
COMMAND & CONTROL AS AN OPERATIONAL FUNCTION OF INFORMATION WARFARE

PRESENTED BY:

Raymond J. Curts, PhD

Douglas E. Campbell, PhD

PRESENTED TO:

2004 Command and Control Research and Technology Symposium

San Diego, CA

15 - 17 June 2004

Report Documentation Page

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

1. REPORT DATE JUN 2004		2. REPORT TYPE		3. DATES COVERED 00-00-2004 to 00-00-2004	
4. TITLE AND SUBTITLE Command & Control As An Operational Function of Information Warfare				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Syneca Research Group Inc,600 Maryland Avenue SW Suite 800 West, Washington,DC,20024				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES The original document contains color images.					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT	18. NUMBER OF PAGES 32	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

- **Introduction / Background**
- **The IW Vision**
- **Considerations**
- **Functional Relationships**
- **IW Architecture**
- **Summary**
- **Future Initiatives**

*“**Industrialization** led to attritional warfare by massive armies. **Mechanization** led to maneuver predominated by tanks. **The information revolution** implies the rise of cyberwar, in which neither mass nor mobility will decide outcomes; instead, the side that knows more, that can disperse the fog of war yet enshroud an adversary in it, will enjoy decisive advantages.”*

--John Arquilla and David Ronfelt, RAND

- Considering all that has been done over the past ten years or so ...
 - Why is the process of identifying and developing IT architectures so difficult, costly and time **CONSUMING**?
 - Why are we still struggling to:
 - ◆ **define** what exactly constitutes an architecture;
 - ◆ **identify** what type of architectures do and/or should exist;
 - ◆ **categorize** architecture concepts; and,
 - ◆ **develop** a long range plan for architecture development and maintenance?

A Decade+ of Events

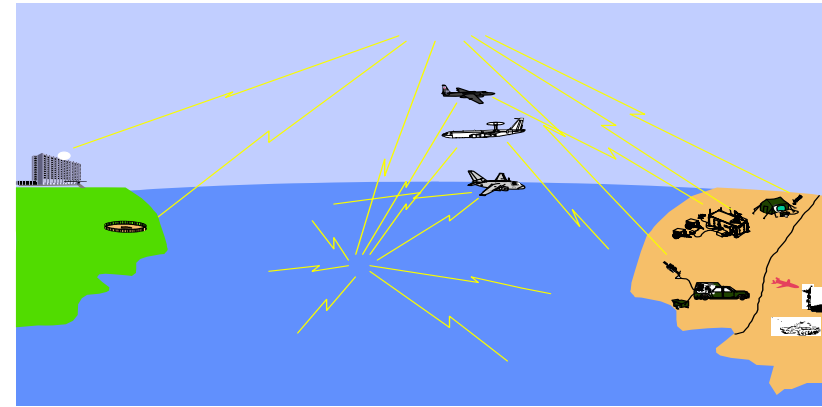

- **Introduction / Background**
- **The IW Vision**
- **Considerations**
- **Functional Relationships**
- **IW Architecture**
- **Summary**
- **Future Initiatives**

Information Superiority through the availability and use of the right information, at the right place, at the right time, to all decision makers, while denying that information to the enemy.

At the conceptual level:

“IW consists of all efforts to control, exploit, or deny an adversary’s capability to collect, process, store, display, and distribute information, while at the same time preventing the enemy from doing the same.” [Garigue, 1995]

Within the Department of Defense (DoD) IW is a fully integrated, embedded, joint, interoperable core set of functional modules building upon the infrastructure and technical capabilities of existing systems augmented as necessary with new / enhanced functionality provided by advanced technologies that fully satisfy validated operational requirements providing a forward deployed, Joint IO capability.

John Frederick Charles Fuller (1876-1966)

"Our present theory is to destroy personnel, our new theory should be to destroy command. Not after the enemy's personnel has been disorganized, but before it has been attacked, so that it may be found in a state of disorganization when attacked."

-Extracted from J.F.C. Fuller, Memorandum

"Strategic Paralysis as the Object of the Decisive Attack"

May 1918

- **Introduction / Background**
- **The IW Vision**
- **Considerations**
- **Functional Relationships**
- **IW Architecture**
- **Summary**
- **Future Initiatives**

“Information Warfare is a national, strategic concern. Our economy, national life and military capabilities are very dependent upon information - information often vulnerable to exploitation or disruption.”

[DSBIAB, 1994]

The Defense Science Board (DSB) twice commented that DoD needs a highly placed C4I Architect and *“... a coordinated DoD approach with standardized guidelines that would be applicable to all Services.”*

[DSBGS, 1993] and [DSBR, 1994]

- Terminology – IW/IO/C2W, ???
- IW, the segment of IO dealing with conflict, provides enhanced capability in the areas of mission planning and preparation, C4I support, analysis, information security and attack.
- As defined by the Roles and Missions Commission IW includes, “*Offensive and defensive measures aimed at controlling, disrupting, or destroying an adversary’s information flow while protecting one’s own.*” [RMC, 1995]

Information Considerations

- **Introduction / Background**
- **The IW Vision**
- **Considerations**
- **Functional Relationships**
- **IW Architecture**
- **Summary**
- **Future Initiatives**

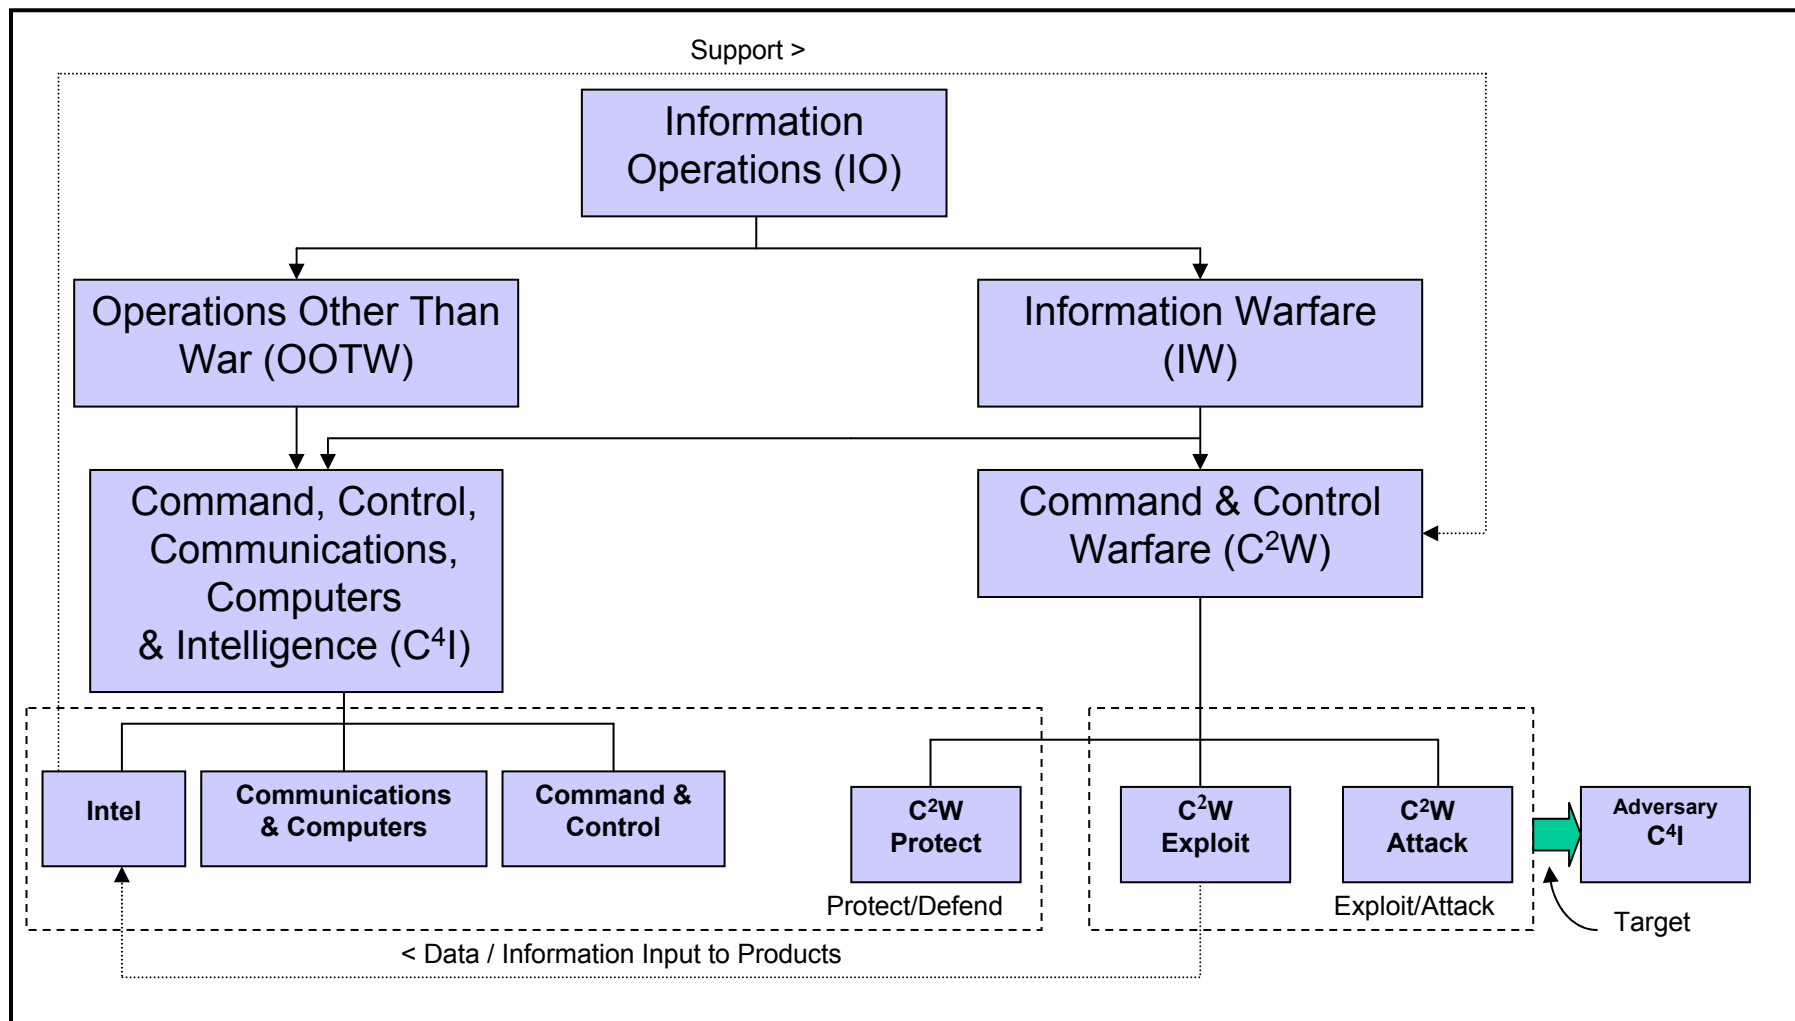

Alfred Thayer Mahan (1840-1914)

*“Communications dominate war;
they are the most important single
element in strategy.”*

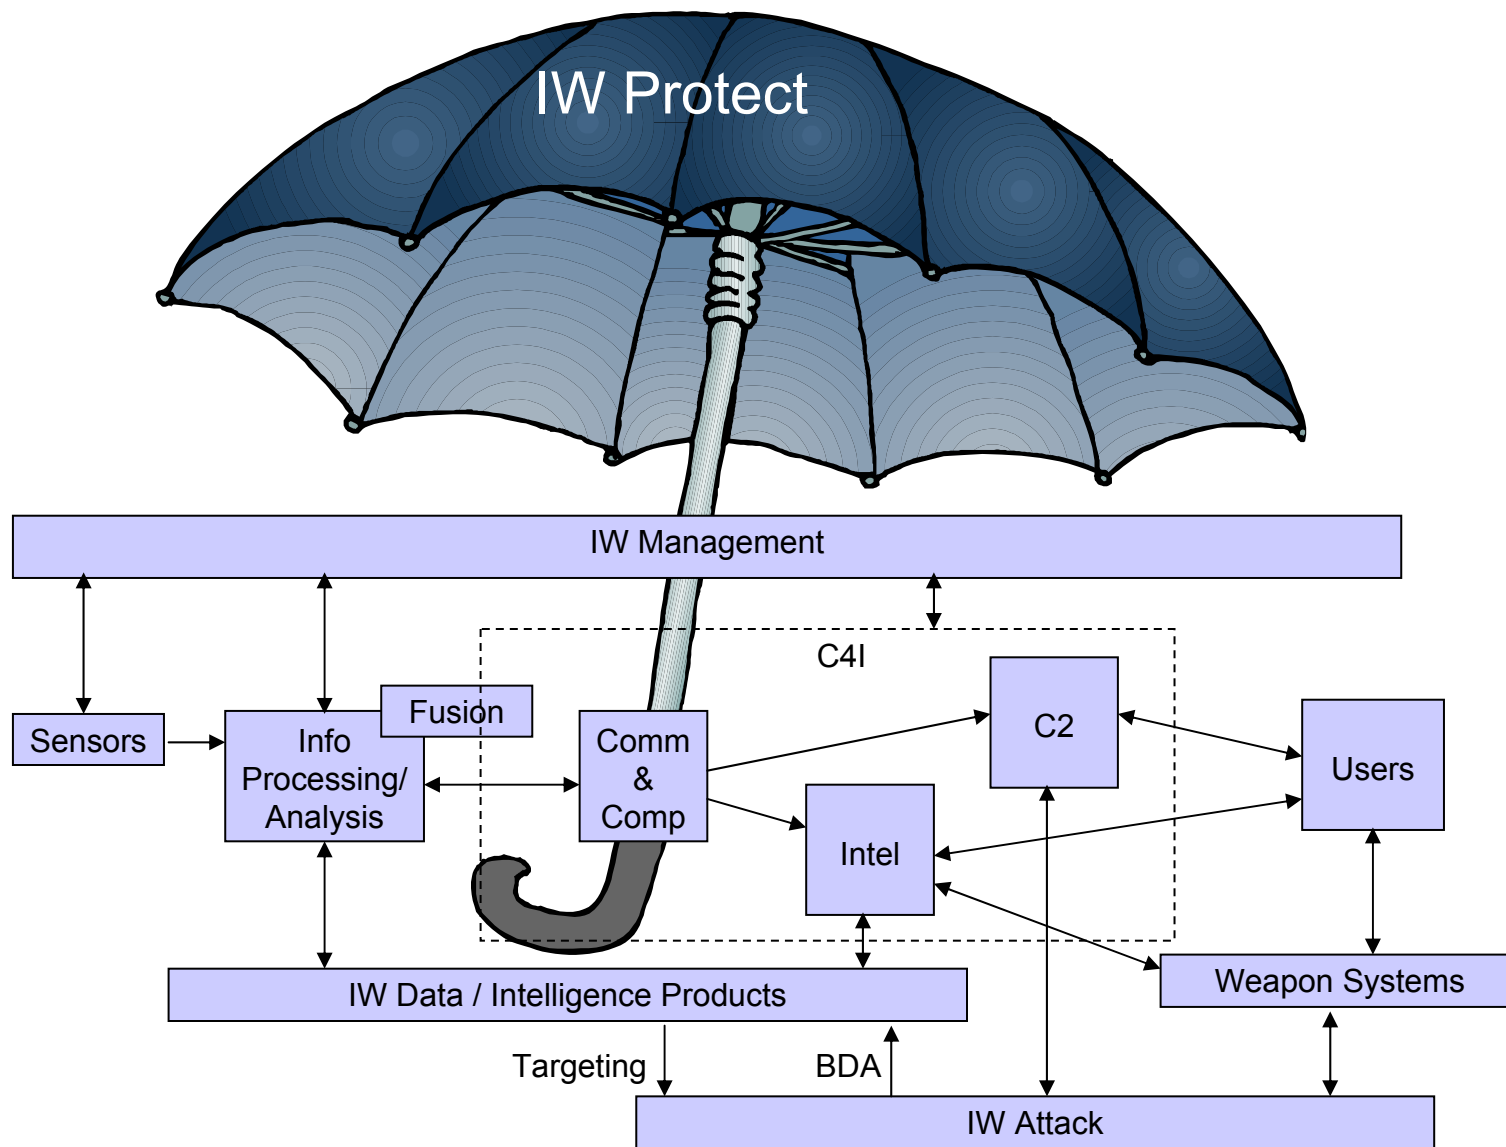

Mahan (1907)

Functional Relationships

- “**Information-based Warfare** is an approach to armed conflict focusing on **the management and use of information** in all its forms and at all levels to achieve a decisive military advantage especially in the joint and combined environment.
- **Information-based Warfare** is both **offensive and defensive** in nature—ranging from measures that prohibit the enemy from exploiting information to corresponding measures to assure the integrity, availability, and interoperability of friendly information assets.
- While ultimately military in nature, **Information-based Warfare** is also waged in political, economic, and social arenas and is **applicable over the entire national security continuum** from peace to war and from ‘tooth to tail.’
- Finally, **Information-based Warfare** focuses on the **command and control needs** of the commander by employing state-of-the-art information technology such as synthetic environments to dominate the battlefield.”

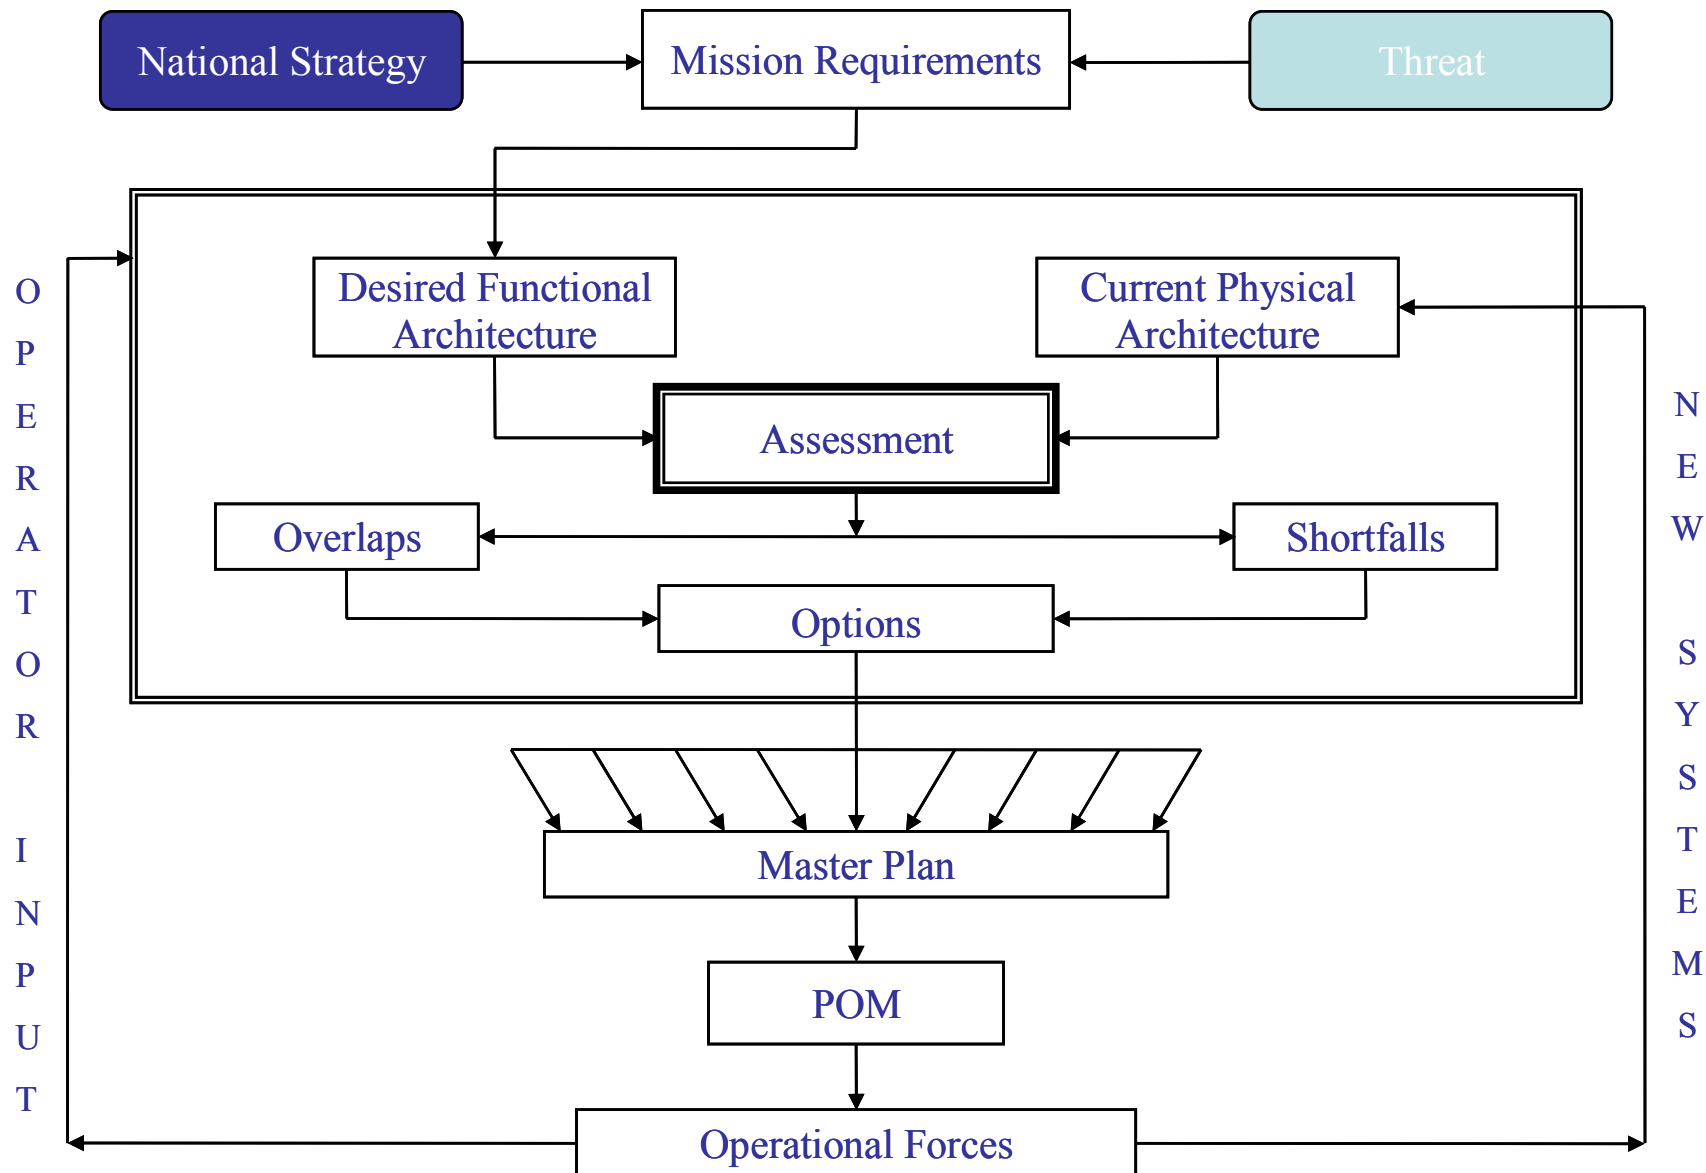

Hutcherson (1994)

Architecture Process

Assessment Process

The 8 Goals for Data Management

Data must be managed such that it can exist in a system that will:

1. expand the bandwidth by 100 to 1000 times for multimedia information delivery;
2. provide smart push and warrior pull via an information grid;

3. provide information management technology to augment the various services and tactical networks to include:
 - data transport services (error recovery, levels of service, instrumentation, and diagnostics),
 - information security, integrated database query and retrieval (repository mediation, information brokering, filtering, profiling, storage management, and data linking), and
 - tools for commanders to enforce an information policy;

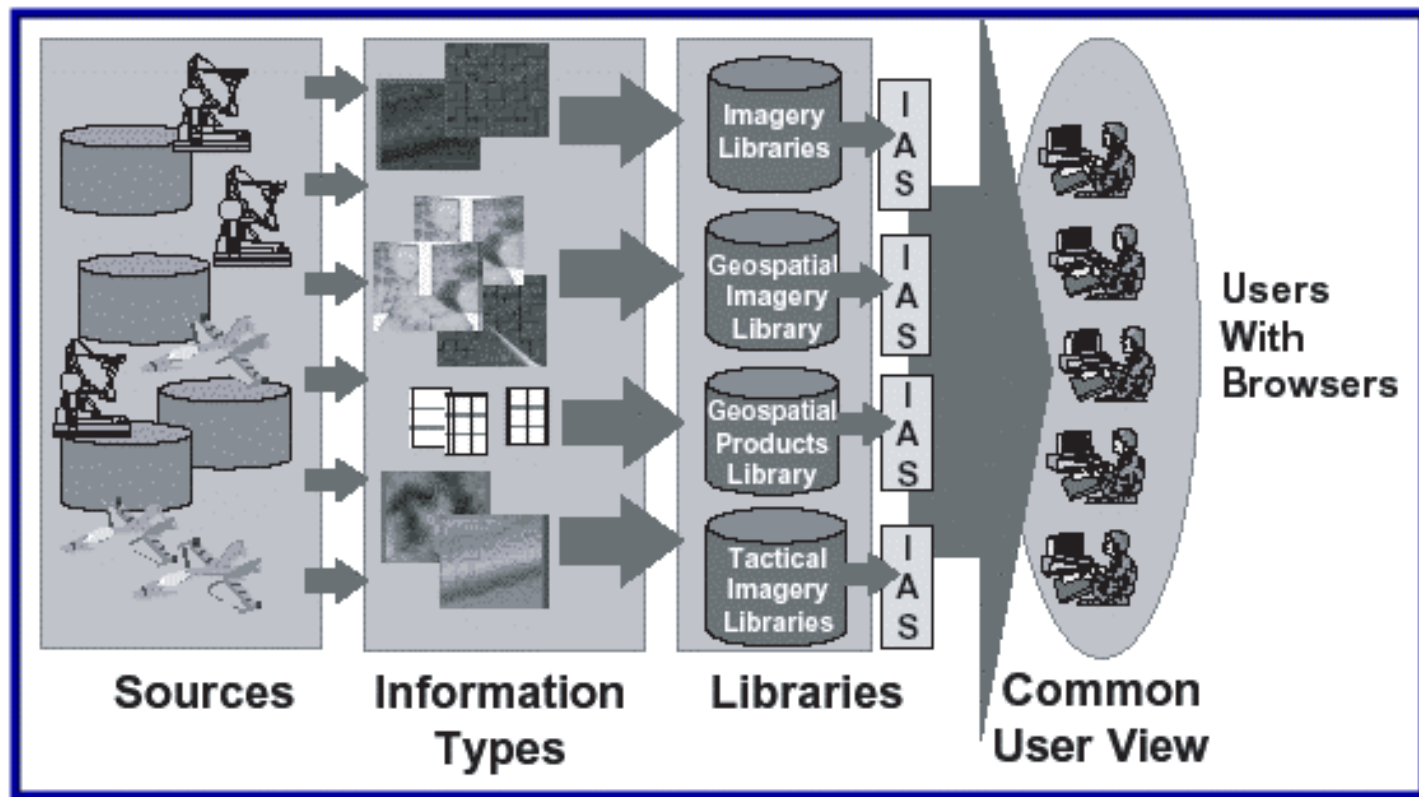

The 8 Goals for Data Management (cont.)

4. use the data accessed via the IDS to create a graphical depiction of the current situation which is consistent across Services and up and down echelon;
5. allow the user to tailor his view of the battlespace;
6. provide the necessary hardware and software for warfighter workstations to allow them to receive, request, store, manipulate, and view integrated information;

The 8 Goals for Data Management (cont.)

7. provide a capability which minimizes life cycle cost; and
8. deliver a system which contains the safeguards necessary to operate in an active information warfare environment.

IA, Interoperability & Architecture

- **Introduction / Background**
- **The IW Vision**
- **Considerations**
- **Functional Relationships**
- **IW Architecture**
- **Summary**
- **Future Initiatives**

- ✓ **Data** - the competition for information is as old as the first conflict. It involves increasing and protecting our own store of information while limiting and penetrating the adversary's. As it pertains to C2 as an operational function of information warfare - targeting the enemy's information functions, while protecting ours, with the intent of degrading his will or capability to fight.
- ✓ **Management** – e.g., advanced battlefield management (e.g., using information and information systems to provide information on which to base military decisions when prosecuting a war); and Risk Management – for the risks potentially associated with information and information technology (IT) to be identified and managed cost-effectively, it is essential that the process of analyzing and assessing risk is well understood by all parties and executed on a timely basis.
- ✓ **Process** - Information Warfare processes are making dramatic changes in how we fight wars. The process must allow a commander's vision and view of the battlespace to be shared at the lowest possible level. From the unique perspectives of soldiers, sailors, marines and airmen, the process must forge a common understanding of how to use information warfare to enhance joint C2 warfighting capabilities. The Global Information Grid (GIG) is an example of such a process.

- **Introduction / Background**
- **The IW Vision**
- **Considerations**
- **Functional Relationships**
- **IW Architecture**
- **Summary**
- **Future Initiatives**

1. How can we enable all appropriate C2 decision makers to successfully achieve information dominance?
2. How can IW opportunities and risks be considered in the design, acquisition, accreditation, and employment of information-based systems for the DoD?
3. How can a common tactical picture be readily available to those who need it which, at one level or another, is virtually everyone?

Future CCRTS Work (Cont.)

4. How can we find a way to make architecture development and analysis a viable effort over the entire life cycle rather than short-lived initiatives?

Publius Syrus (42 B.C.)

It is a bad plan
that admits of no
modification.
