flights have taken place over Texas...for almost 90 years. During this long time, the pilots, their crews, and their aircraft have successfully coexisted with the people and the environment." Yet this misses the point entirely. The point is that during times of national crisis, such as a world war, people will happily make sacrifices; yet this is not a time of national crisis, and the Air Force has, as admitted in the DEIS, cut back bases and personnel in West Texas drastically. Now you are asking us to increase our sacrifices because we have done it in the past. Sir, if we find ourselves as a nation at war and at risk, I am quite sure everyone in Brewster County will make as large a sacrifice as necessary. But in peacetime we should be allowed to live in peace.

Quite frankly, it is difficult for me to write this objection because of the futility of doing so, which is quite obvious to all citizens of Brewster County. Just as was the case with the series of proposed modifications to Instrument Routes 102 and 141, it is clear that no amount of public concern will deter the Air Force from doing in West Texas what it wants to do anyway. All of the citizens of Brewster County support a well-trained military and the cause of military preparedness. It becomes increasingly difficult to do so, however, when the Air Force forces private citizens to bear the cost of its actions by devaluing their property, their businesses, and their quality of life.

Since it is the environmental impacts of your proposed actions that we are supposed to be considering and that the DEIS is supposed to be evaluating, the actual impact on the environment and on the people who exists in it should be considered. The DEIS does not do that. It rationalizes the impacts and justifies the ensuing moderated impact, which is a fiction not a fact.

**AO-109** The only argument presented in the DEIS against conducting realistic, low-level bomber training over federal lands instead of private lands is that it is inconvenient and inefficient for the Air Force. Convenience to private citizens should also be a factor. As should their quality of life. As should the success and prosperity of their businesses. Please choose Alternative A.

Respectfully yours,

Honorable F. Whitten Peters  
Acting Secretary of the Air Force  
1670 Air Force Pentagon  
Washington, DC 20330-1670

Dear Secretary Peters:

**BR-6** It is my understanding that the U.S. Air Force is proposing a new training route for low level B-1 and B-52 bomber flights from bases in Texas and Louisiana under your Realistic Bomber Training Initiative (RBTI). One of the proposed routes, Alternative D, traverses Philmont Scout Ranch in northeastern New Mexico.

I am an advocate of the Boy Scouts of America and their programs. Philmont Scout Ranch provides a great natural resource for Scouts to learn, explore and experience wildlife in its native habitat. The adverse effect of low level flights in this wilderness area could be great. Specifically, I am concerned about the impact the proposal will have on the health and safety of thousands of Scouts attending Philmont each year (summer) and damage to the wildlife and environment. The sudden roar of jet engines could cause a horse to bolt and injure a Scout or distract a Scout while rock climbing.

I urge you to help preserve this national treasure by selecting an alternate training route. Thank you.

Sincerely,

*Tom Craddick*

Major Brent Adams  
RBTI EIS Project Manager  
HQ ACC/CEVPP  
129 Andrews Street, Suite 102  
Langley AFB, VA 23665-2769

Dear Major Adams:

Having reviewed the RBTI draft EIS, I have comments in four areas:

1. Current DEIS analysis results,
2. DEIS analysis deficiencies,
3. Limitations in integrated governmental decision making,
4. The impact of existing lawsuits.

**Current DEIS Analysis Results**

The DEIS analysis, as it currently stands, indicates that RBTI alternative D is the poorest of the action alternatives presented by the Air Force. DEIS data shows that:

The change from baseline sortie operations will be significantly greater for alternative D than for alternatives B and C.

Alternative D presents increased potential for conflicts from intersections with existing jet routes and federal airways, and with civil aviation, thereby requiring increased airspace management to ensure existing levels of airspace safety. (Questions: Is increased management reflected adequately in costs associated with alternative D? Is this increased complexity taken into affect when determining relative safety or cost conclusions?)

A larger number of communities and Special Use Land Management Areas underlying alternative D will be subjected to substantially larger increases in noise levels.

Alternative D will generate a substantial increase in annoyance generated by noise level increases of 15 DNL above baseline (more than a doubling).

Flight segments where increased noise levels occur are over such areas of special concern to those of us living in Northern New Mexico as Philmont Scout Ranch, falcon nesting areas and major wildlife breeding and calving grounds.

Some of these flight segments are relatively narrow, thus limiting the ability for overflight dispersion.

<p style="text-align: right;">000951 009020</p> <p>There is a larger impact on issues of concern to the USFWS, e.g., existing falcon, eagle and owl habitats.</p> <p>There will be considerably higher impact on National Register listed properties in terms of both noise levels and sortie rates.</p> <p>There will be generally lower benefit to the operational outcomes sought by the Air Force should they choose alternative D.</p> <p><b>DEIS Analysis Deficiencies</b></p> <p>While I believe the DEIS analysis already indicates that alternative D is the least viable choice, I also find the DEIS analysis deficient in other areas when analyzing the impacts of RBTI flights on the area underlying RBTI alternative D.</p> <p><b>BR-7</b> [1. Discussions of quality of life (page 3-8) are so benign as to be a cop out. The perspective of native peoples living in Northern NM deserve more specific treatment. So does that of the Hispanic peoples having traditional connections to this area, and of the anglos that have elected to live in this area for other quality of life criteria than the prevailing American "upward mobility" ethic. The comments of a great number of people at the scoping meetings (Spring '98) and public hearings (Spring '99) in Taos and Angel Fire are minimally reflected in the relatively generic discussion at the beginning of DEIS section 3.3. Further, when discussing Native Americans on page 3-9, no specific reference is made to the Jicarilla Apache (reference the Jicarilla Apache inputs in Taos during the April '98 scoping meetings) and Taos Pueblo sites (e.g., Blue Lake) in Northern NM underlying or adjacent to RBTI alternative D. By making reference only to Mescalero Apache sacred mountain tops and other historic Apache and Comanche displacements, the analysis completely misses the point and avoids the EIS analyst's responsibility to provide a context sufficient for accurate judgements about such criteria as Land Management and Use, Socioeconomics and Environmental Justice, or Cultural Resources.</p> <p>2. Regarding the DEIS treatment of the Land Management and Use criterion, Northern NM should be considered prime, and increasingly rare, recreation area that is in increasing demand by a significant segment of the American population -- the baby boomers. Failure to recognize this feature of America's current demand for second homes and recreational space and the linkage of this demand to the unique characteristics of the area underlying RBTI alternative D is a substantial omission. This failure limits the DEIS analyst's ability to recognize economic development and regional planning challenges to which RBTI alternative D adds, or to fully address the impact of RBTI alternative D on Socioeconomics criteria.</p> <p>3. If the Air Force is serious about adhering to FAA avoidance rules (see page 4-5 and reference FARs, Title 14, Code of Federal Regulations, Sec. 91.119,</p>	<p style="text-align: right;">000951 009020</p> <p><b>PD-60</b> [ Minimum Safe Altitudes: General, subparagraphs (b) and (c), then the ability of RBTI alternative D to satisfy stated Air Force requirements is further limited. These rules will require flights through segments over Philmont Scout Ranch (and other areas like the Colin Nebblitt Wilderness and some segments of the CS and Vermejo Ranches) at altitudes considerably above those appropriate to the "threat-avoidance" altitudes associated with the realistic training sought in these areas. This is because of the open-air assembly of persons that is part of normal activities in these regions. The exact locations and frequencies of these assemblies will be unknown to the Air Force, thereby requiring flights through segments over these regions at substantially higher altitudes than are being proposed by the Air Force.</p> <p><b>PD-38</b> [4. Added to the above is the USFWS position that overflights should be as much as 1600 to 2000 feet above the bird populations of concern, an operational deviation that would limit Air Force ability to achieve its objectives even more. Not only that, it is a flight deviation that, while potentially promised by the Air Force, could not and would not be monitored for compliance and would be easy to deviate from by accident or on purpose.</p> <p>5. The impact of aircraft operations in the Northern NM region entails noise impacts equal to the noise made by rock bands, chain saws and diesel trains. These are apt to be more-than-normally annoying because of the higher incidence of people using the region under RBTI alternative D for purely aesthetic reasons to whom such noise events will be unacceptable. The potential for such annoyance cannot be minimized by converting it to a cumulative metric (DNL) that satisfies some general analysis purpose appropriate to "communities" of homes rather than recreational groups. Moreover, the cumulative metric minimizes the hazards associated with the startle impact on individual or group activities going on in the open areas of the area affected by alternative D (horseback riding, rock climbing, hiking in potentially hazardous regimes, youth training, wildlife photography, etc.). This is one of several examples of a relatively persistent tendency in the DEIS to generalize rather than treat the specific characteristics of Northern NM that were amply communicated to the Air Force in both scoping meetings (Spring '98) and public hearings (Spring '99). [NOTE: Although the Air Force did not record any information at the Spring '98 scoping meetings, media footage of the Taos meeting is available, as is a full video of the Angel Fire scoping meeting.]</p> <p><b>BR-1</b> [ The comment on page 4-81: "Flight operations could, however, be perceived by the public as negatively affecting their quality of life" is in error. If you review the comments made in Taos and Angel Fire during the Spring 1998 scoping meetings and more recently in public comment meetings, you will note that the term "could" should clearly be revised to "will!" Even people who were not residents, but regularly come to our area for its recreational and aesthetic appeal, indicated such opinions. Are you listening? Are you using the available data and public comment accurately, or are you downplaying their impact by resorting to use of generalizations and the "softest" of available qualifiers?</p> <p><b>GE-19</b> [</p>
<p style="text-align: right;">000951 009020</p> <p><b>AO-110</b> [7. A similar criticism of your analysis can be levied on the data on page 4-82. There you indicate that noise levels of 65 DNL are a guide above which negative impacts may occur in residential areas, a statement that assumes 20dB attenuation because of residential construction. Yet, your analysis indicates significant noise level increases up to 65 DNL in areas that involve uses having human importance that are not occurring in residential areas. Isn't this fact relevant?</p> <p>8. Many of those impacted by alternative D will be those for whom the discussion on noise-related awakenings (see pages 4-13/4-14) are totally irrelevant. Scouts at Philmont and backpackers in the Colin Nebblitt Wilderness are not in "the field (in the sleeping quarters of homes)" for which the DNL metric was evaluated, nor are they in the region long enough to get habituated! Thus, the statement on page 4-14 assuming a 20-dB noise insulation level is irrelevant. This kind of analysis is misleading because it uses credible research which is irrelevant to the arena and population being impacted. For example, the comment on page 4-11 that "findings substantiate that community annoyance to aircraft noise is represented quite reliably using DNL" is a wonderful statement that overlooks the fact that in the area underlying RBTI alternative D, a "community" with will not be the only area of concern. As an ancillary comment, Philmont Scout Ranch, with its unique character and mission, must be considered a "community" underlying IR-153 (added to Table 4.2-11) which will be significantly and adversely impacted by the increase in sortie rates and the increase in noise metrics, whichever metric is used. And the Philmont "community" does not have the advantage of a 20dB attenuation due to housing construction!</p> <p style="padding-left: 40px;">Philmont contributes uniquely to young peoples' development by offering foundation experiences unavailable elsewhere. Having led a group through Philmont on horseback and along steep mountain trails, I can attest first hand to the benefits of the Philmont experience on the character of young people, and concur with the Philmont management's real concern for safety impacts of low-level RBTI flights.</p> <p><b>BI-31</b> [9. The comment on p 4-106 that: "Historically, and at present, most (about 90 percent) of the area and wildlife under proposed IR-153 has been subject to low-altitude military overflights" is misleading. Those flights have been much lower in both frequency (historically one/day; proposed over 10/day) and noise impact (historically up to 17 DNL lower) than what is proposed for alternative D. This difference is so great as to make the fact of historical overflight irrelevant.</p> <p>10. Section 4.4 addresses the impacts of RBTI on Socioeconomics and Environmental Justice factors only in the immediate vicinity of ESS and emitter site constructions/operations. This is overly limiting. The statement that: "given the rural nature of the region and the history of military use of the associated airspace, changes in numbers or types of overflights are not expected to produce measurable impacts on the economic value of the underlying land" is self serving considering the dramatic increases in both overflight frequency and noise levels. So is the statement that: "It is possible, however, that a recreationalist or rancher</p>	<p style="text-align: right;">000951 009020</p> <p>could be startled if an overflight took place at a specific point of time, but such an event is difficult to predict." It's lack of predictability does not lessen the Air Force's responsibility to consider the impact of such events, given the high incidence of demand for recreational use of lands underlying IR-153, and the fact that this startle effect will often occur when the affected individual or group is engaged in potentially hazardous activity. The fact that the authors of the DEIS assert that only construction/operational sites are relevant of consideration does not make it so, particularly when the public comments provided the Air Force about the fragility of the Northern New Mexico economy at scoping meetings and public hearings dictate otherwise.</p> <p><b>CU-15</b> [11. Regarding the analysis of affected cultural resources, the data indicates that several sites within the confines of the Philmont Scout Ranch were ignored. I also question whether DNL is the appropriate noise metric to use for noise impacts on some of those resources rather than Lmax or SEL. Again, the note that the area has been previously overflown is misleading or inaccurate. An increase from 1 to 11 per day suggests that the historical frequency is irrelevant. Further, Philmont Scout Ranch and its ignored cultural and archeological sites have not been regularly overflown.</p> <p><b>Limitations in Integrated Governmental Decision Making</b></p> <p>On page 2-11 of the DEIS, reference is made to public suggestions that the bombers be moved. While this is not an option available to the Air Force as part of this EIS, the DEIS response that eliminates this option because of the Base Realignment and Closure (BRAC) process suggests the need to improve governmental decision processes.</p> <p>The BRAC process defines and recommends realignment and closure options based on military needs and economic impacts. Given the added costs associated with the BRAC decision to move added bombers to Barksdale and Dyess AFBS that are identified by the RBTI, clearly the BRAC process did not consider all the associated costs of the move. The Air Force should have (and I hope will in the future) pointed out the added costs of ensuring crew readiness associated with this decision to the BRAC committee.</p> <p>Further, the DEIS states (page 2-8) that sorties must be completed using allocated flying hours based on funding from Congress. If Congress approved the move of bombers to a location requiring more flying hours to existing training routes, they can also approve the funding associated with increased flying hour requirements generated by their approval of the BRAC decision. The Air Force should request these funds and point out to Congressional leaders these adverse economic linkages to Congressional and Presidential decisions. These kinds of downstream connections between what are presented by government agencies, Congress and the President are the kinds of things that reduce the taxpayers' view of governmental credibility.</p> <p>I suggest there is also another kind of connectivity that needs consideration by Air Force and Congressional leaders. It is the potential connectivity between the RBTI and other</p>

000951  
009020

000951  
009020

training routes. Based on BRAC, are there other RBTI-like "adjustments" in training routes being proposed by other than the Barksdale/Dyess contingent that might be synergistic with the Barksdale/Dyess requirements? We don't know the answer to that, although we do know that the US, and especially the Western US, has many training routes, and many major test and training installations encompassing the terrain and threat systems required for military training (e.g., Utah Test and Training Range, the training areas north of Nellis AFB, Fort Irwin, the Naval Weapons Center). Perhaps it is time to insist on a Programmatic EIS for such training routes and ranges, and, as part of that, require the FAA take a more integrated look at all the requirements that constitute the public interest than just military requirements. While this would be a complex and difficult undertaking, the likelihood of savings from eliminating duplication of capability and the associated costs is potentially in the billions of dollars.

Oh by the way, this was implied by General Colin Powell (then Chief of Staff of the JCS) in his February 1993 report, Roles, Missions and Functions of the Armed Forces of the United States, when he asserted that, "An integrated test and evaluation range structure linking existing ranges across six western states and supersonic areas off the California coast would provide a land, airspace, sea area to accommodate a large portion of our joint training, test and evaluation needs well into the next century." (For those that don't know the history of the national ranges, this notion has its genesis in the Continental Operating Range concept that surfaced in the mid-1960s.)

GE-20 [Isn't it time to prepare a Programmatic EIS that combines the full intent of NEPA with an integrated assessment of military needs and an opportunity to save taxpayer dollars, or will the public continue to be forced to react to piecemeal actions for which the full range of impacts and benefits is unclear?

The Impact Of Existing Lawsuits

GE-21 [I understand that the Air Force is engaged in a lawsuit filed against them by West Texas ranchers concerned with RBTI action alternatives B and C. Any settlement that precludes low level training over alternatives B and C followed by a decision to select alternative D would violate NEPA and the purposes of the EIS process, and would add a decision criterion (the power of the legal war chest) that is not addressed in the DEIS. If a lawsuit prior to conclusion of the EIS process sways the Air Force's decision or subverts the conclusion justified by EIS analysis processes, then NEPA and the EIS process is a hoax and a waste of taxpayer dollars.

RESOLUTION

TY WHEREAS, Lynn County is a community of almost 7,000 people. The economy of Lynn County has always been primarily agriculture and ranching.

WHEREAS, the City of Tahoka is one of four incorporated cities located in Lynn County. The population of Tahoka is approximately 3,000 people. The city's economy is affected by the agriculture and ranching in our community.

WHEREAS, the city's economy has been adversely affected in the past several years because of drought conditions.

WHEREAS, the city council has the responsibility for the safety and welfare of its citizens. The city council feels that allowing the United States Air Force to use the air space over Lynn County would negatively impact the economy to such an enormous degree that the city's economy might never recover. And, there are concerns over the safety of such use of the community's air space.

WHEREAS, there are other areas of the country that can be utilized by the United States Air Force for training purposes. At these other locations no one's safety or economy would be affected.

NOW THEREFORE BE IT RESOLVED, that the city council of the City of Tahoka actively supports the Heritage Environmental Preservation Association in opposition to the United States Air Force Lancer Realistic Bomber Training Initiative.

PASSED AND APPROVED by the City Council on this 6<sup>th</sup> day of April 1999.

APPROVED:

*Mike McNeal*  
Mayor, City of Tahoka

ATTEST:

The Honorable Whitten F. Peters  
Secretary  
United States Air Force  
The Pentagon  
Washington, D.C.

Dear Secretary Peters,

Let me first underscore that as an avid proponent of a strong U.S. defense and as Senate Budget Committee Chairman, I understand the Air Force's need to achieve realistic training under existing fiscal constraints. I strongly support the Realistic Bomber Training Initiative's (RBTI) ultimate objective. However, I also believe this objective is attainable without undue negative impact to wilderness areas and New Mexican communities.

I would also like to recognize the fact that the Air Force has taken significant strides to accommodate Native American concerns in Northern New Mexico and has formally extended the comment period. I interpret both of these actions as demonstrative of a good faith effort on the Air Force's behalf to accommodate and compensate for different public interests.

I have previously voiced my concerns to the Air Force about the proposed "Alternative D" for the RBTI. At the same time, I believed it was important to allow the process to proceed in order for any decisions to be based on an accurate and justifiable analysis of the available alternatives. Having now reviewed the Draft Environmental Impact Statement for the Realistic Bomber Training Initiative, I have several questions and concerns regarding the Air Force's analysis and conclusions.

First, the Draft EIS concludes that all three alternatives (B, C, and D) have "no measurable impacts to socioeconomic." Second, I note that for Alternative D the Draft EIS mentions that specific segments of the training route would be over areas that support a number of threatened and endangered species; it also notes that the U.S. Fish and Wildlife Service considers low-altitude overflights as potentially significant to these species. Lastly, the summary chart under the heading "Environmental Consequences" offered on page ES-3 clearly indicates greater adverse effects in three categories for Alternative D than any other alternative, and, again, suggests "negligible" socioeconomic impact for all alternatives.

Given the increased noise levels to areas that the Draft EIS and the different economic base of Northern New Mexico as compared to the impacted communities in West Texas and Southern New Mexico, I would appreciate better understanding how the "negligible socioeconomic impact" conclusion for Alternative D was reached. Is there any quantitative analysis utilized to

009023 000148<sup>cm</sup>

BR-4 [determine, for example, that land values, tourism, and recreational activities in this area will not be negatively impacted by the proposed training?]

I would also like to know precisely how to interpret the Air Force's Draft EIS in light of the findings offered in the Draft regarding negative environmental consequences. My constituents will no doubt attend your hearings in New Mexico and ask you similar questions, but in order to clarify for my own purposes the Air Force's most recent views on RBTI options, I would appreciate hearing your response to these concerns.

Again, I would like to reiterate my full support for a trained and ready Air Force. Recent operations in Kosovo make the need for realistic training in diverse terrains all the more evident. Simultaneous, as a representative all New Mexicans I believe it is important to remain vigilant as this process moves forward.

Sincerely,

Pete V. Domenici  
U.S. Senator

**DOMENICI QUESTIONS AIR FORCE'S DRAFT ENVIRONMENTAL PLAN  
ON PROPOSED NORTHERN N.M. TRAINING FLIGHTS**

WASHINGTON -- Senator Pete Domenici today questioned findings in the Air Force's draft environmental impact statement for proposed bomber training missions in northern New Mexico, asking the Air Force to explain several conclusions.

Domenici today wrote Whitten F. Peters, acting Secretary of the Air Force, with his concerns on the Air Force's proposal to begin a Realistic Bomber Training Initiative (RBTI) in northern New Mexico.

"Let me first underscore that as an avid proponent of a strong U.S. defense and as Senate Budget Committee chairman, I understand the Air Force's need to achieve realistic training under existing fiscal constraints. I strongly support the ultimate objective of the Realistic Bomber Training Initiative. However, I also believe this objective is attainable without undue negative impact to wilderness areas and New Mexican communities," Domenici said.

Domenici issued the letter as the Air Force this week embarks on additional public comment hearings on the RBTI in New Mexico, particularly Alternative D which will most affect northern New Mexico.

Having thoroughly reviewed the draft environmental impact statement (EIS) for the RBTI, Domenici questioned some of the Air Force's analysis and conclusions. He sought answers to some apparent inconsistencies, including the fact that:

- All three alternatives (B, C, and D) have "no measurable impacts to socioeconomic,"
- For Alternative D, the draft EIS mentions that specific segments of the training route would be over areas that support a number of threatened and endangered species, in addition to noting that the U.S. Fish and Wildlife Service considers low-altitude overflights as potentially significant to these species; and,
- A summary chart under the heading "Environmental Consequences" clearly indicates greater adverse effects in three categories for Alternative D than any other alternative, and, again, suggests "negligible" socioeconomic impact for all alternatives.

"I have previously voiced my concerns to the Air Force about the proposed Alternative D for the RBTI. At the same time, I believed it was important to allow the process to proceed in order for any decisions to be based on an accurate and justifiable analysis of the available alternatives," Domenici wrote Peters.

"Given the possible impact of noise levels to the different economic bases of northern New Mexico as compared to the impacted communities in West Texas and southern New Mexico, I would appreciate better understanding how the negligible socioeconomic impact conclusion for Alternative D was reached. Is there any quantitative analysis utilized to determine, for example, that land values, tourism, and recreational activities in this area will not be negatively impacted by the proposed training?"

Domenici said he would also like to know precisely how to interpret the Air Force's draft EIS in light of the findings regarding negative environmental consequences.

"Again, I would like to reiterate my full support for a trained and ready Air Force. Recent operations in Kosovo make the need for realistic training in diverse terrains all the more evident. Simultaneous, as a representative for all New Mexicans, I believe it is important to remain vigilant as this process moves forward," Domenici concluded.

The B-1 and B-52 bomber training routes being considered by the Air Force include the northeast part of New Mexico, as well as southeast New Mexico and southwest Texas. Information from the public meetings in New Mexico will be taken into account as the Air Force prepares its final EIS by October 1999. A final Record of Decision on the bomber training routes is expected in November 1999.

REALISTIC BOMBER TRAINING INITIATIVE

Public Hearing Comment Sheet

Location: Reagan County
Date: 10-1-99

Thank you for providing your comments on the Realistic Bomber Training Initiative Proposal.

TY In my 20 plus years in local politics I cannot remember a more controversial topic than the RBTI. People of the land out here are extremely sensitive to any environmental concern that might impact their area. This coupled with the availability of information and the tremendous amount of time they are willing to dedicate will be interesting to the future of game involvement here.

Langley AFB, Virginia 23865-2769

Re: Project review under Section 106 of the National Historic Preservation Act of 1966
Draft Environmental Impact Statement, proposed Realistic Bomber Training Initiative, Multiple Counties, Texas (Air Force)

Dear Mr. Chavis:

Thank you for your correspondence describing the above referenced project. This letter serves as comment on the proposed undertaking from the State Historic Preservation Officer, the Executive Director of the Texas Historical Commission.

The review staff led by Myles Miller has completed its review. We support the selection of an alternative that would result in the least amount of direct and indirect impacts to cultural resources, and therefore recommend the selection of Alternative A (No Action). However, should this alternative prove to be infeasible, we agree with the recommendations for mitigation of effects to cultural resources proposed in Section 4.5 of the draft EIS. On page 4-120 of the draft EIS it is stated that the 22 potential Electron Scoring Sites (ESS) within the State of Texas have been surveyed for cultural resources, although the report of field investigations has not yet been submitted to the SHPO. We will provide our comments and eligibility recommendations upon receipt of this report.

CU-15 We do wish to note that in a previous letter dated January 5, 1998 we requested that your environmental consultant submit copies of the 7.5 minute USGS quadrangle maps showing the locations of the proposed ESS facilities, projected construction impacts, and land ownership status. In this manner we could have provided input on the archeological survey methods, expected resources, site definition criteria, and whether a Texas Antiquities Permit was required for investigations conducted on lands owned by the State of Texas. For example, it is stated on page 4-120 that the archeological survey of the proposed ESS facilities utilized transect intervals of no more than 25 meters. Our state guidelines for West Texas recommend transect interval spacing of 15 meters for archeological surveys.

009025

Mr. Alton Chavis, cont.
P. 2

We look forward to further consultation with your office and hope to maintain a partnership that will foster effective historic preservation. Thank you for your cooperation in this federal review process, and for your efforts to preserve the irreplaceable heritage of Texas. If you have any questions concerning our review or if we can be of further assistance, please contact Myles Miller at 512/463-5864.

Sincerely,

**Broad Issue: Noise Analysis Methodology (BR-1)**

Letter #	Response
0013 0027 0045 0072 0105 0136 0145 0149 0158 0191 0202	Noise is an issue of concern not only for the U.S. Air Force and the Department of Defense, but other Federal agencies such the Federal Aviation Administration (FAA), National Aeronautics and Space Administration (NASA), U.S. Environmental Protection Agency (EPA), Occupational, Safety and Health Administration (OSHA) and the Housing and Urban Development (HUD), among others. These agencies have both independently and collectively studied various sources of noise, including aircraft noise. Particularly since the introduction of jet aircraft, more research has been devoted to aircraft noise than to any other environmental noise problem. Concern over potential effects has prompted many studies on humans, animals and structures. Research focus has included health effects, interruption of activities (e.g., speech interference, sleep disturbance, recreation), wildlife and livestock and property values. Recent concerns over quality of life issues and impacts to solitude and wilderness experiences have emerged in the last few years.
0217 0223 0288 0318 0323 0329 0365 0416 0417 0452 0507 0531	Noise is typically one of the primary concerns voiced when an action involving military aircraft is involved. It is unquestionable that military aircraft generate high noise levels. The levels experienced by an individual or a receptor on the ground vary according to several factors such as location of the receiver (such as a person or sensitive receptor), the distance of the aircraft from the receiver (such as altitude or lateral/slant distance) and how the aircraft is operating at the time (i.e., what is the speed and power setting). In other words, where an individual is in relation to the aircraft and how the aircraft is operating, determines what the noise “dose” will be. The noise levels generated by fixed wing aircraft in the U.S. Air Force inventory, have been measured by noise specialists from Armstrong Laboratories (Wright-Patterson AFB, OH), with sound recording equipment arrays while flying at a variety of speeds and power settings. These measurements are contained within the acoustical data set known as NOISEFILE used in computer modeling.
0634 0674 0713 0784 0827 0828 0877 0906	Predictive computer modeling is standard practice not only in noise analysis, but also in areas such as weather and air quality, transportation, bird avoidance modeling (BAM), personal finance, economic forecasting and urban planning, among others. Computer models utilize a set of known data or information, such as measured noise levels, then make predictions based on the modeled situation (airspeed, power setting, altitude). To determine the correct situational factors for military aircraft noise modeling, information is gathered from aircrews, airspace managers, training requirement syllabi and flying hour allocations. This data collection is performed for each new proposal to ensure the planned training operations are characterized according to the current and future requirements.
0957 0983 01129 01130 01131 08057 08082 08085 08146 08202 08221 08239 08246 08250 08253	The technology used by the Air Force to model aircraft noise is based on the best available technology at the time. Currently, the Air Force uses a computer program known as MR_NMAP (MOA Range NOISEMAP) to model aircraft noise in training areas away from the installation. Over the years as technology has increased, the programs have been refined and updated to reflect the latest information and data. For example, as additional aircraft have been added to the inventory, the acoustical database has changed. Likewise, as our research studies have provided additional information on effects such as annoyance, the modeling programs have been updated to include the additional penalties for intrusiveness above those determined in the previous studies. As technology increases, the programs will continue to evolve as well. The Air Force is often criticized for our efforts in this area, particularly as it relates to the identification of noise related technology needs. It is inappropriate to assume the mere identification of a new research need is an admonition that current technology and modeling procedures are inadequate or inaccurate. The Air Force’s continued involvement in the research arena, along with that of other Federal agencies and the scientific community, has brought the understanding of noise exposure, computer modeling and noise effects to its current the level of sophistication.
08255 08279 08303 08331 09012 09013	In light of this ongoing process, we will continue to submit research needs to the USAF Office of Environment, Safety and Occupational Health (ESOH) Technical Planning Integrated Product Team (TPIPT) at Brooks AFB which serves as the central repository for research ideas and needs. ACC and other major commands utilize the Technology Needs Survey program to compile, rank and prioritize the Air Force research needs in order to compete for limited research funding. Additional information on this program can be accessed on the internet at: <a href="http://xre22.brooks.af.mil/98%20TNS/TNSintro.htm">http://xre22.brooks.af.mil/98 99TNS/TNSintro.htm</a> .

09018 This program, along with locally funded research, helps the Air Force continue to improve our  
09020 methodologies and analyze potential impacts in compliance with the National Environmental Policy Act (NEPA).

In accordance with NEPA, each time an action involving military aircraft is proposed, whether it be a realignment or establishment of an aircraft squadron, creation or modification of airspace or a change in the way aircraft operate and utilize training areas, an environmental analysis is accomplished to determine the potential impacts. The noise analysis is a very important part of the overall analysis. The objective of the noise analysis is to present what the current or baseline noise environment is today and to estimate what the change would result if one of the proposed alternatives were selected and implemented. The RBTI EIS noise analysis was prepared with the computer program, MR\_NMAP (MOA Range NOISEMAP, 1994), which represents the best available technology for modeling military aircraft training operations. MR\_NMAP calculates noise levels under Military Operations Areas (MOAs), Military Training Routes (MTRs) and on air-to-ground ranges. The RBTI proposal only involves a MOAs and MTRs, so a range analysis is not included.

To account for all military activity currently occurring in the affected airspace, each sortie operation in the existing parcels of airspace, including those beginning in the near future, were included in the baseline. In addition, sortie-operations on coincident routes that overlay the primary route and sortie-operations at locations where other routes cross or intersect the primary RBTI route were included. The coincident or intersecting airspace, identified as secondary airspace in the EIS, is important to the overall noise environment. By including each sortie-operation occurring in the affected primary or secondary airspace, all of the contributing noise or the noise “dose” was accounted for. The process was then repeated for each alternative to include the proposed sortie-operations from the various alternatives of RBTI. The results provided not only the new noise levels in the affected airspace, but also provided the change or “delta” to the baseline noise level or how much the noise increased or decreased.

The noise levels in the RBTI EIS are A-weighted which approximates the hearing of the average human ear. Individuals interested in the what the noise exposure may be from a single flyover event should refer to both the maximum noise level ( $L_{max}$ ), the highest sound level occurring during a single aircraft flyover, and the sound exposure level (SEL) which combines the maximum level of a single event with its duration based on distance. To present the cumulative noise exposure or to account for all the aircraft activity occurring in an area, the Day-Night Average Sound Level or DNL is used. DNL (also known as  $L_{dnmr}$ ) has been proven applicable to infrequent events and to rural populations exposed to sporadic military aircraft noise. Contrary to the myth that this metric dilutes or diminishes the noise over a 24-hour period, the DNL in fact accounts for all the relevant factors associated with aircraft operations. It accounts for the total number of events occurring, the duration of the events and the maximum noise levels associated with the events.

In addition, the DNL metric includes penalties for operations occurring after 10:00 PM and before 7:00 AM (to account for the added intrusiveness of nighttime operations) and a penalty of up to 11 dB for the startle or “surprise” effect from the rapid onset of aircraft noise (resulting in an onset-rate adjusted DNL, also know as  $L_{dnmr}$ ). Therefore, the total “noise dose”, including penalties, was calculated for each piece of affected airspace. DNL is the principal metric for describing long-term noise exposure of military aircraft and is sanctioned by the Federal Interagency Committee on Noise (FICON). During the most recent federal review of noise methodologies agencies including EPA, Department of Transportation (with FAA participation), Department of Defense (represented by the Air Force, Army and Navy), HUD, the Department of Veteran Affairs, the Department of Justice, the Council on Environmental Quality and the Council on Historic Preservation, concluded in its final report, “[t]here are no new descriptors or metrics of sufficient scientific standing to substitute for the present DNL cumulative noise exposure metric” (FICON 1992). Collectively, the three metrics used in the RBTI EIS provide adequate analysis of both the existing environment as it occurs today and the future noise environment should one of the action alternatives be implemented.

	<p>Throughout the areas potentially affected by RBTI, many commentors raised concerns regarding conflicts between civil aviation and the proposed increase in flight activity by the B-52s and B-1s. These concerns ranged from inhibiting civil aviation conducting commercial and agency management activities to a belief that air traffic safety would degrade to the perception that civil aviation pilots would lose the freedom with which they currently operate. Civil aviation activities that have been noted in the areas potentially affected by RBTI include: weather modification (cloud seeding), pest (e.g., boll weevils) eradication, crop spraying, range distribution and water assessments for livestock, emergency medical flights, pipeline surveillance, predator control, wildlife management, drug smuggling interdiction, and pleasure flights.</p> <p>As described in the EIS (Section 4.1), the FAA manages the entire national airspace system for the collective benefit of all users, general, commercial, military, and other agencies. To accomplish this goal, the FAA has established rules, regulations, and procedures designed to promote safe and effective operations by all types of aircraft. These rules, regulations, and procedures help promote awareness of all pilots' operations and, thereby, promote safety.</p> <p>One primary way the FAA promotes the beneficial use of the national airspace system for all types of users is by defining different types of airspace for different purposes. The FAA also dictates how aircraft must operate and interact within these different types. Under the RBTI alternatives, two types of military training airspace, MTRs and MOAs, are the focus. As detailed in Section 4.1.1 of the EIS, MTRs and MOAs are designated by the FAA for military aircraft training activities. But this airspace is not exclusive to the military. FAA procedures allow for other aircraft (civilian and non-participating military) to transit in MTRs and MOAs. There is a broad misperception that MOAs and MTRs function like restricted airspace and non-military pilots must fly around these airspace units. No pilot is prevented from flying in an MTR or MOA as long as they follow the rules applicable to the particular situation (i.e., VFR or IFR). This applies to the full range of general and agency aviation activities occurring in the area affected by RBTI.</p> <p>FAA procedures provide for non-military users to fly safely through MTR and MOA airspace. This is accomplished in three ways. First, scheduling serves as a means to help avoid conflicts between military users of the airspace and others needing to fly through it. As presented in Section 4.1.1 of the EIS, the FAA requires the responsible military organization to publish the hours of operations for each MTR and MOA; these publications are available to anyone and updated every two months. The FAA's Aeronautical Information Manual urges pilots planning to fly in or near a MTR or MOA to consult these publications. The Air Force recognizes that civil aviation pilots do not believe this is a convenient or effective means to get current information on when and where military aircraft would be operating in an MTR or MOA. For that reason, the Air Force proposes to set-up an 800 telephone number that would provide the planned weekly schedule of use for the MTR and MOA used under RBTI (see Mitigations, Section 2.6.2).</p> <p>Second, FAA procedures for planning to fly in an MTR or MOA provide means to avoid conflicts between civil and military aviation. Military aircrews, in planning training flights, identify airfields under and near an MTR and MOA. By applying FAA order 7610.4, the aircrews then avoid charted and uncontrolled airfields by 3 NM laterally and 1,500 feet vertically. For civil aviation pilots planning to fly through an MTR or MOA, the Aeronautical Information Manual recommends they contact the nearest flight service station for detailed information on the use of military training airspace at that time.</p> <p>Third, the FAA prescribes procedures during flights to avoid conflicts between aircraft. VFR flights by non-participating aircraft through an MTR or MOA must employ see and avoid techniques. This means that VFR conditions must apply and all pilots, whether civilian or military, must use extreme vigilance to look for and avoid other aircraft. Many commentors expressed a lack of faith that see and avoid techniques would suffice to prevent potential</p>

conflicts between fast moving, large military bombers and small, slower civilian aircraft. However, this technique has been used successfully and safely throughout the country where civil and military aviation interact. Military aircrews flying IFR consistently communicate with air traffic control to ensure avoidance of other aircraft. Similarly, civil aviation pilots flying IFR need to communicate with air traffic control; they must also receive air traffic control clearance to enter and active MOA. Aircraft responding to emergencies, like rescue or medical flights, are given priority by air traffic control.

**Broad Issue: Overflight Effects on Livestock (BR-3)**

Letter #			Response
00017	00642	00984	<p>Analysis on the effects of noise on livestock have been modified in section 4.3.3 and Appendix G in the EIS. It is possible that aircraft flying below 2,000 feet could startle domestic animals. However, animals have been shown through numerous studies to adapt and habituate to various sound sources, including jet aircraft noise. Under some circumstances aircraft flying at low altitudes may result in incidental livestock startle that could lead to injury if these animals are confined or have not been exposed to aircraft overflights. Overflights could stress cattle, although it is a small portion of the aspects that contribute to the overall stress to cattle and horses. Livestock stress is more likely to occur because of extremes in weather, illness, or predators.</p> <p>A 1956 study found that the reactions of dairy and beef cattle to noise from low-altitude, subsonic aircraft were similar to those caused by flying paper, strange persons, other moving objects (USAF 1993), or even to the sound of a tractor engine (97 dB) (Gladwin <i>et al.</i> 1988). Overall, the U.S. Forest Service has concluded (USFS 1992) that “evidence both from field studies of wild ungulates and laboratory studies of domestic stock indicate that the risks of damage are small [from aircraft approaches of 50 to 100 meters], as animals take care not to damage themselves. If animals are simply overflown by aircraft at altitudes of 50 to 100 meters, there is no evidence that mothers and young are separated, that animals collide with obstructions (unless confined) or that they traverse dangerous ground at too high a rate.” A study in 1972 by Frazier observed that bison “appeared oblivious” to the aircraft noise and continued grazing throughout all aircraft passes (Gladwin <i>et al.</i> 1988). Bowles (1995) cites Kruger and Erath as observing pregnant mares (horses) exhibiting intensive flight reactions, random movements, and biting/kicking behavior.</p> <p>However, no injuries or abortions occurred, and there was evidence that the mares adapted somewhat to the flyovers over a month’s time (USAF 1993). Espmark <i>et al.</i> (1974) also reported that stock occasionally jumped backwards when startled, but that they ceased responding within a few days.</p> <p>The potential effects of low-altitude flights on horses and cattle could result in short-term behavioral changes, ranging from simply looking at the aircraft or vocalizing to scattering over short distances (up to about 50 yards) and jumping. These reactions may occasionally result in damage to fences or injury to animals. If damage or injury occurs, citizens may lodge a complaint with the Public Affairs Office at Dyess Air Force Base at (800) 699-5169. The Air Force also had established procedures to handle claims, see Broad Issue: Overflight Effects on the Economy and Land Use (BR-4). No evidence was found to justify claims associated with the direct loss of productivity (feed intake, weight, or growth rates) or loss of marketability from overflights, since overflights are sporadic. No effects due to startling would occur under the MOA, where military flights associated with RBTI would occur above 3,000 feet AGL.</p> <p>Bowles, A.E. 1995. Responses of Wildlife to Noise. **Broad Issue: Overflight Effects on the Economy and Land Use (BR-4)**

Letter #			Response
00012	00441	01030	The public hearings raised the concern that military overflights would affect the economies of underlying communities. Many commentors mentioned that noise would negatively affect the economic viability of ranching, hunting, tourist-related, and retirement-related businesses, as well as property values.
00016	00446	01031	
00017	00452	01034	The issue of noise impacts on various economic resources such as those mentioned above is not new to the Air Force. Studies have been conducted in areas of special use airspace (training airspace away from an installation) to examine the influence of noise. An extensive economic impact study was performed by the Air Force in the early 1980s in association with establishment of the Valentine and Morenci Military (USAF 1980) Operations Areas (MOAs). These MOAs (or certain portions) were proposed for the purpose of conducting supersonic operations, in addition to subsonic training activity. ( <i>Note</i> : RBTI does not include supersonic operations.)
00020	00458	01035	
00024	00470	01036	
00027	00484	01037	
00032	00494	01039	
00033	00506	01040	
00034	00507	01042	
00035	00517	01044	
00036	00531	01078	
00037	00538	01080	
00039	00547	01089	The Valentine MOA is located above portions of Jeff Davis, Culberson, Hudspeth, and Presidio counties in the Trans Pecos region of southwest Texas and the Morenci MOA lies above southwestern Arizona and the southeastern portion of New Mexico (the supersonic area lies entirely within Catron County, New Mexico, and later became Reserve MOA). An analysis of the economic conditions was performed for the two proposed MOAs, as well as for four other existing MOAs authorized for supersonic operations, with focus on the following areas: population, assessed property valuations, real estate development, employment, personal income, retail trade, tourism, ranching, farming, mining, and forestry. Public concerns related to this action were very similar to those expressed by the public during the comment period for RBTI. The Valentine and Morenci (USAF 1980) analysis results showed general net gains in economic health both before and after initiation of the sonic boom activity (and hence, the increased subsonic activity). Overall, there is no evidence to suggest military aircraft training, with or without supersonic operations, significantly or adversely affects the economic health of an area with respect to ranching, tourism, and recreation (including hunting), property value, development potential, or enjoyment of the land.

00055	00568	01097	
00059	00591	01110	
00064	00592	01115	
00094	00608	01127	
00101	00611	01129	
00102	00612	01130	
00103	00615	01131	
00105	00619	08002	
00108	00623	08006	<b>Ranching.</b> As discussed in Section 4.3 (Biological Resources) and Appendix G (Noise) of the EIS, studies have shown that there is no evidence that military overflights increase death rates, reduce productivity rates, or otherwise have long-term negative effects on domestic animal and wildlife populations. Individual animals, especially those unaccustomed to the aircraft noise, or those that may be under stressful situations (i.e., being worked by cowboys or bad weather conditions) may startle when surprised by a low-altitude flying aircraft. However, studies have shown that populations habituate to these overflights and display no long-term, negative effects. In fact, there has been free-ranging livestock grazing at Air Force ranges like Avon Park Range in Florida, Melrose Training Range in New Mexico, and Saylor Creek Range in Idaho for over 30 years. These livestock (cattle and sheep) have been overflown by the full range of fighter and bomber aircraft in the Air Force inventory at altitudes as low as 100 feet AGL and have not shown any negative impacts, nor have ranchers experienced decreases in their operations due to these low-altitude overflights. Please refer to Broad Issue Response 3, <i>Overflight Effects on Livestock</i> for further discussion.

00128	00652	08014	
00137	00653	08015	
00141	00654	08016	
00142	00659	08018	
00143	00661	08024	<b>Hunting.</b> Section 4.2 (Land Management and Use) of the EIS has been modified to include discussion of hunting leases in Texas. While individual game animals may be startled by aircraft noise, especially those unaccustomed to the overflights, the data suggest that populations of animals would not be significantly affected.

00198	00739	08146	
00199	00740	08163	
00202	00742	08164	

00207	00744	08168	The behavior of game animals would not be expected to change such that hunting would be affected (personal communication, Rollins and Trail 1990). Also see Section 4.3, Biological Resources.
00209	00745	08178	
00210	00746	08180	
00212	00755	08181	As discussed in Section 4.1 (Airspace and Aircraft Operations), general patterns concerning the perception and effect of aircraft noise on people have been identified, but attitudes of individual people toward noise is subjective and depends on their situation when exposed to noise. Also, as discussed in Section 4.2 (Land Management and Use), the likelihood of any one location being repeatedly overflowed is low. The dispersed military overflights would not be expected to negatively affect hunting in the overflowed areas such that the value of land leased for hunting would be significantly affected. While individual hunters may be startled and annoyed by intermittent aircraft overflights, there is little to suggest that hunters as a group would modify or cease their hunting activities as a result of the proposed alternatives.
00214	00765	08182	
00216	00770	08185	
00218	00774	08198

00236	00803	08218	
00242	00806	08224	
00243	00808	08225	For example, a MOA and several MTRs overfly Sutton County. Laughlin MOA had over 9,500 sortie-operations in 1997 and over 4,000 sortie-operations in 1998. The MTR s include portions of IR-123, VR-143, and SR-282 and account for 1,002 sortie operations in 1997 and 2,226 sortie-operations in 1998. The MOA and MTRs overlie most of Sutton County; a county that has historically received revenues from hunting leases (Ward 1985). Hunting, therefore, has existed at the same time as thousands of sortie-operations have occurred and these operations have not frightened wildlife away, nor dissuaded hunters from visiting the area.
00244	00811	08237	
00245	00812	08243	
00248	00815	08249	
00251	00824	08253	
00253	00833	08271	
00275	00836	08272	
00276	00837	08278	
00282	00839	08279	
00283	00842	08282	
00287	00843	08290	<b>Tourism and Recreation.</b> Studies of areas where military aircraft training occurs have not shown a decrease in tourism or recreational opportunities due to the occurrence of military overflights. This applies not only to areas where subsonic flights occur, as proposed with RBTI, but also in areas where supersonic operations occur as well. In addition to the Air Force study discussed above, the U.S. Forest Service and National Park Service prepared Reports to Congress pursuant to Public Law 100-91, the <i>National Parks Overflights Act of 1987</i> . As discussed in the EIS Section 4.2, research supporting these reports found that wilderness area visitors did not generally notice aircraft noise intrusions. However, if noticed, low-altitude, high-speed aircraft were reported as the most annoying types of aircraft to hear or see due to the startle effect. In general, noise from aircraft can affect the solitude expected by recreationists in wilderness areas and can cause both humans and animals to startle.
00288	00845	08293	
00291	00853	08294	
00292	00854	08295	
00293	00856	08300	
00294	00860	08313	
00296	00865	08314	
00325	00867	08321	
00327	00868	08322	
00329	00877	08327	
00336	00878	08329	There are a number of factors other than aircraft operations that may affect tourism and the use of recreational areas. These could include weather, proximity to other attractions in the area, lack of snow, airport access, and service amenities. While it is possible that a tourist visiting an area may find an aircraft overflight to be annoying, no significant change to the tourist industry would be expected. In addition, the sorties proposed for RBTI (10 or less per weekday) would not result in a continuous noise source and would not typically be scheduled on weekends. The majority of RBTI airspace has existed for many years and the relevant influences from military aircraft operations are not significantly changing in a majority of the study area.

00357	00931	09008	
00358	00938	09012	
00359	00950	09020	
00361	00952	09023	<b>Property Values.</b> As discussed in Section 4.4 of the EIS, studies have been conducted to assess the change in property values near airports with increasing noise levels. However, these studies (such as the Noise Depreciation Sensitivity Index, NDIC) are specific to the near-airport environment, and are not applicable to the dispersed, higher altitude, episodic noise experienced under an MTR or MOA. In general, there is little evidence to support the estimation of loss in property values due to low-level military overflights in an MTR or MOA. Again, other variables such as drought, market prices, community amenities, and proximity to urban areas are more likely to affect property values than military overflights. Please also refer to response AO-56.

**Conclusion.** As discussed in Section 4.1 of the EIS, annoyance, which is based on perception, is the primary effect associated with aircraft noise. Given the subjectivity of how noise is experienced, it is difficult to translate overflight-noise-generated annoyance into changes in human behavior, especially for noise events that do not equally or consistently affect groups of people. As discussed in Section 4.2, the likelihood of any one location or person being directly and repeatedly overflown is low. Certain commentors have stated they may become highly annoyed and decide to stop visiting a certain hunting location or tourist attraction, or change their minds about purchasing property because of military overflights. However, other less-annoyed people may not change their behavior and still return to hunting locations, visit a tourist attraction, or buy a home. Military aircraft overflights occur across the United States and overfly public and private lands, including recreational areas. There is little data to suggest these overflights have significantly affected the economies of these underlying communities (Fidell *et al.* 1996 and USAF 1980).

The Air Force has specific procedures that they follow when claims for damages are made against the Air Force. Real property and economic losses are determined by reviewing the circumstances of each individual case and cannot be generalized into an overall impact. Noise and other aircraft operational complaints can be reported by the public by calling the Public Affairs Office at Dyess AFB (800-699-5169). When reporting an incident, the time and place of the incident should be provided. In many cases this information is all that would be necessary to identify the source of the incident. Information such as type of aircraft, tail-numbers, and insignia are often helpful in identifying the cause of a specific incident, but are not necessarily essential.

	<p><b>Airspace Ownership.</b> Several commentors on the draft RBTI EIS stated that airspace over their private lands was part of their private property. The commentors stated that as private property, any flights crossing through that airspace would be “trespassing,” and the landowner should be compensated for that use. Law and regulation, however, demonstrate the federal government’s control of all airspace within the United States. According to 49 U.S. Code 49.40103(a), the United States Government has exclusive sovereignty of the airspace of the United States. This sovereignty supersedes all prior claims through mechanisms like Spanish Land Grants.</p> <p>Federal government sovereignty over all airspace began with the Air Commerce Act of 1926 and the Civil Aeronautics Act of 1938. The Federal Aviation Administration (FAA) originated with the Federal Aviation Act of 1958. This law gave the FAA the authority and responsibility to control airspace in the United States and to operate an air traffic control system. In 1994, this act was replaced without substantive change by Public Law 103-272 and further codified under Title 49, U.S. Code.</p> <p>Under FAA Regulation Part 71.71(a), the airspace of the U.S. extends from ground level to above 60,000 feet MSL. No upper limit to the extent of the airspace above 60,000 feet MSL has been established. The FAA has established different kinds of airspace for different uses like the MOAs and MTRs to those proposed for use under RBTI. The FAA also established rules and regulations for aircraft operating in the airspace in order to ensure safety and effective operations. For example, the FAA defines and operates airspace under certain circumstances to separate civil aviation from military training activities.</p> <p>The FAA and each military service have very strict rules to ensure pilots stay within defined training airspace. The rules govern minimum altitudes, maximum speed, and type maneuvers that can be performed inside and outside designated training airspace. Military commanders have the authority to suspend pilots who willfully violate flight rules, such as flying outside designated training airspace. The military closely manages the airspace they use to ensure they do not exceed planned parameters.</p> <p>In addition, the FAA sets rules about the altitude that any aircraft can fly over certain areas. As noted in Section 4.1 of the EIS, FAA rules direct aircraft to avoid congested areas of a city, town, settlement, or open-air assembly by 1,000 feet above the highest obstacle and within a horizontal radius of 2,000 feet of the aircraft. Outside of congested areas, aircraft must avoid visible people, vessels, vehicles, and structures by 500 feet (either horizontally or vertically) (FAA Sec. 91.119(b)). Even though the FAA imposes such restrictions, it does not mean that private citizens “own” the airspace within 500 feet of their house or barn. Rather, the federal government has sovereignty over the airspace and controls its use through the FAA. The imposition of such restrictions by the FAA does not grant private citizens “ownership” of airspace outside of those restricted areas, nor do such restrictions limit federal sovereignty of airspace.</p>
	<p><b>Compensation.</b> Commentors during the public comment period also raised issues concerning compensation for the effects of overflights on underlying private property. These ranged from concerns about property damage to potential impacts to livestock to the concept that property could lose value. Additionally, commentors asked whether the Air Force could pay compensation for the “nuisance of noise.” The Air Force can only make payments to members of the public if authorized to do so by law, such as the Federal Tort Claims Act (FTCA). The Air Force considers each damage claim on a case by case basis. Air Force regulations provide an established process through which damage claims can be submitted, investigated, and resolved.</p>

The impact of noise on private property may also be addressed under “takings” law. The seminal case in this area is the Supreme Court *United States v. Causby* case. Briefly, *Causby* established that landowners are entitled to compensation only when overflights are so low and so frequent as to directly and immediately interfere with the use and enjoyment of the land. Subsequent cases have elaborated on this concept so that today, the general rule is that a successful plaintiff must prove: 1) the flights take place directly over plaintiff’s property, *and* 2) the overflights are of such a frequency that, 3) plaintiff’s use and enjoyment of the land is substantially interfered with, *and* 4) the flights are below navigable airspace (500 feet AGL for uncongested areas and 1,000 feet AGL for congested areas). Our review of the RBTI airspace indicates that flight paths would not impact landowners to this degree.

**Broad Issue: Effects on Philmont Scout Ranch (BR-6)**

Letter #				Response
00007	00520	00685	00939	<p>Many people, including past and present Boy Scouts, have raised concerns regarding the potential effects of proposed overflights on Philmont Scout Ranch that could occur if RBTI Alternative D were chosen. All of these individuals have expressed their pride in the experience they or members of their family gained when they attended the Ranch or the opportunities future generations would attain when they visit the Philmont Scout Ranch in northeastern New Mexico.</p> <p><b>Safety.</b> Flight safety is of paramount importance to the Air Force. Safe flying procedures, adherence to flight rules, and knowledge of emergency procedures form consistent and repeated aspects of training for all aircrews, including those at Barksdale and Dyess AFBs. B-52s have one of the best safety records of all aircraft in the Air Force inventory and the B-1s have an excellent safety record as well. B-52s have had 97 Class A mishaps in over 44 years of operation (1955-1999) and over 2 billion flight miles. The B-1 has also flown for 15 years (1984-1999), more than 160 million miles, and has had 11 Class A mishaps. Given these excellent safety records, the probability of future accidents is extremely low.</p> <p><b>Noise.</b> In Section 4.1.5, Aircraft Noise, the EIS describes the noise resulting from aircraft overflights in Alternative D. While military aircraft have overflown the area for years, noise levels would increase from less than 45 DNL to between 59 and 62 DNL. Over the Philmont area, flight altitudes would range from 400 feet AGL to over 12,000 feet AGL. But, in accordance with FAA regulations, aircraft flying over the ranch headquarters and main camp area would avoid it by 500 feet vertically or laterally. The MTR corridor over the Philmont area would be 8 to 15 nm wide, and flights would be dispersed across this area. The likelihood of one spot being repeatedly overflown on a daily basis would be very low. Staff teaching and student learning should not be impacted by overflights if RBTI Alternative D were chosen.</p> <p><b>Flight Activities.</b> When flying, aircrews are required by the FAA and Air Force rules to stay within established route boundaries and not fly above any open-air assembly of people or congested areas. These rules are established to protect the public. As they do now, the B-1 and B-52 aircrew members would continue to follow these procedures when overflying the Philmont Scout Ranch structures if Alternative D were chosen.</p> <p><b>Aerial Refueling and Fuel Jettison.</b> Under the RBTI proposal, aerial refueling would take place using established procedures and aerial refueling routes (only above 10,000 feet AGL) and would not occur on the proposed MTR. When refueling, the aircrews would normally practice the maneuvers and exchange enough fuel to simulate actual aerial refueling procedures. Any amount of fuel that might escape during these training procedures would evaporate before reaching ground level. In addition, if an emergency were to occur at low altitudes, B-52s are unable to eject fuel and the B-1s are required to climb to 10,000 feet AGL (enough height to ensure that jet fuel evaporates before it reaches the ground) before jettisoning any fuel. Therefore, the potential of increasing the probability of catastrophic fires or campfires escaping their boundaries due to aerial refueling procedures are minimal. However, the Air Force recognizes that accidents could happen and established emergency procedures would be followed if any aircraft were to crash.</p>

	<p>Many citizens at both the public scoping meetings and the public hearings have expressed concern that their quality of life, which is based directly on the kind of lifestyle that they can enjoy in western Texas and northeastern New Mexico, will be changed by implementation of RBTI. Quality of life, traditional lifestyles, and the effect of overflights and noise on solitude, recreation, and wilderness are discussed in the EIS in Sections 3.3 and 4.2.</p> <p>Measuring quality of life can be very subjective. Even within a single community, notions on quality of life can vary a great deal. Each individual has a different perspective on how his or her quality of life has been affected by changes within the community. Some of the components that define quality of life include: population density, traffic, ethnic or social character, businesses, recreation, education, and crime level. The ability to maintain their traditional lifestyle may also be an important element in determining quality of life. There are many kinds of traditional lifestyles in the region, including ranching, oil exploration, Native American, and military. The Air Force has been conducting military aircraft operations in this region for over 50 years.</p> <p>Citizens may notice changes in military overflights in certain areas associated with RBTI, in other areas however, changes would not be discernible. The number of sorties is proposed to increase from 1 to 10 per weekday in some areas and decrease in others. An increase of overall sorties would not exceed 2,660 per year under the action alternatives. Less than 5 percent of the time, RBTI aircraft overflights could extend as low as 300 feet AGL in the MTRs in some areas, but in the MOA would not go below 3,000 feet AGL. With an average corridor width of 8 to 16 nautical miles, the likelihood of repeated overflights above a specific area is low.</p> <p>Many other factors, including fluctuations in the national and regional economy, population changes, land investment by urban interests, and changes in cultural amenities could affect the quality of life. External economic fluctuations in the cattle market, decreases in income, or changes in weather could affect local ranching and recreation industries to a greater degree than aircraft overflights. As under current conditions, noise from military aircraft operations may periodically disturb citizens and affect their enjoyment of solitude; however, opportunities for abundant periods of peace and quiet would continue as under present conditions. Rural lifestyle could be characterized as having shared traditions and values, emphasis on personal relationships, family orientation, and ties to the land. Increase in overflights and noise would not affect these characteristics.</p> <p>Additional military use of the airspace would not preclude civil use of the area or restrict access to areas for recreational or economic activities. In fact, these activities have coexisted in the area for half of this century. Most of the military airspace proposed under any of the alternatives is currently in use. Commercial aircraft overflights have also been taking place and will continue to do so. Therefore, existing quality of life should not be degraded. Nevertheless, public concern about reductions in quality of life due to the project will be considered in the decision-making process.</p>

**Thank You (TY)**

Letter #							Response
00002	00126	00268	00571	00892	08004	08252	Thank you for your comment during the public comment period for the draft EIS for RBTI. Public and agency involvement is an important part of the NEPA process. You and many others can be proud that your participation and comments have become part of the record and will contribute to the decision-making process.

**General (GE)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00019 01130 00983	GE-1	Under NEPA and CEQ Guidelines, a fiscal cost-benefit analysis for training or training assets is not required.
00046 08146 00954 08156 01131 08289 08013 08290 08041	GE-2	Selecting locations for public hearings was based on the affected area, where scoping meetings had occurred, and on providing sites offering reasonable access to the greatest number of people. Meetings were scheduled for evenings in many locations to accommodate people working during the day. The Air Force conducted 15 hearings in 11 locations throughout west Texas, northern New Mexico, Colorado, and Arkansas. See also response GE-22.
00080 08177 00194 08201 00232 08217 00296 08246 00447 08276 00871 08321 01130 08338 08126 08348 08168	GE-3	Through the NEPA process, the public has numerous opportunities to help shape proposals and influence decision-making for a project. While public comments under NEPA are not a “vote” on whether to proceed or not with a proposed action, substantive comments on this EIS can and do influence the decision and final outcome.
00080	GE-4	The Air Force has solicited input on the RBTI proposal since 1997 through a public involvement process detailed in Chapter 6 of the EIS.
00085	GE-5	Each public hearing included an open house where Air Force representatives were available to answer questions.
00085 08113 00976 08231 08105	GE-6	The time limit placed on comments was designed to ensure that all people who wished to speak had that opportunity. At every public hearing, the hearing officer permitted those individuals with additional or longer comments to speak again.
00110 08355	GE-7	The analysis is performed objectively, fairly, and in accordance with NEPA requirements. Proponent agencies are responsible for preparing NEPA analysis for their proposed actions. Agencies commonly seek specialized technical support in performing analyses and preparing NEPA documentation.
00245 08168	GE-8	Completion of the environmental impact analysis process involving an EIS commonly requires two or more years. In addition to the necessary analysis, consultation with agencies, and writing, this process includes several steps required by regulation and law. Each of these steps has a specified duration.
00246	GE-9	Analysis in the EIS considered the principles of biodiversity.
00283 01129 00970 08299	GE-10	This EIS has been prepared in accordance with NEPA to analyze potential environmental consequences. Detailed analyses of potential impacts are presented in Chapters 4.0 and 5.0 of the EIS. Section 2.5.4 demonstrates the conformance of the analysis to NEPA requirements.
00296 08206 00970 08254	GE-11	The Air Force reviewed each comment. Responses to comments are presented in this volume of the EIS. No decision regarding RBTI will be made until after publication of the EIS. The decisionmaker will use all the analysis in the EIS plus public and agency comments to arrive at a decision.
00334	GE-12	Federal, state, and local government officials in the affected communities were all sent newsletters announcing the time and location of public hearings.
00387 09009	GE-13	The suggestion you made will be forwarded to the decisionmaker for consideration.
09013	GE-14	The table is merely a qualitative summary intended to provide the reader with a basic understanding of the difference magnitude of impacts among the alternatives. Table 2.6-1 in the body of the EIS provides a detailed comparison of impacts.
09013	GE-15	The Air Force analyzed and considered the effects of the RBTI proposal on these resources. The Air Force believes the summary presented in the EIS is adequate to understand the lack of effects.

***Realistic Bomber Training Initiative Final EIS***

09013	GE-16	Appendix A is referenced in this section on page 2-5 of the draft EIS.
09013	GE-17	Analysis of all primary and secondary airspace under Alternative A is included in the referenced section. For example, Table 4.1-4 includes noise levels for all these airspace units and the preceding text describes these conditions.
09015	GE-18	Cumulative impact analyses were prepared in accordance with NEPA and CEQ guidelines. The inclusion of current and recent past activities in Alternative A (No Action) allows analysis of the cumulative effects.
08170 09020	GE-19	The Air Force attended those meetings at the invitation of Senator Bingaman. The format and recording of comments were established by the Senator's office, not by the Air Force. The Air Force did, however, have four representatives present. Comments from those meeting were considered in preparing the RBTI EIS.
09020	GE-20	The variety of Air Force activities in the region and throughout the nation are not part of a single program or policy initiative regarding training and airspace use. Separate analyses of these various activities will adequately address their combined cumulative effects. Consequently, a programmatic EIS is not needed.
09020	GE-21	The settlement in the referenced lawsuit includes no requirement to preclude assessment of Alternatives B and C.
00046 08041 00288 08082 00334 08093 00635 08103 00786 08127 00846 08146 00881 08206 00899 08215 00962 08381 00970 09014 00982 09021 01100	GE-22	The Air Force performed a comprehensive public involvement process. Chapter 6 of the EIS details this process. Advertisements for the meetings were run in local newspapers 1 to 2 weeks prior to the meetings. Over fifty newspapers in the affected areas were also sent press releases detailing the time and location of each meeting. In addition, over 900 newsletters were sent out to individuals that participated in scoping. These newsletters described the time and location for each meeting. In addition, over 900 copies of the draft EIS were sent to the public and agencies.
00486 00962 00970	GE-23	Two meetings were held at Alpine, Texas on two consecutive days. The location and starting time for each meeting was advertised well in advance (see response GE-22). At the referenced meeting, all attendees were given multiple opportunities to comment for the record. The meeting was adjourned only after no one wished to speak further.
00713 00786 00806 00846 00906 00971 00977 01131 08050	GE-24	Descriptions of the field surveys for biological resources, cultural resources, and hazardous waste for the candidate emitter and Electronic Scoring Sites are presented in Appendix E. Analysis in the EIS used the most recent, available data. Data were collected from federal, state, and local agencies and an extensive examination of available literature pertinent to the area was conducted. Pertinent studies were reviewed and used in the analysis irrespective of their implications for the project. Note the discussion of overflight effects on wildlife in Section 4.3 as an example. NEPA and CEQ Guidelines do not require original studies or research in preparation of an EIS.
00786	GE-25	The referenced officials originally told the Air Force that the cafeteria location would be adequate for the meeting. When informed later of potential limitations with the cafeteria, the Air Force acquired use of the auditorium.
00786 08041 08041 08127 08171 08278	GE-26	More than 900 copies of the draft EIS were mailed out at least two weeks in advance of the first public hearing in April 1999. Copies were express shipped to the repositories prior to that time. The repositories were located in the communities within the affected area and were ones that were reasonably accessible from other nearby communities. The Air Force also sent copies of the draft EIS to four additional repositories in the area under the proposed Lancer MOA. Those individuals receiving a draft EIS either requested one or were participants in the scoping process.
00786 01130	GE-27	This comment is inaccurate. Air Force officials informed every landowner that the sites were being evaluated as part of the RBTI proposal. The right-of-entry

		was granted by each landowner to allow survey of their land included this information. In addition, each landowner was contacted by telephone and several met with Air Force representatives.
00868 01131	GE-28	It is neither a CEQ requirement nor the standard practice of federal agencies in New Mexico to publish EISs in Spanish. Based on the extensive public participation and comments, the Air Force believes that a broad cross-section of the public had access to the EIS and expressed their concerns. The Air Force provided a Spanish-speaking representative at each public hearing.
00962 08085 00983	GE-29	Any future proposals to change the nature or amount of use of the airspace would require assessment in accordance with NEPA.
00970 08231 00976 08258 08113 08277 08124 08364 08211	GE-30	The purpose of a public hearing under NEPA is to provide the opportunity for the public to comment on the adequacy of the draft EIS. The format of the RBTI public hearings fulfilled this requirement and the open house prior to the hearing allowed for discussion.
00983	GE-31	Proposed IR-153 would be scheduled by Dyess AFB and Cannon AFB would continue to schedule the Mt. Dora MOA.
00983 08026	GE-32	All projected airspace users are documented in Section 2.4 and Appendix B.
01001	GE-33	All project records would be available at Dyess AFB, Public Affairs Office.
01129	GE-34	Mitigation measures have been added into Section 2.6.2 of the EIS.
01131 08179 08206	GE-35	Detailed maps and Geographic Information Systems analysis were used in assessing impacts. The maps presented in the EIS reflect summaries of that information, and fulfill the requirements of NEPA to inform and disclose.
08177 08232	GE-36	A court reporter recorded (verbatim) all statements made at each public hearing. The transcripts are presented in Volume II of the EIS.
08190	GE-37	The counts used in the EIS were relatively accurate estimates. See also response GE-19.
08199	GE-38	The opinion of the FWS is presented in Section 4.3.1 of the EIS.
08263 08276 08319	GE-39	Under NEPA, the agency proposing the action also makes the decision concerning the action. The Secretary of the Air Force or a designated representative will make the final decision with substantial input from other members of the Air Force staff. A decision will be made only after reviewing all the environmental analysis, comments, and other pertinent factors (e.g., training requirements).
08289	GE-40	The public had several ways to provide comments: oral comments at public hearings, written comments submitted at public hearings, or written comments mailed to the Air Force. Information on how to submit comments was provided at each hearing, in newsletters, and in the Notice of Availability for the draft EIS.
08129	GE-41	The No Action Alternative is thoroughly described in Section 2.2 of the EIS.

**Editorial (ED)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00324 00326 00326	ED-1	This has been modified in the EIS in section 4.2.5.
00906 08215 08139 08355 08180	ED-2	Valle Vidal Management Unit has been added to section 4.3.5.
08139	ED-3	Clayton Lake State Park was discussed in Table 4.2-12. The discussion of migratory birds and waterways was modified in section 4.3.5.
08170	ED-4	The Air Force conducted a number of informal meetings with communities, agencies, and public organizations for RBTI. Although not discussed directly in the document, the concerns expressed during these meetings were considered during the environmental impact analysis process.
08170 08178	ED-5	Figure 4.2-7 represents general land use information from the U.S. Geological Survey. The mountainous coniferous forest of the Philmont area is presented in Figure 4.3-6.
08170	ED-6	The effects of noise on structures are discussed in section 4.5.1.
08179	ED-7	The relationship of the proposed route under Alternative D to the boundaries of the town of Angel Fire is accurate based on the best available information at the time the DEIS was produced. The exact distance of the town to the proposed route is not discussed directly in the EIS.
08188 08282	ED-8	The letter has been included in Appendix H.
08215	ED-9	These sites are incorporated into the Special Use Land Management areas in Figure 4.2-8.
08237	ED-10	Given the vast region covered by the proposed airspace, every community was not identified by name in the EIS. However, the EIS has been modified to reflect the total number of people overflown under each proposed alternative.
08254	ED-11	The impact analysis process examines project effects on the environment, resources, land management and use, and on people. There is no requirement to analyze the effects on individual private property owners.

**Purpose and Need, Description of the Proposed Action and Alternatives, and Cumulative Effects (PD) and (CE)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00001 00983 00021 01013 00076 08047 00121 08138 00506 08202 00538 08247 00625 08301 00772 08356 00929	PD-1	Sections 1.2 through 1.4 of the EIS detail the need for RBTI, including the specific airspace and ground assets associated with the RBTI proposal. This section provides basis for the need for low-altitude training. It also demonstrates that refueling the bombers to access distant training assets would not resolve the deficiencies prompting the RBTI proposal.
00015 01129 00019 08083 00085 08254 00291 08347 00296 08355	PD-2	Section 2.1.3 of the EIS explains that basing the additional bombers at Dyess and Barksdale AFBs was a decision of Congress and the President through the Base Realignment and Closure process. Moving the aircraft to other locations would require a similar authorization or basing decisions outside of the scope of this analysis.
00019	PD-3	As described in the EIS, a MOA meeting the realism requirements for RBTI must overlie lands suitable for the placement of electronic emitters.
00018 00721 00112 00722 00121 00772 00161 00800 00224 00813 00231 00914 00236 00931 00237 00969 00266 00974 00275 01021 00277 01110 00291 01130 00293 08010 00295 08014 00360 08016 00385 08030 00390 08036 00401 08069 00419 08122 00500 08131 00517 08162 00538 08217 00619 08242 00634 08318 00632 08320 00682 08324 00686 08333 00694 09012 00704	PD-4	Chapter 1.0 and Section 2.1 define the rationale and the process defining the alternatives. As this shows, the Air Force examined over 70 MTRs located within approximately 600 nm of Barksdale and Dyess AFBs as possible candidate alternatives. All locations outside the 600 nm radius from the bases were excluded from consideration. Those presented in the EIS are the only three candidates that wholly or partially meet the purpose and need. All others, as specified in Section 2.1, failed to meet one or more of the criteria for inclusion.
00052 08300 00409 08307 00579 08310	PD-5	The EIS addresses the use of simulators, and demonstrates that they can provide a small proportion of training, however, they lack the realism necessary to fulfill the purpose of RBTI.
00112	PD-6	Requirements for military readiness derive from the National Command Authority with the President as its leader.
00144 00770 00257 00814 00267 00870	PD-7	The alternative identification process focused on identifying existing MTRs and MOAs meeting the needs defined for RBTI. Out of the more than 70 MTRs evaluated, only 3 met the needs. They were selected as

***Realistic Bomber Training Initiative Final EIS***

00284 00336 00359 00370 00374 00404 00484 00587 00652 00654 00668 00715	00927 00928 01052 01055 08006 08017 08028 08037 08050 08061 08116 08144		alternatives irrespective of the underlying land ownership. The alternatives overlie a mixture of federal, state, and private lands. Alternatives B and C overlie more private lands than Alternative D; Alternative D overlies more federal lands.
00215 00217	00296 00760	PD-8	Section 2.1.3 describes why simulators alone would not provide adequate realism or training. See also response PD-5.
00321		PD-9	To meet the training requirements for all aircrews and ensure readiness for combat, training needs to occur throughout the year. Training tempo may vary season to season.
00334 08229		PD-10	Section 2.1 describes the size and location requirements for emitters and electronic scoring sites. A thorough evaluation of these requirements was performed before identifying locations and alternatives. Section 2.4.1 describes emitter operations.
00342		PD-11	Section 2.3.1 of the EIS indicates that flights would occur on weekends only occasionally.
00369 09012		PD-12	The RBTI alternatives were designed to provide training realism while also reducing the potential effects of the action. A first priority in identifying alternatives was a requirement to maximize the use of existing airspace. By using more than 75% existing airspace in each of the alternatives, the Air Force sought to reduce the potential to affect lands and resources not previously under military airspace.
00370		PD-13	As described in Sections 1 and 2 of the EIS, no requirement exists for variable terrain under a MOA.
00983		PD-14	Depending upon conditions, training requirements, and airspace type, aircrews could fly IFR or VFR. Night vision goggles would normally be used during night operations.
00983		PD-15	Aircrews would include those from Formal Training Units and those from operational units conducting Continuation Training.
00983 01020 01033		PD-16	Section 2.3.1 of the EIS describes the proposed hours of use for the MTR and MOA. The B-52s and B-1s would fly 80 to 85 percent of the time during the day.
00417 00792 08081 08268		PD-17	The alternative identification process focused on identifying existing MTRs and MOAs meeting the needs defined for RBTI. Out of the more than 70 MTRs evaluated, only 3 met the needs. Selection of these alternatives used operational criteria. No particular location was defined for the alternatives other than those meeting the operational needs as described in Section 2.1 of the EIS.
00191 00194 00291 00421	00486 00899 08254	PD-18	In the draft EIS, all alternatives were evaluated equally; none received preference over another. In the final EIS (Section 2.1.5 and Appendix K), the Air Force recommended a preferred and environmentally preferred alternative. However, no decision to select or not select a particular alternative has been made at this time. Such a selection will be presented in the Record of Decision.
00494		PD-19	The RBTI proposal is designed to provide realistic training on a daily basis. Such training includes both low and high altitude training activities. Aircrews could not achieve this level of training through temporary duty assignments at other bases.

00589 00944 08295	PD-20	As detailed in Chapter 1.0 and Section 2.1 of the EIS, the training needed by the B-52 and B-1 aircrews requires terrain following and terrain avoidance. MTR airspace used for such training must overlies lands offering terrain variability. Flying over the ocean or using simulators would not fulfill this need.
00727	PD-21	Both the federal budget and past decisions related to base closures or realignments are beyond the scope of this EIS.
00962	PD-22	The FAA, under its authority to manage airspace over the United States, has charted all existing MTRs. See also response PD-1.
00970	PD-23	The No Action Alternative, as presented in Section 2.3, includes only existing airspace and would support only baseline sortie-operations.
00983	PD-24	Section 2.4 details the proposed process for obtaining the land for emitter sites and Electronic Scoring Sites.
00995	PD-25	Section 2.1.3 of the EIS explains why increasing funding to provide more flight hours is not a reasonable alternative to the RBTI proposal.
01130	PD-26	Refueling for the B-52s and B-1s is a training activity that includes set-up along a refueling track, linking to the refueling aircraft, disengagement, and flight to the next training activity. Even if no fuel or a nominal amount of fuel is delivered, the training to accomplish the refueling is essential.
01130	PD-27	Should the Air Force propose to fly at lower altitudes in an MTR or MOA than those assessed in this EIS, the proposal would be environmentally assessed under NEPA. See also Response AF-2.
01130	PD-28	Average sortie duration is derived by dividing the number of required sorties for a unit into its total annual flying hours. As stated in Section 1.3.3, average sortie durations do not always correspond directly to the time needed to achieve realistic training. To achieve such training, the aircrews from Barksdale and Dyess AFBs would need to fly slightly longer durations. These durations are hours less than current flight times that include substantial low-value transit time.
01130	PD-29	Section 1.2.3 of the EIS clearly describes the relationship between a sortie and a sortie-operation. Total sortie-operations are presented for each alternative and used in all appropriate analyses.
01130	PD-30	Additional detail on emitter operations and safety is presented in Section 2.4 of the final EIS. See also Response AO-32.
01130	PD-31	Section 2.4.2 clearly states that all existing segments of IR-178 north of proposed segment ZAA would be eliminated. This includes the segments under the proposed Lancer MOA.
01130	PD-32	All secondary MTRs intersecting or overlapping with primary airspace were analyzed in all pertinent resource categories. No part of the RBTI proposal includes changing the use of VR-1116 or IR-154. For IR-128/180, the EIS indicates that sortie-operations would decrease under Alternatives B, C, and D.
00827 01130 08133	PD-33	<p>The baseline sortie-operations legitimately include activities resulting from analyzed and approved actions affecting the same study area as RBTI. All of these sortie-operations were accounted for in the analysis. To eliminate these sortie-operations from baseline would also necessitate eliminating them from projected flight activities for Alternatives B, C, and D. Thus, the amount of change in noise levels (from baseline to proposed action) would remain the same as that reported in the EIS.</p> <p>NEPA requires analysis to focus on the affected area. Section 2.2 of the EIS clearly defines the affected area and describes the primary and secondary airspace units within that area. Sortie-operations for all the airspace units are analyzed under each alternative and the synergistic effect of the interaction of those units is analyzed. In this way, the EIS accounts for the airspace use in the affected area. No programmatic treatment of additional areas is required under NEPA or CEQ Guidelines.</p>

08032	PD-34	Very little land would be involved in RBTI. Only about 200 acres would be affected, and the Air Force would compensate private landowners through lease or purchase payments. See also response BR-4.
08103 08176	PD-35	The EIS considers the cumulative effects of both primary and secondary airspace use within the study area. It also accounts for all users of the primary and secondary airspace. Sections 2.3 and 5.1.2 describes how past, present and baseline sortie-operations were incorporated into the analysis.
08177	PD-36	Accurate, scaled maps are provided throughout the EIS to provide the reader the ability to find specific towns or locations in relation to the alternatives. Angel Fire is approximately 5 nm distant from the nearest part of the proposed IR-153.
08202	PD-37	Operational considerations defined the need for the RBTI proposal and directed the alternative identification process. In that process, environmental considerations were used. The EIS is devoted to assessing the environmental impacts of the proposal.
08313 09020	PD-38	The Air Force is familiar with the noise sensitive areas in northeastern New Mexico. Locations of these areas are included on the operations supplements at Cannon AFB who manage the majority of the airspace where the sensitive sites occur. Should Alternative D be selected, the established flight restrictions and/or operating procedures would be incorporated into the RBTI operations.
01018 08229 01027 09008 01039	PD-39	As shown in the EIS (Figure 2.4-11), no portion of the proposed MTR (IR-153) in northern New Mexico would occur over the City of Taos. The proposed MTR would lie more than 30 miles away from the City of Taos and behind mountain ranges.
08113 09008	PD-40	The EIS states that the proposed flight activities would occur between 300 feet AGL and 15,000 feet. Flights could occur anywhere within that range of altitudes, but flights would be between 300 and 500 feet AGL for only 5% of the time. For an average training flight along the MTR, this 5% would represent roughly 2 to 3 minutes within the total flight time for the route. In the portions of the MTR in the region north and east of Taos, B-52 and B-1 flight levels would be no lower than 400 feet AGL.
01130 08037 09012	PD-41	Sections 1.2, 1.3, and 1.4 in the EIS describe in detail the requirements for the airspace to meet the training needs of the B-1s and B-52s. Section 2.1 details the application of those requirements to existing airspace in order to identify potential alternatives to meet the need. Over 70 MTRs were evaluated, including those associated with La Junta and Harrison. The EIS in Section 1.3 establishes that neither La Junta nor Harrison have the integrated assets required for the training and the areas lack required terrain variability. As such, even with airspace modifications, neither would fulfill the purpose and need for RBTI. These sections of the EIS also demonstrate why use of the Belle Fourche and Granite Peak assets would not fulfill the purpose of reducing low value transit time and increasing combat training time. Both of these sites lie well outside the 600 nm area in which frequent realistic training could occur.
08132 09012	PD-42	There is more than a single alternative. The EIS includes analysis of three action alternatives, with two in west Texas and one in northern New Mexico.
09012	PD-43	NEPA and CEQ guidelines require that a proponent of a major federal action present the decision-maker with reasonable alternatives. If reasonable, these may include alternatives not meeting the full need. Use of the Harrison and La Junta facilities and associated airspace would not even fulfill part of the need for RBTI. Furthermore, all of the proposed alternatives include continued training in airspace associated with La Junta, Harrison, Belle Fourche, and Granite Peak. As such, the existing alternatives incorporate the important aspects of the alternative concept suggested in the comment.

08067 09012	PD-44	Realism in training is important, as stated in the EIS Section 1.0. However, the requirements for realism must focus on the crucial combat activities rather than transit time that yields only low-value training. Under RBTI, aircrews would continue to fly a proportion of their training with longer distance sorties to locations like Belle Fourche and Granite Peak. As such, they would receive that portion of training requiring long-range missions.
08247 09013	PD-45	Defining reasonable alternatives was a focus of RBTI, as shown in the draft EIS in Section 2.1 and in Appendix A. As this information demonstrates, over 70 MTRs were examined for operational suitability. These included MTRs associated with the Smoky Hill Range, as well as those associated with the existing ESS's at La Junta and Harrison. The systematic and rigorous process used to identify RBTI alternatives (Section 2.1) demonstrated that none of the suggested potential alternatives met the purpose and need.
09013	PD-46	As shown throughout Section 1.0, particularly in Section 1.6, the goal of RBTI would be to reduce the overall flight times from the bases to the training assets. Section 1.3 details the reasons why these assets need to be closer to the bases and how this would reduce overall flight time.
09013	PD-47	The same "side bar" discussed in the comment states that "all ordnance delivery would be electronically simulated". This clearly indicates that nothing of any type would be released from the aircraft.
09013	PD-48	The section preceding Figure 1.3-3 describes, in detail, the current situation of flying activities for the B-52s from Barksdale AFB and the B-1s from Dyess AFB. The sentences leading up to this figure "call out" state the locations to which the current sorties fly. Optimum was determined based on the Air Force syllabi and training requirements of the B-52s and B-1s.
09013	PD-49	This has been modified in the final EIS.
09013	PD-50	Section 2.2, Description of the Study Area, details each source and date for the data used to define the sortie-operations in Table 2.3-2 and in Appendix B. For Alternatives B, C, and D, the estimated timing of implementation has been added to the EIS.
09013	PD-51	Additional information on average hours of use are included in 2.3.1. Typically, 1 to 2 bomber aircraft would operate in the MOA over a 30 to 45 minute period. On average, about 5 periods would be scheduled per day. A two-aircraft formation would require 45 to 60 minutes to complete a training flight through an MTR. On average, about 5 periods would be scheduled per day.
09013	PD-52	This has been modified in the final EIS.
08086 09014	PD-53	The analysis in the EIS accounts for the primary (those used or proposed for use by the B-52s and B-1s) MTRs and MOAs affected by the alternatives as well as the secondary (not used or proposed for use, but intersected by primary airspace) MTRs and MOAs within the entire study area. Data tables in Section 2.2-2.4 and in Appendix B detail the projected sortie-operations in each airspace unit by aircraft type. Movement from one airspace unit to a separated unit will follow the same FAA regulations to which all air traffic must adhere.
09014	PD-54	Proposed segment WAWB of IR-153 does not overlie any portion of Lake Merideth National Recreation Area. The segment terminates approximately 6 nm west of the area. The Canadian River drainage is not assessed in specific in the EIS because it does not include any designated special land use management areas. Effects of Alternative D on recreation activities such as those that could occur in the river drainage are assessed for all lands underlying the affected airspace.
09014	PD-55	Their use would remain unchanged as shown in Appendix B of the EIS.
09014	PD-56	Flight activities in MOAs are detailed in Sections 1.4, 2.1.1 (including an example of a mission in Figure 2.1-1), and 2.3.1. All of these discussions

		apply to the Mt. Dora MOA as well as the other alternatives. Typically, 1 to 2 bomber aircraft would operate in the MOA over a 30 to 45 minute period. On average, about 5 periods would be scheduled per weekday.
09014	PD-57	As shown on Figure 4.2-8, this NPS unit would lie 4 to 5 nm outside the proposed Mt. Dora MOA.
09014	PD-58	As shown on Figure 4.2-8, this NPS unit would lie 2 to 3 nm outside the proposed IR-153.
09015	PD-59	As described in Section 2.2, all aircraft activities in the affected primary and secondary airspace are analyzed in the EIS.
09020	PD-60	The Air Force has and will continue to adhere to all pertinent FAA regulations. Military pilots flying over sparsely populated areas will avoid all visible persons, vessels, vehicles, and structures by 500 feet. Over congested areas, pilots will overfly no lower than 1,000 feet above the highest obstacle within 2,000 feet. Meeting these requirements would not degrade the training effectiveness of the MTR.
09021	PD-62	Sections 1.2, 1.3, and 1.4 in the EIS describe in detail the requirements for the airspace to meet the training needs of the B-1s and B-52s. Section 2.1 details the application of those requirements to existing airspace in order to identify potential alternatives to meet the need. Over 70 MTRs were evaluated, including those associated with La Junta and Harrison. The EIS in Section 1.3 establishes that neither La Junta or Harrison have the integrated assets required for the training and the areas lack required terrain variability. As such, even with airspace modifications, neither would fulfill the purpose and need for RBTI.
01124 09021	PD-63	Realism in training is important, as stated in the EIS Section 1.0. However, the requirements for realism must focus on the crucial combat activities rather than transit time that yields only low-value training. Under RBTI, aircrews would continue to fly a proportion of their training with longer distance sorties to locations like Belle Fourche and Granite Peak. As such, they would receive that portion of training requiring long-range missions.
00868	CE-1	Sections 2.4 and 2.5 of the EIS present information on the location and use of both primary and secondary airspace under each alternative. All secondary airspace that intersects or overlaps with primary airspace is included in the analyses. In this way, the cumulative effects of other, non-RBTI flight activities are addressed.
00113 00292 01129	CE-2	Cumulative impact analyses were prepared in accordance with NEPA and CEQ Guidelines. The EIS considers the cumulative effects of both primary and secondary airspace use within the study area. It also accounts for <i>all users</i> of the primary and secondary airspace. Section 5.1.2 describes how past and present actions were incorporated into the analysis.
01129	CE-3	Section 4.3 of the EIS addresses the impacts of construction, loss of habitat, and aircraft overflights. The first two factors are related. The EIS demonstrates that less than 20 acres would be affected by construction, so less than 20 acres of habitat would be affected. All of the candidate sites have been subject to previous disturbance that has degraded the habitat. Since the potential impacts to wildlife are negligible to nonexistent, they would not add to any potential impacts from aircraft overflights.

**Airspace and Aircraft Operations (AO)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00001 00045 00088 00106 00119 00140 00149 00217 00297 00327 00336 00466 00846	00983 01020 01027 01034 01041 01118 01130 08086 08103 08108 08265 08292 08303	AO-1  Section 4.1 of the EIS presents the air emissions projected to result from implementation of RBTI. All emissions of criteria pollutants monitored by the EPA would be less than one tenth of one percent (0.1%) of the standards set by the EPA to protect human health, the environment, and visibility.
00005 00398 01129 08023 08035 08078	08082 08095 08128 08157 08337	AO-2  Section 4.1 of the EIS discusses the effects of wake turbulence. This analysis establishes that vortices from B-1s or B-52s flying at 300 feet AGL would produce no more than a temporary, light breeze incapable of damaging structures, livestock, or people. Wake turbulence from one aircraft can affect another aircraft that is trailing it too closely. The FAA has established guidelines for separation of aircraft in flight. Adherence to these guidelines by all pilots, military and civilian, would prevent any problems.
00005 01130		AO-3  IR-178 has been used by low-flying bomber aircraft for roughly two decades. Prior to that time, its predecessor routes, IR-144 and IR-165, covered much of the same area. Bomber aircraft used these routes since their inception. All changes to the use of IR-178 have been assessed in accordance with NEPA. Prior NEPA documentation shows that as early as the 1970s, use levels were equal to or greater than baseline sortie-operations. Established avoidance procedures for airfields would remain in force. See also response AO-2.
00013 00383 00517	00938 08005 08097	AO-4  The EIS addresses noise effects on humans (Section 4.1) wildlife and livestock (Section 4.3 and Appendix G), special use land management areas (Section 4.2), and cultural resources (Section 4.5).
00020 00042 00200 00365 00983	08108 08167 08170 08337	AO-5  B-52s are unable to eject (dump) fuel. For B-1s, if an emergency were to occur, B-1s are required to climb to 10,000 feet AGL or higher before jettisoning fuel. This provides enough altitude to ensure that jet fuel evaporates before it reaches the ground.
00042 00057 01129	08166 08247	AO-6  Air Force aircrews are the most highly trained in the world. These aircrews regularly deal with the effects of winds and turbulence both at high altitude and low altitudes without any effects on safety or navigation.
00043 00097 00113 00120 00292 00361 00393 00399 00405 00416	00448 00507 00538 00625 01011 08186 08187 08190 08193 08331	AO-7  The safety records of B-52s and B-1s are both exceptional and the probability of a mishap is extremely low. If a crash did occur, its potential to start a fire would be dependent on many factors including the season, wind, moisture, terrain, as well as the nature and density of the vegetation. No restrictions on flight activities would be expected. See also responses AO-16 and AO-49.

00044 00247 08172	AO-8	As described in Section 4.1 of the EIS, speech interference could occur. Most people when faced with an outside noise raise their voices sufficiently to be heard. The potential for overflights to “interfere” with instruction would be extremely low since the number of direct, low-altitude overflights would be less than 10 per weekday and flights would be dispersed within a broad MTR corridor. In addition, low altitude overflights currently occur over at least two areas with very difficult rock climbing routes: Joshua Tree National Monument and City of Rocks (Idaho). The Air Force is not aware of any evidence of an effect on climbing safety in either area.
00044 00247	AO-9	The EIS in Section 4.1 addresses sleep disturbance and indicates that it is a function of myriad factors, not only noise.
00044 00247	AO-10	Military aircraft communications and electronic combat equipment operate at different frequencies than other radio and communication equipment, so no effects are anticipated.
00046 08023 00466 08084 00625 08086 00969 08088 01129	AO-11	The EIS describes the emissions from the jet engines in Section 4.1. All emissions of criteria pollutant monitored by the EPA would be less than one tenth of one percent of the standards set by the EPA. These would also include water vapor, but not unburned fuel.
00053 00835 00218 00837 00325 00845 00407 08012 00694 08165 00765 08309 00803 08352 00811	AO-12	Vibrations to structures from low-altitude overflights are addressed in Section 4.5 of the EIS. The analysis in the EIS demonstrates that the proposed overflights would not cause structural damage to homes, historic structures, or other structures.
00062 00349 08218 08249 08344	AO-13	No airspace associated with the RBTI alternatives overflies Taos, Taos Pueblo, or the Taos Ski Valley. Figure 2.4-9 shows the distances of the airspace to these areas. Taos lies 30 or more miles from the nearest portion of the proposed MTR. Noise from aircraft would not be audible at that distance.
00068 01108 00293 01130	AO-14	Flight activities under RBTI would not involve supersonic speeds or produce sonic booms.
00074 08228	AO-15	Figure 2.4-11 presents the increase in sortie-operations per MTR segment for Alternative D.
00092 00427 00105 00445 00120 00447 00124 00458 00140 00466 00144 00500 00165 00566 00200 00760 00225 00784 00227 00906 00240 00983 00241 01019 00295 08012 00308 08016 00322 08096 00355 08218 00361 08287 00370 08311	AO-16	As demonstrated in the EIS (Section 4.1), the safety records of B-52s and B-1s are both exceptional and the probability of a mishap is extremely low. Should the Air Force implement one of the RBTI action alternatives, it would prepare the necessary plans and procedures to deal with responses to mishaps.

00374 00382 00391 00410	08331 08343 08377		Continued from AO-16.
00101 00441 00800		AO-17	The analysis of noise annoyance addresses community noise effects and the basic research considered people from a wide range of occupations. Additionally, the probability of repeated overflights of a single location is small.
00101 00118 00120 00125 00500 00611 00800 00826 00862 08006	08090 08223 08247 08265 08278 08307 08323 08337 08367 08370	AO-18	<p>The effect of aircraft noise on children is a controversial area. The reactions and behaviors of children described in the comments have not been documented in any research on the effects of aircraft noise on children or supported by anecdotal evidence. Also no evidence has been reported about these kinds of reactions to military overflights that have occurred over the last 30 years. It has been proposed that children are potentially more sensitive to noise sources as compared to adults, however, studies completed to date have produced no unequivocal evidence of auditory or non-auditory impact due to aircraft operations. Further, many studies (which have occurred primarily in Europe around airports) have been plagued with serious design problems including failure to incorporate control variables and account for exposure to other loud noise or small sample sizes. Numerous studies have also concluded no likelihood of permanent hearing loss, psychological or physiological health effects on children or young people. The RBTI proposes a small increase in sortie-operations (up to 10 per day) primarily in areas where military activity has occurred for many years. Neither children nor adults exposed to noise levels associated with either the existing military aircraft operations occurring today (Alternative A) or any of the actions alternatives (Alternatives B, C, or D) are anticipated to suffer serious health effects. Mental and emotional effects, as well as hearing loss due to the low noise exposure levels associated RBTI, can generally be ruled out.</p> <p>The Air Force has reviewed the referenced study entitled, “Jets over Labrador and Quebec: noise effects on human health,” by Jeannie Rosenberg. The paper focuses on the issue of effects of low level flights on human health (hearing loss, annoyance, startle, and physiological effects). These issues are addressed in Sections 4.1 and 4.2 of the EIS. Also, see above for a discussion of effects on children. The other unnamed German study referred to, was not specifically reviewed, however, the preponderance of scientific literature indicates no long term health effects, including “post traumatic stress syndrome,” result from occasional overflights such as those associated with the RBTI.</p>
00105 00207 00223 00245 00274	00323 00643 01131 08163	AO-19	The potential for bird-aircraft strikes is analyzed in the EIS (Section 4.1). That analysis demonstrates the very low probability of such occurrences.
00113 00124 00136 00137 00219 00292 00374	00399 01011 01104 08011 08263 08337	AO-20	Section 4.1 of the EIS addresses health effects and aircraft noise. The body of scientific evidence does not support the commentor’s claim concerning the aircraft noise generated under the RBTI proposal and hearing damage, physical ailments, and pain.
00114		AO-21	The FAA has the responsibility for establishing, modifying, and eliminating airspace. The duration that such airspace continues to exist is also up to the FAA. Airspace is not permanent. For example, should the

		Air Force implement Alternative B, hundreds of miles of IR-178 would be eliminated and portions of existing MOAs would also be eliminated.
00120	AO-22	Depending upon the nature and location of the training mission, the Air Force has pre-designated alternate landing locations. Aircrews are highly trained to respond to difficult emergency situations and would plan for all possible contingencies.
00134 08085	AO-23	Analysis in the EIS accounts for all aircraft using the defined airspace units irrespective of their base of origin or service affiliation. Appendix B shows all current and projected airspace use.
00138 08192 00412 08341 00547	AO-24	Life flights and other emergency aircraft activities are always given priority over training activities when the two may be in conflict. For fires involving aerial fire fighting, the FAA transmits a Notice to Airmen to avoid the area of operations.
00156 08019	AO-25	Section 4.1 of the EIS presents the noise levels associated with all aircraft associated with the RBTI proposal. See also response BR-1.
00157 08043 00531 08099 01044 08320 01045 08321 00130 08361	AO-26	Sleep disturbance studies have used both the DNL and the SEL metric in evaluating noise-related awakenings. As such representative studies using both metrics are discussed in the EIS in Section 4.1. It has been determined that arousal from sleep is a function of a number of factors including age, gender, sleep stage, noise level, frequency of noise occurrences, noise quality and pre-sleep activity. Under the RBTI proposal, a maximum of 15% and 20% of the B-52 and B-1 sortie operations, respectively, would potentially be flown at night, i.e., after 10:00 PM. Additionally, nighttime sorties are required to land back at their home station no later than 2:00 AM during the summer and prior to 1:00 AM during the winter season, which effectively reduces the overall potential for sleep disturbance to some degree. The SEL for a single overflight varies depending on the altitude, the lateral distance from the receiver and the aircraft operating characteristics. At the lowest operating altitude band of 300 to 500 feet AGL, accounting for 5% of the proposed operations, the SEL ranges from 116 to 113 dB for a B-1 and 111 to 107 dB for the B-52. In some situations, sleep awakenings have occurred, however studies have shown noise-related awakenings are far less than spontaneous awakenings. The variability of the aircraft position within the airspace structure also reduces the probability of repeated awakenings and significant impact.
00167 00977 00220 08217 00387 08255 00689 08285	AO-27	As presented in Appendix G, the body of scientific knowledge reveals no instances of subsonic aircraft overflights causing landslides, rock slides, or avalanches.
00195 00625 00806 08067	AO-28	The potential effects of aircraft noise on people, livestock and wildlife due to current and proposed operations are discussed in the RBTI EIS Sections 4.1, 4.2 and 4.3. Additional, information on the effects of noise is found in Appendix G, pages G-9 to G-17. Although individual situations can not be predicted, overall, studies have shown that the noise levels associated with RBTI do not cause catastrophic, long-term impacts. Individual overflight events are temporary intrusions into the local environment and do not represent lasting effects. Also see responses BR-1 and AO-42.
00198 00360	AO-29	The presence and use of military airspace over wilderness areas is not in conflict with any stipulations in the Wilderness Act of 1964. Numerous wilderness areas were established under existing military airspace that is still used today.
00243 08164 08181	AO-30	As shown in the EIS, Section 2.4.4, no airspace associated with Alternative D would occur within 5 nm of the Angel Fire airport. No restrictions on the use of that airport would be expected as a result of

		RBTI.
00265 00333 08034	AO-31	Jet fuel (JP-8) does not contain ethylene dibromide.
00267	AO-32	The systems within military aircraft do not emit at frequencies that could affect automobile operations.
00267	AO-33	The aircraft would be training and would not carry nuclear weapons of any kind.
00272	AO-34	As stated in Section 2.4.2 of the EIS, the MOA airspace in the vicinity of Big Lake, Texas would have a floor (base) of 3,000 feet above ground level, not sea level.
00283	AO-35	Section 4.1 of the EIS details both baseline and potential direct and indirect impacts for noise and air quality. Section 5.0 discusses cumulative impacts.
00291	AO-36	Proposed IR-153 would overlap and intersect with numerous existing MTRs that are used for low-altitude training by a variety of aircraft, including some B-1s and B-52s. Appendix B presents the breakout of all current aircraft users of these MTRs.
00291	AO-37	The EIS does show that much of the airspace over the area including Philmont Scout Ranch would be newly established airspace. Refer to Figure 2.4-9 in the EIS.
00324 00326 01129	AO-38	The EIS cites the findings of the National Forest Service accurately. The EIS goes on to note that low-altitude, high-speed overflights were considered most annoying and that the associated startle effect can negatively affect wilderness experiences.
00324 00326	AO-39	The EIS shows the projected amount of change in noise levels as described in the comment. The EIS also defines this amount of change as an adverse impact.
00334	AO-40	In Section 2.4.1, the EIS discusses RF emissions and the safety zone to be established around the emitters. This zone provides more than sufficient separation for the RF emissions from the emitters. Additional discussion of RF emissions has been presented in the EIS.
00334 00983 08087	AO-41	The basis for the sortie-operations is presented in Section 2.2 of the EIS. Actual counts of sortie-operations flown were used based on the records of the airspace managers for the appropriate airspace units. All proposed users are accounted for in these data.
00342 00383 08046	AO-42	It is possible that aircraft noise could startle domestic animals. However, animals have been shown through numerous studies to adapt and habituate to various sound sources, including jet aircraft noise. Likewise, human response to jet aircraft noise can also include startle or “surprise” effect. While the experience may be annoying in the short-term, no long-term health effects have been shown to occur. The overflights and associated noise levels from current operations or those that would result from an RBTI alternative, are intermittent and short in duration as opposed to regularly scheduled flights, such as at an airport. Additionally, the varied altitude structure and horizontal distribution of the flights make repeated overflights of the same location infrequent.
00354	AO-43	The EIS details the potential impacts of the RBTI proposal from noise, air emissions, and safety in more than 50 pages in Section 4.1.
00361	AO-44	The low probability of mishaps as presented in the EIS reflects the number of proposed flights under RBTI.
00361 08210	AO-45	The analysis of the effects of noise on humans is presented in Section 4.1 of the EIS; analysis of the effects of noise on wildlife is presented in Section 4.3.
00365	AO-46	The use of live ordnance for training is not part of the RBTI proposal.

			Rather, aircrews would electronically simulate ordnance delivery training.
00448 00517 00636 00894	08048 08126 08321	AO-47	No part of the RBTI proposal involves flights by B-1s or B-52s at 200 feet AGL; the lowest altitude flown by these aircraft is 300 feet AGL.
00531		AO-48	The noise analysis presents information on the cumulative exposure in the form of DNL that is appropriate for community response. Noise levels for single events, i.e., single overflights, provided by the L <sub>MAX</sub> and SEL metrics supplement this.
00538 01104 01130 08337		AO-49	While the probability of a mishap is extremely low, it could occur. When an aircraft crashes, it may release fuels, oils, lubricants, and other materials that could enter the ground. The potential for contamination would depend upon many factors including the nature of the accident, porosity of the soil, geologic features, and season of the year. As part of the Air Force’s accident response, the presence of contamination would be investigated and, if found, the affected area would be cleaned-up according to Federal standards.
00565 08016 08100 08166 08167		AO-50	B-52s are unable to eject (dump) fuel. For B-1s, if an emergency were to occur, B-1s are required to climb to 10,000 feet AGL or higher before jettisoning fuel. This provides enough altitude to ensure that jet fuel evaporates before it reaches the ground. Jet fuel (JP-8) contains no ethylene dibromide.
00689		AO-51	The OSHA standard applies to sustained noise over a 30-minute period. As shown in Figure 4.1-2 and Table 4.1-1 of the EIS, the maximum sound levels of 117 dB (B-1) and 110 dB (B-52) would be instantaneous and not sustained. This noise level would occur for a fraction of a second. As the aircraft recedes from the receiver, the noise levels decrease with distance.
00689		AO-52	The EIS in Section 4.1 discusses studies on aircraft noise and hearing loss. These studies indicate that RBTI flight activities would neither generate noise levels nor occur with such frequency as to affect hearing.
00712		AO-53	As shown in Figure 4.1-2 and Table 4.1-1 of the EIS, the maximum sound levels of 117 dB (B-1) and 110 dB (B-52) would be instantaneous and not sustained. This noise level would occur for a fraction of a second. As the aircraft recedes from the receiver, the noise levels decrease with distance.
00727 00827 01129		AO-54	No “rural” or “wilderness” guidelines exist, however the referenced guidelines are useful in evaluating the impact of aircraft noise. Additionally, use of the DNL metric is has been recommended as the principal means for describing long-term noise exposure of civil and military aircraft operations.
00742 00744 00745 00746 00853 00856 00865 00878 00896 00950 00953 00955	00956 00970 00984 00985 00993 00994 01078 01089 08182 08237 09014	AO-55	Use of the DNL cumulative metric, as recommended by the Federal Interagency Committee on Noise (FICON), is accepted as the principle metric for describing environmental noise exposure. DNL is appropriate because it not only accounts for the total number of events occurring and the time they occur, it also accounts for the duration of the events and the maximum levels noise levels associated with the events. There are no new descriptors or metrics of sufficient scientific standing to substitute for the DNL cumulative noise exposure metric. As noted, inclusion of the L <sub>max</sub> and SEL metrics is useful to further describe the noise levels attributed to an individual overflight. Collectively, these three metrics provide adequate analysis of the existing environment as it occurs today and the future noise environment should RBTI be implemented. Although DNL can be supplemented with other metrics to characterize specific effects, to date there is no consensus among various agencies on the desired metrics relative to the new field of wilderness psychoacoustics. Additionally, the RBTI action alternatives were structured to avoid NPS properties to the

		maximum extent, however public feedback on the proposal has indicated a preference for overflights to occur over Federal property verses private lands. See also response BR-1.
00827	AO-56	In the RBTI EIS, the AF has presented the noise levels of the existing environment, i.e., that occurring today, and presented the resulting changes if one of the three action alternatives were implemented. It is intuitive that if property values have not suffered due to the historical activity (which includes not only military activity, but management agency flights as well as general and commercial aviation), the addition of 10 flights per day at varied horizontal and vertical distribution will not suddenly result in drastic impacts to property values. Factors which are likely to contribute to fluctuations in property values is the economy, employment opportunities, community amenities, community and education services, as well as historical ties to the land. These factors drive property values, not sporadic military overflights.
00868 08126 08193	AO-57	As stated throughout the EIS, the analysis was based on a floor of 300 feet AGL for proposed MTRs. The floor altitudes of 200 feet AGL noted in Appendix C are structural remnants of the existing MTRs from which the proposed MTRs were developed. See also response for AO-47.
00868	AO-58	The sortie-operations presented in Tables B-1 through B-4 are yearly. As stated in the titles for Tables B-6 through B-8, the sortie-operations denote average daily use. Section 4.1 of the EIS addresses the potential effects of the RBTI alternatives on civil aviation. See also response BR-2.
00894	AO-59	It is possible that aircraft noise could startle domestic animals. Animal responses may vary but generally large, studies have failed to provide conclusive evidence of any serious effect except trauma due to panic reaction. Animals have been shown through numerous studies to adapt and habituate to various sound sources, including jet aircraft noise. In the literature review of Mancini <i>et al.</i> (1988), behavior reaction observed in livestock exposed to low-altitude subsonic overflights have generally consisted of startle reactions that were considered minimal. The RBTI low-level overflights may result in incidental livestock startle that may or may not lead to livestock damage. The expectation that overexertion of cattle raised for food purposes would result in death or weight loss, is speculation.
00827 00906 08021	AO-60	The data set from which the “Schultz curve” is synthesized is not a model, but rather a dose-response relationship for noise exposure levels and the prevalence of annoyance. The original curve was derived from a body of 161 paired observations in the 1970’s (T.J. Schultz, “Synthesis of Social Surveys on Noise Annoyance,” <i>Journal of the Acoustical Society of America</i> , 64(2):377-405, 1978). The set of data was updated from 161 to 453 data points by Dr. Sanford Fidell and colleagues in a 1991 publication (Fidell, S., Barger, D.S., and T.J. Schultz, “Updating a Dosage-Effect Relationship for the Prevalence of Annoyance Due to General Transportation Noise,” <i>Journal of the Acoustical Society of America</i> , 89:221-223, 1991). The expanded analysis revealed only minor differences in the prevalence of noise-induced annoyance as predicted by Schultz and by the newly derived relationship for all transportation noise. This research also pointed out that the prevalence of aircraft noise is somewhat greater than that attributable to surface traffic (e.g., street/highway traffic and railroad noise). This finding was acknowledged by the Air Force in the article entitled “Community Annoyance and Sleep Disturbance: Updated Criteria for Assessment of the Impacts of General Transportation Noise on People” (Finegold, L.S., C.S. Harris, and H.E. von Gierke, <i>Journal of the Acoustical Society of America</i> , 42(1):25-30, 1994). According to the 1992 Federal Interagency Committee on Noise

		(FICON), “the dose-effect relationship, as represented by DNL and ‘Percent Highly Annoyed’ (%HA), remains the best available approach for analyzing overall health and welfare impacts for the vast majority of transportation noise analysis situations.” The RBTI EIS provides this information to assist the public and decision-makers in understanding the degree of community annoyance resulting from the noise levels associated with the alternatives. Additional single event noise metrics have been provided to fully describe the potential noise environment.
00950 00955 00956 00984 00985 01078 01089 08020 08187	08262 08272 08288 08303 08310 08312 08315 08337 09018	AO-61 No human endeavor is entirely without risk, yet the potential for aircraft mishaps (as reported in Section 4.1 of the EIS) is extremely low. The EIS describes the nature of Class A mishaps, provides the overall history of Class A mishaps for the life span of B-52s and B-1s, and presents the estimated rate of mishaps. All sources and causes of mishaps are included in the calculations used in the analysis. On average, B-52s have had a Class A mishap for every 28 million miles flown; B-1s have a record of one mishap per 14.5 million miles flown.
00970 01041 01130 08034 08076 08100 08100 08132		AO-62 Section 4.1 and Appendix F details the methods and assumptions used for the MAILS modeling. The MAILS air quality analysis used a conservative approach by assuming all aircraft would fly at 300 feet AGL for the entire duration of flight in an MTR segment. This distribution over-emphasizes the lowest altitudes whereas only 5 percent of flight activity would actually occur there. An altitude of 5,000 feet AGL was not used as a mixing height for the MAILS model. Even using this conservative approach, the criteria pollutant concentrations would be less than one tenth of one percent of the human health standards set by the EPA.
00983		AO-63 Section 2.4.4 and Appendix C (Table C-2) present information on the length, corridor width, and altitude structure of the airspace associated with Alternative D.
00983		AO-64 Section 2.4.4 and Appendix D present data on the number and location of emitter sites. Section 2.4.1 indicates that all emitter sites would be located on leased or purchased private land and that the emitters would be unmanned.
00983 08363		AO-65 On average, the B-52s would fly at 360 knots and B-1s at 420-550 nm/hour. No supersonic speeds would be employed.
00983 08337 01130 08100		AO-66 The fuel used by B-52s and B-1s is JP-8. JP-8 is basically low-grade kerosene with other additives totaling less than 1 percent. The Air Force switched to JP-8 a few years ago, in part, to reduce jet fuel’s potential effects on the environment and to standardize with NATO forces.
00983		AO-67 Table 2.3-2 in the EIS presents information on current sortie-operations on existing MTRs associated with the RBTI proposal. Tables 2.4-5, 2.4-9, and 2.4-13 present the proposed use of the MTRs under each alternative in comparison to current usage. Appendix B provides additional data on sortie-operations within the airspace.
00983		AO-68 As shown in Section 4.1 of the EIS, the analysis of noise emphasizes the differences in noise levels under existing and projected conditions.
01033		AO-69 No landings would occur in northern New Mexico. Landings would occur at Barksdale AFB, Louisiana, and Dyess AFB, Texas.
01044 01130 09018		AO-70 In section 4.1, the EIS details the emissions from the proposed aircraft activities and compares them to standards established by the EPA for human health. As the analysis demonstrates, the aircraft emissions would represent less than 1% of the threshold for 15 of 16 categories, and about 2.5 percent of the threshold for the other category. These emissions would not affect human health and would not be “smelled” by people on the ground.

01128	AO-71	Establishment of a MOA would not limit civil or agency VFR air traffic. FAA regulations permit non-participating VFR traffic to transit a MOA. See also Response BR-2.
01129	AO-72	Sortie-operations associated with IR-102/141 have been eliminated from all four alternatives and affected resource categories have been re-analyzed to reflect this change.
01130	AO-73	Section 2.4 of the EIS demonstrates that all of the MTRs mentioned in the comment were considered in the noise analysis.
01130	AO-74	Information on average speeds of aircraft has been added to the EIS. The altitude distribution per aircraft type is presented in Table 2.3-3.
00827	AO-75	<p>The noise analysis and modeling performed in the EIS represent the best available, scientifically validated methods. The Air Force’s approach to characterizing noise exposure consisted of summing the acoustic energy produced by individual aircraft operations over a period of time, and expressing this quantity in terms of time-weighted sound levels. Expressing aircraft noise exposure in time-weighted average sound levels has been standard practice since the early 1970s. Although variant methods have been proposed, none has received the scientific or agency validation of time-weighted sound average for noise exposure. No other method of assessing aircraft noise impacts is demonstrably superior.</p> <p>Many of the concepts and arguments presented in the comments have been reviewed by Dr. Sanford Fidell, world renown noise expert and cited as such by the commentor. Dr. Fidell’s assessment concluded that the comments are incomplete, internally inconsistent and misleading. The assertion in the comments that DNL is inappropriate as a measure of noise impacts and annoyance is not borne out by the scientific literature or agency procedures. The Federal Interagency Committee on Noise, as late as 1992, validated the use of DNL for analysis of aircraft noise impact and community annoyance. No credible alternative to DNL for prediction of human response to noise exists. Neither the literature review (which is incomplete) nor the invalid replacement for the Schultz curve presented in the comment demonstrates that the analysis in the EIS is inaccurate or inappropriate. See also response AO-60.</p>
01131	AO-76	<p>Although “surges” can generate an unusually large number of sorties for fighter aircraft, the maintenance and coordination requirements, along with the limited number of airframes make a “tremendous increase in daily flights” improbable for bombers.</p> <p>Both Barksdale and Dyess AFBs conduct a few exercises annually designed to strengthen maintenance and operational practices. Barksdale AFB conducts exercises approximately twice a year, with a typical exercise involving a total of 10 aircraft taking off within 1 to 2 hours and following predetermined routing. Dyess AFB exercises approximately four times per year during a three to four day time frame, typically using six sorties per day.</p> <p>Normally, these exercises take place on non-routine MTRs and the MTRs are closed to non-participating aircraft during the time of the exercise. In addition, these MTRs are chosen to develop the operators’ experience, therefore, the routes commonly traversed for training would not be used. Since RBTI proposed airspace would be routine training, these exercises could reasonably result in fewer sorties within RBTI airspace during these times.</p>

	AO-76	If RBTI airspace were the designated routing during an exercise, the six sorties per day for Dyess AFB or the ten from Barksdale AFB are already accounted for and analyzed in the RBTI EIS.
08007	AO-77	The EIS in Section 2.4.2 states that the proposed Lancer MOA would not expand the area currently under MOA airspace, and indicates that airspace use would increase substantially.
08007	AO-78	As indicated in Table 2.3-3, different types of aircraft would operate at different percentages of time within the MOA. For example, out of a 45-minute sortie-operation in a MOA, a B-1 would spend, on average, 18 minutes (40%) between 3,000 and 5,000 AGL. The remaining 27 minutes would involve flight above 5,000 feet AGL. Since noise decreases with altitude, and 35 to 80 percent of the flight activities would be above 20,000 feet AGL, noise levels in the MOA would remain low.
08011	AO-79	Speech interference sometimes occurs when background noise levels exceed 65 dB. Within houses, which usually provide insulation that reduces noise levels by 20 dB or more, the potential for speech interference decreases.
08019	AO-80	B-1 aircraft already fly on the MTRs mentioned in the comment. Refer to Appendix B of the EIS. Any changes to the altitude of flights within the MTRs or to the amount of sortie-operations performed by specific aircraft would need to be assessed through the NEPA process.
08027	AO-81	The maximum A-weighted sound level ( $L_{max}$ ) of a B-1 overflight ranges from 117 dBA at 300 feet above ground level (AGL) to 75 dBA at 10,000 feet AGL. The A-weighted sound exposure levels (SEL) which is the single number representation of the noise energy dose, ranges from 116 dBA at 300 feet AGL to 83 dBA at 10,000 feet AGL. The data are found in Section 4.1.1, Tables 4.1.1 and Figure 4.1.3. The referenced levels of 45 and 62 dBA are the Day-Night Average Sound Levels or DNL. Refer to Appendix G for additional information on various noise metrics.
08085	AO-82	The analysis uses the most recent data on aircraft operations, noise factors, and emissions. B-52s have been flying since the 1950s and B-1s have been flying since the mid-1980s. Past use of the airspace has included sortie-operations by these aircraft types.
08094	AO-83	As detailed throughout the EIS, an average of 10 sortie-operations would occur on a daily basis in the parts of the MTR proposed for the heaviest use.
08103	AO-84	All flight activities proposed under RBTI are reported in the EIS, Section 4.1. The Air Force has no additional proposals with regard to the affected airspace. Should such proposals arise in the future, they would be assessed through the NEPA process.
08103	AO-85	The EIS details aircraft emissions throughout Section 4.1. Information on increases in $PM_{10}$ is presented for each alternative. $PM_{2.5}$ was not assessed as the EPA has yet to establish a standard for this metric. The analysis does evaluate aircraft activities at 300 feet AGL. See also response for AO-62.
08103	AO-86	No refueling tracks associated with RBTI occur over the area mentioned in the comment. See also response to AO-50.
08122	AO-87	The baseline for the RBTI noise analysis correctly presents the noise levels attributed to existing or previously approved aircraft operations. Each of the proposed alternatives are analyzed to determine the change in the noise levels (increases or decreases) resulting from the addition of the RBTI. Evaluation of the changes in the noise environment against a non-existent baseline would present an inaccurate characterization of the impacts.
08122	AO-88	Since its designation in the early 1990s, IR-178 has encompassed the same

		area. Predecessor MTRs such as IR-165 also overlay much of the same area and supported bomber sorties since the 1970s.
08170	AO-89	Approximately 12 average daily sortie-operations (260 days/year) could occur in the segments of proposed IR-153 overlying Philmont Scout Ranch. As detailed in the EIS, these flights would be dispersed horizontally and vertically, thereby minimizing the potential for a single location to be overflown repeatedly.
08184	AO-90	Noise will not be trapped in the valleys of northeastern New Mexico. Noise traveling in rays away from aircraft reaches the surface of the earth at an angle relative to the position of the aircraft. The noise level experienced in the valley would depend upon the altitude and lateral distance of the aircraft from the valley as well as the location of the receiver. Dispersion of overflights across a Military Training Route corridor and vertically within its altitude structure, limit the probability of exclusively flying over the same spot.
08193	AO-91	Balloon and glider flight activity must also adhere to FAA regulations. Pre-planning of such activities to avoid areas of other civil and military aviation would prevent conflicts.
08196	AO-92	The cumulative noise levels (DNL) presented in EIS are complimented by single event noise levels for the B-1 and the B-52, as well as other aircraft who use the affected airspace. Data on A-weighted maximum sound levels ( $L_{max}$ ) are found in Tables 4.1.1; A-weighted sound exposure levels (SEL) are presented in Figure 4.1.3.
08227	AO-93	Use of all airspace is managed by the FAA. All proposed sortie-operations for RBTI are presented in the EIS and detailed according to airspace units. Should the Air Force propose to use other airspace units not environmentally assessed for a particular type or number of aircraft, it would undertake an analysis governed by the NEPA process.
08323 08331	AO-94	As demonstrated in the EIS (Section 4.1), the safety records of B-52s and B-1s are both exceptional and the probability of a mishap is extremely low. The coincidences necessary to result in an event such as described in the comment would reduce the probability of occurrence to the infinitesimal level.
01130 08337	AO-95	Neither the B-52 nor the B-1 carry hydrazine. F-16s, which carry small canisters of hydrazine, would represent a minor (about 2%) user of the airspace.
09011	AO-96	The Air Force has reviewed the recently adopted Final Regional Haze Rule. Analysis in the EIS shows that the amount of particulate matter ( $PM_{10}$ ), a common source of haze, generated in New Mexico would be less than 0.3% of the PSD Class I increment. Similarly, $NO_x$ emissions from RBTI would represent approximately 2% of the PSD Class I increment (Section 4.1.5 and Table 4.1-21). These small amounts would only occur in the most intensively used segments which account for about 10% of the proposed MTR. All other segments would contribute less $PM_{10}$ and $NO_x$ based on fewer daily flights and/or use of higher altitudes. For this reason, and because the flight activity would be dispersed over thousands of square miles, it is unlikely that RBTI aircraft emissions would represent a factor affecting New Mexico's compliance with the Regional Haze rule.
09011	AO-97	The Pecos Wilderness Area would lie 17 to 18 miles from the edge of the proposed MTR, Wheeler Peak Wilderness Area would be roughly 7 miles from the MTR's edge, and Carlsbad Caverns National Park would lie more than 30 miles from any of the airspace units proposed for increased use under RBTI. Given this distance, the infrequency of flight activities, the volume of air in which the emissions would dissipate, and the

		extremely low concentrations of emission (see Section 4.1 of EIS), these PSD Class I areas are not expected to be affected.
09011	AO-98	Section 4.1.1 (Aircraft Emissions and Air Quality) describes that total emissions of criteria pollutants were derived for all alternatives by calculating military aircraft emissions for affected MOAs and MTRs in each alternative. All military aircraft flying in the airspace were included. Appendix B provides information on the total number and type of sortie-operations for each affected airspace unit.
09012	AO-99	The EIS does account for the effects of increased numbers of sortie-operations within the defined limits of the airspace units, whether they would be expanded or decreased under a particular alternative. For example, the DNL noise analyses (section 4.1) accounts for the horizontal and vertical “concentration” of aircraft sortie-operations within the MTRs and MOAs. The model used in this analysis incorporates the “concentration” and/or “dispersal” of aircraft within the particular airspace unit and the results of the analysis reflect the size of the airspace unit. In addition, for each alternative the EIS does describe the probability of any single location being overflowed based on the size of the airspace unit and the nature of its proposed use.
09013	AO-100	The referenced section and appendix describe the methodology used to assess noise from all types of Air Force aircraft, including B-52s and B-1s. This methodology addresses the noise from B-52s and B-1s specifically for the airspace affected by the RBTI alternatives. Other, older reviews, such as those prepared for basing of aircraft would not be pertinent to the analysis in this EIS.
09013	AO-101	The definition of DNL in the Executive Summary has been enhanced.
09013	AO-102	In Section 4.1.1, the draft EIS did address the noise generated by single event overflights at altitudes ranging from 300 feet AGL to 25,000 feet AGL. It details how the both instantaneous (Table 4.1-1) and single overflight noise energy doses (Sound Exposure Levels) generate noise and are perceived by observers on the ground. Under each alternative in Section 4.1.1, the probability of any single location is discussed along with existing FAA procedures for avoiding overflight of persons, structures, and vehicles. Section 4.1.2 also addresses the potential effects of noise on communities underlying the affected airspace and on other types of land uses. The EIS shows that flights within MTRs would be dispersed and sporadic. For MOAs, the flights would be dispersed within a large volume of airspace. In either case, the probability of repeated, low-altitude overflights over a specific location would be unlikely.
09013	AO-103	This has been modified in the final EIS.
09013	AO-104	These locations and procedures for each noise sensitive area under each MTR are published in the AP-1A/B circulars. This reference is included in the final EIS.
09013	AO-105	The percentages of potential mishaps per year are correct as published in the draft EIS.
09013	AO-106	For each alternative in Section 4.1, the EIS discussed the potential effects of the action on civil aviation. See also response BR-2.
09014	AO-107	Section 4.1, Aircraft Noise Assessment Methods, presents the methodology used to model noise for all airspace units. Appendix G provides further detail on this and other noise topics.
01130	AO-108	These references are available at the Air Force’s project files at Dyess AFB, Public Affairs Office.
09018	AO-109	The EIS does not make this argument. The alternatives for RBTI overlie federal, state, and private lands. Alternatives B and C overlie more private lands, but identification of these alternatives was based on operational

		factors (Section 2.1) and did not “target” any particular land ownership.
09020	AO-110	The use of 65 DNL in the referenced section of the EIS was not used as a threshold for impacts. It simply provided a point of reference. The same paragraph recognizes that the aircraft noise would be expected to affect wilderness and solitary experiences.
01129 01131	AO-111	The EIS recognizes that neither 65 DNL nor 55 DNL is a standard or threshold used solely to determine potential impacts. Many factors were considered in addressing the effects of aircraft noise from RBTI. The amount of change in noise conditions, the number of overflights, the timing of those overflights, the vertical and horizontal dispersion of overflights all formed a part of the analytical process. Description of the potential effects of noise on sleep disturbance, speech interference, and other factors is presented in Section 4.1 of the EIS. Various noise levels are discussed in regard to evaluating these effects.
01130	AO-112	The airspeeds reported in the EIS and used in the analysis are those which the aircraft are expected to fly. Use of maximum airspeeds would be inappropriate for the type of training and airspace.
01130	AO-113	Figure 4.1-2 is an illustrative example. The airspeed used for the B-52 is 10 nm/hour less than the aircraft would be expected to fly in an MTR and MOA.
01130	AO-114	All the requested information is presented in the EIS in Chapters 2.0 and 4.0.
01130	AO-115	Both nighttime and startle penalties were used, as appropriate, in the noise analysis. See also response BR-1.
01130	AO-116	Other aircraft users would represent minor users (less than 2%) of the MOA. With such minor use, the probability of mishaps for such aircraft would be even lower than that defined for the B-52s and B-1s.
01130	AO-117	Halon 1211 and 1301 are being replaced with an EPA approved agent.
01130	AO-118	Refueling for B-52s and B-1s occurs at altitudes above 10,000 feet AGL. Although the potential for minimal leakage during refueling exists, fuel would evaporate before reaching the ground.
01130	AO-119	The low noise levels and associated lack of change in annoyance are a result of the emphasis on use of higher altitudes. See Table 2.3-3 in the EIS.
01130	AO-120	Aircraft would avoid emitters since they represent threats. See also response AO-60 and AF-6.
01130	AO-121	Section 4.1.1 describes the rationale for using less than 45 DNL rather than lower, potentially inaccurate values.
01131	AO-122	$L_{max}$ and SEL metrics apply to a single overflight irrespective of the location or alternative. A B-52 at 500 feet AGL generates the same sound level in Alternative A, B, C, or D.
01131	AO-123	The percent probability of mishaps already accounts for the total annual sortie-operations for the B-1s and B-52s. Also, the mathematical operation performed in the comment is inaccurate, since the probability of both events occurring is derived by multiplying the percent probabilities, not adding them. Thus the combined probability of a Class A mishap would be 0.0014 percent.
01131	AO-124	The analysis, in Section 4.1, addresses hearing loss, speech interference, sleep loss, and physiological health.
08076 08088 08103 08103	AO-125	This issue has been addressed in Section 4.1 of the EIS. Aircraft emissions are not anticipated to effect soils, surface waters, or ground water.
01130	AO-126	The EIS describes that hearing loss occurs due to consistent, long duration exposure to noise, such as that in a factory. The noise from aircraft using

		an MTR or MOA would be sporadic, brief, and dispersed. Moreover, no noise levels generated by aircraft would approach those noted in hearing loss studies. The studies used in the EIS are pertinent to the kinds of noise generated under the RBTI proposal. See also response BR-1.
--	--	---

**Air Force Policy (AF)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00001	AF-1	Although there was no way of telling the exact years you were in the Air Force, we queried the Luke AFB Airspace Management Office to find the Range you referred to in your comment. As far back as the 1960s, one range was used by both Williams AFB and Luke AFB and it was known as the Luke Range; it is still in use, but has been renamed as the Barry Goldwater Range.
00005 08083 00189 08090 08067 08126	AF-2	Aircraft observed at low-altitude are likely on military training routes that already exist in this area (see Figures 2.4-3, 2.4-6 and 2.4-9). However, when individuals observe military aircraft that they feel are in violation of a federal air regulation should report them to the Dyess Air Force Base at (800) 699-5169. See also response BR-5.
00019	AF-3	See Sections 1.3 and 1.4 of the EIS.
00020 00039 00349 00365	AF-4	Aircrews are governed in their flying practices by both Federal Aviation Administration rules and Air Force regulations. “Zooming up” inhabited ski slopes is not acceptable. The Air Force takes disciplinary measures for breaking flight rules. These can vary from a reprimand, establishing an Unfavorable Information File, taking a pilot’s wings, grounding a pilot, to dismissing a pilot from the Air Force. Whenever a citizen sees an Air Force aircrew member breaking flight rules, the Air Force encourages you to note your location, exact time, and nature of the incident and report it as soon as possible to the nearest Air Force Base Public Affairs Office. If you can identify the type of aircraft it helps, but the time and location are essential in helping track the responsible party. The Air Force's relationship with citizens and communities are important to us.
00023	AF-5	There are presently two large ranges, over mostly government owned land, that are used on a limited basis by both Barksdale and Dyess AFBs. These ranges are the Nellis Range Complex near Las Vegas, Nevada, and the Utah Test and Training Range (UTTR) near Salt Lake City, Utah. The problem with using either, or both of these ranges exclusively is the transit distance, range accessibility, and available flying hours. Under the budget constraints of today's environment it is incumbent on the Air Force to make the most out of every training dollar. Traveling these long distances on a regular basis to achieve limited training objectives would not allow us to train the number of crew-members essential to sustain our forces at even the present levels. Since several other bases use Nellis and UTTR, range access is limited. While developing the RBTI alternatives every effort was made to use existing airspace. Alternatives B and C would use existing IR-178 (which is already flown approximately 6 times per day) for low-altitude, terrain avoidance training and would expand existing MOAs for high altitude training. Even if RBTI were not adopted, the use of IR-178 and the MOAs would continue at present levels. For a more thorough comparison of the existing airspace versus the RBTI proposal see Section 2.4 of the EIS.
00042 08097 00137 08129 00152 08171 00983 08208 08006 08220 08083 08222 08094 08314	AF-6	Aircraft observed at low-altitudes below or around the proposed military operations areas are likely on military training routes that already exist in these areas (see Figures 2.4-3, 2.4-6 and 2.4-9). Aircraft operating within a military training route or military operations area are required to remain within the confines of their assigned airspace. Military pilots flying over sparsely populated areas will avoid all visible persons, vessels, vehicles or structures by 500 feet. Air Force aircraft operate under instrument flight rules to the maximum extent possible (AFI 11-202V3, Chap 8), and will be under an air traffic control clearance and on an assigned radio frequency. See also response BR-5.

00074	AF-7	RBTI flights would occur on weekdays, 260 days out of the year. Dyess AFB airspace management office is planning to record a schedule that can be reviewed by calling (800) 699-5169.
00094 00345 00983 08039 08044	AF-8	Aircraft observed at low-altitude are likely on existing military training routes that already exist in this area (see Figures 2.4-3, 2.4-6 and 2.4-9). However, when individuals observe military aircraft that they feel are in violation of a federal air regulation should report them to the Cannon Air Force Base, Public Affairs Office, (505) 784-4131.
00111	AF-9	Selection of the RBTI proposed alternatives was based primarily on operational criteria, Chapter 2 describes these in detail. Also, see Section 4.4 for a discussion on Socioeconomics and Environmental Justice.
00116 08127	AF-10	The flying unit that manages the airspace over that particular area determines areas designated as noise sensitive. Determination is based on many factors including mission requirements, overflight rules and good neighbor policy. Once it is determined to designate an area noise sensitive, the appropriate coordination is accomplished to publish it.
00156	AF-11	Pilots wear two forms of ear protection, depending on the situation. One set serves as protection during ground operations while preparing for flight. The second form is in the helmets that pilots wear for protection during flight.
00244 00266 00598	AF-12	In case of an Air Force mishap (accident) there are, in most cases, mutual aid agreements between geographically located Air Force Bases and local fire fighting departments. If RBTI were implemented the Air Force would address this issue and enter into agreements with the appropriate federal, state, and/or local fire fighting and emergency response organizations.
00246	AF-13	The purpose of the Partners in Flight program is to establish a mechanism to bring together federal, state, and non-governmental organizations involved in the conservation and management of neotropical migratory birds. The objectives of the program are to determine the status and causes of population changes, to maintain habitat for healthy neotropical migratory bird populations, and to facilitate a cooperative partnership effort among concerned groups. In contrast, the objective of the environmental impact analysis process is to anticipate impacts. However, while not specifically working through the Partners in Flight Program, the Air Force's process has involved federal, state, and non-governmental organizations which are involved in that program.
00283 08195	AF-14	The National Environmental Policy Act ensures the public is actively involved and informed during the environmental impact analysis process. The EIS does include a discussion of cumulative effects (Section 5.0) to ensure the public is informed of all actions that could possibly be impacted by the RBTI proposal. In addition, the Federal Register provides a public record of all EISs published by the federal government. See also response AF-13.
00044 00247 00296 00333 00721 00973 01130	AF-15	Compensation claims for damages associated with aircraft overflights are handled on a case-by-case basis. If damage occurs, affected citizens should contact Dyess AFB legal office. The address is 7BW/JA, 466 5 <sup>th</sup> Street, Suite 224, Dyess AFB, TX 79607. The telephone number is (800) 699-5169 and ask for the claims office or (915) 696-2034. See also response BR-5.
00331	AF-16	No restricted airspace is planned or proposed as part of this project. The airspace proposed near Angel Fire is an MTR that is located over an already existing training route.
00332	AF-17	No restricted airspace is planned or proposed as part of this project. The airspace that is proposed is an MTR and a MOA. To the maximum extent possible, in selecting the locations for this airspace, the Air Force used existing airspace.
00334	AF-18	ACC/SCCF is the office responsible for frequency-related requests. Formal requests for RBTI have been submitted and are currently awaiting approval. ACC/SCCF will ensure all ACCR 11-456 requirements are met.

00334	AF-19	This issue has been identified and is being addressed, along with other construction-related issues, by a team of operational and design experts. Construction design with equipment raised to required heights should remedy the issues raised.
00334	AF-20	Technicians working at an associated Electronic Scoring Site typically maintain mini-MUTES. Parts for RBTI Mini-MUTES would be supplied through the Dyess AFB supply system. Technicians would transport the parts to the various Mini-Mutes in specially designed trucks that also serve as maintenance work areas. In the past, Mini-MUTES have been successfully maintained and logistically supported in numerous places with varying climate conditions.
00334	AF-21	If RBTI were implemented, the ESSs at La Junta, Colorado and Harrison, Arkansas would be closed because the training available now would be available in the RBTI airspace complex. The money, manpower, logistics, etc. needed to maintain those sites would not make fiscal sense. La Junta and Harrison both lack the desired variable terrain and/or assets needed to fully optimize and integrate aircrew training. Belle Fourche (now known as Colony) offers both the terrain and, with its associated Powder River MOA and Mini-MUTES, the training opportunities desired. The Colony complex, however, is too distant to meet the daily training requirements of Barksdale and Dyess AFBs on a regular basis. The main customers of the Colony Range are Ellsworth AFB, located within 75 nm, and Minot AFB located within 250 nm. These two bases will still use Colony extensively, while Barksdale and Dyess AFBs would be the main users for the RBTI airspace complex.
00387	AF-22	Training at low altitudes through mountainous terrain has been a regular part of Air Force training for many years. While not flawless, the safety record for this type of training has been extremely impressive. Special routes, called MTRs (Military Training Routes), are designed to allow low-altitude training with as little impact on surrounding communities as possible. When developing the RBTI alternatives every effort was made to use existing MTRs whenever possible, and/or link already existing routes to avoid any undue burden on areas not already under military airspace. For a comparison of existing special use airspace versus the RBTI proposed airspace for Alternative D (New Mexico alternative), see Section 2.4 of the EIS.
00689	AF-23	The Air Force does not set aside funds for defense or compensation of lawsuits.
00846	AF-24	Dialogue has and will continue to occur with federal, state, and local agencies. The Air Force is currently consulting with the U.S. Fish and Wildlife Service. Other state and local agencies have been notified of the RBTI proposal and their comments reviewed and addressed.
00962	AF-25	Please refer to Section 1.2 of the EIS for a description of the current mission and training requirements. However, tactics that were used in the Persian Gulf are still used today and will be into the future.
00970	AF-26	There have been no recent modifications to MTR IR-178. There are, however, several options available to the aircrew (see Figure 2.3-1 in the EIS). For example, one option would enter at point "A" and exit at point "CK," another could exit at points "AT" or "BK." Since aircrews will often not include on their flight charts parts of the route that will not be flown, it is possible to view several different maps of IR-178.
00983	AF-27	The electronic equipment that would be used for RBTI is carefully controlled to not interfere with radio, television, satellite dishes, microwaves, and other similar devices.
00983	AF-28	No weapons or ordnance would be stored at the emitter sites.
00983	AF-29	As indicated in Section 2.0 of the EIS, ordnance delivery training would be electronically simulated and no ordnance of any kind would be involved in these training missions.
01130	AF-30	Refer to Section 2.1.3.

***Realistic Bomber Training Initiative Final EIS***

00983	AF-31	Both the MTR and MOA could be used under instrument meteorological conditions.
00983	AF-32	Specific altitudes are mission-dependent. In Section 2.3 (Table 2.3-3) there is a discussion and the table shows the proposed altitude distribution for the RBTI proposal.
01131	AF-33	Aircrews fly within the corridor, not necessarily along the centerline.
01131	AF-34	The EIS has been prepared in accordance with NEPA and CEQ regulations, neither of which establishes a requirement to consider a national cope for the proposed action. Therefore, a national needs assessment is beyond the scope of what is required for decisionmaking.
00983	AF-35	Under RBTI, no training would involve supersonic flight. However, all Air Force pilots that engage in supersonic flight are required to log the time, altitude, and position at the time they go supersonic. All supersonic activity has occurred within current authorized guidelines.
08008 09005	AF-36	For the areas in Texas associated with the RBTI proposal, the Dyess AFB Public Affairs Office (800) 699-5169 is available to address aircraft noise complaints. This office takes all such calls seriously.
08009 08095 08152 08160 08233	AF-37	For complaints within Texas, the Dyess AFB Public Affairs office 1-800-699-5169 is available to address aircraft noise complaints. All calls are taken seriously. For complaints within New Mexico the Cannon AFB Public Affairs office (505) 784-4131 is available to address aircraft noise complaints.
08050	AF-38	Both surface-to-air and air-to-air threats were analyzed and risks associated with those threats were determined before our aircrews were sent into harms way. Initially, during Desert Storm, it was safer for B-52 aircrews to accomplish low-altitude bombing missions against Iraqi targets. As Desert Storm progressed, the risks associated with high-altitude bombing were lessened and B-52s were mainly used at the higher altitudes. B-1s and B-2s were not used in Desert Storm. In contrast, B-1s and B-52s were used mainly for higher altitude bombing missions in Desert Fox (Iraq) and Operation Allied Force (Yugoslavia). The B-2s were also used for the first time in Operation Allied Force (Yugoslavia) at high-altitude.
08094	AF-39	Balmorhea is inside the boundary of the existing IR-178 military training route. Officials at Barksdale and Dyess AFBs have modified their aircraft flight paths to avoid Balmorhea and Saragosa. Should RBTI Alternative B or C be chosen, avoidance of these towns would continue.
08103	AF-40	Thank you for your request to participate as a cooperating agency in the preparation of the Realistic Bomber Training Initiative (RBTI) Environmental Impact Statement (EIS), however, we respectfully decline your offer. The Air Force welcomes and encourages the cooperation, contributions, and participation of local citizens, agencies, and governmental entities at any time during the EIS process. We have found the scoping, public hearings, and the public participation process as set forth at CFR Part 1501.7 and 40 CFR Part 1503 to be effective in gaining the valuable input we need to complete such documents.
08103	AF-41	No such records exist to base legitimate estimates. Analysis in this document was accomplished using programs accepted by the Federal Aviation Administration and Environmental Protection Agency. See response BR-1 and Appendix G for how the actual flight aircraft noise levels are measured.
08103	AF-42	Anticipated sortie-operations are provided in Appendix B. Each alternative has a detailed description of aircraft flight operations in a section entitled "Airspace and Flight Operations, see Sections 2.3 and 2.4. Section 4.1 provides an analysis of the topics you have described.
08107 08363	AF-43	The FAA has made a provision for military training below 10,000 feet MSL at speeds above 250 knots. This exemption is allowed on military training routes and in special use airspace (restricted areas and military operations area). These areas are charted on civil aviation sectional charts so those civilian pilots will know where this training is being accomplished. See also

		response BR-2.
08129	AF-44	All known aircraft at Dyess AFB, who would participate in the RBTI proposal, are addressed in the EIS and would fly on the routes described in the EIS.
08151	AF-45	The Air Force does try to accommodate traditional and recreational land uses as much as possible. When agencies, like Game and Fish, coordinate with the Air Force, these needs may be accommodated depending upon Air Force mission requirements.
08188	AF-46	The entry point for the proposed IR-153 avoids the Chama River Canyon Wilderness Area and other sensitive areas. Aircraft would be entering the route at 17,000 feet MSL or as assigned by air traffic control. They would not be descending to low altitude until after they enter the route and are heading away from the Chama River Canyon Wilderness Area.
08188	AF-47	The RBTI proposal involves only simulation of ordnance delivery. See Sections 2.4.1 and 4.1 of the EIS.
08234	AF-48	Military training airspace is scheduled in accordance with agreements between the Federal Aviation Administration and the scheduling authority. When the airspace is scheduled for use, the Federal Aviation Administration is notified and if this time is outside that already published on the aeronautical charts, the FAA is responsible for publishing a Notice to Airman. This notice provides the active time of the airspace. The Air Force also proposes to establish an 800 number to provide the planned weekly use of the RBTI airspace.
08246	AF-49	Under RBTI, the B-52s (or B-1s) would not be taking-off or landing in the MTRs or MOAs. The FAA, however, does state that controllers are required to apply separation of at least 5 miles to aircraft operating directly behind a heavy [e.g., B-52] jet at the same altitude or less than 1,000 feet below due to the possible effects of wake turbulence (Aeronautical Information Manual 99 [AIM] para. 7-3-9. In addition, AIM 99 (para. 7-3-8) states that the flight disciplines necessary to insure the pilot must exercise vortex avoidance during VFR operations.
00431 08182 08251 08313	AF-50	We appreciate your request to extend the public comment period for the draft EIS for RBTI. However, the Air Force has already extended the comment period from 45 to 90 days. We believe the additional 45 days allowed adequate time for individuals to provide comments on the draft EIS.
00566 08301	AF-51	(Part 1) Commercial airlines replace aircraft quicker due to their higher use when compared to the average number of service hours of the B-52. The B-52s service life is estimated to last until 2048. Two of the factors that contribute to this longevity are the number of years that the B-52 remained on the ground for generated alert during the Cold War and the structural upgrades received by the B-52.  (Part 2) B-52 maintenance uses parts from decommissioned aircraft. All parts used are thoroughly tested to the same standards as new parts.  (Part 3) The B-52 started flying low-altitude, high-speed flight in 1961 due to the development of Soviet fighters having the capability to destroy high-altitude flying aircraft. By August 1964, all B-52s were structurally modified to increase wing strength to handle the additional stresses of low-altitude flight.  (Part 4) Flying at low altitude gives the B-52 several tactical advantages. All radar is line-of-sight and cannot see through terrain or over the natural curvature of the earth—the lower an aircraft can fly, the greater reduction of the range of detection by the radar, therefore, less time for an enemy to react. This also allows the B-52 to achieve one of the most basic principles of combat—surprise. Concealing one’s intentions creates an opportunity to strike the enemy when they are unaware or unprepared.
08384	AF-52	Analysis in the EIS did review the complete mission of both sites that are

		proposed for decommissioning under RBTI, including C-130 use from Little Rock AFB.	
09013	AF-53	Operational requirements for B-52s and B-1s are detailed in the Air Force's Description of Proposed Action and Alternatives which is part of the project file. The information is synthesized in Sections 1.0 and 2.0 of the EIS.	
09018	AF-54	Assuming that the tactics applicable to one conflict, like Kosovo, will apply to a different future conflict would be a costly mistake. Each conflict and each tactical situation within a conflict calls for identifying the best tactics capable of achieving the mission safely. The use of low altitude flight provides important tactical advantages. For example, all radar is line-of-sight and cannot see through terrain or over the natural curvature of the earth. By flying at low altitudes, aircrews can hide from enemy radar and achieve surprise—an important factor in war. Many aircraft, including B-52s, used these tactics during the Gulf War. Since the need for low-altitude tactics continues, aircrews must receive realistic training in their use.	
00375 08092 08096	08111 08174	AF-55	The Air Force does comply with federal aviation regulations. Over sparsely populated areas, pilots will avoid all visible persons, vessels, vehicles, or structures by 500 feet. Over congested areas, pilots will overfly no lower than 1,000 feet above the highest obstacle within 2,000 feet.

**Land Management and Use (LU)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00104 00105 00245	LU-1	Under Alternative D, aircraft would fly over a portion of the Wild and Scenic Rio Grande River. FAA regulations do not prohibit flight over such designated rivers, however, FAA does suggest that flight altitudes of greater than 2,000 ft AGL be maintained when flying over these areas.
00191 01131 00244 08176 00328 08179 00531 08190 00565 08237 00906 08256 01103 08332	LU-2	Communities under the airspace were identified using databases from the states of New Mexico and Texas, as well as U.S. Geographic Services maps. Analyses were done using a Geographic Information System (GIS). Not all communities were included in these data sources. Given the vast region covered by the proposed airspace, every community was not identified by name in the EIS. However, the EIS has been modified to reflect the total number of people overflown under each proposed alternative.
00361 01131	LU-3	As stated in Section 4.2.5 of the EIS, all the special use land management areas under proposed IR-153 would experience changes in noise levels greater than 10 dB. Most visitors in these areas would notice the change in noise level and noise could be expected to adversely affect the recreational experience. As also stated in the EIS, visual intrusion of military aircraft could adversely affect the recreational experiences of visitors to public recreation areas underlying the proposed airspace.
00780	LU-4	While Nature Conservancy lands were not specifically recognized in the EIS resource maps, state and federal special use land management areas were identified and the vegetation delineated in west Texas. In Section 4.3, the habitat and biological diversity of west Texas, whether private, state, or federally owned was described.
01130	LU-5	As stated in the EIS, the proposed emitter sites are not immediately adjacent to any recreational areas. Site #88 would be 3.5 miles from Big Lake, site #59 about 10 miles from Lake Toyah, and site #65 approximately 3 miles from Lake J.B. Thomas. The emitters themselves should not represent visual intrusions for recreationists nor would overflights occur directly above any of these sites. As described in Section 2, the emitters are simulating enemy threats, therefore, the aircraft are training to avoid such threats.
01130	LU-6	Emitters would be placed more than 400 feet from the highway. The maximum height of the emitter would be about 17 feet high, lower than most windmills found along this route.
01130	LU-7	Aircrew members must follow Air Force and FAA regulations that dictate the altitudes aircraft can fly over buildings and people. Whether over private, state, or federal property, the regulations are the same so that everyone is protected equally.
01130	LU-8	As described in the EIS, airspace was proposed over less populated areas and to take advantage of existing routes. Visitors, because of their short-term stay would be flown over less than permanent inhabitants would be overflown.
08279 08332	LU-9	The special use land management areas (e.g., national parks and forests, wildlife refuges) are listed in Section 4.2.5 of the EIS. The Chama River Canyon Wilderness Area is located in the Santa Fe National Forest. The Valle Vidal Unit is located in the Carson National Forest. The EIS has been modified to reflect the Valle Vidal Unit. Alternative D proposed airspace does not overlie Santa Rosa State Park.
09013	LU-10	This has been modified in the final EIS.
09014	LU-11	Maps in the EIS do include the locations of: Capulin Volcano National Monument and Fort Union National Monument (Figure 4.2-8) and Big Bend National Park (Figure 4.2-4 and others). The legend coding these sites includes national parks and monuments. Information on the Sante Fe

		National Historic Trail has been added to Section 4.5 of the EIS. Lake Merideth National Recreation Area and the Alibates Flint Quarries National Monument were not depicted because they lie well outside the affected area.
09014	LU-12	In accordance with NEPA and CEQ guidelines to focus on those aspects of the environment potentially affected by an action, the EIS addressed only those potentially affected NPS units. Fort Union National Monument, Lake Merideth National Recreation Area, and the Alibates Flint Quarry National Monument all lie more than 4 nm away from the edge of any affected airspace unit. Therefore, these sites are not addressed in the EIS. In contrast, the document has been modified to include discussion of Capulin Volcano National Monument because it underlies the existing Mt. Dora MOA. The Sante Fe National Historic Trail is discussed further in Section 4.5.
09015	LU-13	Review of the referenced section did not reveal the contradiction in the number of special land use management areas addressed for Alternative D.
09015	LU-14	This has been modified in the final EIS.
09015	LU-15	While individual hunters may be startled and annoyed by sporadic overflights, there is nothing to suggest that hunters as a group would modify or cease their hunting activities as result of the proposed alternatives. For example, the Laughlin MOA situated over Sutton County, Texas, (a county that has seen increased hunting revenues over the past 15 years) had over 9,500 sortie-operations in 1997, over 4,000 sortie-operations in 1998. The increase in hunters and hunting that has occurred, at the same time as thousands of sortie-operations, indicates that aircraft overflights have not frightened wildlife away nor dissuaded hunters from using the area.
09015	LU-16	Based on available map data, the northern limits of the Latir Peaks Wilderness Area lies 3 to 4 miles south of the proposed corridor of IR-153.

**Biological Resources (BI)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00012 00024 00046 00105 00116 00209 00222 00239 00245 00507 00565 00615 00634 00674 00773	00828 00846 00863 00954 00979 01017 08156 08162 08180 08203 08204 08230 08291 08353	BI-1  Scientific evidence suggests that the effects of noise on large mammals (deer, elk, bighorn sheep, bear, bison, and others) is transitory and of short duration and that the animals appear to habituate to noise through repeated exposure without long-term discernible negative effects. Animals unaccustomed to noise can be startled and may injure themselves, especially confined. The discussion on the effects of noise and overflights on wildlife in section 4.3 and Appendix G has been clarified in the EIS. Even though the RBTI under Alternative D may overfly the Valle Vidal area, studies indicate that aircraft overflights should not have a long-term effect on the elk herds.
00023 00097 00189 00215 00219 00223 00245 00323 00416 00441 00565 00611 00703 00826 00880 00960 00977	01020 01103 08010 08012 08027 08091 08096 08098 08133 08187 08221 08228 08274 08282 08332 08337 01130	BI-2  The discussion of bird migration routes, such as those of the sandhill crane and the whooping crane, has been modified in the EIS. Even with increases in sortie-operations, the potential for bird-aircraft strikes in IR-178 and proposed IR-153 would be negligible, however, there is a small potential for impacts to migratory birds from overflights. Few bird-aircraft strikes have occurred in IR-178 and the secondary MTRs that overlap and intersect proposed IR-153. Use of the Bird Avoidance Model by the Air Force for planning and flying training sorties is expected to further reduce the number of strikes. Migratory birds often make brief flights in response to aircraft overflights, although they are unlikely to leave a food source. If individuals startle and injure themselves, then impacts due to overflights may occur. Monarch butterflies, which are not a species of concern, threatened or endangered, migrate through central Texas and New Mexico in October and March to reach winter and summer breeding areas. They may fly in groups of up to millions, as low as 3 feet above the ground, or singly, to over 3,000 feet depending upon the direction of the prevailing winds (Brower 1996). If aircraft overflights correspond to specific areas of butterfly migrations, then some butterflies may be affected by direct contact, but should not affect the monarch populations as a whole. The effects of noise on large mammals are discussed in response BI-1 and on wildlife in BI-3.
00043 00055 00064 00092 00105 00149 00168 00177 00181 00190 00202 00212 00224 00225 00226 00227 00228 00230 00243	00399 00400 00405 00413 00414 00423 00547 00612 00619 00623 00689 00719 00784 00808 01008 01011 01014 01025 01038	BI-3  The effects of noise on wildlife have been expanded and are discussed in detail in section 4.3 and Appendix G. Although some conflicting results exist, when using recent, applicable studies, the majority of the scientific evidence suggests that effects are short-term and that animals habituate to noise through repeated exposure without long-term effects. Military aircraft presently overfly most of these areas. See response BI-2 for a discussion of Bird-Aircraft Strikes and BR-3 for a discussion of the effects of noise on domestic livestock. No effects to plants from overflights have been demonstrated. The construction of the emitter and scoring sites would disturb less than 20 acres of native and cultivated vegetation.

00283 00342 00351 00354 00385 00392 00393 00395 00398	01052 01107 08098 08162 08168 08190 08296 08309		See BI-3
00045 00045 00711 00804 08084		BI-4	Like many other species, doves or owls may be momentarily startled or be flushed from trees, but they are unlikely to permanently leave a food source. Owls have been known to roost and nest near runways and under overflight paths on military installations. They habituate to overflight noise and have not been known to abandon such areas because of aircraft effects. They are more likely to be upset by ground-based activities. Please see section 4.3 and Appendix G for the effects of noise on wildlife.
00104 00113 00157 00178 00181 00188 00195 00208 00209 00210 00287 00288 00292 00294 00356 00418 00421 00507 00565 00950 00953 00955 00956 00979	00984 00985 00989 01016 01030 01031 01036 01037 01042 01078 01089 01099 01103 08178 08180 08199 08240 08264 08297 08343 08349 08355 08359 08378	BI-5	As stated in the EIS, federally listed threatened and endangered species, such as spotted owls and eagles, are found in the area. Numerous studies regarding these and similar species have not found aircraft overflights to affect the breeding success or the survivability of these species. See response BI-2 for a discussion of bird-aircraft strikes and the effects of noise and overflights on migrating birds. However, the FWS considers aircraft flights below 1,600 feet AGL in the months of March through August to be potentially harmful to Mexican spotted owls and flights below 2,000 feet AGL from October to March to be potentially harmful to bald eagles. Please see response BI-2 for effects to migratory birds, BI-3 for the effects of noise on wildlife, BR-3 for effects on livestock, and BI-1 for effects on large mammals.
00191 08228		BI-6	The EIS has been changed to reflect the Rio Grande as a bird migration flyway.
00246 08180		BI-7	Although fish do startle in response to low flying aircraft noise and probably to the shadows of aircraft as well, they have been found to habituate to the sound. See BR-4 for the effects of noise and overflights on the economy.
00568		BI-8	As is preferred by the FWS, the biological impacts analysis for RBTI is included within the EIS. Effects from noise, overflights, other aircraft operations, construction, and ground operation are discussed in section 4.3.
00868 00868 00868 01129 01130 01131		BI-9	An expanded version of the effects of noise on wildlife is presented in section 4.3 and Appendix G. Several authors, in addition to Ellis <i>et al.</i> 1991, have been cited to support the conclusion that raptors and other animals habituate to noise. As stated in the EIS, naïve animals, or those not previously exposed to noise, may be startled by sudden loud sounds and as a result could occasionally be injured. However, military aircraft currently overfly the area. A number of articles, including more recent studies on bighorn sheep and others, support the interpretation that the effects of noise on large mammals such as deer, elk, bighorn sheep, bear, and others are transitory and of short duration and that the animal habituate to noise

		through repeated exposure without long-term discernible negative effects. However, particular responses may vary by individual or species.
00983 08195	BI-10	The Air Force complies with the intent of the Migratory Bird Treaty Act as a stipulation under Attachment 4 of AFI 32-7064. They participate in the “Partners in Flight” program as a part of this compliance. Please see response AF-13.
01130 01131 09014 09016	BI-11	Although the FWS has given the project a consultation number, the information regarding FWS consultation has been clarified in the EIS to reflect that the Air Force informally discussed RBTI with the FWS prior to publication of the draft EIS. Since that time the Air Force has identified a preferred alternative and entered into further consultation with the FWS.
01130	BI-12	The effects of noise on game animals such as deer, quail, migratory birds, and other game birds is similar to effects on other wildlife. Scientific evidence suggests that the effects of noise on wildlife is transitory and of short duration and that the animals appear to habituate to noise through repeated exposure without long-term discernible negative effects. However, animals unaccustomed to noise can be startled and may injure themselves, especially if confined. Migratory birds often make brief flights in response to aircraft overflights, although they are unlikely to leave a food source. If individuals startle and injure themselves, then impacts due to overflights may occur.
01130	BI-13	In general, wildlife habituate to the noise associated with low-altitude aircraft overflights. Avoidance and flight tend to occur with naïve animals, although differences in individual reactions to noise do occur.
01131 09015	BI-14	This has been modified in the final EIS.
01131	BI-15	Common wildlife species are listed in Appendix H.
01131	BI-16	The effects of noise on birds have been expanded in Appendix G. Several authors, in addition to Ellis <i>et al.</i> 1991 have been cited to support the conclusion that raptors and other animals habituate to noise. As stated in the EIS, naïve animals, or those not previously exposed to noise, may be startled by sudden loud sounds.
01131 09015	BI-17	This has been modified in the final EIS.
01131	BI-18	Please see response CE-2.
08023	BI-19	Jet engine emissions either burn and dissipate, or fall to the ground as small inert particles. These particles are not injurious to wildlife.
08342	BI-20	Even with increases in sortie-operations, the potential for bird-aircraft strikes in IR-178 and proposed IR-153 would be negligible. Few bird-aircraft strikes have occurred in IR-178 and the secondary MTRs that overlap and intersect proposed IR-153. Use of the Bird Avoidance Model by the Air Force for planning and flying training sorties is expected to further reduce the number of strikes.
09013	BI-21	The draft and final EISs include a description of the FWS estimate (Section 4.3.5) of potential impacts to threatened and endangered species due to aircraft overflights like those under Alternative D. The Air Force considered this viewpoint along with the data and studies available on overflight effects to wildlife in defining the overall magnitude of effects.
09013 09013 09013	BI-22	The field surveys were current, specifically conducted for RBTI. Section 2.4.1 notes that biological surveys were conducted and references Appendix E, which summarizes the results of the survey. Appendix E has been augmented with further details on survey methods. This summary indicates that no threatened, endangered, or other species or their habitats would be affected. A separate Biological Assessment is not necessary because the Air Force intends to use the information presented in the EIS for consultation.
09013	BI-23	The Air Force believes available map data would not adequately portray the level of detail necessary for appropriate analysis. Available map data are

		either spotty in coverage or based on incomplete surveys. In addition, the FWS discourages publishing locations of sensitive species.
09013	BI-24	This has been modified in the final EIS.
09013	BI-25	The draft EIS in Section 4.1, clearly states that all bird migration activity is consistently monitored and modeled by the Air Force to prevent bird-aircraft strikes. The EIS states that aircrews use current information on bird activity to plan and conduct training. This information is more accurate than a simple comparison of flight routes and airspace use.
09014 09016	BI-26	Data on the distribution and abundance of the northern aplomado falcon was derived from the available literature and data resulting from surveys and other studies. The FWS served as a primary source for information on this species, and Mr. Angel Montoya, an aplomado falcon expert with the FWS in New Mexico, provided considerable information on the subject. In addition, data were derived from the EIS and Biological Assessment for the Proposed Expansion of German Air Force Operations at Holloman AFB (1998). Subsequent data provided by the FWS has been added to the EIS to indicate that 11 sightings have been documented since 1991. FWS contends that the aplomado falcon is a possible resident along the Texas/Mexico border. This was modified in the EIS.
09014	BI-27	As stated in the EIS and reflected by the species occurrence tables in Appendix H, the referenced species and/or their habitat are found in the region. Individual maps would merely reflect the same information already described in the EIS. This information was derived from recent data provided by the FWS and state wildlife agencies, as well as scientific literature and professional knowledge pertinent to the topic. The text was modified in the EIS.
09015	BI-28	Summaries of past studies presented in the draft EIS along with clarifications in the final EIS indicate that it is possible that individual elk may or may not react to jet overflights. Available data have not shown that if such reactions occur, they would be of a nature affecting migration or reproduction. Please see response BI-1.
09015	BI-29	Clarification of noise effects studies on wildlife has been included in Section 4.3. Many of the sources listed by the commentor either pertain to species that are not relevant to this analysis or concern supersonic noise, helicopters, or have been addressed in more recent studies. Please see an expanded version of the effects of noise on wildlife in Appendix G.
09016	BI-30	Appendix H has been updated with the 6 April 1999 list from FWS.
09020	BI-31	The statement in the EIS is intended to provide a context for understanding impacts. It is important in that wildlife previously exposed to overflights and aircraft noise are not “naïve,” and may respond differently than wildlife never exposed to overflights.

**Socioeconomics and Environmental Justice (SE)**

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
08085	SE-1	Council on Environmental Quality Regulations (40 CFR 1508.8(b)) state that the EIS must assess “indirect effects, which are caused by the action and are later in time or farther removed in distance, but are still reasonable foreseeable.” Future land uses of privately owned land cannot be reasonably foreseen at this time. A reasonable assumption is that future land use patterns would be similar to those in the affected area today. Also, please see BR-4.
08236	SE-2	While there are various economic approaches to measure goods and services that do not have prices associated with them, there are no widely accepted, proven methods that could accommodate the variability in perceived noise annoyance and behavioral changes associated with the proposed alternative.
00133 08379 08381 09002 09021	SE-3	The methods used in the analysis of the EIS are appropriate and proven. The analysis used county-level economic multipliers supplied by the U.S. Department of Commerce and takes into account the cities (including La Junta) within the county. This method ensures consistency and comparability of analysis for any location. This method established that changes in population and jobs would be less than one percent countywide. Such a change would not be expected to impact population-affected resources such as schools, libraries, and fire and police protection.
00983 00983 09008	SE-4	Section 4.4.5 of the EIS demonstrates that northeastern New Mexico would receive 44 new long-term jobs and 133 short-term jobs should Alternative D be implemented. Direct and indirect revenues from construction would total about \$12 million, and long term revenues would be about \$2 million per year.
00191 00364 00531 00828 00868 00970 01130 01131 08009 08081 08096 08148 08279 09013 09014	SE-5	<p>As stated in Section 4.4 of the EIS, no populations of any kind, including minority or low-income populations, would be subject to noise levels of 65 DNL or greater under any alternative. As such, minority and low-income populations would not be disproportionately affected.</p> <p>The concept of environmental justice addresses the actions of federal agencies and determining if those actions disproportionately impact human health and environmental conditions in minority and low-income communities (Executive Order [EO] 12898). The use of 65 DNL as a guideline, not a firm “standard,” for the evaluation of environmental justice issues, relative to sporadic military training flights, is consistent with the intent of EO 12898. While the DNL of 65 is the level most often recognized as being compatible with residential land use, it was only one of several criteria, not the sole criterion, which was used in the environmental justice analysis.</p> <p>Various components of the proposed action were considered individually and collectively, namely construction, commissioning/decommissioning of facilities, and aircraft operations. The facility-related components either contributed to or removed revenue from the affected areas. Construction and commissioning contributions would occur primarily in Reeves and Taylor Counties (Texas) for Alternatives B and C, or in the tri-county area of Quay, Harding, and Union (New Mexico) and Taylor County (Texas). Boone County, Arkansas and Otero County, Colorado would experience a revenue decrease from the decommissioning of facilities.</p> <p>With respect to aircraft operations, first, the majority of the proposed alternatives occur in existing airspace where military activity has occurred at varying levels for many years. Only 11 to 17 percent of the RBTI proposed airspace is new (Alternative B, 15%; Alternative C, 17%; and Alternative D, 11%). Second, demographic analysis of the census tracts and block numbering areas show the majority, i.e., over 50 percent, of the affected</p>

		population does not belong to either a minority or low-income group (the final EIS Section 4.4 has been modified to reflect this information).
01130	SE-6	The 1990 census data were used because only these data are comprehensive, validated, and comparable from one geographic area to another.

<b>Letter #</b>	<b>Response #</b>	<b>Response</b>
00039 01032 00045 01035 00090 01036 00155 01037 00195 01038 00215 01040 00224 01043 00228 08084 00230 08097 00290 08143 00294 08147 00351 08149 00445 08159 00455 08209 00634 08249 00689 08250 00775 08271 00808 08299 00835 08301 00979 08304 00983	CU-1	The effects of noise and vibrations from aircraft overflights are discussed in section 4.5.1 and Appendix G. Studies of adobe structures, in particular, and stone and concrete structures as well, show that damage is unlikely to occur from subsonic noise or vibrations from overflights. Aircraft must generate a maximum sound level ( $L_{max}$ ) of greater than 120 dB at less than 150 feet to potentially result in structural damage. RBTI aircraft would not exceed this level. The proposed IR-153 would not overlie Taos Pueblo, but would be located approximately 10 miles east of the pueblo.
00043 01015 00072 01020 00104 01021 00115 01025 00154 01026 00179 01031 00196 01033 00283 01034 00392 01039 00407 08178 00423 08189 00728 08210 01008	CU-2	The effects of noise and aircraft overflights on archaeological and historical resources are discussed in section 4.5. Historic structures and petroglyphs are unlikely to be affected by vibrations (please see response CU-1). Since most of the route underlies existing military airspace, noise and overflights would not represent an intrusion to the setting, where setting is an important criterion for historic significance. In addition, the most important of these properties, those on the National Register, are unlikely to be overflown in the MOA and would only occasionally be overflown on MTRs. The proposed IR-153 would not overlie Taos Pueblo, but would be located approximately 10 miles east of the pueblo.
00074	CU-3	There are no Native American reservations or pueblos underneath the proposed MOAs or MTRs.
00149 00983 00287 00984 00294 00985 00421 01078 00950 01089 00953 08161 00955 08235 00956	CU-4	The effects of the RBTI proposal on traditional cultural properties of Native American groups is discussed in section 4.5. No traditional cultural properties have been identified under the affected airspace. Taos Pueblo and the Blue Lakes area are located up to 10 miles to the west of a segment of the proposed IR-153. The Air Force will continue to conduct Government-to-Government consultation with Native American groups to solicit their input on the effects of overflights on traditional lifestyles.
00838 00882 00880 00883	CU-5	Structural damage is unlikely from subsonic noise and vibrations, please see response CU-1. The RBTI proposal does not include supersonic flights.
00983	CU-6	The Air Force initiated Section 106 consultation at the beginning of the project and obtained information on known sites as well as conducting archaeological surveys at candidate emitter and electronic scoring site locations. The selected alternative will not be undertaken before measures, if any, are taken to reduce, avoid, or mitigate any adverse effects to eligible National Register properties.

01103	CU-7	Christ in the Desert Monastery and Ghost Ranch are not located underneath the RBTI affected airspace. It is unlikely that these sites would be damaged directly by the noise and vibrations or that noise would be intrusive to the setting.
08170	CU-8	A specific discussion of the Villa Philmonte and the Kit Carson/Maxwell Abreu House has been added to Section 4.5. These sites were considered in the analysis of overflight effects in the draft EIS as National Register historic properties.
9013	CU-9	The Executive Summary is not the appropriate location for this level of detail. Section 4.5 of the EIS has been clarified to include discussion of the potential effects on non-National Register listed cultural resources.
9013	CU-10	Mitigation measures are presented in Section 2.6.2 of the final EIS.
9013	CU-11	This statement is included in the EIS in Section 2.6.2, Mitigations.
9014	CU-12	Fort Union National Monument lies 2 to 3 miles from the edge of proposed IR-153. Noise levels of 61 DNL would occur in the nearest segment of IR-153. Even without attenuation from intervening terrain, noise levels at the NPS unit would be 20 to 30 dB lower for an SEL.
9014	CU-13	A specific discussion of the Santa Fe Trail and National Historic Landmark sites has been added to Section 4.5. These sites were considered in the analysis of overflight effects in the draft EIS as National Register historic properties.
9020	CU-14	This information has been clarified in the EIS.
9025	CU-15	Maps (7.5' quadrangles) showing the locations of the candidate emitters were sent to the Texas Historical Commission (Texas Archeological Research Laboratory) on July 21, 1998.
9025	CU-16	In April 1998, Bill Martin of the Texas Historical Commission was contacted regarding survey techniques. He stated that Texas had not yet finalized standards for survey intervals but that the Secretary of Interior's standards and guidelines of 30-meter intervals should be used.

# APPENDIX A

## STUDY AREA AND TERRAIN VARIABILITY SUPPORTING DOCUMENTATION

---

---

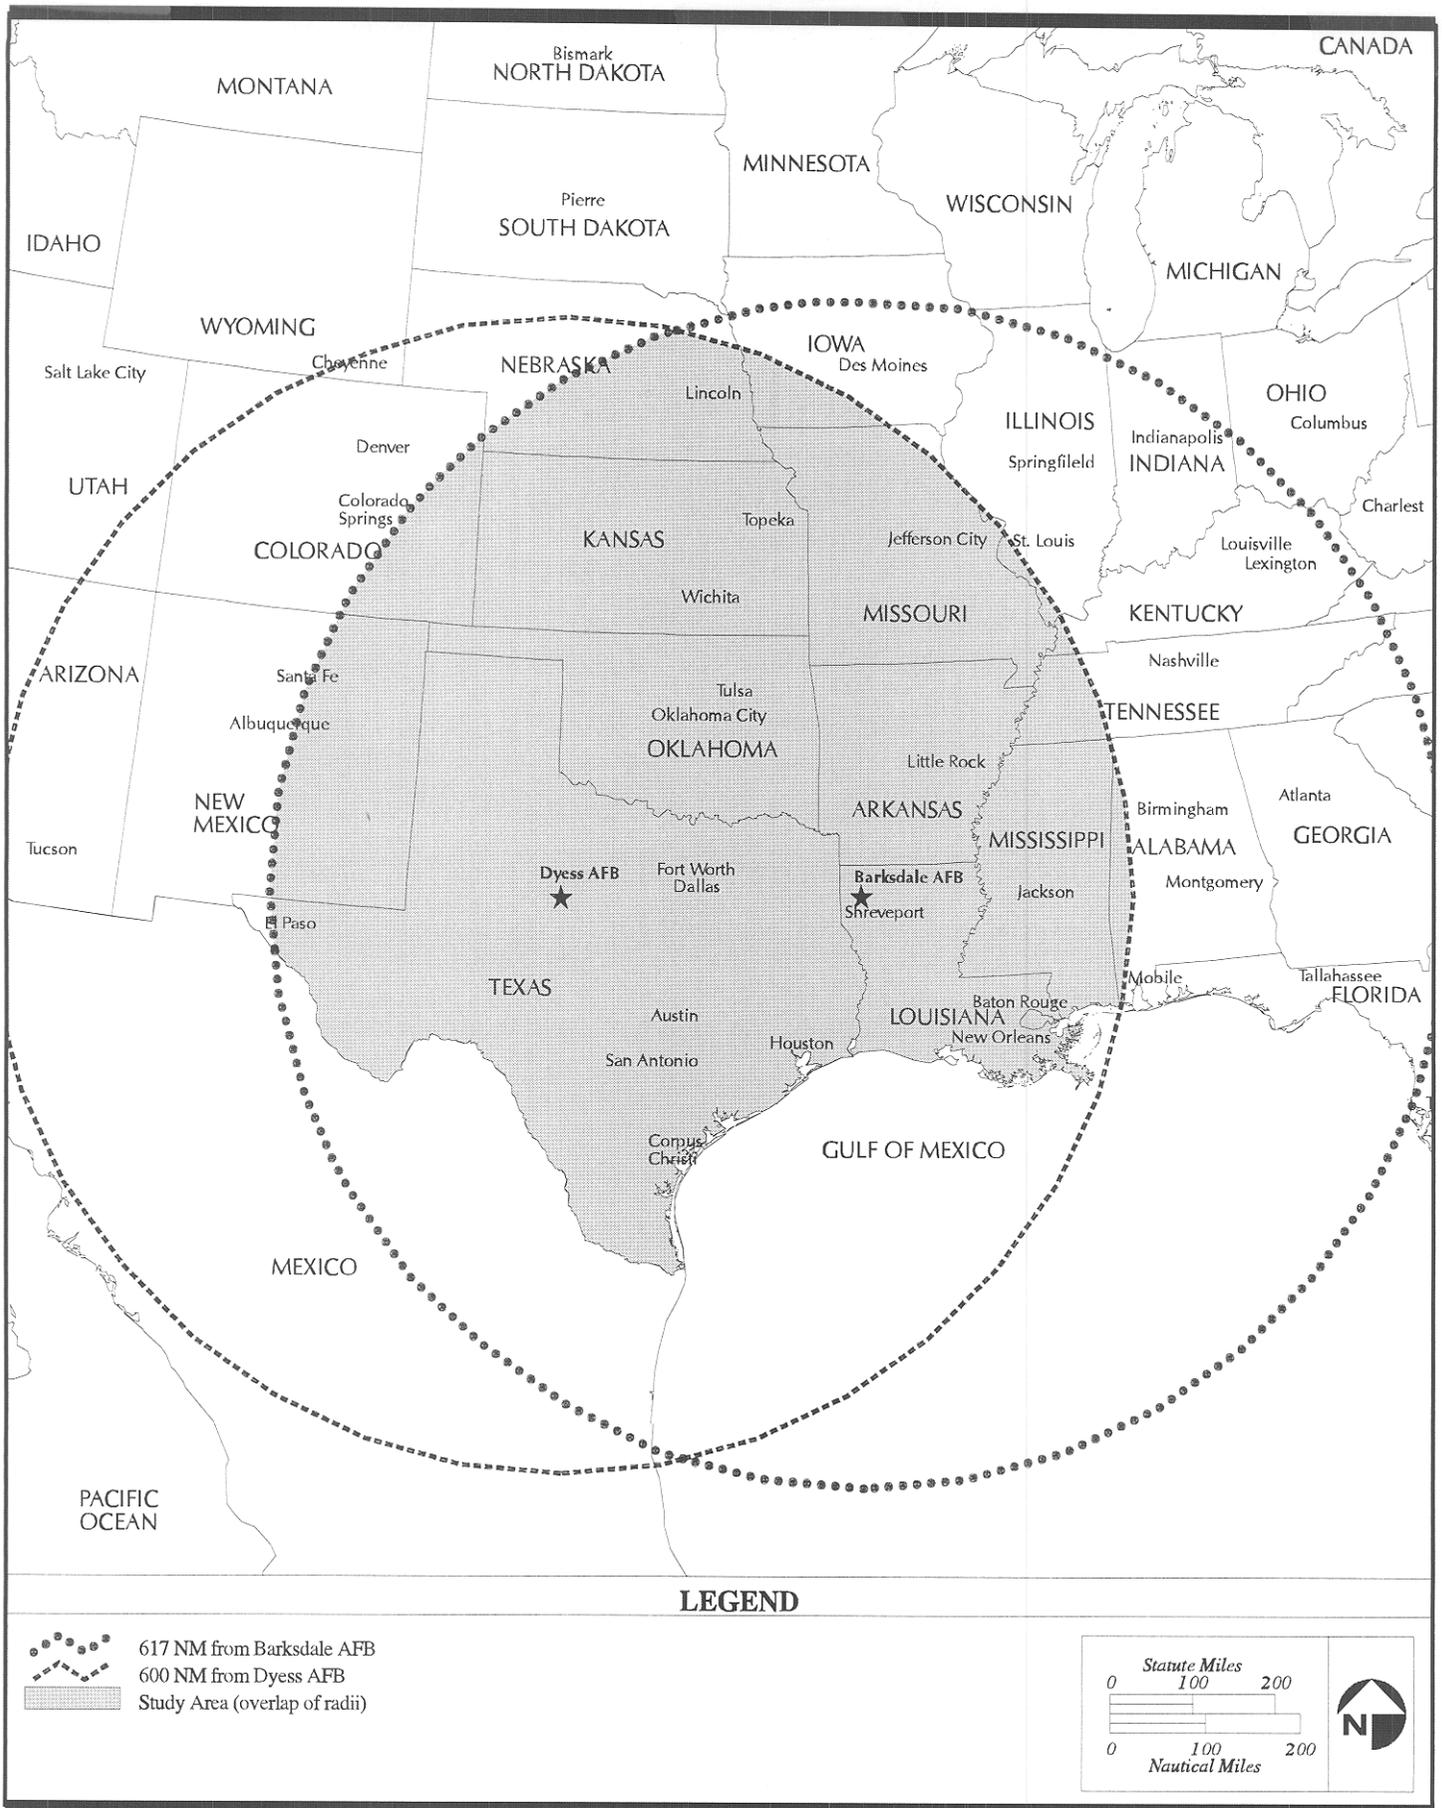

### Introduction

The RBTI study area was defined by creating a circle around Barksdale AFB and a circle around Dyess AFB; each circle has a radius of approximately 600 nautical miles (nm) from Barksdale and Dyess AFBs (Figure A-1). Terrain variability was then identified meeting the criteria defined as necessary for simulating realistic combat conditions. The discussion below explains how the 600 nm radius was derived and the process followed for determining terrain variability.

### 600 Nautical Mile Determination

The times and airspeeds for outbound and return distances for mission flight events were used to determine the distance from the bases to training assets to meet optimum average sortie duration (ASD) goals. The ASD is calculated using a unit's total number of flying hours divided by the number of sorties that must be flown (see Section 1.3.3 in RBTI EIS for further discussion). Tables A-1 and A-2 show the maximum distance for a B-52 and B-1 flying from the base and returning within the optimum ASD. These distances do not include flight time along a Military Training Route (MTR) since any given route does not necessarily provide either outbound or inbound distance. Nor do these distances include flight time that occurs around the base airfield for take-offs and landings.

<i>Flight Event</i>	<i>Time (minutes)</i>	<i>Airspeed (nm/minute)</i>	<i>Distance (nm)</i>
Departure	15	4	60
En route to IR	45	7	315
Air Refueling	60	6	360
En route to MTR	20	7	140
En route to MOA	20	7	140
MOA	20	7	140
En route to Base	20	4	80
<b>TOTAL</b>	200	NA	1,235
Maximum Outbound or Inbound Distance			617.5

Average Sortie Duration Radii from Barksdale and Dyess AFBs

<b>B-1 Maximum Distance–Based on Optimum ASD from Dyess AFB</b>			
<i>Flight Event</i>	<i>Time (minutes)</i>	<i>Airspeed (nm/minute)</i>	<i>Distance (nm)</i>
Departure	15	4	60
En route to IR	30	7	210
Air Refueling	60	6	360
En route to MTR	20	7	140
En route to MOA	20	7	140
MOA	30	7	210
En route to Base	20	4	80
<b>TOTAL</b>	200	NA	1,200
Maximum Outbound or Inbound Distance			600

Because an aircraft must return to base, training assets should not be located farther than one-half the distance of the aircraft’s maximum allotted flight time (i.e., one-half of 1,200 nm equals 600 nm) from a base. Each half of the maximum distance represents the length for the outbound or inbound segment of a sortie. For B-52s, the longest outbound or inbound distance is about 617.5 nm from Barksdale AFB. For B-1s from Dyess AFB, the halfway point of a sortie lies within approximately 600 nm of the base. The overlapping section of the distances from each base accounts for approximately 65 percent of the total area. Since most of the two areas coincide, development of interrelated training assets within the overlapping section would enhance efficiency for the units at both bases. These overlapping areas were used to define the RBTI study area and the area in which the search for alternatives was conducted. Figure A-1 illustrates the area encompassed relative to each base and shows their degree of overlap.

**Terrain Variability**

Under RBTI, varied terrain differences results in better training opportunities for simulating realistic combat conditions. As mentioned in Section 2.1.1 of the RBTI EIS, the optimal MTR should overlie a minimum of 240 nm of contiguous terrain and offer high to moderate variability. Terrain variability is a combination of both slope and elevation. To identify those areas with terrain variability, a Geographic Information Systems (GIS) modeling program was employed. This GIS model compared the elevation and slope differences for each square mile under a candidate MTR to the elevations of all surrounding square miles.

Classes of elevation differences were assigned to each square mile, on a scale of 1 to 8, with 1 reflecting “low” elevation differences and 8 indicating “high” elevation differences. An identical process was applied to slope differences, where 1 represented the lowest slope differences and 8 showed the highest slope differences. Since elevation and slope both factor into terrain variability, both factors were added together to assign a single measure of terrain variability for each square mile. For example, the lowest measure of terrain variability an area could receive might be 2 (1 for elevation plus 1 for slope); the highest could be 16 (8 for elevation plus 8 for slope).

For purposes of this proposal, lands with a combined total score of 4 or less (elevation and slope differences) represented low terrain variability. Lands under MTRs offering a combined value of greater than 4 but less than 10 comprised moderately variable terrain, and values greater than 10 indicated high terrain variability. Using the GIS model, a search was conducted on all MTRs within the study area to determine the classes of terrain variability. The degree of variability found within

an MTR was then used to assist in alternative MTR selection. All MTRs within the study area with low terrain variability were eliminated from further consideration as potential alternatives. All those exhibiting moderate and/or high variability were further evaluated in the alternative identification process (see EIS, Section 2.1.1).

## **APPENDIX B**

### **SORTIE-OPERATIONS**

---

---

The following tables present the number of sortie-operations flown within the existing (Alternative A) and proposed (Alternatives B, C, and D) airspace. A sortie-operation is the use of one airspace unit (for example, an MTR or MOA) by a single aircraft. One sortie (i.e., a take-off, mission, and landing) by a single aircraft may include several sortie-operations. The following tables provide a breakdown of each airspace unit (MTRs and MOAs), the number of sortie-operations within that airspace unit, and the type of aircraft using that airspace unit by alternative. They also present information on estimated average daily sortie-operations for existing and proposed IR-178 and proposed IR-153. These tables supplement the data found Sections 2.3.1 (Alternative A), 2.4.2 (Alternative B), 2.4.3 (Alternative C), and 2.4.4 (Alternative D) of the RBTI EIS.

<sup>1</sup>P = Primary airspace used by B-1s from Dyess AFB and/or B-52s from Barksdale AFB.

<sup>2</sup>S = Secondary airspace unit intersects with primary airspace unit used by B-1s from Dyess AFB and/or B-52s from Barksdale AFB.

<sup>a</sup> secondary MTRs overlapping a portion of the segment.

<sup>b</sup> secondary MTRs overlapping a portion of the segment.

## **APPENDIX C**

### **AIRSPACE MANAGEMENT**

---

---

The following provides a description of how airspace is managed by the Federal Aviation Administration (FAA) as it relates to those types of airspace used by the Air Force. It explains the process followed when the Air Force proposes airspace modifications for both Military Operations Areas (MOAs) and Military Training Routes (MTRs). In addition, this appendix offers specific information on IR-178, both existing (Alternative A) and proposed (Alternatives B, C, and D).

As is described in the RBTI EIS (Sections 1.4.1 and 2.1.1), MTRs are three-dimensional highways in the sky, having height (altitude) as well as length and width. Aircraft follow these routes within the assigned altitudes and width. Under RBTI, proposed IR-178 (Alternatives B and C) and proposed IR-153 (Alternative D) segments have an assigned width and height; Tables C-1 through C-3 provide these altitudes (both floor and ceiling) and width of the existing and proposed MTR segments.

#### **Processing Airspace**

FAA Order 7400.2D prescribes policy, criteria, and procedures applicable to Special Use Airspace (SUA). This order applies to all regional and field organizations involved in rule making and non-rule making actions associated with this airspace. FAA Order 1050.1D establishes policy and procedure and assigns responsibility for assuring agency compliance with environmental procedures set forth in the Council on Environmental Quality (CEQ) regulation for implementing the procedural provisions of the National Environmental Policy Act (NEPA). FAA Order 1050.1D, Appendix 3, describes the FAA's environmental responsibilities in relation to SUA. FAA Order 7490.XX, which is in draft form and in agency coordination, incorporates many of the practical environmental review steps taken in the process of establishing and modifying special use airspace. This draft document, which is more specific than FAA Order 1050.1D, Appendix 3, is used by the Southwest Region Air Traffic Division as a practical guide to the FAA review process.

SUA falls into two categories. One category consists of airspace subject to rule making actions relating to restricted and prohibited areas. The other category consists of airspace subject to non-rule making actions related to alert areas, controlled firing areas, offshore warning areas, and MOAs. MOAs are established to separate and/or segregate certain nonhazardous military activities from aircraft flying under Instrument Flight Rules (IFR) and to identify these activities for aircraft flying under Visual Flight Rules (VFR). Final approval authority for MOAs rests with the Airspace and Rules Division (ATA-400), Headquarters FAA.

When a MOA proposal is submitted to the FAA Regional Air Traffic Division, the regional FAA office reviews the proposal from an aeronautical perspective and conducts a preliminary review of the proponent's environmental documentation. Since the FAA is the approval authority for SUA actions, it cannot take a position on any particular SUA proposal prior to the completion of the NEPA and aeronautical processing phases. When the regional FAA office is notified early in the environmental process and asked by the military to participate in NEPA meetings and scoping actions, the regional FAA Air Traffic Division designates the FAA representatives and encourages participation in the NEPA process.

According to CEQ guidelines, the FAA has the discretion to adopt an environmental assessment or an environmental impact statement prepared by the military, provided that the FAA independently

reviews the document and assesses whether it meets the standard for adequacy under NEPA, CEQ regulations, and the FAA's own regulations. In adopting the document, the FAA must assume responsibility for the scope and content of the document or prepare its own supportive environmental documents and issue an independent decision document. It is important to note that the FAA usually does not begin the environmental review process until there is a formal airspace proposal submitted. In the majority of past cases, the FAA has not been informed of the proponent's initiation of NEPA actions until the environmental documentation has been sent to the regional office along with the airspace proposal.

Environmental Programs Division (ATA-300) of the FAA was established to assist and support the review process for airspace actions. In addition, each FAA region has a trained environmental specialist in its Air Traffic Division who initiates the environmental review process for military SUA proposals and examines environmental documentation coming from that region. This regional review ensures that applicable impact categories and any specific FAA environmental concerns are considered in the documents. Concurrent with the regional review, the ATA-300 office begins the review process with information forwarded by the region and from the military proponent.

During the process, the FAA regional office has the following responsibilities:

- Examining document format;
- Confirming that the proposed airspace falls within the area that was environmentally assessed and that justification for the proposal is included;
- Reviewing the timeliness, level of controversy, and whether public and interagency involvement has been encouraged or sought by the proponent;
- Analyzing public comments and interagency letters related to airspace issues;
- Ensuring that the concerns raised during public comment have been addressed;
- Determining whether cumulative impacts from a regional perspective are addressed; and
- Ascertaining whether decision documents are reflective of the actions being proposed.

The regional specialist may either coordinate directly with the military proponent or coordinate within the FAA to ATA-300 regarding any questions or comments about the documentation. When ATA-300 has concerns with the proponent's environmental documentation or efforts, it will transmit these concerns back to the regional office, which will then forward these concerns to the proponent for answers or comments. This review process may cause delays in the approval process, with some actions taking much longer than a year to resolve. ATA-300 coordinates environmental actions and works with Headquarters FAA Environmental Law Branch (AGC-620) to determine the ultimate sufficiency of environmental actions taken by the proponent.

MTRs are neither rule making nor non-rule making actions, nor are they categorized as SUA. FAA Order 1050.1D makes reference to SUA but not to MTRs. These routes are considered in FAA Order 7610.4H as Special Military Operations. Chapter 11 of this order prescribes policy, criteria, and administrative and operating procedures pertaining to routes for military training conducted below 10,000 feet Mean Sea Level (MSL) and in excess of 250 knots indicated airspeed. There are two main types of MTRs: Instrument Routes (IRs) and Visual Routes (VRs). IRs allow Instrument Flight Rules (IFRs) separation from other known air traffic and VRs allow flight under Visual Flight Rules (VFRs). IRs and VRs have different actions, procedures, and/or processes for approval.

IR requirements are validated by the appropriate military major command and are coordinated with FAA Air Route Traffic Control Centers for aeronautical concurrence. Once the routes are formally proposed, they are forwarded to the appropriate military major command headquarters for review and environmental certification. Formal proposals are reviewed at the FAA Regional Air Traffic Division. FAA Order 7610.4H states that the regional Air Traffic division shall:

- Coordinate all proposals with other interested FAA divisions;
- Determine when proposals will increase the burden on civil users of the navigable airspace and coordinate those proposals with the appropriate civil aviation user groups; and
- Approve or disapprove the proposal and notify the regional military representative, in writing, within 45 days of receipt of the original proposal.

These requirements are aeronautically focused, with no reference to environmental review. This order also states that the FAA Regional Air Traffic Division is the final approval authority for all IR proposals and revisions. Regional offices have historically viewed this role as approval based upon aeronautical effects. The review of the environmental documentation is not prescribed or assigned to the FAA regional Air Traffic Division by order; however, this review is normally made to assure that the military's environmental process has been addressed.

Final approval authority for the establishment of VRs rests with the appropriate military major command headquarters. FAA Order 7610.4H states that the FAA Regional Air Traffic Division in whose area the route originates shall submit the approved FAA form 7110-4 to the National Flight Data Center, so that it can be issued via the National Flight Data Digest for charting and description in appropriate Flight Publications. As with IRs, the review of the VR's environmental documentation is not prescribed or assigned to the FAA Regional Air Traffic Division; however, this review is normally made to ensure the military's environmental process has been addressed. Also, MTR environmental documents are not normally retained in the FAA regional offices, since the MTR programs rest with the military.

Altitude Structure

Administration

Air Route Traffic Control Center  
8000 Louisiana Blvd. NE  
Albuquerque, NM 87109

DEC 31 1998

Alton Chavis  
Chief, Environmental Analysis Branch  
HQ ACC/CEVP  
129 Andrews Street, Suite 102  
Langley AFB, VA 23665-2769

Dear Mr. Chavis:

As per the request in your memorandum dated December 17, 1998, Subject: Cooperating Agency Point of Contact (POC) for Realistic Bomber Training Initiative (RBTI) Environmental Impact Statement (EIS), Albuquerque Center will serve as a cooperating agency. We designate David B. Wingert, Support Manager, Airspace and Procedures, ZAB-530, as our POC. Dave can be reached at DSN 245-1530 or (505) 856-4530.

Sincerely,

*J. M. Mallen*

## APPENDIX D

# CANDIDATE EMITTER SITES AND ELECTRONIC SCORING SITE LOCATIONS

---

---

The Air Force carefully studied each candidate site for emitters and electronic scoring sites. This process resulted in identification of more candidate sites than would be needed under each action alternative. Should an action alternative be selected after completion of the Record of Decision, the ten emitter and two electronic scoring sites would also be selected.

Out of the 42 candidate sites, 40 are located on private land and two on federal government property. To acquire the right to construct and operate the ground-based assets on private property, the Air Force would need to lease or purchase 11 sites (for five MTR emitters, five MOA emitters, and one MTR Electronic Scoring Site). The twelfth site would accommodate the en route Electronic Scoring Site. These candidate sites for the en route Electronic Scoring Site are found on government property and are located near and managed by Dyess AFB. They represent the only candidates for the one en route Electronic Scoring Site proposed for all three action alternatives. To meet the requirements for the Electronic Scoring Site, the Air Force would construct a new building, link it to on-site power, telephone, and water sources, and install a septic system. For the emitter sites, existing power and telephone lines would be used to the greatest extent possible.

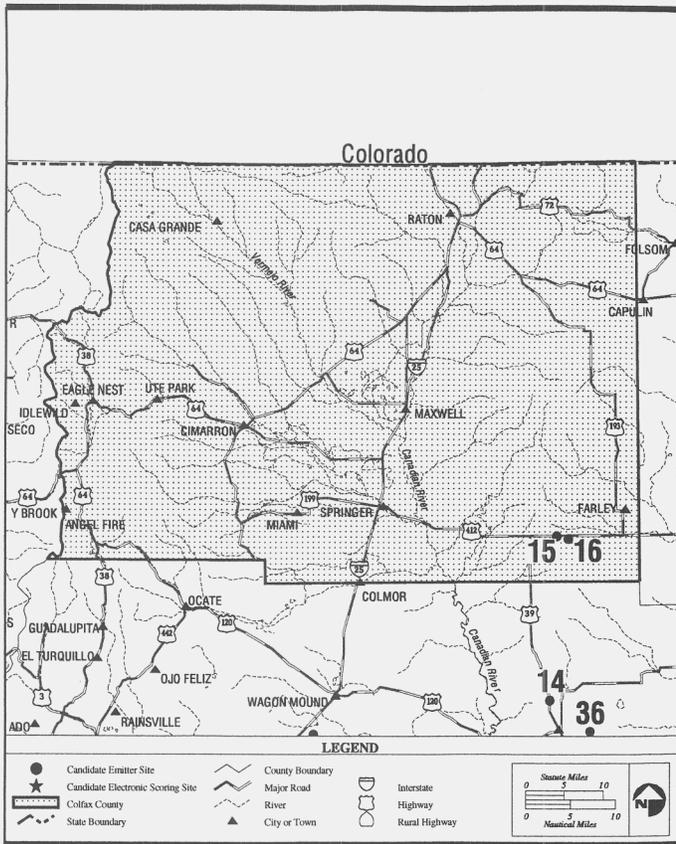

The following county maps identify the candidate emitter and Electronic Scoring Sites. Given the large geographic extent of the study area, the scales of the maps are not similar. Major roads, towns, and rivers are provided to assist the reader in locating the site. The maps are arranged alphabetically, first by state, then by county. The following list provides the figure numbers:

New Mexico counties:

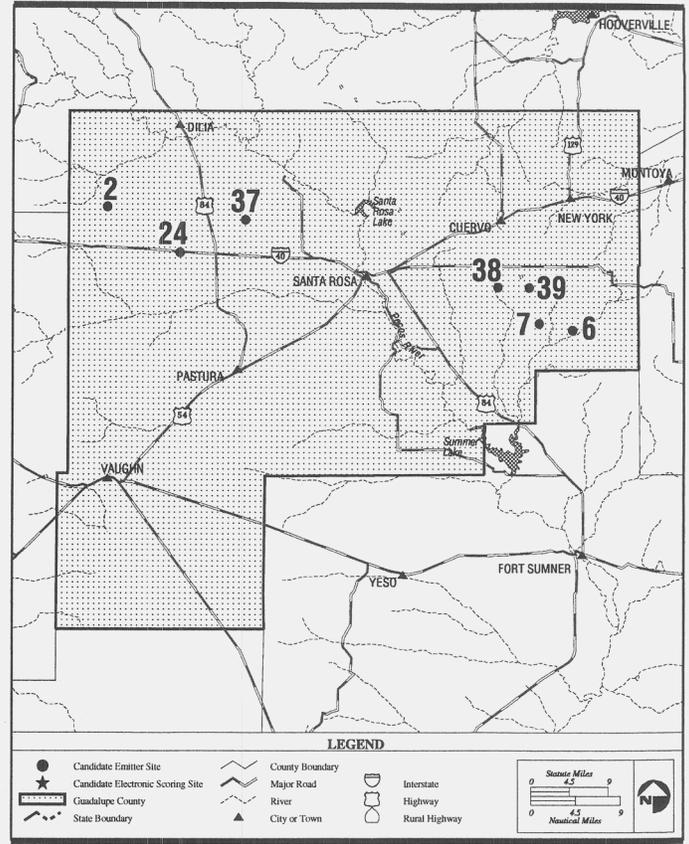

Colfax	D-1
Guadalupe	D-2
Harding	D-3
Mora	D-4

## **APPENDIX E**

### **FIELD SURVEY RESULTS**

---

---

To support RBTI, an interrelated system of ground-based and airspace assets would be developed. The ground-based assets would include an Electronic Scoring Site (ESS) system composed of five MTR and five MOA emitter sites, as well as one MTR and one en route Electronic Scoring Site—all twelve sites would be 15 acres in size. Depending on the action alternative chosen, sites would be located in western Texas or northeastern New Mexico.

The Air Force identified a total of 42 candidate sites for these ground-based assets. Field investigations by professional scientists were conducted at each of the 15-acre sites for hazardous wastes and contamination; wetlands and threatened and endangered species; and archaeological resources. The following table outlines the results of these investigations and the field methods are described below.

Section 4.3 (Biological Resources) and Section 4.5 (Cultural Resources), in the RBTI final EIS, discuss each of the sites and the potential for impacts. Appendix H (Biological Resources Support Documentation) provides an index to the species identified in the RBTI EIS as well as the state and federal threatened, endangered, and sensitive species found in the RBTI study area. Section 2.5.4 discusses the results of the Environmental Baseline Survey.

#### **Environmental Baseline Survey**

Site assessments were generated by conducting a visual inspection of the candidate sites, interviewing available landowners, and reviewing all available data on potential contamination sources. Documents reviewed consisted of environmental databases from federal and state regulatory agencies, aerial photographs, historic maps, site plans, floor plans, and chain-of-title information.

#### **Biology**

A background literature review was conducted prior to the site visits. Pertinent soil surveys of each county (dates ranging from 1973 to 1994), topographic maps, and National Wetland Inventory maps (dates ranging from 1987 to 1994) were used to identify potential jurisdictional wetlands, non-jurisdictional wetlands, and “Waters of the United States.” Sensitive species of concern were also identified by state and federal agencies. The following agencies were contacted regarding sensitive species that could potentially be affected by the RBTI project.

The US Fish and Wildlife Service in Albuquerque, NM.

The US Fish and Wildlife Service in Austin, TX

The US Fish and Wildlife Service in Arlington, TX.

Texas Parks and Wildlife Department, Texas Biological and Conservation Data System.

Internet data from the US Fish and Wildlife Service, Texas Parks and Wildlife Department, New Mexico Department of Game and Fish, and The New Mexico Natural Heritage Program.

Each of the 42 candidate emitter and electronic scoring sites were visited by biologists: the Texas surveys were conducted 20-28 April 1998 and the New Mexico surveys were conducted 11-18 May 1998. Field visits were also conducted 10-11 September 1998 in order to survey additional sites in Texas that were added to the program at that time. Dominant plant species were identified and vegetation cover was determined, wildlife observations were recorded, and potential habitat for threatened and endangered species, and other species of concern, were noted when present. Site data forms were used to record wetland indicators, or lack of the indicators, and species observed. Scaled maps were drawn and photographs were taken.

## **Cultural Resources**

All 42 candidate sites, 22 sites in western Texas and 20 sites in northeastern New Mexico, were intensively and systematically surveyed for cultural resources. Prior to fieldwork, a records search was conducted for all emitter and electronic emitter site locations in Texas through the Texas Archaeological Research Laboratory (TARL) and in New Mexico through the Archaeological Records Management Section (ARMS) of the New Mexico Historic Preservation Division. The goal was to identify all previously recorded prehistoric and historic resources within one mile of each site.

Fieldwork involved an intensive pedestrian survey of each of the forty-two 15-acre parcels in Texas and New Mexico. Archaeologists surveyed each parcel in a north-south direction using transect intervals spaced 25 meters apart or less. The specific transect interval at a candidate emitter and electronic scoring site depended on the field conditions, terrain, and surface visibility. Once an artifact was encountered, transects were reduced to three meters or less. In general, surface visibility was very good and the transect interval was close enough to identify any potentially significant cultural resources.

All archaeological resources were recorded and characteristics of the site were noted on quadrat summary forms. For prehistoric and historic sites identified at the Texas locations, State of Texas Archaeological Site Data Forms were filled out. For sites found in New Mexico, the Laboratory of Anthropology Site Record was completed, photographs of archaeological sites were taken, and artifacts were drawn to scale. Isolated finds were documented in field notes; neither Texas nor New Mexico require a specific isolate form. No architectural resources over 50 years old were identified on any of the candidate sites in either Texas or New Mexico.

**Table E-1. Field Survey Results**

<i>Site Type</i>	<i>Candidate Sites</i>	<i>Alternative</i>	<i>County</i>	<i>State</i>	<i>Current Land Use</i>	<i>EBS Concerns</i>	<i>Biological Concerns</i>	<i>Cultural Concerns</i>
MTR emitter	2	D	Guadalupe	NM	Grazing	None	None	1 prehistoric isolate

## **APPENDIX F**

### **AIR QUALITY**

---

---

This appendix includes supporting data for the air quality analysis for all four alternatives. Tables F-1 through F-3 present the total emissions and tons per year of criteria pollutants for each affected Air Quality Control Region (AQCR) associated with Alternatives A, B, and C. Table F-4 presents the same type of data for baseline emissions of Alternative D; Table F-5 presents projected emissions totals for Alternative D. Tables F-6 through F-8 contain the MAILS input information and results for Alternatives A, B, C, and D.

**Table F-1. Alternatives A, B, and C: Baseline Emissions**

# APPENDIX G

## NOISE

---

---

### AIRCRAFT NOISE ANALYSIS

Noise is generally described as unwanted sound. Unwanted sound can be based on objective effects (hearing loss, damage to structures, etc.) or subjective judgments (community annoyance). Noise analysis thus requires a combination of physical measurement of sound, physical and physiological effects, plus psycho- and socioacoustic effects.

Section 1 of this Appendix describes how sound is measured, and summarizes noise impact in terms of community acceptability and land use compatibility. Section 2 gives detailed descriptions of the effects of noise which lead to the impact guidelines presented in Section 1. Section 3 provides a description of the specific methods used to predict aircraft noise.

#### 1.0 NOISE DESCRIPTORS AND IMPACT

The aircraft noise assessed in this document is the continuous sound generated by the aircraft's engines and also by air flowing over the aircraft itself. Section 1.1 describes the quantities which are used to describe sound. Section 1.2 describes the specific noise metrics used for noise impact analysis. Section 1.3 describes how environmental impact and land use compatibility are judged in terms of these quantities.

#### 1.1 QUANTIFYING SOUND

Measurement and perception of sound involves two basic physical characteristics: amplitude and frequency. Amplitude is a measure of the strength of the sound and is directly measured in terms of the pressure of a sound wave. Because sound pressure varies in time, various types of pressure averages are usually used. Frequency, commonly perceived as pitch, is the number of times per second the sound causes air molecules to oscillate. Frequency is measured in units of cycles per second, or Hertz (Hz).

**Amplitude.** The loudest sounds the human ear can comfortably hear have acoustic energy one trillion times the acoustic energy of sounds the ear can barely detect. Because of this vast range, attempts to represent sound amplitude by pressure are generally unwieldy. Sound is therefore usually represented on a logarithmic scale with a unit called the decibel (dB). Sound on the decibel scale is referred to as a sound level. The threshold of human hearing is approximately 0 dB, and the threshold of discomfort or pain is around 120 dB.

Because of the logarithmic nature of the decibel scale, sound levels do not add and subtract directly and are somewhat cumbersome to handle mathematically. However, some simple rules of thumb are useful in dealing with sound levels. First, if a sound's intensity is doubled, the sound level increases by 3 dB, regardless of the initial sound level. Thus, for example:

$$60 \text{ dB} + 60 \text{ dB} = 63 \text{ dB, and}$$

$$80 \text{ dB} + 80 \text{ dB} = 83 \text{ dB.}$$

The total sound level produced by two sounds of different levels is usually only slightly more than the higher of the two. For example:

$$60.0 \text{ dB} + 70.0 \text{ dB} = 70.4 \text{ dB}.$$

Because the addition of sound levels behaves differently than that of ordinary numbers, such addition is often referred to as “decibel addition” or “energy addition.” The latter term arises from the fact that combination of decibel values consists of first converting each decibel value to its corresponding acoustic energy, then adding the energies using the normal rules of addition, and finally converting the total energy back to its decibel equivalent.

The difference in dB between two sounds represents the ratio of the amplitudes of those two sounds. Because human senses tend to be proportional (i.e., detect whether one sound is twice as big as another) rather than absolute (i.e., detect whether one sound is a given number of pressure units bigger than another), the decibel scale correlates well with human response.

Under laboratory conditions, differences in sound level of 1 dB can be detected by the human ear. In the community, the smallest change in average noise level that can be detected is about 3 dB. A change in sound level of about 10 dB is usually perceived by the average person as a doubling (or halving) of the sound’s loudness, and this relation holds true for loud sounds and for quieter sounds. A decrease in sound level of 10 dB actually represents a 90 percent decrease in sound *intensity* but only a 50 percent decrease in perceived *loudness* because of the nonlinear response of the human ear (similar to most human senses).

**Frequency.** The normal human ear can hear frequencies from about 20 Hz to about 20,000 Hz. It is most sensitive to sounds in the 1,000 to 4,000 Hz range. When measuring community response to noise, it is common to adjust the frequency content of the measured sound to correspond to the frequency sensitivity of the human ear. This adjustment is called A-weighting (American National Standards Institute [ANSI] 1988). Sound levels that have been so adjusted are referred to as A-weighted sound levels. The amplitude of A-weighted sound levels is measured in dB. It is common for some noise analysts to denote the unit of A-weighted sounds by dBA or dB(A). As long as the use of A-weighting is understood, there is no difference between dB, dBA or dB(A). It is only important that the use of A-weighting be made clear. In this study, sound levels are reported in dB and are A-weighted unless otherwise specified.

**Time Averaging.** Sound pressure of a continuous sound varies greatly with time, so it is customary to deal with sound levels that represent averages over time. Levels presented as instantaneous (i.e., as might be read from the dial of a sound level meter), are based on averages of sound energy over either 1/8 second (fast) or one second (slow). The formal definitions of fast and slow levels are somewhat complex, with details that are important to the makers and users of instrumentation. They may, however, be thought of as levels corresponding to the root-mean-square sound pressure measured over the 1/8-second or 1-second periods. The most common uses of the fast or slow sound level in environmental analysis is in the discussion of the maximum sound level that occurs from the action, and in discussions of typical sound levels. Figure G-1 is a chart of A-weighted sound levels of typical sounds. Some (air conditioner, vacuum cleaner) are continuous sounds whose levels are constant for some time. Some (automobile, heavy truck) are the maximum sound during a vehicle passby. Some (urban daytime, urban nighttime) are averages over some extended period. A variety

of noise metrics have been developed to describe noise over different time periods. These are described in Section 1.2.

## **1.2 NOISE METRICS**

### **1.2.1 Maximum Sound Level**

The highest A-weighted sound level measured during a single event in which the sound level changes value as time goes on (e.g., an aircraft overflight) is called the maximum A-weighted sound level or maximum sound level, for short. It is usually abbreviated by ALM,  $L_{\max}$  or  $L_{A\max}$ . The maximum sound level is important in judging the interference caused by a noise event with conversation, TV or radio listening, sleep, or other common activities.

### **1.2.2 Peak Sound Level**

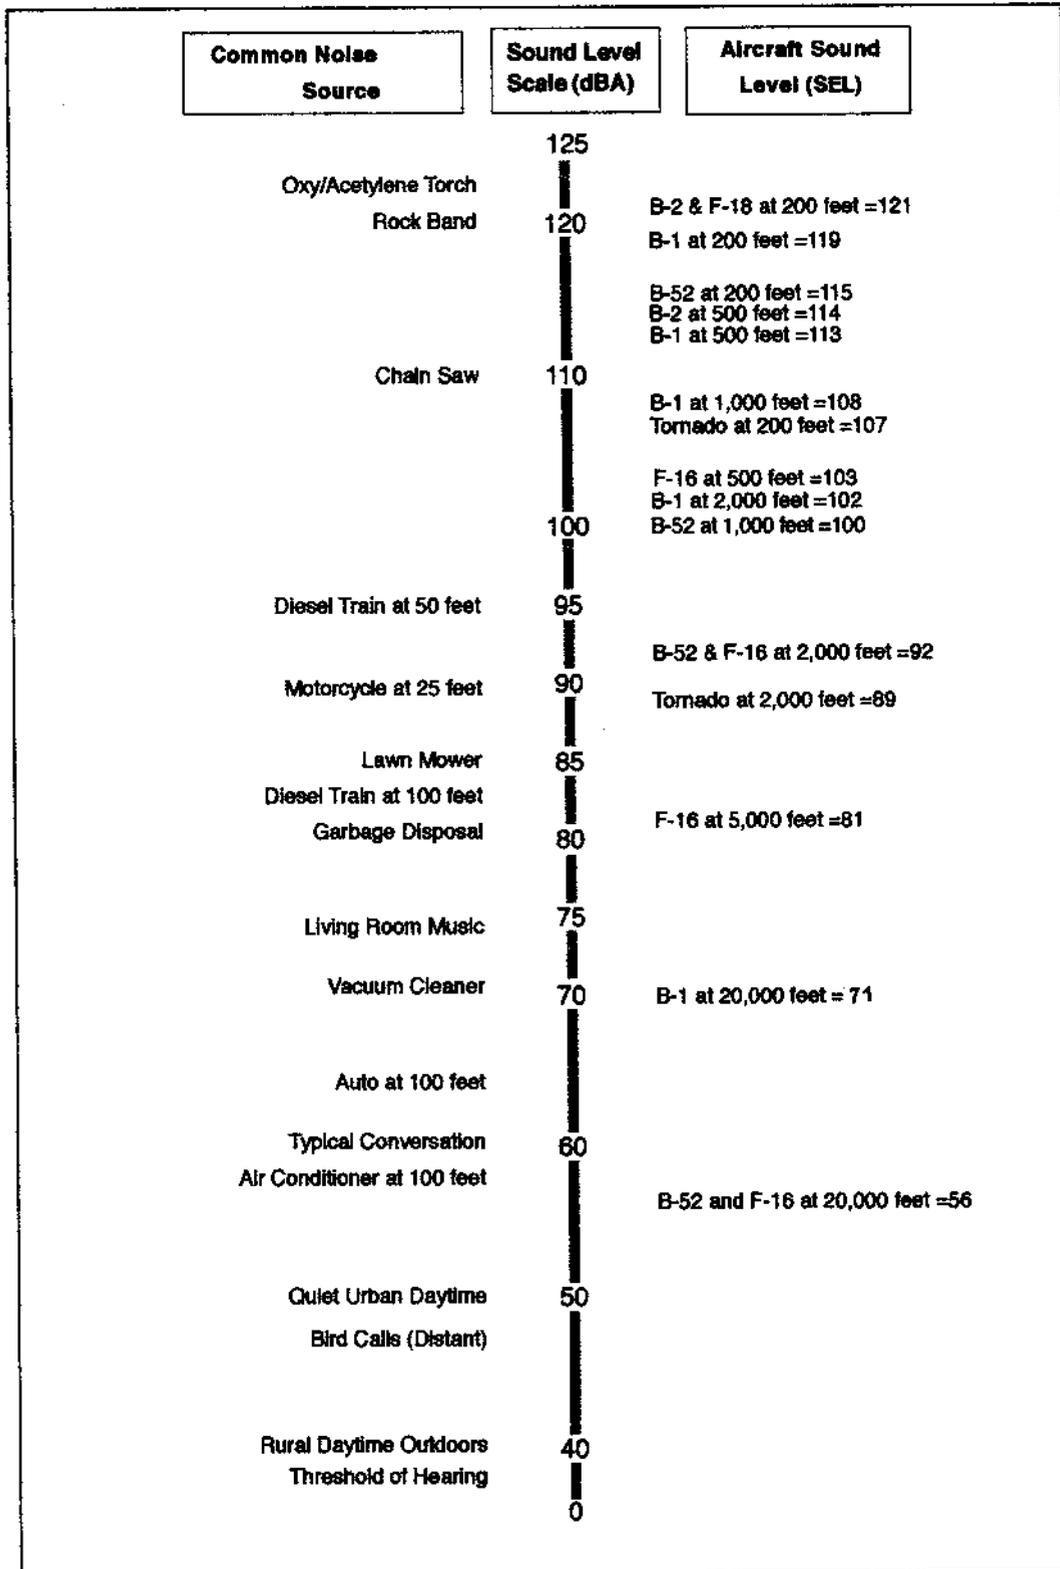

For impulsive sounds, the true instantaneous sound pressure is of interest. For sonic booms, this is the peak pressure of the shock wave. This pressure is usually presented in physical units of pounds per square foot. Sometimes it is represented on the decibel scale, with symbol  $L_{pk}$ . Peak sound levels do not use A weighting.

### **1.2.3 Sound Exposure Level**

Individual time-varying noise events have two main characteristics—a sound level which changes throughout the event and a period of time during which the event is heard. Although the maximum sound level, described above, provides some measure of the intrusiveness of the event, it alone does not completely describe the total event. The period of time during which the sound is heard is also significant. The Sound Exposure Level (abbreviated SEL or LAE for A-weighted sounds) combines both of these characteristics into a single metric.

Sound exposure level is a composite metric which represents both the intensity of a sound and its duration. Mathematically, the mean square sound pressure is computed over the duration of the event, then multiplied by the duration in seconds, and the resultant product is turned into a sound level. It does not directly represent the sound level heard at any given time, but rather provides a measure of the net impact of the entire acoustic event. It has been well established in the scientific community that Sound Exposure Level measures this impact much more reliably than just the maximum sound level.

Because the sound exposure level and the maximum sound level are both used to describe single events, there is sometimes confusion between the two, so the specific metric used should be clearly stated.

Typical A-Weighted Sound Levels of Common Sounds

Figure G-1

### **1.2.4 Equivalent Sound Level**

For longer periods of time, total sound is represented by the equivalent continuous sound pressure level ( $L_{eq}$ ).  $L_{eq}$  is the average sound level over some time period (often an hour or a day, but any explicit time span can be specified), with the averaging being done on the same energy basis as used for SEL. SEL and  $L_{eq}$  are closely related, differing by (a) whether they are applied over a specific time period or over an event, and (b) whether the duration of the event is included or divided out.

Just as SEL has proven to be a good measure of the noise impact of a single event,  $L_{eq}$  has been established to be a good measure of the impact of a series of events during a given time period. Also, while  $L_{eq}$  is defined as an average, it is effectively a sum over that time period and is thus a measure of the cumulative impact of noise.

### **1.2.5 Day-Night Average Sound Level**

Noise tends to be more intrusive at night than during the day. This effect is accounted for by applying a 10-dB penalty to events that occur after 10 PM and before 7 AM. If  $L_{eq}$  is computed over a 24-hour period with this nighttime penalty applied, the result is the day-night average sound level (DNL or  $L_{dn}$ ). DNL is the community noise metric recommended by the U.S. Environmental Protection Agency (U.S. Environmental Protection Agency [USEPA] 1972) and has been adopted by most federal agencies (Federal Interagency Committee on Noise [FICON] 1992). It has been well established that DNL correlates well with community response to noise (Schultz 1978; Finegold *et al.* 1994). This correlation is presented in Section 1.3.

While DNL carries the nomenclature “average,” it incorporates all of the noise at a given location. For this reason, DNL is often referred to as a “cumulative” metric. It accounts for the total, or cumulative, noise impact.

### **1.2.6 Onset-Adjusted Monthly Day-Night Average Sound Level**

Aircraft operations in military airspaces generate a noise environment somewhat different from other community noise environments. Overflights are sporadic, occurring at random times and varying from day to day and week to week. This situation differs from most community noise environments, in which noise tends to be continuous or patterned. Individual military overflight events also differ from typical community noise events: noise from a low-altitude, high-air-speed flyover can have a rather sudden onset.

To represent these differences, the conventional Day-Night Average Sound Level metric is adjusted to account for the “surprise” effect of the sudden onset of aircraft noise events on humans. For aircraft exhibiting a rate of increase in sound level (called onset rate) of 15 to 150 dB per second, an adjustment or penalty ranging from 0 to 11 dB is added to the normal Sound Exposure Level. Onset rates above 150 dB per second require an 11 dB penalty, while onset rates below 15 dB per second require no adjustment. The Day-Night Average Sound Level is then determined in the same manner as for conventional aircraft noise events and is designated as Onset-Rate Adjusted Day-Night Average Sound Level (abbreviated  $L_{dnmr}$ ). Because of the irregular occurrences of aircraft operations, the number of average daily operations is determined by using the calendar month with the highest number of operations. The monthly average is denoted  $L_{dnmr}$ .

## **1.3 NOISE IMPACT**

### **1.3.1 Community Reaction**

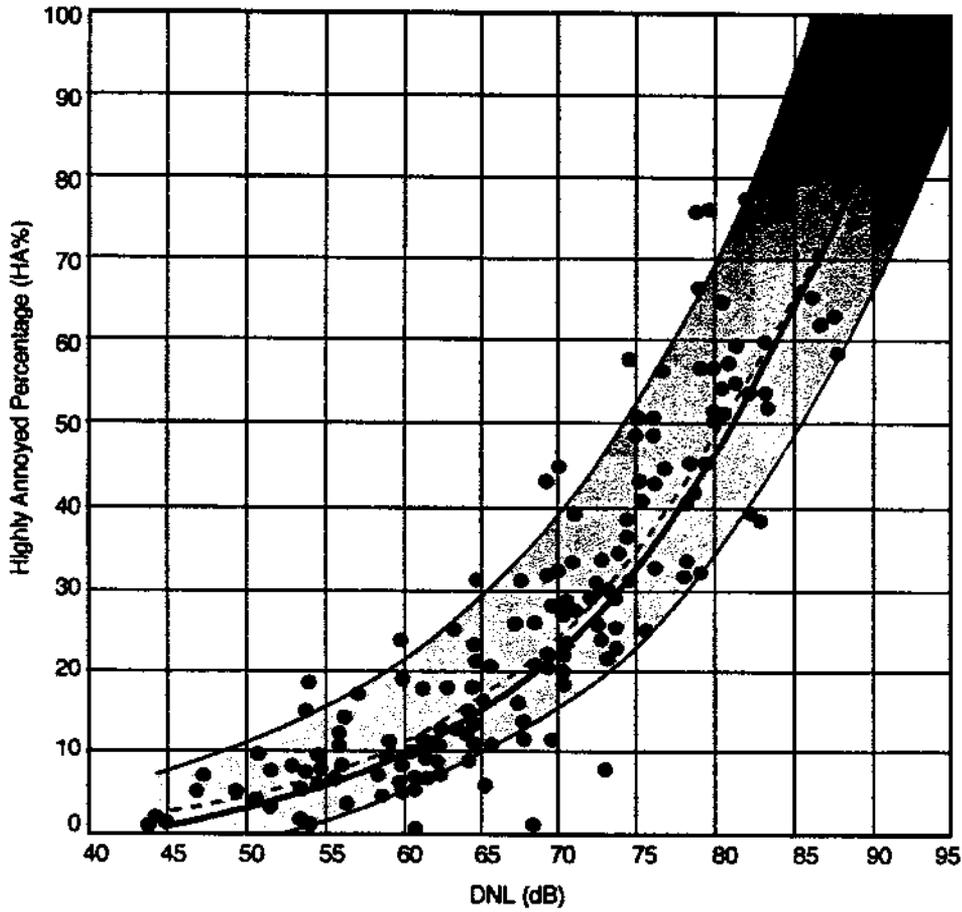

Studies of community annoyance to numerous types of environmental noise show that DNL correlates well with impact. Schultz (1978) showed a consistent relationship between DNL and annoyance. Figure G-2 shows Shultz's original curve fit. This result shows that there is a remarkable consistency in results of attitudinal surveys which relate the percentages of groups of people who express various degrees of annoyance when exposed to different Day-Night Average Sound Levels.

A more recent study has reaffirmed this relationship (Fidell *et al.* 1991). Figure G-3 (FICON 1992) shows an updated form of the curve fit (Finegold *et al.* 1994) in comparison with the original. The updated fit, which does not differ substantially from the original, is the current preferred form. In general, correlation coefficients of 0.85 to 0.95 are found between the percentages of groups of people highly annoyed and the level of average noise exposure. The correlation coefficients for the annoyance of individuals are relatively low, however, on the order of 0.5 or less. This is not surprising, considering the varying personal factors which influence the manner in which individuals react to noise. Nevertheless, findings substantiate that community annoyance to aircraft noise is represented quite reliably using Day-Night Average Sound Level.

As noted earlier for Sound Exposure Level, Day-Night Average Sound Level does not represent the sound level heard at any particular time, but rather represents the total sound exposure. It accounts for the sound level of individual noise events, the duration of those events, and the number of events. Its use is endorsed by the scientific community (ANSI 1988, ANSI 1980, FICON 1992, FICUN 1980, USEPA 1972).

While DNL is the best metric for quantitatively assessing cumulative noise impact, it does not lend itself to intuitive interpretation by non-experts. Accordingly, it is common for environmental noise analyses to include other metrics for illustrative purposes. A general indication of the noise environment can be presented by noting the maximum sound levels which can occur and the number of times per day noise events will be loud enough to be heard. Use of other metrics as supplements to DNL has been endorsed by federal agencies (FICON 1992).

There are several points of interest in the noise-annoyance relation. The first is DNL of 65 dB. This is a level most commonly used for noise planning purposes, and represents a compromise between community impact and the need for activities like aviation which do cause noise. Areas exposed to DNL above 65 dB are generally not considered suitable for residential use. The second is DNL of 55 dB, which was identified by EPA as a level below which there is effectively no adverse impact (USEPA 1972). The third is DNL of 75 dB. This is the lowest level at which adverse health effects could be credible (USEPA 1972). The very high annoyance levels make such areas unsuitable for residential land use.

### **1.3.2. Land Use Compatibility**

As noted above, the inherent variability between individuals makes it impossible to predict accurately how any individual will react to a given noise event. Nevertheless, when a community is considered as a whole, its overall reaction to noise can be represented with a high degree of confidence. As described above, the best noise exposure metric for this correlation is the Day-Night Average Sound Level or Onset-Rate Adjusted Day-Night Average Sound Level for military overflights.

In June 1980, an ad hoc Federal Interagency Committee on Urban Noise published guidelines (FICUN 1980) relating Day-Night Average Sound Levels to compatible land uses. This committee was composed of representatives from the United States Departments of Defense, Transportation, and Housing and Urban Development; the Environmental Protection Agency; and the Veterans Administration. Since the issuance of these guidelines, federal agencies have generally adopted these guidelines for their noise analyses.

Following the lead of the committee, the Department of Defense and the Federal Aviation Administration (FAA) adopted the concept of land-use compatibility as the accepted measure of aircraft noise effect. The FAA included the committee's guidelines in the Federal Aviation Regulations. These regulations are reprinted in Table G-1, along with the explanatory notes included in the regulation. Although these guidelines are not mandatory (note the footnote "\*" in the table), they provide the best means for determining noise impact in airport communities. In general, residential land uses normally are not compatible with outdoor Day-Night Average Sound Levels (DNL values) above 65 dB, and the extent of land areas and populations exposed to DNL of 65 dB and higher provides the best means for assessing the noise impacts of alternative aircraft actions.

## **2.0 NOISE EFFECTS**

The discussion in section 1.3 presents the global effect of noise on communities. The following sections describe particular noise effects.

### **2.1 HEARING LOSS**

Noise-induced hearing loss is probably the best defined of the potential effects of human exposure to excessive noise. Federal work place standards for protection from hearing loss allow a time-average level of 90 dB over an 8-hour work period, or 85 dB averaged over a 16-hour period. Even the most protective criterion (no measurable hearing loss for the most sensitive portion of the population at the ear's most sensitive frequency, 4,000 Hz, after a 40-year exposure) suggests a time-average sound level of 70 dB over a 24-hour period (USEPA 1972).

**Table G-1. Land-Use Compatibility With Yearly Day-Night Average Sound Levels**

\* The designations contained in this table do not constitute a federal determination that any use of land covered by the program is acceptable or unacceptable under federal, state, or local law. The responsibility for determining the acceptable and permissible land uses and the relationship between specific properties and specific noise contours rests with the local authorities. FAA determinations under Part 150 are not intended to substitute federally determined land uses for those determined to be appropriate by local authorities in response to locally determined needs and values in achieving noise-compatible land uses.

**KEY TO TABLE G-1**

SLUCM = Standard Land-Use Coding Manual.

Y (YES) = Land Use and related structures compatible without restrictions.

N (No) = Land Use and related structures are not compatible and should be prohibited.

NLR = Noise Level Reduction (outdoor to indoor) to be achieved through incorporation of noise attenuation into the design and construction of the structure.

25, 30, or 35 = Land Use and related structures generally compatible; measures to achieve NLR of 25, 30, or 35 dB must be incorporated into design and construction of structures.

**NOTES FOR TABLE G-1**

(1) Where the community determines that residential or school uses must be allowed, measures to achieve outdoor-to-indoor Noise Level Reduction (NLR) of at least 25 dB and 30 dB should be incorporated into building codes and be considered in individual approvals. Normal residential construction can be expected to provide an NLR of 20 dB; thus the reduction requirements are often stated as 5, 10, or 15 dB over standard construction and normally assume mechanical ventilation and closed windows year-round. However, the use of NLR criteria will not eliminate outdoor noise problems.

(2) Measures to achieve NLR 25 dB must be incorporated into the design and construction of portions of these buildings where the public is received, office areas, noise-sensitive areas, or where the normal noise level is low.

(3) Measures to achieve NLR 30 dB must be incorporated into the design and construction of portions of these buildings where the public is received, office areas, noise-sensitive areas, or where the normal noise level is low.

(4) Measures to achieve NLR 35 dB must be incorporated into the design and construction of portions of these buildings where the public is received, office areas, noise-sensitive areas, or where the normal noise level is low.

(5) Land-use compatible provided special sound reinforcement systems are installed.

(6) Residential buildings require an NLR of 25.

(7) Residential buildings require an NLR of 30.

(8) Residential buildings not permitted.

## **2.2 NONAUDITORY HEALTH EFFECTS**

Nonauditory health effects of long-term noise exposure, where noise may act as a risk factor, have not been found to occur at levels below those protective against noise-induced hearing loss, described above. Most studies attempting to clarify such health effects have found that noise exposure levels established for hearing protection will also protect against any potential nonauditory health effects, at least in work place conditions. The best scientific summary of these findings is contained in the lead paper at the National Institutes of Health Conference on Noise and Hearing Loss held on 22 to 24 January 1990 in Washington, D.C. This lead paper stated the following: "The nonauditory effects of chronic noise exposure, when noise is suspected to act as one of the risk factors in the development of hypertension, cardiovascular disease, and other nervous disorders, have never been proven to occur as chronic manifestations at levels below these criteria (an average of 75 dBA for complete protection against hearing loss for an eight-hour day). At the 1988 International Congress on Noise as a Public Health Problem, most studies attempting to clarify such health effects did not find them at levels below the criteria protective of noise-induced hearing loss, and even above these criteria, results regarding such health effects were ambiguous. Consequently, it can be concluded that establishing and enforcing exposure levels protecting against noise-induced hearing loss would not only solve the noise-induced hearing loss problem but also any potential nonauditory health effects in the work place." (von Gierke 1990; parenthetical wording added for clarification).

Although these findings were directed specifically at noise effects in the work place, they are equally applicable to aircraft noise effects in the community environment. Research studies regarding the nonauditory health effects of aircraft noise are ambiguous at best, and often contradictory. Yet, even those studies which purport to find such health effects use time-average noise levels of 75 dB and higher for their research.

For example, in an often-quoted paper, two UCLA researchers found a relation between aircraft noise levels under the approach path to Los Angeles International Airport (LAX) and increased mortality rates among the exposed residents by using an average noise exposure level greater than 75 dB for the "noise-exposed" population (Meecham and Shaw 1979). Nevertheless, three other UCLA professors analyzed those same data and found no relation between noise exposure and mortality rates (Frericks *et al.* 1980).

As a second example, two other UCLA researchers used this same population near LAX to show a higher rate of birth defects during the period of 1970 to 1972 when compared with a control group residing away from the airport (Jones and Tauscher 1978). Based on this report, a separate group at the U.S. Centers for Disease Control performed a more thorough study of populations near Atlanta's Hartsfield International Airport for 1970 to 1972 and found no relation in their study of 17 identified categories of birth defects to aircraft noise levels above 65 dB (Edmonds 1979).

A review of health effects, prepared by a Committee of the Health Council of the Netherlands (1996) reviewed currently available published information on this topic. They concluded that the threshold for possible long-term health effects was a 16-hour (0600 to 2200)  $L_{eq}$  of 70 dB. Projecting this to 24 hours and applying the 10 dB nighttime penalty used with DNL, this corresponds to DNL of about 75 dB. The study also affirmed the risk threshold for hearing loss, as discussed earlier.

In summary, there is no scientific basis for a claim that potential health effects exist for aircraft time-average sound levels below 75 dB.

## **2.3 ANNOYANCE**

The primary effect of aircraft noise on exposed communities is one of annoyance. Noise annoyance is defined by the U.S. Environmental Protection Agency as any negative subjective reaction on the part of an individual or group (USEPA 1972). As noted in the discussion of Day-Night Average Sound Level above, community annoyance is best measured by that metric.

Because the EPA Levels Document (USEPA 1972) identified DNL of 55 dB as “. . . requisite to protect public health and welfare with an adequate margin of safety,” it is commonly assumed that 55 dB should be adopted as a criterion for community noise analysis. From a noise exposure perspective, that would be an ideal selection. However, financial and technical resources are generally not available to achieve that goal. Most agencies have identified DNL of 65 dB as a criterion which protects those most impacted by noise, and which can often be achieved on a practical basis (FICON 1992). This corresponds to about 12 percent of the exposed population being highly annoyed. Although DNL of 65 dB is widely used as a benchmark for significant noise impact, and is often an acceptable compromise, it is not a statutory limit and it is appropriate to consider other thresholds in particular cases.

## **2.4 SPEECH INTERFERENCE**

Speech interference associated with aircraft noise is a primary cause of annoyance to individuals on the ground. The disruption of routine activities such as radio or television listening, telephone use, or family conversation gives rise to frustration and irritation. The quality of speech communication is also important in classrooms, offices, and industrial settings and can cause fatigue and vocal strain in those who attempt to communicate over the noise. Research has shown that the use of the Sound Exposure Level metric will measure speech interference successfully, and that a Sound Exposure Level exceeding 65 dB will begin to interfere with speech communication.

## **2.5 SLEEP INTERFERENCE**

Sleep interference is another source of annoyance associated with aircraft noise. This is especially true because of the intermittent nature and content of aircraft noise, which is more disturbing than continuous noise of equal energy and neutral meaning. Sleep interference may be measured in either of two ways. "Arousal" represents actual awakening from sleep, while a change in "sleep stage" represents a shift from one of four sleep stages to another stage of lighter sleep without actual awakening. In general, arousal requires a somewhat higher noise level than does a change in sleep stage.

An analysis sponsored by the U.S. Air Force summarized 21 published studies concerning the effects of noise on sleep (Pearsons *et al.* 1989). The analysis concluded that a lack of reliable in-home studies, combined with large differences among the results from the various laboratory studies, did not permit development of an acceptably accurate assessment procedure. The noise events used in the laboratory studies and in contrived in-home studies were presented at much higher rates of occurrence than would normally be experienced. None of the laboratory studies were of sufficiently long duration to determine any effects of habituation, such as that which would occur under normal community conditions. A recent extensive study of sleep interference in people's own homes (Ollerhead 1992) showed very little disturbance from aircraft noise.

There is some controversy associated with the recent studies, so a conservative approach should be taken in judging sleep interference. Based on older data, the U.S. Environmental Protection Agency identified an indoor Day-Night Average Sound Level of 45 dB as necessary to protect against sleep interference (USEPA 1972). Assuming a very conservative structural noise insulation of 20 dB for typical dwelling units, this corresponds to an outdoor Day-Night Average Sound Level of 65 dB as minimizing sleep interference.

A 1984 publication reviewed the probability of arousal or behavioral awakening in terms of Sound Exposure Level (Kryter 1984). Figure G-4, extracted from Figure 10.37 of Kryter (1984), indicates that an indoor Sound Exposure Level of 65 dB or lower should awaken less than 5 percent of those exposed. These results do not include any habituation over time by sleeping subjects. Nevertheless, this provides a reasonable guideline for assessing sleep interference and corresponds to similar guidance for speech interference, as noted above.

## **2.6 NOISE EFFECTS ON LIVESTOCK AND WILDLIFE**

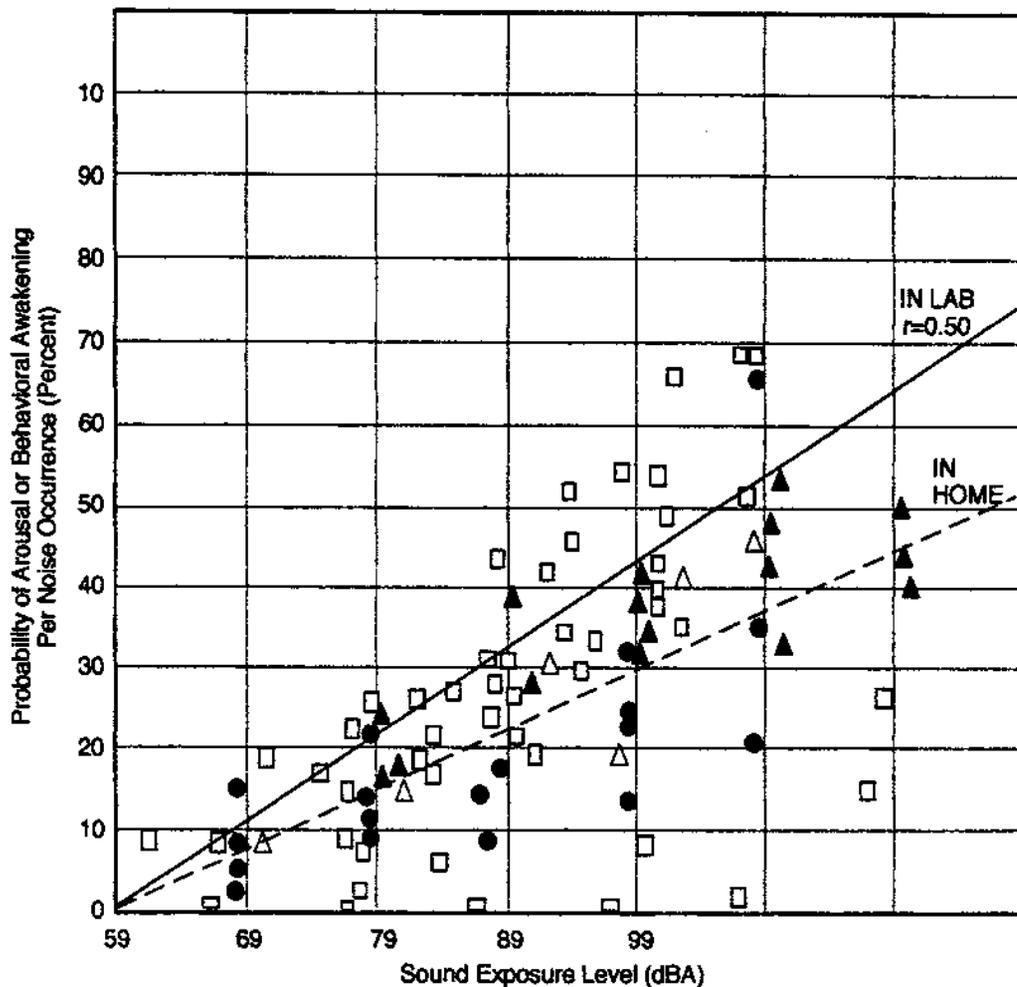

Animal responses to aircraft are influenced by many variables including aircraft size, proximity (both height above the ground and lateral distance), engine noise, color, and flight profile. The type of aircraft (e.g., fixed-wing versus rotary-winged [helicopters]) and its flight mission may also produce different levels of disturbance and animal response (Smith *et al.* 1988).

### **LIVESTOCK**

A large bibliography of studies on the effects of aircraft noise on livestock has found a varied effect, although a large number of the studies minimize the effects of aircraft overflight on the health and well-being of these animals. The following is a summary of the literature findings by major domestic animal types found in the RBTI region. Although some studies report that the comprehensive effects on aircraft noise on domestic animals is inconclusive, a majority of the literature reviewed indicates that domestic animals exhibit minimal behavioral reactions to military overflights and seem to habituate to the disturbances over a period of time. There is no evidence from these studies that aircraft overflights affect feed intake, growth, or production rates in any way.

*Cattle.* A study in Sweden found that no adverse effects were observed, and behavioral reactions were considered minimal in 20 cattle and 18 sheep that were exposed to 28 sonic booms and 10 low-altitude subsonic flights over 4 days (Espmark *et al.* 1974). The authors determined there was a strong tendency for the animals to adapt to aircraft overflight disturbance, which would minimize any long-term effects.

In response to concerns about overflight effects on pregnant cattle, cattle safety and milk production, the Department of the Air Force prepared a handbook for environmental protection that summarizes the literature on the impacts of low-altitude flights on livestock (and poultry) and includes specific mention of case studies conducted in numerous airspaces across the country. Negative results have been found in a few studies, but are not reproduced in other similar studies. One study in 1983 suggested that two of ten cows in late pregnancy aborted after showing rising estrogen and falling progesterone levels correlated with 59 aircraft overflights, while the other 8 cows showed no changes in their blood concentrations and calved normally (USAF 1993). Another, in 1982, showed abortion results in 3 out of 5 pregnant cattle after exposing them to flyovers by six different aircraft

(USAF 1993). A third study in 1983 suggests feedlot cattle could stampede and injure themselves when exposed to low level overflight (USAF 1993).

Negative findings were few, however, and the findings of little or no effect were more prevalent. A study in 1978 by Rowe and Smithies examined the causes of 1,763 abortions in Wisconsin dairy cattle over a 1-year time period and none were associated with aircraft disturbances (USAF 1993). In 1987, Anderson contacted 7 livestock operators for production data and no effects of low altitude and supersonic flights were noted. Three out of 43 cattle previously exposed to low altitude flights showed a startle response to an F/A-18 aircraft flying overhead at 500 feet AGL and 400 knots by running less than 10 meters. They resumed normal activity within 1 minute (USAF 1993). A study (Beyer 1983) found that helicopters caused more of a reaction than other low aircraft overflights and even the helicopters at 30 to 60 feet overhead did not affect milk production and pregnancies of 44 cows and heifers in a 1964 study (USAF 1993). Additionally, the 1983 Beyer study showed that 5 pregnant dairy cows in a pasture did not even run, nor disturb their pregnancies, after being overflown by 79 low-altitude helicopter flights and 4 low-altitude, subsonic jet aircraft flights (USAF 1993). A 1956 study found that the reactions of dairy and beef cattle to noise from low-altitude, subsonic aircraft were similar to those caused by flying paper, strange persons, or other moving objects (USAF 1993). In addition, Broucek (USAF 1992) found that dairy cows react to the sound of a tractor engine (97 dB) with an increased white blood cell count (the cells that fight infection), an increased sugar reserve in the blood (a response to adrenaline or fear) and a lowered red blood cell count (cells that carry oxygen to the body) (Gladwin *et al.* 1988). Overall, the U.S. Forest Service has concluded in a report to Congress (USFS 1992) that “evidence both from field studies of wild ungulates and laboratory studies of domestic stock indicate that the risks of damage are small [from aircraft approaches of 50 to 100 meters (m)], as animals take care not to damage themselves. If animals are simply overflown by aircraft at altitudes of 50 to 100 m, there is no evidence that mothers and young are separated, that animals collide with obstructions (unless confined) or that they traverse dangerous ground at too high a rate.” These varied study results suggest that although the confining of cattle could magnify animal response to aircraft overflight, there is no proven cause-and-effect link between startling cattle from aircraft overflights and abortion rates or lower milk production in cattle.

*Bison.* Bison do not react as strongly to surrounding disturbances, as do cattle. A study in 1972 by Frazier observed bison with high and low-altitude (100-1000 feet AGL at 450 knots) overflights with F-15 aircraft at a ground noise level of 90 dBA; the bison “appeared oblivious” to the aircraft noise and continued grazing throughout all aircraft passes (Gladwin *et al.* 1988). Aircraft overflights appear to have little, if any effect on bison.

*Horses.* Horses have been observed for reactions to overflights as well. Several studies were summarized showing a varied response of horses to low-altitude aircraft overflights. Observations made in 1966 and 1968 noted that the horses galloped around in response to jet flyovers (USAF 1993). Bowles (1995) cites Kruger and Erath as observing horses exhibiting intensive flight reactions, random movements, and biting/kicking behavior. However, no injuries or abortions occurred and there was evidence that the mares adapted somewhat to the flyovers over a month’s time (USAF 1993). Although horses notice the overflights, it does not appear to affect their survivability or their procreation and they do seem to habituate to these disturbances.

## **WILDLIFE**

The potential sources of impacts to wildlife from aircraft overflights are the visual effect of the approaching aircraft and the associated subsonic noise. Any visual impacts would be most likely to occur along those portions of MTRs that are below 1,000 feet AGL, the altitude accounting for most reactions to visual stimuli by wildlife (Lamp 1989, Bowles 1995).

Noise effects to wildlife are classified as primary, secondary, and tertiary effects. Primary effects are direct, physiological changes to the auditory system, (i.e., ear drum rupture, temporary and permanent hearing threshold shifts, and the masking of auditory signals). These primary effects are not expected to occur as described in the following discussion. Secondary effects include non-auditory effects such as stress and associated physiological response (i.e., increased blood pressure, use of available glucose, and blood corticosteroid levels); behavior modifications; interference with mating or reproduction; and impaired ability to obtain adequate food, cover, or water. The possibility of secondary effects occurring are more likely than primary effects and will be explored in detail as follows. Tertiary effects are the direct result of primary and secondary effects, and include population declines, habitat loss, and species extinction. Tertiary effects of aircraft overflight are difficult to pinpoint because the intricate details involved in ecosystem function include many factors not related to the overflight operations.

Behavioral experiments have demonstrated that noise at high levels is mildly aversive in and of itself, apparently because the physiological effects stimulated by noise are aversive (e.g., muscular flinch, vasoconstriction, bradycardia) (Bowles 1997). However, noise is not aversive enough to be an effective conditioning stimulus over the long term. This explains the failure of most acoustic harassment devices to deter wildlife, such as deer, from favored areas (Bowles 1997).

Literature available on aircraft overflights on wildlife specifically related to the RBTI includes fixed-wing aircraft overflight studies conducted in the early 1970s through mid-1998. In the past, literature discussing different types of aircraft were used to argue whether any aircraft overflights adversely affected wildlife. Much of this literature discussed helicopter overflight, which is not included in the RBTI action. Helicopter overflight is found to have a greater effect on wildlife because helicopters do not typically leave an area as rapidly as fixed-wing aircraft. Helicopters have a percussive effect from the beat of the rotors, and helicopters are often used to chase, dart, and capture wildlife and could cause a greater fear factor among wildlife populations that have interacted with helicopters in this way. Therefore, studies on helicopters will not be discussed.

Some caution has also been suggested when extrapolating studies using one species, for the results that might happen for another. For this reason, only studies relating to RBTI-associated species will be used to discuss impacts.

Most of the effects of noise are mild enough that they may never be detectable as changes in population size or population growth against the background of normal variation (Bowles 1995). Many other environmental variables (e.g., predators, weather, changing prey base, ground based human disturbance) may influence reproductive success and confound the ability to identify the ultimate factor in limiting productivity of a certain nest, area, or region (Smith *et al.* 1988). In contrast, the effects of other human intrusions near nests, foraging areas, dens, etc. (e.g., hiking, bird watching, timber harvesting, boating) are readily detected and substantially affect wildlife behavior and reproductive success (USFS 1992).

The following discusses the aircraft overflight effects on wildlife by species type.

**Large Herbivores:** The large wild herbivores under the RBTI airspaces include mule deer, elk, bighorn sheep, and pronghorn antelope. There have been many studies of aircraft noise on mammals. Some of these studies have examined the noise response of mammals under laboratory conditions (e.g., Weisenberger *et al.* 1996). Other researchers have investigated the physiological and behavioral responses of mammals in the field (Lamp 1987). Laboratory studies previously showed habituation results to continuous noise exposure. Now, both the current field and laboratory data indicate that mammals (e.g., pronghorn, bighorn sheep, elk, and mule deer) show that the effects are transient and of short duration and suggest that the animals appear to habituate to noise through repeated exposure without long-term discernible negative effects (Workman *et al.* 1992; Krausman *et al.* 1993, 1998; Weisenberger *et al.* 1996). Therefore, changes to the number and types of overflight are not expected to result in major impacts to wildlife populations.

**Mule deer.** Mule deer were observed for jet fighter overflight responses. None of the three jet fighter flights below 3000 feet AGL and none of the 18 jet fighter flights above 3000 feet AGL caused mule deer to run (Kroodsma 1988). Wild animals exposed to intense noise with sudden onset can panic and injure themselves or their young, however, this is usually the result of active pursuit (such as the perceived pursuit of a low flying aircraft). Animals control their movements to minimize risk. Loss rates have varied greatly in the few documented cases of injury or loss. Mammals and raptors appear to have little susceptibility to those losses, whereas the most significant losses have been observed among waterfowl. Panic responses habituate quickly and completely, usually with fewer than five exposures (Bowles 1997).

**Small Mammals:** Small mammals under the RBTI airspaces include the Mexican long-nosed bat, black-tailed jackrabbit, black-tailed prairie dog, desert cottontail, Ord's kangaroo rat, plains harvest mouse, southern plains woodrat, and thirteen-lined ground squirrel.

One recent three-year study by McClenaghan and Bowles (1995) focused on chronic military aircraft exposure. It was conducted in south-central Arizona characterized by creosote and mixed Sonoran Desert scrub. The sites were exposed to low-altitude flights of more than 20,000 sound events in excess of 80 dB with 115.5 dB being the highest A-weighted single event level (SEL) recorded. The control sites received noise levels at least an order of magnitude lower with an average of 51.3 dB and none were over 100 dB. The control area event rate was approximately one flight per day. Numerous kangaroo rat and pocket mouse species and the white-throated wood rat were included in the study. Populations densities, body weight, reproductive activity, recruitment by immigration and reproduction, survival rate month to month were measured. Overall, the outcome of the study suggests the effects of lifetime exposure to intermittent aircraft noise on animal demography are likely to be small and difficult to detect, if they exist at all (McClenaghan and Bowles 1995), which is consistent with what is found in laboratory species and humans (Kryter 1994).

**Raptors:** Birds of prey, or raptors, in the area include ferruginous hawk, bald eagle, golden eagle, great-horned owl, spotted owl, burrowing owl, peregrine falcons, prairie falcons, and aplomado falcon.

**Peregrine and prairie falcons:** Peregrines occupy their breeding habitat by March 1, with egg laying occurring from March 15 to May 15. During this period of egg laying and initial incubation, peregrines are most susceptible to disturbance and abandonment (USFWS 1984). A study (Ellis *et*

*al.* 1991) of low-altitude overflights above prairie falcon and other similar raptors showed no permanent nest abandonment or reduction in reproductive success. Abandonment is less likely during the period from May 16 until the fledged young have dispersed from the nest area (usually by August 15).

In studies on the impacts of low-altitude jet overflights on nesting peregrine and prairie falcons, Ellis (1981) and Ellis *et al.* (1991) found that responses to extremely frequent and nearby jet aircraft were often minimal and never associated with reproductive failure. Typically, birds quickly resumed normal activities within a few seconds following an overflight. While the falcons were noticeably alarmed by the noise stimuli in this study, the negative responses were brief and not detrimental to reproductive success during the course of the study.

In 1995, a three year study was initiated for the U.S. Air Force by the Alaska Cooperative Fish and Wildlife Research Unit, University of Alaska, Fairbanks, and Alaska Biological Research to assess the effects of jet overflights on the behavior, nesting success, and productivity of nesting peregrine falcons beneath five MOAs in interior Alaska (Ritchie *et al.* 1998). An average of 34 nests per year were monitored over the three year study, with an average of 28 and 27 overflights each, respectively, through the nesting season. Daily sound exposure levels (SEL) ranged from 60 to 110.6 dBA. Overall, the average number of young per successful pair was greater at the experimental sites than at the control sites (Ritchie *et al.* 1998).

*Mexican Spotted Owl.* Johnson and Reynolds (1996) studied F-16 aircraft overflights directly over several Mexican spotted owls located under an existing MOA. Adult and juvenile birds were observed and found to have minimal to no reactions.

*Bald Eagle.* Fleischner and Weisberg (1986) have shown that bald eagles are susceptible to being startled by loud noises during the breeding season. Bald eagles (threatened) typically respond to the proximity of disturbance, such as from pedestrian traffic or aircraft within 100 meters, because of the increased visibility of the perceived threat rather than noise level (Ellis *et al.* 1991). Bald eagles' reactions to commercial jet flight, although minor (e.g., looking), were twice as likely to occur at eagle-jet distances of one half mile or less (Fleischner and Weisber, 1986). Another study by Fraser *et al.* (1985) stated that over 850 overflights of active bald eagle nests only resulted in two eagles (10 percent) that interrupted their incubation or brooding activities during these overflights. Awbrey and Bowles (1990) suggested that eagles are particularly resistant to being disturbed from their nests.

*Other Raptors.* There have been no studies on the responses of aplomado falcons to aircraft overflights but there have been studies on the closely related peregrine and prairie falcons and other raptors (e.g., Ellis *et al.* 1991). These studies suggest that falcons will nest within areas overflown by low-level jet aircraft. Although birds do at times flush from nests, they soon return and nest success is not affected. Peregrine falcons and other raptor species are known to nest in the immediate vicinity of airports under the flight patterns where aircraft land and take-off.

Lamp (1989) found in a study of the impacts to wildlife of aircraft overflights at Naval Air Station Fallon in northern Nevada, that nesting raptors (golden eagle, bald eagle, prairie falcon, Swainson's hawk, and goshawk) either showed no response to low-level flights (less than 3,000 feet AGL) or only showed minor reactions. Minor reactions consisted of the bird assuming an alert posture or turning its head and watching the aircraft pass overhead. Duration of raptor response to aircraft

disturbances was monitored for one year and was found to average 14 seconds for low-level overflights. All raptor nests under observation successfully fledged young (Lamp 1989).

In a literature review of raptor responses to aircraft noise, Mancini *et al.* (1988) found that most studies of raptors did not show a negative response to overflights. When negative responses were observed they were predominantly associated with rotary-winged aircraft or jet aircraft that were repeatedly passing within one-half mile of a nest. The USFWS indicated as part of consultations associated with a Cannon AFB action that flights at or below 2,000 feet AGL from October 1 through March 1 could result in adverse impacts to wintering bald eagles (USFWS 1998). However, Fraser *et al.* (1985) believes that raptors habituate to overflights rapidly, sometimes tolerating aircraft approaches of 65 feet or less.

**Other birds:** The passerines present under the RBTI airspace include black-throated sparrow, dark-eyed junco, loggerhead shrike, white-faced ibis, cactus wren, mourning dove, and vesper sparrow. Federally listed birds that could be found under the airspaces include the interior least tern and southwestern willow flycatcher. As opposed to other taxa, many researchers (Bowles 1997, Ellis *et al.* 1991, Klein 1973, Pritchett *et al.* 1978) have studied the effects of aircraft noise on birds and mammals. Some of these studies have examined the noise response of birds under laboratory conditions (e.g., Book and Bradley n.d.). Other researchers have investigated the physiological and behavioral responses of birds in the field (Ellis *et al.* 1991, Henson and Grant 1991). The primary criticism of the previous laboratory studies is that the results invariably show habituation to continuous noise exposure. Both the current field and laboratory data, however, indicate that many birds appear to habituate to noise through repeated exposure without long-term discernible negative effects.

**Passerines.** Passerines (i.e., perching birds or song birds) cannot be driven any great distance from a favored food by a nonspecific disturbance, such as aircraft overflight (USFS 1992). However, Mancini *et al.* (1988) states that reproductive losses have been reported for small territorial passerines after exposure to low-altitude overflights.

**Black Ducks.** One recent study measured the heart rate of black ducks for 4 days and subjected them to simulated aircraft noise for 48 episodes per day with peak volume of 110 dB. Acute response occurred on the first day but diminished rapidly after that. This indicated the ability of black ducks to habituate to the auditory component of low altitude aircraft overflight (Harms *et al.* 1997).

**Migratory Waterfowl.** Migratory waterfowl have shown to have moderate responses and habituate slowly to aircraft overflight. For example, migratory waterfowl often make brief flights in response to aircraft overflights. If individuals are susceptible to damage as a result of these moderate responses, noise may continue to have an impact over long periods. For example, gulls nesting in colonies can take advantage of brief defensive flights to cannibalize one another's eggs (Burger 1981). Unfortunately, little information is available on the actual extent of such losses. Migrants and animals living in areas with high concentrations of predators are the most vulnerable.

**Wading Birds.** A literature synthesis by Mancini *et al.* (1988) cited Black *et al.* (1984) as studying wading bird colony effects of low-altitude (less than 500 feet AGL) military training flights. It was found that reproductive activity including nest success, nestling survival, and nestling chronology, was independent of F-16 overflights, but was related to ecological factors including location and physical characteristics of the colony and climatology.

*Sandhill Cranes.* In a literature review by the USAF (1993), two studies were referenced that noted aircraft noise caused a cessation of intensive calling, but birds rarely left the nest, when overflowed.

***Fish, Reptiles, and Amphibians:*** Reptile and amphibians identified under the RBTI airspaces include Mojave rattlesnake, side-blotched lizard, Texas horned lizard, yellow mud turtle, Texas banded gecko, Great Plains skink, Couch's spadefoot toad, and the Great Plains toad. The effects of overflight noise on fish, reptiles, and amphibians have been poorly studied, but conclusions about their expected responses have been speculated on through the known physiology and behavior for these taxa (Gladwin *et al.* 1988). Although fish do startle in response to low flying aircraft noise and probably to the shadows of aircraft as well, they have been found to habituate to the sound and overflights. Noise is also readily and well attenuated by water surfaces, fish are not expected to be affected by noise from overflights. Reptiles and amphibians that respond to low frequencies and those that respond to ground vibration, such as toads (genus *Scaphiopus*), may be affected by noise. However, RBTI activities are unlikely to cause ground vibrations noticeable to these species.

## **2.7 NOISE EFFECTS ON STRUCTURES**

Normally, the most sensitive components of a structure to airborne noise are the windows and, infrequently, the plastered walls and ceilings. An evaluation of the peak sound pressures impinging on the structure is normally sufficient to determine the possibility of damage. In general, at sound levels above 130 dB, there is the possibility of the excitation of structural component resonance. While certain frequencies (such as 30 Hz for window breakage) may be of more concern than other frequencies, conservatively, only sounds lasting more than one second above a sound level of 130 dB are potentially damaging to structural components.

In a 1989 study, directed specifically at low-altitude, high-speed aircraft showed that there is little probability of structural damage from such operations (Sutherland 1990). One finding in that study is that sound levels at damaging frequencies (e.g., 30 Hz for window breakage or 15 to 25 Hz for whole-house response) rarely occur below 130 dB.

Noise-induced structural vibration may also cause annoyance to dwelling occupants because of induced secondary vibrations, or "rattle," of objects within the dwelling, such as hanging pictures, dishes, plaques, and bric-a-brac. Window panes may also vibrate noticeably when exposed to high levels of noise, causing homeowners fear of breakage. In general, such noise-induced vibrations occur at sound levels above those considered normally incompatible with residential land use. Thus assessments of noise exposure levels for compatible land use should also be protective of noise-induced secondary vibrations.

## **2.8 NOISE EFFECTS ON TERRAIN**

Members of the public often perceive that noise from low-flying aircraft can cause avalanches or landslides by disturbing fragile soil or snow structures, especially in mountainous areas, causing landslides or avalanches. There are no known instances of such effects, and it is considered improbable that such effects will result from routine, subsonic aircraft operations.

## **2.9 NOISE EFFECTS ON HISTORICAL AND ARCHAEOLOGICAL SITES**

Because of the potential for increased fragility of structural components of historical buildings and other historical sites, aircraft noise may affect such sites more severely than newer, modern structures. Again, there are few scientific studies of such effects to provide guidance for their assessment.

One study involved the measurements of sound levels and structural vibration levels in a superbly restored plantation house, originally built in 1795, and now situated approximately 1,500 feet from the centerline at the departure end of Runway 19L at Washington Dulles International Airport (IAD). These measurements were made in connection with the proposed scheduled operation of the supersonic Concorde airplane at IAD (Wesler 1977). There was special concern for the building's windows, since roughly half of the 324 panes were original. No instances of structural damage were found. Interestingly, despite the high levels of noise during Concorde takeoffs, the induced structural vibration levels were actually less than those induced by touring groups and vacuum cleaning within the building itself.

As noted above for the noise effects of noise-induced vibrations of normal structures, assessments of noise exposure levels for normally compatible land uses should also be protective of historic and archaeological sites.

## **3.0 NOISE MODELING**

An aircraft in subsonic flight generally emits noise from two sources: the engines and flow noise around the airframe. Noise generation mechanisms are complex, and in practical models the noise sources must be based on measured data. The Air Force has developed a series of computer models and aircraft noise data bases for this purpose. The models include NOISEMAP (Moulton 1992) for noise around airbases, ROUTEMAP (Lucas and Plotkin 1988) for noise associated with low-level training routes, and MR\_NMAP (Lucas and Calamia 1996) for use in MOAs and ranges. These models use the NOISEFILE database developed by the Air Force. NOISEFILE data includes SEL and  $L_{\max}$  as a function of speed and power setting for aircraft in straight flight.

Noise from an individual aircraft is a time-varying continuous sound. It is first audible as the aircraft approaches, increases to a maximum when the aircraft is near its closest point, then diminishes as it departs. The noise depends on the speed and power setting of the aircraft, and its trajectory. The models noted above divide the trajectory into segments whose noise can be computed from the data in NOISEFILE. The contributions from these segments are summed.

MR\_NMAP was used to compute noise levels in the affected airspace for this EIS. The primary noise metric computed by MR\_NMAP was  $L_{\text{dnmr}}$  averaged over each airspace. Supporting routines from NOISEMAP were used to calculate SEL and  $L_{\max}$  for various flight altitudes and lateral offsets from a ground receiver position.

# APPENDIX H

## BIOLOGICAL RESOURCES SUPPORT DOCUMENTATION

---

The following tables provide a list of all plant and wildlife species mentioned in Section 4.3 (Biological Resources) of the RBTI EIS. These lists include both their common and scientific names. Tables describing all species mentioned in the text that are listed as state and federal threatened, endangered, and sensitive species are also provided. This appendix also includes correspondence between the Air Force and USFWS regarding informal discussions for RBTI.

Table	Title	Page
H-1	Representative Plant Species in the Affected Areas.....	H-2
H-2	Representative Wildlife Species in the Affected Areas.....	H-3
H-3	Federally Listed Threatened and Endangered Species Potentially Found in the Study Area of New Mexico and Texas Counties .....	H-6
H-4	Sensitive Plant Species Potentially Found in the Study Area of New Mexico and Texas Counties .....	H-8
H-5	Sensitive Invertebrate Species Potentially Found in Study Area of New Mexico and Texas Counties .....	H-15

<b>Table H-1. Representative Plant Species in the Affected Area</b>	
<i>Common Name</i>	<i>Scientific Name</i>
Acacia	<i>Acacia</i> spp.
Agave	<i>Agave</i> spp.
Arizona fescue	<i>Festuca arizonica</i>
Bitterweed	<i>Hymenoxys odorata</i>
Black grama	<i>Bouteloua eriopoda</i>
Broadleaf milkweed	<i>Asclepias latifolia</i>
Broomweed	<i>Amphiachyris</i> spp. and <i>Gutierrezia</i> spp.
Buffalograss	<i>Buchloe dactyloides</i>
Cane bluestem	<i>Bothriochloa barbinodis</i>
Catclaw	<i>Acacia greggii</i>
Catclaw mimosa	<i>Mimosa biuncifera</i>
Creosote bush	<i>Larrea tridentata</i>
Douglas fir	<i>Pseudotsuga menziesii</i>
Fragrant ash	<i>Fraxinus cuspidata</i>
Galleta grass	<i>Hilaria jamesii</i>
Gambel (=shin) oak	<i>Quercus gambelii</i>
Guajillo	<i>Acacia berlandieri</i>
Juniper	<i>Juniperus</i> spp.
Little bluestem	<i>Schizachyrium scoparium</i>
Live oak	<i>Quercus turbinella</i>
Mesquite	<i>Prosopis</i> spp.
Mexican pinyon	<i>Pinus cembroides</i>
Mountain laurel	<i>Sophora secundiflora</i>
Mountain muhly	<i>Muhlenbergia montana</i>
Needlegrass	<i>Achnatherum</i> spp.
Ocotillo	<i>Fouquieria splendens</i>
Pinyon pine	<i>Pinus edulis</i>
Pinyon ricegrass	<i>Piptochaetium fimbriatum</i>
Plains lovegrass	<i>Eragrostis intermedia</i>
Ponderosa pine	<i>Pinus ponderosa</i>
Post oak	<i>Quercus margarettiae</i>
Pricklypear and cholla	<i>Opuntia</i> spp.
Sage	<i>Artemisia</i> spp.
Sand shin oak	<i>Quercus havardii</i>
Sandpaper oak	<i>Quercus pungens</i>
Sideoats grama	<i>Bouteloua curtipendula</i>
Snakeweed	<i>Gutierrezia</i> spp.
Soapweed	<i>Yucca glauca</i>
Switchgrass	<i>Panicum capillare</i>
Tarbush	<i>Floureusia cernua</i>
Texas bluestem	<i>Schizachyrium cirratum</i>
Texas grama	<i>Bouteloua rigidiseta</i>
Texas kidneywood	<i>Eysenhardtia texana</i>
Threeawn grass	<i>Aristida</i> spp.
Tobosa	<i>Hilaria mutica</i>
Walnut	<i>Juglans</i> spp.
White fir	<i>Abies concolor</i>
Whitethorn	<i>Acacia constricta</i>
Wolftail	<i>Lycurus phleoides</i>
Yucca	<i>Yucca</i> spp.

**Table H-2. Representative Wildlife Species in the Affected Area** (page 1 of 3)

<i>Common Name</i>	<i>Scientific Name</i>
<b>REPTILES AND AMPHIBIANS</b>	
Checkered whiptail	<i>Cnemidophorus tesselatus</i>
Couch's spadefoot toad	<i>Scaphiopus couchii</i>
Crevice spiny lizard	<i>Sceloporus poinsettii</i>
Four-lined skink	<i>Eumeces tetragrammus</i>
Great Plains skink	<i>Eumeces obsoletus</i>
Great Plains toad	<i>Bufo cognatus</i>
Greater earless lizard	<i>Cophosaurus texanus</i>
Kingsnake	<i>Lampropeltis</i> spp.
Lesser earless lizard	<i>Holbrookia maculata</i>
Mojave rattlesnake	<i>Crotalus scutulatus</i>
Ornate box turtle	<i>Terrapene ornata</i>
Plains black-headed snake	<i>Tantilla nigriceps</i>
Plains spadefoot	<i>Scaphiopus bombifrons</i>
Prairie lizard	<i>Sceloporus undulatus</i>
Red-spotted toad	<i>Bufo punctatus</i>
Side-blotched lizard	<i>Uta stansburiana</i>
Six-lined racerunner	<i>Cnemidophorus sexlineatus</i>
Skink	<i>Eumeces</i> spp.
Texas banded gecko	<i>Coleonyx brevis</i>
Texas black-headed snake	<i>Tantilla atriceps</i>
Texas horned lizard	<i>Phrynosoma cornutum</i>
Texas spotted whiptail	<i>Cnemidophorus gularis</i>
Trans-Pecos ratsnake	<i>Elaphe subocularis</i>
Western boreal toad	<i>Bufo boreas</i>
Western diamondback	<i>Crotalus atrox</i>
Western hognose snake	<i>Heterodon nasicus</i>
Yellow mud turtle	<i>Kinosternon flavescens</i>

<b>Table H-2. Representative Wildlife Species in the Affected Area</b> (page 2 of 3)	
<i>Common Name</i>	<i>Scientific Name</i>
<b>BIRDS</b>	
Acorn woodpecker	<i>Melanerpes formicivorus</i>
American dipper	<i>Cinclus mexicanus</i>
American peregrine falcon	<i>Falco peregrinus anatum</i>
Bald eagle	<i>Haliaeetus leucocephalus</i>
Black phoebe	<i>Sayornis nigricans</i>
Black-capped vireo	<i>Vireo atricapillus</i>
Black-headed grosbeak	<i>Pheucticus melanocephalus</i>
Black-throated sparrow	<i>Amphispiza bilineata</i>
Brown pelican	<i>Pelecanus occidentalis</i>
Brown-headed cowbird	<i>Molothrus ater</i>
Burrowing owl	<i>Athene cunicularia</i>
Cactus wren	<i>Campylorhynchus brunneicapillus</i>
Chihuahuan raven	<i>Corvus cryptoleucus</i>
Common nighthawk	<i>Chordeiles minor</i>
Common poorwill	<i>Nyctidromus albicollis</i>
Cooper's hawk	<i>Accipiter cooperi</i>
Crested caracara	<i>Caracara plancus</i>
Crissal thrasher	<i>Toxostoma crissale</i>
Dark-eyed junco	<i>Junco hyemalis</i>
Eastern bluebird	<i>Sialia sialia</i>
Golden eagle	<i>Aquila chrysaetos</i>
Golden-cheeked warbler	<i>Dendroica chrysoparia</i>
Grasshopper sparrow	<i>Ammodramus savannarum</i>
Greater roadrunner	<i>Geococcyx californianus</i>
Great-horned owl	<i>Bubo virginianus</i>
Harris' hawk	<i>Parabuteo unicinctus</i>
Interior least tern	<i>Sterna antillarum athalassos</i>
Juniper titmouse	<i>Baeolophus griseus</i>
Lark bunting	<i>Calamospiza melanocorys</i>
Lark sparrow	<i>Chondestes grammacus</i>
Mexican spotted owl	<i>Strix occidentalis lucida</i>
Mountain chickadee	<i>Parus gambeli</i>
Mountain plover	<i>Charadrius montanus</i>
Mourning dove	<i>Zenaida macroura</i>
Northern aplomado falcon	<i>Falco femoralis septentrionalis</i>
Northern bobwhite	<i>Colinus virginianus</i>
Northern cardinal	<i>Cardinalis cardinalis</i>
Northern flicker	<i>Colaptes auratus</i>
Piping plover	<i>Charadrius melodus</i>
Prairie falcon	<i>Falco mexicanus</i>
Sandhill crane	<i>Grus canadensis</i>
Scaled quail	<i>Callipepla squamata</i>
Scissor-tailed flycatcher	<i>Tyrannus forficatus</i>
Southwestern willow flycatcher	<i>Empidonax traillii extimus</i>
Stellar's jay	<i>Cyanocitta stelleri</i>
Upland sandpiper	<i>Bartramia longicauda</i>
Vesper sparrow	<i>Poocetes gramineus</i>
Western wood-pewee	<i>Contopus sordidulus</i>
Whooping crane	<i>Grus americana</i>

**Table H-2. Representative Wildlife Species in the Affected Area** (page 3 of 3)

<i>Common Name</i>	<i>Scientific Name</i>
<b>MAMMALS</b>	
American bison	<i>Bos bison</i>
Badger	<i>Taxidea taxus</i>
Bighorn sheep	<i>Ovis canadensis</i>
Black-footed ferret	<i>Mustela nigripes</i>
Black-tailed jackrabbit	<i>Lepus californicus</i>
Black-tailed prairie dog	<i>Cynomys ludovicianus</i>
Chipmunk	<i>Tamias spp.</i>
Collared peccary	<i>Pecari tajacu</i>
Coyote	<i>Canis latrans</i>
Desert cottontail	<i>Sylvilagus audubonii</i>
Desert mule deer	<i>Odocoileus hemionus crooki</i>
Elk	<i>Cervus elaphus</i>
Hispid pocket mouse	<i>Chaetodipus hispidus</i>
Kangaroo rat	<i>Dipodomys spp.</i>
Mexican (=greater) long-nosed bat	<i>Leptonycteris nivalis</i>
Mule deer	<i>Odocoileus hemionus</i>
Northern grasshopper mouse	<i>Oncychomys leucogaster</i>
Ocelot	<i>Leopardus pardalis</i>
Ord's kangaroo rat	<i>Dipodomys ordii</i>
Plains harvest mouse	<i>Reithrodontomys montanus</i>
Plains pocket gopher	<i>Geomys bursarius</i>
Plains pocket mouse	<i>Perognathus flavescens</i>
Pronghorn	<i>Antilocapra americana</i>
Ringtail	<i>Bassariscus astutus</i>
Sonoran Desert pocket mouse	<i>Chaetodipus penicillatus</i>
Southern plains woodrat	<i>Neotoma micropus</i>
Spotted ground squirrel	<i>Spermophilus spilosoma</i>
Swift fox	<i>Vulpes velox</i>
Thirteen-lined ground squirrel	<i>Spermophilus tridecemlineatus</i>

**CORRESPONDENCE**

## MEMORANDUM

TO: Jennifer Fowler-Propst  
State Supervisor  
USDI, Fish and Wildlife Service  
Albuquerque, NM 87113

FROM: HQ ACC/CEVP  
129 Andrews St., Suite 102  
Langley AFB, VA 23665-2969

SUBJECT: Realistic Bomber Training Initiative (RBTI)

DATE: December 22, 1997

1. The United States Air Force (Air Force) is in the process of preparing an Environmental Impact Statement (EIS) to assess the potential environmental impacts of a proposal to implement the Realistic Bomber Training Initiative in the airspace and land in west Texas and northeastern New Mexico. This proposal is intended to provide efficient, integrated training opportunities for aircrews flying B-1 and B-52 aircraft from Dyess Air Force Base (AFB), Texas and Barksdale AFB, Louisiana, respectively. The proposed action for RBTI would involve several interrelated elements:

- A. Modifications and additions to existing military training route (MTR) airspace used generally for low-altitude navigation training activities;
- B. Modifications and additions to existing military operations area (MOA) airspace used for medium to high altitude training and maneuvering;
- C. Increased flights by B-1 and B-52 aircraft in the MTR and MOA airspace;
- D. Acquisition of a total of 12, 15-acre parcels under the MTR and MOA airspace for construction and operation of an Electronic Scoring Site system consisting of electronic emitters and associated facilities; and
- E. Closure of existing Electronic Scoring Site systems at Harrison, Arkansas and La Junta, Colorado, and transfer of equipment to the proposed Electronic Scoring Site system developed for RBTI.

2. The proposed RBTI project could potentially affect those areas under MTR (low-altitude scoring site) and the MOA (high-altitude scoring site) where the emitter sites will be located. The accompanying maps identify those areas of potential impact. Pursuant to ESA and NEPA, we would like to request information regarding federally listed threatened, endangered, candidate, and proposed to be listed species that occur or may occur in the potentially affected area. To support this data collection effort, please provide the requested information to: Ogden Environmental and Energy Services, RBTI EIS, 910 Main Street, Suite 352, Boise, Idaho, 83702. If you could provide or direct us to a source of digital information on species list/concentration sites, we would be grateful. Until the extent of the potential impact to species is determined, no determination regarding the need for Section 7 consultation will be made.

3. The Air Force intends to hold public scoping meetings in the affected areas of Texas, New Mexico, Arkansas, and Colorado. Dates, times, and locations for these meetings will be announced through newspaper notifications and other media sources accessible to the public and agencies. These meetings are the first step in soliciting public and government agency comments on the RBTI proposal as required by NEPA. During the meetings, the Air Force will describe the proposed action and alternatives, the National Environmental Policy Act process, and outline the opportunities for involvement in the process.

4. If you have any specific questions about the RBTI proposal, we encourage you to contact Ms. Brenda Cook at the following address: HQ ACC/CEVP, Attention: Brenda Cook, 129 Andrews Street, Suite 102, Langley AFB, VA 23665-5542, (757) 764-9339 or RBTI EIS, 7<sup>th</sup> CES/CEV, 710 3<sup>rd</sup> Street, Dyess AFB, TX, 79607. Thank you for your assistance in this matter.

BRENDA W. COOK  
Acting Chief, Environmental Impact Analysis Branch

Environmental Impact Analysis Branch  
HQ ACC/CEVP  
129 Andrews St., Suite 102  
Langley AFB, Virginia 23665-2969

Dear Ms. Cook:

This responds to your December 22, 1997, request for information regarding federally listed, proposed, and candidate species that could occur within the proposed training area. The U.S. Air Force is in the process of preparing an Environmental Impact Statement to assess the potential impacts of a proposal to implement the Realistic Bomber Training Initiative (RBTI) in the airspace and land within west Texas and northeastern New Mexico. The proposed action is intended to provide efficient, integrated training opportunities for aircrews flying B-1 and B-52 aircraft from Dyess Air Force Base (AFB), Texas and Barksdale AFB, Louisiana, and would involve the following activities: 1) Modifications and additions to existing military training route (MTR) airspace used for low-altitude navigation training activities; 2) Modifications and additions to existing military operations area (MOA) airspace used for medium to high altitude training and maneuvering; 3) Increased flights by B-1 and B-52 aircraft in the MTR and MOA airspace; 4) Acquisition of a total of 12, 15-acre parcels under the MTR and MOA airspace for construction and operation of an Electronic Scoring Site system consisting of electronic emitters and associated facilities; and 5) Closure of existing Electronic Scoring Site systems at Harrison, Arkansas and La Junta, Colorado and transfer of equipment to the proposed Electronic Scoring Site system developed for RBTI.

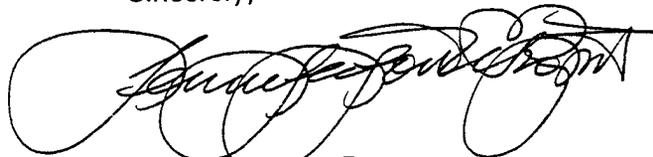

These operations may potentially affect threatened and endangered species in counties where overflights and ground disturbing activities occur. The U.S. Fish and Wildlife Service (Service) is particularly concerned about the potential adverse impacts of low-level flight noise disturbance on nesting raptors. The Service is currently in formal consultation with the Air Force, under Section 7 of the Endangered Species Act of 1973, as amended, on the proposed expansion of German Air Force (GAF) operations at Holloman AFB and continued use of existing MTRs and MOAs managed by Holloman, Cannon, and Air National Guard. Our main concern is that these actions may affect the

following threatened and endangered species: American peregrine falcon, northern aplomado falcon, bald eagle and Mexican spotted owl. Based on the maps provided, it appears that the RBTI will use some of the same airspace as the GAF proposal. The Service is concerned about the additive impacts of all military flights within this airspace. On January 14 and 15, 1998, Service and Air Force personnel met to discuss the RBTI and other proposals and whether it was feasible to combine them into the ongoing GAF consultation. The Air Force determined that it was not possible and informed the Service that the GAF consultation is still the top priority. It was agreed that the RBTI and other proposals, for which there is currently no information, are lower priority and will not be addressed by the Service until the GAF consultation is completed because of limited staff availability.

In New Mexico, the proposed action could impact airspace and/or land in the following counties: Colfax, Eddy, Guadalupe, Harding, Lea, Mora, Quay, Rio Arriba, San Miguel, Taos, and Union. Enclosed is a list of endangered, threatened and candidate species that may be found in these counties. These species should be considered in the analysis of environmental effects for the proposed action. Due to staffing constraints we are unable to provide more specific information at this time. We recommend you contact the Arlington and Austin Ecological Services Field Offices for information concerning federally listed species in Texas, and the New Mexico Department of Game and Fish and the New Mexico Energy, Minerals and Natural Resources Department, Forestry and Resources Conservation Division for information concerning fish, wildlife, and plants of State concern. In addition, we suggest you contact land management agencies (Federal, State, and Tribal) and private land owners for information concerning habitat and occurrence/concentration sites within the region of influence.

In future communications regarding this project, please refer to Consultation # 2-22-98-I-124. If we can be of further assistance, please contact Carol Torrez of my staff at (505) 761-4525 ext. 115.

Sincerely,

Jennifer Fowler-Propst

RE: Realistic Bomber Training Initiative

Dear Sir:

This letter responds to the memorandum from HQ ACC/CEVP, Langley AFB, to Nancy Kaufman, Regional Director, Region 2, U.S. Fish and Wildlife Service (Service), dated December 22, 1997. The letter states that the Air Force is in the process of preparing an Environmental Impact Statement for the subject project proposal. As requested, we are providing you with a list of threatened and endangered species from the counties in Texas that could be affected, according to the maps provided.

The New Mexico Ecological Service Field Office of the Service will be the lead office for consultation on this project. However, we will be of assistance to you for assessment of affects on species occurring in Texas, if needed. Please contact Mr. Nathan Allan, at ~~(505)~~ 490-0063, if you need further information. 512

Sincerely,

*/s/ William Seawell*

**SUBJECT: Realistic Bomber Training Initiative (RBTI)**

The United States Air Force (Air Force) is in the process of preparing an Environmental Impact Statement (EIS) to assess the potential environmental impacts of a proposal to implement the Realistic Bomber Training Initiative in the airspace and land in west Texas and northeastern New Mexico. This proposal is intended to provide efficient, integrated training opportunities for aircrews flying B-1 and B-52 aircraft from Dyess Air Force Base (AFB), Texas and Barksdale AFB, Louisiana, respectively. The proposed action for RBTI would involve several interrelated elements:

- A. Modifications and additions to existing military training route (MTR) airspace used generally for low-altitude navigation training activities;
- B. Modifications and additions to existing military operations area (MOA) airspace used for medium to high altitude training and maneuvering;
- C. Increased flights by B-1 and B-52 aircraft in the MTR and MOA airspace;
- D. Acquisition of a total of 12, 15-acre parcels under the MTR and MOA airspace for construction and operation of an Electronic Scoring Site system consisting of electronic emitters and associated facilities; and
- E. Closure of existing Electronic Scoring Site systems at Harrison, Arkansas and La Junta, Colorado, and transfer of equipment to the proposed Electronic Scoring Site system developed for RBTI.

The proposed RBTI project could potentially affect those areas under MTR (low-altitude scoring site) and the MOA (high-altitude scoring site) where the emitter sites will be located. The accompanying maps identify those areas of potential impact. Pursuant to ESA and NEPA, we would like to request information regarding federally listed threatened, endangered, candidate, and proposed to be listed species that occur or may occur in the potentially affected area. Please send the requested information to the above address, attention: Rick Spaulding. If you could provide or direct us to a source of digital information on species list/concentration sites, we would be grateful. Until the extent of the potential impact to species is determined, no determination regarding the need for Section 7 consultation will be made.

The Air Force intends to hold public scoping meetings in the affected areas of Texas, New Mexico, Arkansas, and Colorado. Dates, times, and locations for these meetings will be announced through newspaper notifications and other media sources accessible to the public and agencies. These meetings are the first step in soliciting public and government agency comments on the RBTI proposal as required by NEPA. During the meetings, the Air Force will describe the proposed action and alternatives, the National Environmental Policy Act process, and outline the opportunities for involvement in the process.

If you have any specific questions about the RBTI proposal, we encourage you to contact Ms. Brenda Cook at the following address: HQ ACC/CEVP, Attention: Brenda Cook, 129 Andrews Street, Suite 102, Langley AFB, VA 23665-5542, (757) 764-9339 or RBTI EIS, 7<sup>th</sup> CES/CEV, 710 3<sup>rd</sup> Street, Dyess AFB, TX, 79607. Thank you for your assistance in this matter.

MEMORANDUM FOR Field Supervisor  
U.S. Fish and Wildlife Service  
New Mexico Ecological Services Field Office  
2105 Osuna NE  
Albuquerque NM 87113

FROM: HQ ACC/CEVP  
129 Andrews Street, Suite 102  
Langley AFB VA 23665-2969

SUBJECT: Realistic Bomber Training Initiative (RBTI), Cons. #2-22-98-I-124

1. This is a request for consultation under the Endangered Species Act for possible impacts to listed species or species proposed for listing that may be caused by the implementation of the Realistic Bomber Training Initiative (RBTI) by the United States Air Force (Air Force). Pursuant to the National Environmental Policy Act (NEPA), this request is for consultation on all of the alternatives considered, since final selection of an alternative will not occur until the NEPA process is completed with a Record of Decision.
2. The Air Force has developed this project in ways that allow us to conclude that the proposed action may affect but is not likely to adversely affect any listed species or critical habitat. Consequently, we believe the proposed action qualifies under 50 CFR 402.14(b)(1) as an exception to the requirement for formal consultation, and seek your written concurrence with this conclusion.
3. We look forward to a successful conclusion of this consultation. Please direct any questions to Mr. Roy Barker, HQ ACC/CEVPN at (757) 764-9338.

Biological Evaluation

**BIOLOGICAL EVALUATION**  
**Realistic Bomber Training Initiative**

1. In accordance with the U.S. Fish and Wildlife Service's request during a 22 Sep 99 meeting with Ms. Torrez, the Air Force is providing the following material in support of consultation #2-22-98-I-124:
  - A. This document, which:
    - summarizes the analysis of potential impacts to listed species or species proposed for listing as identified and discussed in the Draft Environmental Impact Statement (EIS) for RBTI, which was previously provided to you,
    - details the applicability to RBTI of recent consultations on other Air Force actions in the region,
    - presents relevant mitigation measures resulting from those consultations, and
    - discusses the potential of RBTI to affect the mountain plover and the aplomado falcon. (This information will appear in the Final EIS.)
  - B. Maps showing RBTI alternatives, areas of RBTI alternatives covered under previous consultations, and airspace not previously consulted on that is associated with RBTI.
  - C. A copy of the RBTI Natural Resources Report describing the background, methods, and results of biological surveys of candidate emitter sites and Electronic Scoring Sites.
  - D. A CD containing photographs (in MS Word software) of the candidate emitter and scoring sites described in the Natural Resources Report.
  - E. An updated version of Appendix H from the Draft EIS reflecting changes and corrections made to species lists at the request of Ms Torrez.
  
2. **Background.** The Air Force is in the process of preparing a Final EIS to assess the potential environmental impacts of a proposal to implement RBTI in the airspace and land in western Texas or northeastern New Mexico. This proposal is intended to provide efficient, integrated training opportunities for aircrews flying B-1 and B-52 aircraft from Dyess Air Force Base (AFB), Texas and Barksdale AFB, Louisiana, respectively. The Draft EIS was provided to the U.S. Fish and Wildlife Service in March, 1999. As detailed in Section 2.4 of the Draft EIS, the proposed action for RBTI would involve several interrelated elements:
  - Modifications (including elimination in some cases) and additions to existing Military Training Route (MTR) airspace used for low-altitude (300 to 3,000 feet above ground level [AGL]) training activities;

- Modifications (including elimination in some cases) and additions to existing Military Operations Area (MOA) airspace used for training and maneuvering above 3,000 feet AGL;
- Increased annual flights by B-1 and B-52 aircraft in the proposed MTR and MOA airspace;
- Acquisition of twelve 15-acre parcels under or near the proposed MTR and MOA airspace for construction and operation of an Electronic Scoring Site system consisting of 10 electronic emitters and 2 scoring sites; and
- Closure of existing Electronic Scoring Sites at Harrison, Arkansas and La Junta, Colorado.

The proposed action for RBTI has three alternative locations: Alternatives B, C, and D. Regardless of the alternative ultimately selected, the basic features of the proposed action, as outlined above, would be the same. A fourth alternative, Alternative A (No-Action), would involve no changes to current conditions or operations.

3. **Related Consultations.** The Air Force has conducted several recent consultations that overlap with areas affected by RBTI (See attached maps). These previous consultations resulted in mitigation measures affecting airspace also associated with RBTI alternatives. The outcomes of those consultations are found in:

- Consultation #2-22-96-F-334: Biological Opinion dated 8 May 98 for the Proposed Expansion German Air Force (GAF) Operations at Holloman AFB, New Mexico
- Consultation #2-22-98-I-224: USFWS Letter dated 14 Dec 98 for Proposed Force Structure and Foreign Military Sales at Cannon AFB, New Mexico (Cannon)

RBTI operations would incorporate the GAF and Cannon consultation commitments as applicable, depending upon the RBTI alternative selected.

4. **Summaries of Anticipated Species Effects From Air Operations.** The only potential effects from aircraft operations associated with the alternatives for the proposed action would derive from noise and visual disturbance. Consequently, this discussion will focus on species that might be affected by noise and visual disturbance (e.g., birds and mammals).

- a) **Alternative A.** This is the No-Action Alternative. Its selection would entail no change in the current bomber training activities on the existing IR-178, or in the shape or size of the airspace. The affected area lies primarily within the same area covered by Alternatives B and C (see discussion for Alternative B below).

Areas under Alternative A that do not overlap with Alternatives B and C are in portions of southeastern New Mexico and Texas (segments VW through YZ, AA-AB through AS-AT, and BA-BB through BJ-BK). This area is either rangeland or agricultural land. Potential habitat for the proposed mountain plover is found there. Listed species

potentially there include: bald eagle, brown pelican, interior least tern, northern aplomado falcon, southwestern willow flycatcher, and black-footed ferret.

The northern aplomado falcon has not recently been sighted this far north. However, some portions of this Alternative overfly a portion of the species' historical range and it could occur in the area as a rare transient visitor.

The bald eagle, brown pelican, and interior least tern depend on major water bodies and would only occur in the area affected by Alternative A as rare transient visitors.

The southwestern willow flycatcher has specific habitat requirements that are not commonly found under the affected airspace. This species is not known to occur in the affected areas of either New Mexico or Texas.

The black-footed ferret was last reported in Bailey County, Texas, in 1963 and is not expected to be found beneath Alternative A.

In consideration of these factors, and factors discussed below for the areas where this alternative "overlaps" other alternatives, the Air Force has concluded that Alternative A is not likely to affect listed species.

b) Alternative B. This alternative is located primarily in western Texas.

About 33 percent of Alternative B airspace (IR-178 segments AG-AH, AH-AI, AI-AJ, AJ-AK, and the proposed Lancer MOA) would involve flights only above 2,000 feet AGL, which the Air Force believes is high enough to avoid an adverse effect on listed species.

Another 33 percent of the total airspace (IR-178 segments AB, BC, CD, DE, EF, FG, GH, HI, IJ, JK, and half of KL) coincide with (but are at various points wider than) segments of IR-102/141 consulted on for GAF. As we previously reported to you, it has been decided that the GAF-related operations will now not take place on IR-102/141. RBTI aircraft using these areas will operate under the Terms and Conditions of the GAF Biological Opinion.

Another 33 percent of the airspace includes new areas not previously overflown by military aircraft or consulted on. This includes IR-178 segments VA-VB, VB-R, KL (partial), LM, MN, NO, OP, PQ, QR, RS, ST, TU, UV, VW, WA, WX, XY, YZ, Z-AA, AA-AB, AB-AC, AC-AD, AD-AE, AE-AF, AF-AG, O-OA, and OA-AE.

Potential impacts for Alternative B are as follows:

- Black-capped vireos are known to nest in only two Texas counties affected by Alternative B: Pecos and Brewster (USFWS 1991). In a report to Congress in 1992, the U.S. Forest Service reviewed potential impacts of aircraft overflights. Among their conclusions were: passerines cannot be driven any great distance from a favored food by a non-specific disturbance and; while passerines avoid intermittent or unpredictable sources of disturbance more than predictable ones, they return rapidly

to feed or roost once the disturbance ceases. In consideration of the infrequency of overflight that birds under this airspace may experience, the Air Force has concluded that RBTI Alternative B may affect, but is not expected to adversely affect this species

- The mountain plover was once thought to be particularly associated with Lea County, New Mexico (Ligon 1961), but there are no records of it in this county for 25 years (the 1970s through 1995) (Sager 1996), and the species is currently classified by the New Mexico Department of Game and Fish as uncommon in Lea County. The mountain plover has also been reported in Eddy County, New Mexico, as well as Jeff Davis, Brewster, Dawson, and Lynn counties in Texas. Air operations over Dawson and Lynn counties would take place at a minimum altitude of 3,000 feet AGL. The other three counties have not had confirmed nesting activity, although they are likely to be visited by migrants as they fly between their winter home in southern Texas and Mexico and the common breeding area in northern New Mexico (Peterson 1990). In consideration of these factors, the Air Force has concluded that Alternative B is not likely to jeopardize the continued existence of this proposed species.
- The northern aplomado falcon is a potential resident along the Texas and Mexico border. During GAF consultations for this species, it was determined that aircraft overflight actions “may affect but are not likely to jeopardize the continued existence of” the northern aplomado falcon. As a result of the GAF consultation, the Air Force has initiated annual aplomado falcon surveys (with reports of findings to the USFWS) under airspace flown by GAF aircraft. By expanding the ongoing northern aplomado falcon survey/reporting effort to cover potential falcon habitat under that airspace associated with RBTI Alternative B and which is overflown below 2,000 feet AGL, the Air Force believes it may conclude that Alternative B may affect, but is not likely to adversely affect, the northern aplomado falcon.
- Based on their known distribution and available habitat, none of the listed mammal species in this region (black-footed ferret, Mexican long-nosed bat, black bear, and ocelot) are expected to be found under the airspace affected by this alternative. Therefore, Alternative B is expected to have no effect on these species.
- The remaining listed bird species found in the region either do not have habitat directly under the airspace or would only be transient visitors in the area (see Appendix H of the Draft EIS, Table H-10, for a complete listing of sensitive species). Transient visitors include the bald eagle, interior least tern, whooping crane, piping plover, and brown pelican. Because of the small chance of overflight, these species would experience no adverse effect from Alternative B. Species that do not have habitat under the airspace include Mexican spotted owl, southwestern willow flycatcher, and golden-cheeked warbler. These species would experience no effect from Alternative B.
- Aircraft overflights from Alternative B are expected to have no effect on the 14 listed or proposed-for-listing plant species potentially found under the affected airspace. The six sensitive fish species present are expected to experience no adverse effect due

to habituation and to noise attenuation at the air/water interface. The only listed reptile species (the Concho water snake) is likewise not expected to respond to aircraft overflights. Therefore, Alternative B is not expected to adversely affect this species.

In summary, the Air Force has concluded that Alternative B may affect, but is not likely to adversely affect, listed species.

- c) Alternative C. This alternative is very similar to Alternative B, and is roughly 75 percent existing airspace.

Under this alternative, aircraft would use the proposed Texon MOA (instead of the Lancer MOA and IR-178 segments AE-AF through AJ-AK in Alternative B). All flights in the Texon MOA would be at or above 3,000 feet AGL, which the Air Force believes is high enough to preclude an adverse effect on listed species.

IR-178 segments AB, BC, CD, DE, EF, FG, GH, HI, IJ, JK, and half of KL) coincide with (but are at various points wider than) segments of IR-102/141 which were consulted on for GAF. As we previously reported to you, it has been decided that the GAF-related operations will now not take place on IR-102/141. Like Alternative B, this alternative would include new IR-178 segments VA-VB and VB-R, but Alternative C would additionally have new segment N-NA. All segments of IR-178 would have minimum altitudes of less than 2,000 feet AGL, and RBTI aircraft using these areas would operate under the Terms and Conditions of the GAF Biological Opinion.

In summary, the overall potential effects for this alternative would be the same as for Alternative B. Consequently, the Air Force has concluded that Alternative C may affect, but is not likely to adversely affect, listed species.

- d) Alternative D. This alternative is mostly located in northeastern New Mexico, with four counties in northern Texas also affected. Much of the airspace associated with Alternative D was covered in the Cannon and/or GAF consultations, although some segments will now be widened. New segments are Z-ZA (which would be flown at or above 2,000 feet AGL) and CD, WA-WB. Potential impacts for this alternative are as follows:

- Concentrations of wintering bald eagles occur within Alternative D. Those populations along the Canadian River and at Conchas Lake are under high-altitude overflight areas (greater than 2,000 feet AGL) and are expected to experience no adverse effect. Populations along the Pecos River and the Rio Chama could experience lower overflights, which could result in an adverse effect. New airspace in reconfigured segment HI is adjacent to a designated roost area. With the application of the eagle overflight restrictions described in the Cannon consultation to RBTI Alternative D, the Air Force concludes that Alternative D may affect, but is not likely to adversely affect, the bald eagle. The flight restrictions are as follows:

- *Avoid known nest sites by 1 mile laterally or 2,000 feet AGL during the entire bald eagle breeding season (October 1 to July 15).*
  - *Avoid water bodies (named lakes, perennial rivers, and reservoirs) by 2,000 feet AGL October 1 through March 1 of each year.*
  - *Avoid known roost sites by a minimum of 1,000 feet AGL from October 1 through March 1 of each year.*
- The Mexican spotted owl has potential habitat along the Rio Chama which would be overflown. Low-altitude overflight in this area could result in an adverse effect. By applying to RBTI Alternative D the Mexican spotted owl overflight restrictions described in the Cannon consultation, the Air Force concludes that Alternative D may affect, but is not likely to adversely affect, the Mexican spotted owl. The flight restrictions are as follows:
    - *Avoid known protected activity centers by 2,000 feet AGL and 2,900 feet laterally during the period 1 March to 31 August.*
    - *Overflights along the western segments of IR-109 and IR-111 will be restricted to 2,000 feet AGL during the breeding season (March 1 - August 31 of each year) to avoid impacts to inadequately surveyed owl habitat.*
- The mountain plover is considered to potentially occur in all of the 15 counties overflown by Alternative D. The mountain plover is considered common in only three affected New Mexico counties (Union, Colfax, and Torrance). Union and Colfax, the two counties identified by U.S. Fish and Wildlife Service as of high concern (USFWS 1999), would not experience overflight below 2000 feet AGL. Torrance County is crossed only in the northeast corner, leaving most of the county unaffected. Four Texas counties (Dallam, Hartley, Oldham, and Potter) have a low relative abundance. Flights in Dallam County would be over 3,000 feet AGL, and flights in Potter County and half of Oldham would be over 2,000 feet AGL, so any populations of mountain plovers in these areas would not be disturbed by low overflight. The remaining eight counties have uncommon to rare breeding populations (NMDGF 1997). In summary, low-altitude overflight would occur only over the uncommon to rare mountain plover population sites in the state, leaving most of the concentrations of birds relatively unaffected. In consideration of these factors, the Air Force has concluded that Alternative D is not likely to jeopardize the continued existence of this proposed species.
- Piping plover have been reported in the state on only six occasions. Because of the infrequency of exposure, the piping plover is likely to experience no effect from the Alternative D.
  - The whooping crane exists only as a poorly performing experimental flock in New Mexico that is soon to be extirpated. The closest frequently used habitat is hundreds of miles from the RBTI area along the south coast of Texas. The state of New Mexico is considering delisting the whooping crane. Since this species occurs so

infrequently in the state as to warrant consideration for delisting, the Air Force concludes that all RBTI alternatives are likely to have no effect on this species.

- The brown pelican is only a rare visitor to the area, occurring primarily as immature wanderers during the summer and fall seasons: presumably these are storm-driven birds. Therefore, because of the infrequency of exposure, Alternative D is likely to have no effect on this species.
- The southwestern willow flycatcher is predominantly found in the southwestern portion of New Mexico and not underneath the proposed alternative airspace. Habitat has been identified along the Rio Grande west of Taos. However, the Alternative D proposed flight path bypasses this habitat to the north by more than 15 miles. Critical habitat in New Mexico is restricted to portions of the Gila, San Francisco, and Tularosa rivers in the southwestern corner of the state and is not found under the affected airspace. Therefore, Alternative D is likely to have no effect on this species.
- The interior least tern does not have nesting habitat under Alternative D airspace, although wintering or migrating birds may use wetlands and open water in the proposed project area. These same areas are frequented by the bald eagle, and are avoided by aircraft. This avoidance will afford coincidental protection to the tern. Therefore, the Air Force concludes that Alternative D will have no adverse effect on the interior least tern.
- The only listed mammal potentially found in the area is the black-footed ferret, but it is considered extirpated from the area. Therefore, Alternative D would have no effect on the black-footed ferret.
- By the very nature of the proposed action and the species themselves, the two listed plants and three listed fish species would not be affected by aircraft overflight under Alternative D. Proposed RBTI activities would have no effect on the holy ghost ipomopsis and the puzzle sunflower, and no adverse effect on the Arkansas River shiner, Colorado squawfish, and Pecos blunt-nose shiner.

In summary, the Air Force has concluded that Alternative D may affect, but is not likely to adversely affect, listed species.

7. **Summary of Anticipated Species Effects From Electronic Scoring and Emitter Sites.** As detailed in Section 2.4.1 of the Draft EIS, the Air Force specifically sought candidate sites that were previously disturbed in order to avoid impacts to biological and other resources. Development of the ten selected emitter sites would consist of the installation of a chain-link fence, a 14-foot-wide gravel driveway, and 0.25-acre gravel parking lot at each 15-acre site. The two electronic scoring sites would have a chain-link fence, a 14-foot-wide asphalt driveway, and a 3-acre asphalt pad. The attached Natural Resources Report details the methodology and findings of the site surveys. Key points are outlined below:

- Surveys of the 42 candidate emitter and electronic scoring sites were conducted 20-28 Apr 98 and 10-11 Sep 98 in Texas and 11-18 May 98 in New Mexico.

- Biologists conducting the survey were Kirk Lakey and Scot Greenwood. Mr. Lakey is a Senior Biologist with The Environmental Company, Inc., and has a B.S. degree in Range Management and Wildlife Habitat Management and over 14 years' experience. Mr. Greenwood is an Environmental Analyst with Ogden Environmental and Energy Services Company, Inc., and has a B.S. degree in Natural Resources and Environmental Science and three years' experience.
- Sensitive plants surveyed include, but were not limited to, those listed in the Draft EIS Appendix H, Table H-4. All species observed were noted so that unexpected sensitive species present would have been discovered.
- The overall habitat disturbed by the sites would be less than 20 acres over twelve locations, all of which have already been disturbed by agriculture, grazing, or oil and gas development.

No listed species or potential habitat were observed during biological surveys of each of the candidate Electronic Scoring Sites and emitter sites in Texas or New Mexico. No sites are near known locations of listed bird species. Therefore, even though the sites overlap the general range of several sensitive-bird, mammal, and reptile species, site inspections lead the Air Force to conclude that no adverse effect on listed wildlife species and no effect on listed plant species is expected from the development of these sites.

# APPENDIX I

## SOCIOECONOMICS

---

---

This Appendix provides detailed supporting information for the socioeconomic analysis discussed in Section 4.4. Appendix I describes the methodology and assumptions used in the analysis, as well as the direct and indirect output, earnings, and employment impacts for each affected region. Changes in regional population and attendant impacts to public services are also assessed.

### **Economic Impact Methodology**

An examination of economic effects requires a systematic analysis of the relationships among industries within regions because these relationships largely determine how regional economies are likely to respond to project changes. Regional input-output multipliers account for industry relationships within regions and are useful tools for estimating regional economic impacts.

The Regional Input-Output Modeling System (RIMS II) of the U.S. Bureau of Economic Analysis (BEA) was used for this analysis (U.S. Bureau of Economic Analysis 1997). RIMS II is widely used in both the public and private sectors and is based on an accounting framework called an input-output (I-O) table. For each industry, an I-O table shows the distribution of the inputs purchased and the outputs sold. A typical I-O table in RIMS II is derived mainly from two data sources: BEA's national I-O table, which shows the input and output structure of nearly 500 U.S. industries, and BEA's regional economic accounts, which are used to adjust the national I-O table to reflect a region's industrial structure and trading patterns.

Local procurement for goods and services, as well as local expenditures by employees support additional, indirect output, earnings, and jobs. Final-demand multipliers for output, earnings, and employment measure the economic impact of a change in final demand, in earnings, or in employment on a region's economy. Specific RIMS II regional multipliers developed by BEA for Boone County, Arkansas; Otero County, Colorado; Taylor and Reeves counties, Texas; and Quay, Union, and Harding counties, New Mexico were used in this EIS.

For this analysis, the following assumptions were made:

- All economic activity is assumed to occur within the affected counties (i.e., all expenditures are local).
- Maintenance expenditures are assumed to be the same for the existing and proposed scoring and emitter facilities.
- Maintenance expenditures are assumed to equal producers' prices.
- Expenditures associated with the un-manned emitter sites are assumed to occur in the county where the associated scoring facility is located.
- The creation of scoring facility operations positions would result in in-migration of personnel.
- The loss of scoring facility operations positions would result in out-migration of affected personnel.

- Quay, Union, and Harding counties, New Mexico are considered one economic region.

## **1.0 Alternative A: No-Action**

Under Alternative A: No-Action, there would be no construction or changes in existing operations. No new socioeconomic impacts would be associated with this alternative.

## **2.0 Alternative B: IR-178/Lancer MOA**

### **2.1 Construction Impacts**

Under this alternative, construction costs are estimated to range from \$3.6 million to \$5 million for each scoring facility at Abilene, Taylor County, and Pecos, Reeves County. Construction costs for the associated emitter sites would range from \$300,000 to \$680,000 per site. Construction would take place in 2001 and last for 12 to 18 months for each scoring site and less than 2 months for each emitter site. Construction activities would employ an average of eight workers at any one time. Estimated costs to acquire fee, lease, and easement rights for the 10 emitter sites would be approximately \$500,000. For the purposes of this analysis, half of the construction costs associated with the emitter sites are assessed in Taylor County and the other half in Reeves County.

The construction expenditures of approximately \$4.3 million for each scoring facility and \$2.7 million for five emitter sites would total approximately \$7 million each in Taylor and Reeves counties. The impacts of facility construction are shown in Table I-1.

<b>Table I-1. Estimated Construction Impacts Under Alternative B</b>		
<i>Impact Based on the Change in Final Demand</i>	<i>Taylor County</i>	<i>Reeves County</i>
Change in Final Demand	\$7,000,000	\$7,000,000
<i>Final-demand multipliers:</i>		
Output (dollars)	1.6471	1.2934
Earnings (dollars)	0.4892	0.2772
Employment <sup>a</sup> (jobs)	19.9	11.3
<i>Impact on:</i>		
Output	\$11,530,000	\$9,054,000
Earnings	\$3,424,000	\$1,940,000
Employment (jobs)	140	80
<sup>a</sup> The employment multiplier is measured on the basis of a \$1 million change in output delivered to final demand. <i>Source:</i> U.S. Bureau of Economic Analysis, 1998.		

No changes to population would occur from construction activities. The required construction force of eight workers would be expected to be available from the local labor supply. Indirect jobs associated with construction expenditures would be approximately 140 and 80 in Taylor and Reeves counties, respectively. Most indirect job growth would occur in the services, wholesale, and retail trade industries. This would represent about 1 percent of current employment in both counties. No in-migration would be expected as a result of indirect job growth. Increased earnings as a result of construction activities would represent approximately 1 percent of current county personal income. This would represent a minor beneficial impact to the economy.

## 2.2 Ground Operations Impacts

The scoring facilities in Taylor and Reeves counties would employ 31 and 30 people, respectively, at an average salary of \$30,000. It is assumed that these personnel would in-migrate to the area for employment. Annual maintenance costs for each scoring site would be approximately \$150,000. The emitter sites would be unmanned; annual maintenance costs would be less than \$50,000.

Total earnings paid in Taylor and Reeves counties would be \$930,000 and \$900,000, respectively. Annual maintenance costs would be approximately \$175,000 in each county. Impacts associated with operations are shown in Tables I-2 and I-3.

<b>Table I-2. Estimated Operations Impacts in Taylor County Under Alternative B</b>							
<i>Industry</i>	<i>Regional Purchases (dollars)</i>	<i>Final-Demand Multiplier</i>			<i>Impact</i>		
		<i>Output (dollars)</i>	<i>Earnings (dollars)</i>	<i>Employment<sup>a</sup> (jobs)</i>	<i>Output (dollars)</i>	<i>Earnings (dollars)</i>	<i>Employment (jobs)</i>
Utilities	43,750	1.4413	0.2357	6.2	63,000	10,000	1
Wholesale Trade	52,500	1.5560	0.4413	14.9	82,000	23,000	1
Insurance	17,500	1.8682	0.5732	20.9	33,000	10,000	1
Business Services	61,250	1.6593	0.5729	22.0	102,000	35,000	2
Households	930,000	0.9761	0.2659	12.9	907,000	247,000	12
<i>Sub total</i>	1,105,000				1,187,000	325,000	17
Initial Change					175,000	930,000	31
<i>Total</i>					1,362,000	1,255,000	48
<sup>a</sup> The employment multiplier is measured on the basis of a \$1 million change in output delivered to final demand. Source: U.S. Bureau of Economic Analysis 1998.							

<i>Industry</i>	<i>Regional Purchases (dollars)</i>	<i>Final-Demand Multiplier</i>			<i>Impact</i>		
		<i>Output (dollars)</i>	<i>Earnings (dollars)</i>	<i>Employment<sup>a</sup> (jobs)</i>	<i>Output (dollars)</i>	<i>Earnings (dollars)</i>	<i>Employment (jobs)</i>
Utilities	43,750	1.5844	0.1657	3.9	69,000	44,000	1
Wholesale Trade	52,500	1.2511	0.2898	9.4	66,000	15,000	1
Insurance	17,500	1.4229	.5096	17.9	25,000	9,000	1
Business Services	61,250	1.3520	0.5060	19.1	83,000	31,000	2
Households	900,000	0.5768	0.1468	7.8	519,000	132,000	7
<i>Subtotal</i>	1,075,000				762,000	231,000	12
Initial Change					175,000	900,000	30
<i>Total</i>					937,000	1,131,000	42

<sup>a</sup> The employment multiplier is measured on the basis of a \$1 million change in output delivered to final demand.  
Source: U.S. Bureau of Economic Analysis 1998.

Given an average household size of 2.8 and 3.3 in Taylor and Reeves counties, respectively (U.S. Census 1990), direct population change as a result of operations would be 87 in Taylor County and 99 in Reeves County. This would represent less than 1 percent of county population. No impacts would be expected to population-affected resources such as schools, libraries, fire and police protection, housing, etc.

Indirect jobs created as a result of operations would be 17 and 12 in Taylor and Reeves counties, respectively. Most indirect job growth would occur in the services, wholesale, and retail trade industries. Indirect job growth would represent less than 1 percent of county employment. The local labor pool would be expected to absorb this additional demand; no significant change in the unemployment rates and no in-migration of labor would be expected.

Increased earnings as a result of operations would represent approximately 1 percent of current county personal income. This would represent a minor beneficial impact to the economy.

### **2.3 Decommissioning Impacts**

Under Alternative B, the electronic scoring facilities located in Harrison, Boone County, Arkansas and La Junta, Otero County, Colorado would be decommissioned and the equipment from the associated eight emitter sites removed. The decommissioning of the facilities would result in the loss of 30 positions in Harrison and 31 positions in La Junta. Affected personnel are assumed to move from the areas. The scoring facilities would be offered for sale to other federal and local governmental agencies and the leased emitter site property would be returned to the landowners.

Decommissioning would result in the loss of earnings of \$900,000 and \$930,000 in Boone and Otero counties, respectively. In each county, annual maintenance expenditures of \$150,000 for the scoring facilities and \$20,000 for the associated emitter sites would cease. Impacts associated with decommissioning are shown in Tables I-4 and I-5.

**Table I-4. Estimated Decommissioning Impacts in Boone County Under Alternative B**

Industry	Regional Purchases (dollars)	Final-Demand Multiplier			Impact		
		Output (dollars)	Earnings (dollars)	Employment <sup>a</sup> (jobs)	Output (dollars)	Earnings (dollars)	Employment (jobs)
Utilities	-42,500	1.2994	0.2069	6.5	-55,000	-9,000	-1
Wholesale Trade	-51,000	1.4112	0.3720	15.1	-72,000	-19,000	-1
Insurance	-17,000	1.5673	0.5674	25.3	-27,000	-10,000	-1
Business Services	-59,500	1.4972	0.5787	31.7	-89,000	-34,000	-2
Households	-900,000	0.7695	0.1952	11.1	-693,000	-176,000	-10

<sup>a</sup>: The employment multiplier is measured on the basis of a \$1 million change in output delivered to final demand.  
 Source: U.S. Bureau of Economic Analysis 1998.

Given an average household size of 2.5 and 2.7 in Boone and Otero counties, respectively (U.S. Census 1990), direct population loss as a result of decommissioning would be 75 in Boone County and 84 in Otero County. This would represent less than 1 percent of county population. No impacts would be expected to population-affected resources such as schools, libraries, fire and police protection, and housing.

Indirect jobs lost as a result of decommissioning would be 15 and 14 in Boone and Otero Counties, respectively. Most indirect job loss would occur in the services, wholesale, and retail trade industries. Indirect job loss would represent less than 1 percent of county employment. The county economies would be expected to absorb this additional capacity of labor; no significant change in the unemployment rates or out-migration of labor would be expected.

Lost earnings as a result of decommissioning would represent approximately 1 percent of current county personal income. This would represent a minor negative impact to the economy.

### **3.0 Alternative C: IR-178/Texon MOA**

#### **3.1 Construction Impacts**

Impacts would be the same as those described for Alternative B.

#### **3.2 Operations Impacts**

Impacts would be the same as those described for Alternative B.

#### **3.3 Decommissioning Impacts**

Impacts would be the same as those described for Alternative B.

### **4.0 Alternative D: IR-153/Mt. Dora MOA**

#### **4.1 Construction Impacts**

For the proposed Taylor County, Texas site, construction impacts would be the same as described under Alternative B. The proposed three scoring sites in New Mexico are located in Quay, Union, and Harding counties, near Tucumcari. Given the size and economic activity in the region, the three counties are considered one economic region for this analysis. Construction costs for the proposed Tucumcari scoring site would range from \$3.6 million to \$5 million. Construction costs for the associated emitter sites would range from \$300,000 to \$680,000 per site. Construction would take place in 2001 and last for 12 to 18 months for the scoring site and less than 2 months for each emitter site. Construction activities would employ an average of eight workers at any one time. Costs to acquire fee, lease, and easement rights for the 10 emitter sites would be approximately \$500,000. For the purposes of this analysis, half of the construction costs associated with the emitter sites are assessed in Taylor County, Texas, and the other half in the tri-county region of Quay, Union, and Harding counties, New Mexico.

The construction expenditures of approximately \$4.3 million for the scoring facility and \$2.7 million for five emitter sites would total approximately \$7 million in the tri-county region. The impacts of facility construction are shown in Table I-6.

<b>Table I-6. Estimated Construction Impacts Under Alternative D</b>	
<i>Impact Based on the Change in Final Demand</i>	<i>Tri-County Region of Quay, Union, and Harding Counties</i>
Change in Final Demand	\$7,000,000
<i>Final-demand multipliers:</i>	
Output (dollars)	1.3992
Earnings (dollars)	0.3927
Employment <sup>a</sup> (jobs)	18.9
<i>Impact on:</i>	
Output	\$9,794,000
Earnings	\$2,749,000
Employment (jobs)	133
<sup>a</sup> The employment multiplier is measured on the basis of a \$1 million change in output delivered to final demand.	
<i>Source:</i> U.S. Bureau of Economic Analysis 1998.	

No changes to population would occur from construction activities. The required construction force would be expected to be available from the local labor supply. Indirect jobs associated with construction expenditures would be approximately 133. Most indirect job growth would occur in the services, wholesale, and retail trade industries. This would represent about 2 percent of current employment. No in-migration would be expected as a result of new indirect job growth. Increased earnings would represent approximately 2 percent of current regional personal income. This would represent a minor beneficial impact to the regional economy.

## **4.2 Operations Impacts**

For the proposed Taylor County site, ground operations impacts would be the same as described for Alternative B. The facility near Tucumcari would employ 30 people at an average salary of \$30,000. It is assumed that all these personnel would in-migrate to the area for employment. Annual maintenance costs for the Tucumcari site would be approximately \$150,000. The emitter sites would be unmanned; annual maintenance costs would be less than \$50,000.

Total earnings paid in the region would be \$900,000. Annual maintenance costs would be approximately \$175,000. Impacts associated with operations are shown in Table I-7.

**Table I-7. Estimated Operations Impacts in the Tri-County Region, New Mexico Under Alternative D**

Industry	Regional Purchases (dollars)	Final-Demand Multiplier			Impact		
		Output (dollars)	Earnings (dollars)	Employment <sup>a</sup> (jobs)	Output (dollars)	Earnings (dollars)	Employment (jobs)
Utilities		1.4031	0.2496	8.3	61,000	11,000	1
Wholesale Trade	52,500	1.3479	0.4203	16.8	71,000	22,000	1
Insurance	17,500	1.5030	0.5670	24.9	26,000	10,000	1
Business Services	61,250	1.3900	0.5133	23.4	85,000	31,000	2
Households	900,000	0.6436	0.1759	9.9	579,000	158,000	9
<i>Subtotal</i>	1,075,000				822,000	232,000	14
Initial Change					175,000	900,000	30
<i>Total</i>					997,000	1,132,000	44

<sup>a</sup>: The employment multiplier is measured on the basis of a \$1 million change in output delivered to final demand.  
 Source: U.S. Bureau of Economic Analysis 1998.

Given an average household size of 2.6 in the tri-county region (U.S. Census 1990), direct population change as a result of operations would be 78. This would represent less than 1 percent of regional population. No impacts would be expected to population-affected resources such as schools, libraries, fire and police protection, and housing.

Indirect jobs created as a result of operations would be 14, less than 1 percent of regional employment. Most indirect job growth would occur in the services, wholesale, and retail trade industries. The local labor pool would be expected to absorb this additional demand; no significant change in the unemployment rates and no in-migration of labor would be expected.

Increased earnings as a result of operations would represent approximately 1 percent of current regional personal income. This would represent a minor beneficial impact to the regional economy.

### **4.3 Decommissioning Impacts**

The impacts would be the same as those described for Alternative B.

## SOIL EROSION CALCULATIONS

---

### *Assumptions and Background for Calculations*

While long-term wind and water caused soil erosion rates are predicted to be low in areas with established permanent cover and hardened surfaces (graveled pads, roads, etc.), potentially moderate erosion losses may occur on unimproved roads, other bare areas, and during short-term construction practices. If not protected, the majority of soils found on RBTI have the potential for water and wind erosion. However, best management practices would be followed and the erosion potential would be minimal. The following describes how soil erosion is calculated and Table J-1 provides the data that were used for these calculations.

Excessive water runoff causes three types of erosion: sheet, rill, and gully. The Universal Soil Loss Equation (USLE) can be used to estimate loss rates due to sheet and rill erosion. Gully erosion is more apparent when it occurs and is calculated by direct volume measurements. It is difficult to predict gully erosion rates: it is based on site specific factors and professional judgment.

Wind-caused erosion is typically most severe where soil textures are sandy. Moisture helps bind soil particles together, therefore, this type of erosion occurs predominantly during dry periods. Fine textured soils are susceptible to wind erosion if pulverized, as on road surfaces. Airborne dust, or fugitive dust, can be a result of this type of erosion.

USLE factors used to calculate sheet and rill erosion rates were obtained from various USDA-NRCS (SCS) soil surveys, NRCS technical guides, and NRCS soil scientists from New Mexico and Texas. Gully erosion estimates were based on site specific data provided by qualified field crew and technical staff after review of proposed construction concepts. Gully erosion may be a factor on localized sites and should be added to overall loss calculations. If it is known to occur, gully erosion can be estimated using an average gully size (e.g., v-shaped gully 30 ft. long by 2 ft. wide at ground surface by 1 ft. deep =  $30 \text{ ft.}^3 = 1.1 \text{ yd.}^3$ , which is about 1 ton of soil).

Wind erosion estimates are based on NRCS methodologies (Wind Erosion Equation or WEQ), as well as an EPA standard method for calculating losses due to construction practices, in the form of fugitive dust (1.2 tons/ac/month x 50% reduction factor with Best Management Practice use = 0.6 tons/ac/month). Because some factors are site specific, WEQ calculations were made for each candidate MTR and MOA emitter and electronic scoring site. A 70% overall reduction factor that recognizes application of Best Management Practices is used in this analysis for WEQ. Care must be used when generalizing about wind erosion (see Assumptions).

Formulas, factors, and assumptions used in all cases are listed below.

### **Summary**

1. Calculate area (acres) of ground to be disturbed (roads and right-of-ways, building pad areas, etc.), according to soil types listed for each emitter/scoring site.
2. Total predicted soil lost for given site = (acres x USLE factors) + (acres x Wind Erosion factors) + gully losses if any.

## **Assumptions**

1. Total disturbed area for MTR/MOA sites = 0.6 acres.
2. Total disturbed area for ESS sites = 3.3 acres.
3. Bare soil construction period at each site is 10 days (0.33 months).
4. Erosion will be negligible after construction period is completed.
5. 250 lbs./ac. vegetation cover and/or coarse fragments, and no soil clods or crusts in construction areas (pulverized soil conditions).
6. Moderate to high erosion factors are used in USLE calculations (*P* factor equals *I*, *C* factor adjusted for low cover with low management =0.50, slope length *L* maximum and gradient *S* low, all other factors per NRCS FOTGs).
7. Wind erosion loss as fugitive dust will be reduced by 50% with application of Best Management Practices such as watering and soil stockpiling.
8. Other wind erosion losses to saltation, suspension, and surface creep, as calculated by WEQ will be reduced by 70% with application of Best Management Practices such as watering, covering with erosion fabric, and soil stockpiling.
9. Moderate to high erosion factors are used in Wind Erosion Equation (*K* factor set to 1, *L* factor at maximum length for graded site, *V* factor set low converted to small grain equivalents, all other factors per NRCS FOTGs).
10. Wind erosion calculated on 12-month basis and reduced to 10-day period. Because wind erosion periods vary on monthly basis, actual erosion rates will depend on weather conditions during construction periods.
11. Gully erosion will be minimal except on margins of steepest sites.

## **Factors and Calculations**

(Note: Factors used in the USLE are not the same as in the Wind Erosion Equation)

*BMP* = *Best Management Practice*

*USLE*:  $R \times K \times LS \times C \times P = A$  in tons/ac/year

*Wind Erosion Equation*:  $f(I K C L V) = E \times \text{BMP reduction factor} = E_{Tot}$  in tons/ac/year.

*Fugitive Dust*:  $1.2 \text{ tons/ac/month} \times \text{BMP reduction factor} = D$  in tons/ac/month

**Table J-1. Soil Erosion Calculations for Candidate Emitter and Electronic Scoring Sites**

\* Little evidence that gully erosion may occur on site was observed.  
 \*\* Short-term erosion rates. Actual rates will depend on weather factors during construction period. Long-term erosion is not expected to exceed natural background rates. Sites are relatively level and will be paved with rock or asphalt.

# APPENDIX K

## IDENTIFYING THE PREFERRED ALTERNATIVE AND ENVIRONMENTALLY PREFERRED ALTERNATIVE

---

---

*In conformance with the Council on Environmental Quality (CEQ) regulations (40 CFR 1502.14(e)), the Air Force evaluated information acquired during the RBTI environmental impact analysis process to determine the Air Force's preferred alternative. In addition, as required by 40 CFR 1505.2(b), the environmentally preferred alternative, necessary for the future Record of Decision is identified as well. The two-fold process is discussed below.*

Identification of the preferred action alternative and environmentally preferred action alternative followed independent processes. For the preferred alternative, the Air Force evaluated each action alternative to identify which one best met the operational goals of RBTI. Although each action alternative achieves RBTI operational requirements, they can be differentiated by the level of training potential and operational utility. These differences were identified during the NEPA process. Identification of a preferred alternative followed review of the technical analysis, comments received from the public and agencies, as well as input from the FAA, a cooperating agency on this EIS.

For the environmentally preferred alternative, the Air Force evaluated each of the action alternatives based on the results of the environmental analysis as well as public and agency comments on the draft EIS. This evaluation differentiated the action alternatives according to the nature and magnitude of their environmental consequences.

### Preferred Alternative

The process for identifying a preferred alternative from among the three action alternatives consisted of a two-part screening. A coarse screening was conducted, followed by a fine screening.

**Step 1: Coarse Screening.** During coarse screening, the Air Force evaluated the operational utility of each action alternative. Section 2.4 of the EIS indicates that all three alternatives met the rigorous requirements of the systematic alternative identification process in order to be carried forward for analysis in the EIS. This means they all fulfilled the operational requirements. Further evaluation, as presented in Section 2.6.3 of the EIS and summarized below, established that the expected operational outcomes of all three alternatives were similar, although Alternatives B and C would provide slightly more combat training time than Alternative D.

	Alternative B	Alternative C	Alternative D
Percent reduction in low-value transit time	67 – 71%	67 – 71%	45 – 75%
Percent increase in proportion of combat training time	20 – 26%	26 – 29%	18 – 26%

In addition, training activities in Alternative D are more likely to be adversely constrained by weather than the other two action alternatives. The northeastern New Mexico area, where Alternative D is located, is prone to afternoon thunderstorms during the summer months and severe snowstorms during the winter months potentially impairing the ability for military aircraft to train. Western Texas, where Alternatives B and C are located, receives less severe weather. This factor and the operational considerations described above resulted in eliminating Alternative D from being carried forward for fine screening. At this coarse level of consideration, Alternatives B and C had approximately equal potential for being identified as the preferred alternative. Both were carried forward for fine screening.

**Step 2: Fine Screening.** Alternatives B and C were then assessed in detail to determine the extent to which operational differences had been identified by the technical analysis, agency input, public comments, and cooperating agency (FAA) input.

Both Alternatives B and C would achieve RBTI operational goals almost equally. In terms of training value, Alternative C would provide slightly more combat training time than Alternative B. Since this difference was minor, input from the FAA was the primary tool used to differentiate between the two alternatives. The FAA indicated that the modification and increased use of the proposed Texon MOA/ATCAA within Alternative C could significantly impair IFR traffic, would require rigid management with little or no capability to support any flight changes or delayed operations, necessitate rerouting of civil and commercial aircraft using affected jet routes and federal airways, and possibly require restructuring of the airspace. Given these constraints, the operational flexibility of the proposed Texon MOA/ATCAA would be limited.

In contrast, the proposed Lancer MOA/ATCAA associated with Alternative B offers flexibility and is better suited to support the designated training activities with less potential interference to other aviation in the area. While the proposed Lancer MOA/ATCAA could require rerouting of civil and commercial aircraft, the amount of traffic would be minimal and easily accommodated by the FAA. The proposed Lancer MOA/ATCAA would allow less constrained flow into and out of the training airspace. These factors make Alternative B the more operationally preferable alternative, therefore, it has been identified as the Air Force's preferred alternative.

### **Environmentally Preferred Alternative**

Independent of the identification of the preferred alternative, the Air Force evaluated all three action alternatives to determine the environmentally preferred alternative. Similar to the operational evaluation, a two-step coarse and fine screening approach was used.

**Step 1: Coarse Screening.** This effort focused on differentiating the overall potential for environmental impacts among the three action alternatives. An assessment of the environmental analysis in the EIS, public comments, and agency input demonstrated that Alternative D, IR-153/Mt. Dora MOA, was the least preferred alternative.

Review of the impact summary table in the Executive Summary of the EIS (repeated below) reveals that in three of the six resource categories, the magnitude of potential impacts for Alternative D would exceed those resulting from Alternatives B and C. In the other three categories, all action alternatives were considered equal. Implementing Alternative D would result in substantial (>10 dB) increases in noise over 22 of 38 segments of proposed IR-153. In contrast, four segments in Alternative B and two in Alternative C would be subjected to similar changes in noise levels. Both

the analysis and comments from agencies indicated that Alternative D has the potential to affect more special use land management areas and threatened or endangered species due to increased aircraft noise and overflights.

Alternatives B and C each have the potential for fewer and lower magnitude environmental impacts than Alternative D. At this coarse level of consideration, Alternatives B and C had approximately equal potential for being identified as the environmentally preferred alternative.

<b>Potential Effects of RBTI Alternatives</b>					
<i>EIS Section</i>	<i>Resource</i>	<i>Alternative A</i>	<i>Alternative B</i>	<i>Alternative C</i>	<i>Alternative D</i>
4.1	Airspace and Aircraft Operations	⊗	◆	◆	◆◆ <sup>1</sup>
4.2	Land Management and Use	⊗	◆	◆	◆◆
4.3	Biological Resources	⊗	⊗	⊗	◆
4.4	Socioeconomics and Environmental Justice	⊗	⊗	⊗	⊗
4.5	Cultural Resources	⊗	⊗	⊗	⊗
4.6	Soils and Water Resources	⊗	⊗	⊗	⊗
⊗ = Negligible/inconsequential effects ◆ = Potential adverse effects ◆◆ = Magnitude of potential adverse effects <sup>1</sup> = Applies to noise					

**Step 2: Fine Screening.** This second level of screening addressed each environmental resource category, individually and cumulatively, to determine if there were environmental discriminators between the two alternatives. Although no dramatic differences were identified from either the EIS analysis or comments, a detailed interdisciplinary review revealed the relative environmental differences presented below.

*Airspace and Aircraft Operations.* Both alternatives include similar modifications to existing IR-178. Although proposed IR-178 in Alternative B would involve more total airspace, it would create less new airspace, both in total and proportionally. With respect to the MOAs/ATCAAs associated with these alternatives, the proposed Lancer MOA/ATCAA (Alternative B) would reduce the total area affected by this type of airspace, (90 percent would be composed of existing airspace), whereas modifications to the proposed Texon MOA/ATCAA (Alternative C) would increase the total area underlying MOA airspace by 25 percent (with 25 percent of the MOA comprised of new airspace). Coupled with the operational constraints and issues derived from the FAA, these factors make Alternative C less environmentally preferred in terms of airspace management.

Because of similar location, structure, and projected use, neither Alternative B or C is measurably different than the other with regard to noise, air quality, or aircraft safety.

*Land Management and Use.* Land management and uses underlying the airspace for both Alternatives B and C are relatively similar since the alternatives cover similar area. Ranching, farming, and hunting (through leases) represent the most common land management and uses. Both

alternatives overlie the same two special use land management areas and noise levels at each area increase no more than 3 dB. While population under Alternative B is greater, the establishment of more new airspace in Alternative C affects more locations not previously exposed to aircraft noise. This factor suggests that Alternative B would be slightly preferable to Alternative C.

*Biological Resources.* No substantive differences were identified between the two alternatives during the screening. Both affect almost the same area and habitats.

*Socioeconomics and Environmental Justice.* No discernible differences in socioeconomic and environmental justice impacts would result from these two alternatives. Short-term and long-term revenues from construction and operation of the emitters and electronic scoring sites would be identical and apply to the same counties.

*Cultural Resources.* The number of cultural resources potentially affected by construction of emitter and electronic scoring sites would be one less under Alternative B. Although these resources could be avoided under both Alternatives B and C, the reduced potential for effects makes Alternative B minimally preferable to Alternative C.

*Soils and Water.* No substantive differences were identified between the two alternatives during the screening. Soil loss and erosion would be minimal under each alternative, and neither would effect water use or availability.

*Cumulative Effects.* The areas affected by and the timing of both alternatives would be very similar. No known or foreseeable actions would interact with either alternative. Neither alternative could be considered environmentally preferable.

Fine screening of environmental impacts revealed minor differences in the potential consequences of Alternatives B and C. Since Alternative B offers somewhat less potential for environmental impacts, it has been identified as the environmentally preferred alternative.

In conclusion, Alternative B is environmentally preferred. Therefore, the Air Force's preferred alternative and the environmentally preferred alternatives are one in the same -- Alternative B, IR-178/Lancer MOA.
