Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

ABSTRACT

A series of studies reviewing naval electronic systems was initiated in order to facilitate the prosecution of problems related to the integration of systems for "Command" purposes. This report enumerates all current and proposed Navy radar systems, itemizing approximately 25 operational and technical characteristics. A bar graph showing frequency relationships of these radars is also included.

PROBLEM STATUS

This is an interim report on one phase of the problem; work is continuing.

AUTHORIZATION

NRL Problem R07-25R
NR 507-250

U. S. NAVY RADAR SYSTEMS SURVEY

PREFACE

This survey is one in a series of studies to facilitate the prosecution of Part II* of NRL Problem 39R07-25R. Not only those systems presently installed but also all systems proposals under consideration and all developments in progress are included in the survey, thereby providing characteristics of surface, sub-surface, airborne, amphibious, mobile, and landbased equipments. Only by this means was it possible to assure consideration of all available equipments and techniques.

Initially it was necessary to establish a subject classification by means of which the many kinds of electronic equipments could be grouped. A review of library systems including Dewey Decimal, filing systems, the subject breakdown used by the RDB committee on Electronics, and others did not disclose any classification readily adaptable to electronic equipment. Appendix A shows the breakdown which has been developed for use with the project. Admittedly, the classification of a number of equipments under certain fields is controversial, but this listing was prepared principally as a means of organizing electronics into compartments of manageable size, and of permitting like systems to be grouped together.

Radar was selected as the first major field to be reviewed. For purposes of this survey, Radar is defined to cover search and weapon control radars, indicators, and trainers. Other closely related subjects will be treated under their respective fields as shown in Appendix A. For example, radars which are employed in landing systems will be surveyed under the field of Navigation.

Excellent cooperation and courtesy were encountered in contacts with personnel in the various material bureaus of the Navy Department. A large amount of data which was entirely adequate for this project was obtained directly from charts that had been previously prepared by these bureaus. The presentation of data was reviewed by the activities which supplied the respective information so that the charts contained in this survey should be accurate as of April 1949.

Appendix B lists 15 sources of information that are referred to numerically on each chart, and in addition shows examples of NRL problem assignments and RDB project cards. Appendix C is a bar graph showing the disposition of Navy radars in the frequency

**Part II of this problem was identified in paragraph 6 of NRL Letter Report 3950-18/49 (3954) Ser., 6981 dtd May 10, 1949, to ONR, "Electronics; Combat Command Electronic Systems, Problem 39R07-25R; Interim report on; forwarding of," (Secret).*

spectrum. Radars are grouped on the graph according to their use, and those having a common frequency coverage are combined and so indicated.

Although every effort has been made to assure accurate and complete data, the authors invite any corrections or additions of new material the reader may be able to provide.

RADARS

REMARKS	MODEL
Rectangular Scan. Obsolescent.	AN/APS-3
*PRS 1000 for 4-20 50-mile ranges and 600 for 100-mile ranges. A forward looking carrier based air search for bomb rack mounting.	AN/APS-4
Obsolescent. Spiral scan covers a conical volume of 120°.	AN/APS-6, 6A
For evaluation.	AN/APS-10
Heavy patrol aircraft.	AN/APS-15, 15A, 15B
Replaces APS-4, 6. For all carrier based aircraft nightfighters.	AN/APS-19, 19A
Also used as ASW Radar.	AN/APS-20, 20A
Carrier and patrol LTA.	AN/APS-20B
Includes computer for 20 MM Guns, rockets, and bombs. (Glide bombing) Tentative characteristics. Computer similar to a FCS Mk 11.	AN/APS-25
Not intended for surface search.	AN/APS-29
Forward search only. For carrier based aircraft.	AN/APS-31
For medium patrol aircraft.	AN/APS-33
MTI and G.P.I.	AN/APS-41
Transport radar	AN/APS-42
	AN/APS-44
Long Range, high power search intercept gun	AN/APS-21
aiming and tail warning for two place fighters.	AN/APS-28
Includes computer for 20 MM. Special computer for AN/APG-26.	AN/APG-26

REMARKS	MODEL
Provides an AEW beacon system used with AN/APS-20A	AN/APR-12(XN)
For attack and long range bombers. Electronic computer.	AN/APB-3
Circular horn feed with polystyrene lens. Computer AFCS 1,4,6,7,8,11.	AN/APG-18
Supplies range to MK18 and MK23. Computing gun sights.	AN/APG-22
For tail and nose turret installation. Special computer.	AN/APG-25(XN-1)
Tail turret installation. Special computer.	AN/APG-25(XN-2)
Wing tip and nose turret installation. Special computer.	AN/APG-25(XN-3)
Special Computer.	AN/APG-25(XN-4)
AFCS-1, 4, 6, 7, 9, 11 computer.	AN/APG-30
Beam rider system for LARK XSAMN-4 and SKY LARK XSAMN-2. 2 Receivers only, works with AN/SPQ-2.	AN/APW-4
Bombing equipment for carrier based planes.	AN/ASB-1
- - -	--
- - -	--
- - -	--
- - -	--
Spiral beam rider guidance system. Search auto track and dual pulse per quadrant guidance references.	--
Detection of submerged submarines from aircraft.	--
Mod. AN/SPS-2. Rapid scan surface search.	--

REMARKS	MODEL
Experimental Automatic Tracking Radar	Mk 7 Mk 7 Mod 1
	Mk 8 Mod 2
Mk 8 Mod 2 converted from S-band to X-band	Mk 8 Mod 3
A and F Spot Error Indicator Scopes	Mk 12 Mod 1
	Mk 13
Used with R.E. Mk 12 to provide accurate elevation data below 10°	Mk 22 Mod 1
Used with Computer Mk 1 in GFCS Mk 37	Mk 25 Mod 2
Used with Gun Fire Control System Mk 67	Mk 25 Mod 3
Special purpose missile guidance radar for Terrier; beacon facilities; dual transmitters and dual receiver channels; guidance by frequency modulation of repetition rate	Mk 25 Mod 6
6"/47 and 8"/55 M.B. Turret Radar; also, in BB fire control tower	Mk 27 Mod 0,2
Used with GFCS Mk 63; antenna reflector mounted on gun	Mk 28, Mod 2
Interim radar for GFCS Mk 57. Currently being replaced by R.E. Mk 39 Mod 3	Mk 29 Mod 2
Mod 2 controls 40mm guns; Mod 6 - 3"/50 guns	Mk 34 Mod 2,6
Mods 13 and 14 have acquisition features the same as R.E. Mk 39 Mod 2. Mods determined by type of guns controlled.	Mk 34 Mod 3,4, 7-14
	Mk 35 Mod 2

REMARKS	MODEL
Mod 0, 1 and 2 not installed. One Mod 4 on USS MISSISSIPPI	Mk 39 Mod 3,4
5" PPI, 5" B or L	Mk 44
Automatic tracking in bearing and elevation - Aided tracking in range	Mk 47 Mod 0,1
Antenna reflector mounted on gun mount; slew, tracking and acceleration rates dependent on gun mount drive characteristics	AN/SPG-48
Double RF head for look-thorough. Beacon tracking	AN/SPG-49
Semi-passive homing SKYLARK; AN/SPG-2 used as illuminating source	AN/DPN-7
Transponder type pulse beacon	AN/APN-4(XN)
For GM and P/A tracking	AN/APN-62
Modified SP to include stabilization. Maximum ranges to employ beacons in missiles	AN/SPQ-2
Two receivers. Now AN/MPQ-5	SP-1M LARK
Permits tracking of KUV-1 Missile (LOON). For submarine installation	SV-1
Simultaneous lobing. Angle information is obtained from each individual pulse. May be used as gun director and missile guidance.	RE Mk 50
For use with AN/MPS-4(XN)	SP-1Ma
Modified F.C. Radar Mk 25 Mod 2. Has AFC for beacon signal and provides for command transmission via P.R.F.

REMARKS	MODEL
	AN/APA *1A
	AN/APA -32
Ground stabilization and plotting system.	AN/APA -53
Continuously variable range from 200 to 1 mile.	AN/SPA -4
Provides remote PPI and TDT in director. Slave to TDT MK 11 or VJ. PD panel combination.	MK - 3 Mod 2
Selector switch permits selection of any one of 5 radars.	VC VC - 1
Splash proof. May be used on open bridge. Portable. VD-1 has 10 mile range.	VD to VD-2
	VE VE-1
Similar to VE-1 except uses 12" CRT instead of 7".	VE-1A
Surface plotting may be done directly on plotting surfaces. Mod. VF for 400 cycles. VF-1, VF-1A cancelled.	VF
10 or 20 mile sector of overall range may be expanded to fill entire scope. VG-2 has DRT in place of chart table.	VG to VG-3
East-West, North-South off-centering. Will work with AEW or DRA. VH-A is mod. VH for 400 cycles.	VH
Mod. VK. Independent instantaneous ranging strobe, electronic cursor. VJ-A is mod. VJ for 400 cycles.	VJ VJa
Deck mounted. Has provision for manual off-centering, and will accept tracking ing. from DRA or AEW.	VK
Mechanically redesigned VK. Will work with AEW. Off-centering, 40 miles on 4 to 80 mile scale	VK-2
Height indicator. 5 to 1 vertical expansion.	VL
Uses 2 different color PPI displays optically superimposed. IFF or RKI.	VM
Similar to VK. Off-centering to 200 miles. 2 video channels for use with MK-5 IFF. Rubber range scales.	VN

REMARKS	INDICATORS
Introduction of printed or written information into video channels. Never produced- closed.	VO
Permits continuous presentation on a 5 ft vertical screen at a distance of 7 ft within 6 seconds.	VP
Used with AN/SPA-4 as navigational aid.	VPR
EXPerimental VH.	X-VH
Increases range of VF to 100 miles	VF-2
To convert low intensity scan to bright PPI raster scan by graphechon techniques. VG indicator.	VG-1A
Used with hemispherical scan radars.	---
To increase quantity of presented data. Plan to use 2-gun CRT to permit simultaneous display without time sharing.	---
To evaluate 3 dimensional information.	---
---	---
Breadboard delivered by RCA to NRL 3930	---
Used by Marines in amphibious landings.	---
Video mapping and projected PPI.	---
To provide transfer of radar target information to the acquiring radar in fire control systems.	---
---	---

OUTPUT DATA

1. Target Bearing (1 X Synchro)
2. Target Range (72,000 and 1,296,000 yds/rev)
3. Target Elevation (2 X Synchro)

1. Search Radar, Video and Trigger
 2. Antenna Bearing (1 X Synchro)
 3. Ships Heading (1 X Synchro)
 4. Target Bearing (1 X Synchro)
 5. Target Range (synchro - 72000 yds/rev
- To any or all of six director stations

- Target Bearing (1 X Synchro)
Target Range (synchro - 72000 yds/rev)
Target Elevation (2 X Synchro)

- Target Bearing (1 X synchro)
Target Range (synchro - 72000 yds/rev)
- To one station

REMARKS	MODEL
Main battery, for use in shore bombardment. Used on CI and above. F.C. computer only. To be replaced by plotter Mk 10.	Mk 1 Mod 0
High speed T.D.S. - Breadboard 3-coordinate T.D. display. Elevation is indicated in color. Converts PPI and IFF display to roster scan.	Mk 2
Converts information referred to one ship to the same elements referred to another ship. Breadboard model only. (1) Should be redesigned before production.	Mk 3 Mod 0
Remote PPI indicator. Incorporates six switching positions to select proper director. (12 in use.)	Mk 11 Mod 1
Target information for torpedo and gun. Optical - Bearing only. Receives automatic track data. For DD, DDE, and DDK.	Mk 14
Optical scope tied to synchros which transmit range and estimated bearing to Air Defense positions (sky forward and aft). Developmental only.	Mk 15
Aided tracking unit for use on VF PPI. (one experimental unit only).	--
Provides remote PPI and T.D.T. in director. Slave to T.D.T. Mk 11 or VJ. P.D. panel combination.	Mk 3 Mod 2
