14. ABSTRACT This bibliography on the geographical, water and geological information of Guadalcanal was begun to fill a request for current information needed for the forensics recovery of the bodies of the US Marines of the Lt Col. Frank B. Goettge Reconnaissance patrol that was ambushed in August 1942. Part I of this report is a bibliography of the geology, geography and natural history of the island. Part II is a bibliography on the history of the island, including accounts of the Battle of Guadalcanal. This bibliography brings together selected citations from a variety of different cartographic, geographical, geological and hydrological resources and a number of specialized library collections. Most of the citations have location information on where these items can be located and either used on site, or borrowed through inter-library loan, or where copies of the items can be purchased from the originating source, or through commercial document delivery services.

Introduction

During Memorial Day weekend of 2007, the US Army Corps of Engineer's Topographic Engineering Center (TEC), part of the Engineer Research and Development Center (ERDC), was asked by the US Marine Corps to supply period and modern maps, imagery and current geological data about the island of Guadalcanal in the Solomons. The data are to support the expedition team of Doug Drumheller¹, John Innes² and Tom McLeod³, who will search for the bodies of the missing Goettge Reconnaissance Patrol. They will also search for the remains of twenty year-old Pvt. Robert J. Budd and eighteen year old Pvt. Thomas W. Phillips, two marines who were both killed in action on Guadalcanal on August 27, 1942.

As stated in their preliminary report, "The purpose of the 2007 Guadalcanal Expedition was to survey two potential MIA August 1942 recovery areas. The main project area involves a search for the remains of the massacred Goettge Patrol. The second project is to locate the Budd/Phillips MIA remains located west of Honiara. Successful surveys were made of both areas."⁴

Lieutenant Colonel Frank B. Goettge led a reconnaissance patrol of twenty-five US Marines on the island of Guadalcanal on August 12, 1942. The purpose of the mission was to investigate allegations that a number of Japanese forces were willing to surrender to the Americans. The patrol was ambushed, and only three survivors made it back to the American base at Henderson Field.

This doomed patrol was described in one book, "First Offensive: The Marine Campaign for Guadalcanal", when the author, Henry I. Shaw, Jr., stated: "A captured enemy naval rating, taken in the constant patrolling to the west of the perimeter, indicated that a Japanese group wanted to surrender near the village of Kokumbona, seven miles west of the Matanikau. This was the area that Lieutenant Colonel Goettge considered held most of the enemy troops who had fled the airfield. On the night of 12 August, a reconnaissance patrol of 25 men led by Goettge himself

Col. Frank B. Goettge with captured Japanese currency on 11 August 1942. He was killed in action the following night. USMC photo by Thayer Soule.

¹ In 1994, Mr. Drumheller retired after a 30-year career with Westinghouse Electric Corporation. Mr. Drumheller held engineering and management positions in electronics, manufacturing, systems engineering and project management. After retirement, he started and operated a small business-consulting firm, which provided computer and business systems to restaurants and small retail businesses. Mr. Drumheller currently spends his time supporting WW-II MIA Pacific recovery activities with historical research, photography, plus computing and mapping skills.

² Mr. Innes is a native of Brisbane, Australia; however, he resides on Guadalcanal nine months a year where he operates a company supplying computer hardware and software to the Solomon Island government. John spends his spare time searching for MIAs, conducting WW-II tours and preserving the history of Guadalcanal. Historians recognize John as, "Mr. Guadalcanal". The team is fortunate to have a man of John's caliber on site to coordinate the recovery activities, without John, recoveries would be virtually impossible. In 2005, Mr. Innes had the honor of escorting retired Marine Corps Commandant Mike Hagee during his visit to Guadalcanal.

³ Mr. McLeod is a noted author, WW-II Pacific historian, staff writer for the Old Breed News, and Historian for the 1st Marine Division Association. Tom owns and operates a research museum, the "Museum of the Pacific" (www.museumofthepacific.com), in Texas. Besides his many other activities he is an advisor to the Marine Corps Museum and Marine Corps University. Mr. McLeod appears regularly on the History, Discovery and Military channels and has served as an advisor to movie production companies such as Eastwood Productions, Flight 33-TV and Greystone Productions. Tom regularly leads historical tours to Guadalcanal and New Guinea searching for and recovering Marine Corps MIAs. He is a member of The Company of Military Historians.

⁴ Doug Drumheller. September 5, 2007. Private correspondence.

left the perimeter by landing craft. The patrol landed near its objective, was ambushed, and virtually wiped out. Only three men managed to swim and wade back to the Marine lines. The bodies of the other members of the patrol were never found. To this day, the fate of the Goettge patrol continues to intrigue researchers.”⁵

The fate of the Americans left behind is still unknown today. The Japanese forces who buried the bodies were themselves killed during the ensuing battle of Guadalcanal, and the location of the graves have never been discovered.

The members of the 2007 Guadalcanal Expedition were able to further describe what they have learned from their research about the fate of the missing Goettge Patrol. Combing through the reports and communications from the period in different archives and libraries, they are able to piece together some of the conflicting accounts of the conflict. In their report, they state:

United States Marines landed on Guadalcanal, in the Solomon Islands, on 7 August 1942, which began a four-year trek to Tokyo to revenge a Japanese surprise attack on Pearl Harbor. The 1st Marine Division’s Intelligence Section received reports on 10 August indicating that a group of Japanese construction workers, on the west bank of the Mataniko River, wanted to surrender due to a lack of food and medicine. Colonel Frank Goettge, Division Chief of Intelligence, received permission to land a 25-man humanitarian patrol west of the Mataniko River.

Left to right: MajGen Alexander Vandegrift, command officer; LtCol Gerald C. Thomas, operations officer; LtCol Randolph McC. Pate, logistic officer; LtCol Frank G. Goettge, intelligence officer; and Col William Capers James, chief of staff. National Archives.

Colonel Goettge’s Patrol boarded a landing craft and departed the Marine perimeter around 7:30 PM on 12 August. Unable to see landmarks because of the moonless pitch-black night, Colonel Goettge decided to go ashore and bivouac until first light. He

also ordered the landing craft to return to the perimeter. Unknown to the patrol, freshly landed Japanese troops had established a beachhead defense in the landing area. The Japanese massacred the Goettge Patrol, except for three enlisted men ordered to swim to Marine lines for help.

Japanese records indicate they beheaded five Marines and disposed of their remains in the ocean. The Japanese buried the remaining seventeen Marines, along with seven Japanese, in four trenches. On 18 August, the Marines reconnoitered the area finding visual evidence of the ill-fated Goettge Patrol. Due to increasing Japanese forces, headquarters ordered the reconnaissance patrol to return to base after destroying the area but without an extensive survey of the burial location.

The Mataniko River area became a major fighting area during the period of September to December 1942. To date, there are no records indicating recover of any remains of any member of the patrol. One of the remaining mysteries of WW-II is the disappearance of the ill-fated Goettge Patrol.

There have been several attempts to locate the patrol remains during the past twenty years... Over the last decade scientists and technologists have developed

⁵ Shaw, Henry I. 1992. “First Offensive: The Marine Campaign for Guadalcanal.” Washington, D.C.: History and Museums Division, Headquarters, U.S. Marine Corps.
See: <http://www.ibiblio.org/hyperwar/USMC/USMC-C-Guadalcanal.html>

ground radar and high-resolution resistivity equipment to detect abnormalities in the ground including the location of gravesites. Experts in this field believe that this technology can locate the trenches. Forensic scientists and anthropologists have indicated that the remains should contain sufficient DNA to allow for identification.

In December 2006, a team member discovered an excellent reconnaissance photograph of the Goettge Patrol landing area dated “18 August 1942”. Somewhere in this photograph are the trenches containing the remains of the Goettge Patrol.⁶

The 2007 Guadalcanal Expedition wanted all the information available concerning the area of interest from TEC. They wanted water and geological data, topology, drainage, soil, agricultural patterns and crops, geographic data such as roads and buildings, and historical data as well. Special interest was centered on the area of the missing patrol east of Guadalcanal’s capital, Honiara.

Photo from US Archives. Text and photo interpretation supplied by Peter Flahavin.

mined for information relating to buildings and terrain experienced by the troops, which may give clues to the locations of landmarks and sites useful in discovering the missing marines.

After their return from Guadalcanal to Australia, members of the 2007 Guadalcanal Expedition reported their activities and their preliminary results of investigations on September 6, 2007:

The team spent considerable time and effort on the Goettge Patrol area. Activities included taking over a hundred photographs of the three parcels that constitute the Goettge area, reviewing the project with parcel owners, and determining the location of the 1942 Mataniko Village. The onsite survey showed that several 1942 huts are along the current public road. The group feels that the public road was once part of the government trail shown on the 1942 reconnaissance photograph. One concern is the amount of fill added to the area since 1942.

A detailed analysis of the data is required; however, the preliminary review is positive for an electronic scan of the area based on the following:

- The area is accessible
- The terrain is flat with few obstructions
- Support facilities are near by

⁶ Doug Drumheller. September 17, 2007. Private correspondence.

- Parcel owners are positive and interested
- Native support is readily available
- Logistics should not be a problem
- The Solomon Islands Land Office wants to participate

Budd/Philips Area

Ken Budd has made numerous trips to Guadalcanal trying to locate the remains of his brother, Robert Budd, who was killed on August 27, 1942. Ken made available the documents from his previous trips along with a suggested search area. The team went to the area and determined the location of the new search area. The concern is that a Solomon Islands family has taken up residence on the property. Although there are buildings on the land, there is still a large open area conducive to an investigation. The next step, by the local team member, is to obtain permission to enter the property and determine the feasibility of searching the area using either conventional or electronic techniques.⁷

This bibliography began as a research project and as our data assistance to this expedition project, looking for the geological information which has been printed on this island. However, so many other citations from the history and the natural history of the islands and the battle were retrieved, that it was decided they could be added to make a literature overview and review of the printed articles, books and media on Guadalcanal and the Solomon Islands.

Guadalcanal and the Solomons

Although little prehistory of the Solomon Islands is known, excavations indicate that a hunter-gatherer people lived on the larger islands as early as 1000 B.C. The European discoverer of the Solomons was the Spanish explorer Álvaro de Mendaña de Neira (aka Alvaro de Mendana Y Neyra), who set out from Peru in 1567. Guadalcanal was named by this explorer after his ship visited the island in 1568. By the way, the place name, “Guadalcanal”, comes from a municipality in the province of Sevilla in Andalusia, Spain. The name origin is from an Arabic term, *Wād al-Khānāt*, which means “Valley of the Stalls”. This refers to a number of refreshment stalls that were erected here during the Moslem rule of Andalusia. Guadalcanal in Spain lies about 100 kilometers north-northwest of Seville.⁸

The British mariner Philip Carteret entered Solomon waters in 1767. A few years later, the English navigator Lieutenant John Shortland explored the sheltered anchorages along the northern coast in 1788. English traders followed, and the island was annexed (1893) by the British as part of the Solomon Islands Protectorate. By the late 19th century the islands were being exploited for labour to work the plantations of Fiji and other islands and in Queensland, Australia. About 30,000 labourers were recruited between 1870 and 1910. To protect their own interests Germany and Britain divided the Solomons between them in 1886; but in 1899 Germany transferred the northern islands, except for Buka and Bougainville, to Britain (which already claimed the southern islands) in return for recognition of German claims in Western Samoa (now Samoa) and parts of Africa. The British Solomon Islands Protectorate was declared in 1893, partly in response to abuses

⁷ Doug Drumheller. September 7, 2007. Private correspondence.

⁸ From the Wikipedia. See: <http://en.wikipedia.org>

associated with labour recruitment and partly to regulate contacts between islanders and European settlers, but mainly to forestall a threat of annexation by France. Colonial rule began in 1896. Although generally humane, administrators were more concerned with promoting the interests of European traders and planters than with those of the islanders, and islanders were punished harshly for offenses against colonial law and order. The murder of government tax collectors on Malaita in 1927 was answered with a savage punitive expedition, which was backed by an Australian warship. Together with some of his associates, Basiana, the leader of the assassins, was hanged, and his young sons were forced to witness the execution.⁹

The Solomon Islands' economy is based mainly on fishing, coconuts, timber, cocoa, and fruit; there are occasional workings in alluvial gold and silver. During World War II it was the scene of bitter land and sea fighting between U.S. and Japanese forces. Self-government was achieved in 1976 and independence two years later. Ethnic violence, government malfeasance, and endemic crime have undermined stability and civil society. In June 2003, then Prime Minister Sir Allen Kemakeza sought the assistance of Australia in reestablishing law and order; the following month, an Australian-led multinational force arrived to restore peace and disarm ethnic militias. The Regional Assistance Mission to the Solomon Islands (RAMSI) has generally been effective in restoring law and order and rebuilding government institutions.

Population

The bulk of the population depends on agriculture, fishing, and forestry for at least part of its livelihood. Most manufactured goods and petroleum products must be imported. The islands are rich in undeveloped mineral resources such as lead, zinc, nickel, and gold. Prior to the arrival of the Regional Assistance Mission to the Solomon Islands (RAMSI), severe ethnic violence, the closing of key businesses, and an empty government treasury culminated in economic collapse. RAMSI's efforts to restore law and order and economic stability have led to modest growth as the economy rebuilds.

The island ethnic groups are: Melanesian 94.5%, Polynesian 3%, Micronesian 1.2%, other 1.1%, unspecified 0.2%, according to the 1999 census. The languages of the Solomon Islands are many. Melanesian pidgin in much of the country is the lingua franca; English is the official language, but is spoken by only 1%-2% of the population, and there are 120 indigenous languages used today. The major religious groups are: Church of Melanesia 32.8%, Roman Catholic 19%, South Seas Evangelical 17%, Seventh-Day Adventist 11.2%, United Church 10.3%, Christian Fellowship Church 2.4%, other Christian 4.4%, other 2.4%, unspecified 0.3%, none 0.2% (1999 census)

Only 2.04% of the land is in permanent crops. Only about 0.62% of the land is arable. The major economic activities include fishing; forestry and timber products; mining for gold, bauxite, phosphates, lead, zinc and nickel; agricultural production of cocoa beans, coconuts, palm kernels, rice, potatoes, vegetables and fruit; animal husbandry with cattle and pigs.¹⁰

Natural History of Guadalcanal

The Solomon Islands form an archipelago in the southwestern Pacific Ocean, covering an area of some 280,000 square miles (725,197 sq. km.), slightly smaller in land area than Maryland, with land covering 11,599 sq. mi. (27,556 sq. km.) northeast of Australia. With terrain ranging from ruggedly mountainous islands to low-lying coral atolls, the Solomons stretch in a chain southeast from Papua New Guinea across the Coral Sea to Vanuatu.

Guadalcanal is the largest island of the Solomon Islands. With an area of some 2,047 square miles (5,302 square km), it is of volcanic origin with a mountainous spine (Kavo Range) that culminates in Mount Makarakomburu (8,028 feet or 2,447 meters), that is the highest point in the country. The islands have a tropical monsoon, and has few extremes of temperature and weather. The climate is tropical oceanic; that is, hot and humid, but relieved by cool winds and abundant, year-round rainfall. Temperatures seldom exceed 90° F (32° C) and rainfall generally averages 120–140 inches (3,000–3,500 millimetres) a year.

Many short, rapid streams, including the Mataniko, Lunga, and Tenaru, tumble from the wooded mountains to the coast, which in some places is lined with mangrove swamps.

“The island is mostly mountainous and the main range, the Kavo Mountains, is volcanic and reaches a height of 2,440 m/8,805 ft. Guadalcanal has dense forests, but extensive areas are treeless and covered in grass growing to a height of almost 2 m/6.5 ft. This grass extends over the plains and up into the mountains, but the watercourses are lined with scrub and timber. Many streams of Guadalcanal consist, in ordinary weather, of dry beds of stone and sand, water appearing only at a rock outcrop in the bed. A brilliant yellow orchid (*Dendrobium*) grows on the island. Guadalcanal contains evidence of having been upraised more than once and it would seem from the raised beaches, common round the coast, that the upheaval is still going on.”¹¹

The capital city of Honiara, situated on Guadalcanal (the largest island) has 54,600 inhabitants; the other principal towns are Gizo, Auki, and Kirakira.

The islands command a strategic location on sea routes between the South Pacific Ocean, the Solomon Sea, and the Coral Sea.

Earthquakes and destructive cyclones also occur regularly. On April 2, 2007, an undersea earthquake measuring 8.1 on the Richter scale occurred 345 km west-northwest of the capital city, Honiara. The resulting tsunami devastated coastal areas of Western and Choiseul provinces with dozens of deaths and thousands dislocated. The provincial capital of Gizo was especially hard hit. There are also some hot springs on Savo, where a volcano last erupted in the 1840s. Solomon Islands has a number of other volcanoes. Tinakula in the Santa Cruz group and Kavachi, a submarine volcano near New Georgia, for example, have erupted regularly every few years, and Simbo Island has a solfatara (a volcanic area or vent that yields only hot vapours and sulfurous gases).

Although there were 35 airports on the Solomons in 2006, only two had paved runways. The roadways on the islands totaled 1,360 km; of which 34 km were paved and 1,326 km of the roads were unpaved (1999). The ports and terminals were located at: Honiara, Malloco Bay, Shortland Harbor, Viru Harbor, Yandina.

Heavily wooded, mountainous terrain is characteristic and, although there are extensive plains, only those on the northern side of Guadalcanal have been developed for large-scale agriculture. As in most island groups, animal life is limited. Many of the economic problems of the

¹¹ Guadalcanal Island. (2005). In *The Hutchinson Unabridged Encyclopedia including Atlas*. Retrieved September 07, 2007, from <http://www.credoreference.com>.

Natural History of Guadalcanal

islands include unrestrained human activity such as deforestation and soil erosion. Also, many of the surrounding coral reefs are dead or dying.¹²

This bibliography and report is published in two separate sections: “The Natural History of Guadalcanal” and “The History of Guadalcanal”.

“The Natural History of Guadalcanal” section is a science “catch-all” section that includes maps, reports, books, video and journal articles concerning scientific investigations of the island. These items are generally refereed, but not all are, especially the older materials. “Natural history” is an umbrella term for what are now usually viewed as a number of distinct scientific disciplines.

Most definitions of “Natural History” include the study of living things, e.g. agriculture, anthropology, biology, including bio-medicine, botany, sociology and zoology; other definitions extend the topic to include paleontology, ecology or biochemistry, as well as geology, geography, physics and even meteorology. This bibliography is heaviest in geological citations.

“The History of Guadalcanal” section of this document includes maps, reports, books, journal articles and other media concerning the island’s history, politics and development. These items are generally refereed materials, but not all are, especially the older materials or personal accounts. The history section includes citations to works on the exploration and early development of the islands, and accounts of the early missionaries, commerce and plantations of Guadalcanal.

The largest part of the bibliography is concerned with the Battle of Guadalcanal, part of the Solomon Islands Campaign during World War II. Czech, English, German, Japanese and Polish language materials are included.

Post World War II accounts and citations also include recent ethnic, political and social trends and conflict.

Resources Consulted

A number of resources were consulted for this project. Wherever possible, the author has included location information to show where the materials may be obtained from lending libraries through inter-library loan, or from commercial agencies such as document delivery services. Many archives, unique items, or frail materials, may only be viewed at the location of the document holder. Where these restrictions apply, the author has tried to indicate whether it can be borrowed or not.

Researchers should be aware that the Library of Congress, other national libraries, museums and almost all governmental archives, frequently do not lend materials except as “last resort”. And they may not lend their materials even then. Consult with your local library for access to these citations.

Aquatic Sciences and Fisheries Abstracts (ASFA). The Aquatic Sciences and Fisheries Abstracts Bibliographic Database is the principal information product produced through the cooperative efforts of the international network of ASFA Partners see: <http://www.fao.org/fi/asfa/partners.asp> and a commercial ASFA Publishing Partner, CSA. The database contains approximately 1 million bibliographic references or records to the world’s aquatic science literature accessioned since 1971. “Aquatic Sciences and Fisheries Abstracts (ASFA) is an International Cooperative Information System which comprises an abstracting and indexing service covering the world’s literature on the science, technology, management, and conservation of marine, brackish water, and freshwater resources and environments, including their socio-economic and legal aspects.”

ASFA 1: Biological Sciences and Living Resources. “For scientists involved in the cooperative management of the world’s living aquatic resources, ASFA 1 provides extensive coverage of basic and applied research on aquatic organisms. All aspects of marine, freshwater, and brackish water organisms and environments are examined, including information on biology and ecology of aquatic organisms, exploitation of living resources, and related legal, policy, and socioeconomic issues. Since natural resources are an important feature of ASFA 1, fisheries receive particular attention, with comprehensive sections that put scientists and managers in touch with the latest fishing methods, statistics, aquaculture, food technology, productivity, conservation, and marketing.”

Acknowledgements

The author acknowledges with thanks the contributions of the following historians and librarians who helped make this bibliography possible: Michael J. Brodhead, US Army Corps of Engineers History Office; Helen Sherman, Diane Schnurpusch and the Reference Staff at the Defense Technical Information Center (DTIC); Bret W. Rodgers, USMC; Wayne Olson, Reference Librarian, National Agriculture Library; Ed Redmon and Habte M. Teclemariam, Reference Librarians, Library of Congress; Cliff Nelson, US Geological Survey Historian; Bruce Wallace, Brenda Graff, and Bob Bier of the US Geological Survey Library.

Peter Flahavin, an author and researcher on Guadalcanal “who has been into military history” since his youth, has kindly located and supplied some of the public domain photographs used in this report.

Special thanks also goes to Mr. Willie Sayyad of RefWorks.com. Because of the generous donation of Mr. Sayyad and RefWorks.com, the author was able to place citations electronically and manually from many card catalogs and different resources into one large database. From this database, it was fairly easy to produce this bibliography quickly and efficiently.

Some of the foreign language (Japanese or European languages) materials were electronically translated through AltaVista’s BabelFish service at: <http://babelfish.altavista.com/tr> or MicroSoft’s new online service (Beta version), <http://translator.live.com/>.

Geology, Geography and Natural History of Guadalcanal

Abe, S. and Dotsu, Y. 1977. "Research Report of the T.S. Kakuyo Maru, Nagasaki University. 1. A Note on Yellowfin Tuna Fishing with Hand Line in the Northwestern Coral Sea in October, 1976." *Suisan Kaiyō Kenkyūkai hō/Bulletin of the Japanese Society of Fisheries Oceanography*. (no.31), 7-11. (1977). Descriptors: hand lining; fishing grounds; *Thunnus albacares*; Coral Sea; catching methods; bait; Marine. TR: FA7801275. Abstract: Tuna fishing with hand line in the northwestern Coral Sea off Australia originated in 1965 when a tuna long liner operating in that water area had a great catch with hand lines upon making the tuna school come up to the surface layer by the use of ground-bait. This water area has been recognized as a fishing ground for hand lines rather than long lines. The hand line fishing ground is mainly located within the range 14-18 degree S 145-148 degree E. The fishing period is only about a month from late October to early December. In late October, 1976, the water area where the tuna school appears is very small within a circle of 5 sea miles in radius though the location changes from day to day. On October 25, 1975, the T.S. Kakuyo Maru found a school of yellowfin tuna in the water area around 16 degree 07'S/146 degree 51'E and caught 650 tuna (mean body weight 25 kg) by one purse seine operation after throwing slices of frozen mackerel and having the school come up to the surface layer. On October 25, 1976, yellowfin tunas were caught with hand line around 16 degree 49'S 146 degree 52. 5'E. In this operation, two individuals of the eleotrid goby *Ophieleotris aporos*, measuring approximately 15 cm in body length were used as live bait to fish the tuna in an experimental attempt. The goby were selected from among over 20 individuals caught at Guadalcanal Isl. and Tulagi Isl. of the Solomons and kept alive in two aquaria on board before the Kakuyo Maru went to the Coral Sea. A tuna was caught in each of two trials immediately after throwing the hand line with the live bait hooked at the caudal peduncle. Although experimental cases are few, this fact indicates that live bait is superior to frozen one, also in hand line fishing of tuna in this area, and it is expected that the catch efficiency can be increased by the use of live bait. Since the eleotrid goby is a fish commonly found in the brackish water zone at the mouth of river in Guadalcanal Isl. and Tulagi Isl., and is hardy enough to be kept collectively in a small marine aquarium on board, it may serve as an appropriate live bait fishing with hand line. Allen, John Barry and Deans, T. 1965. "Ultrabasic Eruptives with Alnoeitic-Kimberlitic Affinities from Malaita, Solomon Islands." *Mineralogical Magazine*. Mineralogical Society: London, United Kingdom. Volume 34, Pages 16-34. Descriptors: Alnoeitic kimberlitic like rocks; igneous rocks; Malaita; Melanesia; Oceania; petrology; plutonic rocks; Solomon Islands; ultramafics; Igneous and metamorphic petrology. Abstract: Detrital gravels with ilmenite, garnet, rutile, and zircon in stream beds and elsewhere on Malaita, one of the larger of the Solomon islands in the south Pacific, have been traced back to ultrabasic rocks intermediate between melilitite basalts, alnoeites, and kimberlites, which are the first record of alkaline rocks in the area. The host

rocks are alnoeite, with olivine and clinopyroxene phenocrysts, olivine nodules, and other xenocrysts, an alnoeite breccia, and ankaratrite. Chemical analyses are given and compared with similar material from Sweden, Texas, Germany, and Madagascar. Discussion centers about the differing proportion of alkalis, the effect of ultrabasic inclusions and the kimberlitic affinities, with the conclusion that the Malaita rocks provide a good example of the close relation between melilite-bearing eruptives and kimberlites. Anderson, Ian. 1995. "Lawless loggers 'will go on plundering paradise'." New Scientist. September 16, 1995, page 6. Abstract: Unrestrained logging on South Pacific islands may be halted if a new code governing forestry is adopted this week by prime ministers from the South Pacific region meeting in Madang, Papua New Guinea. But critics say that the code will be useless unless island governments back it up with laws that can be enforced. "The code is a quick fix, not a permanent solution," says Grant Rosoman from Greenpeace in New Zealand. The code aims to change logging practices in the Solomon Islands, Papua New Guinea, Vanuatu and Fiji. Other islands do not have enough forest to make logging worthwhile. Logging in the Solomon Islands is seen as the worst example of overexploitation. According to the Australian government, the islands' forests will disappear in a decade if the present rate of logging continues. ISSN: 0262-4079.

Arai, M., Mizukoshi, C., Kubochi, F., Kakutani, T. and Wataya, Y. 1994. "Detection of Plasmodium Falciparum in Human Blood by a Nested Polymerase Chain Reaction." *Am J Trop Med Hyg.* 1994 November. Volume 51, Issue 5, Pages 617-26. Abstract: We have developed a simple method for direct detection of Plasmodium falciparum parasites in infected human blood using a nested polymerase chain reaction. Whole blood (10 microliters) was obtained by finger puncture and suspended in a microcentrifuge tube containing phosphate-buffered saline. For removal of components that might inhibit the PCR, blood samples were treated with saponin and washed by centrifugation. After three cycles of a two-step incubation (3 min at 94 degrees C and 3 min at 55 degrees C), the first amplification was done with oligonucleotide primers specific for the junction region of the gene coding for the dihydrofolate reductase-thymidylate synthase in P. falciparum. A 1-microliter portion of the first amplification was then amplified again with a second set of primers, and 226-basepair fragments were generated. The amplified products were analyzed by agarose gel electrophoresis with ethidium bromide staining. Experiments with cultured parasites showed that the method could detect as few as 13 parasites in 10 microliters of whole blood. In 1991, 101 samples from 98 donors were collected in Guadalcanal, Solomon Islands. Eight of these samples gave positive results by both examination of thin blood smears and by the nested PCR. There was a correlation between parasite densities and the intensity of the results by the nested PCR. The method is suitable for detection of asymptomatic parasite carriers and evaluation of medical treatment on clinical cases. Availability: NLM.

Atu, W. T. 2005. "Fishing for Drummerfish (Kyphosidae) with Termites and Spider Webs on the Weather Coast of Guadalcanal, Solomon Islands." *Tradit. Mar. Resour. Manag. Knowl. Inf. Bull.* Issue 18, Pages 3-8. Descriptors: Article Subject Terms: Artisanal fishing; Bait; Catching methods; Coastal fisheries; Fishing technology; Lagoon fisheries; Sociological aspects; Article Taxonomic Terms: Kyphosus; Article Geographic Terms: ISEW, Pacific, Solomon Islands. Rudderfishes; Marine. Notes: Printed matter, Internet; English version dated August 2005; version Francaise, Ressources Marines et Traditions, Octobre 2005; TR: CP0600024. Abstract: This paper describe a unique traditional fishing method called bulukochi which was used to capture drummerfish (Kyphosidae) at Sukiki community on the weather coast of Guadalcanal, Solomon Islands. This traditional fishing method was used for many generations but is now infrequently practiced. The origin of the bulukochi fishing method in legend is told. The method is given, including rituals, taboos and a description of beliefs attached to the ritual. The termites, or Kochi, are found in the bush and a ritual is performed before the termites are harvested and mashed into a paste. The fishing pole is prepared with the sticky laobaulu spider web. The technique for the fishing is described. The bulukochi fishing method described in this paper is a highly skilled and sacred fishing method that is an important component of Solomon Island cultural heritage. Baker, R. C. 1950. "An Occurrence of Saline Ground Water on Guadalcanal." Transactions - American Geophysical Union. Volume 31, Issue 1, Pages 58-60. Descriptors: Guadalcanal; saline ground water; water supply. Abstract: Guadalcanal island is largely mountainous, but on the north side there is a coastal plain about 40 miles long which averages eight miles in width and stands about 15 feet above sea level. This plain is composed of the coalesced deltas of several large rivers. Most of the military installations of World War II were located on this plain near its western end. Wells drilled for water supply disclosed a body of saline ground water between the Lunga and Nalimbu rivers. The saline water probably is ocean water that was incorporated into the sediments as the coastal plain was built. The location and shape of the body of salt water appears to be controlled largely by the permeability of the material. ISSN: 0002-8606.

Baker, George. 1949. "Note on Volcanic Rocks, with Special Reference to Plagioclase Feldspars, from Mount Bogana, Bougainville Island, Solomon Islands." Transactions - American Geophysical Union. American Geophysical Union: Washington, DC, United States. Volume 30, Issue 2, Pages 250-262. Descriptors: Andesine phenocrysts; Australasia; Bougainville; igneous rocks; Melanesia; mineral data; Mount Bogana; Oceania; Papua New Guinea; petrogenesis; Solomon Islands; volcanic rocks; Mineralogy; Igneous and metamorphic petrology. Abstract: "The described rocks consist of ejected pebbles and andesitic scoria that form the greater part of the recent, symmetrical volcanic cone of Mt. Bogana, and slightly older andesitic flows that occur to the southwest in the valley of the Torokina River.... The characteristics of the andesine phenocrysts in the unaltered hornblende andesites are described in some detail, because in them, twinning, zoning, welding of crystals, and inclusions of earlier products of crystallization are best represented." ISSN: 0002-8606.

Baird, Nicola. 1996. "Unwisdom of the Solomons." New Scientist magazine, 27 January 1996, page 31. Abstract: Which product "reinvigorates any time fatigue overtakes you"? If you believe the sales pitch, it's oxygen. Canisters containing about 10 minutes' worth of 99.5 per cent pure oxygen are sold in Britain as an "aid to healthier living, countering the effects of smog and pollution". And in Japanese cities, bottled oxygen is available at bars and from dispenser machines. But if you are tempted to splash out on some fresh air, why stop at an ordinary variety when you could treat yourself to lungfuls of pure tropical rainforest oxygen? Of course, there's absolutely no difference - one oxygen molecule is just the same as another. But that's just a small inconvenience to those behind one of the most bizarre marketing projects of our times. The idea comes from the government of Solomon Islands, a string of islands scattered over some 1.35 million square kilometres of the southwestern Pacific. Plans to bottle and sell not just oxygen but also water from the country's rainforests were outlined just over a year ago by the Prime Minister, Solomon Mamaloni. The plan is part of a major restructuring of the Ministry of Forests, Environment and Conservation, and comes at a time when past efforts to achieve a sustainable forest policy in the Solomons have been largely abandoned. Last year, the government-owned plantations were sold and more than 450 forestry workers made redundant. At the Forest Research Station in Munda, Western Province, scientists were as dismissive of the bottled oxygen scheme as staff at the Office of the Prime Minister were of the research station's work. It is not only forestry experts that the

government has failed to convince. Around the capital, Honiara, the plans to sell oxygen and water are privately described as "unworkable" and "mad". Critics see them as a smoke screen designed to divert attention from a disastrous logging policy. A forestry inventory completed in 1992 put the sustainable rate of harvest at 325 000 cubic metres of timber per year. Escalating extraction since then has brought the sustainable yield down to 275 000 cubic metres per year. Yet the government has issued logging licences allowing an annual cut of 4 million cubic metres, a rate of extraction that would leave Solomon Islands logged out in just three years. In fact, the logging companies, which are mostly foreign owned, are not equipped to cut quite this fast. But even at the present estimated cutting rate - 700 000 cubic metres last year - the resource cannot last more than 10 years. ISSN: 0262-4079.

Beebe, N. W., Bakote'e, B., Ellis, J. T. and Cooper, R. D. 2000. "Differential Ecology of *Anopheles Punctulatus* and Three Members of the *Anopheles Farauti* Complex of Mosquitoes on Guadalcanal, Solomon Islands, Identified by PCR-RFLP Analysis." *Med Vet Entomol*. 2000 September. Volume 14, Issue 3, Pages 308-12. Notes: Research Support, Non-U.S. Gov't Abstract: From a series of larval collections made across northern Guadalcanal during the dry season, October-November 1997, four members of the *Anopheles punctulatus* group of mosquitoes (Diptera: Culicidae) were identified using PCR-RFLP analysis. Anopheline larvae were found in 54/57 (95%) of the sites sampled, comprising *An. farauti* Laveran sensu stricto (32 sites), *An. farauti* species no. 2 (39 sites), *An. farauti* no. 7 (36 sites) and *An. punctulatus* Dönitz (10 sites). *Anopheles punctulatus* occurred only on the coastal plain, where it was associated with the more transient sites. *Anopheles farauti* sensu lato was more widespread throughout the survey region, with similar proportions of all three sibling species in both transient and permanent sites. Two members of the *An. farauti* complex, *An. farauti* s.s. and species no. 2, were found in brackish water. All breeding sites of *An. punctulatus* were cohabited by *An. farauti* s.l., sometimes by all three sibling species. *Anopheles farauti* s.s. was the only species collected on human bait, with a much higher biting rate early in the evening (57 bites/human/hour at 18.30-20.00 hours) than later (0.8 bites/human/hour at 21.00-24.00 hours). Database: PubMed. Availability: NLM. ISSN: 0269-283X.

"Malaria in Honiara, Solomon Islands: Reasons for Presentation and Human and Environmental Factors Influencing Prevalence." *Southeast Asian Journal of Tropical Medicine and Public Health*. 1997 September. Volume 28, Issue 3, Pages 482-8. Abstract: During February and March 1995, out-patients attending health clinics and the Central Hospital in East Honiara, Guadalcanal, Solomon Islands, were surveyed with the aim of determining factors influencing the differing rates of malaria, the proportion of transmission occurring within the town, and the reasons for presentation. Three hundred and nine adult patients, who were sick and had blood smears taken, were asked about their general knowledge of malaria transmission. Of those interviewed, 120 were visited at their home in East Honiara, to determine variables. EpiInfo 5.1 was used in analysis. A history of fever alone was not a good indicator of parasitemia. Most precautions, including bed nets, window screens and personal precautions were of little benefit. Significant protection was afforded individuals and families with indoor kitchens. Patients not completing their antimalarial treatment fared worse in terms of parasitemia and malaria history. Most malaria/parasitemia was indigenous to Honiara. Many patients had a good knowledge of malaria transmission and mosquitos, but this did not translate into a lower rate of parasitemia or malaria. Database: PubMed. Availability: NLM. ISSN: 0038-3619.

Descriptors: Solomon Islands; Water resources development; Hydrogeology; Mapping; Hydrologic maps; Water demand; Islands. Notes: CL: Groundwater; Data-acquisition; Groundwater-management. Abstract: Water resource assessment in the Solomon Islands has been confined to meeting the immediate needs of small scale demand. Progress in water resources assessment and development has been limited by a shortage of professional expertise; in 1983 this shortcoming was alleviated by the secondment from New Zealand of a Water Resources Officer. Approximately 66% of the Solomon Islands have now been geologically surveyed at the 1:50,000 scale, and 1:50,000 topographic maps are available for the whole country. The Solomon Islands Geological Survey is interested in the methods other Economic and Social Commission for Asia and the Pacific countries employ to acquire and present their hydrogeological information and is particularly interested in assessing the usefulness of hydrogeological maps in an island(s) context. Australian Geological Survey Organisation: Canberra, A.C.T., Australia. Volume 107, Pages 11-15. Descriptors: activity; Australasia; Bougainville; lake dakataua caldera; mechanism; Melanesia; Mount Bagana Lake Loloru; New Britain; Oceania; Pacific Islands; Papua New Guinea; Solomon Islands; volcanism; volcanoes; volcanology; Igneous and metamorphic petrology. Abstract: In this report on the most recent investigations at Mount Bagana (Territory of Papua and New Guinea) it is noted that the most prominent activity is a continuous emission of steam from the whole summit area, and on the western flank a new lava flow is advancing at the rate of a few inches per hour. However, activity appears to be mild and stable. Water temperatures at Lake Loloru crater are little changed since 1955 readings. ISSN: 0084-7100.

Descriptors: Australasia; Bougainville; eruptions; igneous rocks; lake loloru; Melanesia; mount bagana; Mount Balbi; Oceania; Pacific Islands; Papua New Guinea; petrology; prediction; Solomon Islands; volcanic rocks; volcanism; volcanoes; volcanology; 05 Igneous and metamorphic petrology. Abstract: The last eruption of Mount Balbi, a 9000-ft volcanic cone which rises high above the Emperor range on Bougainville island, Territory of Papua and New Guinea, occurred between 1800 and 1850. The volcano complex, which surrounds a solfatara field where nuee ardente deposits occur, is considered, on the basis of air photographs, to be located at the intersection of three major lines of weakness. The nature of the deposits and the presence of chlorine gases in the fumarole emissions indicate future eruptions are to be expected. ISSN: 0084-7100.

Volume 10, Pages 247-284.* Descriptors: alteration; Australasia; breccia; brines; carbon dioxide; Cenozoic; classification; cooling; copper ores; D H; disseminated deposits; epithermal processes; fluid inclusions; geothermal systems; gold ores; hydrogen; hydrogen sulfide; hydrothermal alteration; igneous rocks; inclusions; isotope ratios; isotopes; Ladolam Deposit; Lihir Island; magmas; Melanesia; metal ores; metasomatism; meteoric water; mineral assemblages; mineral deposits, genesis; mineralization; mining; mining geology; mixing; molybdenum ores; Neogene; O 18 O 16; Oceania; open pit mining; oxygen; paleosalinity; Papua New Guinea; paragenesis; pH; Pleistocene; Pliocene; porphyry copper; porphyry molybdenum; Quaternary; resources; S 34 S 32; Solomon Islands; stable isotopes; sulfur; surface mining; temperature; Tertiary; veins; volcanic rocks; wall rock alteration; Economic geology, geology of ore deposits; Isotope geochemistry. Notes: Includes appendix. Abstract: The Ladolam gold deposit on Lihir Island, Papua New Guinea, is one of the world's largest epithermal gold deposits with a gold resource of 37 million oz. Open-pit mining commenced at Ladolam in 1997. Epithermal gold mineralization formed at 32 wt % NaCl equiv) is explained by open-system boiling and vapor loss. Fine-grained auriferous pyrite and adularia

precipitated in breccias at approximately 200 degrees C, immediately above an anhydrite-K feldspar alteration zone as fluids vented to the surface. Pyritic ores were deposited by rapid cooling associated with mixing of the magmatic ore fluid (δ (super 18) O approximately 6 per mil) with cool ground water (δ (super 18) O \leq 0 per mil) and boiling. The δ (super 34) S values of pyrite (-7 to +2 per mil) and deep anhydrite (13+ or -2 per mil) suggest a magmatic sulfur source. Stage III epithermal: Quartz and calcite veins formed under hydrostatic boiling point for depth conditions. Upwelling stage III fluids at 230 degrees C were moderately saline (5+ or -0.5 wt % NaCl equiv) and contained low abundances of dissolved gases (up to 3.5 wt % CO (sub 2) +H (sub 2) S). This brine mixed with dilute meteoric ground water (near 0 wt % NaCl equiv at 170 degrees + or -10 degrees C), depositing quartz as it cooled. Isotopic compositions of deep carbonates (δ (super 13) C = -4 per mil, δ (super 18) O = 14 per mil) indicate a magmatic origin for the brine (δ (super 13) C(CO (sub 2)) approximately -3 per mil, δ (super 18) O (H (sub 2) O) = +6 per mil). At Lienetz, an advanced argillic cap formed due to tectonic uplift of this area relative to Minifie. Silicic breccia ores in the Lienetz area contain pyrite-marcasite with lighter δ (super 34) S values (-13 to -2 per mil) compared to pyrite from Minifie (δ (super 34) S, -3 to -1 per mil). Lienetz ores probably formed at temperatures below 200 degrees C as reduced fluids mixed with descending, oxidised acid-surface waters beneath the advanced argillic cap. Gold from the earlier transitional stage II event may have been remobilized by the acid-sulfate waters and reprecipitated as electrum with fine-grained quartz in this mixing zone. Geothermal fluids in the modern system are neutral-pH chloride-sulfate brines that have a salinity similar to stage III (approximately 5.5 wt % NaCl equiv) but contain few if any magmatic volatiles. The modern system is +6 per mil, δ D = -25 per mil) and are diluted by meteoric waters (δ (super 18) O = -6 per mil, δ D = -40 per mil) within the top few hundred meters. These waters discharge into the Kapit-Coastal and Luise harbor areas, while acid-sulfate hot springs of steam-heated origin are associated with areas of steaming ground to the west and north of the major orebodies. Chen, M., Frohlich, C. and Taylor, F. W. 2006. "Seismological, Geological and Geomorphic Aspects of Arc Segmentation and their Relation to Subducting Bathymetric Features in the Solomon Island Arc, SW Pacific Ocean." EOS Transactions, American Geophysical Union. Volume 87, Issue 52, Pages Suppl. 26 Dec. Descriptors: Islands; Segments; Seismicity; Boundaries; Seismic phenomena; Tectonics; Segmentation; Geology; Geomorphology; Seismic engineering; Spreading; Northwest; Cross sections; Keyboards; Pianos; Subsidence; Stations; Fragmentation; Seismology. Abstract: Arc segmentation partitions forearcs into multiple blocks so that the forearc behaves like a "keyboard on a piano" as each segment potentially interacts with the downgoing plate in a different tectonic style. For example, parts of the forearc of the Solomon Islands arc has undergone hundreds of meters of rapid subsidence and uplift during late Quaternary time. Other parts have undergone only minor late Quaternary movements. We use seismology, geology, and geomorphology to identify arc segments in order to evaluate how bathymetric features on the subducting plate influence seismicity and active tectonics and cause overriding plate segmentation. Seismic rupture areas for large earthquakes, seismicity patterns, seismicity cross sections, focal mechanisms, and seismic moment calculations all reveal that the central arc being underthrust by the Woodlark Basin system of active sea-floor spreading is very different from the northwest and southeast parts of the arc. Woodlark subduction is characterized by sparse seismicity, gentle subduction angle, and thrust faulting with some normal and strike-slip components. Observations from geologic maps, coastal geomorphology, and emerged coral reefs show that the arc segments are undergoing varying amounts and rates of uplift and submergence.

Larger islands such as Guadalcanal and San Cristobal have both drowning and emerging coastlines. This information indicates the individual segments have dramatically different histories of vertical tectonics. We identify three supersegments: Bougainville, New Georgia, and Guadalcanal-San Cristobal. Smaller segments subdivide each supersegment. Thus we identify nine major boundaries, seven minor boundaries, and six possible boundaries. The classification of each boundary depends on the strength of evidence supporting its existence and the amount of change in tectonic behavior across the boundary. We speculate that subduction of the young Woodlark Spreading Center with seamounts and ridges on its fracture zone makes central Solomon Islands different from the rest of the island arc with low seismicity, high uplift rate, radical drainage patterns, fragmented islands and small arc segments. References: 59; illus. incl. tables, geol. sketch maps. Abstract: The Koloula Igneous Complex on the island of Guadalcanal consists of a low-K calc-alkaline sequence of 26 different intrusive phases. The oldest phase is a leucogabbro within which occurs a tabular cumulate body of olivine pyroxenite. Younger phases include diorites, quartz diorites, tonalites and trondhjemitic, and aplite dikes. Two major cycles of igneous activity are recognized, as well as at least four periods of andesitic dike intrusion. Four distinct episodes of hydrothermal alteration occurred within the sequence of igneous events. Two of these episodes were associated with porphyritic intrusions of tonalitic composition that show textural and fluid inclusion evidence consistent with boiling. These intrusions are spatially and temporally associated with minor copper mineralization. The earlier, or A, alteration system has five distinguishable concentric zones. The innermost is sulfide free and contains alkali feldspar-quartz-magnetite-actinolite + or - pyroxene (salite). It is succeeded by zones consisting of potassic and propylitic alteration assemblages, containing chalcopyrite and bornite in the potassic zones. The later, or B, system is characterized by four zones in which chlorite, sericite, and lesser amounts of clay minerals have overprinted an earlier potassic alteration. Here, copper mineralization (average grade 0.17ppm Cu) is best developed in chloritic fractures and quartz veins. Within the B system, the fluids responsible for hydrothermal alteration became progressively less saline and to some extent cooler during the system's evolution. It is likely that ocean water played a significant role in the later stages of the B system. The gradual decrease in the K (super +)H (super +) ratio of the B system fluids is responsible for the observed alteration veinlet sequence: phlogopite --> chlorite --> sericite. Peripheral vein assemblages of the B system were formed at lower temperatures than the final sericite and sericite-clay alteration within the center of the system. These peripheral assemblages are now composed mainly of poorly crystalline illite and interstratified illite-smectite. The final-stage veins consist of laumontite + or - smectite that postdate at least part of the B system and are widespread throughout the Koloula Igneous Complex. The solutions responsible for laumontite deposition were low temperature (nearly equal 250 degrees C) and water rich ($X(\text{sub CO}(\text{sub 2})) < \text{or} = 0.03$). Electron probe studies of alteration minerals indicate that hydrothermal pyroxene, amphibole, and usually biotite are more magnesian and contain less TiO (sub 2) than primary (magmatic) mafic silicates from the same, or similar, rock types. Secondary biotites from the B system are progressively less magnesian and richer in octahedral aluminium with increasing distance from the center of the B alteration area. Secondary alkali feldspar from the A system is somewhat more sodic in the outer alteration zones than in the center of the system. Within the B system, illite crystallinity and molybdenite polytypism of samples are related to distance from the center of alteration. The compositions of chlorite (usually pycnochlorite or ripidolite), sericite, and epidote (22 to 30 mole % pistacite) are not related to spatial position within alteration zones but reflect the initial chemical composition of the rock or mineral which they have replaced. Abstract: K-Ar ages are reported for the major intrusive and mineralization episodes from the Koloula Igneous Complex. Two major cycles of igneous activity occurred. Cycle 1 rocks (gabbro including olivine pyroxenite, diorite, Vasuata Quartz Diorite, dolerite dikes, granodiorite, and aplite dikes) are at least 4.5 m.y. old. The major cycle 2 intrusions (quartz diorites and tonalites) were emplaced 2.4 m.y. ago. In one of these bodies (Inamumu Zoned Pluton) hydrothermal alteration and mineralization followed within a short interval not exceeding 0.3 m.y. Within this mineralized area (A system) the average age from primary biotite of 1.55 m.y. indicates a protracted cooling history. A satellite pluton (Kolokemau Tonalite), that on field evidence is younger than the main cycle 2 intrusive episode, has an age of 2.0 m.y. A second episode of mineralization (B system) is spatially

and temporally associated with the Chikora Tonalite Porphyry and a series of trondhjemite dikes. The preferred age for strongly altered whole rocks from this system is 1.7 to 1.6 m.y. An andesitic dike that locally postdates this alteration has an age in the range 1.7 to 1.5 m.y. A date of 24.4 m.y. is reported for tonalite from the Poha Diorite Complex, another igneous body on the island of Guadalcanal. ISSN: 0361-0128.

Chivas, A. R. and Wilkins, R. W. T. 1977. "Fluid Inclusion Studies in Relation to Hydrothermal Alteration and Mineralization at the Koloula Porphyry Copper Prospect, Guadalcanal." *Econ. Geol. Bull. Soc. Econ. Geol. Apr.* Volume 72, Issue 2, Pages 153-169. Descriptors: applications; calc-alkalic; complexes; copper ores; economic geology; exploration; fluid inclusions; gases; genesis; geologic thermometry; Guadalcanal; host rocks; hydrothermal alteration; hydrothermal processes; igneous rocks; inclusions; Koloula; liquids; Melanesia; metal ores; metasomatism; mineral deposits, genesis; mineralization; Oceania; ore deposits; porphyry copper; processes; salinity; Solomon Islands; zoning. Abstract: The Koloula Igneous Complex on the island of Guadalcanal, part of the British Solomon Islands Protectorate, consists of a calc-alkaline sequence of 26 intrusive phases ranging from leucogabbro through diorites and granodiorites to andesite dikes. The intermediate and felsic rocks of the younger central part of the complex are host to porphyry copper mineralization, characterized by two well-defined separate alteration systems. The earlier or "A" system has five distinguishable concentric zones. The innermost is sulfide free and contains K feldspar-quartz-magnetite-actinolite-pyroxene (salite). It is succeeded by zones containing potassic and propylitic assemblages, with chalcopyrite and bornite associated with the potassic zones. The later, or "B" system, is characterized by four zones in which sericite and lesser amounts of clay minerals predominate. Fluid inclusion assemblages are closely similar to those from porphyry copper deposits of the Bingham type. Three types of inclusions are common: gas-rich, moderately saline, highly saline inclusions which contain NaCl + or - KCl + or - hematite + or - birefringent phases. Homogenization temperatures obtained from moderately and highly saline inclusions range up to approximately 700 degrees C in the A system and up to 480 degrees in the B system. There is a continuous variation in salinity from 2 percent equivalent NaCl in some two-phase inclusions up to approximately 60 percent equivalent NaCl in some highly saline inclusions. The evolution of fluids in the A hydrothermal system has not proved easy to elucidate, but the best development of high-salinity inclusions containing KCl daughter crystals is found in areas of strong potassic alteration. Information derived from the sequence of secondary fluid inclusion planes and from the coincidence of alteration and late-intrusive activity suggests that in the B system high-salinity fluids dominated the early phase of alteration and moderate-salinity fluids dominated the later phases. It is considered that both hydrothermal systems developed predominantly under lithostatic pressure conditions with a cover of about 3 km. Counts of inclusions in primary quartz in standard petrographic thin sections reveal a close relationship between fluid inclusion abundance and the location of Cu soil geochemistry anomalies. Such counts may well prove to be a simple preliminary exploration technique for porphyry copper prospect evaluation. ISSN: 0361-0128.

Chong, Michel and Campos, Claudia. 1996. "Extended Overdetermined Dual-Doppler Formalism in Synthesizing Airborne Doppler Radar Data." *Journal of Atmospheric and Oceanic Technology*, Boston, MA. Volume 13, Issue 3, Pages 581-597. Descriptors: Article Subject Terms: Doppler radar data processing; Doppler radar observation of airflow. Notes: June 1996. Refs. figs. table. Abstract: During the intensive observing period of the field phase of the Coupled Ocean-Atmosphere Response Experiment (COARE) of the Tropical Oceans and Global Atmosphere (TOGA) program, airborne Doppler radars capable of fore-aft scanning (dual-Doppler analog) were involved in aircraft missions in which highly coordinated and parallel tracks were flown (quad-Doppler analog). Pairs of observations from each radar can be used to infer the wind components through an iterative dual-equation solution, while combining them allows a direct determination. Errors from these two analysis methods are discussed, in particular those induced from geometrical considerations. Due to these geometrical limitations, neither the dual-Doppler nor the quad-Doppler approach can take advantage of the whole volume sampling. To overcome the limitations and to increase considerably the synthesis domain, the overdetermined dual-Doppler (ODD) technique is proposed in an extended version (EODD). EODD includes solutions to these problems as well as means to mitigate the inevitable contribution of errors in estimating the vertical velocity, previously described in early studies. The EODD technique is applied to data collected in a squall line that occurred near Guadalcanal Island on 22 February 1993, from Doppler radars aboard the two NOAA WP-3D aircraft. Similar airflow structures, consistent with those from previous studies, are obtained from application of the EODD method to dual-Doppler and quad-Doppler observations, indicative of the validity of using the proposed method to solve either dual- or quad-Doppler data configurations. Journal of the Royal Society of Western Australia Volume 47, Part 1, Pages 13-24. Descriptors: Cenozoic; Foraminifera; Guadalcanal region; Invertebrata; Melanesia; microfossils; Miocene; Miocene foraminifera; Neogene; Oceania; paleontology; Protista; Solomon Islands; Tertiary; 10 Invertebrate paleontology. Abstract: Although generally mutually exclusive,

larger foraminifera and planktonic species have been found in association in certain middle Miocene localities of the Guadalcanal area. The stratigraphic setting and age significance of the association are discussed. The association of larger foraminifera with planktonic species of the *Sphaeroidinellopsis seminulina* fauna was contemporaneous during Vindobonian time. Some of the species persisted into the Tortonian. ISSN: 0035-922X.

Coleman, P.J. and eds. 1976. A Re-Evaluation of the Solomon Islands as an Arc System. Descriptors: Article Subject Terms: Tectonics; Geochemistry; Seismology; Article Geographic Terms: Solomon I; India Plate; I, Pacific Plate; Marine. Abstract: The Solomon chain is made up of a part of the Ontong Java Plateau on the north-east flank, a central Early Tertiary tholeiitic province, and a Plio-Pleistocene volcanic pile on the west-southwest flank. Evidence that the Early Tertiary province arose as an arc with NE-facing polarity is ambiguous and limited especially by lack of refined geochemical data. If low-angle obduction of the Plateau over the central province could be proven, then this would be strong indirect evidence of an old subduction zone, but the relation between these two can just as well be interpreted as one of high angle strike-slip. The young volcanics are geochemically peculiar and not a typical young arc assemblage. The seismicity is puzzling does not define a subduction zone. In terms of juvenile arc development the absence of volcanics east of western Guadalcanal is altogether anomalous. Given the fact of the Line Islands and notion of volcanic accumulations along fracture zones and leaky transforms, then the Solomons can be speculatively interpreted as an old oceanic fracture system that has been incorporated into an essentially transform boundary between India and Pacific plates. Cooper, D. Cottingame, W. Eichinger, W. Forman, P. and Lebeda, C. 1994. "High Resolution Properties of the Marine Atmospheric Boundary Layer." Los Alamos National Lab., NM. Volume: LAUR94101, CONF9403681, Pages: 5. Descriptors: Earth atmosphere;

Atmospheric Circulation; Optical Radar; Pacific Ocean; Troposphere; Water Vapor; EDB/540110; Atmospheric boundary layer; Marine meteorology; CEPEX experiment; Atmospheric sciences Meteorological data collection analysis and weather forecasting. Abstract: Los Alamos National Laboratory (LANL) participated in the Central Equatorial Pacific Experiment (CEPEX) by fielding a water-vapor Raman lidar on board the Research Vessel Vickers. The lidar measured water vapor concentration from the surface to lower tropospheric altitudes in order to support the CEPEX goal of evaluating a hypothesis regarding feedback mechanisms for global circulation models. This report describes some of the features observed within the marine Atmospheric Boundary Layer (ABL) and the lower troposphere. Data was collected continuously 24 hours per day over the equatorial Pacific from March 8th to March 21st of 1993 while in route between Guadalcanal and Christmas Island (the transect was at approximately 2(degree) south latitude). The lidar collected vertical transects of water vapor concentration up to 10 km during night operations and 4 km in the day. The vertical lidar profiles of water vapor were produced by summing the data over a period up to 600 seconds. The water-vapor Raman lidar measured the properties of the marine ABL as well as the lower and mid-troposphere. From the lidar water vapor profiles, "images" of water vapor concentration versus altitude and date or sea surface temperature will be produced along with other products such as latent heat fluxes. The Raman water vapor lidar data will be used to better understand the role of transport and exchange at the ocean-atmosphere interface and throughout the marine atmosphere. Cooper, D. I., Eichinger, W. E., Barr, S., et al. 1996. "High-Resolution Properties of the Equatorial Pacific Marine Atmospheric Boundary Layer from Lidar and Radiosonde Observations." *Journal of Atmospheric Sciences*. July. Volume 53, Issue 14, Pages 2054-2075. Descriptors: Article Subject Terms: atmospheric boundary layer; air-sea coupling; lidar; radiosondes; ocean-atmosphere system; aerosols; water vapour; Article Geographic Terms: Equatorial Pacific; Marine. TR: CS9707012. Abstract: A "thermostat" mechanism for cooling the Equatorial Pacific is being tested with data collected during the Central Equatorial Pacific Experiment. The Los Alamos National Laboratory participated by fielding two shipboard lidars that collected nearly continuous data over the Pacific from 10 to 21 March 1993 as the ship sailed from Guadalcanal to Christmas Island. A Raman lidar measured water vapor mixing ratio in the lower troposphere, especially in the marine atmospheric boundary layer (ABL), and an aerosol backscatter lidar measured height and thickness of clouds to an altitude of 20 km. The data collected from these two lidars were used to determine ocean-atmosphere phenomenology, which in turn, affects the climatology of the Central Pacific. Agreement between coincident radiosonde and the Raman water vapor lidar measurements was typically within plus or minus 0.25 g kg⁻¹ of water. Divergence between the two instruments occurred at transitions between distinct layers in the lower marine atmosphere. Reasons for this divergence will be discussed. Above the ABL the lidar and radiosonde are in excellent agreement. A wealth of detail is apparent in the lidar-derived profiles. For example, there are large variations in water vapor mixing ratio-the expression of the inherent low-frequency, intermittent, atmospheric turbulence that produces spatially discrete features such as convective plumes. These features define the structure and extent of the ABL. Using the ABL structural characteristics, an analysis of the relationship between entrainment zone (EZ) height and observed sea surface temperature (SST) revealed counterintuitive behavior-that the height of the EZ decreases as SST increases in the range between 27 degree and 30 degree C. Davies, H. L. 1985. "Mineral Potential of the Southwest Pacific Islands." UNEP Regional Seas Reports and Studies. United Nations Environment Programme, Regional Seas Programme: Geneva, International. Volume 69, Pages 129-142. Descriptors: East Pacific Ocean Islands; economic geology; energy sources; Fiji; Melanesia; metal ores; mineral resources; Nauru; New Caledonia; nonmetal deposits; Oceania; Pacific Ocean; Polynesia; production; Solomon Islands; South Pacific; Southwest Pacific; Tonga; Vanuatu; volcanism; West Pacific; West Pacific Ocean Islands; 26A Economic geology, general, deposits. Abstract: The islands of the South Pacific produce minerals worth about one billion dollars each year. Chief revenue are the large porphyry copper-gold mine at Panguna on Bougainville Island in Papua New Guinea, the nickel mines of New Caledonia, and the phosphate exported from Nauru. Metals which have been produced in the past, from these and other islands, include gold and silver, base metals, antimony, cobalt, chromium, manganese and magnesite; other known metals and minerals include mercury, molybdenum, coal, hydrocarbons and probably uranium. In the immediate future a second large porphyry copper-gold mine will come into being in Papua New Guinea, at Ok Tedi near the Irian Jaya border. Other likely developments include the discovery of commercial accumulations of hydrocarbons in Papua New Guinea, and possibly in Tonga and Fiji, the discovery and/or development of other gold, silver, base metal, nickel, cobalt, chromium and phosphate deposits, in response to more thorough or sophisticated exploration, or improved metal prices; the better definition and possible commercial development of known deposits of bauxite, coal, mineral sands and metal-rich sea floor nodules; and the possible discovery of mercury and tungsten minerals,

platinum group metals, metals of the carbonatite association, sea floor volcanic vent minerals, diamonds, uranium and precious coral. ISSN: 1014-8647.

University of Auckland Geothermal Institute, Centre for Continuing Education 1979 -: Auckland, New Zealand. Volume 17, Pages 19-21. Descriptors: Australasia; exploration; Fiji; geothermal energy; Melanesia; Oceania; Papua New Guinea; Polynesia; Samoa; Solomon Islands; Vanuatu; western Samoa; 29A Economic geology, geology of energy sources. Notes: CN: 17th New Zealand geothermal workshop. Auckland, New Zealand. 1995. Abstract: In 1993 several member countries of the South Pacific Applied Geoscience Commission (SOPAC), requested a survey of regional geothermal potential. This request reflects a growing interest in the countries of the southwest Pacific to find reliable domestic energy resources which could result in less dependence on imported fossil fuels. With financial assistance from the New Zealand government a report was prepared for SOPAC by Geothermal Energy New Zealand Limited (GENZL), on the resource data available and potential development of the geothermal fields. The report, published in June this year, includes a proposed exploration programme to complete pre-commercial studies in five countries. This paper describes the findings of the report and comments on the potential uses of geothermal energy in the developing countries of the South Pacific. ISSN/ISBN: 0111-6835; 0-85859-008-2.

Feinberg, R. 1996, vol. , no , pp. "Outer Islanders and Urban Resettlement in the Solomon Islands: The Case of Anutans on Guadalcanal" *Journal de la Société des Océanistes*. Musée De L'Homme: Paris. Volume 103, Issue 2, Pages 207 - 217. Abstract: L'A. montre que le repeuplement des insulaires dans les centres urbains reflète des changements culturels importants tant par l'accès à de nouvelles opportunités économiques et sociales, de nouvelles valeurs et projets que par les pressions et contraintes subies. Les problèmes liés à l'urbanisation devraient être compris à travers l'étude du système relationnel entre les communautés urbaines et celle de l'articulation entre les différentes orientations culturelles souvent incompatibles entre elles. L'étude de la population originaire d'Anuta à Guadalcanal offre un cas exemplaire: présentation du contexte ethnographique d'ensemble, arrivée et installation en ville des communautés traditionnelles, émergence de certains migrants en tant que nouveaux leaders reconnus par leur communauté émigrée en ville. Translated Abstract: This report shows that the repopulation of the islanders in the urban centres reflects important cultural changes so much by the access to new economic and social opportunities, new values and projects than by the pressures and constraints. The problems related to the urbanization should be included and understood through the study of the relational system between the urban communities and that of the articulation between the various often incompatible cultural orientations between them. The study of the population originating in Anuta with Guadalcanal offers an exemplary case: presentation of the overall ethnographic context, arrival and installation downtown of the traditional communities, and the emergence of certain migrants as new leaders recognized by their community downtown. Foley, DH and Bryan, JH. 2000. "Shared Salinity Tolerance Invalidates a Test for the Malaria Vector *Anopheles Farauti* s.s. on Guadalcanal, Solomon Islands." *Medical and Veterinary Entomology*. 2000 March. Volume 14, Issue 1, Pages 102-4. Notes: Corrected and republished in: *Med Vet Entomol*. 2000 Dec;14(4):450-2. Abstract: Among the *Punctulatus* Group of *Anopheles* mosquitoes (Diptera: Culicidae), first-instar larvae of the medically unimportant freshwater *Anopheles farauti* species No. 7 survives a seawater tolerance test (SST) that was previously

thought to be diagnostic for the saltwater-tolerant malaria vector species, *An. farauti* Laveran s.s. Salt tolerance in these two closely related isomorphic species appears to be a shared derived character within the Farauti Complex. Failure to differentiate *An. farauti* s.s. from *An. farauti* No. 7 will overestimate potential malaria vector numbers and waste limited larval control resources. Use of the SST should therefore be discontinued on Guadalcanal and other techniques such as allozyme electrophoresis used instead. Database: PubMed. Availability: NLM. ISSN: 0269-283x.

Foley, D. H., Meek, S. R. and Bryan, J. H. 1994. "The *Anopheles Punctulatus* Group of Mosquitoes in the Solomon Islands and Vanuatu Surveyed by Allozyme Electrophoresis." *Med Vet Entomol.* 1994 October. Volume 8, Issue 4, Pages 340-50. Abstract: Four species within the *Anopheles punctulatus* group of mosquitoes (Diptera: Culicidae) were identified by allozyme analysis of samples collected from thirty-three localities in Guadalcanal, Makira, Malaita, Temotu and Western Provinces in the Solomon Islands and six localities on Efate, Espiritu Santo, Maewo and Malekula Islands in Vanuatu. Three of these species are members of the *An. farauti* complex. A key is given to identify five species of the *An. punctulatus* group known to occur in the Solomon Islands using their isoenzyme characteristics. *An. farauti* No. 1 was widespread in coastal areas of the Solomon Islands and was the only species detected in Vanuatu, including Efate Island (where Faureville is the type locality of *An. farauti* Laveran sensu stricto). *An. farauti* No. 2 and *An. punctulatus* were common in the Solomon Islands in more inland areas. *An. farauti* No. 7, reported here for the first time, was found as larvae in freshwater at six localities on north Guadalcanal. Three other members of the *An. punctulatus* group which have been reported previously from the Solomon Islands: *An. koliensis*, *An. renellensis* and an electrophoretic variant of *An. farauti* sensu lato, were not found in our samples. Previously recognized vectors of malaria and bancroftian filariasis in the Solomon Islands are *An. farauti* No. 1 (i.e. *An. farauti* s.s.), *An. koliensis* and *An. punctulatus* s.s. Adult females of *An. farauti* No. 2 and *An. farauti* No. 7 were not attracted to human bait in areas where their larvae occurred, indicating that these two species are not anthropophilic and therefore unlikely to transmit human pathogens. Database: PubMed. Availability: NLM. ISSN: 0269-283x.

Conference: 1st world

geothermal congress. Florence, Italy. May 18-31, 1995. Abstract: Thermal activity at the Paraso geothermal field, Vella Lavella, Solomon Islands, consists largely of steam-heated features, usually associated with vapor-dominated zones of a geothermal system. Chloride contents of up to 2400 mg/kg in some of the waters, however, point to the simultaneous discharge of waters from liquid-dominated parts of the system. Varying contamination of the neutral Cl waters with the steam-heated, acid waters greatly impedes application of standard solute geothermometers; only K/Na ratios provide an indication for the occurrence of high temperatures of 290 degrees C at depth. Gas geothermometers (CO (sub 2) , CH (sub 4) , H (sub 2)) are more reliable and confirm deep temperatures of close to 300 degrees C. The isotopic composition of the high Cl waters corresponds to an (super 18) O-shift of 6 per thousand or the presence of about 40% of "andesitic water" The isotopic composition of H (sub 2) S (sigma (super 34) S = 0 per thousand) and low CO (sub 2) He (75 000) and N (sub 2) He (450) ratios, however suggest a largely mantle origin, only little contaminated by volatiles from subducted sediments. The simultaneous discharge of fluids representative of vapor-and liquid-dominated zones is likely to be due to the Paraso field being situated in a narrow valley, at close to sea level, preventing clear separation of vapor-and liquid-dominated discharge features. Groody, Brian S. 1996. *Is the Western Pacific Ocean Getting Warmer? A Long Term Isotopic Record of Corals from Nauru and Guadalcanal, Solomon Islands*. Princeton, NJ, United States: Princeton University. Pages: 46. Descriptors: Anthozoa; Cenozoic; climate; Coelenterata; El Nino; Guadalcanal; Holocene; Invertebrata; isotope ratios; isotopes; Melanesia; Micronesia; modern; Nauru Island; O 18 O 16; ocean circulation; Oceania; oxygen; Pacific Ocean; Quaternary; sea water; Solomon Islands; Southern Oscillation; stable isotopes; temperature; West Pacific; 02D Isotope geochemistry; 07 Oceanography. Abstract: The western equatorial Pacific is an important component of the El Nino Southern Oscillation (ENSO) which represents most of the interannual climate variability observed on a global scale. This event occurs on a time scale of two to ten years. An ENSO event occurs when the Walker circulation cell migrates from the Australasian maritime continent to the region of the equator and the date line. ENSO is marked by precipitation anomalies in the west and sea surface temperatures in the east. Massive corals that grow near the surface of the ocean are able to record changes in the delta (super 18) O of the ambient sea water in their aragonite skeletons. These changes result from increases in ocean water temperature and influx of isotopically depleted rain water. ENSO events are recorded particularly well since these two influences of the delta (super 18) O are the trademarks of ENSO occurrence. Corals were collected from Nauru (0.5S, 166E) and Guadalcanal, Solomon Islands (9.5S, 161E) and the delta (super 18) O of their skeletons was determined through mass spectrometry analysis. These isotopic records were compared with instrumental climate data (sea surface, temperature, sea level pressure) to evaluate the temporal and spatial variability associated with interannual climate fluctuations in the western Pacific. The Nauru records showed interannual warming trends with a periodicity of about 7.5 years and interdecadal warmings with a period of roughly 25 years. The record from Guadalcanal showed interannual warming on the order of 8.5 years and an interdecadal cycle of 35 years. However both records showed the same long-term trend: the western Pacific has warmed continuously over the course of the twentieth century. GeoRef Accession Number: 1996-065751.

Volume 213, Issue 5077, Pages 686-687. Descriptors: Bougainville New Ireland group and Santa Cruz group; correlation; Deep focus and shallow; deep focus; earthquakes; Melanesia; Oceania; Pacific Ocean; prediction; shallow events; Solomon Islands; Seismology. Abstract: In the Solomon region of the southwest Pacific, deep-focus earthquakes have been concentrated at the northwestern end of the Bougainville-New Ireland group, and in a region to the southeast of the Santa Cruz group. Structurally, the deep foci of the two regions form broad abutments at different depths, which support a narrowing arch of seismicity along which shock waves travel upwards towards a center in the San Cristobal area. Evidence points to the existence of megaseisms, which must extend below the shallow crust into the mantle itself, in which nearly all the earthquakes appear to occur. A time-space correlation is postulated between deep foci and the shallower events: deep-focus shocks initiate thermo-energetic phenomena which radiate upwards along tectonic zones and trigger shallower earthquakes of the same order of magnitude as the deep shock, except where phenomena converge. The delays between a deep-shock and its related earthquakes are a function of the distance from, and the magnitude and depth of, the deep shock. ISSN: 0028-0836.

Grover, J. C. 1966. "Gravity Surveys in the British Solomon Islands; a Narrative." Paper - Geological Survey of Canada. Geological Survey of Canada: Ottawa, ON, Canada. Pages 257-277. Descriptors: British section; geophysical methods; geophysical surveys; gravity methods; marine geology; Melanesia; Oceania; Pacific Islands; Solomon Islands; structure; surveys; Oceanography. Notes: 66-15. Abstract: This paper summarizes the progress of investigations in the Solomons, with pertinent information from other islands, to the present time. Recently compiled land gravity maps of the islands show remarkable correlation with the major geologic features, although much of the detail is yet to be obtained. Sufficient offshore gravity data will soon be available to make possible a tentative regional model. It is already evident that the Solomon islands constitute one of the most anomalous island structures in the entire world. ISSN: 0068-7650.

Grover, John C. 1960. "The Geology of Rennell and Bellona; the Great Uplifted Atolls on the Edge of the Coral Sea." Pages 103-119. Descriptors: atolls; expeditions; geology; Melanesia; micropaleontology; Oceania; phosphates; reefs; Rennell Bellona; sedimentary rocks; Solomon Islands; Miscellaneous. Abstract: Formation of coral masses probably began at the end of the Pliocene and continued into post-Pleistocene time, when differential emergence occurred, first as a result of anticlinal folding and later by oscillating vertical uplift of the sea bed on the southern side of the submarine trench which parallels the southwest side of the Solomon islands. Data on the details of the limestone formations, areas of phosphatic enrichment, and fossil assemblages are summarized.

Grover, John C. 1955. *Geology, Mineral Deposits and Prospects of Mining Development in the British Solomon Islands Protectorate*. Pages: 108. British Solomon Islands, Interim Geol.Surv., Mem. Volume: 1, Descriptors: Cenozoic; igneous rocks; Melanesia; mineral resources; Oceania; seismology; Solomon Islands; Tertiary; volcanism; Seismology. Abstract: Includes chapters on seismic and volcanic activity, structural geology, the geology of the individual islands, mineral resources and prospects, and the possible occurrence of petroleum. The islands consist of a double chain which forms part of an extensive island arc. "The axis of the major geosyncline could be the area in which will be found the most ultramafic rocks (with possible associated useful minerals); the more gently folded areas of Tertiary sediments may provide structural features worthy of examination from the point of view of oil accumulations . . . ; major structural features may also give a lead to the controls affecting mineralisation."

Guilderson, T. P. Guilderson, T. P. Schrag, D. P. and Kashgarian, M. Pacific Coral Post-Bomb Radiocarbon Time-Series Reflect Ocean Dynamics. American Geophysical Union. Descriptors: Article Subject Terms: Atmospheric circulation; Entrainment; Equatorial undercurrents; General circulation; Interannual variability; Oceanographic data; Spatial variability; Thermocline; Upwelling; Warm water patches; World Ocean Circulation Experiment (WOCE); Article Geographic Terms: Atlantic, Equatorial Undercurrent; Pacific, New Zealand Island Terr., Cook Is., Southern Cook Is., Rarotonga; Pacific, Solomon Islands, Guadalcanal; Pacific, Nauru. Abstract: Sub-annual radiocarbon measurements derived from coral skeletal material which accurately records the ^{14}C concentration of water DIC, has added to our knowledge of the general shallow circulation of the Pacific augmenting the results derived from GEOSECS and WOCE. Although the WOCE program continues to produce sea water ^{14}C analysis today, there are notable limitations to shipboard sampling, primarily the inability to monitor ocean conditions continuously. For ^{14}C in the deep ocean, this is not a problem because the transport is relatively slow and the gradients are relatively low. For the surface ocean, where ^{14}C gradients are highest and transport is rapid, we have demonstrated that temporal variability is of the same order as spatial variability, an observation which is lost in discrete analyses like GEOSECS or WOCE whose “snapshots” of bomb-radiocarbon are integrations of 20 and 40 years of ocean dynamics. In general, ^{14}C in corals from the subtropics (Hawai’i, Rarotonga) have higher D^{14}C reflecting the stability of the gyres and high air-sea exchange. D^{14}C in the eastern equatorial Pacific (Galapagos) are lower and reflect the subsurface pathway of the Equatorial Undercurrent and entrainment of deeper thermocline waters which feed the upwelling in this region. Radiocarbon values in the “warm pool” region (Nauru, Guadalcanal) are intermediate between the higher subtropics and those in the east. Superimposed upon the long term trend which reflects the invasion of bomb radiocarbon into the ocean is seasonal to interannual variability. The patterns of the higher-frequency radiocarbon variations can be explained in terms of variability in dynamic processes. OCLC: 7323371.

H

Haberle, S. 1996. “Explanations for Palaeoecological Changes on the Northern Plains of Guadalcanal, Solomon Islands: The Last 3200 Years.” *Holocene*. Volume 6, Issue 3, Pages 333-333-338. Descriptors: The Holocene; Solomon Islands- Guadalcanal; vegetation change; anthropogenic effect; natural disaster. Abstract: Suggests human activity may have played a role in changing vegetation patterns on the northern plains of Guadalcanal. Catastrophic events, such as tectonic activity, cyclones and volcanic eruptions, have also contributed to disturbance of the forest communities and to erosion. Both sites show evidence for increases in carbonized particles

coincident with greater presentation of second-growth forest taxa, beginning some time between 3200 and 2100 BP. ISSN: 0959-6836.

Hazbun, J. A. 1983. "Use of Alternative Methods and Materials in Ferrocement Rainwater Storage Tanks." *Journal of Ferrocement*. Volume 13, Issue 2, Pages 169-176. Descriptors: Article Subject Terms: construction; steel; tanks; ferrocement. Abstract: Two sizes of tanks, 500 gal. and 1000 gal, were designed and constructed with bamboo and mild steel wires as reinforcement. These rectangular tanks were formed from pre-cast panels. The moulds for casting the panels are made out of hard wood. The bamboo tanks are cheaper and easier to construct compared to tanks

constructed in ferrocement, concrete and galvanized sheet. Database: Environmental Sciences and Pollution Mgmt. ISSN: 0125-1759.

Hess, Folke I., Iannuzzi, Aniello, Leafasia, Judson, et al. 1996/8. "Risk Factors of Chloroquine Resistance in Plasmodium Falciparum Malaria." Acta Tropica. Volume 61, Issue 4, Pages 293-306. Abstract: Objective: To identify patient-related risk factors of chloroquine resistance. Design: A case control study. Subjects: Plasmodium falciparum infected school children were followed prospectively for 7 days for the detection of chloroquine resistance. Cases were 38 individuals with chloroquine resistant infections. Controls were 125 individuals with chloroquine sensitive infections. Cases were compared with controls with respect to previous or current study factor levels. Subjects were recruited from randomly selected schools which were stratified for area. Study location was in North Guadalcanal, Solomon Islands. Outcome measure: Treatment failure of chloroquine in standard dosage (25 mg/kg). Follow-up period was 7 days. Results: Logistic regression resulted in 5 independent significant predictors of chloroquine resistance, obtained simultaneously with the diagnosis of malarial infection: (i) Young age (odds ratio (OR) for age 1000/gml: 5.0; 95% CI: 2.0-10.6; OR per 500 parasites/l increase: 1.3; 95% CI: 1.1-1.7). (iii) Normal spleen size (OR: 4.0; 95% CI: 1.5-10.8). (iv) Malnutrition (OR: 4.9; 95% CI: 1.8-13.2). (v) Presence of gametocytes in the thick smear (OR: 3.0; 95% CI: 1.1-8.0). Conclusion: The

identified risk factors are easily measurable without special equipment. They may be useful for health workers in the Solomon Islands, even in remote areas, to identify *Plasmodium falciparum* infected individuals at high risk for chloroquine resistance before a treatment decision is made. "Impact of Permethrin-Impregnated Mosquito Nets Compared with DDT House-Spraying Against Malaria Transmission by *Anopheles Farauti* and *an. Punctulatus* in the Solomon Islands." *Medical & Veterinary Entomology*. Volume 7, Issue 4, Pages 333-333-338. Descriptors: Solomon Islands-Guadalcanal; water; vector control; mosquito net; malaria transmission. Abstract: In villages of northern Guadalcanal in the Solomon Islands, malaria transmission rates were compared for three zones: 1) non-intervention; 2) residual DDT house-spraying two cycles per year; 3) bednets impregnated with permethrin 0.5 g/m² twice per year. Regular DDT spraying in zones 1 and 3 had been withdrawn 18 months previously. The results show that permethrin-impregnated mosquito nets exerted significantly more impact on vector infectivity and the inoculation rate than resulted from DDT spraying. Even so, the inoculation rate for people in the bednet zone remained at one infective bite every 4-32 days, an insufficient reduction to control malaria without additional countermeasures. ISSN: 0269-283X.

Hobbs, William Herbert. 1944. "Mountain Growth, a Study of the Southwestern Pacific Region." *Proceedings of the American Philosophical Society*, Vol. 88, No. 4 (Oct. 18, 1944), pp. 221-268. Abstract: In most parts of the world where mountains are to be found, the history of their origin and manner of growth is difficult to decipher, and mainly for the reason that the history, if not already completed, is at least in a very advanced stage. We are in those areas dealing with conditions of erection which no longer obtain, and throughout this history other and destructive rather than constructive agencies have been in operation, and these agencies have largely effaced or else entirely removed the pertinent evidence. These agencies are grouped under the names weathering, erosion, and transportation, and they have left us only disfigured remnants of forms and structures which at one time would have laid bare the essential facts of the history. These destructive agencies are largely within the realm of the atmosphere, and it is within that shell of our planet that most mountains undergo their erection. In one region, that of the southwest Pacific, and in that alone, mountains have in very recent time been rising from the bottom of the deep sea, where they have been immune from the usual destructive agents, and they are there even today in an early stage of their growth. Impressed by the unique opportunity for study which was there presented, the author in 1918 began a preliminary study of the area, and in 1921 and 1923 he undertook for the purpose extensive reconnaissance cruises in the western and southwestern Pacific areas (map 1). The proof that the mountains within this southwestern Pacific region are still in a vigorous growth which is not duplicated elsewhere, is supplied by the authoritative map of earthquake distribution (map 5). Only less important as evidence is the local effusion of now active volcanic vents which reveals general elevation while the presence of coast terraces reveals a local elevation, as barrier reefs do local subsidence. A very important aid has also been recently supplied by the extended use of the echo method for deep sea soundings (map 7). The present study is treated in three parts: I, a general discussion of the nature of mountain growth; II, a special study of the mountain arcs of the southwestern Pacific area; and III, a study of the principal islands in the oceanic area of subsidence where crustal settlement has brought about the wrinkles or arcs. "Frequency-Magnitude Relationships for Seismic Areas Around the Capital Cities of Solomon, Vanuatu, Tonga and Fiji Islands." *Journal of Seismology*. Volume 4, Issue 3, Pages 285-285-296. Descriptors: Earthquakes; Fiji- Viti Levu-Suva; Pacific Ocean; Solomon Islands- Guadalcanal- Honiara; Tonga- Tongatapu Group- Nuku'alofa; Vanuatu- Efate- Port Vila; earthquake recurrence; frequency-magnitude distribution. Abstract: We studied the relationships between the frequency of occurrence and the magnitudes in seismogenic areas that will affect four capital cities in the South Pacific, namely: Honiara in Solomon Islands, Port Vila in Vanuatu, Suva in Fiji and Nuku'alofa in Tonga. We used the NEIS catalogues for the period 1973-1997, for magnitudes greater than about 5, in the proximity to the city under investigation. The definitions of the geographic boundaries of the seismogenic zones are based on the classical concepts of the distribution of the tectonic plates, the overwhelming number of studies that describe the seismo-tectonics in those active regions and on the observed seismicity and studies of the local people. Completeness of the catalogue is assumed because of the high seismicity in these areas, despite the relatively short time span. We have used a hybrid process combining least squares fitting and Newtonian search process to find the best fit of the statistical parameters. The characteristic b value is 1.27, and seems to be irrespective of the depth and/or region. ISSN: 1383-4649.

Ishii, A., Nagai, N., Arai, M., et al. 1999. "Chemotherapeutic Malaria Control as a Selective Primary Health Care Activity in the Solomon Islands." *Parassitologia*. 1999 September. Volume 41, Issue 1-3, Pages 383-4. Abstract: Malaria control by chemotherapy has been established in rural villages of Guadalcanal, the Solomon Islands, following field trials. As a selective primary health care activity, mobile unit teams visited villages once or twice a year to detect malaria positives and gave chloroquine and primaquine to treat the infection and interrupt the transmission. On site diagnosis was by the use of acridine orange fluorescent staining or the ICTPf commercial diagnostic kit. To avoid possible haemolytic crises, a new single step screening method of G6PD deficiency was introduced. This approach has been accepted well by villagers and proved to be an efficient and feasible control method even in remote rural villages with endemic malaria transmission. Epidemiological modelling of the situation predicts reduction of prevalence in five years. Database: PubMed. Availability: NLM. ISSN: 0048-2951.

Volume 52, Issue 1, Pages 81-93. Descriptors: Malaria; Mathematical model; Plasmodium vivax; Relapse; Simulation; The Solomon Islands. Abstract: We have proposed a mathematical model for the transmission of Plasmodium vivax malaria quantitatively, which is adjusted to the infected region, Guadalcanal, in the Solomon Islands. The simulation of a transmission model will be instrumental in planning the malaria control strategy. A characteristic of the life cycle of *P. vivax* is that a sporozoite injected into the blood stream by a mosquito bite may sometimes stay in a hepatocyte as a hypnozoite. Therefore, we have incorporated a phenomenon of renewed infections caused by a relapse into the transmission model. Also through the simulations we have attempted to evaluate the decline in prevalence caused by the programs of selective mass drug administration (MDA) and vector control such as the distribution of permethrin-treated bednets. The simulations have indicated that the concentrated repetition of MDA at 1-week intervals would reduce the prevalence of vivax malaria swiftly in the beginning and would keep the parasite rate below 1% for a few years but the prevalence would increase thereafter. In contrast, the parasite rate would remain below 1% for a long time if a trial of 1 or 2 times MDA is accompanied with some reduction of the vectorial capacity by the enforcement of vector control. In any case, it is important to beware of relapse cases because even after the execution of MDA it takes a long time to decrease the proportion of hypnozoite carriers. ISSN: 1383-5769.

Jackson, G. V. H. and Zettler, F. W. 1983. “Sweet Potato Witches’ Broom and Legume Little-Leaf Diseases in the Solomon Islands.” *Plant Diseases*. Volume 67, Issue 10, Pages 1141-1144. Descriptors: Article Subject Terms: mycoplasma-like organisms; witches’ broom; disease transmission; Article Taxonomic Terms: *Ipomoea batatas*; *Desmodium*; *Ipomoea triloba*; *Crotalaria*; *Polygala paniculata*; Solomon I. *Merremia pacifica*; *Orosius lotophagorum ryukyuensis*; *Vernonia cineria*; *Vigna sesquipedalis*. Abstract: Sweet potato witches’ broom disease occurred in *Ipomoea batatas*, *I. indica*, *I. triloba*, and *Merremia pacifica* in the Solomon Islands. The disease agent, a mycoplasma-like organism (MLO) found in phloem cells of infected *I. batatas* plants, was transmitted by the sweet potato leafhopper, *Orosius lotophagorum ryukyuensis*. Disease incidence was much higher on the Guadalcanal Plains than elsewhere in the Solomon Islands. The high incidence there was correlated with high populations of *C. lotophagorum ryukyuensis*. All 192 accessions of *I. batatas* from the Solomon Islands were susceptible to this MLO when graft-inoculated with infected scions or when infected naturally. Legume little-leaf, another MLO, was manifested as a witches’ broom symptom on *Emilia sonchifolia* and *Vernonia cineria*. On Guadalcanal, the legume little-leaf disease was also found in plants of *Crotalaria* sp., *Desmodium heterophyllum*, *D. triflorum*, *Polygala paniculata*, and *Vigna sesquipedalis*. Jakes, P. and White, A. J. R. 1969/9. “Structure of the Melanesian Arcs and Correlation with Distribution of Magma Types.” *Tectonophysics*. Volume 8, Issue 3, Pages 223-236. Abstract: Chemical data on Cenozoic lavas (29 new analyses) from Melanesia indicate a zonal arrangement of lava types in the New Guinea-New Britain arc. Tholeiitic rocks occur on the oceanic side of New Guinea (Manam, Karkar), and north of New Britain. Calc-alkaline rocks occur on the East Papuan coast (Mt. Lamington, Mt. Victory). The shoshonitic rock association of the New Guinea highlands (Mt. Hagen, Mt. Giluwe) and East Papua probably represents the equivalent of the alkali-basalt association, or a further zone of magma variation across island arcs. Zonation is not distinct within the Solomon Island Arc. Lavas of the New Georgia Group show tholeiitic as well as calc-alkaline affinities, and rocks from Bougainville and Guadalcanal are calc-alkaline. The equivalent of the alkali-basalt association has not been found in the Solomons. Seismic data are reviewed. The position of the seismic zone may be correlated with the chemistry of the rocks and in the New Guinea Arc the plane dips towards the continent. In the Solomon Arc (Bougainville section) the seismic zone dips steeply towards the continent: in the southern section (New Georgia-Guadalcanal) it is almost vertical. ISSN: 0040-1951.

Johnson, Howard and Pflueger, John. 1991/6. "Potential Mio-Pliocene Reef Traps in the Iron Bottom Basin, Solomon Islands." *Marine Geology*. Volume 98, Issue 2-4, Pages 177-186. Abstract: The Iron Bottom Basin is situated in Iron Bottom Sound, north of Honiara, Guadalcanal, Solomon Islands and is the most southerly sub-basin of the Central Solomons Trough. The basin contains a maximum sedimentary thickness of about 4.5 km of late Oligocene to Quaternary strata that may have the potential for the generation and entrapment of hydrocarbons. We have interpreted commercial multi-channel seismic-reflection profiles from the southern, nearshore part of Iron Bottom Basin and have found mound-like anomalies at least two stratigraphic levels, and we believe these anomalies to be Mio-Pliocene and Pliocene shelf-edge reefs. They cover areas of greater than 6 km by 2.5 km and are up to about 200 m thick. A smaller patch reef is also described. These reef features are overlain by about 1 km of stratified sediments and lie under about 550–650 m of water. They form potential traps for hydrocarbons that may have been generated in Iron Bottom Basin. Descriptors: Cenozoic; economic geology; geophysical methods; geophysical profiles; geophysical surveys; Guadalcanal; Iron Bottom Basin; island arcs; Melanesia; Miocene; Neogene; Oceania; oceanography; Pacific Ocean; petroleum; Pliocene; reefs; reflection methods; reservoir rocks; seismic methods; seismic profiles; Solomon Islands; South Pacific; Southwest Pacific; surveys; Tertiary; traps; West Pacific. Jordan, J.K. and Capul, R. R. 1986. "Rural Water Supply and Sanitation Program in the Solomon Islands." Descriptors: Developing countries; Rural areas; Water supply development; Sanitation; Solomon Islands; Management planning; Finances; Economic aspects; Public participation; Public health; Training; Maintenance; Water treatment; Wastewater treatment. Notes: SO: Water and Sanitation for Health Project, Washington DC. WASH Field Report No. 179, May 1986. 89p, 3 fig, 9 append. AID Contract 5942-C-00-4085-00, Project 936-5942. Water-treatment-and-distribution; Wastewater-treatment-processes. Abstract: At the request of the US Agency for International Development/Suva (USAID/Suva) the Water and Sanitation for Health (WASH) Project sent a two-person team to Solomon Islands (SI) in January and February 1986 to assist USAID/Suva by recommending methods whereby USAID could best implement the Rural Water and Sanitation Project for Child Survival in the Solomon Islands. In addition, the Solomon Islands Government requested that the WASH team assess the effectiveness of the Rural Water and Sanitation (RWSS) Project which was started by the Solomon Islands Government in 1979. Conclusions included: (1) The Solomon Islands Government must decide if it wants to place greater emphasis on sanitation. If so it must recognize that fewer water systems can be constructed; (2) The Environmental Health Division should continue to administer the RWSS Program, but must implement a satisfactory management information system; (3) Implementing a program to maintain rural water systems is essential; and (4) The development and implementation of a research protocol to measure the health benefits of improved water systems in the Solomon Islands is not practical. Recommendations include: (1) The Ministry of Health and Medical Services should form a committee to make decisions on the direction of the RWSS Program with respect to

sanitation; (2) Some of the funds currently allocated for materials should be used to provide more reliable transport for Environmental Health Division personnel; (3) The Solomon Islands Government should seek donor assistance to begin a program of developing community participation workshops for villages with water systems and for those that will receive new ones; (4) USAID should provide financial support and management for the training associated with the development of community participation workshops; and (5) USAID should not provide major support for materials to construct new water systems. Current donor aid is adequate to support this part of the program. Until simplified and practical methodologies are developed, USAID should not fund attempts to undertake research programs to assess the health benefits of improved water supplies to the rural people in the Solomon Islands.

Jun, Takeda, Masato, Kawabata and Toshiaki, Matsuo. 2000. "The Traditional Utilization of Useful Plants and Animals at Talaura Village, Guadalcanal, Solomon Islands." Bulletin of the Faculty of Agriculture, Saga University. Japan. Issue 85, Pages 19-43. Abstract: The Mongoloid group who spoke Austronesian words left the small islands near Indonesia and the Phillipines for Micronesia and Polynesia around 7,000 to 5,000 years ago carrying with them root crops, some arboricultural plants and pottery. These neolithic people were very good at canoeing, so they are called sea Mongoloids. They spread and made a territorial expansion to Oceania, escaping from the Australo-Melanesian people who had settled in advance Australia, Papua New Guinea and other Melanesian islands. They migrated, settled and interbred on the way. One of these groups is the Lapita people whose potteries remained in Musau in the Bismark Islands, Melanesia 3200 to 3300 years ago. Arboricultural plants such as coconut palms and breadfruit trees were very important in the process of migration and settlement in the expansion, and adaptation in the islands. Especially, breadfruits have been utilized as fermented storage foods in Oceania. Coconut palms have a characteristic to flow adrift on the sea and grow naturally on the beach, and have lots of useful parts as food or other uses according to each stage of the growth. Moreover, it is very essential that both plants are even now available inexhaustibly almost throughout the year. We made a field study on the traditional procurement techniques and food processing methods of various kinds of local food resources of the Solomon Islanders, which will give us a clue to elucidate the process of the territorial expansion and adaptation in the islands. Guadalcanal Island belongs to the Solomon

Islands with Honiara as the capital. It has a tropical climate and is blessed with species-diverse resources. Their traditional food system was strongly based on root crops such as taros and yams as main dishes, and local ferns and so on as side dishes all of which grow in Guadalcal Island. ISSN: 0581-2801.

Kale, Brian. 2006. "Seismic Observation in Solomon Islands." Bulletin of the International Institute of Seismology and Earthquake Engineering. International Institute of Seismology and Earthquake Engineering: Tokyo, Japan. Volume 40, Pages 103-126. Descriptors: depth; earthquakes; epicenters; geologic hazards; history; instruments; Kavachi; Melanesia; observations; Oceania; risk assessment; Savo; seismic networks; seismic risk; seismicity; Simbo; Solomon Islands; technology; volcanic earthquakes; volcanoes; Seismology; Environmental geology. Abstract: Each year, someone, somewhere within these scattered islands of Solomon should experience considerably strong earthquake, if not a tremor or perhaps a moderate earthquake. It is quiet true to say Solomon Islands is a region of high seismicity. To be frank, each year, a total number of local earthquake shocks of estimated 780 to 1200 are often detected, recorded, analyzed and distributed at Honiara (HNR) seismological station. For the half part of this year 2005, a total of 640 earthquakes of local and distance (as far as Sumatra) origins were recorded. Most of these local shocks range from magnitude of 2.1 to 7.0 on the richter scale. The most felt shock for 2005, as determine by the United State Geological Survey (USGS) has having magnitude 6.4 on the richter scale occurred on the NE of Dadali on Santa Isabel island on 22nd January at 7.7 degrees S and 159.5 degrees E with Shallow depth. Moderate to considerably strong earthquakes epicenters are plotted along the San Cristobal trench and occasionally along the Vitiaz trench system. ISSN: 0074-655X.

Kannan, K., Tanabe, S., Tatsukawa, R. and Williams, R. J. 1995. "Butyltin Residues in Fish from Australia, Papua New Guinea and the Solomon Islands." Internationa journal of Environmental Chemistry. Descriptors: Australia; Solomon Islands; Papua New Guinea; fish; water pollution effects; bioaccumulation; antifoulants; tissue analysis; toxicity; butyltin; Pisces; food contamination; metals; antifouling substances; tributyltin. Notes: CL: Effects-of-pollution (3030). Abstract: Concentrations of mono- (MBT), di- (DBT) and tributyltin (TBT) were determined in the

muscle and liver of fish collected from Australia, Papua New Guinea and the Solomon Islands. Butyltin concentrations ranged from below the limit of detection to 47 ng g super(-1) in muscle and 6.5 to 570 ng g super(-1) wet wt in liver. Liver was found to accumulate higher concentrations of butyltins than muscle. Butyltin residues in tissues were not positively correlated with lipid content. Monobutyltin was the predominant species in all samples. The daily dietary intake of butyltins by Australians via fish was estimated to be 377-416 ng person super(-1)day super(-1), lower than is believed to cause health problems. ISSN: 0306-7319.

"The Effect of Permethrin Impregnated Bednets on the Incidence of Plasmodium Falciparum, in Children of North Guadalcanal, Solomon Islands." Southeast Asian Journal of Tropical Medicine and Public Health. 1993 March. Volume 24, Issue 1, Pages 130-7. Abstract: The effect of permethrin impregnated bednets was studied for the first time amongst a large community in North Guadalcanal, Solomon Islands. The community was divided into two; one covered 23 villages with 860 people who were given bednets impregnated at 0.5 g/m², and the other 20 villages with 520 people was used as control. Parasitological data were collected by regular prevalence surveys and examination of records of malaria patients who have sought treatment in clinics. Entomological data by landing catches using human bait. The entomological results showed a 71% reduction of Anopheles farauti. Even though there was no significant reduction observed with An.punctulatus, as the density was already very low, the number biting indoor was much lower than those outdoor of houses with treated bednets. Parasitologically there was a steady decline in the incidence between surveys with Plasmodium falciparum in the under 10 years old. Even though there was no significant reduction in the other variables measured, there was a steady increase in the clearance rate between surveys which might also be due to easy accessibility to chemotherapy. The study showed the significant beneficial effect of permethrin impregnated bednets, which was found to be still effective up to twelve months, against stable P. falciparum malaria in children. Availability: NLM.

Kinman, William S and Neal, Clive R. 2006. "Magma Evolution Revealed by Anorthite-Rich Plagioclase Cumulate Xenoliths from the Ontong Java Plateau; Insights into LIP Magma Dynamics and Melt Evolution." J. Volcanol. Geotherm. Res. Elsevier: Amsterdam, Netherlands. Volume 154, Issue 1-2, Pages 131-157. Descriptors: anorthite; basalts; cumulates; electron probe data; feldspar group; framework silicates; igneous rocks; inclusions; Kwaimbaita Basalt; large igneous provinces; laser ablation; laser methods; lava; Leg 192; magmas; Melanesia; melts; Ocean Drilling Program; Oceania; ODP Site 1183; Ontong Java Plateau; Pacific Ocean; pillow lava; plagioclase; silicate melts; silicates; Solomon Islands; volcanic rocks; West Pacific; xenoliths; Igneous and metamorphic petrology. Based on Publisher-supplied data. Abstract: Petrologic studies of igneous rocks often rely on whole-rock analyses alone to deduce source and melting histories. Whole-rock compositions represent a mixture of the processes responsible for the final texture and composition of the rock, but do not emphasize the evolutionary processes that the rock may have experienced. We examine the major, minor, and trace element compositions of plagioclase phenocrysts and plagioclase-rich cumulate xenoliths from a sequence of Kwaimbaita pillow basalt and massive flows recovered from Ocean Drilling Program (ODP) Site 1183 on the expansive approximately 122 Ma Ontong Java Plateau (OJP) and from subaerial outcrops on the island of Malaita, Solomon Islands. These data are used to reconstruct equilibrium liquid compositions to understand magma dynamics, magma evolution, and the distribution basalt types across the OJP. Results reveal that crystals frequently are out of equilibrium with their host basalt. Two distinct compositional zones are present in plagioclase phenocrysts and xenolith crystals - An (sub 80-86) and An (sub 65-79) . Equilibrium magma compositions derived from each of these zones are distinct. In relative terms, the following distinctions are made: An (sub 80-86) : Sr, Y, and Eu richer, Ba and LREE depleted, higher Sr/Ti, lower Ba/Sr and La/Y; An (sub 65-79) : Sr, Y, and Eu

poorer, Ba and LREE enriched, lower Sr/Ti, higher Ba/Sr and La/Y. We observed several An (sub 65-79) parent magmas with higher La/Y, lower Sr, and higher LREE than the majority of An (sub 65-79) zones, which suggests that they grew from highly fractionated magmas. The An (sub 80-86) zones of both xenolith crystals and phenocrysts appear to have crystallized relatively early and are attributed to growth in magmas more primitive than parent magmas of An (sub 65-79) zones or the host magma. Using MELTS modeling we demonstrate a significant role for H (sub 2) O is not necessary to form An-rich crystals from known OJP magma types. These types of zones can instead form when relatively primitive OJP magmas ascend and partially crystallize at low pressures. Crystal mush layers are rheological elements of multiply saturated solidification fronts, and conditions for extreme fractionation are met deep with thermally and mechanically insulated mush-solidification fronts. Conditions in a homogenous magma body alone cannot generate the range of magma compositions and textures recorded in OJP plagioclase crystals. We suggest that the OJP magma chamber system consisted of crystal mush dominated regions and liquid dominated regions in a laterally and vertically extensive system of interconnected dikes and sills. Solidification front disruption was common during magma recharge and transport, which freed debris to mix with OJP magmas. The volume of crystalline debris from disrupted solidification fronts was small relative to the overall magma volume, which leads to little change of bulk magma chemistry. This can explain the dominance of the Kwaimbaita basalt type across the OJP. Evidence of solidification front disruption is best preserved as allochthonous crystals both more and less primitive than bulk magma chemistry, both of which were observed in OJP basalts. Coincident with a zone of neutral buoyancy, the shallow OJP magma chamber system existed at a depth of 0-7 km. The OJP magma chamber system was thinner near the plateau margins, which provided less density filtration of magmas. This allowed more diverse magma types to reach the surface along the margins. It is envisaged that as the OJP formed, the zone of neutral buoyancy slowly migrated upward leading to slow yet pervasive assimilation of overlying seawater-altered basalt at the base of the lava pile. Volume: 77, Pages: 16. Descriptors: Article Subject Terms: Geophysical surveys; Drilling; Ground water; Water quality; Water pollution; Article Geographic Terms: Solomon I., Guadalcanal Plains; Freshwater. Abstract: Aquifers on the Guadalcanal Plains (Solomon Islands) consist of poorly graded gravel, sand and clay layers and permeability is very irregular from one well to another. Ground water quality is generally good from chemical point of view but some areas are contaminated with seawater. This report outlines the information about the availability of ground water. The information was gathered by geophysical surveys, drilling, well monitoring and water quality analysis. Being the primary source of ground water, the Plains must be kept free from dumping waste matter. It is suggested that ground water may be the only source free of contamination. MacQuillan, M. J. 1974. "Influence of Crop Husbandry on Rice Planthoppers (Hemiptera; Delphacidae) in the Solomon Islands." Agro-Ecosystems. Volume 1, Pages 339-358. Abstract: Husbandry practices which led to the rice planthoppers *Nilaparvata lugens* Stål and *Sogatella furcifera* Horv. (Hemiptera; Delphacidae) becoming severe pests at Ilu on Guadalcanal are identified. In the system of two irrigated rice crops a year at Ilu, rice was grown in every month of each year from 1960 to 1966. Overlapping of an extended period of harvesting of one rice crop with an extended period of planting of the next, resulted in high densities of rice planthoppers appearing on young rice crops. Insecticides applied to control rice planthoppers on young crops and

close cutting of paddy bunds severely reduced mirid and spider predators of rice planthoppers. Rice planthoppers surviving insecticidal applications and macropterous adults, arriving from rice not sprayed with insecticides and from crop residues, were able to reproduce unchecked resulting in severe damage to more susceptible sowings of 90 kg seed/ha in rows 18 cm apart if further insecticidal applications were not regularly made. The absence of a severe rice planthopper problem in the system of one unirrigated crop a year at Tetera is explained in the light of the results at Ilu. Attention is drawn to methods that can be used to control rice planthoppers attacking irrigated rice on Guadalcanal. ISSN: 0304-3746.

Mann, Paul and Taira, Asahiko. 2004. "Global Tectonic Significance of the Solomon Islands and Ontong Java Plateau Convergent Zone." *Tectonophysics*. Elsevier: Amsterdam, Netherlands. Volume 389, Issue 3-4, Pages 137-190 ; 3 sheets. Descriptors: acoustical methods; basins; Cenozoic; crust; geophysical methods; geophysical surveys; gravity methods; imagery; island arcs; lineaments; mafic composition; magnetic methods; mantle; mantle plumes; ocean floors; oceanic crust; Ontong Java Plateau; Pacific Ocean; plate convergence; plate tectonics; Quaternary; reflection methods; refraction methods; seismic methods; side scanning methods; Solomon Islands; sonar methods; subduction zones; surveys; tectonics; trenches; uplifts; volcanism; West Pacific; Solid earth geophysics; Applied geophysics. Abstract: Oceanic plateaus, areas of anomalously thick oceanic crust, cover about 3% of the Earth's seafloor and are thought to mark the surface location of mantle plume "heads". Hotspot tracks represent continuing magmatism associated with the remaining plume conduit or "tail". It is presently controversial whether voluminous and mafic oceanic plateau lithosphere is eventually accreted at subduction zones, and, therefore: (1) influences the eventual composition of continental crust and; (2) is responsible for significantly higher rates of continental growth than growth only by accretion of island arcs. The Ontong Java Plateau (OJP) of the southwestern Pacific Ocean is the largest and thickest oceanic plateau on Earth and the largest plateau currently converging on an island arc (Solomon Islands). For this reason, this convergent zone is a key area for understanding the fate of large and thick plateaus on reaching subduction zones. This volume consists of a series of four papers that summarize the results of joint US-Japan marine geophysical studies in 1995 and 1998 of the Solomon Islands-Ontong Java Plateau convergent zone. Marine geophysical data include single and multi-channel seismic reflection, ocean-bottom seismometer (OBS) refraction, gravity, magnetic, sidescan sonar, and earthquake studies. Objectives of this introductory paper include: (1) review of the significance of oceanic plateaus as potential contributors to continental crust; (2) review of the current theories on the fate of oceanic plateaus at subduction zones; (3) establish the present-day and Neogene tectonic setting of the Solomon Islands-Ontong Java Plateau convergent zone; (4) discuss the controversial sequence and timing of tectonic events surrounding Ontong Java Plateau-Solomon arc convergence; (5) present a series of tectonic reconstructions for the period 20 Ma (early Miocene) to the present-day in support of our proposed timing of major tectonic events affecting the Ontong Java Plateau-Solomon Islands convergent zone; and (6) compare the structural and deformational pattern observed in the Solomon Islands to ancient oceanic plateaus preserved in Precambrian and Phanerozoic orogenic belts. Our main conclusion of this study is that 80% of the crustal thickness of the Ontong Java Plateau is subducted beneath the Solomon island arc; only the uppermost basaltic and sedimentary part of the crust (approximately 7 km) is preserved on the

overriding plate by subduction-accretion processes. This observation is consistent with the observed imbricate structural style of plateaus and seamount chains preserved in both Precambrian and Phanerozoic orogenic belts. ISSN: 0040-1951.

Descriptors: accreting plate boundary; air guns; Australian Plate; body waves; crust; data acquisition; data processing; elastic waves; geochemistry; geophysical methods; geophysical surveys; igneous rocks; Indian Plate; island arcs; Izu Bonin Arc; major elements; Malaita; Melanesia; models; North Pacific; Northwest Pacific; ocean bottom seismographs; ocean floors; Oceania; oceanic crust; Ontong Java Plateau; P waves; Pacific Ocean; plate collision; plate tectonics; reflection methods; refraction methods; San Cristobal Trench; seismic methods; seismic waves; seismicity; seismographs; Solomon Islands; subduction zones; surveys; trenches; velocity; volcanic rocks; West Pacific; Solid earth geophysics; Applied geophysics. Abstract: A seismic refraction-reflection experiment using ocean bottom seismometers and a tuned airgun array was conducted around the Solomon Island Arc to investigate the fate of an oceanic plateau adjacent to a subduction zone. Here, the Ontong Java Plateau is converging from north with the Solomon Island Arc as part of the Pacific Plate. According to our two-dimensional P-wave velocity structure modeling, the thickness of the Ontong Java Plateau is about 33 km including a thick (15 km) high-velocity layer (7.2 km/s). The thick crust of the Ontong Java Plateau still persists below the Malaita Accreted Province. We interpreted that the shallow part of the Ontong Java Plateau is accreted in front of the Solomon Island Arc as the Malaita Accreted Province and the North Solomon Trench are not a subduction zone but a deformation front of accreted materials. The subduction of the India-Australia Plate from the south at the San Cristobal Trench is confirmed to a depth of about 20 km below sea level. Seismicity around our survey area shows shallow (about 50 km) hypocenters from the San Cristobal Trench and deep (about 200 km) hypocenters from the other side of the Solomon Island Arc. No earthquakes occurred around the North Solomon Trench. The deep seismicity and our velocity model suggest that the lower part of the Ontong Java Plateau is subducting. After the oceanic plateau closes in on the arc, the upper part of the oceanic plateau is accreted with the arc and the lower part is subducted below the arc. The estimation of crustal bulk composition from the velocity model indicates that the upper portion and the total of the Solomon Island Arc are SiO (sub 2) 58% and 53%, respectively, which is almost same as that of the Izu-Bonin Arc. This means that the Solomon Island Arc can be a contributor to growing continental crust. The bulk composition of the Ontong Java Plateau is SiO (sub 2) 49-50%, which is meaningfully lower than those of continents. The accreted province in front of the arc is growing with the convergence of the two plates, and this accretion of the upper part of the oceanic plateau may be another process of crustal growth, although the proportion of such contribution is not clear. ISSN: 0040-1951.

Mizushima, Yutaka, Kato, Hiromi, Ohmae, Hiroshi, Tanaka, Toshiaki, Bobogare, Albino and Ishii, Akira. 1994/12. "Prevalence of Malaria and its Relationship to Anemia, Blood Glucose Levels, and Serum Somatomedin c (IGF-1) Levels in the Solomon Islands." *Acta Tropica*. Volume 58, Issue 3-4, Pages 207-220. Descriptors: Malaria; Malnutrition; IGF-1. Abstract: As part of establishing effective methods for malaria control, the malaria-associated nutritional status was surveyed on Guadalcanal Island in the Solomon Islands in 1993. A total of 506 residents participated in this study. The slide positive rate for malaria was 54% (275/506) in all ages, with a high of 79% for children aged 4-6 years. *Plasmodium falciparum* was the most common species (52%), followed by *P. vivax* (29%). Splenomegaly in children from infants to age 15 was detected at the rate of 30% (104/343) by the palpation method. Body mass index was lower in Solomon

Islanders than for the Japanese population up to 15 years old in both genders. Mean values for serum insulin-like growth factor-1 (IGF-1) were also lower in Solomon Islanders in children under 18 years old. The hemoglobin distribution curves were almost identical in the malaria-positive (P(+)) and -negative (P) groups. The percentage of cases with less than 80 mg/dl of blood glucose and those with less than 50 ng/ml of IGF-1 were higher in the P(+) group than for the anti-malaria drug-untreated malaria-negative (P(?)D(?)) group. It is suggested that low blood glucose and low IGF-1 levels may have some relationship with the malaria infection. ISSN: 0001-706X.

Morton, J. E. 1973. "The Inner-Tidal Ecology of the British Solomon Islands. 1. the Zonation Patterns of the Weather Coast." *Philosophical Transactions of the Royal Society of London (B)*. Volume 265, Issue 873, Pages 491-542. Descriptors: Marine. Notes: records keyed from 1974 ASFA printed journals; TR: 1974. Abstract: The structure and composition of the intertidal zonation pattern on Solomon Islands exposed shores has been studied with reference to a series of transects on the south and east coasts of Banika Island, Russell Group. The generalized zonation pattern is given. Detailed comparative studies were made at Titiana Point, Gizo Island; at the Spit Reef, Wickham Anchorage; Wickham Island; and at Kopiu and Walmai, South Guadalcanal. The distribution of the Mollusca, especially the Gastropoda forms a clear-cut pattern, widely applicable in the Solomons Islands. Where moats or shallow pools provide continuously Immersed stretches between tides, a different, and much enriched, zoning pattern is evident. With the transition from maximal wave exposure towards increased shelter, the intertidal zonation is altered by (1) vertical and (2) horizontal effects. For vertical effects, less marked than on corresponding temperate shores, there is still a marked elevation of the successive zones, to occupy areas well above the nominal tide limits. With decrease of wave exposure, 5 distinctive types of intertidal pattern have been recognized. ISSN: 0962-8436.

Descriptors: data bases; data processing; eruptions; Melanesia; Oceania; report; Solomon Islands; volcanism; volcanoes; volcanology; Quaternary geology. Abstract: This visit followed a request for information about GNS volcanological programmes which might be applicable to Solomon Island volcanoes. The request came from Patrick Nanau of the Seismological Section of the Ministry of Energy, Water

and Mineral Resources (MEWMR). A copy of his letter is attached to this report as an Appendix. The Solomon's capital - Honiara (on Guadalcanal) was visited on the way to Rabaul, PNG. A two hour meeting was held at the Ministry office on 10 May 1995, with Patrick Nanau, Cromwell Oopoto, Alison K. Papabatu and Boby Kelly of the Seismological Section. Institute of Geological & Nuclear Sciences, Lower Hutt, New Zealand. ISBN: 1171-9184; 0-478-08869-8.

Nowak, Rachel and Reuters. 2007. "Ten-metre-high tsunami strikes Solomon Islands." *NewScientist.com news service*. 12:09 02 April 2007. Abstract: At least 12 people died and many more are missing after a tsunami struck the tiny Solomon Islands following a powerful undersea earthquake in the South Pacific on Monday morning. The quake measured 8.1 on the Richter scale

and occurred in shallow waters 350 kilometres (220 miles) north-west of the Solomons' capital, Honiara. It struck at 0740 local time on Monday 2 April (2040 GMT on Sunday), levelling buildings in the south-western islands. The initial tremor was followed about 7 minutes later by a second one, centred further west, of magnitude 6.7. The quakes created a tsunami several metres high that swamped buildings, swept away entire villages and dragged people out to sea. There are fears that the numbers of dead could rise with emerging news of more villages being destroyed. At least seven people died in Gizo, a small fishing village on Ghizo Island just 45 kilometres (25 miles) from the first quake's epicentre. "The wave was up to 10 metres high in some villages," says Alfred Maesulia, the Solomon Islands' chief government spokesman. Many residents were trapped in their homes when waves swept through their towns. Other bodies could be seen but not reached because of the big waves, said government officials. The Solomons' prime minister, Manasseh Sogavare, said the disaster could have been worse if it had happened only a few hours earlier, in darkness, when more people would have been asleep. "We are lucky that it happened during the daytime, that the people observed the sea receding as a sign that something was not right," he said. A tsunami warning for the Pacific from Australia to Alaska was issued within 15 minutes of the quake, creating panic along the east coast of Australia, 2100 kilometres away. Beaches were closed, some schools and daycare centres evacuated, and ferry services halted in Sydney Harbour amid fears of a repeat of the 2004 Indian Ocean tsunami disaster. Geoscience Australia alerted the Australian Bureau of Meteorology and Emergency Management Australia of the earthquake's "potential to generate a destructive tsunami". The alert was lifted about 9 hours later, with damage confined to the immediate area around the quake. Witnesses on Australia's east coast described the arriving wave as an "extreme tide". The quake was the biggest to hit the Solomon Islands since 1900, says Gary Gibson, chair of the International Seismological Centre executive committee. "An earthquake of this size would involve a rupture of more than 10,000 square kilometres of fault area – about 100 kilometres by 100 kilometres." But he adds that the quake was much smaller than the 1300-km-long rupture in December 2004 off Indonesia's island of Sumatra. The Solomon Islands lie on the so-called Pacific "Ring of Fire", which is geologically extremely active: volcanic eruptions and large submarine earthquakes are fairly common. "The proximity of the quake to the Solomon Islands meant that there was no time to warn of the tsunami, which struck nearby coastlines within a few minutes," said Bill McGuire, director Benfield Hazard Research Centre in the UK. "This sort of thing will continue to happen until populations living close to major earthquake faults are educated to self-evacuate inland or uphill immediately following strong ground shaking," McGuire warned. Ockenhouse, Christian, F., Magill, Alan, Smith Dale and Milhous, Wil. 2005. "History of U.S. Military Contributions to the Study of Malaria." *Military Medicine*. 2005 April. Association of Military Surgeons of the U.S. Volume 170 (4 Suppl), Issue 12-6, Abstract:

More so than any other infectious disease, malaria has all too often affected the conduct of military operations in war and in some cases has disproportionately influenced the outcome. From Napoleon's defensive action at Walcheren, to the Union Army's attempts to take control of the Mississippi River at Corinth and Vicksburg, to the dreadful numbers of malaria casualties suffered by U.S.

At Guadalcanal, "By October [1942], malaria began to claim as many casualties as Japanese artillery, bombs, and naval gunfire. Shown here are the patients in the division hospital who are ministered to by physicians and corpsmen working under minimal conditions." Shaw. First Offensive.

Marines on the islands of Efate and Guadalcanal during World War II and more recently in Liberia in 2003, malaria has extracted a heavy toll. In this article, we summarize a few of the significant contributions to malaria control by U.S. military personnel throughout its history. We review examples of scientific achievements, medical breakthroughs, and lessons learned from preceding wars that continue to drive the quest for effective antimalarial therapies and preventive vaccines. This review is by no means comprehensive or complete but serves as a testament to the skill, courage, self-sacrifice, and devotion to duty of the many who have faithfully served their country in the past and to those today who continue the struggle against this disease. "Field Evaluation of an Insect Growth Regulator, Pyriproxyfen, Against *Anopheles Punctulatus* on North Guadalcanal, Solomon Islands." *J. Am. Mosq. Control Assoc.* Volume 7, Issue 4, Pages 604-607. Descriptors: Article Subject Terms: chemical control; mortality; aquatic insects; Article Taxonomic Terms: Culicidae; Diptera; *Anopheles punctulatus*; growth regulators; pyriproxyfen; Solomon I., Guadalcanal I. Freshwater. Abstract: Five pools containing immature stages of *Anopheles punctulatus* were treated with pyriproxyfen at 4 different dosages. Inhibition of adult emergence was observed in pupae collected from the test pools and/or those obtained by rearing of the 4th instar larvae. Adult emergence was inhibited completely for 2 months at a dosage of 0.1 ppm, for one month at 0.05 ppm and 0.01 ppm, and for 20 days at 0.02 ppm. Death of test insects were observed at the pupal stage and at adult emergence. The mortality rate at adult emergence increased with the duration of larval rearing and with the elapse of time after application. ISSN: 8756-971X.

Paik, Y.H. 1987. "Influence of Stagnation of Water Pathways on Mosquito Population Density in Connection with Malaria Transmission in the Solomon Islands." Descriptors: Water management effects; Stagnant water; Public health; Mosquitoes; Malaria; Human diseases; Aquatic insects; Water management; Solomon Islands; DDT; Guadalcanal; Flow discharge; River mouth; Ecological effects; Insecticides. Notes: *The Japanese Journal of Experimental Medicine JJEMAG Vol. 57, No. 1, p 47-52, February 1987. 4 fig, 1 tab, 4 ref.* Ecological-impact-of-water-development. Abstract: Malaria is the major health problem in the Solomon Islands. The area of Guadalcanal plains is known as the most malarious area of the Solomons. In spite of well executed DDT indoor spraying, malaria transmission was not interrupted. The causative factors responsible for the persisting transmission appeared to be: (1) refractoriness of *Anopheles farauti* to DDT spraying; (2) the habit of people to stay outside late in the evening; and (3) a marked outdoor biting tendency of *A. farauti*. It was found that DDT indoor spraying alone had little impact on the interruption of malarial transmission. The study was conducted in 1974 to observe the change of mosquito population density in relation to the constriction of the river mouth in north Guadalcanal in order to consider alternative means for malaria control. The results indicate that the improvement of the malaria situation in north Guadalcanal could be associated with the steady flow of the river water obtained by maintaining the river mouth in the open condition. ISSN: 0021-5031.

Pain, Stephanie. 2006. "Histories: Carteret's South Sea trouble." Issue #2538 of *New Scientist* magazine, 11 February 2006, page 52. Abstract: Philip Carteret was astonished. The young British officer couldn't believe he was being asked to sail a "miserable tool" like HMS *Swallow* around the world. The ship was slow and hard to handle. It was badly equipped. It leaked. He was short of officers, short of crew and didn't have enough space to stow the supplies needed

for a long voyage. But Carteret was an ambitious man and he had his orders. And if the Swallow didn't sink and they didn't all starve or die from scurvy, the voyage would make his name - or so he thought. So for three years he nursed his ship through wild weather and treacherous waters in search of new lands in the South Seas. Carteret failed to find a new continent - the hoped-for place of consequence - but he pulled off an extraordinary feat of seamanship. Despite great hardships and constant danger of shipwreck he did discover new places, rediscovered the legendary Solomon Islands, and much to everyone's surprise sailed the Swallow safely home. The Swallow's adventures - or misadventures - began in the summer of 1766. In May, Carteret had returned from a two-year round-the-world voyage as lieutenant aboard HMS Dolphin. Within weeks, he was given command of the Swallow and told to get it ready to sail as consort to the Dolphin on a new and urgent mission under the command of Captain Samuel Wallis... As the more experienced man, Carteret was to pilot the ships through the treacherous Strait of Magellan into the Pacific. Swallow was so slow it took four months, and when the ships finally reached the ocean, Wallis sped off and disappeared over the horizon. He left no word of his intended route. Convinced the Swallow had been abandoned, Carteret decided to go on alone. First he headed north to find food and water in the Juan Fernandez islands off Chile - only to discover the Spanish installed there. With orders to explore the southern parts of the Pacific, he turned west across the ocean, tracking farther south than any before him. Wallis, sailing well to the north of him, discovered Tahiti. The Dolphin's crew thought they had found paradise and Wallis thought he had done his duty. He stayed six weeks and then headed for England. While Wallis was enjoying the delights of Tahiti, Carteret made his first discovery. On 2 July, Midshipman Pitcairn spotted a massive volcanic island rising out of the ocean. Unlike lush, welcoming Tahiti, Pitcairn Island was "scarce better than a large rock". It was remote, uninviting and uninhabited, and it was impossible to land because the surf "broke upon it with great violence". Pitcairn was then of little consequence. But 30 years later, Fletcher Christian and his band of mutineers from HMS Bounty needed a hiding place. In the Bounty's library, Christian read an account of Carteret's discovery and reckoned Pitcairn would suit. It turned out to be better even than he imagined, for without a chronometer to calculate longitude, Carteret had marked the island wrongly on the map. The mutineers escaped notice for 19 years. On 11 July, Carteret discovered three unknown atolls in the Tuamotu archipelago. He was now hoping to find the Solomon Islands, discovered by Spanish navigator Alvaro Mendaña in 1568 but which no other European had seen since. Mendaña claimed the islands were the source of King Solomon's legendary gold - which made all Europe keen to find them. By now, though, conditions aboard the Swallow were grim: most of the crew had scurvy and provisions were running out. Carteret's priority was to find fresh food and water, and so instead of pressing on southward he continued west. On 12 August, with his men sick and his ship leaking, Carteret finally found a group of islands he named Queen Charlotte Islands. He made for the largest, which he called Egmont Island... On 20 August he found three new islands. He named them, marked them on his map and charged on, his explorer's curiosity all but extinguished by worry. Four days later, he spotted a ring of small coral islands. Carteret reckoned there were nine (there were six) and called them the Carteret Islands. What he failed to recognise was that all the islands he had seen that week were northern outliers of Mendaña's fabled archipelago. He had made a great discovery - but didn't know it. The journey home was as difficult as the outward voyage. Carteret eventually found enough food and water to last until the Swallow reached the nearest friendly port - the Dutch settlement at Macassar in what is now Sulawesi. The Dutch, who were bound by a treaty of friendship to aid stricken British ships, initially refused to help him, an act that soured relations between the two countries for years. Eventually, and grudgingly, the Dutch capitulated and the Swallow went home,

arriving in March 1769. So why does no one remember Carteret? His discoveries were significant, and he charted routes that were later followed by British ships making the voyage to China and Australia. Misfortune had dogged him all the way, yet he had triumphed. But there was one misfortune he couldn't overcome. While he was still in the South Seas, a new expedition set out - led by Captain James Cook. Cook's achievements so eclipsed those of his predecessors, he became the nation's hero. Carteret was laid off on half pay. Two centuries on, Carteret's name is in the news, not in belated recognition of his heroism but because the six low-lying islands that bear his name are about to disappear, victims of rising sea levels. One island has already been cut in half and seawater floods have made the soils useless for growing crops. Over the next two years, the 1500 islanders will all pack up and leave. Within a decade the islands will be under water and Carteret's name will be forgotten again. ISSN: 0262-4079.

San Francisco, CA, United States. Dec. 8-12, 1997. GEMOC Publ. No. 140. Abstract: Spinel peridotites from a variety of island arcs have been utilised to calculate the redox state of the mantle wedge above subduction zones. Oxygen fugacities ($f(\text{sub O}_2)$ values) calculated from the ferric iron content of spinels, measured by Electron Microprobe (EMP) using secondary standards [Wood, B. J., Virgo, D., 1989. Upper mantle oxidation state: ferric iron contents of lherzolite spinels by (super 57) Fe Mossbauer spectroscopy and resultant oxygen fugacities. *Geochim. Cosmochim. Acta*, 53, 1277-1291.], yield values which range from 0.3 to 2.0 above the fayalite-magnetite-quartz (FMQ) buffer. These data provide further evidence that the mantle wedge is ubiquitously oxidised relative to oceanic and ancient cratonic mantle. There is no correlation between $f(\text{sub O}_2)$ values and the presence of hydrous phases and, in fact, the most oxidised samples contain no hydrous phases. Within individual suites there is no correlation between $f(\text{sub O}_2)$ and degree of depletion as indicated by spinel Cr except for a suite of reacted forearc-peridotites. However, when the data is viewed as a whole there is broad a positive correlation between $f(\text{sub O}_2)$ and spinel Cr suggesting that partial melting processes may influence the redox state of the mantle wedge. We suggest that the ultimate source of the oxygen which oxidises the mantle wedge is from the subducted slab. It is not clear whether this oxidising agent is a solute-rich hydrous fluid or a water-bearing silicate melt. However, our data does indicate that silicate melts are effective oxidisers of the depleted shallow upper mantle. Simple mass balance calculations based on the ferric iron content of primitive subduction zone magmas indicates that the source region must contain 0.6-1.0 wt.% Fe (sub 2) O (sub 3). This amount of Fe (sub 2) O (sub 3) in a fertile spinel peridotite yields an oxygen fugacity of 0.5-1.7 log units above FMQ in the IAB source. If water is the sole oxidising agent in the mantle wedge then 0.030-0.075 wt.% H (sub 2) O is required which is considerably less than the 0.25% H (sub 2) O envisaged by Stolper and Newman [Stolper, E. M., Newman, S., 1994. The role of water in the petrogenesis of Mariana trough magmas. *Earth Planet. Sci. Lett.*, 121, 293-325.], suggesting water is not necessarily an efficient oxidising agent. Alternatively, ferric iron may be added to the mantle wedge by addition of a ferric iron-rich sediment melt or more likely as a solute-rich hydrous fluid. This model would produce spinel, orthopyroxene or amphibole in the wedge with only a slight increase in $f(\text{sub O}_2)$ of the source region. Although it is unclear which model is correct the maximum $f(\text{sub O}_2)$ of the fertile mantle wedge is unlikely to be above FMQ+2 and therefore some decompression melting in the mantle wedge is required to explain the higher $f(\text{sub O}_2)$ values of primitive arc lavas than arc-peridotites. Petterson, M G, Babbs, T, Neal, C R, et al. 1999. "Geological-Tectonic Framework of Solomon Islands, SW Pacific; Crustal Accretion and Growth within an Intra-Oceanic Setting." *Tectonophysics.* Volume 301, Issue 1-2, Pages 35-60. Descriptors: accretion; basalts; basement; block structures; Cenozoic; classification; Cretaceous; crust; definition; faults; geochemistry; Guadalcanal; igneous rocks; island arcs; Malaita; mantle; mantle plumes; Melanesia; Mesozoic; mid ocean ridge basalts; Oceania; oceanic crust; Ontong Java Plateau; Pacific Ocean; plate tectonics; plateaus; Solomon Islands; systems; tectonic elements; terrains; terranes; volcanic rocks; West Pacific; Solid earth geophysics. Abstract: The Solomon Islands are a complex collage of crustal units or terrains (herein termed the "Solomon block") which have formed and accreted within an intra-oceanic environment since Cretaceous times. Predominantly Cretaceous basaltic basement sequences are divided into: (1) a plume-related Ontong Java Plateau terrain (OJPT) which includes Malaita, Ulawa, and northern Santa Isabel; (2) a "normal" ocean ridge related South Solomon MORB terrain (SSMT) which includes Choiseul and Guadalcanal; and (3) a hybrid

“Makira terrain” which has both MORB and plume/plateau affinities. The OJPT formed as an integral part of the massive Ontong Java Plateau (OJP), at c. 122 Ma and 90 Ma, respectively, was subsequently affected by Eocene-Oligocene alkaline and alnoitic magmatism, and was unaffected by subsequent arc development. The SSMT initially formed within a “normal” ocean ridge environment which produced a MORB-like basaltic basement through which two stages of arc crustal growth subsequently developed from the Eocene onwards. The Makira terrain records the intermingling of basalts with plume/plateau and MORB affinities from c. 90 Ma to c. 30 Ma, and a contribution from Late Miocene-present-day arc growth. Two distinct stages of arc growth occurred within the Solomon block from the Eocene to the Early Miocene (stage 1) and from the Late Miocene to the present day (stage 2). Stage 1 arc growth created the basement of the central part of the Solomon block (the Central Solomon terrain, CST), which includes the Shortland, Florida and south Isabel islands. Stage 2 arc growth led to crustal growth in the west and south (the New Georgia terrain or NGT) which includes Savo, and the New Georgia and Russell islands. Both stages of arc growth also added new material to pre-existing crustal units within other terrains. The Solomon block terrane collage records the collision between the Alaska sized OJP and the Solomon arc. Initial contact possibly first occurred some 25-20 Ma but it is only since around 4 Ma that the OJP has more forcefully collided with the Solomon arc, and has been actively accreting since that time, continuing to the present day. We present a number of tectonic models in an attempt to understand the mechanism of plateau accretion. One model depicts the OJP as splitting in two with the upper 4-10 km forming an imbricate stack verging to the northeast, over which the Solomon arc is overthrust, whilst deeper portions of the OJP (beneath a critical detachment surface) are subducted. The subduction of young (<5 Ma), hot, oceanic lithosphere belonging to the Woodlark basin at the SSTS has resulted in a sequence of tectonic phenomena including: the production of unusual magma compositions (e.g. Na-Ti-rich basalts, and an abundance of picrites); an anomalously small arc-trench gap between the SSTS and the Quaternary-Recent arc front; calc-alkaline arc growth within the down going Woodlark basin lithospheric plate as a consequence of calc-alkaline magma transfer along leaky NE-SW-trending faults; rapid fore-arc uplift; and rapid infilling of intra-arc basins. The present-day highly oblique collision between the Pacific and Australian plates has resulted in the formation of rhombohedral intra- and back-arc basins. ISSN: 0040-1951.

Petterson, M G, Neal, C R, Mahoney, J J, et al. 1997. “Structure and Deformation of North and Central Malaita, Solomon Islands; Tectonic Implications for the Ontong Java Plateau-Solomon Arc Collision, and for the Fate of Oceanic Plateaus.” *Tectonophysics*. Elsevier: Amsterdam, Netherlands. Volume 283, Issue 1-4, Pages 1-33. Descriptors: anticlinoria; Cenozoic; crust; deformation; folds; island arcs; lithostratigraphy; Malaita; Melanesia; obduction; Oceania; oceanic crust; Ontong Java Plateau; Pacific Ocean; plate collision; plate tectonics; plateaus; sedimentation; Solomon Islands; structural analysis; subduction; tectonics; volcanism; West Pacific; Structural geology. Abstract: The island of Malaita, Solomon Islands, represents the obducted southern

margin of the Ontong Java Plateau (OJP). The basement of Malaita formed during the first and possibly largest plateau-building magmatic event at approximately 122+ or -3 Ma. It subsequently drifted passively northwards amassing a 1-2 km thickness of pelagic sediment overburden. A major change in OJP tectonics occurred during the Eocene, possibly initiated by the OJP passing over the Samoan or Raratongan hotspot. Extension facilitated increased sedimentation and basin formation (e.g., the Faufaumela basin) and provided readily available deep-crustal pathways for alkali basalt and subsequent Oligocene alnoite magmas, with related hydrothermal activity producing limited Ag+Pb mineralisation. Eocene to Mid-Miocene sediments record the input of arc-derived turbiditic volcanoclastic sediment indicating the relative closeness of the OJP to the Solomon arc. The initial collision of the OJP and Solomon arc at 25-20 Ma was of a “soft docking” variety and did not result in major compressive deformation on Malaita. South-directed subduction of the Pacific Plate briefly ceased at this time but resumed intermittently on a local scale from approximately 15 Ma. Subduction of the Australian Plate beneath the Solomon arc commenced at approximately 8-7 Ma. Increased coupling between the Solomon arc and the OJP led to the gradual emergence of the OJP at 6-5 through to 4 Ma. The most intense period of compressive to transpressive deformation recorded on Malaita is stratigraphically bracketed at between 4 and 2 Ma, resulting in estimated crustal shortening of between 24 and 46%, and the inclusion of between 1 and 4 km of basement OJP basalts within the larger anticlines. Basement and cover sequences are deformed together in a coherent geometry and there are no major decollement surfaces; the large asymmetrical fold structures of Malaita are likely to be the tip regions of blind thrusts with detachment surfaces between 1 and 4 km beneath the cover sequence. Mid-Pliocene deformation records the detachment of the upper parts of the OJP, with initial material movement direction towards the northeast and later obduction of an upper allochthonous block of the OJP southwestwards over the Solomon arc. A model is presented whereby an upper 5-10-km-thick flake of the OJP is obducted over the Solomon arc to form the Malaita anticlinorium, whilst deeper levels are presently being subducted. The important implication is that even very large and thick oceanic plateaus may not survive subduction completely intact. ISSN: 0040-1951.

Abstract: This paper presents the most complete results yet published of geological surveys in Malaita, north of latitude 9 degrees 05'S between 1990 and 1995. The geology of Malaita reflects its position as an obducted part of the Alaska-size Ontong Java Plateau (OJP). The geology comprises a monolithological Cretaceous basalt basement sequence up to 3-4 km thick, termed the Malaita Volcanic Group (MVG), conformably overlain by a 1-2 km-thick Cretaceous-Pliocene pelagic sedimentary cover sequence. Cretaceous-Pliocene pelagic sedimentation was punctuated by alkaline basalt volcanism during the Eocene and by intrusion of alnoites during the Oligocene. Basement and cover sequences were both deformed by an intense, but short, middle Pliocene event. A number of localized, Upper Pliocene-Pleistocene, shallow-marine-subaerial, predominantly clastic formations overlie the middle Pliocene unconformity surface. The MVG comprises a monotonous sequence of pillowed and non-pillowed tholeiitic basalt lavas and sills with a predominant clinopyroxene-plagioclase-glass-opaques+ or -olivine mineralogy. The basaltic plateau morphology of the MVG is reflected in the presence of trap-like topographic features exposed in numerous river sections. Remarkably little sediment is present between basalt flows (most inter-lava contacts are basalt-basalt), indicating high to very high effusion rates. When present, inter-lava sediment is laminated pelagic chert or limestone, millimetres to centimetres thick, reflecting emplacement of the basalt in deep water (near or below the calcite compensation depth). Gabbro intrusions, dolerite dykes and an unusual spherulitic dolerite facies are locally present. The deep-water eruptive environment of the MVG probably was defined by the accumulation of voluminous eruptions from a multi-centred, submarine, possibly fissure-fed, volcanic source. The Malaitan cover sequence largely comprises a series of foraminifera-rich, pelagic calcilutites and calcisiltites with chert and, in the younger formations, arc-derived mudstone interbeds at various stratigraphic levels. Phillips, D. A., Bevis, M., Taylor, F. W., Papabatu, A. K., Basi, S. and Kendrick, E. 2002. "New Estimates of Crustal Velocity in the Solomon Islands." American Geophysical Union, Fall Meeting 2002, Abstract #G71A-0955. Geophysical Union: Descriptors: Crustal movements: interplate; Dynamics of lithosphere and mantle: general; Plate motions: present and recent; Pacific Ocean. Abstract: We present crustal velocity estimates derived from a dense GPS network in the western Solomon Islands. Initial crustal motion estimates reported by Tregoning et al. (1998) showed convergence between the Australian Plate and the Solomon Arc at the San Cristobal Trench. Active deformation between the Pacific Plate and the Solomon Arc block was also

detected. In 1997, we established a continuous GPS (CGPS) site on Guadalcanal and five rover GPS sites in the New Georgia Group. The Guadalcanal site was short-lived due to vandalism so we established a new CGPS site in the New Georgia Group in 1999. The original rover sites were re-occupied in 1999 and 2001. We have analyzed this four-year time series using GAMIT/GLOBK software. Our measurements show convergence with the Australian Plate as well as motion between the Solomon Arc and the Pacific Plate. Possible intra-arc deformation is also observed. Regional tectonic interpretations based upon our GPS measurements and other data will be discussed.

Volume 389, Issue 3-4, Pages 221-246. Descriptors: accretionary wedges; Alite Formation; Barremian; Cenozoic; Cretaceous; crust; data acquisition; data processing; deformation; Devonian; fault zones; faults; free air anomalies; geophysical methods; gravity field; gravity methods; Haruta Formation; igneous rocks; island arcs; Kia Kaipito Korigole fault zone; Kwaraae Formation; Lewis thrust fault; lithostratigraphy; Lower Cretaceous; Malaita; Malaita Group; Marmasike Formation; Melanesia; Mesozoic; Middle Devonian; Neogene; ocean floors; Oceania; oceanic crust; Ontong Java Plateau; Pacific Ocean; Paleozoic; plate collision; plate convergence; plate tectonics; Pleistocene; Quaternary; remote sensing; Saint Laurent Limestone; satellite methods; sedimentary rocks; sediments; seismic stratigraphy; sequence stratigraphy; Solomon Islands; Suafa Formation; subduction zones; tectonics; Tertiary; trenches; volcanic rocks; West Pacific; Structural geology; Stratigraphy. Abstract: Possibilities for the fate of oceanic plateaus at subduction zones range from complete subduction of the plateau beneath the arc to complete plateau-arc accretion and resulting collisional orogenesis. Deep penetration, multi-channel seismic reflection (MCS) data from the northern flank of the Solomon Islands reveal the sequence stratigraphy, structural style, and age of deformation of an accretionary prism formed during late Neogene (5-0 Ma) convergence between the approximately 33-km-thick crust of the Ontong Java oceanic plateau and the approximately 15-km-thick Solomon island arc. Correlation of MCS data with the satellite-derived, free-air gravity field defines the tectonic boundaries and internal structure of the 800-km-long, 140-km-wide accretionary prism. We name this prism the "Malaita ccretionary prism" or "MAP" after Malaita, the largest and best-studied island exposure of the accretionary prism in the Solomon Islands. MCS data, gravity data, and stratigraphic correlations to islands and ODP sites on the Ontong Java Plateau (OJP) reveal that the offshore MAP is composed of folded and thrust faulted sedimentary rocks and upper crystalline crust offscraped from the Solomon the subducting Ontong Java Plateau (Pacific plate) and transferred to the Solomon arc. With the exception of an upper, sequence of Quaternary island-derived terrigenous sediments, the deformed stratigraphy of the MAP is identical to that of the incoming Ontong Java Plateau in the North

Solomon trench. We divide the MAP into four distinct, folded and thrust fault-bounded structural domains interpreted to have formed by diachronous, southeast-to-northwest, and highly oblique entry of the Ontong Java Plateau into a former trench now marked by the Kia-Kaipito-Korigole (KKK) left-lateral strike-slip fault zone along the suture between the Solomon arc and the MAP. The structural style within each of the four structural domains consists of a parallel series of three to four fault propagation folds formed by the seaward propagation of thrust faults roughly parallel to sub-horizontal layering in the upper crystalline part of the OJP. Thrust fault offsets, spacing between thrusts, and the amplitude of related fault propagation folds progressively decrease to the west in the youngest zone of active MAP accretion (Choiseul structural domain). Surficial faulting and folding in the most recently deformed, northwestern domain show active accretion of greater than 1 km of sedimentary rock and 6 km, or about 20%, of the upper crystalline part of the OJP. The eastern MAP (Malaita and Ulawa domains) underwent an earlier, similar style of partial plateau accretion. A pre-late Pliocene age of accretion (approximately 3.4 Ma) is constrained by an onshore and offshore major angular unconformity separating Pliocene reefal limestone and conglomerate from folded and faulted pelagic limestone of Cretaceous to Miocene age. The lower 80% of the Ontong Java Plateau crust beneath the MAP thrust decollement appears unfaulted and unfolded and is continuous with a southwestward-dipping subducted slab of presumably denser plateau material beneath most of the MAP, and is traceable to depths >200 km in the mantle beneath the Solomon Islands. ISSN: 0040-1951.

Phinney, Eric James. 1997. *Sequence Stratigraphy, Structure, and Tectonics of the Southern Ontong Java Plateau and Malaita Accretionary Prism, Solomon Islands*. Austin, TX, United States: University of Texas, Austin. page(s): 128. Descriptors: accretionary wedges; Cenozoic; Cretaceous; crust; deformation; faults; geophysical methods; geophysical profiles; geophysical surveys; gravity methods; lithostratigraphy; Malaita; Melanesia; Mesozoic; ocean floors; Oceania; oceanic crust; Ontong Java Plateau; Pacific Ocean; plate tectonics; seismic methods; seismic profiles; seismic stratigraphy; Solomon Islands; subduction; surveys; tectonics; thrust faults; trenches; West Pacific; Stratigraphy; Structural geology; Applied geophysics. Abstract: The Ontong Java Plateau is the largest and thickest oceanic plateau on Earth and one of the few oceanic plateaus actively converging on an island arc. Previous tectonic and geochemical models for the formation of the Ontong Java Plateau and its overlying sedimentary cover are handicapped by a lack of high quality geophysical observations of the structure and stratigraphy of the plateau and a paucity of well information. In this thesis, I present new seismic velocity determinations and geologic interpretation of 2000 km of 2-D multichannel seismic data collected across the southwestern Ontong Java Plateau, North Solomon Trench, and northern Solomon Islands. Three seismic megasequences inferred to range in age from early Cretaceous to Quaternary are recognized on the basis of distinct interval velocities and seismic stratigraphic facies. I show that a

high-amplitude reflector, previously identified as the top of igneous basement, is related to a late Cretaceous unconformity between two sedimentary megasequences which together define a much thicker sedimentary section on the plateau than previously recognized. I integrate seismic facies analysis, sediment thickness, and structural relationships to interpret the three megasequences into a dynamic plate tectonic framework which includes two periods of mantle plume activity at 122 Ma and 92 Ma, a period of gentle folding and uplift associated with the 92 Ma mantle plume event, middle to late Miocene faulting possibly related to arrival of the plateau at the North Solomon Trench, and recent normal faulting related to flexure and southwest-directed subduction of the plateau at the North Solomon Trench. Previous workers have proposed several possibilities for the fate of oceanic plateaus at subduction zones ranging from complete subduction to complete accretion. I present multichannel seismic data from the Ontong Java Plateau/Solomon Islands convergent zone showing active accretion of a 7 km section of the sedimentary cover and igneous crust of the oceanic plateau. Correlation of the seismic data with satellite-derived free-air gravity data confirms the presence of a 900-km-long, 140-km-wide fold-thrust belt, named here the Malaita Accretionary Prism, composed of accreted sediments and upper crust from the plateau. I divide the Malaita Accretionary Prism into four structural domains interpreted to have formed by diachronous, southeast-to-northwest progression of the active deformation front along the North Solomon Trench. Uplift and deformation of ponded sediment across the prism and in the North Solomon Trench confirm that plateau accretion is active. Thrust faults dipping southwest from the North Solomon Trench at 10-17 degrees and surficial convergent deformation imaged in the most recent, northwestern domain show that greater than 1 km of sediments and 6 km of upper crust are being actively transferred from the plateau to the Solomon Islands arc. Linear gravity trends and structural patterns indicate that plateau accretion is not simply the result of failed plateau subduction at the North Solomon Trench during the late Miocene as proposed by previous workers. Instead, gravity and seismic data suggest that the middle Pliocene through present accretion of the Malaita Accretionary Prism was activated by shallow subduction of 4-0 m.y. old crust of the Woodlark Basin and bounding bathymetric highs along the southwestern edge of the Solomon arc. Descriptors: Asia; faults; geophysical methods; geophysical surveys; Godavari Valley; gravity methods; India; Indian Peninsula; magnetic methods; Melanesia; Oceania; recent upwarping; rift zones; Solomon Islands; surveys; Applied geophysics. Abstract: A Bouguer anomaly map of the Godavari valley region has been prepared by using data of the Survey of India and National Geophysical Research Institute. A gravity 'low' of the order of 50 milligals is associated with the Godavari valley. Its average width is 50 km and its lateral extent, as indicated by gravity and paleogeographic data, may be of the order of 800 km. The valley floor may lie at depths ranging from 3 to 4 km. The gravimetric and geologic data do not indicate extension of the Godavari valley structure into the sea. It is suggested that the Godavari rift developed along a zone of weakness inherited from the Archean orogenies. It appears that after the Eparchean interval, but prior to the deposition of the Cuddapahs, tensional forces must have developed that caused formation of the graben. ISSN: 0016-7606.

Ridgway, J. 1987/2/1. "Neogene Displacements in the Solomon Islands Arc." *Tectonophysics*. Volume 133, Issue 1-2, Pages 81-93. Abstract: The geology and present configuration of the Solomon Island arc can be explained in terms of the Neogene displacement of a single linear chain of islands. The central part of an original arc consisting of Bougainville, Choiseul, Santa Ysabel, Guadalcanal and San Cristobal was displaced to the northeast as a consequence of the attempted subduction of the Woodlark spreading system. Malaita arose on the northeastern side of the arc as a result of interaction between the arc and the Pacific Ocean floor and the volcanic islands of the New Georgia group formed to the southwest in response to the subduction of a spreading ridge, thus giving rise to the present double chain structure of the arc. Ridgway, J. and Midobatu, C. 1991. "Temporal Variations in the Trace Element Content of Stream Sediments: An Example from a Tropical Rain Forest Regime, Solomon Islands." *Applied Geochemistry APPGEY*. Volume p 185-193, Pages 9 ref. Descriptors: Alluvial sediments; Environmental chemistry; Geochemistry; Rain forests; Sediment chemistry; Solomon Islands; Trace elements; Chemical analysis; Heavy metals; Iron; Sediment analysis; Temporal variation; Tropical regions. Abstract: A stream sediment geochemical anomaly in a tropical rain forest environment on Guadalcanal Island, Solomon Islands, was monitored at monthly intervals over a period of 15 months. Major changes in stream sediment chemistry took place after heavy rainfall associated with the passage of the tail of a cyclone through the region. These changes were directly linked to changes in the mineralogical composition of the sediments. Significant chemical variations also occurred in the period before the cyclone but these appear to have been related to variations in hydromorphic dispersion processes. Results show that statistically significant temporal variations in the trace element content of the stream sediments occurred at every sample site monitored. These variations were generally strongest at the three most upstream sites, which were the ones closest to mineralization. The data suggest that common exploration practices, such as the use of 'threshold values', should be applied with caution in tropical rain forest terrain. The use of element/iron ratios in exploration work and smoothing techniques in regional geochemical

mapping may help eliminate some of the more pronounced effects of temporal variations in the trace element contents of stream sediments. ISSN: 0883-2927.

Rombach, M. C. and Roberts, D. W. 1987. "Calcarisporium Ovalisporum Symbiotic with the Insect Pathogen Hirsutella Citrififormis." Mycologia. Volume 79, Issue 1, Pages 153-155. Descriptors: Article Subject Terms: symbiosis; Calcarisporium ovalisporum; Hirsutella citrififormis; Solomon I. Abstract: Cladobotryum ovalisporum Petch was described by Petch from a froghopper (Homoptera; Cercopidae) from Sri Lanka. Because C. ovalisporum occurred together with other, unidentifiable hyphomycetes, its entomopathogenic nature is questionable. Cladobotryum ovalisporum was transferred by de Hoog to Calcarisporium Preuss; this genus was erected to accommodate C. arbuscula Preuss, a symbiote of higher Basidiomycetes and Ascomycetes which occasionally also occurs on wood. The authors collected C. ovalisporum growing on Hirsutella citrififormis Speare on Guadalcanal, Republic of the Solomon Island. ISSN: 0027-5514.

"Limited Allelic Diversity of Plasmodium Falciparum Merozoite Surface Protein 1 Gene from Populations in the Solomon Islands." *American Journal of Tropical Medicine and Hygiene.* 2006 January. Volume 74, Issue 1, Pages 31-40. Abstract: Meiotic recombination generates allelic diversity in the Plasmodium falciparum merozoite surface protein 1 (msp1) gene. In this study, we monitored recombination-based diversity of msp1 in Guadalcanal, the Solomon Islands, where malaria transmission is high. We identified 5' recombinant types, 3' sequence types, and msp1 haplotypes (unique associations of 5' recombinant types and 3' sequence types), and compared them with those from areas of low transmission in Thailand and Vanuatu. The mean number of 5' recombinant types per person (multiplicity) was lower in Guadalcanal than in Thailand. Guadalcanal populations had 6-8 msp1 haplotypes; the numbers are comparable to Vanuatu but much lower than in Thailand. There were marked geographic differences in distribution of msp1 haplo-types. Linkage disequilibrium in msp1 was stronger in Guadalcanal than in Thailand, suggesting limited recombination events in the Solomon Islands. We suggest that the frequency of recombination events in msp1 is determined not only by transmission intensity but by the number of msp1 alleles prevalent and multiplicity of infections. Database: PubMed. Availability: NLM.

Program. Performer: Rhode Island Univ., Kingston. Dept. of Resource Economics. Feb. Volume: UNIHISGME8502, page(s): 31. Descriptors: Exports; Japan; Trends; Fiji Islands; Solomon Islands; Food processing; Profits; International trade; Marketing; Tunas; South Pacific Ocean; Commercial fishing; Behavioral and social sciences Economics; Business and economics International commerce marketing and economics; Business and economics Foreign industry

development and economics. Abstract: International joint ventures have played a significant role in the recent development of commercial tuna fisheries in the southwest Pacific. This report describes the tuna export marketing activities of Japanese joint venture partners in three enduring joint venture companies in Fiji, the Solomon Islands, and Vanuatu. Tuna export development trends in these island nations suggest that affiliation with Japanese firms has led to dramatic expansion in tuna exports and increased value-added due to additional local processing. Japanese partners have tended to dominate production and marketing management in the joint venture companies and have devoted little attention to training local staff in tuna export marketing skills. Profitability of the ventures has also been less than anticipated. Notes: Funder: National Oceanic and Atmospheric Administration, Rockville, MD. Office of Sea Grant. Prepared in cooperation with Rhode Island Univ., Kingston. Dept. of Resource Economics. NTIS: PB85180271XSP.

Descriptors: Radioisotopes; Carbon; Radioactive tracers; Oscillations; Engineering research; Time series analysis; Correlation methods. Abstract: Radiocarbon records from modern corals have long been recognized for their usefulness as a geochemical tracer of surface ocean waters and oceanic upwelling. Pacific corals are especially interesting because of their potential relevance to El Nino - Southern Oscillation (ENSO) events. At present, the Pacific Ocean is undersampled with respect to radiocarbon time series. This study

establishes a ^{14}C time series for a coral from the Solomon Islands, located near the center of the Western Pacific Warm Pool (WPWP). We present radiocarbon results from a *Porites* colony which grew in Marau Sound, on the east coast of Guadalcanal. A semiannual record of ^{14}C was constructed from measurements of alternating bands which grew continuously from 1944 to 1994. The record reflects the uptake of atmospheric bomb-produced ^{14}C since the late 1950s with superimposed subannual radiocarbon variations, presumably related to changes in ocean circulation. Although the coral radiocarbon is influenced by ENSO events, the record is not closely correlated with the Southern Oscillation Index (SOI) for the same period. ISSN: 0168-583X.

Descriptors: Article Subject Terms: New species; Taxonomy; Biogeography; Aquatic plants; Article Taxonomic Terms: Acetabularia haemmerlingi; Article Geographic Terms: Solomon Is; Marine. Notes: Records keyed from 1976 ASFA printed journals. TR: 1976. Abstract: A new sp which belongs to the fam Dasycladaceae, the subfam Acetabularioideae, the gen Acetabularia and the section Acetabuloides is described. It occurs in the British Solomon Islands (Guadalcanal Island). The new sp is called Acetabularia haemmerlingi. It is similar to A. kilneri and A. dentata with respect to the shape of the rays. However, it is a different sp because of the number of cap rays and the number of protuberances per segment of the corona superior. Database: ASFA 1: Biological Sciences and Living Resources. "Compositional Variability in Lavas from the Ontong Java Plateau; Results from Basalt Clasts within the Volcaniclastic Succession at Ocean Drilling Program Site 1184." *Geological Society Special Publications*. Geological Society of London: London, United Kingdom. Volume 229, Pages 333-351. Descriptors: alkaline earth metals; Aptian; basalts; chemical composition; chemical ratios; clasts; Cretaceous; igneous rocks; isotope ratios; isotopes; Kwaimbaita Formation; lava; Leg 192; Lower Cretaceous; major elements; Malaita; mantle; Melanesia; Mesozoic; metals; Nd 144 Nd 143; neodymium; Ocean Drilling Program; Oceania; ODP Site 1184; Ontong Java Plateau; Pacific Ocean; petrography; rare earths; Singgalo Formation; Solomon Islands; Sr 87 Sr 86; stable isotopes; strontium; tholeiitic basalt; trace elements; volcanic rocks; volcaniclastics; West Pacific; Isotope geochemistry; Igneous and metamorphic petrology. Abstract: Tholeiitic basalts have been recovered from drill sites in different locations on the Ontong Java Plateau (OJP) and are remarkably homogeneous across this large igneous province. The most abundant basalt type is represented by the Kwaimbaita Formation on Malaita in the Solomon Islands, where it is capped by the isotopically distinct and slightly more incompatible-element-enriched basalt of the Singgalo Formation. Ocean Drilling Program (ODP) Leg 192 drilled five sites on the OJP, four of which penetrated basement lava successions. All basalt recovered during Leg 192 is chemically and isotopically indistinguishable from Kwaimbaita-type lavas. Site 1184 of ODP Leg 192 is situated on the eastern salient of the OJP, and is unique because the recovered volcaniclastic succession

contains the first conclusive evidence for emergence of part of the OJP above sea level. Within this succession are clasts of basaltic material. We report the major element-, trace-element and isotopic compositions of 14 moderately to highly altered basalt clasts. On the basis of incompatible-element concentrations, specifically high field strength elements (HFSE) and rare earth elements (REE), four groups of clasts are defined. Group 1 clasts are similar to basalt from the Kwaimbaita Formation. Group 2 clasts show variable composition, but the heavy rare earth element (HREE) concentrations are similar to those of basalts from the Kwaimbaita Formation. Group 3 clasts have compositions similar to the high-MgO Kroenke-type basalt recovered during ODP Leg 192. Group 4 clasts are more evolved than the Kwaimbaita or Singgalo lavas, and contain deep negative Eu and Sr anomalies on primitive-mantle (PM)-normalized diagrams, as well as high concentrations of Nb, Ta and Th. Group 4 clasts also show a large fractionation of Nb from La and have (Nb/La) (sub PM) ratios of approximately 2. Sr-, Nd- and Pb-isotope ratios were measured on five clasts covering all four groups. Although the Sr- and Pb-isotope ratios exhibit some variability, which we attribute to alteration, the Nd-isotope ratios are within the field defined for Kwaimbaita-type lavas. We conclude that most of the compositional variability displayed by these clasts is a result of alteration and that Ta appears to be the most immobile incompatible trace element. All of the clasts were derived from the mantle source that produced the Kwaimbaita-type and Kroenke-type basalts. Our data emphasize the widespread nature of Kwaimbaita-type basalt and show that the source region was active under both the eastern salient and the high plateau of the OJP. ISSN: 0305-8719.

Shinohara, M., Suyehiro, K. and Murayama, T. 2003. "Microearthquake Seismicity in Relation to Double Convergence Around the Solomon Islands Arc by Ocean-Bottom Seismometer Observation." *Geophysical Journal International*. June. Volume 153, Issue 3, Pages 691-698. Descriptors: Earthquakes; Seismology; Plates (tectonics); Subduction (geology); Ocean bottom; Earth crust; Seismographs; Convergence; Islands; Pacific Ocean; Slip. Abstract: The Solomon

Islands arc area is a complex plate convergence zone. At the North Solomon Trench on the northern side of the arc, it is believed that the Pacific Plate was subducting before coming into collision with the Ontong Java Plateau, the world's largest oceanic plateau. After the collision about 5 Ma, northeastward subduction initiated along the southern side of the arc at the San Cristobal Trench, another trench on the south side. GPS observations and crustal seismic structure surveys confirm that convergence occurs at both trenches. Without detailed and accurate seismicity, it is difficult to characterize the plate subduction to reveal the tectonics of such a complex zone where a key mechanism of continental growth may also exist. In 1994, an ocean-bottom seismometer (OBS) experiment was carried out for the first time in the area around the Solomon Islands arc to locate microearthquakes. Observations started in late August and continued until early September. Five digital recording OBSs were deployed around the Russell Islands west of Guadalcanal Island. OBS spacing was about 20 km. All the OBSs were recovered and yielded data with a good signal-to-noise ratio. Forty earthquakes, with magnitudes in the range 1.5-4.4 were located over 8 days. The seismicity clearly images the two subducting plates. Though the seismicity beneath the arc side slope of the San Cristobal Trench is relatively high, we can see the seismicity, which is related to the subducting Pacific Plate beneath Santa Isabel Island. In addition, earthquakes occur within the crust beneath the southern part of the New Georgia Basin and the Russell Islands. An aseismic area extending 40 km inward from the San Cristobal trench axis implies initial aseismic slip of the India Australia Plate at a small dip angle. ISSN: 0956-540X.

Shorten, G. G. 2003. "Challenges for the Application of Earthquake Engineering in the Pacific Islands." Bulletin of the New Zealand Society for Earthquake Engineering. June. Volume 36, Issue 2, Pages 125-133. Descriptors: Earthquake engineering; Seismic phenomena; Earthquake construction; Seismic engineering; Foundations; Capacity; Education; Catastrophic failure analysis; Networks; Sustainable development; Urban areas; Infrastructure; Disasters. Abstract: Experience has shown that successful application of earthquake engineering in the Pacific, particularly the understanding of earthquake risk as applied in the high-risk urban areas, is fundamentally dependent on continuing studies of seismicity and neotectonics; research on foundation problems; the institution of building standards; and seismic microzonation studies of urban population

centers. The whole needs to be carried forward by a comprehensive risk-management approach that takes scientific and engineering advances towards social outcomes by defining the people, buildings and infrastructure at risk, and engages the relevant communities in planning for ways to treat risk, including risk-financing for catastrophes. The challenges inhibiting that successful application in the Pacific Islands are manifold, and include problems imposed from outside the region as well as those inherent from within. The focus of activities related to earthquake engineering should now be on the solutions to those challenges, including improvements in education, organizational approaches and research on the local risk, as well as providing for an immediate technical response capacity to disasters and a regional network facility.

Overwhelmingly, a more efficient coordination of the services provided by the international community is called for, because a concerted effort is required if there is to be any chance of successfully overcoming the challenges to sustainable development in the Pacific. ISSN: 1174-9857.

Solomon Islands. Guadalcanal. 1942? "A captured Japanese map of Guadalcanal (Reproduction)" Map Scale: 1:20,000. In Japanese. Translated markings: "A Plain: an enemy airfield." "The virgin forest region along the coast are usually located in higher planes than are the jungle regieme, and are usually dry." "The south of the river is closed with mud and sand. It is a good place for boats." "There is jungle to the west of the river." "Cocanut jungle." "Reefs cover the southern coast." "Jungle region." Library of Congress.

Solomon Islands. Ministry of Agriculture and Lands. Survey Division. 1976. "Solomon Islands, Scale 1:150,000. Guadalcanal." Honiara, Solomon Islands: The Division. Descriptors: Guadalcanal (Solomon Islands)- Maps; Government publication; National government publication. Description: 1 map; col. 57 x 99 cm. Map Info: Scale 1:150,000;; Transverse Mercator proj.(E 159035'--E 160053'/S 9014'--S 10000'). Cartographic Code: Category of scale: a Constant ratio linear horizontal scale: 150000 Coordinates--westernmost longitude: E1593500 Coordinates--easternmost longitude: E1605300; Notes: "Based upon reductions of Directorate of Overseas Surveys 1:50,000 map series X711; 1976." Relief shown by contours, gradient tints, and spot heights. Other Titles: Solomon Islands. Guadalcanal. Guadalcanal. Responsibility: prepared, printed, and published by the Survey Division of the Ministry of Agriculture and Lands. LCCN: 84-696641.

"Solomon Islands: An Introductory Economic Report. World Bank Country Study." 1980. International Bank for Reconstruction and Development, Washington, DC. page(s): 154. Descriptors: Economic development; Solomon Islands; Trends; Developing countries; Exports;

Gross National Product; Behavioral and social sciences; Economics; Business and economics
Foreign industry development and economics. Abstract: This introductory economic report, the first Bank report since the country's independence, 1) describes the present economic situation and discusses the most critical issues with which the country is confronted. Recent developments and issues in agriculture, human resource development and domestic resource mobilization receive special attention. Microfiche copies only. Paper copy available from World Bank, 1818 H St., NW, Washington, DC. 20433. DTIC Accession Number: PB83262014XSP.

Solomon, M. 1990. "Subduction, Arc Reversal, and the Origin of Porphyry Copper-Gold Deposits in Island Arcs." *Geology* (Boulder). July. Volume 18, Issue 7, Pages 630-633. Descriptors: Asia; Australasia; Bougainville; Cenozoic; copper ores; economic geology; Far East; Fiji; gold ores; Guadalcanal; island arcs; Luzon; Melanesia; metal ores; mineral deposits, genesis; Oceania; Pacific Ocean; Papua New Guinea; Philippine Islands; plate collision; plate tectonics; porphyry copper; processes; Solomon Islands; South Pacific; Southwest Pacific; subduction; tectonophysics; West Pacific. References: 56; sketch maps. Abstract: The Tertiary-Quaternary porphyry copper-gold deposits of the southwest Pacific rim (particularly in Luzon, mainland Papua New Guinea, Bougainville, Guadalcanal, and Fiji) mostly formed after a reversal of arc polarity. Where this reversal has not occurred (e.g., New Zealand and Japan), porphyry copper-gold deposits are absent or scarce; hence, older porphyry copper-gold deposits may be useful clues to tectonic history. Enrichment of magmas in gold may have resulted from two-stage melting. The tectonic setting of porphyry copper-gold deposits differs from that inferred for volcanic-hosted massive sulfide deposits. ISSN: 0091-7613.

Stanton, R. L. 1961. "Explanatory Notes to Accompany a First Geological Map of Santa Ysabel, British Solomon Islands Protectorate." *Overseas Geology and Mineral Resources*. Great Britain, Institute of Geological Sciences: London, United Kingdom. Volume 8, Issue 2, Pages 127-149. Descriptors: Cenozoic; geologic maps; geology; maps; Melanesia; metamorphic rocks; Oceania; Santa Ysabel; Solomon Islands; tectonics; Tertiary; Structural geology. Map Scale: 1:40,000. Abstract: This report supplements and completes previously reported information and includes the completed geologic map. The basement complex, pre-Miocene in age, consisting of lavas and sediments intruded by gabbro-diorite, has been folded and metamorphosed with subsequent base-leveling. During Miocene and Pliocene time, the Sigana volcanics and sediments of the Tanakau group were deposited, and were later folded. At this time, the Kaipito-Korigole thrust fault, extending some 60 miles in the southern part of the island, was formed. The abundant microfauna in the Tanakau group, probably upper Miocene in age, is listed. ISSN: 0030-7467.

Descriptors: Cladistics; New species; Nucleotide sequence; Phylogenetics; Phylogeny; Probability theory; Taxonomy; Article Taxonomic Terms: *Baseodiscus*; *Heteronemertea*; *Nemertea*; Article Geographic Terms: Solomon Islands. Solomon Islands. Guadalcanal. TR: CS0741878. Abstract: A new heteronemertean, *Baseodiscus jonasii* sp. nov., is described from Guadalcanal, Solomon Islands. It resembles *B. delineatus* in inner morphology but can be distinguished from this species by its different color pattern and differences in the nucleotide sequence of the mitochondrial 16S rRNA gene. The monophyletic status of the genus is investigated by reconstructing the phylogeny of six specimens from four species assigned to this genus, together with 22 specimens from nine other heteronemertean genera, using parsimony and Bayesian analysis. The results imply that *Baseodiscus* is a monophyletic group while several other heteronemertean genera are non-monophyletic. ISSN: 0022-2933.

Swiridiuk, P. 1998. "Exploring the Solomon Islands with Airborne Geophysics." Exploration Geophysics (Melbourne). Volume 29, Issue 3-4, Pages 620-625. Descriptors: airborne methods; basement; Cenozoic; gabbroic composition; geophysical methods; gold ores; Guadalcanal; intrusions; magnetic methods; Melanesia; metal ores; mineral exploration; Oceania; Solomon Islands; Tertiary; topography; volcanic features; Economic geology, geology of ore deposits; Applied geophysics. Notes: Conference: ASEG 13th international Geophysical conference and exhibition. Hobart, Tasmania, Australia. Nov. 10-14, 1998. Abstract: The Island of Guadalcanal occurs as an "s" shape with each end twisted along the en echelon chain of the Solomon Islands primary fractured arc. The regional geology of Guadalcanal consists broadly of Mesozoic gabbroic and ultrabasic basement with Tertiary intrusives and sedimentary cover, and Quaternary volcanics. Helicopter borne magnetic and radiometric surveying was completed to delineate known gold-copper porphyry and epithermal style mineralization events as well as locating structurally favorable sites for the emplacement and control of mineralization. Porphyry prospects in the mountainous southern weather coast are coincident with magnetic features that correlate with IP anomalies. An intense amplitude magnetic anomaly on the southern side of Mount Turipukumahi is interpreted as an intrusive in the contact between gabbro and Kavo greywacke beds where magnetite rich skarn is likely to exist. A post volcanic event at the Sutakiki prospect is apparent as an outer halo of magnetite and potassium destruction 2 km in diameter. The event is also coincident with a circular topographic depression with magnetic ring dykes occurring within.

The topographic depression and ring dykes suggest it is a remnant of a collapsed strato-volcano, which is the possible control for present gold mineralization. Controlling mechanisms for widespread mineralization near the Gold Ridge deposit appears related to a 10 km-diameter partially collapsed strato-volcano that is evident from both the digital terrain model and Radarsat images. An inner 5 km-diameter halo of potassium anomalies is directly coincident with anomalous surface gold and copper sampling results. Other volcano occurrences evident from the Radarsat and magnetic data indicate the presence of a magmatic arc. Hot springs are located along the proposed arc, which appears to be a control of most of the mineralization that exists on the island. ISSN: 0812-3985.

Sydney University Department of Geology and Geophysics. 1957. "Geological Reconnaissance of Parts of the Central Islands of the British Solomon Islands Protectorate." Colonial Geology and Mineral Resources. Volume 6, Issue 3, Pages 267-306. Descriptors: Cenozoic; central; geologic maps; geologic reconnaissance; igneous rocks; maps; Melanesia; metamorphic rocks; mineral resources; Oceania; Quaternary; Solomon Islands; Tertiary; Igneous and metamorphic petrology; Geologic maps. Abstract: In late 1950 and early 1951 reconnaissance surveys in the Solomon islands were carried out by C. E. Marshall, P. J. Coleman, R. L. Stanton, B. M. Levett, and F. K. Rickwood and are here reported. The areas mapped are 1) southeastern Santa Ysabel island and nearby San Jorge Island, 2) western Guadalcanal, and 3) Malaita Island. Sambani and Buena Vista Islands were examined briefly. The dominant rock types are Tertiary volcanic rocks and Tertiary-Quaternary sediments; a pre-Tertiary metamorphic complex is present on Santa Ysabel and a pre-Miocene igneous complex on Guadalcanal. For each area, physiographic, stratigraphic, structural, and economic data are given, together with photomicrographs of the rock types and colored geologic maps.

Taira Asahiko, Mann, Paul and Rahardiawan R. 2004. "Incipient Subduction of the Ontong Java Plateau Along the North Solomon Trench." Tectonophysics. Elsevier: Amsterdam, Netherlands. Volume 389, Issue 3-4, Pages 247-266. Descriptors: acoustical methods; data acquisition; data processing; fracture zones; free air anomalies; geophysical methods; geophysical profiles; geophysical surveys; gravity methods; North Solomon Trench; ocean floors; Ontong Java Plateau; Pacific Ocean; plate collision; plate convergence; plate tectonics; reflection methods; remote sensing; satellite methods; seismic methods; seismic profiles; seismic stratigraphy; side scanning methods; Solomon Islands; sonar methods; subduction; subduction zones; surveys; trenches; West Pacific; Solid earth geophysics; Applied geophysics. Abstract: The Ontong Java Plateau (OJP) in the western central Pacific is the largest and thickest oceanic plateau and one of a few oceanic plateaus converging on an island arc (Solomon island arc--SIA). To better understand the evolution of the North Solomon trench (NST), active oblique convergence between the OJP and SIA, and late Neogene development of Malaita accretionary prism (MAP), we present 850 km of multichannel seismic reflection data integrated with 7832 km (super 2) of IZANAGI side-scan

sonar coverage. We have focussed the study at the transition area between the well-defined northwestern end of the North Solomon trench and a diffusely deformed area where the trench is actively propagating in a northwestward direction. The deeper structure beneath the survey area is discussed by Phinney et al. [Oceanic plateau accretion in the Malaita accretionary prism inferred from multi-channel seismic reflection data, this issue] using deeper penetration, multichannel seismic reflection lines. The serial cross sections provided by multichannel seismic profiling combined with the IZANAGI backscattering imagery provides a time series evolution for the development of the North Solomon trench. The main evolutionary stages include (1) the incipient trench in the northern area marked by a diffuse zone of deformation above a broad arch in the crust. Deeper penetration profiles by Phinney et al. show the bulge is related to a deeper decollement fault that is propagating upward and seaward through the crust. (2) The formation of a continuous thrust front in the central area. Deeper penetration profiles by Phinney et al. show this thrust front is surface expression of the same decollement present at depth to the north. The boundary between the surface trace of the thrust and the diffuse area of deformation in the northern area is inferred as a vertical, high-angle tear fault with left-lateral offset. (3) The formation of a deep, elongate trench which controls gravitationally related slumping and sedimentation around the steep edges of the trench fill basin. The areas to the southeast are those that have undergone convergence for the longest period of time and therefore show better developed trench structures and a reduced width of the MAP. Areas to the northwest have undergone convergence for a shorter period of time and show less developed trench structures and a wide area of the MAP. ISSN: 0040-1951.

Abstract: Data on major and minor element abundances of andesites based on analyses of samples from New Zealand, Japan, Bougainville (Solomon Islands), and Fiji are tabulated, together with averages for granodiorite, granite, basalt, and oceanic tholeiite, and the distribution of about 40 trace elements is discussed with referenceto their significance for theories of andesite origin and crustal composition. The data indicate that the calc-alkalic andesites of orogenic regions formed from a primary magma derived from the mantle rather than by fractional crystallization from a parent basalt magma or by mixing or contamination of parent basalt magma with granitic or crustal material.

Abstract: Age-corrected Pb, Sr and Nd isotope ratios for early Aptian basalt from four widely separated sites on the Ontong Java Plateau that were sampled during Ocean Drilling Program Leg 192 cluster within the small range reported for three earlier drill sites, for outcrops in the Solomon Islands, and for the Nauru and East Mariana basins. Hf isotope ratios also display only a small spread of values. A vitric tuff with epsilon (sub ND) (t) = +4.5 that lies immediately above basement at Site 1183 represents the only probable example from Leg 192 of the Singgalo magma type, flows of which comprise the upper 46-750 m of sections in the Solomon Islands and at Leg 130 Site 807 on the northern flank of the plateau. All of the Leg 192 lavas, including the high-MgO (8-10 wt%) Kroenke-type basalts found at Sites 1185 and 1187, have epsilon (sub Nd) (t) between +5.8 and +6.5. They are isotopically indistinguishable from the abundant Kwaimbaita basalt type in the Solomon Islands, and at previous plateau, Nauru Basin and East Mariana Basin drill sites. The little-fractionated Kroenke-type flows thus indicate that the uniform isotopic signature of the more evolved Kwaimbaita-type basalt (with 5-8 wt% MgO) is not simply a result of homogenization of isotopically variable magmas in extensive magma chambers, but instead must reflect the signature of an inherently rather homogeneous (relative to the scale of melting) mantle source. In the context of a plume-head model, the Kwaimbaita-type magmas previously have been inferred to represent mantle derived largely from the plume source region. Our isotopic modelling suggests that such mantle could correspond to originally primitive mantle that experienced a rather minor fractionation event (e.g. a small amount of partial melting) approximately 3 Ga or earlier, and subsequently evolved in nearly closed-system fashion until being tapped by plateau magmatism in the early Aptian. These results are consistent with current models of a compositionally distinct lower mantle and a plume-head origin for the plateau. However, several other key aspects of the plateau are not easily explained by the plume-head model. The plateau also poses significant challenges for asteroid impact, Icelandic-type and plate separation (perisphere) models. At present, no simple model appears to account satisfactorily for all of the observed first-order features of the Ontong Java Plateau. ISBN: 0305-8719; 1-86239-157-2.

Notes: illus. incl. tables, geol. sketch maps. Abstract: The discovery of economic porphyry copper mineralization during the mid-1960s on the islands of New Guinea and Bougainville established the potential of this type of copper mineralization on certain southwestern Pacific islands. Continued exploration has resulted in the discovery of numerous porphyry copper systems. However, economic evaluation of these bodies is still pending or incomplete at this time. Only two of about 25 occurrences are presently in production. Considerable scientific interest attends the study of these deposits as they are geologically youthful and appear to be genetically related to the histories of old or active island arcs, or continental edges. Although detailed resolution of the times of certain events in the history of the Pacific Basin is lacking, there does appear to be correspondence in a general way of the probable age of those events with the ages of certain deposits. As a working hypothesis, it is suggested that times of increase of convergence rates of plates, which appear to be those times of porphyry copper evolution, are also those times of uplift and extension of the preore rock systems. Variations in the type of porphyry copper deposits known are the same as those recognized in deposits of the western hemisphere. They are composed of large volumes of rock, either porphyry or porphyry-associated, reflecting large sulfide systems with at least a hundredfold increase in the Clarke of copper. Supergene enrichment of a few has upgraded primary concentration another two to five times. Porphyritic rock types appear to be commonly quartz diorite or dacite. Alteration ranges from pyrometamorphic in carbonate wall rocks through potassic, phyllic, and propylitic alteration of intrusive and extrusive igneous rocks. Zoning of alteration seems less discrete than that generally recognized in some western hemisphere bodies and in many instances appears to be telescoped. ISSN: 0361-0128.

Toba, Thomas. 2003. "Seismic Observation in the Solomon Islands." *Bulletin of the International Institute of Seismology and Earthquake Engineering*. International Institute of Seismology and Earthquake Engineering: Tokyo, Japan. Volume 37, Pages 101-117. Descriptors: Australasia; Benioff zone; Bougainville; damage; earthquakes; focal mechanism; Indo Australian Plate; landslides; mass movements; Melanesia; monitoring; Oceania; Pacific Plate; Papua New Guinea; plate boundaries; plate collision; plate tectonics; San Cristobal Trench; Savo; seismicity; seismographs; short period seismographs; Solomon Islands; Solomon Plate; spatial distribution; subduction; tectonics; telemetry; tsunamis; vertical component seismographs; volcanoes; Woodlark Basin; Seismology. Abstract: The establishment of the Seismology Section in Solomon Islands was in the early 1960's. The establishment of this Section is more closely related to monitoring the active volcanoes; especially Savo which is situated some 35km northwest of the British colonial centre (Honiara) at that time. The seismicity in the Solomon Islands is relatively high. Because of this; later developments had more emphasis on earthquake monitoring. Minimal number of equipment is kept and operated by the observatory. As far as records are concerned Solomon Island Suffers little on earthquake disasters on the scale experienced in other parts of the world. Historical earthquake related disasters had occurred in 1939 and 1977. With its aims and obligations the observatory has a proposal to expand the net work as to cover the entire region of the Solomon Islands. ISSN: 0074-655X.

Tolia, Donn H and Petterson, M. G. 2005. "The Gold Ridge Mine, Guadalcanal, Solomon Islands' First Gold Mine; a Case Study in Stakeholder Consultation." *Geological Society Special Publications*. Volume 250, Pages 149-160. Descriptors: gold ores; Gold Ridge Mine; Guadalcanal Solomon Island; investment; Melanesia; metal ores; mineral economics; mines; mining; negotiations; Oceania; Solomon Islands; sustainable development; Economic geology, economics of ore deposits. Abstract: The Pacific small island state of Solomon Islands gained independence from Britain in 1978. Solomon Islands has a population of around 400 000 mainly Melanesian people distributed across six moderately sized islands and hundreds of smaller islands. The traditional economy has been based on hunter-gatherer and small-scale farming activities, with the bulk of the population residing in self-sufficient rainforest and coastal villages. Melanesians have a

particularly strong cultural attachment to land, which is considered to be within the custodianship of the community at large. Individual land ownership in the Western economic sense is largely unknown. Melanesian society and culture is strong and complex. Colonial and post-independence Solomon Islands has had to face the challenges of a transition from a traditional society to a partially urbanized society and a rapidly increasing population and changing economic drivers and dynamics. Mining and mineral development is one area of economic activity that holds the promise of generating hard currency quickly to develop the country, but that needs to be achieved in a sustainable manner. Gold Ridge is situated in Central Guadalcanal, some 22 km southeast of the country's capital town, Honiara. Gold Ridge hosts around 1.4 million ounces of epithermal volcanic-hosted gold. Ross Mining NL began the construction of Solomon Islands' first gold mine in 1997 and operated a highly successful gold mine between 1997 and 2000, when ethnic tensions (unrelated to the mine) closed the operations. This paper documents the painstaking negotiations and planning that took place from 1993 and particularly from 1995-1996 which paved the way forward for the development of a gold mine within a fragile tropical rainforest environment among traditional Melanesian people who had little prior knowledge of modern mining activities. ISSN: 0305-8719; ISBN: 1-86239-188-2.

Tregoning, P., Tan, F., Gilliland, J., McQueen, H. and Lambeck, K. 1998. "Present-Day Crustal Motion in the Solomon Islands from GPS Observations." Geophysics Research Letters. Oct. Volume 25, Issue 19, Pages 3627-3630. Descriptors: Article Subject Terms: Island arcs; Oceanic crust; Plate tectonics; Plate convergence; Crustal adjustment; Deformation; Positioning systems; Article Geographic Terms: Philippine Sea Plate; Pacific, Solomon Islands. Pacific, San Cristobal Trench; Australia Plate; GPS; Marine. TR: CS0008878. Abstract: Site velocities in the Solomon Islands from Global Positioning System measurements spanning two years provide direct evidence of active deformation between the Pacific Plate and the Solomon Arc block. Convergence is occurring at the San Cristobal Trench at a rate of similar to 52 plus or minus 4 mm/yr, with no apparent local deformation occurring in the Australian Plate at a distance of similar to 100 km from the trench. The islands of Guadalcanal and Makira are in a first approximation moving with the Pacific Plate although there is evidence of small but significant decoupling from the Pacific Plate of 14-23 mm/yr in a direction of 75-85 degree. Research Needs and Applications to Reduce Erosion and Sedimentation in Tropical Steeplands. Proc., Symposium, Suva, 1990 (1990). Suva Conference: 1990. Descriptors: Pacific- Solomon Islands- Guadalcanal; flood hazard; landslide hazard map; Cyclone Namu; evacuation strategy; map. Abstract: Cyclone Namu in 1986 highlighted the enormity of the risk to life and property on Guadalcanal from natural hazards. Buildings, roads, bridges, crops, and forests were destroyed and at least 100 people were killed. An aerial photographic reconnaissance survey of the two most severely damaged islands, Guadalcanal and Malaita, was undertaken three months after the storm. To assist the Solomon Islands Government in reducing the impact of future disasters, flood and landslide hazard mapping was later completed for eight major watersheds in northern Guadalcanal. Over 75% of the 400 km² Guadalcanal Plain flooded in cyclone Namu and can be expected to flood in similar low probability events in the future. Siting of developments, both existing and proposed, should consider the consequences of flooding and landsliding. Evacuation strategies and relief planning also may be improved to cope with future flooding. OCLC: 22697522.

Turner, C. C., Eade, J. V., Danitofea, S. and Oldnall, R. 1977. "Gold-Bearing Sediments on the Continental Shelf Northern Guadalcanal, Solomon Islands." *South Pacific Marine Geological Notes*. 1(6), 55-69. (1977). Descriptors: abundance; continental shelf; exploration; gold; Gold Ridge; marine geology; Melanesia; metals; North Guadalcanal; Oceania; oceanography; profiles; sediments; Solomon Islands; structure, sediment sampling; go; mineral resources; Solomon Islands., Guadalcanal; echo sounding. Notes: References: 6; illus. incl. tables, sketch maps. TR: IR7807290. Abstract: A nearshore bottom-sediment sampling programme and sub-bottom reflection profiling survey was carried out during November 1975 off the north coast of Guadalcanal. The aim of the project was to investigate the gold content of terrigenous sediment transported from the Gold Ridge area of central Guadalcanal by the Matepono River. A total of 88 samples were collected from the 93 stations occupied including 53 piston cores averaging 1 m in length, with a maximum length of 2.27 m, and 35 dredge samples. Subsampling of the cores and dredge samples provided 172 samples for analysis, of which 3 contained gold above the detection limit of 0.02 ppm. All are located off the present mouth of the Matepono River or its old mouth to the east. The gold-bearing samples were all -120 mesh size fractions of the total samples and had a maximum gold value of 0.66 ppm. Of four beach samples two, which are local black sand concentrates (87 ppm for the total sample) from Tetera and Koli Point contained 2.28 ppm and 0.4 ppm gold and the other two were barren. Echo soundings and sub-bottom reflection profiles were obtained along 140 km and 110 km respectively. The continental shelf occupies most of the area studied and water depths are commonly 30-66 m. The shelf is 2-5 km wide, and its outer edge is well defined by a sharp shelf break at a water depth of 55-75 m. ISSN: 0110-0408. OCLC: 6669472.

Turner, D. A. 1977. "A Review of the Malaria Eradication Programme in the Solomon Islands 1975-1976." *P N G Med J*. December 1977. Volume 20, Issue 4, Pages 188-97. Abstract: The review outlines the developments in the Solomon Islands Malaria Eradication Programme (MEP) during the period 1975 - 1976. In most of the islands of the Solomons group MEP continues to be successful, but overall progress is hindered by persistent foci in areas of high malaria endemicity in north Guadalcanal. Some changes in the operational methodology are described, together with a report on supplementary measures carried out in the 'problem area' of north Guadalcanal. Availability: NLM.

Viola, Bill; International Television Workshop and Electronic Arts Intermix. 1990s. *Memories of Ancestral Power the Moro Movement in the Solomon Islands*. New York, NY: Electronic Arts Intermix. Volume: 1 videocassette (37 min.), Descriptors: Solomon Islands- Social life and customs; Guadalcanal (Solomon Islands)- Social life and customs; Videorecording; Videocassette; VHS tape. Abstract: Documents the collision of Western influences with cultural heritage in the Solomon Islands. The filmmaker calls it "a form of visual anthropology." Moro, a leader on Guadalcanal, was inspired to help his people keep their traditions alive in the face of European influences. He helped revive dance, music and crafts. The film shows dances and music in Makaruka Village and visits the House of Memories where people can learn their ancestors' traditions. Notes: System Info: VHS format. Notes: Originally produced in 1977. Responsibility: a production of the International Television Workshop; a videotape by Bill Viola. OCLC: 82457790.

Wartho, Jo Anne and Kelley, Simon P. 2003. "(Super 40) Ar/ (Super 39) Ar Ages in Mantle Xenolith Phlogopites; Determining the Ages of Multiple Lithospheric Mantle Events and Diatreme Ascent Rates in Southern Africa and Malaita, Solomon Islands." Geological Society Special Publications. Geological Society of London: London, United Kingdom. Volume 220, Pages 231-248. Descriptors: absolute age; Africa; amphibole group; Ar 40; Ar Ar; argon; chain silicates; clinoamphibole; Cretaceous; dates; diatremes; electron probe data; igneous rocks; inclusions; intrusions; isotopes; Kimberley South Africa; kimberlite; Letseng Southern Africa; lithosphere; mantle; MARID; Melanesia; Mesozoic; mica group; noble gases; Northern Cape Province South Africa; Oceania; phlogopite; pipes; plutonic rocks; richterite; sheet silicates; silicates; Solomon Islands; South Africa; Southern Africa; stable isotopes; ultramafics; xenoliths; Geochronology; Igneous and metamorphic petrology. Abstract: Kimberlites are extraordinary natural phenomena, ascending through the Earth's lithosphere, entraining xenoliths, to erupt at the surface within hours to days of their inception deep within the lithospheric mantle. With the realization that some Ar/Ar phlogopite grain core ages may be indicative of geological events, we have undertaken high spatial resolution Ar/Ar dating of phlogopites in xenoliths and megacrysts from Kimberley, Monastery and Letseng in southern Africa, and Malaita, in the Solomon Islands, to test whether other mantle phlogopite cores may yield meaningful ages. Modelling of Ar diffusive loss profiles from phlogopite grain boundaries to cores provides information on both the eruption age and the duration of outgassing within the kimberlite magma, and hence yields estimates on diatreme ascent rates. The ascent durations are very similar for all of the southern African pipes studied, yielding durations of 0.9-6.9 days, assuming an average kimberlite magma temperature of 1000 degrees C. These can be compared to estimates from phlogopite xenoliths from Siberian diamond-bearing kimberlites yielding ascent durations of 2-15 hours (assuming the same magma temperature). ISSN: 0305-8719.

Webber, R. H. and Southgate, B. A. 1981. "The Maximum Density of Anopheline Mosquitoes that can be Permitted in the Absence of Continuing Transmission of Filariasis." *Transactions of the Royal Society of Tropical Medicine and Hygiene*. Volume 75, Issue 4, Pages 499-506. Abstract: Using two years of mosquito collections from two fixed stations on Guadalcanal it was possible to compare the average man-biting rate with the prevalence of microfilaraemia. One area was found to be free of infection while the other still had one positive case. The DDT residual spraying had caused a change in biting habits of *A. farauti* No. 1 allowing a greater density of mosquitoes to bite man at times when they had lower microfilaria densities. This difference was compared with the pre-spray density so that the maximum permissible number of mosquitoes biting man without transmission of filariasis taking place, could be calculated. A theoretical value for m of 19.84 had been worked out previously, this study gave a corrected observed value of m of approximately 20, very close to the calculated theoretical value. The situation studied here probably showed incomplete interruption of transmission, so it was considered preferable to recommend a figure of 0.66 average vector man-biting rate per hour indoors for the critical value. White, NC, Leake, M J, McCaughey, S N and Parris, B. W. 1995. "Epithermal Gold Deposits of the Southwest Pacific." *J. Geochem. Explor. Elsevier: Amsterdam-New York, International*. Volume 54, Issue 2, Pages 87-136. Descriptors: Asia; Australasia; Australia; epithermal processes; Far East; Fiji; gold ores; Indonesia; Melanesia; metal ores; mineral deposits, genesis; New Zealand; Oceania; Pacific Ocean; Pacific region; Papua New Guinea; Philippine Islands; Solomon Islands; South Pacific; Southwest Pacific; West Pacific; Economic geology, geology of ore deposits. Abstract: Since the freeing of the market price of gold in 1971, exploration for epithermal gold deposits in the southwest Pacific region has been intense, and has been encouraged by some major successes. Sufficient discoveries have been made to summarise what has been found to date, and to assess what implications may be drawn for future exploration. Data are tabulated for 137 epithermal precious metal deposits and prospects in Australia (30), Fiji (2), Indonesia (43), New Zealand (22), Palau and Yap (2), Papua New Guinea (18), the Philippines (19), and Solomon Islands (1). Comparison of the character of epithermal deposits in the southwest Pacific with those in other regions (e.g. the northeastern Pacific margin) suggests that they are in

most respects similar, with however, three differences: (i) through much of the region (especially the Philippines and Indonesia) low-sulfidation style deposits commonly show characteristics suggestive of formation at deeper levels than is typical elsewhere; (ii) high-sulfidation deposits appear to be more common than along the northeast Pacific margin; (iii) many of the largest deposits show atypical features, particularly those suggestive of a transition to porphyry or mesothermal conditions, or indicating overprinting of an epithermal system on a porphyry environment. These differences can be partly understood in terms of the tectonic setting and evolution of the volcanic arcs of the southwest Pacific, and the consequent hydrological conditions that existed during mineralization. The results of exploration in the southwest Pacific indicate that, while the principles of formation of epithermal deposits still apply, deposit models developed in other tectonic/volcanic settings should not be rigidly applied. Gold explorers should first consider the character of the geologic environment at the time of mineralization to try to predict the hydrological conditions during mineralization. Once the likely volcanic environment and paleorelief have been established, then the types, distribution, and zoning of hydrothermal alteration, coupled with observations of deposit form, vein textures and mineralogy, will allow a judgement to be made on the level of system that is now exposed, and on the probable controls that localized mineralization. The very dynamic character of the tectonic and volcanic setting throughout much of the southwest Pacific has resulted in deposits that reflect changes in the environment of the deposit, in some cases even while the deposition was occurring. This has produced some deposits with unusual characteristics which could not have been predicted before exploration. ISSN: 0375-6742.

Wesnousky, Steven G., Astiz, Luciana and Kanamori, Hiroo. 1986/12. "Earthquake Multiplets in the Southeastern Solomon Islands." *Physics of the Earth and Planetary Interiors*. Volume 44, Issue 4, Pages 304-318. Descriptors: body waves; earthquakes; elastic waves; epicenters; equations; focal mechanism; Guadalcanal Island; guided waves; Indian Plate; mathematical models; Melanesia; numerical analysis; Oceania; P-waves; Pacific Plate; Rayleigh waves; San Cristobal Island; seismic waves; seismology; seismotectonics; Solomon Islands; southeastern Solomon Islands; spatial distribution; subduction; surface waves; tectonics. Abstract: The 350-km stretch of the Solomon Islands trench that lies adjacent to the islands of Guadalcanal and San Cristobal has been the site of 10 large shallow earthquakes since 1966: June 15, 1966 doublet ($M_s = 7.7, 7.3$), May 20, 21, 1977 quadruplet ($M_s = 6.7, 7.5, 7.5, 7.5$), November 4, 5, 1978 doublet ($M_s = 6.9, 7.1$), and two single events on October 23, 1979 ($M_s = 7.1$) and February 7, 1984 ($M_s = 7.7$). Analyses of P-wave first-motions, aftershock distributions, P-wave-forms recorded at epicentral distances of 30° to 90° on the WWSSN, and 256 s-period Rayleigh-wave spectra obtained from the IDA and GDSN networks are used to examine the source characteristics of the events. The close temporal association and large size of earthquakes precluded collection of useful seismograms for the latter of the two 1966 events and the second and third events of the 1977 sequence. P-waveforms analyzed show smooth traces that can be modeled with simple trapezoidal source-time functions located at shallow (15–45 km) depths. Focal mechanisms are consistent with oblique subduction of the Indian plate beneath the Pacific plate at about $N73^\circ E$. Estimates of seismic moment for individual events range from 0.2 to 2.3×10^{27} dyne-cm. Average stress drops of the sequences are estimated to range between 10 and 40 bars. This section of island arc may have ruptured in a similar sequence of earthquakes during the 1930's. Conversion of the cumulative seismic moment to displacement and averaging over 40 years suggests a convergence rate of about 4.5 cm year⁻¹, about one half of the rates that have been assessed on the basis of seafloor magnetic lineations. ISSN: 0031-9201.

Abstract: Existing data for subduction-related magmas reveal a considerable diversity in both Re and Os concentrations and osmium isotope ratios. Unfortunately, with current knowledge, deciphering the relative roles of mantle, subducting slab and crust in generating these signatures remains a difficult undertaking. Fractional crystallisation imparts a significant influence on both Re and Os abundances which, in the case of Re, can be corrected for, although the extent to which Re volatility influences measured concentrations remains to be firmly established. With these provisos in mind, Re does appear to be more mobile in “fluid-dominated” low-K tholeiite-type arcs. A compilation of existing isotope data strongly suggests that Os isotope signatures in continental arcs are compromised by interactions within the crust rendering them largely unsuitable for the estimation of subduction fluxes. Within intra-oceanic arcs, taking lavas from New Britain as an otherwise well-constrained example, estimation of the local upper mantle isotopic composition remains a major impediment to the quantification of slab-derived Os fluxes. Eric. 2004. "MODVOLC; Near-Real-Time Thermal Monitoring of Global Volcanism." *J. Volcanol. Geotherm. Res.* Elsevier: Amsterdam, Netherlands. Volume 135, Issue 1-2, Pages 29-49. Descriptors: algorithms; Atlantic Ocean Islands; computer networks; Earth; Earth Observing System; global; hot spots; imagery; information systems; Internet; Kavachi; lava flows; lava lakes; Melanesia; Moderate Resolution Imaging Spectroradiometer; MODIS instrument; monitoring; Montague Island; Mount Belinda; Oceania; orbital observations; remote sensing; satellite methods; Scotia Sea Islands; Solomon Islands; South Sandwich Islands; thermal anomalies; thermal emission; volcanism; volcanoes; World Wide Web; Quaternary geology; Applied geophysics. Abstract: MODVOLC is a non-interactive algorithm developed at the Hawaii Institute of Geophysics and Planetology (HIGP) that uses low spatial resolution (1-km pixel-size) infrared satellite data acquired by the Moderate Resolution Imaging Spectroradiometer (MODIS) to map the global distribution of volcanic thermal anomalies in near-real-time. MODVOLC scans the Level-1B MODIS data stream, on a pixel-by-pixel basis, for evidence of pixel and sub-pixel-sized high-temperature radiators. Once a hot spot has been identified its details (location, emitted spectral radiance, time, satellite observation geometry) are written to ASCII text files and transferred via FTP to HIGP, from where the results are disseminated via the internet (<http://modis.higp.hawaii.edu>). In this paper, we review the underlying principles upon which the algorithm is based before presenting some of the results and data that have been obtained since its inception. We show how MODVOLC reliably detects thermal anomalies at a large number of persistently and sporadically active volcanoes that encompass the full range of common eruptive styles including Erebus (Antarctica), Colima (Mexico), Karymsky (Kamchatka), Popocatepetl (Mexico), Etna (Italy), and Nyiragongo (Democratic Republic of Congo), amongst others. We also present a few cautionary notes regarding the limitations of the algorithm and interpretation of the data it provides. ISSN: 0377-0273.

Yanagihara, RA, et al. 1991. Solomon Islands Variants of Human T-Lymphotropic Virus. Patent Application. page(s): 26. Descriptors: Bioassay; HTLV I infections; Western blotting; Nucleic acid hybridization; Humans; Base sequence; Patent applications; HTLV I; Solomon Islands; Medicine and biology Microbiology; Government inventions for licensing Biology and medicine. Abstract: The invention relates to a human T-cell line persistently infected with a Solomon Island HTLV-I-related virus, for example, the cell line, and to the infecting virus, for example, the HTLV-I-SI variant. The cell lines of the invention grow better and produce more virus than the other known T-cell line persistently infected with an HTLV-I variant from that area. The invention also relates to vaccines for use in humans against infection with and diseases caused by HTLV-I and variants thereof. The invention further relates to a variety of bioassays for the detection of infection by HTLV-I and variants thereof. Notes: Filed 28 Feb 91; NTIS: PB92230119XSP.

Yoneshima S, Mochizuki K, Araki E, Hino R, Shinohara, M. and Suyehiro K. 2005. "Subduction of the Woodlark Basin at New Britain Trench, Solomon Islands Region." *Tectonophysics*. Elsevier: Amsterdam, Netherlands. Volume 397, Issue 3-4, Pages 225-239. Descriptors: basins; crust; earthquakes; elastic waves; focus; New Britain Trench; ocean bottom seismographs; ocean floors; oceanic crust; Ontong Java Plateau; Pacific Ocean; plate collision; plate tectonics; seismic waves; seismicity; seismographs; Shortland Basin; Solomon Islands; stress; subduction; subduction zones; trenches; triple junctions; velocity; West Pacific; Woodlark Basin; Solid earth geophysics; Seismology. Abstract: The Woodlark Basin, located south of the Solomon Islands arc region, is a young (approximately 5 Ma) oceanic basin that subducts beneath the New Britain Trench. This region is one of only a few subduction zones in the world where it is possible to study a young plate subduction of several Ma. To obtain the image of the subducting slab at the western side of the Woodlark Basin, a 40-day Ocean Bottom Seismometer (OBS) survey was conducted in 1998 to detect the micro-seismic activity. It was the first time such a survey had been performed in this location and over 600 hypocenters were located. The seismic activity is concentrated at the 10-60 km depth range along the plate boundary. The upper limit just about coincides with the leading edge of the accretionary wedge. The upper limit boundary was identified as the up-dip limit of the seismogenic zone, whereas the down-dip limit of the seismogenic zone was difficult to define. The dip angle of the plate at the high seismicity zone was found to average about 30 degrees . Using the Cascadia subduction zone for comparison, which is a typical example of a young plate subduction, suggests that the subduction of the Woodlark Basin was differentiated by a high dip angle and rather landward location of the seismic front from the trench axis (30 km landward from the trench axis). Furthermore, as pointed out by previous researchers, the convergent margin of the Solomon Islands region is imposed with a high stress state, probably due to the collision of the Ontong Java Plateau and a rather rapid convergence rate (approximately 10 cm/year). The results of the high angle plate subduction and inner crust earthquakes beneath the

Shortland Basin strongly support the high stress state. The collision of the Ontong Java Plateau, the relatively rapid convergence rate, and moderately cold slab as evidenced by low heat flow, rather than the plate age, may be dominantly responsible for the geometry of the seismogenic zone in the western part of the Woodlark Basin subduction zone. ISSN: 0040-1951.

**History of Guadalcanal and the Solomon Islands
and the
Battle of Guadalcanal
and the
Solomons Islands Campaigns, 1942-1944**

The Battle of Guadalcanal, August 1942–February 1943, was a series of World War II land and sea clashes between Allied and Japanese forces on and around Guadalcanal, one of the southern Solomon Islands, in the South Pacific. Strategically, possession of a Guadalcanal air base was important to control of the sea lines of communication between the United States and Australia. Japanese troops had landed on Guadalcanal on July 6, 1942, and had begun constructing an airfield there. The ensuing six-month Guadalcanal campaign proved to be the turning point of the Pacific war. On August 7, in the Allies' first major offensive in the Pacific, 6,000 U.S. Marines landed on Guadalcanal and seized the airfield, surprising the island's 2,000 Japanese defenders. Both sides then began landing reinforcements by sea, and bitter fighting ensued in the island's jungles. The Japanese forces on the island reached a peak strength of 36,000 troops by October, but they were unable to overwhelm the Americans' defensive perimeter and retake the airfield. Six separate naval battles were also fought in the area as the navies of both sides sought to land reinforcements. By November, the U.S. Navy was able to land reinforcements on Guadalcanal faster than were the Japanese, and by January 44,000 U.S. troops were on the island. By February 1943 the Japanese, badly outnumbered, were forced to evacuate 12,000 of their remaining troops from Guadalcanal. Along with the naval Battle of Midway (June 3–6, 1942), the fighting on Guadalcanal marked a turning point in favour of the Allies in the Pacific War. Operationally, the Battle of Guadalcanal was notable for the interrelationship of a complex series of engagements on the ground, at sea, and in the air. Tactically, what stood out was the resolve and resourcefulness of the U.S. Marines, whose tenacious defense of the air base dubbed Henderson Field enabled the Americans to secure air superiority.

The Japanese lost a total of 24,000 men killed in the Battle of Guadalcanal, while the Americans sustained 1,600 killed, 4,200 wounded, and several thousand dead from malaria and other tropical diseases. The various naval battles cost each side 24 warships: the Japanese lost 2 battleships, 4 cruisers, 1 light carrier, 11 destroyers, and 6 submarines, while the Americans lost 8 cruisers, 2 heavy carriers, and 14 destroyers.¹³ But by far the most significant loss for the Japanese was the decimation of their elite group of naval aviators. Japan after Guadalcanal no longer had a realistic hope of withstanding the counteroffensive of an increasingly powerful United States.¹⁴

Abstract: Features the World War II U.S. naval operations on land and sea from 1939 to 1945 as recorded in footage taken by Allied and enemy combat photographers. Design for war: Details the events occurring at the beginning of the war, including the German invasion of Europe, the spread of propaganda, and the development of American opinion about the European war. Focuses on the Battle of the Atlantic, 1939-1941, to emphasize the nature of fighting a war on and under water and the importance of the defense of Britain's waterways. Also examines the role that North American Armed Forces played in defending Britain, Greenland and Iceland. Pacific boils over: Details the philosophy behind Japan's aggression on Pearl Harbor and examines the factors that allowed Japan to take the U.S. naval base by surprise. Discusses the breakdown of U.S. and Japanese negotiations before the attack. Shows the peaceful activities taking place at Pearl Harbor prior to the attack, the destruction of the attack and its impact on the war. Sealing the breach: Rare live-action film footage from the Allied and Axis governments show American and Allied naval operations against Axis

History of Guadalcanal

submarines in the Pacific from 1941-43. Midway is east: Describes Japanese victories at Hong Kong, Singapore, Bataan, Corregidor and the Philippines. Pictures Coral Sea and Midway Battles and explains the Allied strategy. Mediterranean mosaic: Features the high points of the war on land and sea in Gibraltar and Malta, as recorded in footage taken by Allied and enemy combat photographers. Guadalcanal: Explains the strategic importance of Guadalcanal Island, the efforts of the Japanese to build a base to cut off supplies from the U.S. to New Zealand and Australia and the battle that allowed the U.S. to secure the island as a supply base. Also illustrates activities that supported the war effort back in the U.S. including military training and industrial production. Design for war: the battle of the Atlantic, 1939-1941- The Pacific boils over: Pearl Harbor, December 7, 1941- Sealing the breach: anti-submarine warfare, 1941-1943- Midway is east: Japanese victories and the battle of Midway- Mediterranean mosaic: Gibraltar, Allied and enemy fleets, Malta- Guadalcanal. Abstract: "Pacific Counterblow" tells the story of the Battle for Guadalcanal (1942), focusing on the operations of the 11th Bombardment Group and the 67th Fighter Squadron. Months after the devastation of Pearl Harbor, U.S. forces had crushed the Japanese fleet at Midway and then moved to seize the initiative. Army Air Force commanders in the Pacific sought to prevent the enemy from severing Australia's supply lines. So the B-17s of the 11th Bomb Group and the P-39s and P-400s of the 67th Fighter Squadron, flying from makeshift bases at Espiritu Santo and Henderson Field, began grueling attacks on Japanese shipping between Rabaul, New Britain and the Solomon Islands. After several months of bitter fighting, American forces gained control of Guadalcanal, positioning them to swing forward beyond Rabaul to New Guinea. Notes: Wings at War Series, No. 3. Anon. 2005. "From Action Plan to Action on the Ground." *ITU News*. Issue 7, Pages 15-17. Descriptors: Internet; Personal communication systems; Education; Information technology; Personnel training; Project management. Abstract: Samoa and the Solomon Islands will have multipurpose community telecenters, which should be functioning as telephone and Internet access points for not only personal communications, but also educational, business, and community applications. In cooperation with Samoa's Ministry of Communications and Information Technology, International Telecommunication Union (ITU) will install five MCTs in rural district on the island of Upolu, serving a total of about 21,000 people who mainly work in agriculture and fishing. The ITU project will design and equip ten MCTs on the island of Guadalcanal and support staff training. In Samoa and the Soloman Islands, the business model is based on partnership between government and the telecommunication operators. ISSN: 1020-4148.

Barr, William Thomas. 2002. "Interview with William Thomas Barr [9/24/2002]" *Veteran's History Project*. Excerpt: **Sally Ainsley:** So, you were stationed at first then in Traverse City. What was your mission there? **William Thomas Barr:** The base at Traverse City was working on a secret project television-guided bombs which were actually plywood airplanes guided by remote control. And we had proceeded to a point where we could plunge these airplanes by pre-arrangement flying them remotely into haystacks by pre-arrangement with the farmers. And we got to be very accurate at it, but everybody in Traverse City knew what was going on about this so-called secret project, so the Navy decided to build a Navy ... another base in some state where there were many fewer people around. **Sally Ainsley:** And where was that? **William Thomas Barr:** That was, it wound up being in a place called Burns Flat in Oklahoma. The name of the Navy Base was NAS Naval Air Station Clinton. At Burns Flat there was just simply an intersection and the nearest town of any size was 22 miles away. So it was an ideal spot to operate in secrecy. **Sally**

Ainsley: And what happened eventually to the television-guided bomb program? **William Thomas Barr:** Oh, after we had been there about a year or so, I believe it was in June of 1943, they sent a squadron of these television-guided airplanes to Bougainville, which is near Guadalcanal in the South Pacific and they launched them against the Japanese, but with their bombs on the plywood airplanes they only went about 1-10 mph, so the Japanese easily shot them out of the sky and the whole thing was a bust and President Roosevelt was so upset that he cancelled the entire program. There were actually four different bases in the United States but the whole program was cancelled and Roosevelt said, "Send them all out to sea." Beckman, K. B. 2002. "Personality and Strategy: How the Personalities of General MacArthur and Admiral King Shaped Allied Strategy in the Pacific in World War Two. Master's Thesis." Army Command and General Staff College, Fort Leavenworth, KS. 31 May. Pages: 104. Descriptors: Theater level operations; Decision making; Bibliographies; Theses; Personality; Second world war; Military strategy; Leadership; Conventional warfare; Officer personnel; Military sciences Military operations strategy and tactics; Administration and management Management practice. Abstract: This thesis examines the impact that the dominant personalities of General Douglas MacArthur and Admiral Ernest King had in shaping Allied strategy in the Pacific during the Second World War. The concept of dominant personality is defined as containing three essential elements: arrogance, tenacity, and supreme competence. The lives of MacArthur and King are examined, demonstrating that the actions of each consistently reflected these characteristics, allowing them to dominate those around them. Three key decisions from the Pacific war are scrutinized for the impact of one or both of these dominant personalities. King and MacArthur affected these decisions in different ways. In the first, the decision to initiate carrier raids against Japan in early 1942, King acted unopposed in pushing his audacious plans through. The second decision was to invade Guadalcanal (Operation Watchtower) in August 1942. King and MacArthur drove this decision in parallel competition, each striving to begin offensive operations and each desiring to be in control. Finally, the long competition between the Central and Southwestern Pacific drives for primacy, culminating with the debate over invading Luzon or Formosa, is examined. In this case, MacArthur and King pursued mutually exclusive courses and stalemate nearly resulted. Notes: Product reproduced from digital image. Bennink, Richard E. 1938-2002. Richard E. Bennink Collection, 1938-2002 (Bulk, 1941-1945). Descriptors: Guadalcanal, Battle of, Solomon Islands, 1942-1943; World War, 1939-1945- Naval operations, American; World War, 1939-1945- Campaigns- Japan; World War, 1939-1945- Personal narratives, American. Abstract: Collection contains a wide range of items relating to his service in the U.S. Navy, the bulk of the material dating from World War II (1941-1945). Includes personal papers, photographs, journals, and letters; Navy documents, maps, and photographs; and newspaper and magazine articles from the 1950s to 2001, including post-war publications about the ships on which Bennink served, and an account of the Japanese experience during World War II. Ephemera include his uniform, helmet, an ashtray made out of cartridge casings, buttons, and medals. Notes: 2 document boxes. 1 oversized photograph box. 1 garment box. 2 boxes of equipment and photographs; Named Corp: United States. Navy. United States. Naval Reserve. Guam (Cruiser) Heywood (Troop transport) Livermore (Destroyer) Sangamon (Tanker); Genre/Form: Correspondence- Massachusetts- Cambridge. Ephemera- Massachusetts- Cambridge. Journals (accounts)- Massachusetts- Cambridge. Maps- Massachusetts- Cambridge. Personal papers- Massachusetts- Cambridge. Photographs- Massachusetts- Cambridge. Notes: Bio/History: Bennink was born in 1917, and graduated from Harvard University and the Navy ROTC in 1938, when he was commissioned as an ensign in the U.S. Naval Reserve that June. He reported for active duty on 6 June 1941, and over the next four years he served as a communications officer on board the USS Heywood in Iceland and Alaska, on the USS Sangamon in Guadalcanal, and on the USS Guam at Leyte Gulf and Okinawa. After post-war stints with the Naval Reserve aboard the USS Livermore in 1948 and 1949, Bennink was transferred to the Volunteer Reserve in 1952 and, after twenty years of naval service, the Retired Reserve in 1958. General Info: Finding aid is available in the repository. Occupation: Sailors- Massachusetts- Cambridge. LCCN: 2004-716356. OCLC: 71014304.

Abstract: Presents the author's recollection of his experience in the United States Navy's battle for Guadalcanal in October, 1942. His escape from the burning destroyer USS Duncan during the Battle of Cape Esperance; Loss of a companion to sharks. Presents the author's recollection of his experience in the United States Navy's battle for Guadalcanal in October, 1942. His escape from the burning destroyer USS Duncan during the Battle of Cape Esperance; Loss of a companion to sharks. Abstract: Guadalcanal, 1942: In the 1960s, Roy Boehm founded the SEALs, the Navy's commando unit. But

at Guadalcanal, the brutal, six-month battle for control of a key island in the Solomon chain, he was just a teenage sailor floundering in the Pacific. "The plunge overboard drove me into dark, warm waters. I fought to hold on to my senses. If I passed out, I would just keep sinking. I was 18, and I had shrapnel in both legs and my skull. I struggled to the surface and saw my destroyer, the USS Duncan, burning and adrift, struck 56 times by Japanese shells during the Battle of Cape Esperance near Guadalcanal. It was Oct. 12, 1942. I saw a wooden spar and grabbed it. To my surprise, a Japanese sailor was hanging on to the other end. I reached for my knife as we eyed each other. We remained frozen with indecision for a long moment. I eased off my end of the spar. He eased off his end. We swam away as fast as we could in opposite directions. Both of us had had all of the fight we wanted. As luck would have it, I splashed into someone else floating face up. It was [my shipmate] Stanley Dubiel, raving, out of his mind with pain. His legs were badly burned; I had thrown him overboard before I jumped into the ocean. Looking back over my shoulder as I swam, I saw the Duncan chasing me. The ship was like a giant flamethrower. Still steaming wildly in a tight circle, blazing like a Viking's funeral pyre, she bore straight down on me, growing larger as she approached, spewing fire and smoke from every opening. The ship rushed by so near I thought I could reach out and grab her. I held on to Dubiel and his life jacket with a drowning man's grip as the wake caught us and drove us tumbling underwater. When we surfaced, after what seemed like hours, the world had grown quiet and warm and peaceful. I thought I must have died. Then I spotted the Duncan, flaming away across the sea in the distance. I must have passed out for a minute. We had gone into the drink about midnight. Now it was daylight. I had been swimming for hours, towing Dubiel. "Keep going" played itself over and over in my brain. Somehow I became aware that Dubiel and I were no longer alone. I saw fins cutting the surface like blades of knives. The sharks closed in. One of the fish, larger and bolder than the others, darted in for a bite. My foot was bleeding. The shark's fin disappeared beneath the surface. I spun in the water, my eyes searching frantically. I screamed, Dubiel screamed. His body exploded out of the water. He twisted violently, then he was gone, wrenched from my grip. I swam like a madman. I figured by all rights I should have been dead. I heard Dubiel's screams for years afterward." ISSN: 0028-9604.

Botts, Robert H., interviewee. Van Ells, Mark D. and Wisconsin Veterans Museum. 1997. Oral History Interview with Robert H. Botts, 1997. Descriptors: Veterans- Wisconsin- Madison; World War, 1939-1945- Personal narratives, American; Atomic bomb; World War, 1939-1945- Health aspects; World War, 1939-1945- Psychological aspects; Malaria; World War, 1939-1945- Pacific Ocean; World War, 1939-1945- Campaigns- Japan- Okinawa Island; Combat; Guadalcanal, Battle of, Solomon Islands, 1942-1943; World War, 1939-1945- Guam; Tank warfare; Cassette recording. Abstract: The Madison, Wis. veteran discusses his pre-war and World War II service as a tank commander with the 4th Regiment of the 6th Marine Division island hopping during the Pacific campaign. He talks about enlisting in the Marines because he wanted to serve in China, being issued supplies, guard duty at the Naval air station at North Island (California), and learning of the attack on Pearl Harbor. After being transferred to the 11th Defense Battalion, he left for overseas in 1942. Landing at Guadalcanal Island, he comments on participating in the fighting for the island, the effectiveness of training, bathing and washing clothes in a river, interacting with

natives, and fishing using explosive charges. Botts details his experiences on Guam where including staying in flooded foxholes for three nights, having his tank set on fire by Japanese soldiers, finding and using Japanese weapons, and being wounded. Also discussed is the landing at Okinawa supporting infantry troops and trading captured weapons and souvenirs with sailors. Included are his feelings about the dropping of the atomic bomb, discharge, recovery from service experiences, use of the GI Bill, and recurring malaria. Camp, Dick. "Leatherneck: Star-Crossed Translator." Abstract: Second Lt Merle Ralph Cory was an expert cryptanalyst, who, at the height of patriotic fervor, joined the Corps and went to war. His comprehensive knowledge of the American code-breaking successes caused many to second-guess the decision that allowed him to risk capture by the Japanese. He was killed while serving in the Goettge Patrol. "The last survivor, Platoon Sergeant Frank L. Few, made a mad dash for the water. As he looked back, "swords flashed in the morning sun." Cory's old friend Van der Rhoer was told, "The swimmer saw a [Japanese] soldier thrust his bayonet into Cory's body, stretched out on the sand where he had first fallen." Cory was listed as missing in action on 13 Aug. 1942, which was changed to killed in action (body not recovered) a year later for administrative purposes by the Secretary of the Navy. His wife, Carolyn, wrote to Van der Rhoer informing him that she had received the "bad-news telegram." A headstone was erected in New Tacoma Cemetery, Tacoma, Wash. See:

Cariello, Nick. 2007. "March of the Unknown Generals." *World War II*. Volume 22, Issue 1; 1, Pages 21-22. Descriptors: First person narrative; Generals; Marines; Snipers; Guadalcanal (Solomon Islands); Solomon Islands. Notes: World War II; Source Information: April 2007, Vol. 22 Issue 1, p21; Number of Pages: 2 pages; Document Type: Article; Full Text Word Count: 1474. Abstract: The article discusses the author's experience when he was engaged in a drive on Guadalcanal in Solomon Island along with other U.S. Marine units. He states that his unit's objective was to sweep the enemy away from an area near Matanikau river. He cites that the task of snipers is not just to kill but to make psychological chaos. He relates that he was impressed by the calm presence of the two Marine generals. ISSN: 0898-4204.

Clubb, Timothy L. 1996. "CACTUS Airpower at Guadalcanal." Army Command and General Staff Coll

Fort Leavenworth KS. Volume: ADA313107, 155 Pages.

Descriptors: *Military History; *Amphibious Operations; *Military Capabilities; *Air Logistics Support; *Air Power; *Marine Corps Operations; Military Strategy; Lessons Learned; Military Doctrine; Assault; Theses; Japan; Limitations; Military Tactics; Reconnaissance; Shortages; Strategic Areas. Abstract: This study examines the role of the CACTUS Air Force during the battle for Guadalcanal. Hurriedly planned and executed, Guadalcanal was the first U.S. ground offensive in the Pacific. Starting as an unopposed amphibious assault, the operation turned into a six-month-long air, land, and sea battle to secure the island. Operating from an expeditionary airfield, the U.S. Marine Corps employed air power as its primary means of defending the island. The CACTUS Air Force conducted the campaign with limited air assets and was plagued by a variety of critical shortages, yet it managed to play a key role in the U.S. victory. This study focuses on the specific contributions of air power during this campaign. It examines the role of air power in reconnaissance, deep, close, and rear area air operations. It also examines the factors that influenced how air assets were employed and the

Martin Clemens - Australian Coastwatcher - August 2007

changes in U.S. concepts about air operations that were made to conduct the air campaign. CACTUS planes assisted in defeating several major Japanese attacks. However, the daily presence and routine operations of the CACTUS Air Force were its key contributions. CACTUS Air's most important contribution was its ability to deny the Japanese air superiority and disrupt their freedom of action in the lower Solomon Islands. Notes: Approved for Public Release. Coates, Robert interviewee. Reeves, Troy; Idaho State Historical Society and Idaho Veterans History Project. 2001-2002. Robert Coates Interviews, 2001 Sept.-2002 Feb. Descriptors: Guadalcanal, Battle of, Solomon Islands, 1942-1943- Personal narratives, American; Veterans-Idaho- Nampa- Interviews; World War, 1939-1945- Personal narratives, American; World War, 1939-1945- Veterans- Idaho- Nampa- Interviews; World War, 1939-1945- Naval operations, American. Abstract: Coates discusses both his personal and military life from the early 1930s through the present. Coates describes his numerous military assignments while aboard the USS San Francisco during World War II. His military assignments with the U.S. Navy occurred from Jan. 1941 through Dec. 1946. Coates then worked as an electronic technician at the Idaho National Engineering and Environmental Laboratory from 1956 through 1962; the U.S. Forest Service in Missoula, Mont., from 1963 through 1964; and as a research engineer at the INEEL from 1964 through 1983. He further describes one of his positions which was directly associated with NASA, and his interest in family and Idaho history. Coates was born and raised in Carey, Idaho, and now resides in Nampa. Cotts, Christopher D. "Decisive Halt 1942: Guadalcanal and Implications for American Military Strategy in the 21st Century." *Air Command and Staff College, Maxwell AFB, AL*. Volume: ADA398334, 54 Pages. Descriptors: *Military Strategy; *Battles; *Second World War; Warfare; Air Force; Combat Effectiveness; United States; Military Equipment; Theses; Military Capabilities; Enemy; *Guadalcanal Campaign. Abstract: The recent Report of the Quadrennial Defense Review outlines an increased need to execute Halt Phase Operations, defined as the halt of an enemy invasion of friendly territory before the enemy reaches his strategic goals. In order to meet this challenge, the QDR panel proposes a force that relies on the Revolution in Military Affairs to leverage increased military capability from a smaller force. Other agencies, in particular the United States Air Force, have proposed that Halt Phase operations can best be executed by modern airpower. Unfortunately, this assertion is not borne out by current military combat models. Therefore, this study examines a historical example, the World War II Guadalcanal campaign, to examine the Halt Phase and develops some critical issues for this key phase of battle. First, trading mass for technological superiority increases the risk of failure under a wide range of circumstances. Second, sound operational force employment is also a key to victory, a major problem in a two-

major theater war scenario. Third, sustainment capability is crucial. Fourth, multi-dimensional combat capability provides a war-winning edge. Failure to heed these conclusions may not risk outright defeat but does increase the possibility of failure in the Halt Phase and a reversion to attrition warfare exactly the situation the American strategy and operational forces are designed to avoid. “Country Reports on Human Rights Practices, 2003: Solomon Islands.” 2004. Department of State, Washington, DC. Bureau of Democracy, Human Rights, and Labor. 25 Feb. Pages: 22. Descriptors: Civil rights; Political systems; Politics; Economics; Foreign government; International relations; Religion; Military government; Foreign policy; Crimes; Solomon Islands; Human rights; Behavior and society Social concerns; Behavior and society International relations. Abstract: The Solomon Islands has a modified parliamentary system of government consisting of a single-chamber Legislative Assembly of 50 members. Executive authority is vested in the Prime Minister, who is elected by a majority vote of Parliament, and his Cabinet. A new Parliament was elected in 2001 with Sir Allan Kemakeza as Prime Minister; elections were considered generally free and fair. Since 1998, conflict between two of the main ethnic groups in the country--the Malaitans and the Guadalcanalese--has forced thousands of Malaitans residing on Guadalcanal from their homes, and in June 2000, armed Malaitan militants took over Honiara, the capital. The Malaitan militants forced the then-Prime Minister to resign. Although a peace agreement formally ending the conflict was signed in October 2000, subsequent governments had limited success in their efforts to restore peace, due to political and institutional weaknesses and the public's perception that their leaders were beholden to one or the other of the conflicting parties. In late July, the Regional Assistance Mission for Solomon Islands (RAMSI), a multinational police-centered force organized by Australia, arrived in the country at the invitation of the Government and began to assist the Government in restoring law and order and rebuilding the country's institutions. The Constitution provides for an independent judiciary; however, prior to RAMSI's arrival, the judiciary was hampered by police ineffectiveness, lack of resources, and threats against judges and prosecutors. Notes: Appendices not included. NTIS: PB2005103542XSP.

“Country Reports on Human Rights Practices, 2001: Solomon Islands.” 2002. Department of State, Washington, DC. Bureau of Democracy, Human Rights, and Labor. 4 Mar. Pages: 54. Descriptors: History; Political systems; Politics; Religion; Economics; Foreign government; International relations; Geography; Foreign policy; Culture; Warfare; Education; Agriculture; Climate; Solomon Islands; Human rights; Country studies; Behavior and society International relations. Abstract: The Solomon Islands has a modified parliamentary system of government consisting of a single-chamber legislative assembly of 50 members. Executive authority is vested in the Prime Minister and his Cabinet. The Prime Minister, elected by a majority vote of Parliament, selects his own Cabinet. A new Parliament was elected in December with Allan Kemakeza as Prime Minister; elections were considered free and fair. In 1998 tensions between two of the main ethnic groups in the country--the Malaitans and the Guadalcanalese--resulted in violence. Throughout 1999 Guadalcanalese militants forced thousands of Malaitans residing on Guadalcanal from their homes. Beginning in January 2000, Malaitan militants stole large quantities of weapons from the police and actively began to combat the Guadalcanalese. The conflict continued to escalate, and in June 2000, armed Malaitan militants, reportedly assisted by paramilitary police officers acting without authorization, took over Honiara, the capital. Following their takeover of the capital, the Malaitan militants forced the then-Prime Minister, Bartholomew Ulufa'alu, to resign, and Parliament chose a new Prime Minister, Manasseh Sogavare, under duress. A new government,

known as the Coalition for National Unity, Reconciliation, and Peace, was formed. The Government has sought to restore peace, but its success has been limited due to its weakness--both political and institutional--and the perception that its leaders are beholden to one of the conflicting parties. The judiciary is independent, but was hampered by police ineffectiveness, lack of resources, and threats against judges and prosecutors. Notes: Product reproduced from digital image. “Country Reports on Human Rights Practices, 1999: Solomon Islands.” 2000. Department of State, Washington, DC. 23 Feb. Pages: 10. Descriptors: Civil rights; Political systems; Politics; Economics; Foreign government; International relations; Religion; Military government; Foreign policy; Crimes; Solomon Islands; Human rights; Behavior and society Social concerns; Behavior and society International relations. Abstract: Solomon Islands, with a population of approximately 450,000, is an archipelago stretching over 840 miles in the South Pacific. Its government is a modified parliamentary system consisting of a single-chamber legislative assembly of 50 members. Executive authority is vested in the Prime Minister and his Cabinet. The Prime Minister, elected by a majority vote of Parliament, selects his own Cabinet. Political legitimacy derives from direct election by secret ballot. There have been five general elections since independence in 1978, most recently in August 1997. The judiciary is independent. A police force of approximately 900 persons under civilian control is responsible for law enforcement and border security. About 75 percent of the population engage to some extent in subsistence farming and fishing and have little involvement in the cash economy. Commercial activities include some plantation production of copra, cocoa, and palm oil, one fish cannery, a gold mine on Guadalcanal, and small resort and diving enterprises. Basic individual rights are provided for in the Constitution, generally respected by authorities, and defended by an independent judiciary; however, some rights were suspended during a state of emergency. Headquarters Company; Germany- History- 1945-1955; Bangkok (Thailand)- Description and travel; Japan- Description and travel; Hong Kong- Description and travel; Taiwan- Description and travel; Pennsylvania- National Guard; Manuscript; Picture. Abstract: General description of the collection: The Edward F. Davis papers include a World War II Veteran's Survey Questionnaire, a Vietnam War Veteran's Survey Questionnaire, and a memoir filled with computerized reproductions of photos, maps, newspaper clippings, propaganda leaflets, and an issue of the 8th Field Artillery Battalion newspaper. Sergeant Davis describes his training, quarters, rations, equipment, uniforms, relations with civilians, rest and relaxation (R & R) tours to Japan, Hong Kong, Taiwan, and Bangkok, troop transports, disease, flora and fauna in the jungle, USO shows, drug use, his work at missile sites in the US, and his time in the National Guard. Notes: Contains the following type(s) of materials: memoir, questionnaires. Bio/History: First Sergeant Edward F. Davis enlisted as a high school student on 2 May 1940 because of family financial hardships. He trained at Scofield Barracks, HI after being assigned to the 25th Infantry Division (ID), 8th Field Artillery Battalion, Headquarters Battery. After the bombing of Pearl Harbor, he went into combat with the 25th ID at Guadalcanal and participated in the invasion of the Philippine Islands. He was released from combat in 1945 because he had accumulated enough points, and was discharged at Fort Dix, NJ on 16 July 1945. He joined the Pennsylvania National Guard in 1946, then volunteered to return to active duty when the

Korean War broke out. He was sent for occupation duty in Hoenfels, Germany from 1953-1955. After returning to the United States (US), he was assigned to Korea in 1957, then to Pakistan in 1963. After another tour in the US, he volunteered for Vietnam, where he served three tours. He retired in 1970 after twenty-two years of active duty service. He used the GI Bill to attend trade school in the early 1970's. General Info: Original or duplicate materials: U.S. Army Military History Institute, Carlisle Barracks, Carlisle, Pa. 17013-5008. Other Titles: Papers of Edward F. Davis; Davis papers. OCLC: 56791706.

Deuel, Jay Riley and Saints at War. 1944-2000. Memoir, Ca. 1944-2000. Descriptors: 1 folder (7 pages); World War, 1939-1945- Personal narratives, American; World War, 1939-1945- Religious aspects- Catholic Church; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Manuscript. Abstract: In this narrative about Jay Riley Deuel, Geneve Deuel expresses the feeling of Deuel as he served in the U.S. Navy as recorded in a collection of letter found and held by his family. He served around Guadalcanal, but was never in any danger. In his letters, and the memoir, his love for his family, and positive outlook are emphasized. The memoir recounts many of the personal life aspects of Deuel as he served. Notes: Genre/Form: Memoirs. Notes: Bio/History: Deuel served in the U.S. Navy during World War II from 1944-1946. He achieved the rank of Seaman First Class. General Info: Open for research. Items were donated by Geneve Deuel to the Saints At War Project in 2000. OCLC: 55006266.

Dick, William W., Jr. Artillery Support by Eighth F.A. (Manuscript) January 10-16, 1943. Descriptors: 7 pages; Artillery, Field- Tactics; Artillery in battle; Guadalcanal, Battle of 1942-1943. OCLC: 56665235.

Dickson, Donald L. United States; Navy, et al. 1996. *To the Shores of Iwo Jima*. Cerritos, CA: Diamond Entertainment Corp. Volume: 1 videocassette (45 min.), Descriptors: Iwo Jima, Battle of, Japan, 1945; World War, 1939-1945- Campaigns- Japan; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Videocassette; VHS tape. Abstract: Presents a dramatic documentary account of the American invasion of Iwo Jima and the Battle of Guadalcanal in the Solomon Islands. Shows ship bombardment, rocket fire, air bombing, the use of flame throwers, and scenes of individuals and groups in combat. Notes: System Info: VHS format. Notes: At head of title on container: World War II - War in the Pacific. Originally issued as a motion picture in 1945. Participants: Narrator, Donald L. Dickson (2nd work). Other Titles: Title on cassette label; *To the shores of Iwo Jima/Guadacanal*; *To the shores of Iwo Jima, Guadacanal*; *This is Guadalcanal* (Motion picture); Responsibility: Photographed in combat areas by cameramen of the U.S. Navy, Marine Corps and Coast Guard. 45035; Diamond Entertainment Corp. Dillard, Nancy R. 1997. “Operational Leadership: A Case Study of Two Extremes during Operation Watchtower.” Naval War College, Newport, RI. Volume: ADA325157, Pages: 27 Pages(s). Descriptors: *Military Operations; *Leadership; Military History; Theater Level Operations; Decision Making; Skills; Morale; Theses; Case Studies; Military Capabilities; Strength (General), Vision; Military Commanders; Judgement (Psychology); Pacific Ocean Islands; South Pacific Ocean; Operation Watchtower. Abstract: Amid the fog and friction of war, operational leadership is an essential element of success. Never was this better demonstrated than in the South Pacific theater during World War II’s Operation Watchtower (the American occupation of Guadalcanal and Tulagi), where an unforeseen change of command altered the course of history. Successful military theater commanders possess common traits that facilitate their operational leadership role. These traits include the intellectual ability and imagination to analyze situations, and to envision a future end state and the steps required to achieve it; communication skill to clearly articulate the vision to subordinates; enthusiasm and confidence to inspire subordinates beyond their known capabilities; boldness and audacity to take calculated risks decisively; good judgment to make the right decisions; and, when the going gets tough, strength of character and will to maintain the vision, stay the course, rekindle enthusiasm and keep hope alive. With the success of America’s first major offensive operation against Japan in jeopardy, Fleet Admiral Chester W. Nimitz, USN, Commander in Chief Pacific Ocean Areas, faced the soul-searching decision to relieve a subordinate commander. He replaced Vice Admiral Robert L. Ghormley, USN, Commander South Pacific Area and South Pacific Force, with Vice Admiral William F. Halsey, USN. Admiral Halsey’s immediate positive impact on morale and readiness, coupled with his bold audacity, turned the tide and achieved victory in less than a month. Admiral Halsey proved to be the right leader in the right place at the right time. Approved for Public Release. URL: <http://handle.dtic.mil/100.2/ADA325157>

Descriptors: Guadalcanal Island, Battle of, Solomon Islands, 1942-1943; Warships; Wildcat (Fighter plane); Sakai, Saburo; Mitsubishi G4M bomber; Southerland, James J; Solomon Islands. Notes: *Air & Space Smithsonian*; Article; Source Information: Dec2006/Jan2007, Vol. 21 Issue 5, 34 pages; Subject Term: Guadalcanal Island, Battle of, Solomon Islands, 1942-1943; Subject Term: Warships; Subject Term: Wildcat (Fighter plane); Subject Term: Sakai, Saburo; Subject Term: Mitsubishi G4M bomber; Subject Term: Southerland, James J. Geographic Subject: Solomon Islands; Number of Pages: 2; Illustrations: 2 diagrams. Abstract: The article details events that transpired during the air combat between the Japanese and the U.S. forces in Guadalcanal,

Solomon Islands on August 7, 1942. Lieutenant James J. Southerland II radioed his division when he found that G4M1 Betty bombers are about to attack the 50 U.S. Navy ships. Japanese pilot Saburo Sakai found himself in front of the Wildcat flown by Southerland. Sakai realized his mistake but Southerland did not fire which prompted the former to target Wildcat's engine instead of Southerland. ISSN: 0886-2257.

Downing, Taylor. Baker, Steve. Carroll, Michael. Johnson, Gareth; Flashback Television; History Channel (Television network); Arts and Entertainment Network and New Video Group. 2005. Pacific, the Lost Evidence Guadalcanal. Burlington, VT; New York: A&E Television Networks; distributed by New Video. Volume: 1 videodisc (ca. 50 min.), Descriptors: Guadalcanal, Battle of, Solomon Islands, 1942-1943; DVD (Digital video discs); Videorecording; DVD video; Videodisc. Abstract: On August 7, 1942, more than 19,000 Marines invaded Guadalcanal with orders to seize and hold the tropical island. In the first US offensive of the Pacific War, these young Americans took on the seemingly invincible Japanese and fought a series of bitter battles. Aerial

photographs taken during the war have now been layered over a 3-D contour map to create a CGI “model” of the battlefield. These original, high-resolution images allow the viewer to track the battle step-by-step. Individual stories of courage and heroism are placed in the exact spot where they took place. Using cutting-edge techniques, unique archive film, reenactments, and extraordinary interviews, *Pacific: The Lost Evidence* sheds new light on one of the most important battles of World War II. Notes: System Info: DVD. Notes: Participants: Narrator: Michael Carroll. Other Titles: *Guadalcanal: Pacific, the lost evidence*; *Guadalcanal: the lost evidence*; produced by Flashback Television for A&E Television Networks; The History Channel; producer: Taylor Downing; written and directed by Steve Baker. Film editor: Gareth Johnson. AAE-74781; A&E Television Networks. OCLC: 64574416.

Draper, Rulon P. and the Saints at War. 1941-2001. Military Service: 1941-1945, Ca. 1941-2001. Descriptors: 1 folder (9 pages) + photocopied photographs, photocopied military documents. World War, 1939-1945- Personal narratives, American; Iwo Jima, Battle of, Japan, 1945; World War, 1939-1945- Campaigns- Japan- Okinawa Island; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Saipan, Battle of, Northern Mariana Islands, 1944; World War, 1939-1945- Religious aspects- Mormon Church; Manuscript. Abstract: In his memoir simply entitled “Military Service: 1941:1945” Draper shares experiences from his enlistment through his service in the Pacific Theater of World War II to his discharging and marriage shortly thereafter. Draper saw many of the major battles of the Marines in the Pacific, including Iwo Jima, Guadalcanal, Saipan, and Okinawa as a field cook and member of a Howitzer team. Notes: Genre/Form: Memoirs. Photographs. Notes: Bio/History: Draper served in the U.S. Marine Core Pacific Theater during World War II from 1941-1945 as field cook in the 2nd Division of the Marine Core achieving the rank of Mess Sergeant. General Info: Open for research. Items were donated by Sue Draper, Rulon P. Draper’s daughter, to the Saints At War Project in 2001. OCLC: 55006398.

Emberton, Keith D. 1996. "Operational Leadership Once Beyond the Culminating Point: Perspectives on Calculated Tactical Risk to Achieve Operational Success." *Naval War Coll Newport RI*. Volume: ADA307601, Pages: 28. Descriptors: *Military Operations; *Leadership; *Tactical Warfare; Risk; Military Doctrine; Limitations; Casualties; Marine Corps Personnel; Military Commanders. Abstract: There is an extraordinary degree of risk of casualties and destruction to the attacking force associated with continuing the attack beyond the tactical culminating point. The operational commander may take a significant calculated risk at the tactical level and pass the culminating point or accept loss once beyond the culminating point, in order to achieve success at the operational level. The forces of Confederate General 'Stonewall' Jackson in the Shenandoah Valley in the Civil War and U.S. Marine Corps Major General Alexander Vandegrift in the Guadalcanal Operation in the Second World War passed beyond the culminating point. An analysis of the leadership of these two generals produces insight into some major characteristics of operational leadership once beyond the culminating point in light of the great tactical risk. The framework for analysis included a physical component, and the components of will, initiative, coup d'oeil, and style of communication. Operational commanders demonstrate the ability to limit their tactical objectives beyond the culminating point and seek to capitalize on temporary risk to achieve success at a higher level. Other insights relate to the significant role of strength of will and intuitive decision-making and vision. These insights are relevant to the challenges that senior commanders potentially face in present warfare as well as to further research

and analysis in doctrine, theory, and the operational art. Notes: Approved for public release. DTIC. URL: <http://handle.dtic.mil/100.2/ADA307601>

Falk, Victor S., interviewee. Van Ells, Mark D. and Wisconsin Veterans Museum. 1994. Oral History Interview with Victor S. Falk 1994. Descriptors: World War, 1939-1945- Personal narratives, American; Veterans- Wisconsin- Stoughton; Soldiers- Wisconsin- Edgerton; Vietnam War, 1961-1975- Medical care; Vietnam War, 1961-1975- Casualties; World War, 1939-1945- Aerial operations, American; Guadalcanal Island (Solomon Islands), Battle of, 1942-1943; World War, 1939-1945- Medical care; Vietnam War, 1961-1975- Psychological aspects; Cassette recording. Abstract: Victor S. Falk, a Stoughton, Wis. native, discusses his World War II service as a flight surgeon with the Navy attached to the 1st, 2nd, and 4th Marine Air Wings; and his later work with Volunteer Physicians for Vietnam during the Vietnam War. Falk provides information about his training such as his initial assignments, reaction to Pearl Harbor, lack of proper equipment, and necessary training to become a flight surgeon. He discusses his duty at Guadalcanal including his role as a flight surgeon, psychological state of pilots, interaction with natives, common diseases, and interaction between servicemen and nurses. He provides a sketch of military life discussing alcohol, recreation, drug use, and prostitution. He touches upon his service with the court martial board and use of the GI Bill. Falk describes his service during the Vietnam War as a volunteer civilian surgeon including a comparison of the Vietnam War to World War II, civilian casualties, relationship between officers and enlisted men, and soldier readjustment problems. Falk briefly mentions his reactions during post-war trips to the South Pacific and his membership in the American Legion and Veterans of Foreign Wars. Notes: Sound recording; Named Person: Falk, Victor S., 1915-1996. Named Corp: United States. Navy- Aviation. United States. Navy- Military life. Volunteer Physicians for Vietnam- History. United States. Navy- Surgeons. Notes: Bio/History: Falk (September 10, 1915-1996) served as a flight surgeon attached to the 1st, 2nd,

and 4th Marine Air Wings during World War II. After the war, he worked as a doctor and during the Vietnam War served as a volunteer surgeon. Interviewed by Mark D. Van Ells, on October 11, 1994 in Wisconsin. General Info: Copyright owned by the Wisconsin Veterans Museum. Forms part of: Wisconsin Veterans Oral History Project, conducted by the Wisconsin Veterans Museum. OCLC: 56215833.

Farmer, Walton R. and Saints at War. 1942-1945. Memoir, Ca. 1942-1945. Descriptors: 1 folder (5 pages); World War, 1939-1945- Personal narratives, American; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Iwo Jima, Battle of, Japan, 1945; Manuscript. Abstract: Photocopied Newspaper Article, Photocopied Photographs, Photocopied Military Documents. After recruiters told Farmer he was rejected for service in the Marine Corps because an injury he had sustained as a child to his little finger he paid thirty dollars to have it amputated so that he could enlist. Included is a photocopied newspaper article further explaining the story. Notes: Genre/Form: Letters. Clippings (Books, newspapers, etc.) Photographs. Notes: Bio/History: Farmer served in the U.S. Marine Corps Pacific Theater during World War II from 1942-1945 achieving the rank of a corporal. General Info: Open for research. Items were donated by Walton R. Farmer to the Saints At War Project in 2000. OCLC: 55006511.

Farr, Scott T. 2003. "The Historical Record, Strategic Decision Making, and Carrier Support to Operation Watchtower." Volume: ADA416432, Pages: 93 Pages. Descriptors: *Military Operations; Military History; Military Strategy; Theater Level Operations; Decision Making; Military Doctrine; Theses; Aircraft Carriers; Pacific Ocean; Second World War; Battle Of Guadalcanal; Operation Watchtower. Abstract: The Battle of Guadalcanal marked the first offensive ground operations conducted in the Pacific theater during World War II. One divisive issue of the Guadalcanal campaign is the withdrawal of carrier based aviation support on 8 August 1942, by Vice Admiral Frank Jack Fletcher. The historical record is dominated by the argument that Fletcher faced very little threat and could have supported the invasion forces longer than he did. What influenced Vice Admiral Frank Jack Fletcher to withdraw carrier based aviation from direct support of the Guadalcanal invasion and was the decision valid? In order to objectively evaluate Fletcher's decision, this paper will first review historical literature and outline how the dominant opinion of Fletcher's decision developed. Next, it will look at Fletcher's character, development as a leader, and record from commissioning through the Watchtower campaign. This study will also review of the orders and guidance at the strategic level and the operations of subordinate commanders within Watchtower. Finally, the metrics of 1942 and the modern strategic

military decision-making model will be applied to evaluate the validity of the decision to withdraw. The evidence clearly suggests that Fletcher's decision was strategically valid, in addition to being characterized inaccurately by historians. Notes: Master's thesis 5 Aug 2002-6 Jun 2003. Approved for Public Release. DTIC. URL: <http://handle.dtic.mil/100.2/ADA416432>

Frankel, Stanley A. "Battle of Bougainville: 37th Infantry Division's Battle for Hill 700-Losing Hill 700 to the Japanese Meant Defeat for the American Forces on Bougainville. To the Men of the 37th Infantry Division, that was Unthinkable." Historynet.com. no. July 2007, Abstract: The American strategic plan was clear: Move up the Solomon Island chains to open a direct route to the Philippines, take the Philippines and then move out from there on to Tokyo. In 1942, the U.S. Marines drove the Japanese out of the first Solomon Island, Guadalcanal; in 1943, painfully, bloodily, the 37th Infantry Division pushed through the equally impenetrable jungles of New Georgia, sweeping what was left of the 15,000 defending Japanese into the sea. The next and final Solomon island was Bougainville, and there the tactics were dramatically altered though the strategic concept remained the same. Notes: This article was written by Stanley A. Frankel and originally appeared in the September 1997 issue of World War II. URL:

Fuquea, David C. 2004. "Commanders and Command Decisions: The Impact on Naval Combat in the Solomon Islands, November 1942." Naval War College, Newport, RI. Volume: ADA427566, Pages: 78 Pages(s). Descriptors: *Decision Making; *Naval Operations; *Military Commanders; *Second World War; Warfare; United States; Impact; Military Forces (Foreign); Naval Personnel; Navy; Attack; Japan; Wounds And Injuries; Enemy; Destroyers; Pearl Harbor; Cruisers; Guadalcanal Island. Abstract: The number of United States sailors killed approached the figures lost to the Japanese attack on Pearl Harbor nearly a year before and represented nearly forty percent of the US force. Nearly a third of the 700 survivors from the sunken ships that managed to make their way to the island of Guadalcanal that morning were wounded. These numbers reflected the "barroom brawl" nature of the fight that the United States commander allowed to take place at such close ranges as to make the danger of collisions and the point-blank gunfire between ships from the two enemy forces make a shambles of any tactical formations or controls. As a result, the United States Navy was without a coherent surface strike force of cruisers and destroyers at a vital turning point in the Guadalcanal Campaign. Notes: Approved for Public Release. Final Report. DTIC. URL: <http://handle.dtic.mil/100.2/ADA427566>

Fuquea, D. C. 2004. "Night Fighters without Equal, Task Force 39 at Empress Augusta Bay. Final Rept." Naval War Collection, Newport, RI. 3 May. Pages: 25. Descriptors: Naval personnel; Task forces; Night; Naval vessels Combatant; Naval warfare; Empress augusta bay; Military sciences (74); Urban and regional technology and development Emergency services and planning (91I). Abstract: On the 1st of November 1943, the ships and men of Rear Admiral 'Tip' Merrill's Task Force 39 steamed off the west coast of the island of Bougainville, the last island at the northern end of the Solomon Islands chain. Their mission was to protect the landing of the 3rd Marine Division at Cape Torokina in the closing act of the United States' first counter offensive campaign against the Japanese that had begun at Guadalcanal sixteen months earlier. Within hours, Merrill and his trusted destroyer commander, Arleigh Burke, faced the largest and most powerful Japanese surface naval force encountered since the dark and ugly initial naval defeats of the

Solomons that killed so many American sailors and littered the bottom of the waters in the Solomons with so many American ships as to earn them the name 'Iron Bottom Sound.' Yet, just as the Marine force going ashore at Bougainville was far better prepared than its predecessor at Guadalcanal, so too was this U.S. Navy task force far better prepared than its predecessors that fought in the night 'slug fests' of a year earlier. For Task Force 39, despite being outgunned in nearly every category by the ships commanded by Rear Admiral Omori, several other factors contributed to an unquestionable victory by the United States Navy at the Battle of Empress Augusta Bay. Gabelman, Warren interviewee. McIntosh, James F. and Wisconsin Veterans Museum. 2002. Oral History Interview with Warren Gabelman, 2002. Volume: Sound recording: 2 sound cassettes (ca. 90 minutes); analog, 1 7/8 ips. Videorecording: 1 videocassette (ca. 90 min.); sd., col. 1/2 in. Master sound recording: 1 sound cassette (ca. 90 min.); analog, 1 7/8 ips., Descriptors: Veterans- Wisconsin- Madison; Sailors- Nebraska; World War, 1939-1945- Naval operations, American; World War, 1939-1945- Campaigns- Guadalcanal; World War, 1939-1945- Campaigns- Corrigedor; Gabelman, Warren, 1921-; Videorecording; Cassette recording; Videocassette; VHS tape. Abstract: Gabelman, a Madison, Wis. veteran, discusses his World War II service with the Navy serving aboard the USS Nicholas (DD 449) in the Pacific theater. He talks about postponing his wedding to enlist in the Navy, midshipman school at Notre Dame (Indiana), torpedo school at San Francisco (California), assignment to destroyer duty, and transfer to Noumea in the South Pacific. Assigned in 1943 to the USS Nichols as the communications officer, he comments on mine sweeping missions off Guadalcanal; destroying floating mines with rifle fire at Corrigedor; and transfer to the United States to work on a newly commissioned destroyer. Gabelman mentions his marriage while in the U.S., joining the USS Glennon in Boston (Massachusetts), shakedown cruise to Guantanamo Bay (Cuba), discharge in 1946, and finishing his education at the University of Nebraska using the GI Bill. Notes: Named Corp: Glennon (Destroyer: DD-840) Nicholas (Destroyer: DD-449); Notes: Bio/History: Gabelman (b.1921) enlisted in the Navy while a student at the University of Nebraska. After serving four years, he was discharged from service and eventually settled in Madison, Wisconsin. Interviewed by James F. McIntosh on July 24, 2002 in Madison, Wisconsin. General Info: Access to videorecording is restricted: 48-hour advance notification required. Copyright owned by the Wisconsin Veterans Museum. Forms part of: Wisconsin Veterans Oral History Project, conducted by the Wisconsin Veterans Museum. System Info: VHS-C format. OCLC: 58398863.

Geishirt, Kenneth W. interviewee. McIntosh, James F. and Wisconsin Veterans Museum. 2001. Oral History Interview with Kenneth W. Geishirt 2001. Volume: Sound recording: 1 sound cassette (ca. 60 min.): analog, 1 7/8 ips. Videorecording: 1 videocassette (ca. 60 min.): sd., col. 1/2 in. Master sound recording: 1 sound cassette (ca. 60 min.): analog, 1 7/8 ips., Descriptors: World War, 1939-1945- Aerial operations, American; Veterans- Wisconsin- Madison; Soldiers- Wisconsin- Watertown; World War, 1939-1945- Personal narratives, American; B-17 bomber; Midway, Battle of, 1942; Guadalcanal, Battle of, Solomon Islands, 1942-1943; World War, 1939-1945- Campaigns- Pacific Ocean; World War, 1939-1945- Australia; Geishirt, Kenneth W., 1921-; Videorecording; Cassette recording; Videocassette; VHS tape. Abstract: Kenneth Geishirt, a Watertown, Wis. native, discusses his World War II service with the 42nd Bomber Squadron, 11th Bomb Group and his service in the Pacific theater. He talks about mechanic training at Chanute Field (Illinois) and Jefferson Barracks (Missouri). While stationed in Hawaii, Geishirt describes his role as a ground crewman with B-17 bombers, pre-flight tests, and flying patrol missions. He recalls viewing the air attack on Midway Island and participating as a tail gunner during air attacks on Guadalcanal, Tulagi (Solomon Islands), and Munda (New Guinea). Stationed in Melbourne (Australia) he touches upon flying supply missions, being grounded by the flight surgeon, and being reassigned to the ground crew. After the war, Geishirt mentions duty in Guam and Hawaii and his return home to work as an electrician. Notes: Named Corp: United States. Army Air Forces. Bombardment Group (Heavy), 11th. United States. Army Air Forces. Bomb Squadron, 42nd. United States. Air Force- Equipment and supplies. Notes: Bio/History: Geishirt (b. 1921) served with the 42nd Bomber Squadron, 11th Bomb Group in the Pacific theater of World War II. He was honorably discharged in 1945 as a staff sergeant and eventually settled in Madison, Wis. Interviewed by James F. McIntosh, on October 1, 2001 in Wisconsin. General Info: Access to videorecording is restricted: 48-hour advance notification required. Copyright owned by the Wisconsin Veterans Museum. Glenn, R. W. 2007. *Counterinsurgency in a Test Tube. Analyzing the Success of the Regional Assistance Mission to Solomon Islands (RAMSI)*. Rand National Defense Research Inst., Santa Monica, CA. page(s): 184. Descriptors: Military forces Foreign; International; Culture; Law enforcement; Counterinsurgency; Peacekeeping; Ramsi Regional assistance mission to solomon islands; Solomon islands; Nation building; Interagency; Multinational forces; Behavior and society International relations; Behavior and society Social concerns; Military sciences Military operations strategy and tactics. Abstract: On July 24, 2003, a joint, multinational, interagency force landed in the Solomon Islands at the request of that nation's prime minister. Its intent was to 'reinforce and uphold the legitimate institutions and authorities in the Solomon Islands, and to ensure respect for the country's constitution and implementation of its laws.' The call for help came after years of turmoil during which the legitimacy and effectiveness of the Solomon Islands government had been undermined by social strife, corruption, intimidation, and armed groups acting with no regard for the law. Within weeks, the worst of the problems had been suppressed and national rebuilding began. This analysis considers why the Regional Assistance Mission to Solomon Islands (RAMSI) succeeded in its first weeks, months, and years, and what lessons of value its operations might offer to counterinsurgency (COIN) and reconstruction efforts in Afghanistan, Iraq, and elsewhere. Grant, Meg. 2001. "The Windtalkers: The Navajos who helped turn the tide of World War II with their unbreakable code." *Reader's Digest*. November 2001. Abstract: "The Navajos were assigned to Marine divisions and shipped out. [John] Brown first saw combat in Guadalcanal with the 2nd Marine Division; Japanese forces had taken a huge toll on the 1st Marine Division. During battles, code talkers traveled with regimental or battalion commanders. Says Capt. Matt Morgan, Marine Corps motion-picture liaison director, "A code talker with the regimental commander would, in Navajo code, say over the radio to three battalion code talkers something like, 'We're going to attack at dawn on the right.' Those three code talkers would then write the message in English and give it to their commanders." Because the Japanese couldn't crack the code, the Navajos became particular targets for capture." “Guadalcanal: The Naval Campaign (Joint Force Quarterly, Autumn 1993).” 1993. National Defense University, Washington, DC. Center for Counterproliferation Research. Pages: 10. Descriptors: Japan; History; Fleets Ships; Air power; Shores; Second world war; Military operations; Joint military activities; Military sciences Military operations strategy and tactics. Abstract: The Guadalcanal campaign in the lower Solomons is a paradox in the history of joint warfare. It was the first American offensive of World War II and purely Navy in design. Yet the impact of the campaign in the southwest Pacific on joint operations was far-reaching. Above all, it underscored the real interdependence of the services: the supply of forces on land relied on escorts; the cover of escort forces depended on fleet units; and the denial of enemy sustenance of their troops ashore was largely accomplished by shore-based airpower. Thus, to a surprising degree,

Natural History of Guadalcanal

Japanese forces were displaced from the lower Solomons by virtue of a singularly joint effort.

Guttman, Jon. Hiroyoshi Nishizawa: Japan’s World War II Ace of Aces- Hiroyoshi Nishizawa was Gaunt and Sickly Looking, but in the Cockpit of His Zero Fighter He Became ‘the Devil.’ *HistoryNet.com*. no. July 2007, Abstract: On August 7, word arrived that U.S. Marines had landed on the island of Guadalcanal, more than 500 miles away at the lower end of the Solomon Islands chain, at 5:20 that morning. Without delay, Lt. Cmdr. Nakajima led 17 Zeros to escort 27 Mitsubishi G4M bombers of the 4th Ku. in an attack on the U.S. Navy task force supporting the invasion. The Japanese were met by 18 Grumman F4F-4 Wildcat fighters and 16 Douglas SBD-3 Dauntless dive bombers from the aircraft carriers *Saratoga*, *Enterprise* and *Wasp*. Nishizawa was credited with six F4Fs in this first air battle between land-based Zeros and American carrier fighters. One of his victims was probably Lieutenant Herbert S. (“Pete”) Brown of VF-5, who was attacked by a Zero that made a full-deflection shot from about 1,500 feet overhead, shattering his canopy and wounding him in the hip and leg. Pete Brown reported that his opponent came alongside him, and after the two adversaries had looked each other over, the Japanese pilot grinned and waved. The skill and wildness of Brown’s antagonist both suggest Nishizawa’s style, but for neither the first nor last time, his assumption of the F4F’s demise was premature. Brown managed to make it back to his carrier, *Saratoga*. Other likely VF-5 victims of Nishizawa included Ensign Joseph R. Daly, who was shot down in flames and badly burned but parachuted to safety just off Guadalcanal, and Lt. j.g. William M. Holt, who was killed. Notes: This article was written by Jon Guttman and originally published in the July 1998 issue of *Aviation History*. URL: http://www.historynet.com/magazines/aviation_history/3037341.html

Guttman, Jon. Archie Donahue: WWII Ace Pilot- Shooting Down Five Aircraft on a Single Mission was an Impressive Accomplishment, but to do it Twice in a Combat Career Required Special Skill. Historynet.com. no. July 2007, Abstract: On November 2, 1942, the squadron arrived at its first combat assignment: Guadalcanal in the Solomons. There, the Marines and their offshore U.S. Navy support were still fighting to hold the island and its airstrip, Henderson Field, code-named "Cactus" by the Allies. Second Lieutenant Donahue's first victory came during three days and nights of naval and aerial combat that brought the struggle for the island to its climax. On November 13, Henderson-based U.S. Navy and Marine aircraft, joined by planes from the carrier Enterprise, attacked and sank the Japanese battleship Hiei, which had been crippled in a wild naval action the night before. For the Wildcat pilots, that involved protecting their bombers from Mitsubishi A6M2 Zero fighters operating from Japanese bases in the upper Solomons. In the course of those encounters, Donahue shot down a Zero off Guadalcanal, killing Chief Petty Officer Tasuke Mukai from the carrier Zuiho's air group. That night Japanese cruisers arrived off Lunga Point and lobbed 1,400 shells at Henderson, destroying 18 American planes and damaging 32 others. They failed to render the field inoperable, however, and when Japanese Rear Adm. Raizo Tanaka's Destroyer Squadron 2, better known to his American adversaries as the "Tokyo Express," escorted 11 transports to Guadalcanal, every Marine and Navy aircraft that could still fly, joined by Enterprise's planes, attacked. They damaged the retiring cruiser Maya and sank seven of the 11 transports, although "Tenacious Tanaka" ran the four remaining ships aground to land 2,000 troops and supplies, while his destroyers rescued some 5,000 survivors. Guymon, Wayne and Saints at War. 1942-2000. Memoirs, 1942-2000. Descriptors: 1 folder (11 p.) 1 newspaper clipping. 1 map. 9 photocopied photographs. World War, 1939-1945- Personal narratives, American; World War, 1939-1945- Campaigns- Pacific Ocean; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Manuscript. Abstract: Contains several narratives written by Guymon about his military experiences on the islands of Guadalcanal, Fiji, and Espirito Santos. Includes a description of his work clearing foliage on Espirito Santos. Also contains a description of the local warriors on Fiji and their role in helping to destroy fortified Japanese artillery positions. Bulk of text relates to the wartime conditions and his combat and communications experiences on Guadalcanal, where he laid telephone lines. Also includes photocopied photographs of telephone wire crews in Espirito Santos and Guadalcanal, airfield headquarters at Guadalcanal, and Japanese casualties at Guadalcanal. Contains a map sketching Japanese and American military movements during the battle at Guadalcanal. Notes: Genre/Form: Memoirs. Photographs. Clippings (Books, newspapers, etc.); Notes: Bio/History: Served in the US Marine Corps during World War II from 1942-1945. Guymon was assigned to the 1st Marine Aircraft Wing, 1st Marine Division. He was made communications chief and received the rank of master technical sergeant. General Info: Items were donated by creator, Wayne Guymon, to the Saints At War Project in 2001. OCLC: 52119036.

Haley, J. Frederick. 1980-1996. *J. Frederick Haley Papers, 1980-1986*. Descriptors: Authors- United States- 20th century; World War, 1939-1945- Campaigns- Pacific Ocean; World War, 1939-1945- Campaigns- Japan- Okinawa Island; Saipan, Battle of, Northern Mariana Islands, 1944; Guadalcanal, Battle of Solomon Islands, 1942-1943; Tarawa, Battle of, Kiribati, 1943. Abstract: The J. Frederick Haley collection contains a Haley manuscript "Lt. Ski- A Man for All Seasons", which is a eulogy for Lt. Ski after his natural death in Colorado. Lt. Ski led the first reconnaissance mission to the Island of Tarawa before the main invasion. There are some of Haley's articles printed in the *Marine Corps Gazette*, and there are some photocopies of his manuscripts on Tarawa and the Japanese mortar-fire death of General Buckner on Okinawa. There are also Haley photographs that he took during Pacific Island campaigns. These include images of Japanese dead, Amtrak landing craft, and Marines hunkered down under fire. His later correspondence with the *New York Times* and some small town newspapers defending the Marines is also included. Notes: 1 cubic ft. (1 box); Named Corp: United States. Marine Corps. Geographic: Tinian (Northern Mariana Islands); Notes: Bio/History: J. Frederick Haley fought in the South Pacific during World War II. Afterwards he became a lawyer, but kept strong ties to the Marine Corps and particularly fellow veterans of the Pacific island campaigns. He wrote articles about the fighting on Tarawa, Saipan and other island battlefields. He also corresponded with anyone in power who denigrated or showed ignorance about the sufferings and accomplishments of the Marines. General Info: No finding aid available in repository. Heavilin, Gale E. 1986. "War Planning Assumptions and Errors in Military Strategy." Air War Coll Maxwell AFB, AL: March 1986. Volume: ADA177846, Pages: 120 Pages(s). Descriptors: *Military Strategy, *Military Forces(Foreign), *Military Planning, Warfare, Integrated Systems, Strategy, Terrain, Planning, Conflict, Battles, Air Power, Southeast Asia, Land Areas. Zmilitary Strategy, *Military Forces(Foreign), *Military Planning, Warfare, Integrated Systems, Strategy, Terrain, Planning, Conflict, Battles, Air Power, Southeast Asia, Land Areas. Abstract: This paper analyzes and assesses opposing strategies at Guadalcanal and at Dien Bien Phu. The analysis shows basic strategy, highlights key planning assumptions, and identifies force structures. The author concludes that battles are lost and campaigns fail because commanders make classic, but avoidable, errors in military thinking from which come the faulty planning assumptions upon which their losing strategies are based. He shows that Japan failed to hold Guadalcanal because the Imperial General HQ did not have an integrated strategy for defense of the southeast perimeter of the Greater East Asia Co-Prosperity Sphere and it chose positions in the southern Solomons that over-reached the range of land-based air power. He concludes that the French beat themselves at Dien Bien Phu because they: lost sight of any clear war aims in Indochina; underestimated the capabilities of the Viet Minh; overestimated their own capabilities while ignoring significant limitations on their own military power; did not to use advantage the terrain on which they chose to accept battle; and failed to plan adequately for retreat. Notes: Approved for Public Release; Document Partially Illegible. Database: DTIC AND NTIS.

"The Hell I Can't: The Boats That Made The Landings Possible, And The Man Behind Them." 2004. *American Heritage of Invention & Technology*. Summer. Volume 20, Issue 1, Pages 22-25. Descriptors: Landing; Boats; Beaches; Personnel; Vehicles; Charging; Sport utility vehicles; Diesel engines; Discharge; Off road vehicles; Shores; Marine engines; Inventions; Islands; Sicily; Ramps; Liquid crystal polymers; Coastlines; Structural steels. Abstract: During World War II Adolf Hitler called Andrew Jackson Higgins "the new Noah." After the war Dwight Eisenhower called Higgins "the man who won the war for us." Soldiers and Marines charged out of Higgins's little landing boats to secure beachheads all through World War II, coming ashore in North Africa, Sicily, mainland Italy, on Omaha and Utah Beaches on the Normandy coast, and on a succession of Pacific islands that stretched to the outskirts of Japan itself, places with names like Biak, Wadke, Guadalcanal, Tarawa, and Iwo Jima. Those landings always began with Higgins boats. The GIs who rode them up onto hostile shores also knew them by their official designations, LCM (landing craft, mechanized), LCP (landing craft, personnel), LCPL (landing craft, personnel, large), and, smallest and best known, LCVP (landing craft, vehicle, personnel). The LCVP was 36 feet long and 11 feet wide, and it held a platoon of 36 fully equipped men or a dozen men and a jeep. It was built mainly of wood-mahogany, pine, and oak-and was unique in that it could run its bow up onto a beach and then quickly power back off and head for open water. No other craft could do that. The Higgins boat drew only 2 feet 2 inches at the bow and 3 feet aft; it had a steel ramp at the front that dropped down to discharge troops; it was powered by a 225-horsepower Gray diesel engine that could speed it toward a beach as fast as 12 knots. Database: CSA Technology Research Database. ISSN: 8756-7296.

Henry, James J., IV. 2000. "A Historical Review of the Development of Doctrine for Command Relationships in Amphibious Warfare." Army Command And General Staff Coll Fort Leavenworth KS. Volume: ADA383832, Pages: 123 Pages(s). Descriptors: *Amphibious Operations; Military History; Warfare; Marine Corps; Military Doctrine; Navy; Theses; Joint Military Activities; Spain; Okinawa. Abstract: This thesis traces the development of doctrine for command relationships in amphibious warfare. The study examines the command relationships employed in landing operations through World War I, with emphasis on Santiago in the Spanish-American War and Gallipoli in World War I as the driving forces behind joint and naval doctrine development. From this background, the thesis outlines the efforts of the Joint Board and Marine Corps Schools to codify% their doctrine, primarily in the interwar years. The joint process led to Joint Action of the Army and the Navy and Joint Overseas Expeditions of 1927 and 1933, predecessors to Joint Publication 0-2, Unified Action Armed Forces. Naval doctrine begun by the Marine Corps Schools became the Navy's Fleet Training Publication 167, Landing Operations Doctrine, US. Navy, 1938, predecessor to Joint Publication 3-02, Joint Doctrine for Amphibious Operations. The thesis then examines the employment of that doctrine, and the doctrinal changes and lessons that resulted, in three major amphibious operations, WATCHTOWER (Guadalcanal), ICEBERG (Okinawa), and CHROMITE (Inchon). The study concludes with a discussion of the relevance of the historical development to today's doctrinal issues and provides recommendations for further research. Notes: Master's thesis 6 Aug 1999-2 Jun 2000. Approved for Public Release. Database: DTIC and NTIS. URL: <http://handle.dtic.mil/100.2/ADA383832>

Henry, Philip M. 1998. "Operational Protection of the Guadalcanal Operation Landings." Volume: ADA348452, Pages: 22 Pages(s). Descriptors: *Military History; *Combat Support; *Naval Planning; *Military Art; Risk; Decision Making; Protection; Aircraft Carriers; Naval Logistics; Military Commanders; Carrier Based Aircraft; *Guadalcanal; Operational Logistics; *Operational Protection. Abstract: It has been argued that the operational commander's decision to withdraw the aircraft carrier-based operational protection earlier than planned at Guadalcanal placed the operation in extremis. The operational commander's decision as to what was necessary and possible to protect with the aircraft carriers was based on the means available and the risk involved. In view of the information he had his actions can be justified, but his overall command of the operation is subject to criticism. There were things that could have been done better, and there are lessons to be learned. In this paper I look at the issue of operational protection of the landing during the planning stage, and when the operational commander made the decision to withdraw it. Centers of gravity at all levels are considered in order to analyze the operations commander's decision. Lastly, I consider what the operations commander could have done better, and at the need to properly plan for operational protection in a future operation maneuver from the sea. Notes: Approved for Public Release. Database: DTIC and NTIS. URL: <http://handle.dtic.mil/100.2/ADA348452>

Henry, Harold P. 1942-1950. The Harold P. Henry Papers, 1942-1950. Descriptors: 1 box. Hoffman, Jon. 1994. *Once a Legend: "Red Mike" Edson of the Raiders*. Novato, CA: Presidio Press. xvi, 434 pages: ill., maps; 24 cm. Descriptors: Edson, Merritt. Abstract: U.S. Marines are no strangers to distributed and simultaneous operations. In World War II, they devised a multidimensional series of strikes to dislodge the Japanese defending Guadalcanal and its surrounding islands. Mixing naval gunfire with close air support, Rear Admiral Richmond Kelly Turner's Task Force 62 conducted five separate assaults in early August 1942 that initially stunned the Japanese defenders. Lieutenant Colonel Merritt Edson's 1st Raider Battalion conducted an assault on Tulagi, while another rifle company landed on Florida Island as a supporting attack. The 1st Marine Division then conducted the main attack on Guadalcanal. Later in the afternoon, the 1st Parachute Battalion seized Gavutu and Tanambogo. This demonstrated the versatility of well-trained and well-led Marines, in both conventional and unconventional warfare. ISBN: 0891414932.

Hoffman, Jon T. *Battle for Henderson Field: Lieutenant Colonel Lewis B. Puller Commanded the 1st Battalion, 7th Marines* The 7th Marines' Tenacious Defense of the Hills Overlooking Henderson Field Secured Victory at Guadalcanal. no. July 2007, Abstract: Puller and his battalion had arrived on Guadalcanal with the rest of the 7th Marine Regiment on September 18. Although Chesty had trained his men well, the green unit did not get off to an auspicious start. The first night ashore, Japanese ships inflicted several casualties when they bombarded the coconut grove in which the regiment had bivouacked. During a battalion-size patrol over the next two days, Puller lost a few more men and was incensed when his battalion joined in unprovoked nighttime shooting with other men of the regiment. At the Second Battle of the Matanikau later that month, the Japanese thwarted 1st Marine Division commander Maj. Gen. Alexander A. Vandegrift's effort to gain control of the Matanikau River. In the process, a good portion of the 1/7 (under the command of Puller's executive officer) was trapped for a time behind enemy lines. Only Chesty's daring efforts in commandeering a destroyer and supervising an amphibious withdrawal under fire saved the force from annihilation. Having suffered more than 10 percent casualties (including the battalion executive officer and all three company commanders) at the end of 10 days on the island, the morale of the 1/7 was at a low ebb. Hollway, Don. World War II: The Cactus Air Force Fought at Guadalcanal: A Small Group of Die-Hard Aviators Fended Off Japanese Invaders at Guadalcanal, Code-Named 'Cactus.' no. July 2007, Abstract: Believing the amphibious assault to be a temporary, diversionary raid (and seeing that they were outnumbered 3-to-1), Japanese ground forces on Guadalcanal initially withdrew into the jungle, expecting air attacks to drive the Americans off. Over the next two days, land-based Japanese navy planes, including Mitsubishi G4M bombers (Allied code name "Betty") and Zero ("Zeke") fighters, downed 20 percent of the U.S. Navy fighters sent against them but lost nearly half their own. The loss of four cruisers and a destroyer in the sea battle of Savo on the night of August 9, combined with the continuing threat of daylight air attack, caused the U.S. Navy to withdraw. The Marines were left on "the Canal" with what they referred to as the only unsinkable aircraft carrier in the Solomon Islands--the Guadalcanal airfield. They used captured construction equipment to finish the 2,600-foot runway, adding an extra 1,200 feet for good measure. Although bereft of taxiways, revetments, drainage and radar, the airfield-- christened Henderson Field after Marine Major Lofton Henderson, who died leading a dive-bomber attack in the June 4 Battle of Midway--boasted Japanese hangars, machine shops and radio installations, a pagodalike control tower complete with a warning siren for air raids, and even an ice plant. But not until August 20 did Guadalcanal--code-named "Cactus"--take delivery of 12 Douglas SBD Dauntless dive bombers and their escort of 19 Grumman F4F-4 Wildcat fighters, the advance squadrons of Marine Air Group (MAG) 23. "I was close to tears and I was not alone," said Maj. Gen. Archer Vandergrift, the Marine ground commander, "when the first SBD taxied up and this handsome and dashing aviator jumped to the ground. 'Thank God you have come,' I told him." Within 12 hours the fledgling "Cactus Air Force" helped finish off a Japanese infantry assault. The next day, the American fliers gave an enemy bomber raid from Rabaul, New Britain, a rude welcome. In his first combat engagement, Captain John Lucien Smith, commanding Marine Fighter Squadron (VMF) 223, and four F4Fs met the fighter escort, 13 Zeros of the crack Tainan Kokutai (naval air group) led by Lieutenant Shiro Kawai, head-on. All four Wildcats survived, though two were badly damaged and one cracked up attempting a dead-stick landing. No Zeros were destroyed, but Smith thought the skirmish "did a great deal of good" by giving the Marines a better idea of the Zero's capabilities while giving them confidence in the performance and durability of their own Wildcats. Later that week, Captain Marion Carl, who had downed a Zero at Midway, got two Bettys and another Zero. Carl and Smith were to become friendly rivals. The balance of power on Guadalcanal seesawed with the waxing and waning of fighter strength at Henderson. By the end of August the Cactus Air Force included 14 Bell P-400 Airacobra fighter-bombers (export versions of the company's P-39) of the 67th Fighter Squadron, U.S. Army Air Forces (USAAF), and 19 F4Fs of VMF-224, under Major Robert E. Galer. Database: Historynet.com. URL: http://www.historynet.com/magazines/aviation_history/3028101.html

Navy; Guadalcanal (Solomon Islands); Solomon Islands. Notes: War in History; Article; Source Information: Apr2006, Vol. 13 Issue 2, 171 pages; Subject Term: Combat sustainability (Military science); Subject Term: Guadalcanal Island, Battle of, Solomon Islands, 1942-1943; Subject Term: Naval art & science; Subject Term: Naval education; Subject Term: United States. Navy; Geographic Subject: Guadalcanal (Solomon Islands); Geographic Subject: Solomon Islands; Number of Pages: 29p; Illustrations: 2 diagrams; Document Type: Article. Abstract: Examinations of the US Navy’s tactical performance during the nocturnal engagements of the Guadalcanal campaign have largely ignored pre-war tactical developments, focusing instead on the details of the actions and extrapolating from their results to draw conclusions about the navy’s preparedness for war. This article adopts a different methodology, concentrating first on the pre-war preparations and then examining the night battles in light of the tactical doctrine the navy developed before the Second World War. The result is a comprehensive view of the navy’s night tactical doctrine, which provides the reasons for its successes and failures off Guadalcanal. ISSN: 0968-3445.

Hooper, Edwin Bickford. Hooper, Edwin Bickford and United States naval power in a changing world. *Papers of Edwin Bickford Hooper, 1842-1986 (Bulk 1931-1986)*. Descriptors: Amphibious warfare; Antiaircraft artillery; Fire control (Naval gunnery); Guadalcanal, Battle of, Solomon Islands, 1942-1943; Logistics, Naval; Nuclear weapons- Testing; Ordnance, Naval; Vietnam War, 1961-1975- Naval operations, American; World War, 1939-1945- Campaigns-Pacific Ocean. Abstract: Correspondence, manuscripts of writings, research materials, notes, speeches, articles, book reviews, reports, orders, organizational charts, rosters, printed materials, photographs, and other papers primarily pertaining to Hooper’s naval career and to his research in U.S. naval history. Documents his studies of ordnance and fire control, his ordnance work on the Washington (battleship) during World War II especially during the battle of Guadalcanal, his work in antiaircraft and nuclear weapons research and development following the war, his work in the Atomic Energy Commission’s Military Applications Division which involved planning for nuclear weapons tests at the Eniwetok Proving Grounds in the Marshall Islands, the organization and management of the Bureau of Ordnance and Hooper’s position at the Bureau as director of research and development, his assignments involving amphibious warfare and logistical operations, his service as commander of the U.S. Pacific Fleet’s Service Force prior to and during the Vietnam War, and his work as director of the Naval Historical Center. Includes a draft of Hooper’s book *United States Naval Power in a Changing World* (1988). Notes: 4,850 items. 11 containers plus 1 oversize. 5.5 linear feet; Named Corp: U.S. Atomic Energy Commission. United States. Navy-History. United States. Navy- History- Vietnam War, 1961-1975. Howard, Ernest G. 1992. "Demand the Advantage: When is Airpower Central to a Campaign?" Maxwell Afb, Al: Air University, Maxwell Afb, Al; School of Advanced Airpower Studies. May 1992. 62 pages. Descriptors: *Joint Military Activities; *Military Planning; *Air Power; Military Operations; Military History; Warfare; Theses; Documents; Military Art; Guadalcanal Campaign; South Atlantic War of 1982. Abstract: The purpose of this study is to provide joint planners with a means to determine when airpower should be the central element of a campaign. Additionally, this study can help planners understand not only when airpower should support surface forces but also when the roles of joint forces may be expected to change as the campaign progresses. To accomplish its purpose, this study provides an analysis of two island campaigns in which air, land, and sea forces were employed; the Guadalcanal Campaign of 1942 and the South Atlantic War of 1982. This study documents and analyzes how the role of airpower evolved and changed in relative significance to other forces during course of each campaign. Finally, this study may provide a useful framework for campaign analysis, in general, or for the study of the historical practice of operational art. Future students, who wish to research the tensions and complementary effects associated with planning joint operations and employing joint forces, may capitalize on the framework used in this study to pursue their studies. Hughes, W. D., III. 1993. "Vice Admiral Frank Jack Fletcher: Scapegoat or Operational Artist?" 22 February 1993. Volume: ADA263953, Pages. Descriptors: *Naval Operations; *Decision Making; Aircraft Carriers; Beaches; Friction; Guidance; Historians; Islands; Missions;

Navy; Risk; Standards; Military Tactics; Military Strategy; Marine Corps. Abstract: This paper examines Admiral Frank Jack Fletcher's decision to withdraw the three aircraft carriers during the early days of the Guadalcanal campaign in August 1942. Many officers, historians, and Marines to this day criticize this decision as a bad decision that resulted in the naval defeat at Savo Island on 9 August 1942 and as another example of the Navy deserting the Marines on the beach. Research into the original documents and a careful examination of the written histories provide a different insight into the roots of the decision, particularly when evaluating the decision with some principles of operational thinking as opposed to the sometimes disjointed tactical and strategic thought of 1942. By today's standards, the decision is correct. By yesteryear's standards, it also was the correct decision given the condition of the Navy, the strategic guidance and operational level friction, and the tactical situation. Admiral Fletcher followed orders providing the requisite tactical support while not risking the operational and strategic mission by further exposing his carriers to unnecessary risk. Notes: Final rept. 19 Dec 92-22 Feb 93; Approved for Public Release. Database: DTIC AND NTIS.

Hughes, Howard;. Grainger, Edmund; direction Grant, James Edward, et al. 1951. *Flying Leathernecks*. United States: RKO Radio Pictures, Inc. "Humor in Uniform." 1958. Reader's Digest. April 1958. Page 134. "The first part of this I know is true; perhaps the rest could never be properly checked. But when I was a Red Cross hospital worker on Guadalcanal during World War II, Navy doctors and nurses gloated over the case of a certain admiral who, bedded snugly in a Navy hospital with nothing worse than athlete's foot and non-critical complications, spent his time chasing nurses, "pulling rank" on enlisted patients and harassing the overworked medical staff. This went on until the day an enterprising young seaman inmate borrowed a surgical gown, cap and face mask, swept into the admiral's room with a brisk "Good morning," glanced at the chart, ordered the patient over on his stomach and proceeded to take his temperature. Before he could finish the job, however, the man in white

explained that he had another urgent case to attend to and left, gravely warning the grumbling seadog not to move until his return. One hour later the nurse, making her rounds, froze in consternation on the officer's doorstep. "Admiral!" she gasped. "What - what happened?" "Taking my temperature," the admiral growled. "Anything unusual about taking an admiral's temperature?" "N-no, sir," the startled nurse managed to reply, "but, Admiral - with a daffodil?"

Inbody, D. S. 2000. "Getting Past Guadalcanal: The Joint Force Commander's Guidelines for the Control of Amphibious Forces. Final Rept." Naval War Collection, Newport, RI. Joint Military Operations Dept. 19 May. Pages: 31. Descriptors: Military forces United states; Defense systems; Models; Task forces; Navy; Case studies; Tactical air support; Viability; History; Fleets Ships; Instructions; Land areas; Amphibious operations; Military commanders; Landing forces; Military sciences Military operations strategy and tactics. Abstract: The introduction of an amphibious task force into a Joint Operations Area will require the Joint Force Commander to decide how best to use the force and the proper command relations between the commanders of the amphibious task force (CATF) and landing force (CLF), and other key commanders in the Joint Task Force. Amphibious operations are fundamentally naval in nature and operate under unified command. These attributes give amphibious operations unique advantages over land defenses that must not be diluted by inadvertent or arbitrary decisions on command relations. 'Support Command', as an alternative to 'OPCON Command' is a viable command relationship between CATF and CLF as demonstrated by historical case study. Air support can be provided by commanders not under the direct command of CATF or CLF if clear and unambiguous direction is provided in an initiating directive or operations order. Fleet command and component command models are presented as methods of structuring a naval amphibious force. Notes: Product reproduced from digital image. Order this product from NTIS: ADA381666XSP.

Jacobsen, Philip H. 2007. "Station AL - Guadalcanal: A Full Service WWII Cryptologic Unit." *Cryptologia. Jan. Volume 31, Issue 1, Pages 57-75. Descriptors: Traffic flow; Books; Personnel; Traffic engineering. Abstract: Station AL was a small but efficient intercept, direction finder, traffic analysis, cryptanalysis and reporting station that was operational during the early hectic days of World War II. It was established on Guadalcanal amidst the heavy fighting there. Many cryptologic researchers and writers are not even aware that such a facility existed and most have not included it to any degree in their books or articles. Although opportunities were lost due to lack of personnel, equipment and the support of various commands high and low, Station AL achieved many successes. ISSN: 0161-1194.*

Jersey, Stanley C. *Ordinary Marines: Guadalcanal's Lonely Patrol during World War II: An Unsung Unit Patched Together from a Depleted Battalion of 2nd Division Leathernecks Cleared the Way for the Legendary Carlson's Raiders on Guadalcanal.* no. July 2007, Abstract: Having held Henderson Field, the Marines now faced the task of destroying the enemy on both sides of the island and trying to secure, once and for all, the first steppingstone in the Solomon Islands chain. While much attention was focused on Japanese positions on the western part of the island, General Vandegrift knew he would have to do something about roving bands of enemy soldiers reportedly in and around Aola. Following the series of brutal encounters with the Japanese, however, Vandegrift did not have enough men left to launch a full-scale attack in two directions. Instead, the "Old Breed" commander decided to send a small raiding party from nearby Tulagi Island to neutralize Japanese strongholds around Aola. Notes: This article was written by Stanley C. Jersey and originally appeared in the October 2006 issue of *World War II* magazine. URL: http://www.historynet.com/historical_conflicts/4295552.html?page=1&c=y

Jersey, Stanley C. Three-Day Pass to Where? HistoryNet.com. no. July 2007, Abstract: May I make nit-picky corrections to your article "A Very Important Prisoner" (March 2007). In the story, author Gene Santoro states that Captain John Burden (MC, XIV Army Corps) became the first Japanese language officer in combat on Guadalcanal Island in December 1942. He was mistaken. There were three other Japanese-speaking intelligence officers on Guadalcanal before Captain Burden arrived in December. They were 2nd Lt. Ralph Corry, USMC, with the Fifth Marines, who was killed on August 12 as the translator and a member of the ill-fated Goettge patrol, and 1st Lt. Eugene Boardman, USMC, with the Second Marines. Boardman arrived on Tulagi Island on August 20 from the rear base at Espiritu Santo, New Hebrides Islands. The third officer was Captain Sherwood F. Moran, USMC, with Headquarters Company, 1st Marine Division. Also, Santoro goes overboard when he quotes Captain Burden: "Any soldier bringing in a POW got a three-day pass and ice cream." A three-day pass to where? On Guadalcanal? Carlsbad, Calif..

Abstract: They are the men of C-for-Charlie Company. "Mad" 1st Sgt. Eddie Welsh, SSgt. Don Doll, Pvt. John Bell, Capt. James Stein, Cpl. Fife, and dozens more just like them, infantrymen in "this man's army" who are about to land grim and white-faced on an atoll in the Pacific called Guadalcanal. This is their story, a shatteringly realistic walk into hell and back. In the days ahead some will earn medals; others will do anything they can dream up to get evacuated before they land in a muddy grave. But they will all discover the thin red line that divides the sane from the mad, and the living from the dead, in this unforgettable portrait that captures for all time the total experience of men at war. K

Kabutaulaka, Tarcisius Tara. "Failed State" and the War on Terror: Intervention in Solomon Islands. East-West Center. 2004-02-29. no. July 2007, Abstract: "A heightened sense of vulnerability to terror has touched every part of the world, including the Pacific Islands, and has linked small nations to large in new ways. Since the September 11 tragedy, concern has risen that so-called 'failed states,' losing the struggle to maintain law and order at home, could become springboards for terrorism. Australia has shed its reluctance to intervene militarily in Pacific trouble-spots--such as Solomon Islands, whose descent into chaos and violence was sparked in 1998 by civil unrest on Guadalcanal. With regional support, Australia led a mission in 2003 to restore law and order. A short-term success, the mission leaves questions about its long-term ability to achieve either well-being for Solomon Islands or security for the region. Its emphasis on shoring up a perennially weak central government, and its inattention to other pillars of Solomons society, threaten to undermine its success and create a crippling sense of dependency. For the mission to succeed, it must empower Solomon Islanders to take charge of their own destiny." URL: <http://www.eastwestcenter.org/stored/pdfs/api072.pdf>

Kimball, William H. 1994. "Command & Control Little Beavers Style: Arleigh Burke in the Solomon Islands Campaign." Naval War College, Newport, RI. Dept of Operations. 17 June 1994. Volume: ADA283486, Pages: 44. Descriptors: Burke Arleigh; Solomon Islands Campaign. Abstract: World War II command and control systems were more rudimentary than those we have today. Additionally, operational naval commanders as late as 1943 based their doctrine on prewar perceptions of war at sea. The result was a series of defeats in the waters around Guadalcanal and in the Slot. As commanders tried to reassess their tactics and operations, attempting to shift the tide of battle in the Solomon Islands, Commodore Arleigh A. Burke assumed his first wartime command. As a commander of destroyer divisions and squadrons, Burke developed and implemented an aggressive fighting doctrine that changed the operational employment of destroyers in battle. Stressing unity of command, surprise, and delegation of authority, Burke's doctrine led to significant successes in surface engagements in the South Command and control, Little Beavers style, Arleigh Burke in the Solomon Islands campaign Pacific. Arleigh Burke is not only a great historical sea story, but provides an example of successful command and control in combat situations while utilizing minimal technological systems. Notes: Approved for public release; distribution is unlimited. Database: DTIC AND NTIS: ADA283486.

Kitson, J. D. Cook 3rd Class William Pinckney. no. July 2007, Abstract: Ship's Name Will Honor Heroism of One Shipmate Who Saved Another. The explosion that rocked the ammunition handling room of the aircraft carrier Enterprise killed four men immediately. Outside the hull, the Battle of Santa Cruz Islands raged on, part of the fierce Guadalcanal campaign of 1942. Inside, flames and suffocating smoke threatened the lives of William Pinckney, an officers' cook from South Carolina, and the other surviving sailor, a boatswain's mate. They tried to get out through a hatch to the hangar deck, but gasoline fumes knocked out the boatswain's mate. Summoning his strength, Beaufort native Pinckney carried his shipmate to safety. For his heroism, he was

eventually awarded the Navy Cross -- the second African American to receive the honor. He will soon receive a new, posthumous honor: becoming the namesake for the Navy's newest guided-missile destroyer. In February 2000, then-Navy Secretary Richard Danzig said the 41st Arleigh Burke-class guided-missile destroyer will be christened the USS Pinckney (DDG 91). The ship, under construction by Ingalls Shipbuilding of Pascagoula, Miss., is scheduled to be commissioned in 2003. URL:

Abstract: On December 7, 1941, Japan launched its attack on Pearl Harbor. The result was that the United States was thrust full force into World War II - turning it into a truly global conflict. American Marines and many of the great filmmakers of the day captured footage of the events as they unfolded - in color. Battles such as the Coral Sea in flames; Guadalcanal littered with corpses; rarely seen images of the deportation of U.S. citizens of Japanese descent and much more. Notes:

Kwa'ioloa, Michael and Burt, Ben. 2007. "The Chiefs' Country: A Malaitan View of the Conflict in Solomon Islands." *Oceania*. March 2007. Volume 77, Issue 1, Pages 111. Abstract: The recent conflict in Solomon Islands between the peoples of Malaita and Guadalcanal has been documented in news bulletins, internet commentaries and investigative reports, enabling the main political and economic developments to be summarised in two books (Fraenkel 2004, Moore 2004). But while such publications reflect the experience of both Solomon Islands and foreign professionals, they do not necessarily convey the views of the ordinary Islanders whose circumstances led to the conflict and who found themselves most closely involved. Michael Kwa'ioloa, a Kwara'ae brought up in rural Malaita, speaks here from long experience of the Malaitan village communities of Honiara, the Solomon Islands capital on Guadalcanal. He has dealt personally with grievances between Honiara's diverse ethnic groups, before and during the crisis, not as a professional politician, administrator or academic, but as a local community activist for the Kwara'ae chiefs and as a front-line officer in the Royal Solomon Islands Police. As such his views on the historical causes and the necessary resolution of the conflict reflect a local understanding which has yet to be fully appreciated by the national and international policymakers who have such influence on the future of Solomon Islands. In explaining the background to the conflict, Kwa'ioloa emphasizes the inherited relationships with Guadalcanal landholders that legitimate the land claims of Malaitan settlers, the authority which clan leaders hold as chiefs to resolve disputes between communities, the importance of political consensus and economic co-operation rather than the competition of winners and losers, and the necessity for conciliation in resolving conflict. In recounting the course of events, he stresses the attempts of the Malaita chiefs to avert the crisis, the defensive origins of the Malaita Eagle Force and the efforts of the Special Constables to contain the violence. This local perspective is Kwa'ioloa's own, while my task as long-term research partner and co-author has been to communicate it to those it might not otherwise reach. Kwa'ioloa proposed the present account as part of a sequel to his autobiography, *Living Tradition* (Kwa'ioloa & Burt 1997) but we present it here for its topical importance. In the aftermath of the events recounted here, he sent me writings and recordings of reflections and recollections which I edited to clarify his argument and narrative, then supplemented with further recordings in conversation with him on a visit to Solomon Islands in 2004. Kwa'ioloa's underlying theme is his faith in the values of local tradition, in particular the need to involve local chiefs in the government of Solomon Islands and the resolution of the crisis, and a deep but ambivalent resentment of the individualistic values of capitalist economic development, which are blamed for the corruption of the political elite. While he confirms that the tensions between Guadalcanal and Malaita were exploited by politicians and militia leaders for personal gain, bringing militias and police into disrepute, he shows the values of tradition to be deeper-rooted than the exploitative compensation claims emphasized by Fraenkel (2004) as 'the manipulation of custom'. Kwa'ioloa's concept of tradition (translating Kwara'ae *falafala*, colonial custom and Pijin *kastom*) has a long history as an ideological focus for Malaitan and other political movements seeking to recover local self-determination under values founded in particular interpretations of ancestral heritage (see Burt 1994). As Akin explains (2005 and forthcoming) and Kwa'ioloa demonstrates here, this ideology has long resisted attempts" by colonial and state authorities to co-opt it for their own purposes, as it

will survive abuses by lawless militants. Far from merely reinventing tradition as the political symbol described by Keesing (1982) and others, Kwa'ioloa and his fellow chiefs treat their cultural heritage as a source of moral values which they mediate as clan leaders in a network of local communities in Honiara and 'home' in Malaita. Kwa'ioloa speaks as a man from the Malaitan culture of male seniority about events which affected women and other islanders at least as much, but his themes are also of general concern. Many of these concerns will be shared by the local people of Guadalcanal, who no doubt recognise the predicament of Malaitans seeking employment and land, just as Kwa'ioloa acknowledges the grievances of Guadalcanal caused by Malaitan immigration. In fact, the underlying concerns leading to the conflict, for appropriate economic development, locally controlled according to local values, are shared by many people throughout Solomon Islands. It is in their interpretations of the historical development of the conflict that they differ, and Kwa'ioloa's Malaitan account deserves to be compared with other local views, which we hope will also be published. Solomon Islanders know as well as anyone that histories are contested, but if governing elites and policymakers are to mediate such contests they need to understand the perspectives of the parties concerned. Unfortunately, as Kwa'ioloa's account suggests, the dialogue between government and governed in Solomon Islands itself seems in need of mediation. His personal experience of the Malaita-Guadalcanal conflict is offered as a contribution to the national and international debate which is essential to avoid recent history repeating itself. Database: History Resource Center.

Kwallek, J. A. 1988. "U.S. Marine Aviation in World War II: VMF 124 in the Solomons. Student Rept." Air Command and Staff Coll., Maxwell AFB, AL. Apr. Volume: ACSC881515, page(s): 79. Descriptors: Fighter aircraft; Firepower; Islands; Military tactics; Pacific ocean; Pilots; Squadrons; Warfare; Pacific ocean islands; Melanesia; History; Aerial warfare; Marine corps aviation; Solomon Islands; World War 2; Military sciences Military operations strategy and tactics. Abstract: Marine Fighter Squadron (VMF) 124 was formed in 1942 to fly the new F4U Corsair in combat against the Japanese Zero to win air superiority in the Pacific air war. VMF 124 was highly successful in combat against the Japanese and attained decisive air superiority. The pilots of VMF 124 were, for the most part, very young and inexperienced with the Corsair. Their tactics and the superior performance and firepower of the Corsair spearheaded the critical Allied drive up through the Solomon Islands chain. This paper examines the combat history of VMF 124 during the Solomons campaign to identify factors for the squadron's success against the enemy and to identify lessons learned for consideration today. We base our doctrine, and to some degree, our strategy and tactics on the results of those who have gone before us. This paper looks at some winning warriors of World War II who turned the tide in a critical air war, and shows that they did it. DTIC: ADA1925197XSP.

LaBarbera, D. A. 1997. "BUNA: MacArthur's Lieutenants in an Immature Theater. Final Rept." Naval War Collection, Newport, RI. 19 May. Pages: 27. Descriptors: Military forces United states; Military operations; Logistics support; Military personnel; Strategic analysis; Military forces Foreign; Battlefields; Operational effectiveness; Japan; Aerial warfare; Pacific Ocean; Military planning; Tactical warfare; Reinforcing materials; Philippines; New Guinea; Military history; Theater level operations; Leadership; Military commanders; Guadalcanal battle Second world war; Eichelberger; Robert L; Kenney, George C; New Guinea/Papuan campaign; Buna battle Second world war; Behavior and society Education law and humanities; Military sciences Military operations strategy and tactics. Abstract: The Battle for Buna which occurred in late 1942 is a

forgotten episode in U.S. military history. Events happening simultaneously on Guadalcanal dominated the headlines and is historically remembered as one of the rallying points of the Pacific war. The Battle for Buna had many parallels to Guadalcanal. Both were emotional struggles within larger campaigns and their outcomes impacted the overall strategic planning for both the Allies and Japan. Buna like Guadalcanal tested American will and resolve. Buna was like no other battle fought in U.S. history. The terrain, specifically the dense, disease-infected jungle sapped the strength from all three forces involved, the Americans, Australians and Japanese. The conditions were possibly the worst for U.S. forces in the entire war. U.S. military leadership had to find solutions in a theater that was not developed to support military operations. This paper discusses two of the innovators who understood the principles of war, operational art and the dynamics of combat and turned the battlefield in the Allies favor. The leadership of Army Air Corps General George Kenney and Army General Robert Eichelberger were two pivotal characters that worked for Douglas MacArthur and in essence saved the day at Buna and, from a strategic standpoint, the New Guinea Campaign. They reversed the fortunes of MacArthur and his staff by reinforcing sound principles. The lessons learned at Buna were applied strategically in future campaigns against Japanese forces in the Pacific. Notes: Product reproduced from digital image. NTIS: ADA3281193XSP.

Laidman, Hugh. 1942. *At the Edge of Henderson Field*. Descriptors: Dauntless (Dive bomber)- Pictorial works; World War, 1939-1945- Campaigns- Solomon Islands- Guadalcanal- Pictorial works; Artwork reproduction. Abstract: Image is reproduction of Laidman watercolor done on the scene during the second World War. It shows an SBD Dauntless at the airfield Henderson Field on Guadalcanal during World War II. The airfield was completed in August of 1942 and was important throughout the remainder of the war, as both a point of attack for the Japanese and as a base for American operations in the Pacific Theater. Notes: 1 art print; Named Corp: United States. Marine Corps- History- 20th century- Pictorial works. Notes: Paper. Image area measured in frame. Bio/History: Hugh Laidman was a combat artist for the Marine Corps in World War II. He was later commissioned by the National Gallery of Art to do work for NASA. After the war, Laidman became a cartoonist, teacher, and writer, authoring several books on illustration. Responsibility: Hugh Laidman. OCLC: 70080678.

Lane, D. A. 1997. “Hospital Ship Doctrine in the United States Navy: The Halsey Effect on Scoop- and-Sail Tactics.” *Military Medicine*. 1997 June. Volume 162, Issue 6, Pages 388-95. Abstract: Although hospital ships have a long history, naval strategists have paid little attention to their tactical employment in naval and amphibious warfare. Often employed as floating ambulances, operational doctrine for hospital ships did not permit their use as floating combat surgical hospitals until the final amphibious campaigns of World War II. Based on operational archives-ships’ logs, war diaries, battle plans, and other official records-this essay traces the evolution of tactical doctrine on hospital ships from Guadalcanal to Inchon. Early in World War II, there were insufficient hospital ships to permit much flexibility in their employment. By the Philippine campaign in 1944, the increased availability of afloat medical assets prompted Third Fleet Commander Vice Admiral William F. Halsey to propose that the ships be used as acute surgical hospitals at the amphibious landing sites rather than as sea-going ambulances. Facing the prospect of a growing number of casualties for the major assaults being planned, Halsey needed to maximize medical and surgical efficacy and return-to-duty rates to conserve the fighting strength of his invasion forces. Admiral Chester A. Nimitz approved Halsey’s proposal, and the battle plan at Iwo Jima combined the careful triage of casualties at the waterfront with early, forward employment of hospital ships. Despite more than 21,000 casualties at Iwo Jima, they were handled better than at any previous operation in the Pacific theater. The tactical doctrine for hospital ships suggested by Halsey has since been employed in every major amphibious operation, including Okinawa and Inchon, and has also been used in modern-era contingency and humanitarian missions. Availability: NLM. ISSN: 0026-4075.

Larsch, Don E. 2004. *World War II PFC Don E. Larsch, USMC, Sixth Joint Assault Signal Company, Sixth Marine Division*. Aurora, Col.: C.M. Brandt. Volume: 1 sound cassette (80 min.). Descriptors: World War, 1939-1945- Personal narratives, American; World War, 1939-1945- Campaigns- Pacific Area; Marines- United States- Biography; Iwo Jima, Battle of, Japan, 1945- Personal narratives, American; Guadalcanal, Battle of, Solomon Islands, 1942-1943- Personal narratives; World War, 1939-1945- Campaigns- Japan- Okinawa Island; Non-musical recording; Cassette recording. Abstract: In this audio interview, Larsch describes his life as a Marine in the Pacific Theater as his unit operated on Guadalcanal, Guam, Okinawa, and Iwo Jima. His main emphasis is not on the actual combat of the division but on his unit's operations, which included a non-signal function of reconnaissance for combat troops. Larsch gives a very thorough commentary on the adverse conditions he and others endured while operating on the Pacific islands. Notes: Named Person: Larsch, Don E.- Interviews. Named Corp: United States. Marine Corps. Marine Division, 6th. Joint Assault Signal Company, 6th. Genre/Form: Audio tapes. Other Titles: Don E. Larsch, PFC, US Marine Corps, Sixth Marine Division, Sixth Joint Assault Signal Company. OCLC: 55530305.

Larsen, Ronald F. and Saint at War. 1943-2001. *World War II Experiences, 1943-2001*. Descriptors: 1 folder (9 p.) + 3 photographs. Mormon Church- Maryland; World War, 1939-1945- Personal narratives, American; New Caledonia (Colony); Guadalcanal (Solomon Islands)- History, Military; Maryland- History; Manuscript. Abstract: Discusses his training; his assignments and experiences in California, New Caledonia and Guadalcanal. Mentions the weather & varieties of native people on New Caledonia and his experiences with other LDS Church members in Maryland. Includes 3 photocopied photographs of Larsen, his army comrades, and natives of New Caledonia. Notes: Genre/Form: Memoirs. Photographs. Notes: Bio/History: Served in the US Army during World War II from 1942-1945. Larsen was assigned to the Counter Intelligence Corps and

achieved the rank of second lieutenant. General Info: Items were donated by creator, Ronald F. Larsen, to the Saints At War Project in 2001. OCLC: 51804233.

Larsen, Stanley R. 1976. The Stanley G. Larsen Papers, 1976. Descriptors: 1 box. World War, 1939-1945- Campaigns- Philippines; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Vietnam War, 1961-1975- Campaigns; World War, 1939-1945- Personal narratives, American; Vietnam War, 1961-1975- Personal narratives, American; Larsen, Stanley R. (Stanley Robert), 1915-- Archives; Larsen, Stanley R. (Stanley Robert), 1915-- Interviews; United States. Army. Army, 6th; United States. Army. Field Force Vietnam, 1st. Abstract: Contains the following type of materials: oral history. Contains information pertaining to the following wars and time periods: (WWII)- Pacific, 1946-1950, 1950s, 1960s, Vietnam War, 1970s, Post WWII Occupation- Japan. Contains information pertaining to the following military units and organizations: 2nd Battalion, 35th Infantry Regiment, 25th Infantry Division, I Field Force, Vietnam, 8th Infantry Division, Sixth Army, U.S. Army Pacific. General description of the collection: The Stanley R. Larsen papers include general officer's memoirs, Hawaii, 1941, Campaigns at Guadalcanal, New Georgia, Vietnamese Conflict, battalion commander at Guadalcanal, New Georgia, Philippine invasion. Lippman, David H. *Battle of Guadalcanal: First Naval Battle in the Ironbottom Sound: Like Weary Boxers, the Opposing Forces Slugged it Out with One another in Ironbottom Sound*. Abstract: By October 1942, Japan and the United States had worn each other down in the South Pacific. United States Marines held Guadalcanal's vital Henderson Field but were ringed in by Japanese soldiers. Both armies were devastated by malaria and supply shortages. At sea, the picture was equally grim. Japan had just lost 74 planes at Santa Cruz, but the United States had lost the aircraft carrier Hornet, and her sole remaining flattop, Enterprise, was badly damaged. American planes ruled "The Slot" and Ironbottom Sound off Guadalcanal by day, but Japanese ships dominated them by night. Both sides were stalemated, gasping for breath. In his spartan sea cabin aboard the super battleship Musashi at Guam, Japan's Admiral Isoroku Yamamoto, commander of the Combined Fleet, spewed out a stream of orders intended to allow the fleet to regain the initiative with typical daring. Notes: This article was written by David H. Lippman and originally appeared in the November '97 issue of *World War II* magazine. URL: http://www.historynet.com/historical_conflicts/3026026.html

Lippman, David H. *Second Naval Battle of Guadalcanal: Turning Point in the Pacific War- the Second Naval Battle of Guadalcanal Spelled the Difference between Victory and Defeat for the United States in the Pacific War*. no. July 2007, Abstract: At dawn on Friday, November 13, 1942, burning, wrecked ships littered the waters of Guadalcanal. At a cost of five ships and thousands of lives, the U.S. Navy had blunted Japan's drive to break the Guadalcanal stalemate. Notes: This article was written by David H. Lippman and originally appeared in the November 1997 issue of *World War II*. URL: http://www.historynet.com/historical_conflicts/3026056.html

Natural History of Guadalcanal

Marlow, Gordon V. interviewee. Van Ells, Mark D. and Wisconsin Veterans Museum. 1995. Oral History Interview with Gordon V. Marlow 1995. Descriptors: World War, 1939-1945- Personal narratives, American; Veterans- Wisconsin- Madison; Soldiers- Wisconsin- Madison; University of Wisconsin--Madison- History; World War, 1939-1945- Aerial operations, American; World War, 1939-1945- Casualties; Guadalcanal, Battle of, Solomon Islands, 1942-1943; World War, 1939-1945- Food supply- United States; V-E Day, 1945; V-J Day, 1945; Dive bomber; Veterans- Education- Wisconsin- Madison; Cassette recording. Abstract: Gordon V. Marlow, a Madison Wis. native, discusses his World War II service with the United States Navy as a dive bomber with the first Flying Badger Unit, and later war service at the Naval Air Station at Pensacola (Florida). Marlow joined the Navy before the war began and tells of the Pensacola base reaction to the Japanese attack of Pearl Harbor and reactions in Madison to a uniformed serviceman. He talks about carrier training at Coronado (California) and the high casualty rate there, dive bomber training, and escort of boats to Guadalcanal. He describes his first encounter with the Japanese while flying cover when the Cruiser Chicago sank. He touches upon equipment problems, Army-Navy rivalry, effectiveness of the Japanese Army, daily life, interactions with natives, and dive bombing on Guadalcanal. Marlow was wounded and returned to the United States. He became the assistant operations officer at the Pensacola base. While in Florida, he mentions rationing, race relations, V-E Day, and V-J Day. At the war's end, Marlow returned to Madison and tells of the effects of WWII on the University of Wisconsin-Madison campus including courses and housing. Notes: Sound recording 7/8 ips; Named Person: Marlow, Gordon V., 1920-; Named Corp: United States. Navy- Aviation. Naval Air Station Pensacola (Fla.) United States. Navy- Military life. Notes: Bio/History: Marlow (January 27, 1920) served as a dive bomber with the Navy in the Pacific theater during World War II. He achieved the rank of Lieutenant and was honorably discharged in 1945. Interviewed by Mark D. Van Ells, on June 7, 1995 in Wisconsin. General Info: Copyright owned by the Wisconsin Veterans Museum. Forms part of: Wisconsin Veterans Oral History Project, conducted by the Wisconsin Veterans Museum. OCLC: 56518377.

McCool, Thomas. 2002. "Battle of Savo Island - Lessons Learned and Future Implications." *Army War Coll Carlisle Barracks PA*. Volume: ADA404261, Pages: 41. Descriptors: *Lessons Learned; *Battles, Warfare; Decision Making; Leadership; Japan; Decision Theory; History; Fleets(Ships); Military Modernization; Military Planning; Mental Ability; Pearl Harbor; *Savo Island Battle; Strategy Research Project; Guadalcanal Campaign; Imperial Japanese Fleet. Abstract: As the United States enters into the 21st century, it will face new and different challenges that will be more complex than those encountered in the past. Evolutions in doctrine, training, and equipment modernization, influenced by informational and technological advances, will enhance U.S. ability to accomplish national objectives. Valuable lessons learned can be realized by studying past operations that failed to understand the threat and capitalize on friendly capabilities. The Battle of Savo Island in August 1942 is one such event. This short but violent naval engagement, a daring Japanese night surface attack conducted at the beginning of the Guadalcanal campaign on 9 August 1942, was a significant tactical victory for the Imperial Japanese Fleet and has been called the worst blue water defeat in the U.S. Navy's history. This paper will address the shortcomings at Savo Island, particularly in terms of intelligence, command and control, training, force protection, and leadership and discuss these concepts as they apply to current and future operations in the 21st century. McFadden, Brian S. 1999. "Marine Close Air Support in World War II." *Army Command and General Staff Coll Fort Leavenworth KS*. Volume: ADA369287, Pages: 85 Pages(s). Descriptors: *Military History; *Marine Corps; *Close Support; *Tactical Air Support; *Marine Corps Personnel; *Second World War; Weapons; Military Forces (United States); Military

Operations; Aircraft; Weapon Systems; Amphibious Operations; Resources. Abstract: This paper traces the development of close air support (CAS) by the United States Marine Corps in World War II. The study examines how the Marines started developing their doctrine in the 1930s and adapted their (CAS) system based on the outcome of battles on Guadalcanal, Tarawa, Iwo Jima, and Okinawa, as well as during operations in support of the U.S. Army in the Philippines. Particular emphasis is placed on the development of Marine CAS doctrine, liaison organizational structures, aircraft, and air-to-ground weapons. This study is pertinent because it describes how the Marines developed a very effective weapon that greatly increased the potency of its amphibious operations. Additionally, this was initially accomplished during a period of very limited financial resources (before the start of World War II) and then limited time resources (during the war crisis). This study also shows how the Marines worked to support the forces on the ground with the best CAS system possible despite the opposition. Notes: Approved for Public Release. Database: DTIC AND NTIS. McKearney, T. J. 1985. "Solomons Naval Campaign: A Paradigm for Surface Warships in Maritime Strategy. Master's Thesis." Naval Postgraduate School, Monterey, CA. Sep. page(s): 277. Descriptors: Military commanders; Military forces United states; Naval vessels Combatant; Cruisers; Failure; Navy; Ocean environments; Strategy; Task forces; Theses; History; Battles; Naval warfare; Military strategy; Naval operations; World War 2; Solomon islands; Military sciences Operations strategy and tactics; Military sciences Military operations strategy and tactics. Abstract: This thesis examines the naval campaign in the Solomons during World War II with an emphasis on the relationship between the campaign strategy and the tactics employed. The strategic background is reviewed within the context of the War in early 1942. A central theme developed is that in the Solomons campaign both sides employed cruisers and DD's as principal naval forces in place of the fully integrated 'battle fleets' envisioned as part of pre-war strategy. The role of war gaming in American preparations for the war is shown to explain in part the failure of American commanders to modify existing doctrine in a timely manner during the campaign. Data from the naval battles fought in the Solomons is compiled in an original way and analyzed to explain the factors which consistently influenced the outcome of the eleven battles. Conclusions reached address the nature of modern campaigns undertaken to widen a conflict ('horizontal escalation') and the forces that may be required to pursue such campaigns. The parallels between the use of surface combatant task forces in World War II and their projected employment today are noted and discussed. DTIC: ADA1614734XSP.

Mellor, D.P. 1958. Official Histories – Second World War Volume V – The Role of Science and Industry (1st edition, 1958). Canberra: Australian War Memorial. Abstract: “Early in 1942 an urgent need arose for geographical information about New Guinea and the Solomons. At this stage the framework for all topographical reports consisted of a series of rather indifferent maps compiled from government surveys and traverses by patrolling officers of the Civil Administrations, exploratory surveys by oil search companies, and sketches by missionaries. Hydrographic charts were also used but were in general quite faulty both as to depiction of land masses and offshore information. In addition there were available many useful reports of a geological and anthropological nature. No attempt had been made by military intelligence to collect this information, which was widely scattered throughout Australia in repositories of every conceivable nature. It was evident that the hard pressed intelligence staff was not in a position personally to search for it.” Australian War Memorial.

Miller, Donald L. 2005 *D-Days in the Pacific*. New York: Simon & Schuster Paperbacks. 426 pages. Abstract: In a six-month Pacific blitzkrieg that began with the surprise attack on Pearl Harbor, the Japanese conquered an empire that stretched 10,000 miles across the Pacific -- the most

expansive ocean empire in history. To roll back that perimeter, the U.S. settled on a two-pronged offensive strategy led by General Douglas MacArthur and Admiral Chester Nimitz. MacArthur attacked across the western Pacific toward the Philippines, and Nimitz advanced across the vast central Pacific. Along the way, the Army and Marines faced scores of D-Days. Of these, Miller concentrates on a handful of the most violent and decisive: Guadalcanal, Tarawa, Saipan, Peleliu, Leyte, Iwo Jima, and Okinawa -- battles that rivaled the great confrontations in the European theater in everything but the popular imagination. ISBN 0-7432-6929-2.

Mortensen, D. R. 2003. "Air Expeditionary Force in Perspective. Technical Paper." Air Univ., Maxwell AFB, AL. Airpower Research Inst. Volume: RP200301, Pages: 55. Descriptors: Iraq; Decision making; Leadership; Middle east; Japan; Joint military activities; Spain; Norway; Judgement Psychology; Turkey; China; Philippines; North africa; Mexico; Strategic bombing; Aleutian islands; East africa; Ethiopia; United kingdom; First world war; Second world war; Civil

war United states; Military operations; Military history; Lessons learned; Guadalcanal; Spanish civil war; Pancho villa; Battle of kut; Gallipoli campaign; Palestine; Eef Egyptian expeditionary force; Roman expeditionary legions; Napoleonic expeditionary legions; Boxer rebellion; Expeditions before airpower; Expeditionary operations; Air expeditionary forces; Military sciences Military operations strategy and tactics. Abstract: The military has conducted expeditionary operations for centuries; airmen began to participate in expeditions from the very early days of flight. Descriptions of expeditions, with and without air components, evoke suggestive lessons for current expeditionary operations. Frequently the identification of lessons from past events provides planners and commanders the background, wisdom, and the equally important element of context that facilitate better judgment in the imperfect decision-making process. This collection begins with a short description of Air Force leadership promoting the idea of expeditionary air operations. This is followed by a review of the 1995-1996 Aerospace Expeditionary Force I-III deployments to the Middle East. The anthology then continues in reverse chronological order to describe various expeditionary operations throughout history, beginning with examples from World War II. The latter include the British and German expeditions to Norway; the pre-war American buildup in the Philippines; the first American operation in the Pacific--Guadalcanal; Rommel in North Africa; Japan's venture in the Aleutians; the first major European campaign for the United States--the Twelfth Air Force's invasion of Northwest Africa; and finally, the buildup of the Eighth Air Force in England for the Strategic Bombing Campaign. The interwar years are marked by the Italian-Ethiopian War and the Spanish Civil War, described here from the Italian, German, and Soviet perspectives. The World War I era includes the American expedition against Pancho Villa and four British expeditions in Africa and the Middle East. Finally, a number of famous campaigns illustrate the timelessness of expeditionary campaigns, particularly the campaigns of the Romans and Napoleon. In addition, parts of the American Civil War depict expeditionary efforts, as do American operations in China at the turn of the 20th century--the Boxer Rebellion. (30 figures). Mueller, Joseph N. "Not a Name, but an Emotion": A Return to "the Ridge"; Guadalcanal Plus Sixty: First Division Marines Storm Ashore Across Guadalcanal's Beaches on 7 August 1942. The Invaders were Surprised at the Lack of Initial Enemy Opposition. Navy League of the United States. August 2002. Volume: 2007, Abstract: The story of the Battle for Guadalcanal unfolds amidst the somber atmosphere of the marble monuments located on the top of "Skyline." Each phase of the campaign is recounted on the huge tablets. A bronze relief map in the northwest corner of the ridge gives perspective to the panoramic view of the entire western region of the island. From this key terrain feature, one can easily see the Matanikau River Valley, site of some of the bloodiest fighting of the Guadalcanal campaign... Leaving the monuments, the tour group headed east for Alligator Creek--named by the Marines for its crocodile population. It was at this stagnant stream that the first major Japanese attempt to recapture Guadalcanal was repulsed. Like the Battle of Bunker Hill--which was, in point of fact, fought on Breed's Hill--the so-called Battle for the Tenaru River was actually fought at Alligator Creek. The reason for the confusion was the inaccuracy of the Marine Corps' maps, which confused the eastern complex of the Tenaru with Alligator Creek. Mustard, Harry Stoll. 1944-1945. Battalion Surgeon with the Marines: Letters from a Doctor with an Infantry Regiment in the Pacific, in World War II: 1944 Jan. 10-1945 Oct. 23. [Typescript]; Descriptors: iv, 136; Soldiers- South Carolina; Marines- United States; World War, 1939-1945- Medical care- United States; Medicine, Military- United States- History- 20th century; Iwo Jima, Battle of, 1945- Personal narratives, American; Marines- United States- Biography; Mustard, Harry Stoll, 1913-1963- Correspondence; Mustard, Harry Stoll, 1889-1966- Correspondence; Mustard, Ariel Elizabeth Williams- Correspondence; United States. Marines- Medical personnel; United States. Marine Corps- Biography; Guam- History- Japanese occupation, 1941-1944- Personal narratives, American; Guadalcanal (Solomon Islands)- History; Manuscript. Abstract: Seventy-four transcribed and annotated letters sent by H.S. Mustard to his parents describing life as a military physician in the Pacific theater. Topics addressed include accounts of training in U.S. descriptions of deployments to Guadalcanal (Solomon Islands), Guam, Iwo Jima, and elsewhere; and observations on progress of the war, local conditions, and his fellow soldiers, including reports of meeting fellow South Carolinians stationed in the South Pacific. Letters were transcribed by Mustard's father, ca. 1963, in months following death of H.S. Mustard, Jr., the veteran of World War II; collection includes introduction and epilogue written by Mustard, Sr., and letter, 3 Apr. 2000, written by Harry S. Mustard, III. Notes: Bio/History: Military physician of the First Battalion of the Twenty-first Infantry Regiment of the Third Marine Division, serving in Pacific theatre during World War II; born in Charleston, S.C. completed three years of undergraduate work at Johns Hopkins University, 1932-1935; raised cotton in Boykin, S.C., 1935-1937; attended University of South Carolina; graduated from Medical School of Duke University, 1943; son of Harry S. Mustard (1889-1966). Reproduction: Photocopy. General Info: Preferred citation: Harry Stoll Mustard (1913-1963), Battalion Surgeon with the Marines: Letters from a Doctor with an Infantry Regiment in the Pacific, in World War II, 10 Jan. 1944-23 Oct. 1945, South Caroliniana Library, University of South Carolina. Mustard, Harry Stoll. 1944-1945. Harry Stoll Mustard (1913-1963) Papers, 1944 Jan. 10-1945 Oct. 23. Descriptors: 88 items. World War, 1939-1945- Medical care- United States; Medicine, Military- United States- History- 20th century; Soldiers- South Carolina- Correspondence; Marines- United States- Correspondence; Iwo Jima, Battle of, 1945- Personal narratives, American; Mustard, Harry Stoll, 1913-1963- Correspondence; Mustard family; United States. Marines- Medical personnel; United States. Marine Corps- Biography; Charleston (S.C.)- Biography; Guadalcanal (Solomon Islands)- History; Guam- History- Japanese occupation, 1941-1944- Personal narratives, American; Manuscript. Abstract: Letters with enclosures sent by Harry S. Mustard chiefly to his parents, Dr. and Mrs. Harry S. Mustard, New York, N.Y., describing life as a military physician in the Pacific theater; topics addressed include accounts of training in U.S. descriptions of deployments to Guadalcanal (Solomon Islands), Guam, Iwo Jima, and elsewhere; and observations on progress of the war, local conditions, and his fellow soldiers, including reports of meeting fellow South Carolinians stationed in the South Pacific. Correspondence begins at time of Mustard's training at Camp LeJeune, New River, N.C., and ends with beginning of his journey home from the Pacific; Mustard served with infantry battalions in combat on both Guam and Iwo Jima. Assigned to several different units, Mustard was promoted to full lieutenant, and also made battalion surgeon; he was awarded a Purple Heart in Aug. 1945 for a shrapnel wound received in Mar. 1945; other letters were written by Mustard from Camp Elliott, Ca., aboard the troop transport ship en route to the Pacific, and at New Caledonia. Transcribed and annotated version of letters,

Nakamura, Kan and Campbell, Frank Nelson. 1942-1943. Diary, 1942-1943. Descriptors: Soldiers- Japan; World War, 1939-1945- Campaigns- Solomon Islands; Guadalcanal, Battle of, Solomon Islands, 1942-1943- Personal narratives, Japanese. Abstract: Typewritten transcript of a World War II diary (Sept. 19, 1942-Jan. 6, 1943), written by Kan Nakamura, a Japanese soldier who served as a Probationary Officer of the Sano Group, Sohji Butai, Takizaura Butai, Matsumaga Tai, and was involved in the Battle of Guadalcanal. The diary records illnesses and deaths among fellow soldiers, daily air raids by enemy bombers, camp life and conditions, difficulties in finding supplies and getting provisions to the soldiers. The end of the diary lists personnel movements and equipment used. Notes on the transcript indicate the diary was most likely translated by the U.S. Office of Naval Intelligence in 1943. Notes: 0.1 linear ft. (1 folder); Named Person: Nakamura, Kan. Notes: Mss 2, F7 (6-1-1). Previously known as SC0051, TR0557, and A96.43. OCLC: 51091476.

Nelson, Glenn Walter. "Duties on Guadalcanal." Glenn Nelson, a product of the plains of Wyoming and Nebraska, made an unusual career choice when he joined the Navy in the early days of World War II; he attended the service's Japanese Language School. His duties were to translate captured documents and interrogate the rare captured Japanese soldier. On Okinawa, he took the difficult assignment of trying to persuade surviving soldiers and civilians to come out from the island's many caves. He was in Pearl Harbor for the surrender, but by that point Nelson had become so fascinated with the Japanese that he spent 20 years after the war in Japan with the Central Intelligence Agency. Veteran's History Project. Library of Congress.

O’Neal, Michael F. 1999. “Expeditionary Air Forces’ Roots in the Past: Cactus Air Force.” *Air Univ Maxwell AFB AL*. Volume: ADA397327, Pages: 39 Pages(s). Descriptors: *Military Strategy; *Air Logistics Support; Military History; Lessons Learned; Flight Training; Theses; Military Capabilities; Supplies; Air Power; Pacific Ocean Islands; Second World War; Guadalcanal; Cactus Air Force. Abstract: This paper is primarily a description of the state of aircrew training and the maintenance and logistics practices employed by an early example of an Expeditionary Air Force: the Cactus Air Force on Guadalcanal in 1942. Secondly it compares the training, maintenance and logistical problems dealt with by Cactus personnel with the modern AEF now in development. Information for WWII-era Cactus Air Force issues was obtained by literature review and archive research. Current AEF information is from open sources and is widely available. Problems faced and solved by Cactus Air Force are lessons learned that we may be able to use to save time, money, and lives as we develop AEF concepts. The paper examines and enumerates Cactus problem areas and some of their solutions. The lack of training for the crews who arrived on Guadalcanal, codenamed Cactus, on 20 and 22 August 42 caused a number of pilots to lose their lives. The lack of preparation for the conditions they would be working and living

under dramatically affected how the maintenance was handled. Enemy activity prevented the initial supply stocks from disembarking, and subsequent sustainment operations were chronically threatened. The greatest assets the Cactus Air Force people had were a diehard attitude and a will to win. The technological leap forward from World War II to This paper is primarily a description of the state of aircrew training and the maintenance and logistics practices employed by an early example of an Expeditionary Air Force: the Cactus Air Force on Guadalcanal in 1942. Secondly it compares the training, maintenance and logistical problems dealt with by Cactus personnel with the modern AEF now in development. Notes: Approved for Public Release. "Pacific Counterblow: The 11th Bombardment Group and the 67th Fighter Squadron in the Battle for Guadalcanal. an Interim Report." 1992. Washington, DC: Air Force History Support Office Bolling Afb Dc. 63 Pages(s). Descriptors: *Military History; *Aerial Warfare; *Air Force Operations; *Army Aviation; *Bombing; *South Pacific Ocean; *Second World War; Fighter Aircraft; Air Force; Military Forces (Foreign); Military Commanders; Australia; Shipping; Bomber Aircraft; Pacific Ocean Islands; New Zealand; *Army Air Force; *Guadalcanal; B-17 Aircraft; P-39 Aircraft; P-400 Aircraft; B-26 Aircraft; Tulagi; Solomon Islands; Millard F Harmon; Laverne G Saunders; 67th Fighter Squadron; 11th Bombardment Group. Abstract: "Pacific Counterblow" tells the story of the Battle for Guadalcanal (1942), focusing on the operations of the 11th Bombardment Group and the 67th Fighter Squadron. Months after the devastation of Pearl Harbor, U.S. forces had crushed the Japanese fleet at Midway and then moved to seize the initiative. Army Air Force commanders in the Pacific sought to prevent the enemy from severing Australia's supply lines. So

the B-17s of the 11th Bomb Group and the P-39s and P-400s of the 67th Fighter Squadron, flying from makeshift bases at Espiritu Santo and Henderson Field, began grueling attacks on Japanese shipping between Rabaul, New Britain and the Solomon Islands. After several months of bitter fighting, American forces gained control of Guadalcanal, positioning them to swing forward beyond Rabaul to New Guinea. Notes: Wings at War Series, No. 3. Volume: Sound recording: 1 sound cassette (ca. 40 min.); analog, 1 7/8 ips. Videorecording: 1 videocassette (ca. 40 min.); sd., col. 1/2 in. Master sound recording: 1 sound cassette (ca. 40 min.); analog, 1 7/8 ips., Descriptors: Veterans- Wisconsin- Milwaukee; Soldiers- California- Hollywood; World War, 1939-1945- Personal narratives, American; Combat; Soldiers- Suicidal behavior- Japan; Saipan, Battle of, Northern Marina Islands, 1944; Tarawa, Battle of, Kiribati, 1943; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Merchant mariners; World War, 1939-1945- Pacific Ocean; World War, 1939-1945- Naval operations, American; World War, 1939-1945- Equipment and supplies; Parshall, Gerald S., 1924-; Jaekel, Robert; Videorecording; Cassette recording Videocassette; VHS tape. Abstract: Gerald Parshalle, a Milwaukee, Wis. veteran, discusses his World War II service with the Merchant Marines. He talks about training at Coyote Falls (California) and transporting Sea Bees to construct an airstrip during the battle of Tarawa. Parshalle mentions carrying supplies to soldiers at Guadalcanal, nightly bombing by a Japanese airplane while near Guadalcanal, and seeing actor Robert Jaekel while on Guam. He touches upon transfer to a "liberty" ship that carried ammunition

to South Pacific islands, seeing Japanese soldiers commit suicide at Saipan, and providing supplies to American forces at New Caledonia. Technical problems end this interview abruptly. Peabody, Hitch. 2004. “Paramount Interest: Command Relationships in Amphibious Warfare.” *Naval War Coll Newport Ri Joint Military Operations Dept*. Volume: ADA425987, Pages: 28 Pages(s). Descriptors: *Amphibious Operations; *Joint Military Activities; Military Forces (United States); Warfare; Theater Level Operations; Military Doctrine; Command And Control Systems; Marine Corps Personnel; Military Commanders; Doctrine; Landing Forces; Second World War. Abstract: In 2001, U.S. amphibious forces abandoned sixty years of established command and control doctrine, replacing the traditional senior-subordinate relationship between Navy and Marine commanders with coequal command. Why did it change? This paper examines the development of amphibious doctrine during World War II, when command relationships were worked out under fire. There were differences between the Pacific and European theaters, reflecting the service traditions of the landing forces, as well as British command traditions. Comparing U.S. experience with command models at Guadalcanal and Tarawa with that used at Salerno highlights contrasts between the two approaches. There have been many changes both in technology and practice in amphibious warfare since World War II. An overview of these developments shows why the old doctrine needed to change and how new practices made change possible. Modern amphibious practice works well in the slightly hazy uncertainty of coequal command, which provides flexibility to the joint task force commander. As the Expeditionary

Strike Group concept develops, the advantages of coequal command should not be forgotten.

Abstract: Photographs, certificates, and personal military papers related to the World War II service of Perrin, a West Bend, Wis. native, who served with the Navy as a chief gunners mate in the Pacific Ocean. The collection includes honorable discharge certificates and separation papers. There is also a sketch of Perrin drawn by a fellow sailor, a letter from the Japanese Embassy inquiring about Japanese teeth Perrin collected at Guadalcanal, and a 1940 edition of The Bluejackets' Manual which includes inscriptions from soldiers and sailors whom Perrin met while in service. A certificate commemorating Perrin's crossing of the equator and signatures of people he served with is also found. Photographs show James Perrin in uniform and several casual photos taken in the South Pacific. There is also a photo of Perrin and his wife Olga and a photo of Olga and her sons James R. Jr. and Richard Perrin, Richard is wearing a child's sailor uniform. Notes: Papers 0.2 linear ft. (1 archives box and 1 oversized folder) and. Photographs 0.1 linear ft. (1 folder); Named Person: Perrin, James R., 1905-1972. Perrin family. Genre/Form: Photographs. Notes: 2-4-3, Ph5, F20 (27-1-1), Ov6, F5 (4-1-2). Previously known as TR0131, A94.081, and V1994.69. Other Titles: Bluejackets Manual. OCLC: 53936498.

Perry, Roger E. 1943-1946. Papers, 1943-1946. Descriptors: World War, 1939-1945- Naval operations, American; World War, 1939-1945- Personal narratives, American; Horse racing- Solomon Islands- Guadalcanal; Internet resource. Abstract: The collection of Commander Roger Perry contains materials relating to his position as Commanding Officer of USS Jerauld in 1944-1945 and includes correspondence and printed material relating to Jerauld. Supplemental information reflects his interest in horse racing and includes racing information on the Guadalcanal Turf Club. Notes: 0.25 cubic ft; Named Person: Perry, Roger E.- Archives. Pollard, George Francis Pollard, Grace and Elrick, George S. 1944-1945. Papers, 1944-1945. Descriptors: Soldiers- Wisconsin- Madison; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Popular music- United States; World War, 1939-1945- Campaigns- Solomon Islands- Guadalcanal. Abstract: Scattered papers of George F. Pollard relating largely to the battle of Guadalcanal. Collection contains two roughly copied battlefield maps of Guadalcanal Island showing the position of Japanese units as well as the locations of several naval and land battles. A booklet titled "Story of the Solomons" by Sgt. George S. Elrick provided soldiers with background information on the region, its natives, and its wildlife. Another booklet, "The Guadalcanal Campaign," was printed soon after the war and recounts the basic chronology of events in the campaign. Pollard's separation record reveals the details of his service. Soldiers returning to the U.S. could learn the procedure for a typical 45 day rest period from a sheet titled, "Your 45 days at home." There are also the lyrics to several popular homefront songs that Pollard cut out of an unidentified periodical. Notes: 0.2 linear ft. (1 archives box); Named Person: Pollard, George Francis, 1920-1992. Genre/Form: Battlefield maps. Geographic: Guadalcanal (Solomon Islands)- Description and travel. Notes: 2-4-5/ Accessioned as TR1138. OCLC: 63134879.

Probasco, Michael T. 1994. "Joint Force Air Component Commander or Coordinator?" *Air War Coll Maxwell AFB AL*. APR 1994. Volume: ADA281143, Pages: 28. Descriptors: World War 2; Guadalcanal; Cactus Air Force; Interservice Conflict; Joint Doctrine; Concentration Of Forces; Goldwater Nichols Act; Jfacc (Joint Force Air Component Commander); Jfcep (Joint Force Commander's Campaign Plan); Desert Storm Operation. Abstract: The 20 August to 15 November campaign in the Pacific was overwhelmingly an air campaign. It all centered around a single airfield, on Guadalcanal, where the air power of a truly joint force decisively turned back the final assault. The Japanese empire was doomed. This author found very little evidence that suggested an fresh inter-service (joint) reexamination of the paradigm of the joint use of air power in support of the Joint Force Commander's (JFC) campaign plan. Notes: Approved for public release; distribution is unlimited. Database: DTIC AND NTIS.

Profile: Battle of Guadalcanal. 2002. Washington, DC: National Public Radio. August 7, 2002. (10:00-11:00 AM). Volume: Radio Broadcast transcript, Abstract: Today marks 60 years since the start of the first American offensive of the Second World War, the battle of Guadalcanal. On this date in 1942, thousands of US Marines splashed ashore on the then obscure island in the Southwest Pacific and dug in for six months of desperate struggle against not only the Japanese but against heat, jungle rain, disease and hunger. Before Guadalcanal, the Japanese initiated every move in the Pacific War. Afterwards, the United States and its allies decided where and when to fight. In the second of our two part National Geographic Radio Expedition, NPR's Neal Conan reports from Guadalcanal. NEAL CONAN reporting: It was all about the airfield. (Soundbite of airplane). CONAN: These days, Henderson International Airport is the home of Solomon Air and its tiny fleet of small island hoppers. Jets from Fiji and to Australia stop by a couple of times a week. This island is so remote it's hard to imagine why anyone wanted it badly enough to fight for it. But if you look at a map of the Southwest Pacific and think about how far planes could fly in 1942, you can see it. From here, Japanese aircraft could threaten Australia's supply lines to the United States. The Japanese started this airfield in May 1942. It was almost finished when the Marines took it away from them. They completed construction and quickly added an auxiliary strip nearby called Fighter One. Marine pilot Jeff DeBlanc remembers choking dust when it was dry and mud when it wasn't. Notes: Morning Edition. Database: History Resource Center.

Profile: Aid for US Marines during Battle of Guadalcanal by Natives of the Solomon Islands. 2002. August 6, 2002. (10:00-11:00 AM). Volume: Radio Broadcast transcript, Abstract: This is MORNING EDITION from NPR News. I'm Renee Montagne. Sixty years ago, United States Marines waded ashore on the then-obscure island of Guadalcanal. The battle that followed lasted six months and changed the tide of the Second World War in the Pacific. Some veterans of the battle already are gathered on Guadalcanal to mark the anniversary. Martin Clemens was one of the heroes of that battle. Though he expected to be there, he had to stay home in Australia on doctor's orders. But when the Marines first arrived on Guadalcanal, Martin Clemens was there waiting for them. In our latest National Geographic Radio Expedition, NPR's Neal Conan reports from Guadalcanal. Notes: Morning Edition.

Quantock, David E. 2002. "Disaster at Savo Island, 1942." Army War College, Carlisle Barracks, PA. Volume: ADA401647, 43 Pages(s). Descriptors: *Lessons Learned; *Naval Warfare; *Second World War; Military Forces (United States); Military History; Military Forces(Foreign); Military Commanders; Battles; Savo Island; Guadalcanal. Abstract: This paper examines the naval battle of Savo Island from a historical perspective and extracts the lessons learned from a strategic, operational and tactical perspective. The Battle of Savo Island occurred early in the morning on 9 August in 1942 when the Japanese 8th Fleet surprised the Allied Task Force shortly after the landing at Guadalcanal. In approximately 37 minutes, the Japanese Navy destroyed four heavy cruisers and killed more than 1000 American and Australian sailors handing the U.S. Navy the worst defeat in its history. There were many reasons for this debacle, however the one common thread through the entire disaster was the poorly framed command and control relationships. This article examines the command and control breakdowns along with the various contributing causes such as personality conflicts between various commanders of the allied force, communication and equipment shortfalls, common prejudices, and the superior night fighting ability of the Japanese force that caused this decisive defeat. Notes: Approved for Public Release. Database: DTIC and NTIS: ADA401647. URL: <http://handle.dtic.mil/100.2/ADA401647>

Abstract: "In the summer of 1942, America was still reeling from the attack on Pearl Harbor and the humiliating victories of the

Japanese throughout the Far East. Then came the battles of the Coral Sea and the pivotal Battle for Midway. Japan had been effectively countered and it was time to launch an attack. That first landing of American forces on a Japanese held island would occur on Guadalcanal, August 7, 1942. It was the opening of a six month campaign to wrest control of the lower Solomon Islands from the Japanese Empire. From this story of mistakes and heroism would rise the genesis of American strategy for the rest of the war in the Pacific.”--Accompanying box. v. 1. Operation Watchtower- v. 2. Notes: At head of title: 50th anniversary. Includes bibliographical references (p. 430-431). "Chapter 15: **THE GOETTGE PATROL**. On August 12, Lieutenant Colonel Frank

Goettge, senior officer of D-2 Intelligence, set out from Kukum at 6 p.m. in a Tank Lighter craft, somewhat bigger than a Higgins boat, with twenty five officers, scouts and infantry men. Most of these men were from the Intelligence sections of the Division and Fifth Marines. A Regimental surgeon, Dr. Pratt, also accompanied the party. Colonel Goettge's ultimate aim was to achieve a possible victory for the Division and bring land operations on Guadalcanal to an end by giving the enemy the opportunity to surrender. He brought Lt. Ralph Corry, who was proficient in Japanese, with him. He had worked in government service in Japan prior to the war and would be an ideal man in this situation if the Japanese soldiers offered to lay down their arms. A Japanese naval warrant officer, who had been taken prisoner, indicated that there were many men who would surrender if they had the chance. They were wandering aimlessly in the jungle without food. There were also wounded men needing medical attention. Another prisoner gave a very similar story. A report also came from the Marines from the Matanikau line that they believed they saw a white flag flying inland from Point Cruz. There had also been Korean laborers who had come through the lines and surrendered. Colonel Goettge felt these indications were sufficient evidence to warrant immediate action. No time should be wasted in capitalizing on this situation. If a surrender did not eventuate then a plan outlined by First Sergeant Steven Custer would be followed. A patrol would make a reconnaissance of the Matanikou region, starting near the mouth of the river. When this was accomplished they would begin to move southward. A one night bivouac at a vantage point in the hills overlooking the river would be secured. The next day the patrol would continue following the Matanikau upstream, then move eastward toward the Lungga in the afternoon. They would bring in any prisoners who surrendered, as well as determine the strength and disposition of the enemy in this entire sector. The patrol planned to enter the Marine perimeter before dusk on the 13th. ...Just before the patrol departed from the 5th Marine Regiment Command Post, Colonel Whaling, the 5th's executive officer, warned Goettge and Captain Ringer to stay clear of the ground between the Matanikau and Point Cruz. The Japanese were defending this particular section very aggressively. A landing west of Point Cruz was recommended... As they approached the shore it was extremely dark. There was no moon out. When the darkening shadows of the trees came into view Colonel Goettge instructed the coxswain to beach the craft. Before reaching shore, they ran aground on a sandbar protruding from the delta of the river. The coxswain shifted the engine into reverse gear and gunned the motor Marines got out and pushed and rocked the boat and finally she was free. This episode would have alerted any enemy in the area. Just on the west side of the Matanikau's estuary they went ashore. It was shortly before 10 p.m. This was the very place of which Colonel Whaling had warned them to stay clear Two hundred yards from the shore was an elevated rise in the terrain of approximately two hundred feet. It was a rugged coral ridge named Vayaya. The Japanese shore patrol heard the landing craft and immediately informed their command. Infantry men and their weapons were positioned near the base of the ridge and ready. Colonel Goettge gave instruction to his men to establish a defense cordon at the beach while he, Captain Ringer and First Sergeant Custer set off to find a bivouac for the night on the ridge. Goettge led the way. Shortly after the three men left the beach area, Goettge was cut down by one rifle shot; then machine gun fire cut loose. Custer was seriously wounded. Ringer helped the First Sergeant reach a protective position back on the beach. Not knowing if Colonel Goettge was dead or alive, Platoon Sergeant Few, Corporal Spaulding and Sergeant Arndt volunteered to go and bring him in. Upon reaching the Colonel, Few saw that he had been hit in the head and killed instantly. Removing his heavy wristwatch and insignia so that the enemy would not know his rank, they began to make their way back to the high water point at the edge of the beach." ISBN: 9780961169633; LCCN: 92-61189. See: <http://www.gnt.com/~jrube/goettge.htm>

Schmidt, Ralph, interviewee. Buchholz; interviewer. Arendt, Laurie and Wisconsin Veterans Museum. 2003. Oral History Interview with Ralph Schmidt 2003. Volume: Sound recording: 1 sound cassette (ca. 50 min.): analog, 1 7/8 ips. Master sound recording: 1 sound cassette (ca. 50 min.): analog, 1 7/8 ips., Descriptors: Veterans- Wisconsin- Belgium; Soldiers- Wisconsin- Belgium; World War, 1939-1945- Personal narratives, American; Iwo Jima, Battle of, Japan, 1945; Guadalcanal, Battle of, Soloman Islands, 1942-1943; World War, 1939-1945- Villa Verde; World War, 1939-1945- Pacific Area; Combat; World War, 1939-1945- Bouganvilla;

Biography; Non-musical recording; Cassette recording. Abstract: Schmidt, a Belgium, Wis. native, discusses his World War II service as a paratrooper with the 1st Marine Parachute Regiment serving on various islands in the Pacific theater. He talks about his service deferment because he worked on a farm, enlisting in the Marines as soon as his brother was old enough to help on the family farm, and Marine training in California. Sent to New Caledonia, he was assigned to the 1st Marine Parachute Regiment and comments on the impracticality of parachute training in a jungle, injuries Marines sustained on practice jumps, and the decision to use parachute troops and raider battalions as regular infantrymen. He touches upon reinforcing the Marines on Guadalcanal, providing air strip security at Villa Verde, and landing from an LST on Bouganville. After a furlough, he was reassigned to the heavy weapons company of the 28th Regiment, 5th Division. Schmidt talks about training for the Iwo Jima landing, long wait aboard a landing craft, and traveling from island to island picking up Marines. He provides a detailed account of the Iwo Jima landing including shore bombardment, landing near Mt. Suribachi, conditions on the beach, digging fox holes, and instructions to hold fire so the Japanese would not know their positions. He describes seeing roads built on the beach, seeing the flag raising on Mt. Suribachi, helping to take a Japanese airstrip, and clearing Japanese equipment from caves. He mentions American rations of canned mutton and Japanese rations of rice and fish. Schmidt touches upon occupation duty in Japan, volunteering for the inactive Reserves, and call to duty for the Korean War which he was excused from. Schmidt received a Bronze Star for helping to evacuate wounded Marines, but does not discuss this incident during the interview. Notes: Named Person: Schmidt, Ralph. Named Corp: United States. Marine Corps. Division, 5th. Notes: Interviewed by Allen Buchholtz on March 8, 2003 in Belgium, Wisconsin. Bio/History: Schmidt enlisted in the Marine Corps on December 7, 1942. He served Pacific theater where he participated in several major Marine landings and "island-hopping" combat. General Info: Copyright owned by the Wisconsin Veterans Museum. Forms part of: Ozaukee County Veterans Book Project, Laurie Arendt, Project Coordinator. Other Titles: Ralph Schmidt. Back from duty, Ozaukee County Veteran's share their stories. OCLC: 54777333.

Stapleton, Mel, interviewee. McIntosh, James F. and Wisconsin Veterans Museum. 2002. *Oral History Interview with Mel Stapleton 2000*. Volume: Sound recording: 2 sound cassettes (ca. 75 min.); analog, 1 7/8 ips. Videorecording: 1 videocassette (ca. 75 min.); analog, 1 7/8 ips. Master sound recording: 1 sound cassette (ca. 75 min.); analog, 1 7/8 ips., Descriptors: Veterans- Wisconsin- Madison; Airmen- Wisconsin- North Lake; Stapleton, Mel; Pearl Harbor (Hawaii), Attack on, 1941; World War, 1939-1945- Pacific Area; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Midway, Battle of, 1942; World War, 1939-1945- Aerial operations, American; Combat; Cold War; Civil Defense- Wisconsin; Fall out shelters- Wisconsin- Design and construction; Nuclear bombshelters- Wisconsin- Design and construction; Videorecording; Cassette recording Videocassette; VHS tape. Abstract: The North Lake, Wis. native discusses his World War II service as a member of the Army Air Corps. He was stationed at Hickam Field (Hawaii) during the attack on Pearl Harbor. Stapleton talks about enlisting in the Air Corps because

his family had no money for college, receiving a letter from General “Hap” Armstrong permitting him to serve despite his poor eyesight, training at Chanute Field (Illinois), and attending radio school. Transferred to Hickam Field in 1940, he provides a detailed account of the Pearl Harbor attack. He describes hearing an explosion while walking to breakfast, looking outside, and seeing Japanese aircraft flying toward the airfield; running toward airplanes to get machine guns; and running to the armory for additional weapons. Stapleton recalls being knocked down by a bomb blast, taking cover in a bomb crater, and being wounded by shrapnel. He mentions being taken to an airplane hanger with the other wounded and the high number of casualties caused by the strafing. Transferred to the 431st Bomb Squadron as a radio operator in the Pacific theater, he comments on searching for the Japanese fleet in the Pacific. He talks about being on Midway Island when the Japanese attacked, transfer to the British Fiji Islands, and working with Australian troops. Stationed at Guadalcanal, Stapleton comments on helping to defend Bouganville, flying on several missions while under heavy Japanese fire, and the reaction of his unit’s chaplain to seeing bare breasted women on the Solomon Islands. He touches upon rest and relaxation in New Zealand, returning to the United States in 1943, gambling on the way home, and marriage while on leave. Reassigned to stateside duty, he touches upon his work on search and rescue of training planes in Scott’s Bluff (Nebraska), becoming a radio instructor, retiring after 25 years in the service, and working for the State of Wisconsin during the Cold War showing civilians how to build bomb shelters. Notes: Named Corp: United States. Army Air Forces. Bomb Squadron, 431st. Notes: Bio/History: Stapleton (1919-) served with the Army Air Corps during World War II. While at Pearl Harbor, he was a member of the 50th Reconnaissance Squadron and joined the 431st Bomb Squadron in the Pacific. He retired from the Air Force after 25 years. Interviewed by James F. McIntosh on October 30, 2000 in Madison, Wisconsin. General Info: Access to videorecording is restricted: 48-hours advance notification required. Copyright owned by the Wisconsin Veterans Museum. Forms part of: Wisconsin Veterans Oral History Project, conducted by the Wisconsin Veterans Museum. System Info: VHS-C format. OCLC: 60780539.

State Department Required to Report on the use of Child Soldiers. Center for Defense Information. April 10, 2003. no. July 2007, Abstract: Solomon Islands - In 2000, Amnesty International reported that Guadalcanalese militants included a number of child soldiers. UN human rights officials confirmed the use of child soldiers by both Guadalcanalese and Malaitan militants. Several hundred children (generally boys) under the age of 18 were active combatants or assisted in militants’ camps. With the decrease in fighting, dozens of these underage militants remained in quasi-criminal gangs affiliated with their former militant commanders. Stewart, Lyle G. and *Saints at War*. 1939-1999. Papers, Ca. 1939-1999. Descriptors: 1 folder (3 p.); World War, 1939-1945- Personal narratives, American; Guadalcanal, Battle of, Solomon Islands, 1942-1943; World War, 1939-1945- Campaigns- Philippines; World War, 1939-1945- Religious aspects- Mormon Church; Manuscript. Abstract: Handwritten Memoir, Original Church Meeting Program, Photocopied Military Documents. A short handwritten memoir and a letter written on the back of a program from a church meeting tell some of the experiences and feelings of Stewart as he served in the Army. He speaks of being in a mine clearing role in his company, and of his involvement campaigns on the Philippines, Guadalcanal, and in being on shore guard after the bombings at Pearl Harbor. Also included are a couple of military documents. Notes: Genre/Form: Memoirs. Photographs. Notes: Bio/History: Stewart served as a Private First Class in the 213th Field Artillery Battalion of the U.S. Army Pacific Theater of World War II. General Info: Open for research. Items were donated by Lyle G. Stewart to the Saints At War Project in 1999. OCLC: 55632704.

Stroup, Leora Belle. 1944-1948. *Leora Belle Stroup Photograph Collection*. Descriptors: World War, 1939-1945- Japan- Iwo Jima- Photographs; World War, 1939-1945- Guam- Photographs; World War, 1939-1945- Philippines- Manila- Photographs; World War, 1939-1945- Philippines- Los African Americans- Photographs; World War, 1939-1945- Solomon Islands- Guadalcanal- Photographs; World War, 1939-1945- Philippines- Corregidor Island- Photographs; Nurses- Korea- Photographs; Plants- Islands of the Pacific- Photographs; Animals- Islands of the Pacific- Photographs; Photograph; Picture. Abstract: Contains the following types of materials: photographs. Covers the following war: World War II (WWII). Contains photographs of the following military unit: Army Nurse Corps. General description of the collection: The Leora Belle Stroup photograph collection was donated by Olive Hay, whose relationship is unknown. There are many Signal Corps and U.S. Marine Corps stock photographs for WWII, showing Iwo Jima, Guam, Okinawa, the Philippines, especially Manila, Los Negros; Marcus Islands, Guadalcanal, Corregidor, and Japan; also photos she took or received from other nurses of those sites. A collection of photos of her service while stationed at Pusan, Korea, following the war. She was especially interested in the flora and farms of the regions where she served as well as the natives and their culture. There are many photos showing those aspects of the islands and of Pusan and Inchon, Korea. Photos of nurses and their activities from doing laundry, the huts/barracks, hospital duties, social life and sightseeing. It is a very interesting collection showing the female side of

Natural History of Guadalcanal

Army life during and just after WWII. Notes: 1 box (841 photographs); Named Person: Stroup, Leora Belle- Photograph collections. Named Corp: United States. Army Nurse Corps- Photographs. United States. Army- Military life- Photographs. United States. Army- Nurses- Photographs. Notes: Bio/History: Leora Belle Stroup was a United States (U.S.) Army nurse who served in the Pacific Islands near the end of WWII. General Info: Available on site only. Original or duplicate materials: U.S. Army Military History Institute/ Carlisle Barracks, Carlisle, Pa. 17013-5008. Collection is not organized or cataloged at the item level. It is cursorily organized by places as was noted on the envelopes as we received them. Unfortunately most of the photos are not annotated. There are no card indices nor is there an index to the box. Other Titles: Photograph collection of Leora Belle Stroup; Stroup photograph collection; Leora Belle Stroup collection; Stroup collection; OCLC: 48227088.

"Tell it to the Marines: A Proposal to Rename Guadalcanal's Airport Doesn't Fly. (History Now)" 2003. American Heritage. Oct 2003. Volume 54, Issue 5, Pages 11. Abstract: Times Ae tough in the Solomon Islands. With few natural resources, the islands depend on tourism, but their remoteness, often antiquated facilities, and inhospitable environment can make them a tough sell. The government hopes its renovation and expansion of the airport at Honiara (the nation's capital, on the island of Guadalcanal) will attract more tourists, and earlier this year a Japanese consulting firm supervising the improvement had a helpful suggestion: Give the airport, which has been called Henderson Field since U.S. Marines captured it from Japan in 1942, a more Japanese-friendly name: Chrysanthemum Field. The idea must have seemed reasonable at the time. The Japanese paid most of the tab for improving the airport, so why shouldn't they rename it? In Japan the chrysanthemum symbolizes health and happiness. What could be wrong with that? Plenty. Never mind that Emperor Hirohito occupied what is known as the Chrysanthemum Throne or that a massed Kamikaze attack in World War II was known as a kikusui, or "floating chrysanthemum." The idea that Maj. Lofton Henderson, the first American pilot to die in the Battle of Midway, might have his name removed from the field to attract a few more Japanese tourists did not sit well at all with Henderson's fellow Marines--or even with the residents of Honiara. The idea was quickly withdrawn, and the Solomons government learned a lesson about what happens when you listen to consultants. Beyond that, it also learned the importance of choosing one's enemies: If you have to fight someone, try not to make it the U.S. Marines. While we're on the subject of Guadal: canal, this is as good a time as any to correct an article that American Heritage published in 1993. In that piece, Thomas Fleming quoted from a booklet titled Walks on Guadalcanal, whose cheerful tone mixed uneasily with its long and detailed cautions about the island's potential dangers (scorpions, crocodiles, sudden cliffs, and hostile locals, to name but a few). Fleming imagined the booklet's author, J. L. O. Tedder, as a struggling freelancer who had accepted the assignment for want of other work and was determined to make the best of it. We have since learned that Tedder was a longtime British official in the Solomons as well as a distinguished naturalist. Since his retirement, he has been active in environmental organizations and as a farmer in his native Australia. We can only wish him more success in these pursuits than he had in attracting hikers to Guadalcanal. Database: History Resource Center.

Thacker, James R. and Saints at War. 1997. Memoir, 1997 February 16. Descriptors: 1 folder (8 p.); World War, 1939-1945- Personal narratives, American; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Pearl Harbor (Hawaii), Attack on, 1941; World War, 1939-1945- Engineering and construction; Manuscript. Abstract: Thacker enlisted in the Army in 1941, choosing to be stationed in Hawaii, and was there the day Pearl Harbor was bombed. He operated a bulldozer throughout the Pacific, bulldozing roads for the infantry and graves for the enemy dead. He was present at Pearl Harbor and Guadalcanal during combat, and was around smaller skirmishes several other times. His experiences are interesting and he includes various pictures in this computer generated memoir. Notes: Genre/Form: Memoirs. Photographs. Notes: Bio/History:

Thacker served as a heavy equipment operator in the 65th Engineers Battalion of U.S. Army Pacific Theater during World War II from 1941-1945 achieving the rank of Sergeant. General Info: Open for research. Items donated were kept by creator until donation to "Saints at War." OCLC: 55632707.

Abstract: Part of a series that profiles winners of the Congressional Medal of Honor through interviews, actual war footage, news clips and re-enactments of events. This episode presents personal stories of some Medal of Honor winners at Pearl Harbor and in the Pacific in World War II. During the surprise attack on Pearl Harbor, ship machinist Donald Ross fights to keep the U.S.S. Nevada powering through the exploding chaos. Navy officer John Finn drags a machine gun onto an open airfield nearby and singlehandedly battles the attacking enemy Zeroes. In later days of the war in the Pacific, Gen. Jonathan Wainwright faces a terrible decision: surrender the Philippines or risk the annihilation of thousands of soldiers. B-29 radioman Henry Erwin is engulfed in flames but heeds an inner voice telling him to retrieve the burning phosphorus flare that threatens his airplane and crew. John Basilone, "the pride of the Marines," makes Marine Corps legend at Guadalcanal and Iwo Jima. Notes: System Info: VHS format. Notes: Title on back of container: World War II: Pearl Harbor and the Pacific. A production of U.S. News & World Report in association with the Charlie Mopic Company. Series created by Vietnam veterans Patrick Duncan (Charlie Mopic) and Capt. Russ Thurman, USMC (Ret.). Participants: Host, Cliff Robertson. Islands of the Pacific- History. Southeast Asia- Description and travel. Southeast Asia- History. Notes: Bio/History: Tregaskis, a war correspondent and author, was a classmate of John F. Kennedy at Harvard. Prevented by diabetes from enlisting in the armed forces during World War II, he covered both the Pacific and European theaters as a journalist and was badly wounded in Italy. His wartime experiences were chronicled in "Guadalcanal Diary" (1943) and "Invasion Diary" (1944). The bulk of his career was spent reporting on events in Asian countries and Pacific islands. Tregaskis covered nine wars, including the Chinese Civil War, Korea, and Vietnam. He also wrote poetry, novels, biographies, magazine articles, and screenplays for motion pictures and television. Tregaskis was married three times, to Marian Tregaskis, Walton Tregaskis, and Moana McLaughlin-Tregaskis. Walton and Moana both served as photographers for their husband. Richard Tregaskis, an expert swimmer, drowned near Honolulu in 1973. General Info: Organization: Topical. Finding aid available in repository. Occupation: War correspondents. OCLC: 25302522.

Turnbull, Jane. 2002. "Solomon Islands: Blending Traditional Power and Modern Structures in the State." *Public Administration and Development*. Wiley InterScience: 8 May 2002. Volume 22, Issue 2, Pages 191 - 201. Abstract: By mid-2001, the Solomon Islands government was on the edge of bankruptcy after two years of unrest on Guadalcanal. Solomon Islanders' hopes that the national government can improve their living standards have been dashed, only 23 years after British colonial rule ended on these South-West Pacific islands. The reasons for the state's limited capacity to facilitate development extend much further than the financial crisis, as a comparison between power relations typically institutionalized in Western liberal democratic states and those

institutionalized in the Solomons state shows. The Solomons state is a syncretism of traditional political practices and modern structures. Many of these traditional practices are impeding development. Recent neo-liberal reforms championed by the previous government, the Asian Development Bank and other aid agencies did little to address these practices and were terminated in the unrest in 2000. If the state is to improve the living standards of ordinary Solomon Islanders, changes in structure, such as the state governments being established following the Townsville Peace Agreement, are not the sole answer. There also need to be changes in the political practices of both officials and politicians at national and local level.

Valenzi, Kathleen. D. 1995. "Scouting Guadalcanal: A 19 Year Old from New York Joined the Marines to See the World- What he saw was a small Pacific Island Under Fire that would Quickly Test His Mettle." *Military History*. August 1995. Pages 54-60. Abstract: An interview with Michael C. Capraro. "When we went ashore at Guadalcanal, it was like going back to school. All we had by way of maps were barely legible arial photographs taken from a vertical angle. The fields showed up as white, and the jungle showed up as black. But you had no feeling of topography- the third dimension. Being from an industrial town, I had no background in dense, jungle terrain, but suddenly I had to move in the forest quietly, read the stars and other signs to find my location. I remember one time, we'd been patrolling all day, and every once in a while, we'd stop and take a cigarette break around the smoking lamp. It was getting dark, and the company commander pulled me aside and said, "Cappy, where the Hell are we?" I took the map and said, "Right here, sir." "How the Hell do you know that?" he asked. I bent over and picked up one of the cigarette butts we'd left on the ground earlier that day. It was as simple as that. I had followed the cigrarette butts back." ISSN: 0889-7328.

Voight, Dean S. interviewee. Van Ells, Mark D. and Wisconsin Veterans Museum. 1995. Oral History Interview Dean S. Voight 1995. Descriptors: World War, 1939-1945- Personal narratives, American; Veterans- Wisconsin- Medford; Soldiers- Illinois- Chicago; Combat; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Midway, Battle of, 1942; Iwo Jima, Battle of, Japan, 1945; World War, 1939-1945- Battle casualties; War- Psychological aspects; Cassette recording. Abstract: Voight, a Medford, Wis. veteran, discusses his World War II service with Carlton's Raiders, the 2nd Marine Raider Battalion, in the Pacific theater. He talks about enlisting in anger over the attack on Pearl Harbor, decision to join the Marine Corps, boot camp at San Diego, and joining Carlton's Raiders. Voight describes the role of Raider battalions, learning hand to hand combat techniques, and deployment overseas. He describes the major campaigns in which he was involved including the Makin Island Raid, Guadalcanal, Midway, and Iwo Jima. Voight touches upon drinking while in the service including the different ways soldiers made their own alcoholic beverages with items they found at bases. He provides an interesting discussion on the family-like connection between men in the Raider Battalion and the way this relationship was continued after the war. He evaluates the change in this once the Raider Battalions were disbanded and the members joined Marine Divisions. Voight details the battle of Iwo Jima where he served as a platoon sergeant. His account includes the problems landing on the beach, being wounded and returning to combat, and being evacuated to Guam after receiving a second wound. He talks about depression related to his wound, difficulty finding work after the war, attempts to get a higher disability payment, and receiving help from the AmVets to get a thirty percent disability payment. Notes: Sound recording 7/8 ips; Named Corp: United States. Marine Corps. Marine Raider Battalion, 2nd. United States. Marine Corps- Military life. United States. Marine Corps. Division, 5th. Notes: Bio/History: Voight (b. June 19, 1922) served in the Pacific theater of operations with the Marine Raiders and the 5th Marine Division. He was wounded in the fighting for Iwo Jima, and discharged from service in 1946 after achieving the rank of sergeant. Interviewed by Mark D. Van Ells on October 30, 1995 in Wisconsin. General Info: Copyright owned by the Wisconsin Veterans Museum. Forms part of: Wisconsin Veterans Oral History Project, conducted by the Wisconsin Veterans Museum. OCLC: 56883361.

Wallace, Walton M., interviewee. McIntosh, James F. and Wisconsin Veterans Museum. 1999. Oral History Interview with Walton M. Wallace 1999. Volume: Sound recording: 1 sound cassette (ca. 45 min.); analog, 1 7/8 ips. Videorecording: 1 videocassette (ca. 45 min.); sd., col. 1/2 in. Master sound recording: 1 sound cassette (ca. 45 min.); analog, 1 7/8 ips., Descriptors: Veterans- Wisconsin- Madison; Soldiers- Wisconsin- Madison; World War, 1939-1945- Personal narratives, American; Guadalcanal, Battle of, Solomon Islands, 1942-1943; Iwo Jima, Battle of, Japan, 1945; Battle casualties; World War, 1939-1945- Campaigns- Japan- Okinawa; Combat; Wallace, Walton M., 1922-; Videorecording; Cassette recording Videocassette; VHS tape. Abstract: Wallace, a Madison, Wis. native, discusses his World War II service with the Marines in the Pacific. He talks about enlisting in the Marines, boot camp at Camp Elliott (California), training to fire a "pack howitzer," and transfer to Pago Pago Island (American Samoa) as a defense battalion for the island. Wallace describes the fighting at Guadalcanal Island, night raids by a plane nicknamed "Washing Machine Charlie," being hit with shrapnel and evacuated to New Hebrides Island, and returning to his unit at Saipan. After being reassigned to the 5th Marine Division, he details the landing at Iwo Jima, problems with the beach terrain, lack of cover for troops on the island, and feeling when they received hot food at the front. Wallace talks about rest and relaxation in Hawaii including working as a bartender at the officer's club, giving radio reports, and the food in Hawaii. Volunteering to fight on Okinawa, Wallace comments on seeing people he served with at Guadalcanal, reassignment to artillery, brief stay at Sasebo (Japan), and boat ride home. He touches upon use of the GI Bill and membership in the Disabled American Veterans. Notes: Named Corp: United States. Marine Corps. Division, 5th. United States. Marine Corps- Military life. Notes: Bio/History: Wallace (1922-) served with the 2nd and 5th Marines in the Pacific theater of World War II. He participated in several island invasions and returned to Madison after the war. Interviewed by James F. McIntosh on October 13, 1999 in Madison, Wis. General Info: Access to videorecording is restricted: 48-hours advance notification required. Copyright owned by the Wisconsin Veterans Museum. Forms part of: Wisconsin Veterans Oral History Project, conducted by the Wisconsin Veterans Museum. System Info: VHS-C format. OCLC: 61154799.

Walsh, Louis A. 1942-1961. Louis A. Walsh, Jr. Photograph Collection. Descriptors: World War, 1939-1945- Pacific Area- Photographs; World War, 1939-1945- Equipment and supply- Photographs; M5 light tank- Photographs; World War, 1939-1945- Campaigns- Solomon Islands- Guadalcanal- Photographs; World War, 1939-1945- Campaigns- Fiji- Photographs; World War, 1939-1945- Campaigns- New Caledonia; Photograph; Picture. Abstract: Contains the following types of materials: photographs, artwork. Covers the following war: World War II (WWII). General description of the collection: The Louis A. Walsh, Jr. photograph collection mostly represent general Walsh's WWII service in the Pacific Islands. A large album contains the bulk of the images. They show mule harness and pack for carrying the light machine guns and equipments; various views of the M-5 light tank; New Caledonia Island and scenery, equipment and an airfield thereon; sites on the Fiji Islands; Guadalcanal and gun emplacements, dugouts, captured Japanese material and scenery and captured Japanese weapons. The remainder of the photographs deal with his tenure at the U.S. Army Infantry Center, Fort Benning, Georgia, and the construction of the large "follow me" infantryman monument. Notes: 1 box (394 photographs, 22 watercolor

renderings of airborne shoulder patches and distinctive insignia); Named Person: Walsh, Louis A., 1911-- Photograph collections. Named Corp: United States. Army- Transportation- Photographs. Geographic: Japan- Armed Forces- Equipment- Photographs. Notes: Bio/History: Louis A. Walsh, Jr. was born in 1911. He graduated from the United States (U.S.) Military Academy in 1934 and received his commission in the infantry. He attended Parachute School in 1941 and held a number of parachute command and staff assignments. He took part in the battle of Guadalcanal. After this, he activated and commanded the 517th Parachute Infantry Regiment of the 17th Airborne Division. Near the end of the war, he jumped in the Tagaytay Ridge operations in the Philippines. From 1959-1961 he served as deputy commanding general and then assistant commandant of the Infantry School at Fort Benning, Georgia; he served with the Central Intelligence Agency (1962-1966). General Walsh retired from the military service in 1966. Report: RG559; General Info: Available on site only. Original or duplicate materials: U.S. Army Military History Institute, Carlisle Barracks, Carlisle, Pa. 17013-5008. Collection is not organized or cataloged at the item level. There are no card indices nor is there an inventory to the box. Other Titles: Photograph collection of Louis A. Walsh, Jr; Walsh photograph collection; Louis A. Walsh, Jr. collection; Walsh collection. OCLC: 48224848.

Westwell, Ian. Spearhead #8: 1st Marine Division: "The Old Breed." Spearhead magazine. Special issue #8. Soft cover, 7½ x 10, 96 pages, 80 color and b/w photos and maps. Descriptors: United States. -- Marine Corps. -- Division, 1st -- History -- 20th century. World War, 1939-1945 - - Regimental histories -- United States. World War, 1939-1945 -- Campaigns -- Pacific Area. Abstract: " The new Spearhead series is designed to look at the cutting edge of war, dealing with units capable of operating completely independently in the forefront of battle. Each volume in the series examines a historic units origins, history, organization, order of battle, battle history, insignia and markings. This volume focuses on the "Old Breed", the oldest and most decorated unit in the 1st Marine Corps who fought on Guadalcanal and the entire Pacific campaign. ISBN: 071102958X 9780711029583 OCLC: 53019863. See: <http://www.rzm.com/books/cp/1m.cfm>

Wetterhahn, Ralph. 2007. "Mystery on Guadalcanal." Air & Space Smithsonian. Volume 21, Issue 5; 5, Pages 32-37. Descriptors: Guadalcanal Island, Battle of, Solomon Islands, 1942-1943; WILDCAT (Fighter plane); Southerland, James J; TAYLAN, Justin; Solomon Islands. Notes: Air & Space Smithsonian; Article; Source Information: December 2006/January 2007, Vol. 21 Issue 5, p32; Subject Term: Guadalcanal Island, Battle of, Solomon Islands, 1942-1943; Subject Term: WILDCAT (Fighter plane); Subject Term: Southerland, James J. Subject Term: Taylan, Justin; Geographic Subject: Solomon Islands; Number of Pages: 6 pages; Illustrations: 9 color; Document Type: Article. Abstract: The article focuses on the discovery of the wreckage of the Grumman F4F Wildcat aircraft flown by Lieutenant James J. Southerland II by preservationist Justin Taylan in Guadalcanal, Solomon Islands. The Wildcat is believed to be the first U.S. Navy aircraft to shoot down an enemy in the Battle of Guadalcanal in August 1942. The section of the aircraft's linkage belt was attached and the shell case had been dented indicating that it had not been fired. ISSN: 0886-2257.

Willard, W. Wyeth. *Leathernecks come through*. 1935-1982. W. Wyeth Willard Assorted Papers 1935-1982. Descriptors: Chaplains, Military- United States- History- World War, 1939-1945; Clergy- Massachusetts- History- 20th Century; World War, 1939-1945- Personal narratives, American; World War, 1939-1945- Campaigns- Pacific Ocean; Camp sites, facilities, etc.- Designs and plans; Internet resource. Abstract: This Collection contains an assortment of newsletters and fliers published by or about W. Wyeth Willard, together with newspaper clippings documenting his life and activities, a biographical sketch about Willard titled "Combat Chaplain" which appeared in the November 1980 issue of *Leatherneck Magazine* and a blueprint map of Camp Good News. Notes: Named Corp: Brown University- Alumni and alumnae. Camp Good News (Mass.); Genre/Form: Newsletters. Clippings. Geographic: Guadalcanal (Solomon Islands), Battle of, 1942-1943. Kingston (Mass.)- Genealogy. Kingston (Mass.)- History. Kingston (Mass.)- Authors. Notes: In Local History Collection at Kingston Public Library, Kingston, Mass. Bio/History: W. Wyeth Willard was born on July 12, 1905 at Marshfield Hills, Massachusetts. He received a B.A. in 1927 from Brown University, and went on, in 1931, to receive a Masters degree from Princeton Theological Seminary. In the late 1920s he established a summer camp in Forestdale, Massachusetts, Camp Good News, which continues in operation. Willard served, briefly, as pastor of the Federated Church in Kingston, Massachusetts, prior to enlisting as a chaplain during World War II. According to the *Brown Alumni Magazine*, Willard was "credited with serving more consecutive days under constant enemy fire than any chaplain in the history of the U.S. Navy and Marine Corps." Willard wrote four books, most notably *The Leathernecks Come Through* which chronicles Willard's personal experiences and observations during the military campaigns at Guadalcanal and Tarawa in 1942 and 1943. Willard's last pastorate was at the First Presbyterian Church of Waltham, Mass., where he served for 22 years before retiring in 1982. Willard's obituary appeared in the May/June 2000 issue of the *Brown Alumni Magazine*. General Info: Access unrestricted. Unpublished finding aid available in library. Other Titles: *Combat chaplain*. OCLC: 77119186. URL: <http://ocln.org/ibistro%5Flibdetails/KINGSTON.html>

Willis, G. E. 2000. "Brothers' Fate Makes Vivid Memorial." *Air Force Times*. 05/29. Volume 60, Issue 44; 44, Pages 35. Wilson, David S. 1996. "Evolution of Artillery Tactics in General J. Lawton Collins' US VII Corps in World War Two." Volume: ADA312682, Pages: 87 Pages(s). Descriptors: *Military

Doctrine; *Military Tactics; *Artillery; Military Personnel; Students; Theses; Targets; Control Centers; Case Studies; Army; Military Commanders; Fire Control Systems; Corps Level Organizations; Doctrine. Abstract: This thesis examines the evolution of artillery tactics in World War II using General J. Lawton Collins US VII Corps as a case study. This study first reviews artillery doctrine and tactics during World War I and during the 1920s and 1930s, in which time future leaders like General Collins were military students. In 1943, General Collins commanded an infantry division on Guadalcanal where he was one of the first American generals to implement the Army's new doctrine of fire direction centers (FDCs) and massed fires using time on targets (TOTs). Collins then was selected to command the US VII Corps for the invasion of Normandy and the subsequent breakout during OPERATION COBRA. From Normandy to the end of the war, Collins continued to hone his use of artillery based on his experience during the eleven month campaign in Northwest Europe, contributing to his reputation as the best corps commander in World War II. This study looks at Army doctrine in 1944 to judge Collins artillery tactics and concludes that he used established doctrine and that his tactics are the foundation for today's artillery tactics. Notes: Master's thesis, 2 Aug 95-7 Jun 96; Approved for Public Release. Database: DTIC and NTIS. URL: <http://handle.dtic.mil/100.2/ADA312682>

Wilson, David Kirkpatrick; Pyle, Cabot Pollard and Roberts, Kenneth L. 2006. Oral History Interview with David K. Wilson, 2006 September 13, Excerpt 02. Nashville, Tn.: Nashville Public Library. Descriptors: Wilson; David Kirkpatrick; 1919-; Interviews; United States. Navy. Supply Corps; Business; Enterprise; Military History; World War II; Businesspeople; Tennessee; Nashville; Civic leaders; Veterans; World War; 1939-1945; Intrenchments; Management; Guadalcanal; Battle of; Solomon Islands; 1942-1943; Guadalcanal (Solomon Islands); Description and travel. Abstract: An excerpt from an oral history interview with Nashville business and civic leader David Kirkpatrick "Pat" Wilson, conducted on 13 September 2006 by Cabot Pyle and Kenneth L. Roberts as part of the Nashville Public Library's Nashville Business Leaders Oral History Project: The Turner Interviews. Wilson discusses his service in the U.S. Navy Supply Corps during World War II and the management lessons he learned while in the service. He also discusses what it was like being at Guadalcanal, including having to spend the evenings in foxholes. The complete interview, as well as an index, is available in the repository. Wilson, Steven. September 11, 2006. "Long Lance." Military.com. Abstract: In 1942 few Americans had ever heard of Guadalcanal, The Slot, the Solomon Islands, or one unassuming island called Savo that found itself squeezed between the aforementioned Guadalcanal (off the shoulder of Cape Esperance), and Florida Island. The only real asset these steaming jungle-bound lumps of earth offered was either their strategic position or the fact that airfields could be, or had been, carved from their inhospitable surface. Where there is land, of course, there are Marines and Soldiers, but where there are islands, there must naturally come sailors and ships. It was all very simple; the Japanese held the Solomons and the Americans wanted them, starting with the Canal. cassette (ca. 45 min.): analog, 1 7/8 ips. Videorecording: 1 videocassette (ca. 45 min.): sd., col. 1/2 in. Master sound recording: 1 sound cassette (ca. 45 min.): analog, 1 7/8 ips., Descriptors: Veterans- Wisconsin- Madison; Soldiers- Wisconsin- Milwaukee; World War, 1939-1945- Personal narratives, American; Guadalcanal, Battle of, Solomon Islands, 1942-1943; World War, 1939-1945- Campaigns- Pacific Area; World War, 1939-1945- Campaigns- Solomon Islands; Iwo Jima, Battle of, Japan, 1945; Winner, Robert W., 1922-; Videorecording; Cassette recording Videocassette; VHS tape. Abstract: The Marshfield, Wis. native discusses his World War II service as a paratrooper and mortarman with the 5th Marine Division and his experiences with the Army and Navy Reserves. Winner relates joining the Marine Raiders of the 2nd Regiment, 2nd Division and staging for the Guadalcanal campaign. He details preparation for the Bougainville Campaign and his unit's raid on Choiseul Island. He describes his reassignment to the mortar section including training in Hawaii and Saipan, preparing for the Iwo Jima campaign, landing on Iwo Jima, and attacking the middle airstrip on Mt. Surabachi. He touches upon his hospitalization in Hawaii, occupation duty at Sasebo (Japan), and visiting Nagasaki after the atomic bomb. He comments on his return home and his involvement with both the Army and Navy Reserves. Notes: Named Corp: United States. Marine Corps. Marines, 5th. United States. Marine Corps. Marines, 2nd. WWII PT Boat Tossed Up from Ocean Floor. 2007. Associated Press. April 28, 2007. Abstract: Wellington, New Zealand - Wreckage from a World War II torpedo boat was tossed up from the sea in the Solomon Islands after a powerful 8.1 earthquake hit the area in early April, an official said Friday. Jay Waura of the National Disaster Management Office said the explosive-laden boat was exposed when reefs were pushed up three meters (10 feet) above sea level by the April 2 quake, which caused a devastating tsunami in the western Solomon Islands that killed 52 people... Waura said people on Rannonga Island showed his team the wreckage sitting on dry ground. "We were amazed by this finding, as previously this wreckage had long been sitting under the sea and rusting in peace without anyone knowing about it," New Zealand Press Association quoted Waura as saying. Only the boat's hull with its deadly cargo of explosives remained intact, he said. Waura said a Solomon Islands Police Force bomb disposal unit would be sent to the island to safely detonate the explosives. URL:

Wright, Carleton. 1912-1974. Carleton Wright Papers, 1912-1974. Descriptors: Naval battles- Pacific Ocean; World War, 1939-1945- Pacific Area; Guadalcanal, Battle of, Solomon Islands, 1942-1943. Abstract: The Carleton Wright papers contains correspondence between Japanese Navy Officers and United States Navy officers regarding their recollections of the Battle of Tassofaronga (1954); comments by Commander Winslow on the struggle for Guadalcanal (1962); certificates (1912-1942); drafts of articles about the culture and living conditions of the natives of the Marshall and Solomon Islands by Vice Admiral Wright (1944-1947); and newspaper clippings about Wright (1947-1971). There are also over 200 official U.S. Navy photographs of the living conditions of the natives of Faraulep, Fonepe, and Yap Islands (1947-1948); an Inspection Report of the Caroline and Marshall Islands (1946); reports on the fifth Battle of Savo of the Solomon Islands Campaign (Nov. 30, 1942); Report on Action Off Cape Esperance the Night of Nov. 3, 1942 from the Commander Task Force 67 to the Commander South Pacific Fleet (Nov. 30, 1942)). Notes: 2 cubic ft. (2 boxes); Named Corp: United States. Navy- Officers. Genre/Form:

Photographs. Geographic: Marshall Islands. Pacific Islands (Trust Territory); Notes: Bio/History: Carleton Wright (1892-1974) was Vice Admiral of the U.S. Navy. He graduated from the U.S. Naval Academy in 1912 as an Ensign. During World War I he was Executive Officer of the destroyer USS Jarvis which laid mines in the North Sea. During World War II he commanded the USS Augusta which operated on patrol duty in the Caribbean and Atlantic Ocean areas during 1941-1942. He was awarded the Navy Cross for heroism during the Battle of Tassofaronga in the Solomon Islands, and he also received the Bronze Star and the Legion of Merit. From 1946-1947 he was the General Inspector of the Pacific Fleet and Pacific Ocean areas and Deputy Commander of the Mariana Islands. He served as Administrator of the Military Government of the former Japanese Mandate in the Mariana, Caroline, and Marshall Islands. From 1947-1948 he was the Deputy High Commissioner of the Trust Territory of the Pacific Islands. General Info: No finding aid available in repository. OCLC: 75965373.

Wukovits, John. Battle of Rennell Island: Setback in the Solomons- the Tactical Judgment of Admiral Robert C. Giffen may have Contributed to the Loss of the Cruiser USS Chicago. no. July 2007, Abstract: Lieutenant Commander Joji Higai could not have been more pleased in late January 1943. Touted by cohorts throughout the Imperial Japanese Navy as one of its best torpedo plane commanders, he had been handed a plum assignment that suited his reputation. He and his 15-plane unit from the 701st Air Group, in coordination with a second group of 16 Mitsubishi G4M torpedo bombers, were ordered to rise from Rabaul's airfields, head southwest, and attack American naval and air forces in the Solomon Islands in one of World War II's first nighttime torpedo attacks. Approximately 700 miles to the southeast, U.S. Navy Rear Adm. Robert C. "Ike" Giffen cautiously guided a conglomeration of carriers, cruisers, escort carriers and destroyers toward the Solomon Islands. His superior, Admiral William F. Halsey, after recharging the American defensive stand at Guadalcanal, hoped Giffen's foray would be the first of many U.S. offensive actions in the region. For months the American Marines and Navy had been knocked on their heels by the victorious Japanese, but Halsey's arrival infused renewed energy in the U.S. forces fighting in the region. A speedy series of American land and sea triumphs pushed the foe backward and gave a slim advantage to the United States. As 1943 dawned, Halsey optimistically said: "December had shown us faint signs that the tide was turning. By January no one could doubt that it had begun to run with us." Halsey realized that victory in the Solomons had not yet been guaranteed and that he needed more reinforcements, additional ships and aircraft, and tons of ammunition. Nevertheless, he felt confident that U.S. forces were "strong enough to attempt a modest offensive." He eagerly awaited developments as Giffen's force steamed toward Guadalcanal. The action began unfolding in late January, when American aerial reconnaissance spotted indications of a Japanese buildup at their major port of Rabaul, on the island of New Britain, and at Buin, on the island of Bougainville. An increasing number of troop transports and freighters mingled with destroyers at those locations, and Japanese carriers and battleships appeared to be on the prowl north of Guadalcanal. Radio intelligence supported the theory that a Japanese move was imminent. Since the Japanese had repeatedly poured reinforcements into the struggle for the Solomons, American planners at Pearl Harbor concluded that this was yet another such operation. Halsey was under pressure to relieve the 2nd Marine Division, weary from months of vicious combat with crack Japanese land forces on Guadalcanal. The aggressive admiral jumped at an opportunity to combine two operations--he intended to send in troop transports to bring out the 2nd Marine Division while shielding the transports with as much naval power as he could gather in the South Pacific. By doing so, he hoped to entice the Japanese into a surface engagement. Notes: This article was written by John Wukovits and originally appeared in the

Yetka, John, interviewee. Driscoll, John K. and Wisconsin Veterans Museum. 2006. Oral History Interview with John Yetka 2006. Descriptors: Veterans- Wisconsin- Madison; Sailors- Wisconsin- Milwaukee; World War, 1939-1945- Personal narratives, American; Tarawa, Battle of, Kiribati, 1943; World War, 1939-1945- Campaigns- Solomon Islands- Guadalcanal; World War, 1939-1945- Campaigns- Aleutian Islands; World War, 1939-1945- Campaigns- New Guinea; Cassette recording. Abstract: John Yetka describes his personal experiences while in Navy service before and during World War II as engineer aboard the USS Louisville and the USS Cape Esperance and subsequent work experiences in Wisconsin following the war. Yetka, growing up in Milwaukee during the depression years, rose to senior foreman in Civilian Conservation Corps (CCC) before joining the Navy in 1939 (following in his brother's footsteps). He attended basic training at the Great Lakes Training Center prior to assignment on the Louisville as an engineer in the “black gang.” Yetka touches upon USS Louisville's good will cruise to Recife (Brazil) and Montevideo (Uruguay) in time to see the Graf Spee scuttled. Following a mission carrying gold and platinum bullion from South Africa to New York, Yetka's brother came on board the Louisville prior to shipping out to the Philippines. Yetka reflects on providing escort for civilian transport ships from Philippines to American Samoa while not knowing that Pearl Harbor had been bombed. Yetka speaks of their surprise returning to Pearl Harbor and the people's joy on seeing them. After a refit in the States, Yetka mentions his experience at the Battle of Guadalcanal, the Louisville being hit with a dud torpedo in the fire-room and standing watch as the torpedo bounced around while returning to Hawaii. He talks about Japanese activity in New Guinea and some boiler work he did for the British cruiser Sydney before the USS Louisville was sent to the Aleutian Islands to close the channel (sinking all Japanese ships and transports) and his thoughts on the Tarawa (Gilbert Islands) Assault. Yetka mentions his transfer to the USS Cape Esperance, encountering a storm that sunk escorts and destroyers, how USS Cape Esperance's commander was a southern bully only thinking of Dixie, and Yetka's reaction to the Japanese surrender. When on Mare Island, (California), Yetka saw a sign on a civilian residence reading, “Sailors and dogs, keep off,” after which he mentions his impression of Americans at that time. After his discharge in 1945 at Walt Chamberlain Field (Minnesota), Yetka describes subsequent work with the Conservation Department, Goodyear Aircraft and General Motors where he gave the final approval for the mechanical portion of the guidance system used on the Apollo spacecraft. He concludes the interview mentioning additional anecdotes about the Louisville's history, naval family life and his family. Notes: Transcript 7/8 ips; Named Person: Yetka, John, 1918-; Named Corp: United States. Navy- Civic operations. Louisville (CA: 28). Cape Esperance (CVE: 88). United States. Navy- Military life. Graf Spee. Geographic: Pearl Harbor (Hawaii)- Personal narratives, American. Notes: Bio/History: Yetka (1918-) born in Cloquet (Minnesota) and raised in Milwaukee, joined

the Navy in 1939 and served as an engineer with the Louisville during the Battle of Guadalcanal and Aleutian Islands. He was transferred to the Cape Esperance and made chief engineer before being discharged in 1945. Yetka worked in Arizona with Goodyear Aircraft before returning to Wisconsin and General Motors. Zimmerman, John L. United States; Marine Corps; History and Museums Division and Historical Branch. 1949, 1990. *The Guadalcanal Campaign*. Nashville, TeBattery Press. Descriptors: 189; Guadalcanal, Battle of, Solomon Islands, 1942-1943; United States. Marine Corps- History- World War, 1939-1945. Notes: Reprint. Originally published: Washington: Historical Division, Headquarters, U.S. Marine Corps, 1949. “Marine Corps monographs.” Includes bibliographical references (p. 170-172). Responsibility: John L. Zimmerman. “December 5, 1947. We struck at Guadalcanal to halt the advance of the Japanese. We did not know how strong he was, nor did we know his plans. We knew only that he was moving down the island chain and that he had to be stopped. We were as well trained and as well armed as time and our

Natural History of Guadalcanal

peacetime experience allowed us to be. We needed combat to tell us how effective our training, our doctrines, and our weapons had been. We tested them against the enemy, and we found that they worked. From that moment in 1942, the tide turned, and the Japanese never again advanced.” -A.A. Vandegrift, General U.S. Marine Corps. ISBN: 0898391474; OCLC: 21576858; 66120337. URL: <http://www.ibiblio.net/hyperwar///USMC/USMC-M-Guadalcanal.html#4>

USMC Photo. “The temporary resting place of a Marine killed in the fighting at Lunga Point is shown here. The grave marker was erected by his friends. The Marine's remains were later removed to the division cemetery on Guadalcanal, and further reburial at war's end either in his hometown or the Punchbowl National Cemetery in Hawaii with the honors due a fallen hero.” Shaw, Henry I. First Offensive.
