

Response Protocol Toolbox: Planning for and Responding to Drinking Water Contamination Threats and Incidents

Interim Final - August 2004

Response Guidelines

Report Documentation Page

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Introduction

The EPA released the interim final *Response Protocol Toolbox: Planning for and Responding to Drinking Water Contamination Threats and Incidents* (the *Response Protocol Toolbox*) in winter of 2003 and spring of 2004 to help the water sector effectively and appropriately plan for and respond to contamination threats and incidents. Since its release, EPA has received feedback and suggestions from several sources concerning improvements in the *Response Protocol Toolbox*. These *Response Guidelines* have been developed to provide an easy to use document for field and crisis conditions. While the *Response Protocol Toolbox* provides detailed information, the *Response Guidelines* are to be viewed as the application of the same principles during an actual incident.

As stated in the definition of Response Guidelines in Module 1, Section 4.3 of the *Response Protocol Toolbox*, Response Guidelines are different from an Emergency Response Plan in that they are essentially a “field guide” for responding to contamination threats and can be developed in many different formats.

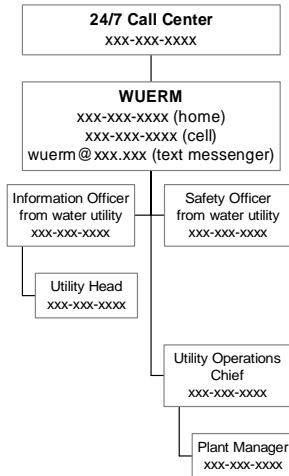

This document is intended to be an action oriented document to assist drinking water utilities, laboratories, emergency responders, state drinking water programs, technical assistance providers, and public health and law enforcement officials during the management of an ongoing contamination threat or incident. The *Response Guidelines* are derived from the content of the six full modules of the *Response Protocol Toolbox*.

The *Response Guidelines* are not intended to replace the *Response Protocol Toolbox* and they do not contain the detailed information contained within the six complete modules. Finally, users are encouraged to adapt the *Response Guidelines* as necessary to meet their own needs and objectives.

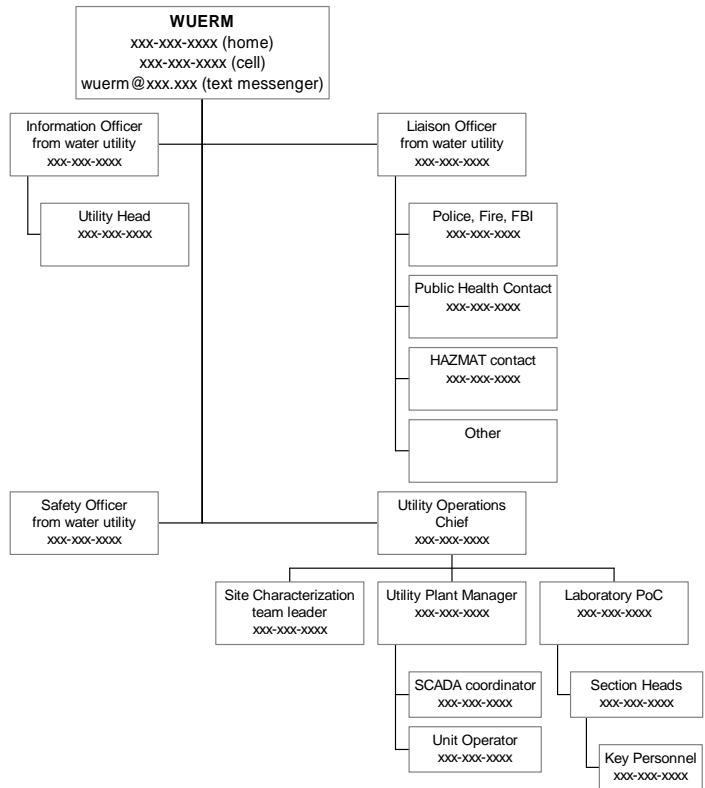

1 Communications and Notifications

1.1 Initial Notifications

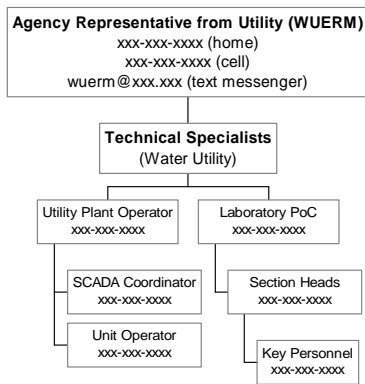

'Possible' stage evaluation by utility

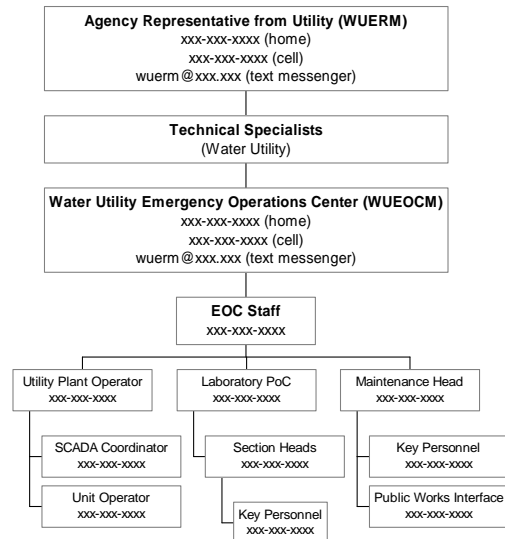

'Credible' stage evaluation by utility

'Credible' stage evaluation by unified command

'Confirmed' stage evaluation by unified command

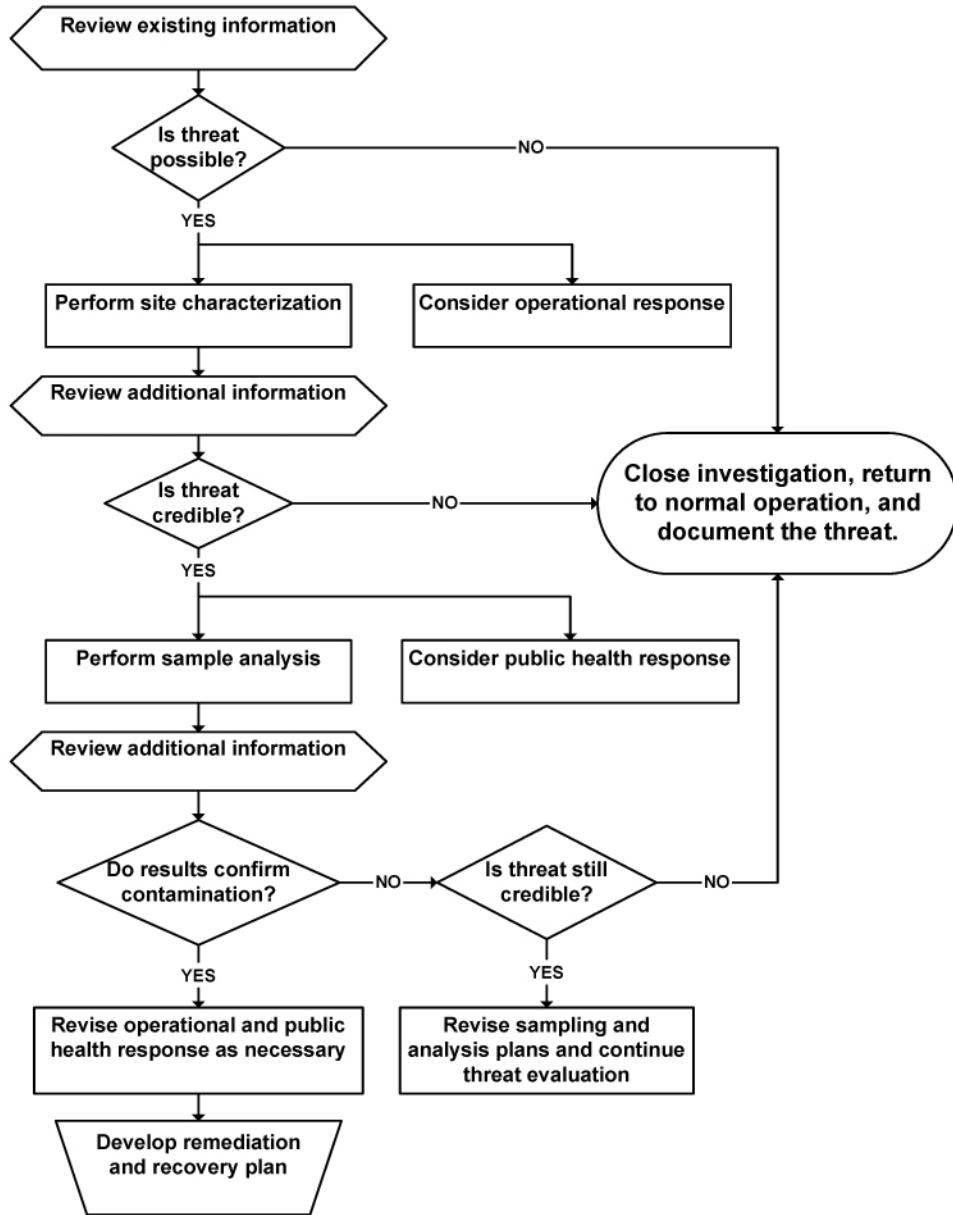

1.2 Contact List

TO BE COMPLETED

Agency	Name	Location	Phone	E-mail

2 Threat Evaluation

2.1 Threat Evaluation Process

2.2 Evaluating Threat Warnings

The first critical step in evaluating a contamination threat is recognition of a *threat warning* (i.e., an unusual situation that may have presented the opportunity for contamination of the drinking water). The utility will likely be in the best position to observe a threat warning and evaluate whether or not the activity is suspicious (i.e., first decision point in the *Threat Evaluation* process). This section briefly describes factors to consider when evaluating various types of threat warnings.

The common types of threat warnings include:

- **Security breaches**: A security breach is an unauthorized intrusion into a secured facility that may be discovered through direct observation, an alarm trigger, or signs of intrusion (e.g., cut locks, open doors, cut fences). Security breaches may be the most common threat warnings, but in **most** cases are related to day-to-day operation and maintenance within the water system. Other security breaches may be due to criminal activity such as trespassing, vandalism, and theft rather than attempts to contaminate the water.
 - Security Incident Report Form → Section 2.4
- **Witness account**: A threat warning may come from an individual who directly witnesses suspicious activity, such as trespassing, breaking and entering, or some other form of tampering. The witness could be a utility employee, law enforcement officer, citizen, etc.
 - Witness Account Report Form → Section 2.5
- **Direct notification by perpetrator**: A threat may be made directly, verbally or in writing, to the water utility, the news media, law enforcement, or a government agency. Verbal threats made over the phone are historically the most common type of direct threats from perpetrators; however, there have also been written threats to contaminate the drinking water supply.
 - Phone Threat Report Form → Section 2.6
 - Written Threat Report Form → Section 2.7
- **Unusual water quality or consumer complaints**: Unusual water quality results or an unexplained or unusually high incidence of consumer complaints may serve as a warning of potential contamination. In order to evaluate this type of warning, it will be necessary to carefully track routinely monitored water quality data and/or consumer complaints such that significant deviations from an established baseline might be observed.
 - Water Quality and Consumer Complaints Report Form → Section 2.8
- **Notification by public health agency**: Notification from a public health agency regarding increased incidence of disease or death is another possible threat warning. A threat triggered by a public health notification is unique in that at least a segment of the population has presumably been exposed to a harmful substance. In this case, public health officials may launch an epidemiological investigation in an attempt to identify the source of the outbreak, during which the utility may be expected to play a support role.
 - Public Health Information Report Form → Section 2.9

2.3 Threat Evaluation Worksheet

INSTRUCTIONS

The purpose of this worksheet is to help organize information about a contamination threat warning that would be used during the Threat Evaluation Process. The individual responsible for conducting the Threat Evaluation (e.g., the WUERM) should complete this worksheet. The worksheet is generic to accommodate information from different types of threat warnings; thus, there will likely be information that is unavailable or not immediately available. Other forms in the Appendices are provided to augment the information in this worksheet.

THREAT WARNING INFORMATION

Date/Time threat warning discovered: _____

Utility Name and Address: _____

Name/Number of person who discovered threat warning: _____

Type of threat warning:

- Security breach
- Written threat
- Public health notification
- Witness account
- Unusual water quality
- Other _____
- Phone threat
- Consumer complaints

Identity of the contaminant: Known Suspected Unknown

If known or suspected, provide additional detail below

- Chemical
- Biological
- Radiological

Describe _____

Time of contamination: Known Estimated Unknown

If known or estimated, provide additional detail below

Date and time of contamination: _____

Additional Information: _____

Mode of contamination: Known Suspected Unknown

If known or suspected, provide additional detail below

Method of addition: Single dose Over time Other _____

Amount of material: _____

Additional Information: _____

Site of contamination: Known Suspected Unknown

If known or suspected, provide additional detail below

Number of sites: _____

Provide the following information for each site.

Site #1

Site Name: _____

Type of facility

- | | | |
|--|--|---|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Ground storage tank | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Finished water reservoir |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other _____ | | |

Address: _____

Additional Site Information: _____

Site #2

Site Name: _____

Type of facility

- | | | |
|--|--|---|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Ground storage tank | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Finished water reservoir |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other _____ | | |

Address: _____

Additional Site Information: _____

Site #3

Site Name: _____

Type of facility

- | | | |
|--|--|---|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Ground storage tank | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Finished water reservoir |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other _____ | | |

Address: _____

Additional Site Information: _____

ADDITIONAL INFORMATION

Has there been a breach of security at the suspected site? Yes No
If "Yes", review the completed 'Security Incident Report' (Section 2.4)

Are there any witness accounts of the suspected incident? Yes No
If "Yes", review the completed 'Witness Account Report' (Section 2.5)

Was the threat made verbally over the phone? Yes No
If "Yes", review the completed 'Phone Threat Report' (Section 2.6)

Was a written threat received? Yes No
If "Yes", review the completed 'Written Threat Report' (Section 2.7)

Are there unusual water quality data or consumer complaints? Yes No
If "Yes", review the completed 'Water Quality/Consumer Complaint Report' (Section 2.8)

Are there unusual symptoms or disease in the population? Yes No
If "Yes", review the completed 'Public Health Report' (Section 2.9)

Is a 'Site Characterization Report' available? Yes No
If "Yes", review the completed 'Site Characterization Report' (Section 3.4)

Are results of sample analysis available? Yes No
If "Yes", review the analytical results report, including appropriate QA/QC data

Is a 'Contaminant Identification Report' available? Yes No
If "Yes", review the completed 'Sample Analysis Report' (Section 4.3)

Is there relevant information available from external sources? Yes No
Check all that apply

- Local law enforcement FBI DW primacy agency
- Public health agency Hospitals / 911 call centers US EPA / Water ISAC
- Media reports Homeland security alerts Neighboring utilities
- Other _____

Point of Contact: _____

Summary of key information from external sources (provide detail in attachments as necessary):

THREAT EVALUATION

Has normal activity been investigated as the cause of the threat warning? Yes No

Normal activities to consider

- | | |
|--|---|
| <input type="checkbox"/> Utility staff inspections | <input type="checkbox"/> Routine water quality sampling |
| <input type="checkbox"/> Construction or maintenance | <input type="checkbox"/> Contractor activity |
| <input type="checkbox"/> Operational changes | <input type="checkbox"/> Water quality changes with a known cause |
| <input type="checkbox"/> Other _____ | |

Is the threat 'possible'? Yes No

Summarize the basis for this determination: _____

Response to a 'possible' threat:

- | | | |
|--|--|--|
| <input type="checkbox"/> None | <input type="checkbox"/> Site characterization | <input type="checkbox"/> Isolation/containment |
| <input type="checkbox"/> Increased monitoring/security | <input type="checkbox"/> Other _____ | |

Is the threat 'credible'? Yes No

Summarize the basis for this determination: _____

Response to a 'credible' threat:

- | | | |
|---|--|---|
| <input type="checkbox"/> Sample analysis | <input type="checkbox"/> Site characterization | <input type="checkbox"/> Isolation/containment |
| <input type="checkbox"/> Partial EOC activation | <input type="checkbox"/> Public notification | <input type="checkbox"/> Provide alternate water supply |
| <input type="checkbox"/> Other _____ | | |

Has a contamination incident been confirmed? Yes No

Summarize the basis for this determination: _____

Response to a confirmed incident:

- | | | |
|--|--|---|
| <input type="checkbox"/> Sample analysis | <input type="checkbox"/> Site characterization | <input type="checkbox"/> Isolation/containment |
| <input type="checkbox"/> Full EOC activation | <input type="checkbox"/> Public notification | <input type="checkbox"/> Provide alternate water supply |
| <input type="checkbox"/> Initiate remediation and recovery | | |
| <input type="checkbox"/> Other _____ | | |

How do other organizations characterize the threat?

Organization	Evaluation	Comment
<input type="checkbox"/> Local Law Enforcement	<input type="checkbox"/> Possible <input type="checkbox"/> Credible <input type="checkbox"/> Confirmed	
<input type="checkbox"/> FBI	<input type="checkbox"/> Possible <input type="checkbox"/> Credible <input type="checkbox"/> Confirmed	
<input type="checkbox"/> Public Health Agency	<input type="checkbox"/> Possible <input type="checkbox"/> Credible <input type="checkbox"/> Confirmed	
<input type="checkbox"/> Drinking Water Primacy Agency	<input type="checkbox"/> Possible <input type="checkbox"/> Credible <input type="checkbox"/> Confirmed	
<input type="checkbox"/> Other	<input type="checkbox"/> Possible <input type="checkbox"/> Credible <input type="checkbox"/> Confirmed	
<input type="checkbox"/> Other	<input type="checkbox"/> Possible <input type="checkbox"/> Credible <input type="checkbox"/> Confirmed

2.4 Security Incident Report Form

INSTRUCTIONS

The purpose of this form is to help organize information about a security incident, typically a security breach, which may be related to a water contamination threat. The individual who discovered the security incident, such as a security supervisor, the WUERM, or another designated individual may complete this form. This form is intended to summarize information about a security breach that may be relevant to the threat evaluation process. This form should be completed for each location where a security incident was discovered.

DISCOVERY OF SECURITY INCIDENT

Date/Time security incident discovered: _____

Name of person who discovered security incident: _____

Mode of discovery:

- | | | |
|---|--|---|
| <input type="checkbox"/> Alarm (building) | <input type="checkbox"/> Alarm (gate/fence) | <input type="checkbox"/> Alarm (access hatch) |
| <input type="checkbox"/> Video surveillance | <input type="checkbox"/> Utility staff discovery | <input type="checkbox"/> Citizen discovery |
| <input type="checkbox"/> Suspect confession | <input type="checkbox"/> Law enforcement discovery | |
| <input type="checkbox"/> Other _____ | | |

Did anyone observe the security incident as it occurred? Yes No

If "Yes", complete the 'Witness Account Report' (Appendix 8.4)

SITE DESCRIPTION

Site Name: _____

Type of facility

- | | | |
|--|--|---|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Ground storage tank | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Finished water reservoir |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other _____ | | |

Address: _____

Additional Site Information: _____

BACKGROUND INFORMATION

Have the following "normal activities" been investigated as potential causes of the security incident?

- | | |
|--|--|
| <input type="checkbox"/> Alarms with known and harmless causes | <input type="checkbox"/> Utility staff inspections |
| <input type="checkbox"/> Routine water quality sampling | <input type="checkbox"/> Construction or maintenance |
| <input type="checkbox"/> Contractor activity | <input type="checkbox"/> Other _____ |

Was this site recently visited prior to the security incident? Yes No
If "Yes," provide additional detail below

Date and time of previous visit: _____

Name of individual who visited the site: _____

Additional Information: _____

Has this location been the site of previous security incidents? Yes No
If "Yes," provide additional detail below

Date and time of most recent security incident: _____

Description of incident: _____

What were the results of the threat evaluation for this incident?

'Possible' 'Credible' 'Confirmed'

Have security incidents occurred at other locations recently? Yes No
If "Yes", complete additional 'Security Incident Reports' (Appendix 8.3) for each site

Name of 1st additional site: _____

Name of 2nd additional site: _____

Name of 3rd additional site: _____

SECURITY INCIDENT DETAILS

Was there an alarm(s) associated with the security incident? Yes No
If "Yes," provide additional detail below

Are there sequential alarms (e.g., alarm on a gate and a hatch)? Yes No

Date and time of alarm(s): _____

Describe alarm(s): _____

Is video surveillance available from the site of the security incident? Yes No
If "Yes," provide additional detail below

Date and time of video surveillance: _____

Describe surveillance: _____

Unusual equipment found at the site and time of discovery of the security incident:

- Discarded PPE (e.g., gloves, masks)
- Tools (e.g., wrenches, bolt cutters)
- Lab equipment (e.g., beakers, tubing)
- None
- Empty containers (e.g., bottles, drums)
- Hardware (e.g., valves, pipe)
- Pumps or hoses
- Other _____

Describe equipment: _____

Unusual vehicles found at the site and time of discovery of the security incident:

- Car/sedan
- Flatbed truck
- Other _____
- SUV
- Construction vehicle
- Pickup truck
- None

Describe vehicles (including make/model/year/color, license plate #, and logos or markings): _____

Signs of tampering at the site and time of discovery of the security incident:

- Cut locks/fences
- Open/damaged access hatches
- Facility in disarray
- Other _____
- Open/damaged gates, doors, or windows
- Missing/damaged equipment
- None

Are there signs of sequential intrusion (e.g., locks removed from a gate and hatch)? Yes No

Describe signs of tampering: _____

Signs of hazard at the site and time of discovery of the security incident:

- Unexplained or unusual odors
- Unexplained dead or stressed vegetation
- Unexplained clouds or vapors
- Other _____
- Unexplained dead animals
- Unexplained liquids
- None

Describe signs of hazard: _____

SIGNOFF

Name of person responsible for documenting the security incident:

Print name _____

Signature _____

Date/Time: _____

2.5 Witness Account Report Form

INSTRUCTIONS

The purpose of this form is to document the observations of a witness to activities that might be considered an incident warning. The individual interviewing the witness, or potentially the witness, should complete this form. This may be the WUERM or an individual designated by incident command to perform the interview. If law enforcement is conducting the interview (which may often be the case), then this form may serve as a prompt for "utility relevant information" that should be pursued during the interview. This form is intended to consolidate the details of the witness account that may be relevant to the threat evaluation process. This form should be completed for each witness that is interviewed.

BASIC INFORMATION

Date/Time of interview: _____

Name of person interviewing the witness: _____

Witness contact information

Full Name: _____

Address: _____

Day-time phone: _____

Evening phone: _____

E-mail address: _____

Reason the witness was in the vicinity of the suspicious activity: _____

WITNESS ACCOUNT

Date/Time of activity: _____

Location of activity:

Site Name: _____

Type of facility

- | | | |
|--|--|---|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Ground storage tank | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Finished water reservoir |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other _____ | | |

Address: _____

Additional Site Information: _____

Type of activity

- Trespassing Vandalism Breaking and entering
 Theft Tampering Surveillance
 Other _____

Additional description of the activity _____

Description of suspects

Were suspects present at the site? Yes No

How many suspects were present? _____

Describe each suspect's appearance:

Suspect #	Sex	Race	Hair color	Clothing	Voice
1					
2					
3					
4					
5					
6					

Where any of the suspects wearing uniforms? Yes No

If "Yes," describe the uniform(s): _____

Describe any other unusual characteristics of the suspects: _____

Did any of the suspects notice the witness? Yes No

If "Yes," how did they respond: _____

Vehicles at the site

Were vehicles present at the site? Yes No

Did the vehicles appear to belong to the suspects? Yes No

How many vehicles were present? _____

RESPONSE GUIDELINES

Describe each vehicle:

Vehicle #	Type	Color	Make	Model	License plate
1					
2					
3					
4					
5					
6					

Where there any logos or distinguishing markings on the vehicles? Yes No
 If "Yes," describe: _____

Provide any additional detail about the vehicles and how they were used (if at all): _____

Equipment at the site

Was any unusual equipment present at the site? Yes No

- Explosive or incendiary devices
- PPE (e.g., gloves, masks)
- Tools (e.g., wrenches, bolt cutters)
- Lab equipment (e.g., beakers, tubing)
- Other _____
- Firearms
- Containers (e.g., bottles, drums)
- Hardware (e.g., valves, pipe, hoses)
- Pumps and related equipment

Describe the equipment and how it was being used by the suspects (if at all): _____

Unusual conditions at the site

Were there any unusual conditions at the site? Yes No

- Explosions or fires
- Dead/stressed vegetation
- Other _____
- Fogs or vapors
- Dead animals
- Unusual odors
- Unusual noises

Describe the site conditions: _____

Additional observations

Describe any additional details from the witness account: _____

2.6 Phone Threat Report Form

INSTRUCTIONS

This form is intended to be used by utility staff that regularly answer phone calls from the public (e.g., call center operators). The purpose of this form is to help these staff capture as much information from a threatening phone call while the caller is on the line. It is important that the operator keep the caller on the line as long as possible in order to collect additional information. Since this form will be used during the call, it is important that operators become familiar with the content of the form. The sections of the form are organized with the information that should be collected during the call at the front of the form (i.e., Basic Call Information and Details of Threat) and information that can be completed immediately following the call at the end of the form (i.e., the description of the caller). The information collected on this form will be critical to the threat evaluation process.

Remember, tampering with a drinking water system is a crime under the SDWA Amendments!

THREAT NOTIFICATION

Name of person receiving the call: _____

Date phone call received: _____

Time phone call received: _____

Time phone call ended: _____

Duration of phone call: _____

Originating number: _____

Originating name: _____

*If the number/name is not displayed on the caller ID, press *57 (or call trace) at the end of the call and inform law enforcement that the phone company may have trace information.*

Is the connection clear? Yes No

Could call be from a wireless phone? Yes No

DETAILS OF THREAT

Has the water already been contaminated? Yes No

Date and time of contaminant introduction known? Yes No

Date and time if known: _____

Location of contaminant introduction known? Yes No

Site Name: _____

Type of facility

- | | | |
|--|--|---|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Ground storage tank | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Finished water reservoir |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other _____ | | |

Address: _____

Additional Site Information: _____

RESPONSE GUIDELINES

Name or type of contaminant known?

Yes No

Type of contaminant

Chemical Biological Radiological

Specific contaminant name/description: _____

Mode of contaminant introduction known?

Yes No

Method of addition: Single dose Over time Other _____

Amount of material: _____

Additional Information: _____

Motive for contamination known?

Yes No

Retaliation/revenge Political cause Religious doctrine
 Other _____

Describe motivation: _____

CALLER INFORMATION

Basic Information:

Stated name: _____

Affiliation: _____

Phone number: _____

Location/address: _____

Caller's Voice:

Did the voice sound disguised or altered? Yes No

Did the call sound like a recording? Yes No

Did the voice sound? Male / Female Young / Old

Did the voice sound familiar? Yes No

If 'Yes,' who did it sound like? _____

Did the caller have an accent? Yes No

If 'Yes,' what nationality? _____

How did the caller sound or speak?

Educated Well spoken Illiterate
 Irrational Obscene Incoherent
 Reading a script Other _____

RESPONSE GUIDELINES

2.7 Written Threat Report Form

INSTRUCTIONS

The purpose of this form is to summarize significant information from a written threat received by a drinking water utility. This form should be completed by the WUERM or an individual designated by incident command to evaluate the written threat. The summary information provided in this form is intended to support the threat evaluation process; however, the completed form is not a substitute for the complete written threat, which may contain additional, significant details.

The written threat itself (e.g., the note, letter, e-mail message, etc.) may be considered evidence and thus should be minimally handled (or not handled at all) and placed into a clean plastic bag to preserve any forensic evidence.

Remember, tampering with a drinking water system is a crime under the SDWA Amendments!

SAFETY

A suspicious letter or package could pose a threat in and of itself, so caution should be exercised if such packages are received. The US Postal Service has issued guidance when dealing with suspicious packages (http://www.usps.com/news/2001/press/pr01_1022gsa.htm).

THREAT NOTIFICATION

Name of person receiving the written threat: _____

Person(s) to whom threat was addressed: _____

Date threat received: _____

Time threat received: _____

How was the written threat received?

- US Postal service
- Delivery service
- Courier
- Fax
- E-mail
- Hand delivered
- Other _____

If mailed, is the return address listed? Yes No

If mailed, what is the date and location of the postmark? _____

2.8 Water Quality/Consumer Complaint Report Form

INSTRUCTIONS

This form is provided to guide the individual responsible for evaluating unusual water quality data or consumer complaints. It is designed to prompt the analyst to consider various factors or information when evaluating the unusual data. The actual data used in this analysis should be compiled separately and appended to this form. The form can be used to support the threat evaluation due to a threat warning from unusual water quality or consumer complaints, or another type of threat warning in which water quality data or consumer complaints are used to support the evaluation.

Note that in this form, water quality refers to both specific water quality parameters and the general aesthetic characteristics of the water that might result in consumer complaints.

Threat warning is based on: Water quality Consumer complaints Other

What is the water quality parameter or complaint under consideration?

Are unusual consumer complaints corroborated by unusual water quality data?

Is the unusual water quality indicative of a particular contaminant of concern? For example, is the color, order, or taste associated with a particular contaminant?

Are consumers in the affected area experiencing any unusual health symptoms?

What is 'typical' for consumer complaints for the current season and water quality?

Number of complaints.
Nature of complaints.
Clustering of complaints

What is considered to be 'normal' water quality (i.e., what is the baseline water quality data or level of consumer complaints)?

What is reliability of the method or instrumentation used for the water quality analysis?

Are standards and reagents OK?
Is the method/instrument functioning properly?

Based on recent data, does the unusual water quality appear to be part of a gradual trend (i.e., occurring over several days or longer)?

Are the unusual water quality observations sporadic over a wide area, or are they clustered in a particular area?

What is the extent of the area? A pressure zone. A neighborhood. A city block. A street. A building.

If the unusual condition isolated to a specific area:

- Is this area being supplied by a particular plant or source water?
- Have there been any operational changes at the plant or in the affected area of the system?
- Has there been any flushing or distribution system maintenance in the affected area?
- Has there been any repair or construction in the area that could impact water quality?

SIGNOFF

Name of person completing form:

Print name _____

Signature _____

Date/Time: _____

2.9 Public Health Information Report Form

INSTRUCTIONS

The purpose of this form is to summarize significant information about a public health episode that could be linked to contaminated water. This form should be completed by the WUERM or an individual designated by incident command. The information compiled in this form is intended to support the threat evaluation process.

In the case of a threat warning due to a report from public health, it is likely that the public health agency will assume incident command during the investigation. The drinking water utility will likely play a support role during the investigation, specifically to help determine whether or not water might be the cause.

PUBLIC HEALTH NOTIFICATION

Date and Time of notification: _____

Name of person who received the notification: _____

Contact information for individual providing the notification

Full Name: _____

Title: _____

Organization: _____

Address: _____

Day-time phone: _____

Evening phone: _____

Fax Number: _____

E-mail address: _____

Why is this person contacting the drinking water utility? _____

Has the state or local public health agency been notified? Yes No

If "No," the appropriate public health official should be immediately notified.

DESCRIPTION OF PUBLIC HEALTH EPISODE

Nature of public health episode:

- Unusual disease (mild) Unusual disease (severe) Death
 Other: _____

Symptoms:

- Diarrhea Vomiting/nausea Flu-like symptoms
 Fever Headache Breathing difficulty
 Other: _____

Describe symptoms: _____

Causative Agent: Known Suspected Unknown

If known or suspected, provide additional detail below

- Chemical Biological Radiological

Describe _____

Estimate of time between exposure and onset of symptoms: _____

Exposed Individuals:

Location where exposure is thought to have occurred

- | | | |
|---------------------------------------|--|---|
| <input type="checkbox"/> Residence | <input type="checkbox"/> Work | <input type="checkbox"/> School |
| <input type="checkbox"/> Restaurant | <input type="checkbox"/> Shopping mall | <input type="checkbox"/> Social gathering |
| <input type="checkbox"/> Other: _____ | | |

Additional notes on location of exposure: _____

Collect addresses for specific locations where exposure is thought to have occurred.

Is the pattern of exposure clustered in a specific area? Yes No

Extent of area

- | | | |
|--|--|--|
| <input type="checkbox"/> Single building | <input type="checkbox"/> Complex (several buildings) | <input type="checkbox"/> City block |
| <input type="checkbox"/> Neighborhood | <input type="checkbox"/> Cluster of neighborhoods | <input type="checkbox"/> Large section of city |
| <input type="checkbox"/> Other: _____ | | |

Additional notes on extent of area: _____

Do the exposed individuals represent a disproportionate number of:

- | | | |
|--|---|-----------------------------------|
| <input type="checkbox"/> Immune compromised | <input type="checkbox"/> Elderly | <input type="checkbox"/> Children |
| <input type="checkbox"/> Infants | <input type="checkbox"/> Pregnant women | <input type="checkbox"/> Women |
| <input type="checkbox"/> Other: _____ | | |
| <input type="checkbox"/> None, no specific groups dominate the makeup of exposed individuals | | |

EVALUATION OF LINK TO WATER

Are the symptoms consistent with typical waterborne diseases, such as gastrointestinal disease, vomiting, or diarrhea? Yes No

Does the area of exposure coincide with a specific area of the system, such as a pressure zone or area feed by a specific plant? Yes No

Were there any consumer complaints within the affected area? Yes No

Were there any unusual water quality data within the affected area? Yes No

Were there any process upsets or operational changes? Yes No

Was there any construction/maintenance within the affected area? Yes No

Were there any security incidents within the affected area? Yes No

SIGNOFF

3 Site Characterization and Sampling

3.1 Site Characterization Process

3.2 Emergency Water Sample Collection Kit

Item	Quantity	Notes
Field Resources and Documentation		
Field guide	2	Resource for field personnel
Health and safety plan	2	If required for the site
Sample labels	48	Waterproof (filled out in advance, if possible)
Sample documentation forms	24	For recording sample information
Custody tape (or seals)	2 rolls	Used on sample or shipping containers
Chain of custody forms	24	For documenting sample custody
Lab marker	2	Waterproof, 1 red, 1 black
General Sampling Supplies		
Sample containers	Table 3-2	For collecting samples
Device for grab sampling	1	For sampling large water bodies
10 liter HDPE container	4	For collection of large volume water samples
Lab grade tape	3 rolls	For temporary labeling in the field
Miscellaneous glassware	N/A	Beakers, graduated cylinders, spatula, etc.
Collapsible cooler	1	For sample storage
Rigid shipping container	1	For shipping by overnight service if needed.
1 qt. zippered freezer bags	1 pack100	For double bagging ice and sample containers
Thermometer	2	For checking water temperature
Paper towels	2 rolls	Wiping wet containers and containing spills
Pathogen Sampling Supplies		
Tubing and clamp	1	For sample tap flushing, etc.
Stopwatch & graduated cylinder	1	For measuring flow rate
Ultrafiltration apparatus	1	For concentrating pathogen samples
Reagents (may need to be kept separate from the rest of the kit)		
Laboratory grade water	5 liters	For sample dilution in the field
Sodium thiosulfate crystals	100 grams	For water sample dechlorination
Ascorbic acid	100 grams	For water sample dechlorination
Sodium sulfite crystals	100 grams	For water sample dechlorination
Potassium dihydrogen citrate	100 grams	For carbamate preservation
6 Molar ACS grade hydrochloric acid (HCl)	25 mL	In dropper bottle for preservation of samples for organic analyses
6 Molar trace metal-grade nitric acid (HNO ₃)	25 mL	In dropper bottle for preservation of samples for trace metals analysis
10 Normal Sodium hydroxide (NaOH)	25 mL	In dropper bottle for preservation of samples for cyanide analyses
pH paper in ranges from 0 - 4 and 10 - 14	50 strips	For checking the pH of samples preserved with acid or base (sensitive to 0.5 pH units)
Safety Supplies		
Splash resistant goggles	2	One per individual (minimum)
Disposable gloves	6 pairs	Nitrile or polyethylene, powder-free
Disposable shoe covers	2 pairs	One pair per individual (minimum)
Disposable laboratory coats	2	One per individual (minimum)
Clear, heavy duty plastic trash bags	4	For disposal of lab coat, gloves, etc.
Rinse water	20 liters	For general use and first aid
Antiseptic wipes	1 container	For cleaning hands, sample containers, etc.
Bleach solution (at least 5%)	1 gallon	For decontamination if necessary
Squirt bottle	2	For use with rinse water or lab grade water
First aid kit	1	For general first aid
Flashlight/headlamp	3	For working at night or in dark locations

3.3 Sample Containers

Sample Type	Container Size	Container Type	No.	Dechlorinating Agent	Preservative	Analytical Technique	Reference Methods
CHEMISTRY - BASIC SCREEN (Established Techniques)							
Organic Analytes							
Volatiles	40 mL	Glass w / Teflon faced septa	5	Ascorbic acid	1:1 HCl to pH < 2 See method.	P&T – GC/MS	EPA 524.2, 8260B
Semi-volatiles	1 L	Amber w / Teflon-lined screw caps	4	Sodium sulfite	6M HCl. See method.	P&T – GC/PID/ELCD SPE GC/MS	EPA 502.2, 8021B 525.2, 8270D/3535
Quarternary nitrogen compounds	1 L	Amber PVC or silanized glass	4	Sodium thiosulfate	Sulfuric acid to pH 2	SPE HPLC - UV	549.2
Carbamate Pesticides	40 mL	Glass w / Teflon faced septa	4	Sodium thiosulfate	Potassium dihydrogen citrate sample pH to ~3.8	HPLC-fluorescence	531.2
Inorganic Analytes							
Metals/Elements	125 mL	Plastic (i.e. HPDE)	2	None	Trace metal grade nitric acid. See method.	ICP-MS ICP-AES AA	200.8 200.7 200.9
Organometallic compounds	125 mL	Plastic (i.e. HPDE)	2	None	Nitric acid to pH ≤2. See method.	AA – cold vapor manual AA – cold vapor automater	245.1 245.2
Cyanide	1 L	Plastic	2	Ascorbic acid	Sodium hydroxide to pH 12. See method.	Titrimetric Spectrophotometric Colorimetric UV	335.2 335.3
Radiological	2 L	Plastic	2	None	None - mark samples not preserved	Gross alpha, gross beta, gamma isotopes, specific radionuclides	900 Series

RESPONSE GUIDELINES

Sample Type	Container Size	Container Type	No.	Dechlorinating Agent	Preservative	Analytical Technique	Reference Methods
CHEMISTRY - EXPANDED SCREEN (Exploratory Techniques)							
Unknown organics (volatile)	40 mL	Glass w / Teflon faced septa	5	None	None - mark samples not preserved	P&T-GC/MS	See Module 4
Unknown organics (general)	1 L	Amber Glass	4	None	None - mark samples not preserved	Prep: SPE, SPME, micro LLE, direct aqueous injection, headspace	See Module 4
						Analysis: GC/MS, GC, HPLC, LC-MS	
Unknown inorganics	1 L	Plastic	2	None	None - mark samples not preserved	ICP-MS	See Module 4
Immunoassays	1 L	Amber Glass	2	Consult manufacturers instructions	Consult manufacturers instructions	Consult manufacturers instructions	None
PATHOGENS - EXPANDED SCREEN (Established and Exploratory Techniques)							
Pathogens - culture	100 mL	HDPE (plastic)	2	Thiosulfate	TBD	Per target pathogens	See Module 4
Pathogens - PCR	100 mL	HDPE (plastic)	2	Thiosulfate	TBD	Per target pathogens	See Module 4
BASELINE WATER QUALITY PARAMETERS (See Section 3.4)							
Water quality: bacteria	250 mL	Plastic	1	Thiosulfate	None	Fecal coliforms, E-coli,	Standard methods
Water quality: chemistry	1 L	Plastic	1	None	None - mark samples not preserved	Conductivity, pH, alkalinity, hardness, turbidity	Standard methods
Surrogates	1 L	Amber glass	2	None	None - mark samples not preserved	Total organic carbon, ultraviolet absorbance, color, chlorine demand	Standard methods
Toxicity	125 mL	Glass	2	Consult manufacturers instructions	Consult manufacturers instructions.	Rapid toxicity assay (several vendors)	None

3.4 Sample Collection Guidelines

3.4.1 Safety Guidelines

1. **Do not** enter the site to perform sampling until cleared. Hazardous materials response units may perform safety screening before allowing other responders to enter the site. *Note that field safety screening does **not** generally include testing for pathogens.*
2. **Do not** eat, drink, or smoke at the site.
3. **Do not** taste or smell the water samples.
4. **Do** use general personal protective equipment (PPE) such as splash-proof goggles, disposable gloves, proper footwear (i.e., no open toe or open heel shoes), a chemical resistant, disposable lab coat, and long pants. *(Note that this level of PPE is only intended to minimize incidental contact with the water or chemical reagents used during sample collection or field testing.)*
5. **Avoid** all skin contact with the water, and if incidental contact does occur, immediately flush the affected area with clean water brought to the site for that purpose.
6. Fill sampling containers **slowly** to avoid volatilization or aerosolization of contaminants.
7. **Minimize** the time that personnel are on the site and collecting samples.

3.4.2 Sampling Procedures

1. Pre-label sample containers with a waterproof marker. Information should include: analyte class (pathogen, chemical, or radionuclide), specific analyte (if sample is being collected for a specific target), sample identification number, utility name, location of sample collection, sample collection date and time, and sampler's initials.
2. Check for the presence of any in-line filters (e.g., home treatment devices) that might interfere with sampling. Remove such devices if present.
3. If the sample tap is the suspected point of contaminant introduction, collect swab samples from the tap **before** flushing the tap and collecting water samples.
4. Flush sample taps for a time sufficient to displace the water in connecting lines in order to obtain a sample that is representative of the water of interest. Keep the flow rate from the sample tap sufficiently low in order to avoid splashing and aerosolizing water droplets. Divert water to a drain if possible.
5. Carefully collect samples in the specified containers (see Section 3.3). If a reagent needs to be added to the sample, allow enough headspace in the container to add the proper amount of preservative. Cap then gently mix the contents to ensure that the reagent is properly mixed with the sample. Test the sample with a strip of pH paper to ensure preservation to the proper pH. Do not insert the pH paper into the sample container. Pour a small portion of the mixed sample into the container cap then pour from the cap onto the pH paper to verify
6. For chlorinated samples, VOCs should be collected into a secondary 8-oz. glass container (prepared with ascorbic acid - see footnote 1, Table 3.3). Gently mix the sample and transfer to 3, 40-ml VOA containers (triplicate). Fill the 40-ml container above the top to form a meniscus. Close the container with the Teflon side of the septa facing the water sample, gently invert the sample container several times, and verify that there are no air bubbles in the container. Once each container is tagged, the three 40-ml containers

should be inserted into a plastic whirlpack bag (provided) and sealed prior to sample storage.

7. Wipe the outside of the sealed containers with paper towel.
8. Attach custody seal to the sample container.
9. Place the sealed container into a rigid cooler and pack with frozen ice packs (preferred) or sealable freezer bags filled with ice.
10. Tag each sample and record all necessary information on “Sample Documentation” and “Chain of Custody” forms.
11. After all samples have been collected, preservative blanks and temperature blanks should be prepared and tagged. A preservative blank should be prepared for each preservative used during the sampling event. The preservative blank can be prepared by adding the appropriate amount of preservative to the preservative blank containers, and tagging the sample for the appropriate analysis (i.e., HNO₃ preservative blank should be analyzed for metals). Additionally, a temperature blank container should be placed in each cooler containing samples.

3.4.3 Sample Holding

1. When samples are not in the possession of designated personnel, they should be secured (e.g., locked in a *secure area*) and only accessible by designated personnel. In the field, samples may need to be locked in a vehicle.
2. Samples should be chilled, but protected from freezing.
3. Samples should be held at the drinking water utility lab until shipped to a lab for analysis or until it is determined that they are not needed.
4. Samples that are held longer than the approved holding times for contaminant analysis may no longer be useful.

3.4.4 Sample Transport

1. Sample integrity and chain of custody must be maintained. All factors that might compromise sample integrity (e.g., storage containers, excessive transit time, temperature, pressure, physical disturbance, etc.) should be considered and appropriate measures taken to avoid compromising samples.
2. Sample packaging must be in compliance with shipping regulations.
3. Samples may be screened by law enforcement and/or ICs prior to sample transport to the laboratory.
4. Samples will be transported to the appropriate laboratory in coordination with law enforcement using appropriate air and ground assets.

3.5 Site Characterization Plan Template

INSTRUCTIONS

This form is intended to support the development of a customized site characterization plan developed in response to a specific water contamination threat. The incident commander and site characterization team leader should develop this plan jointly if possible. The completed form will be used to guide site characterization activities in the field; however, it may be necessary to revise the initial plan based on initial observations at the site. A form should be completed for each investigation site that will be characterized.

THREAT WARNING INFORMATION

Consult Module 2, Appendix 8.2 “Threat Evaluation Worksheet” for details about the threat.

INVESTIGATION SITE

Site Name: _____

Type of facility:

- | | | |
|---|--|---|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Ground storage tank
reservoir | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Finished water |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other | _____ | |

Address: _____

Additional Site Information: _____

INITIAL HAZARD ASSESSMENT

Are there any indicators of an explosive hazard? Yes No
If “Yes,” notify law enforcement and do not send a team to the site.

Initial hazard categorization

- | | |
|--|--|
| <input type="checkbox"/> Low hazard | <input type="checkbox"/> Chemical hazard |
| <input type="checkbox"/> Radiological hazard | <input type="checkbox"/> Biological hazard |

If the initial hazard assessment indicates a chemical, radiological, or biological hazard (as described in Module 3, Section 4.1.3), then only teams trained to deal with such hazards should be sent to the site.

SITE CHARACTERIZATION TEAM

Name & Affiliation of Site Characterization Team Leader:

Drinking water utility staff:

- Water quality specialist Name: _____
- Security specialist Name: _____
- Operations specialist Name: _____
- Other _____ Name: _____

Representatives from other agencies:

- Local law enforcement Fire department HazMat
- US EPA FBI Other

COMMUNICATION PROCEDURES

Mode of communication:

- Phone 2-way radio Digital
- Facsimile Other _____

Reporting events:

- Upon arrival at site During approach Site entry
- After site evaluation After field testing Site exit
- Other _____

FIELD SCREENING CHECKLIST

8	Parameter ¹	Screen ²	Meter/Kit ID ³	Check Date ⁴	Reference Value ⁵
	Radiation	Both			
	Chlorine residual	Water			
	pH / conductivity	Water			
	Cyanide	Water			
	Volatile chemicals	Safety			
	Chemical weapons	Both			
	Biotoxins	Water			
	Pathogens	Water			

1. List the parameters that will be evaluated as part of field screening (examples are listed).
2. Screening may be conducted for safety, rapid water testing, or both.
3. Report the unique identifier for the meter or kit used during screening.
4. Report date of last calibration, last equipment check, or expiration date as appropriate.
5. List any reference value that would trigger a particular action, such as exiting the site.

SAMPLING CHECKLIST

8	Analyte ¹	No. Samples	Sample Preservation ²
	Standard VOCs		
	Semi-volatiles		
	Quaternary nitrogen compounds		
	Cyanide		
	Carbamate pesticides		
	Metals/elements		
	Organometallic compounds		
	Cyanide		
	Radionuclides		
	Non-target VOCs		
	Non-target organic compounds		
	Non-target inorganic compounds		
	Immunoassays		
	Pathogens – culture		
	Pathogens – PCR		
	Water quality – bacteria		
	Water quality – chemistry		

1. List the parameters that will be sampled during site characterization (examples are listed).
2. List preservatives and dechlorinating agents and indicate if they are to be added in the field.

EQUIPMENT CHECKLIST

- | | |
|---|--|
| <input type="checkbox"/> Completed Site Characterization Plan | <input type="checkbox"/> Additional documentation |
| <input type="checkbox"/> Emergency Water Sampling Kit (Table 3-1) | <input type="checkbox"/> Field Testing Kit (Table 3-3) |
| <input type="checkbox"/> Reagents (if stored separately) | <input type="checkbox"/> Bags of ice or freezer packs |
| <input type="checkbox"/> Laboratory grade water (5 gal) | <input type="checkbox"/> Rinse water (20 liters) |
| <input type="checkbox"/> Special equipment for the specific site | <input type="checkbox"/> Disposable camera |
| <input type="checkbox"/> Other _____ | |

SAMPLE HANDLING INSTRUCTIONS

Sample delivery:

- Return samples to water utility
- Ship samples to specified location
- Deliver samples to specified recipient (e.g., laboratory, law enforcement, shipping co., etc.)

Name of recipient: _____

Phone No.: _____

Fax No.: _____

Delivery address: _____

Sample storage and security:

Describe any special precautions or instructions related to sample storage and security:

SIGNOFF

Incident Commander (or designee responsible for developing Site Characterization Plan):

Date/Time: _____

3.6 Site Characterization Report Form

INSTRUCTIONS

Members of the site characterization team can use this form to record their observations at the investigation site. It also serves as a checklist for notifying incident command at key points during the characterization. Additional checklists are included in this form for sample collection and exiting the site. The completed form can also be used as a component of the site characterization report. A form should be completed for each investigation site that is characterized

GENERAL INFORMATION

Date: _____ **Time arrived investigation at site:** _____

Name of Site Characterization Team Leader: _____

Phone No.: _____ **Fax No.:** _____

LOCATION OF INVESTIGATION SITE

Site Name: _____

Type of facility:

- | | | |
|---|--|--|
| <input type="checkbox"/> Source water | <input type="checkbox"/> Treatment plant | <input type="checkbox"/> Pump station |
| <input type="checkbox"/> Finished water reservoir | <input type="checkbox"/> Elevated storage tank | <input type="checkbox"/> Ground storage tank |
| <input type="checkbox"/> Distribution main | <input type="checkbox"/> Hydrant | <input type="checkbox"/> Service connection |
| <input type="checkbox"/> Other _____ | | |

Address: _____

Weather Conditions at Site: _____

Additional Site Information: _____

APPROACH TO SITE

Time of Approach to Site: _____

Initial Field Safety Screening (as listed in the “Site Characterization Plan”):

- | | | |
|---------------------------------|---|---|
| <input type="checkbox"/> None | <input type="checkbox"/> Radiation | <input type="checkbox"/> Volatile chemicals |
| <input type="checkbox"/> HAZCAT | <input type="checkbox"/> Chemical weapons | <input type="checkbox"/> Biological agents |
| <input type="checkbox"/> Other | _____ | |

Report results of field safety screening in Section 3.7 “Field Testing Results Form.”
If any field safety screening result is above the corresponding reference value, immediately notify incident command and do not proceed further into the site.

Initial Observation and Assessment of Immediate Hazards

- Unauthorized individuals present at the site
- Fire or other obvious hazard
- Signs of a potential explosive hazard (e.g., devices with exposed wires)
- Signs of a potential chemical hazard (e.g., dead animals, unusual fogs, unusual odors)
- Unusual and unexplained equipment at the site
- Other signs of immediate hazard _____

If there are any indicators of immediate hazard, immediately notify incident command and do not proceed further into the site.

Report initial observations and results to incident commander.

Approval granted to proceed further into the site? Yes No

SITE INVESTIGATION

Time of Entry to Site: _____

Repeat Field Safety Screening

- | | | |
|---------------------------------|---|---|
| <input type="checkbox"/> None | <input type="checkbox"/> Radiation | <input type="checkbox"/> Volatile chemicals |
| <input type="checkbox"/> HAZCAT | <input type="checkbox"/> Chemical weapons | <input type="checkbox"/> Biological agents |
| <input type="checkbox"/> Other | _____ | |

Report results of field safety screening in Section 3.7 “Field Testing Results Form.”
If any field safety screening result is above the corresponding reference value, immediately notify incident command and do not proceed further into the site.

Signs of Hazard:

- | | |
|--|---|
| <input type="checkbox"/> None | <input type="checkbox"/> Unexplained dead animals |
| <input type="checkbox"/> Unexplained dead or stressed vegetation | <input type="checkbox"/> Unexplained clouds or vapors |
| <input type="checkbox"/> Unexplained liquids | <input type="checkbox"/> Other _____ |

Describe signs of hazard: _____

Unexplained or Unusual Odors:

- | | | |
|---------------------------------------|---------------------------------------|--|
| <input type="checkbox"/> None | <input type="checkbox"/> Pungent | <input type="checkbox"/> Irritating |
| <input type="checkbox"/> Sulfur | <input type="checkbox"/> Skunky | <input type="checkbox"/> Bitter almond |
| <input type="checkbox"/> Sweet/Fruity | <input type="checkbox"/> New mown hay | <input type="checkbox"/> Other _____ |

Describe unusual odor: _____

Unusual Vehicles Found at the Site:

- | | | |
|--|---|---------------------------------------|
| <input type="checkbox"/> Car/sedan | <input type="checkbox"/> SUV | <input type="checkbox"/> Pickup truck |
| <input type="checkbox"/> Flatbed truck | <input type="checkbox"/> Construction vehicle | <input type="checkbox"/> None |
| <input type="checkbox"/> Other _____ | | |

Describe vehicles (including make/model/year/color, license plate #, and logos or markings): _____

Signs of Tampering:

- | | |
|--|--|
| <input type="checkbox"/> None | <input type="checkbox"/> Cut locks/fences |
| <input type="checkbox"/> Open/damaged gates, doors, or windows | <input type="checkbox"/> Open/damaged access hatches |
| <input type="checkbox"/> Missing/damaged equipment | <input type="checkbox"/> Facility in disarray |
| <input type="checkbox"/> Other _____ | |

Signs of sequential intrusion (e.g., locks removed from a gate and hatch)?
 Yes No

Describe signs of tampering: _____

Unusual Equipment:

- | | |
|--|--|
| <input type="checkbox"/> None | <input type="checkbox"/> Discarded PPE (e.g., gloves, masks) |
| <input type="checkbox"/> Tools (e.g., wrenches, bolt cutters) | <input type="checkbox"/> Hardware (e.g., valves, pipe) |
| <input type="checkbox"/> Lab equipment (e.g., beakers, tubing) | <input type="checkbox"/> Pumping equipment |
| <input type="checkbox"/> Other _____ | |

Describe equipment: _____

Unusual Containers:

Type of container:

- | | | |
|--------------------------------------|---|---|
| <input type="checkbox"/> None | <input type="checkbox"/> Drum/Barrel | <input type="checkbox"/> Bottle/Jar |
| <input type="checkbox"/> Plastic bag | <input type="checkbox"/> Box/Bin | <input type="checkbox"/> Pressurized cylinder |
| <input type="checkbox"/> Test Tube | <input type="checkbox"/> Bulk container | <input type="checkbox"/> Other _____ |

Condition of container:

- | | | |
|-----------------------------------|------------------------------|--|
| <input type="checkbox"/> Opened | <input type="checkbox"/> New | <input type="checkbox"/> Damaged/leaking |
| <input type="checkbox"/> Unopened | <input type="checkbox"/> Old | <input type="checkbox"/> Intact/dry |

Size of container: _____

Describe labeling on container: _____

Describe visible contents of container: _____

Rapid Field Testing of the Water

- | | | |
|-------------------------------------|--|--|
| <input type="checkbox"/> None | <input type="checkbox"/> Residual disinfectant | <input type="checkbox"/> pH / conductivity |
| <input type="checkbox"/> Cyanide | <input type="checkbox"/> Radiation | <input type="checkbox"/> VOCs and SVOCs |
| <input type="checkbox"/> Pesticides | <input type="checkbox"/> Biotoxins | <input type="checkbox"/> General toxicity |
| <input type="checkbox"/> Other | _____ | |

Report results of rapid field testing of the water in Section 3.7 “Field Testing Results Form.”

If any field test result is above the corresponding reference value, immediately notify incident command and wait for instruction regarding how to proceed.

Report findings of site investigation to incident commander.

Approval granted to proceed with sample collection? Yes No

SAMPLING

Time Sampling was Initiated / Completed: _____ / _____

Implement Sampling Procedures Appropriate for the Hazard Conditions at the Site:

- | | |
|--|--|
| <input type="checkbox"/> Low hazard | <input type="checkbox"/> Chemical hazard |
| <input type="checkbox"/> Radiological hazard | <input type="checkbox"/> Biological hazard |

If the site is characterized as a chemical, radiological, or biological hazard, then special sampling and safety procedures should be followed.

Safety Checklist:

- Do not** eat, drink, or smoke at the site.
- Do not** taste or smell the water samples.
- Do** use the general PPE included in the emergency water sampling kit.
- Avoid** all contact with the water, and flush immediately with clean water in the case of contact.
- Slowly fill** sample bottles to avoid volatilization and aerosolization.
- Minimize** the time that personnel are on site and collecting samples.

General Sampling Guidelines:

- Properly label each sample bottle.
- Carefully flush sample taps prior to sample collection, if applicable.
- Collect samples according to method requirements (e.g., w/o headspace for VOCs).
- Add preservatives or dechlorinating agents as specified.
- Carefully close sample containers and verify that they don't leak.
- Wipe the outside of sample containers with a mild bleach solution if needed.
- Place sample containers into a sealable plastic bag.
- Place samples into an appropriate, rigid shipping container.
- Pack container with frozen ice packs.
- Complete "Sample Documentation Form" (Section 3.8).
- Complete "Chain of Custody Form" (Section 3.9).
- Secure shipping container with custody tape.
- Comply with any other sample security provisions required by participating agencies.

EXITING THE SITE

Time of Site Exit: _____

Site Exit Checklist

- Verify that hatches, locks, etc. are properly secured.
- Remove all samples, equipment, and materials from the site.
- Verify that all samples are in the cooler and properly seal the cooler.
- Remove all PPE at site perimeter.
- Place disposable PPE and other trash into a heavy-duty plastic trash bag.
- Verify that the perimeter has been properly secured before leaving the site.
- Ensure that all documentation has been completed before leaving the site perimeter.
- Comply with any site control measures required by participating agencies.
- Contact incident commander and inform them that the team is leaving the site.

SIGNOFF

3.7 Field Testing Results Form

Date of Field Testing:		Site Name:		Field Tester:			Phone No.	
Parameter	Units	Screen ¹	Meter/Kit ID ²	Testing Location ³	Testing Time ⁴	Results ⁵	Ref. Value ⁶	

1: Screening may be conducted for safety, rapid water testing, or both.
2: Report the unique identifier for the meter or kit used during screening.
3: Report the specific location where the field testing was conducted.
4: Report the specific time at which the test was performed.
5: Results of field testing should include replicate analysis where appropriate.
6. Results should be compared with a reference value, if available, to determine whether or not the levels detected pose a hazard.

3.8 Sample Documentation Form

Collection Date:		Site Name:		Sampler:		Phone No.	
Sample ID	No. Bottles	Sampling Time	Sampling Location	Sample Description	Analysis	Sample Additives ¹	

1: Report preservatives, dechlorinating agents, acid/base for pH adjustment, and any other sample additives.

4 Sample Analysis

4.1 Laboratory Contact List

Analysis	Laboratory	Physical Address	Contact Person	Phone
Pathogens				
Chemical				
Chemical				
Radiological				
CW Agents				

4.2 General Approach for Analysis of Unknowns in Water

4.3 General Classes of Chemicals, Analyte Groups, and Example Contaminants

Chemical types	Analytical Group	Example Contaminants*
Organic	Volatiles	Acetone, acrylonitrile, chloroform, methyl <i>t</i> -butyl ether, tetrachloroethene, toluene,
	Semivolatiles	Organophosphates (e.g., malathion, mevinphos, dichlorvos, etc.), cyanazine, chlorinated insecticides, chlordane, pentachlorophenol
	Non-volatiles	Sodium trifluoroacetates, surfactants
	Carbamate compounds	Aldicarb, carbofuran, oxamyl
	Quaternary nitrogen compounds	Diquat, paraquat
	Pharmaceuticals	Nicotine, illicit drugs
Inorganic	Trace metals	Mercury, lead, cobalt
	Nonmetals	Arsenic salts
	Organometallics	Organomercury compounds
Cyanides	Cyanides	Cyanide salts, cyanogen chloride
Radionuclides	Radiologicals	Cesium-137, Cobalt-60, Strontium-92
CW Agents	Schedule 1 only	(e.g., VX, sarin, nitrogen and sulfur mustards, Lewsites)

* Not every contaminant in a particular analytical group is listed in this column.

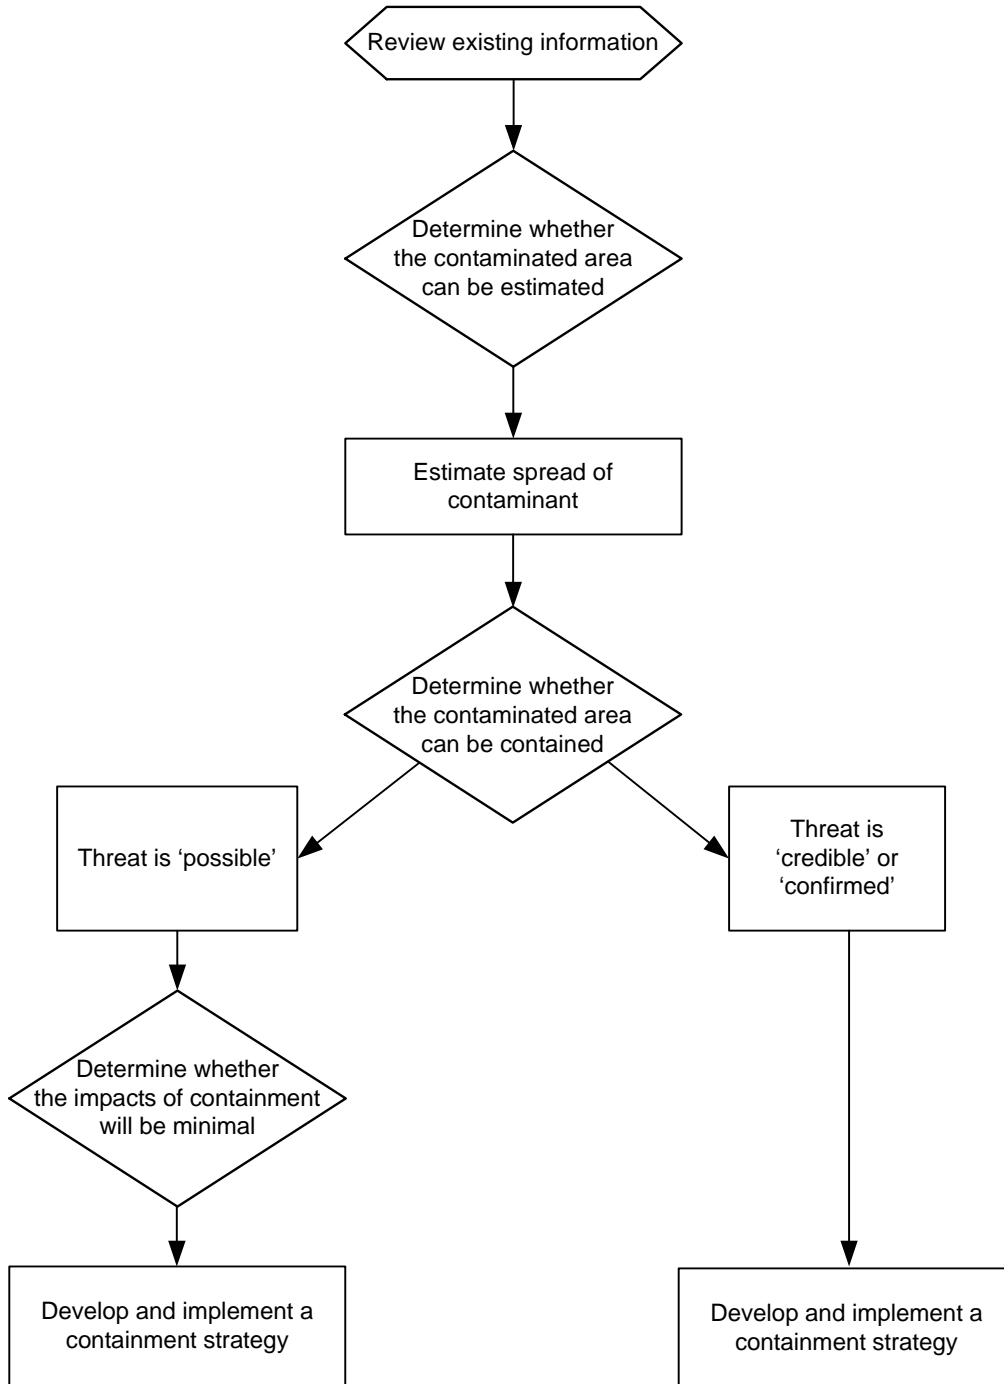

4.4 General Classes of Pathogens, Specific Organisms, and Select Agent Status

Pathogen general class	Organism	Select Agent*
Bacteria (non-spore forming)	<i>Brucella</i> spp.	Yes
	<i>Burkholderia pseudomallerei</i>	Yes
	<i>Campylobacter</i> spp.	
	E. coli 0157:H7	
	<i>Francisella tularensis</i>	Yes
	<i>Salmonella</i> spp.	
	<i>Shigella</i> spp.	
	<i>Vibrio cholerae</i>	
	<i>Yersinia pestis</i>	Yes
Bacteria (spore forming)	<i>Bacillus anthracis</i>	Yes
	<i>Clostridium botulinum</i> A	Yes
Bacteria (Rickettsia)	<i>Coxiella burnetti</i>	Yes
Protozoa	<i>Cryptosporidium parvum</i>	
	<i>Entamoeba histolytica</i>	
	<i>Giardia intestinalis</i>	
	<i>Toxoplasma gondii</i>	
Viruses	Enteroviruses	
	Hepatitis A	
	Hepatitis E	
	Noroviruses	
	Rotavirus	
	Variola	Yes
	VEE	Yes
VHF	Yes

5 Response Actions

5.1 Decision Tree for Containment Options

5.2 Decision Tree for Public Notification

5.3 Contaminant Characterization and Transport Worksheet

INSTRUCTIONS

The purpose of this worksheet is to help organize information that will lead to the identification of the contaminant to facilitate decisions on appropriate operational responses and provide more accurate information for public communication/notification. Contaminant identification will most likely first be a presumptive identification followed by more lengthy procedures to verify the identity of the contaminant. While validated analytical results are typically the most reliable means of contaminant identification, other information collected during the **threat evaluation** and **site characterization** may provide valuable insight regarding the identity of the contaminant.

SITE CHARACTERIZATION/THREAT EVALUATION SUMMARY

Describe the contaminant's odor, if applicable. _____

Describe the *reported* taste of the contaminant, if applicable. _____

Caution: Do NOT taste the water.

What was the physical form of the contaminant?

- | | | |
|--------------------------------------|---------------------------------|-----------------------------------|
| <input type="checkbox"/> Solid | <input type="checkbox"/> Liquid | <input type="checkbox"/> Gas |
| <input type="checkbox"/> Slurry | <input type="checkbox"/> Powder | <input type="checkbox"/> Granules |
| <input type="checkbox"/> Other _____ | | |

What color was the contaminant? _____

Summarize additional information obtained during site characterization/threat warning that is relevant to contaminant identification. _____

Summarize the on-line monitoring data, consumer complaints, or witness accounts that are relevant to contaminant identification. _____

Field Analysis Summary

Summarize the results of the field analysis for the following parameters:

Radiation _____

Chlorine residual _____

pH, conductivity _____

Cyanide _____

Volatile chemicals _____

Chemical weapons _____

Biotoxins _____

Pathogens _____

Other _____

Public Health Information

Have death or disease in the population been reported? Yes No Unknown

Type/symptoms _____

Is there information on unusual sales of pharmaceutical supplies (e.g., diarrhea medication)? _____

Number of people affected _____

Number of fatalities _____

Location/area affected _____

Was an epidemiological investigation conducted? Yes No Unknown

Results _____

Was a clinical investigation conducted? Yes No Unknown

Results _____

Is the contaminant acutely toxic and what are the acute effects? Yes No Unknown

Describe _____

LABORATORY ANALYSIS SUMMARY

Results of analysis _____

Reporting units _____

Analytical method _____

Minimum reporting level _____

Precision (relative standard deviation) _____

QA/QC (e.g., recovery of matrix spikes, standard checks, etc.) _____

Summarize additional information obtained during laboratory analysis that is relevant to contaminant identification.

CONTAMINANT CHARACTERISTICS

What is the class of the contaminant?

- Biological Chemical Radiological
 Unknown _____

Can any conclusions regarding the contaminant properties be made? (Place an 'X' in the appropriate column)

	Yes	No	Unk	Comment/Additional Information
Is the contaminant susceptible to disinfection or chemical oxidation?				
Does the contaminant hydrolyze into less toxic products?				
Does the contaminant hydrolyze into more toxic products?				
What are pKa values for chemicals?				
Is the contaminant water soluble?				
Does the contaminant have a discernable taste, odor, or color?				
Is the contaminant volatile or semi-volatile?				
Does the contaminant impact the pH?				
Does the contaminant impact conductivity?				
Does the contaminant impact other water quality parameters?				
Does the contaminant react with certain disinfectants (i.e., chlorine, chloramines, etc.)?				
What is the contaminant's half life?				

Contaminant Public Health Effect Information

What are the primary routes of exposure?

- Ingestion Inhalation Dermal Contact
 Unknown _____

What are the acute health effects for the exposure routes identified? _____

What is the contaminant's LD₅₀/ID₅₀? _____

What is the length of time to first onset of symptoms after exposure? _____

What are the chronic health effects associated with exposure to the contaminant? _____

Does the contaminant have a method of secondary transmission?

Yes No Unknown

Describe _____

Is an approach available to prevent undesirable health effects from the contaminant?

Yes No Unknown

Describe _____

Are there treatments available for individuals exposed to the contaminant?

Yes No Unknown

Describe _____

Are health standards for the contaminant available?

Yes No Unknown

Describe _____

By which exposure route(s)?

Ingestion Inhalation
 Dermal Ocular

List the levels for each exposure route.

Contaminant Treatment Information

Treatment Types	Could be used to treat the contaminant?	Degradation products formed as a consequence of treatment	Rating of effectiveness (poor, fair, good) of percent effectiveness
Lime softening	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Reverse osmosis	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Standard chlorination	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Enhanced chlorination	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Standard filtration	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Enhanced filtration	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Membrane filtration	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Nanofiltration	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Electrodialysis	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Cation exchange resin	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Anion exchange resin	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Activated alumina	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Chloramine	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Chlorine dioxide	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Standard UV	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Enhanced UV	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Standard ozone	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Enhanced ozone	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Standard GAC	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Enhanced GAC	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Standard air stripping	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Enhanced air stripping	<input type="checkbox"/> Yes <input type="checkbox"/> No		
Other Methods	<input type="checkbox"/> Yes <input type="checkbox"/> No

CONTAMINANT TRANSPORT

Summarize what is known regarding the location of contaminant introduction.

How much material was used _____ (lbs., tons, gal, etc.)

How was it added? Single dose Over time Unknown

Time period of suspected contaminant introduction. _____

Elapsed time. _____

Method of estimating the spread.

- Manual calculations Hydraulic model Water flow analysis
 GIS Field analysis Areas of customer complaints
 Areas of people with health-related symptoms
 Other _____

Estimate the contaminated area. _____

Estimate the population affected. _____

Identify any customers with special needs that are within the affected area.

Critical Care Facilities

- Hospitals
- Nursing Homes
- Other _____

- Clinics
 - Dialysis Centers

5.4 Public Health Response Action Worksheet

INSTRUCTIONS

The purpose of this form is to help organize information to aid in the evaluation of containment options and public notification options. The objectives of public health response actions (operational and public notification) are to prevent or limit public exposure to potentially contaminated water by either restricting further propagation of the contaminant through the distribution system or restricting use of the water through public notification. This worksheet assumes that the "Contaminant Characterization and Transport Worksheet" in Section 5.3 has been completed to the extent possible.

ASSESSMENT OF PUBLIC HEALTH IMPACT

Identity of the contaminant Suspected Known Unknown

Describe _____

Contaminant properties (if known):

Toxic or infectious dose (LD₅₀/ID₅₀): _____

Route of exposure:

Ingestion Inhalation Dermal Contact

Other _____

Symptoms of exposure to high dose: _____

Symptoms of exposure to low dose: _____

Other: _____

EVALUATION OF CONTAINMENT OPTIONS

Describe the location and extent of the contaminated area. _____

Containment options

Valve closures Reverse flow conditions By-pass

Isolate zone(s)

Other _____

Critical equipment within contaminated area

System equipment Zones Pump stations

Hydrants Other _____

Customers with special needs within contaminated area

Critical Care Facilities

Hospitals

Clinics

Nursing Homes

Dialysis Centers

Other _____

Schools

Businesses

Food and Beverage Manufacturers

Commercial Ice Manufacturers

Restaurants

Agricultural Operations

Power Generation Facilities

Other _____

Effectiveness of containment options

- Complete contaminant isolation
- Unknown
- Reduction in spread of contaminant
- Other _____

Is containment expected to provide adequate public health protection?

- Yes
- No
- Unknown

Timeline for implementation of containment options

Containment procedures to begin: _____

Containment procedures to end: _____

EVALUATION OF PUBLIC NOTIFICATION OPTIONS

Is public notification necessary? Yes No

Collaboration Agencies (identified in Public Health Response Plan and Utility’s ERP)

- Public health agencies
- Hospitals/clinics
- Regional Poison Control Center
- Other _____
- Police departments
- Laboratories
- Fire departments
- Drinking water primacy agency

Type of notification (Follow steps shown)

- Is the contaminant known? Yes No
- If no, issue a “Do Not Use” notice.***
- If yes, is boiling effective and advisable? Yes No Unknown
- If yes, issue a “Boil Water” notice.***
- If no or unknown, is there a risk of dermal or inhalation exposure? Yes No Unknown
- If no, issue a “Do Not Drink” notice.***
- If yes or unknown, issue a “Do Not Use” notice.***

Content of public notification

- Has the contamination incident been confirmed? Yes No
- Is the contaminant known? Yes No
- If yes, identity of the contaminant _____
- Characteristics of the contaminant _____
- Restrictions on use _____
- Ingestion exposure Inhalation exposure Dermal exposure
- Exposure symptoms _____
- Medical treatments _____
- Transmission mode (if biological) _____
- Duration of restriction _____
- Alternate water supply _____
- Additional instructions to consumers _____
- Other information about the incident _____
- Other _____

Notification to customers with special needs

- Critical Care Facilities
 - Hospitals
 - Nursing Homes
 - Other _____
- Schools
- Businesses
 - Food and Beverage Manufacturers
 - Restaurants
 - Power Generation Facilities
 - Other _____
- Clinics
- Dialysis Centers
- Commercial Ice Manufacturers
- Agricultural Operations

Are there subpopulations that will be affected at a greater rate than general population?

- Yes No Unknown

Describe _____

Notification to consecutive system.

- Yes No Not Applicable

Method of dissemination

- Broadcast media (radio and television)
- Web site
- Newspaper
- Newsletters (water utility or partner organizations)
- Broadcast phone messages
- Posting in conspicuous locations
- Hand delivery
- Town hall meetings
- Other _____
- Government access channels
- Listserv email
- Letters by mail
- Phone banks
- Broadcast faxes
- Mass distribution through partners
- Door-to-door canvassing
- Conference calls

Notification/restriction timeline

Notification/restriction to begin: _____

Notification/restriction to end: _____

ALTERNATE WATER SUPPLY NEEDS

Is an alternate water supply needed?

- Drinking water Fire fighting
- Other _____

Where can customers obtain the alternate water supply?

- Bottled water provided by local government agencies
- Bottled water provided by local retailers
- Bulk water provided by certified water haulers
- Bulk water transported or provided by military assets
- Bulk water providing by neighboring water utilities
- Water treated at plant and hauled to distribution centers (i.e., in the case of distribution system contamination)
- Other _____

What customers with special needs should be notified of the alternate water supply availability?

Critical Care Facilities

- Hospitals
- Nursing Homes
- Other _____

- Clinics
 - Dialysis Centers
-

Schools

Businesses

- Food and Beverage Manufacturers
- Restaurants
- Power Generation Facilities
- Other _____

- Commercial Ice Manufacturers
 - Agricultural Operations
-

SIGNOFF

6.3 Threat Management Matrices

This section presents a “contamination threat management matrix” for each of the threat warnings described in Section 2.2. Each matrix is a tabular summary that lists the following at the ‘possible,’ ‘credible,’ and ‘confirmatory’ stages of the threat evaluation:

- Information considered during the threat evaluation.
- Factors considered during the threat evaluation.
- Potential response actions.

6.3.1 Security Breach

	THREAT EVALUATION STAGE		
	Possible	Credible	Confirmatory
Information	<ul style="list-style-type: none"> • Location of security breach. • Time of security breach. • Information from alarms. • Observations when security breach was discovered. • Additional details from the threat warning. 	<ul style="list-style-type: none"> • Results of site characterization at location of security breach. • Previous security incidents. • Real time water quality data from the location of security breach. • Input from local law enforcement. 	<ul style="list-style-type: none"> • Results of sample analysis. • Contaminant information. • Results of site characterization at other investigation sites. • Input from primacy agency and public health agency.
Evaluation	<ul style="list-style-type: none"> • Was there an opportunity for contamination? • Has normal operational activity been ruled out? • Have other “harmless” causes been ruled out? 	<ul style="list-style-type: none"> • Do site characterization results reveal signs of contamination? • Is this security breach similar to previous security incidents? • Does other information (e.g., water quality) corroborate threat? • Does law enforcement consider this a credible threat? 	<ul style="list-style-type: none"> • Were unusual contaminants detected during analysis? Do they pose a risk to the public? • Do site characterization results reveal signs of contamination? • Is contamination indicated by a “preponderance of evidence?”
Notifications	<ul style="list-style-type: none"> • Notifications within utility. • Local law enforcement agencies. 	<ul style="list-style-type: none"> • Drinking water primacy agency. • State/local public health agency. • FBI. 	<ul style="list-style-type: none"> • Emergency response agencies. • National Response Center. • Other state and federal assistance providers.
Response	<ul style="list-style-type: none"> • Isolate affected area. • Initiate site characterization. • Estimate spread of suspected contaminant. • Consult external information sources. 	<ul style="list-style-type: none"> • Implement appropriate public health protection measures. • Plan for alternate water supply. • Analyze samples. • Perform site characterization at additional investigation sites. 	<ul style="list-style-type: none"> • Characterize affected area. • Revise public health protection measures as necessary. • Provide alternate water supply. • Plan remediation activities.

Security breaches may be the most common type of threat warning encountered by a utility since they may result from trespassing, vandalism, theft, or failure to re-secure facilities following legitimate activities. The purpose of the threat evaluation under this scenario is to distinguish between these more frequent, yet relatively harmless security breaches, and those few that might be considered ‘credible’ contamination threats.

At the ‘possible’ stage of the threat evaluation, information about the security breach will be available. Specifically, the location of the security breach will be known, which will likely be established as the initial investigation site. Other information may be available from alarms

(including surveillance footage), which may help to establish the time of the security breach. The evaluation at this stage should consider whether or not there was an opportunity for contamination at the site of the security breach. Furthermore, “normal” activity should be considered and investigated at this stage as a potential cause of the security breach (e.g., was a utility crew recently at the site and potentially forgot to re-secure the area?). Potential response actions to a ‘possible’ threat may include isolating areas of the system that could be affected, initiating site characterization activities to collect more information in support of the threat evaluation, and initiating the process to estimate the spread of the suspect water through the system.

Information that may be available at the ‘credible’ stage includes the results of site characterization, an assessment of previous security incidents, real-time water quality data in the area of the security breach, and an assessment of the threat by law enforcement. The evaluation at this stage will consider whether or not signs of contamination were discovered during site characterization, including unusual results from field testing or unusual observations during the site investigation. Consideration should also be given to whether or not the new information available at this stage corroborates the information about the threat. If the threat is determined to be ‘credible,’ response actions may include measures to limit or prevent exposure of the public to the suspect water, such as public notification. Actions taken to continue the investigation at this point may include analysis of samples collected from the site, continued site characterization activities, and an analysis to estimate the spread of the contaminant.

The new information available at the confirmatory stage may include the results from laboratory analysis, including QA/QC data to support the interpretation of the results. If a specific contaminant is identified, then additional information about that contaminant can be used to further evaluate the nature of the threat as well as implications to public health. The findings of continued site characterization activities may also help to confirm the incident. The basis for confirming a contamination incident can be analytical results that identify a specific contaminant or other definitive evidence that a contaminant is present in the water. If a contaminant has been identified, consideration should be given to the health effects associated with exposure to that contaminant. It may be necessary to revise the sampling and analysis plans if a contaminant was not positively identified through laboratory analysis but the threat is still deemed ‘credible.’ Response actions potentially initiated once a contamination incident has been confirmed include characterization of the contaminated area, revision to public health protection measures, provision of alternate water supplies, and planning for remediation and recovery activities.

6.3.2 Witness Account

THREAT EVALUATION STAGE			
	Possible	Credible	Confirmatory
Information	<ul style="list-style-type: none"> • Location of the suspicious activity. • Witness account of the suspicious activity. • Additional details from the threat warning. 	<ul style="list-style-type: none"> • Additional information from the witness. • Results of site characterization at location of suspicious activity. • Previous security incidents. • Real time water quality data from the location of suspicious activity. • Input from local law enforcement. 	<ul style="list-style-type: none"> • Results of sample analysis. • Contaminant information. • Results of site characterization at other investigation sites. • Input from primacy agency and public health agency.
Evaluation	<ul style="list-style-type: none"> • Was there an opportunity for contamination? • Is the witness reliable? • Has normal operational activity been ruled out? • Have other “harmless” causes been ruled out? 	<ul style="list-style-type: none"> • Do site characterization results reveal signs of contamination? • Is the suspicious activity similar to previous security incidents? • Does other information (e.g., water quality) corroborate threat? • Does law enforcement consider this a credible threat? 	<ul style="list-style-type: none"> • Were unusual contaminants detected during analysis? Do they pose a risk to the public? • Do site characterization results reveal signs of contamination? • Is contamination indicated by a “preponderance of evidence?”
Notifications	<ul style="list-style-type: none"> • Notifications within utility. • Local law enforcement. 	<ul style="list-style-type: none"> • Drinking water primacy agency. • State/local public health agency. • FBI. 	<ul style="list-style-type: none"> • Emergency response agencies. • National Response Center. • Other state and federal assistance providers.
Response	<ul style="list-style-type: none"> • Isolate affected area. • Initiate site characterization. • Estimate spread of suspected contaminant. • Consult external information sources. • Interview witness for additional information. 	<ul style="list-style-type: none"> • Implement appropriate public health protection measures. • Plan for alternate water supply. • Analyze samples. • Perform site characterization at additional investigation sites. 	<ul style="list-style-type: none"> • Characterize affected area. • Revise public health protection measures as necessary. • Provide alternate water supply. • Plan remediation activities.

From the perspective of the threat management process, a threat triggered by a witness account is similar to one triggered by a security breach. One of the few significant differences is the use of information collected directly from the witness throughout the evaluation, particularly during the ‘possible’ and ‘credible’ stages of the threat evaluation. The reliability of the witness must be considered when making these determinations, and additional evidence collected during the investigation should be evaluated to determine whether or not it corroborates the witness account.

6.3.3 Direct Notification by Perpetrator

	THREAT EVALUATION STAGE		
	Possible	Credible	Confirmatory
Information	<ul style="list-style-type: none"> • Transcript of phone (or written) threat. • The who, what, where, when, and why of the threat. • Additional details from the threat warning. • Vulnerability assessment. 	<ul style="list-style-type: none"> • Law enforcement assessment. • Primacy agency assessment. • Previous threats at this utility or other utilities. • Results of site characterization at selected investigation sites. • Real time water quality data. • Reports from ISAC, EPA, etc. 	<ul style="list-style-type: none"> • FBI assessment. • Results of sample analysis. • Contaminant information. • Results of site characterization at other investigation sites. • Input from primacy agency and public health agency.
Evaluation	<ul style="list-style-type: none"> • Is the threat feasible? • Has the water already been contaminated? • Is the location known or suspected? • Is the identity of the perpetrator known or suspected? • Have there been personnel problems at the utility? 	<ul style="list-style-type: none"> • Do site characterization results reveal signs of contamination? • Does other information (e.g., water quality) corroborate threat? • Does law enforcement consider this a credible threat? • Does the primacy agency consider this a credible threat? 	<ul style="list-style-type: none"> • Were unusual contaminants detected during analysis? Do they pose a risk to the public? • Do site characterization results reveal signs of contamination? • Is contamination indicated by a “preponderance of evidence?”
Notifications	<ul style="list-style-type: none"> • Notifications within utility. • Local law enforcement. • Drinking water primacy agency. 	<ul style="list-style-type: none"> • FBI. • State/local public health agency. • EPA Criminal Investigation Division. 	<ul style="list-style-type: none"> • Emergency response agencies. • National Response Center. • Other state and federal assistance providers.
Response	<ul style="list-style-type: none"> • Isolate affected area if identified in the threat. • Identify sites and initiate site characterization. • Consult external information sources. • Gather information from law enforcement assessment. 	<ul style="list-style-type: none"> • Implement appropriate public health protection measures. • Plan for alternate water supply. • Analyze samples. • Perform site characterization at additional investigation sites. • Estimate spread of suspected contaminant. 	<ul style="list-style-type: none"> • Characterize affected area. • Revise public health protection measures as necessary. • Provide alternate water supply. • Plan remediation activities.

Threats to contaminate the water made via direct notification by a perpetrator need to be taken seriously. However, the majority of such direct threats are hoaxes that may be intended to cause panic or disruption, gain attention, or fulfill a personal vendetta. Thus, the focus of the threat evaluation for this type of threat warning is to identify any credible threats amongst the larger number of hoax notifications. In any case, direct threats against the water supply should be reported to local law enforcement.

A key source of information that may support the threat evaluation under this scenario is provided directly by the perpetrator making the threat. In the case of a phone threat, it is important to collect information about the threat from the caller to support the threat evaluation. Similarly, a written notification should be carefully reviewed for details about the threat. Additional information collected throughout the investigation should be evaluated against the details of the threat notification, and it corroborates the details of the notification, then the threat is more likely to be deemed ‘credible.’

One of the potential challenges in managing a threat triggered by direct notification from a perpetrator is identification of an investigation site that will be the focus of site characterization activities. Unless a location is named in the threat, it will be necessary to use other information, such as that derived from vulnerability assessments or unusual water quality data/consumer complaints, to identify investigation sites.

6.3.4 Unusual Water Quality or Consumer Complaints

Unusual Water Quality

	THREAT EVALUATION STAGE		
	Possible	Credible	Confirmatory
Information	<ul style="list-style-type: none"> • Unusual water quality data. • Baseline water quality data. • Real time water quality data. • Operational information corresponding to the time of the unusual water quality. 	<ul style="list-style-type: none"> • Results of site characterization at selected investigation sites. • Previous threat warnings triggered by water quality. • Contaminant information. • Reports of consumer complaints. 	<ul style="list-style-type: none"> • Results of sample analysis. • Contaminant information. • Results of site characterization at other investigation sites. • Input from primacy agency and public health agency.
Evaluation	<ul style="list-style-type: none"> • Is the unusual water quality significantly different from an established baseline? • Could operational changes be the cause? • Could changes in source water quality be the cause? • Are there similar results at other monitoring locations? 	<ul style="list-style-type: none"> • Do site characterization results reveal signs of contamination? • Is this unusual data substantial different from other water quality episodes? • Is the unusual data indicative of a specific contaminant? • Are the unusual water quality clustered in a specific area? • Are there any unusual consumer complaints in the area? 	<ul style="list-style-type: none"> • Were unusual contaminants detected during analysis? Do they pose a risk to the public? • Do site characterization results reveal signs of contamination? • Is contamination indicated by a “preponderance of evidence?”
Notifications	<ul style="list-style-type: none"> • Notifications within utility. 	<ul style="list-style-type: none"> • Drinking water primacy agency. • State/local public health agency. • Local law enforcement. • FBI. 	<ul style="list-style-type: none"> • Emergency response agencies. • National Response Center. • Other state and federal assistance providers.
Response	<ul style="list-style-type: none"> • Identify sites and initiate site characterization. • Begin analysis of available water quality data. • Investigate unusual consumer complaints. • Consult external information sources. 	<ul style="list-style-type: none"> • Estimate affected area and isolate if possible. • Implement appropriate public health protection measures. • Plan for alternate water supply. • Analyze samples. • Perform site characterization at additional investigation sites. 	<ul style="list-style-type: none"> • Characterize affected area. • Revise public health protection measures as necessary. • Provide alternate water supply. • Plan remediation activities.

Consumer Complaint

	THREAT EVALUATION STAGE		
	Possible	Credible	Confirmatory
Information	<ul style="list-style-type: none"> • Compilation of consumer complaints, including geographic distribution. • Recent water quality data that may be associated with complaints. • Operational information corresponding to the time of the unusual complaints. 	<ul style="list-style-type: none"> • Results of site characterization at selected investigation sites. • Summary of historic consumer complaints. • Results of consumer interviews. • Contaminant information. 	<ul style="list-style-type: none"> • Results of sample analysis. • Contaminant information. • Results of site characterization at other investigation sites. • Input from primacy agency and public health agency.

Evaluation	<ul style="list-style-type: none"> • Are the complaints unusual? • Could operational changes be the cause? • Could changes in source water quality be the cause? • Are the complaints clustered in a specific area? • Are complaints from habitual complainers? 	<ul style="list-style-type: none"> • Do site characterization results reveal signs of contamination? • Are other consumers in the area experiencing similar water quality? • Are the unusual complaints significantly different from typical complaints? • Are the complaints indicative of a specific contaminant? • Is there anything unusual about the water quality in the area? 	<ul style="list-style-type: none"> • Were unusual contaminants detected during analysis? Do they pose a risk to the public? • Do site characterization results reveal signs of contamination? • Is contamination indicated by a “preponderance of evidence?”
Notifications	<ul style="list-style-type: none"> • Notifications within utility. 	<ul style="list-style-type: none"> • Drinking water primacy agency. • State/local public health agency. • Local law enforcement agency. • FBI. 	<ul style="list-style-type: none"> • Emergency response agencies. • National Response Center. • Other state and federal assistance providers.
Response	<ul style="list-style-type: none"> • Identify sites and initiate site characterization. • Begin analysis of available water quality data. • Interview consumers in area with high numbers of complaints. • Consult external information sources. 	<ul style="list-style-type: none"> • Estimate affected area and isolate if possible. • Implement appropriate public health protection measures. • Plan for alternate water supply. • Analyze samples. • Perform site characterization at additional investigation sites. 	<ul style="list-style-type: none"> • Characterize affected area. • Revise public health protection measures as necessary. • Provide alternate water supply. • Plan remediation activities.

A threat warning arising from unusual water quality data is **significantly different** from the other threat warnings previously discussed and thus should be handled differently during the threat evaluation. In determining whether or not the threat is ‘possible,’ it is necessary to evaluate the anomalous data relative to an established baseline. Furthermore, it is important to consider operational conditions, or potential impacts from changing source water quality or distribution system blending as possible explanations for the unusual water quality or complaint. If the unusual water quality data is determined to be significantly different from the baseline, and cannot be explained by other factors, then t contamination may be considered a possibility.

Presumably, the unusual water quality data will be associated with a particular location in the system, which will help in the identification of investigation sites that will be the focus of site characterization activities. At this stage, it is important to verify the anomalous water quality data through additional testing using independent equipment. For example, if an incident was triggered by a rapid decrease in the free chlorine residual, as detected by online electrochemical monitors, additional testing could be performed with colorimetric field kits to confirm the results. Additional rapid field testing might also help to determine the bounds of the affected area. Furthermore, specific information about particular contaminants should be considered at the ‘credible’ stage as it might be used to identify potential contaminants that would impact the water quality parameter with anomalous readings. For example, contaminants with acidic functional groups might result in reduced pH.

6.3.5 Notification by Public Health

	THREAT EVALUATION STAGE		
	Possible	Credible	Confirmatory
Information	<ul style="list-style-type: none"> • Details of notification from public health sector. • Symptoms of disease and causative agent, if known. • Contaminant information. 	<ul style="list-style-type: none"> • Geographic distribution of disease or death. • Recent water quality and operational data. • Reports of consumer complaints. • Contaminant information. 	<ul style="list-style-type: none"> • Results of site characterization at selected investigation sites. • Results of sample analysis. • Contaminant information. • FBI assessment.
Evaluation	<ul style="list-style-type: none"> • Why is water under investigation as a possible source? • Are the reported symptoms consistent with exposure to the contaminant via water? • If causative agent is known, is it stable in water? 	<ul style="list-style-type: none"> • Is the geographic pattern of exposure consistent with exposure to contaminated water? • Is there a recent occurrence of unusual water quality data or consumer complaints? • Does additional information about the potential contaminant indicate water as a potential source? 	<ul style="list-style-type: none"> • Has the public health agency concluded that water is the cause of the disease or deaths? • Did sample analysis detect the causative agent? • Was another contaminant detected during sample analysis that could be the cause of the disease or deaths?
Notifications	<ul style="list-style-type: none"> • Notifications within utility. • State/local public health agency. • Drinking water primacy agency. 	<ul style="list-style-type: none"> • FBI. • Local and State law enforcement agencies. 	<ul style="list-style-type: none"> • Emergency response agencies. • National Response Center. • Other state and federal assistance providers.
Response	<ul style="list-style-type: none"> • Consult with public health agency and primacy agency. • Consult external information sources. 	<ul style="list-style-type: none"> • Estimate affected area and isolate if possible. • Implement appropriate public health protection measures. • Plan for alternate water supply. • Identify sites and initiate site characterization. • Analyze samples. 	<ul style="list-style-type: none"> • Characterize affected area. • Revise public health protection measures as necessary. • Provide alternate water supply. • Plan remediation activities.

Notification from public health officials regarding a potential water contamination incident is unique in that individuals have been exposed to a harmful substance resulting in illness, disease or death in the population. The threat evaluation in this case may be part of a larger epidemiological investigation to determine the cause of disease. It is critical that the utility work with the appropriate public health officials from the outset, since these officials will likely have information critical for the evaluation. For example, they may know or suspect the causative agent based on clinical information. This knowledge, in conjunction with information about the properties of the contaminant, may indicate whether or not contaminated water is even a possibility. For example, if the causative agent is known to immediately break down into harmless byproducts upon exposure to water, then the possibility of contaminated water might be dismissed.

If water is considered a possible carrier for the contaminant, then further investigation should be conducted to determine if water is the most likely carrier of the contaminant (i.e., analogous to the ‘credible’ stage of the threat evaluation). Information that may help to make this determination will include additional findings from the larger epidemiological investigation, geographic distribution of exposure, recent water quality and operational data, and reports of

consumer complaints. If this additional information indicates that water contamination is likely, response actions would likely include public notification and sampling for the contaminant. The sampling plan developed at this point may start with information about the geographic distribution of exposure; however, consideration must be given to the latency period of the disease, which could be from minutes to weeks, as well as the travel time within the system. The objectives of sampling and analysis at this point would include: 1) confirming the presence of the contaminant in the water; 2) determining if the contaminant is still present; and 3) determining the area affected. If water contamination is confirmed, and the contaminant is still present in the system, it will be necessary to begin planning for remediation and recovery efforts. If the contaminant is not found, extensive sampling would likely be necessary to demonstrate that the contaminant is indeed absent from the system.
