Form Approved OMB No. 0704-0188

### **Outline**

Our Recent Heritage – MEA

Our Plan – HiPAC

HiPAC Technologies

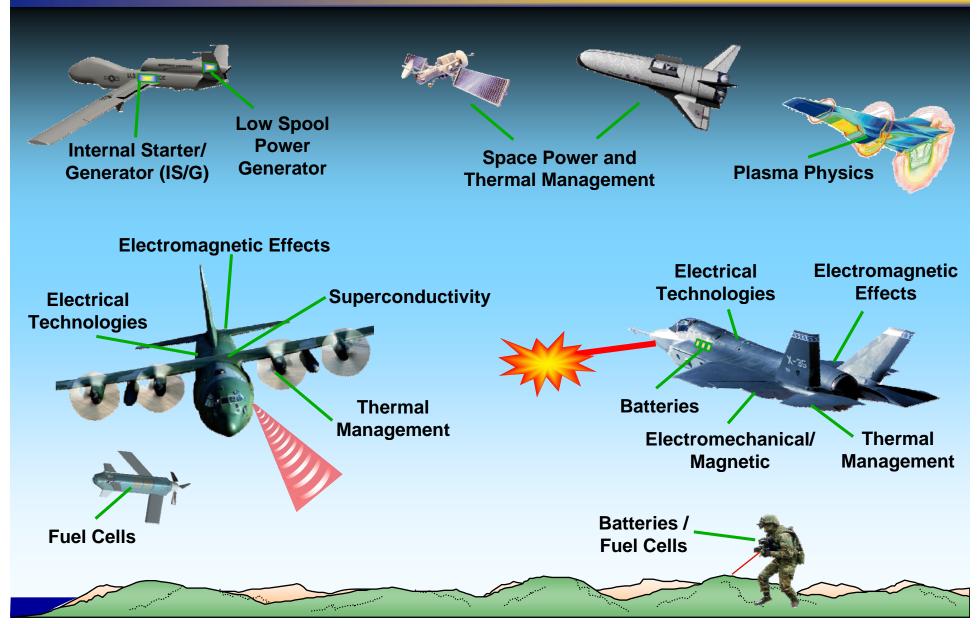

Summary

## Air Force Research Lab Power Technology Program

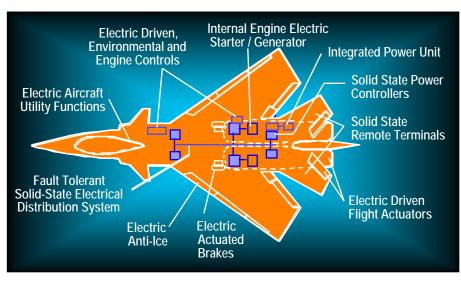

# Our History: The More Electric Aircraft

#### **THE VISION**

#### THE IMPACT

All-electric aircraft eliminates complex, inefficient, maintenance intensive...

- Hydraulics
- Bleed Air Pneumatics
- Mechanical (gearbox) Subsystems

Savings in \$B's with improved warfighting

Enables mission available power for lethal airborne directed energy weapon

## **MEA Generation I Concept Transition to Lockheed F-35**

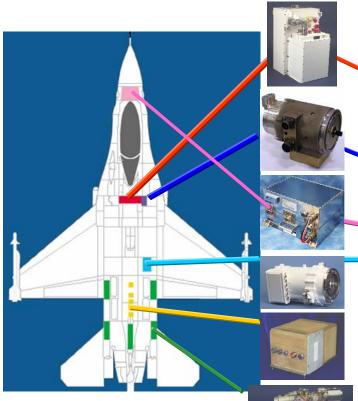

#### Affordable, High-Performance Baseline for F-35

AFTI/F-16 Demonstration Validates More-Electric Aircraft Technologies

#### **Common Components**

F-35 Subsystems Suite Identical to J/IST

Inverter/Converter/Controller (2) – Provides Conditioned 270-VDC Power to Flight Critical Actuation System

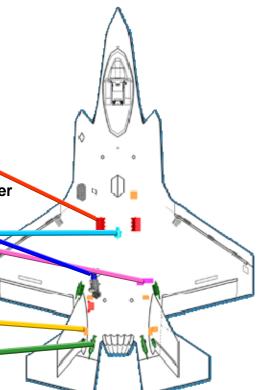

270-VDC Emergency Generator – Provides Independent Source of Electrical Power

270-VDC Battery – Provides
Uninterruptible, Flight-Critical Power

Starter/Generator – Source for – Redundant, Flight-Critical Power

Power Drive Electronics – Provide Modulated 270-VDC Power to Flight Control Actuators

Electro-hydrostatic Actuators – Provide Redundant Control Power at Each Control Surface

## From Vision to Reality

## F-35 IS THE <u>FIRST</u> TRULY "MORE ELECTRIC" AIRPLANE

**Electric Engine Start Ground Demo** 

Starter/Generator / Electric Flight Control Actuation Flight Demo

- Electric Engine Start
- Electric Power & Thermal Mgt System
- Electric Flight Control Actuation
- Electric Flight Control Power Systems

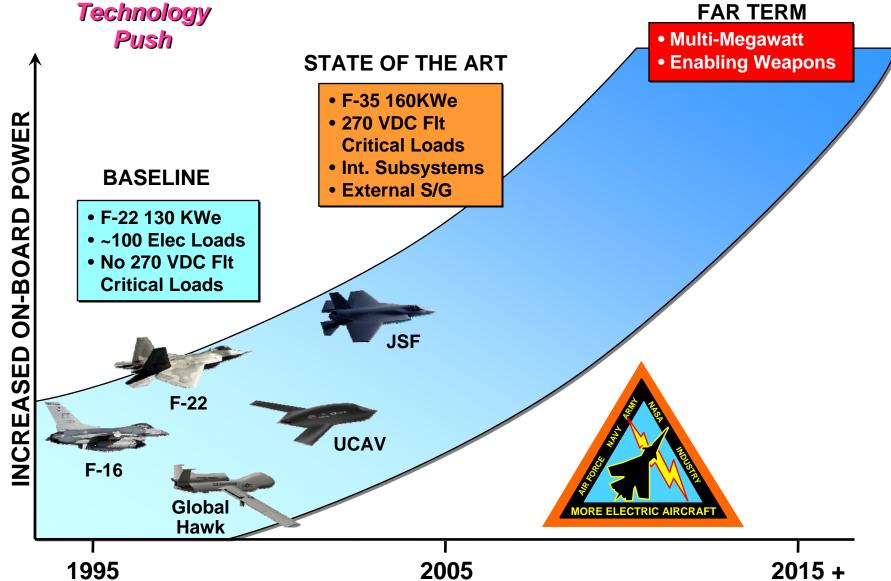

**MEA Thrust Initiated In 1987** 

# **Exponential Growth for Power and Thermal Technology**

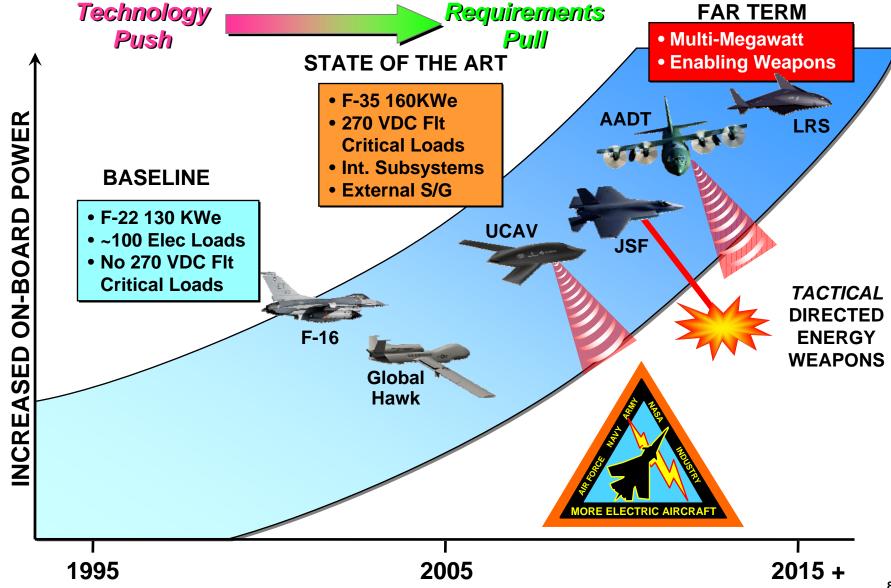

# **Exponential Growth for Power and Thermal Technology**

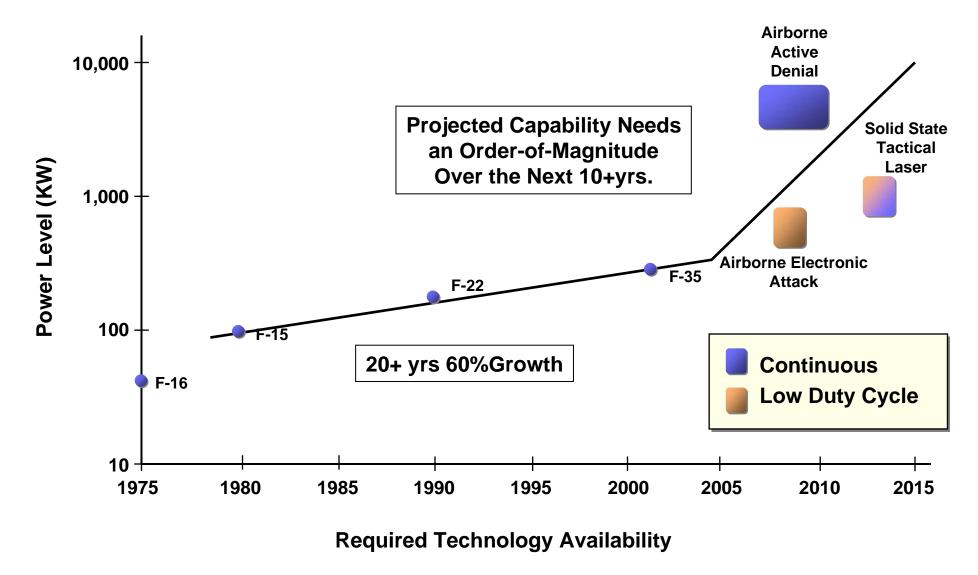

# DE Weapons Need Unprecedented Power & Thermal Management

## **HiPAC Technical Program Areas**

#### Micro-Mini Platforms

Munitions / UAV

Tactical Aircraft

Large Platforms

Directed Energy

- High Temperature Power System Components
- High Temperature Thermal Control Systems
- EMI Immunity
- Integrated Engine / Power Extraction
- Smart Power: Prognostics & Health Management
- MW Power Generation
- MMW Power Generation
- Active High Flux Thermal Control System
- Lightweight Compact Power Conditioning
- Energy Storage
- Electrochemical Power Generation
- MEMS Power Generation
- MEMS Thermal Management
- Pulse Power Components
- Subsystem Integration

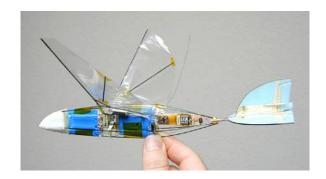

### **Micro-Mini Platforms**

## Small Platforms with sub kW Power Requirements

#### **Technologies:**

- MEMS Power Generation
- MEMS Thermal Management
- Batteries
- Fuel Cells

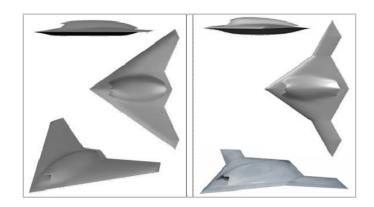

### **Munitions / Small UAVs**

## Munitions / Small UAVs with 1-100 kW Power Requirements

#### **Technologies:**

- EMI Immunity
- Integrated Engine / Power Extraction

- Smart Power Prognostics and Health Management
- Electrochemical Power Generation
- Light Compact Power Conditioning
- Energy Storage

# Low Spool Generator for Global Hawk

**Enables Advanced Sensor Upgrades for Global Hawk** 

#### **Power Technologies Benefits:**

- •15% Thrust Improvement at Altitude
- 7.5X Increase in Power Generated

#### **GLOBAL HAWK CAPABILITIES**

NOW: 2000 lb Payload

24 Hour on Station

1200 NM range/ 60K ft altitude

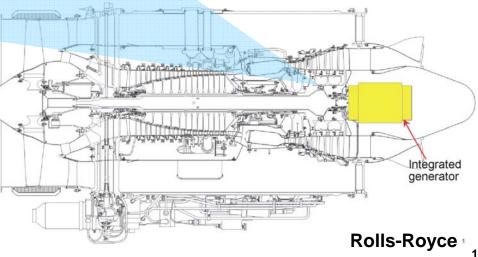

10 KVA Payload Power

**FUTURE: 3000lb Payload** 

20 Hour on Station

1200 NM range/ 60K ft altitude hold 25 KVA(Near-term); 75 KVA(Far-term)

#### **AE3007 ENGINE - GLOBAL HAWK PROPULSION**

### **Tactical Aircraft**

## Tactical Aircraft with 100-500 kW Power Requirements

#### **Technologies:**

- High Temperature Power System Components
- High Temperature Thermal Control Systems
- Energy Storage
- Integrated Engine / Power Extraction
- EMI Immunity
- Smart Power: Prognostics & Health Management
- Lightweight Compact Power Conditioning
- Electrochemical Power Generation

## Li Ion Battery

 Lithium Ion Technology Developed Under Joint AFRL/NASA/JPL Program Transitioned to B-2, F-35, and Mars Rovers

- B-2 Batteries >350 Flight Test Hours Logged
- Mars Rover Batteries Fully Operational After 7 Month Cruise Through Space

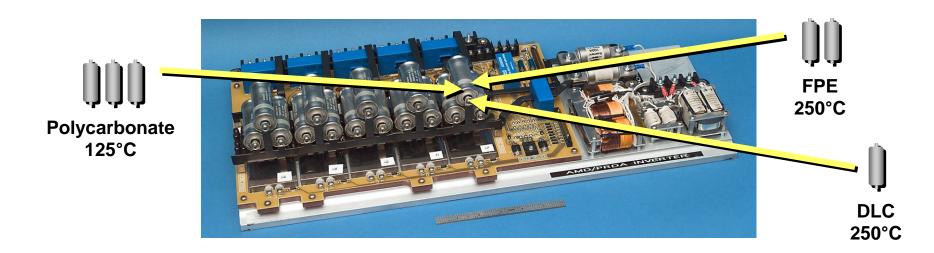

## Revolutionary Capacitor Development

DIELECTRIC	DIELECTRIC CONSTANT	FILM THICKNESS	BREAKDOWN STRENGTH	UPPER-LIMIT TEMPERATURE	ENERGY DENSITY
POLYCARBONATE	3.2	3 <b>m</b>	5 KV/mil	125°C	> 1.0 J/g
FLUORENE POLYESTER (FPE)	3.4	3 <b>m</b>	10 KV/mil	250°C	> 2.0 J/g
DIAMOND-LIKE CARBON (DLC)	3.5	0.5 <b>m</b>	25 KV/mil	250°C	> 4.0 J/g

- Low cost DLC thin film in-house process scale-up (Mar 01);
   Commercialization by FY04 (energy density)
  - Enables DEW - 2X increase in energy density
- Reduces size, weight & volume

## **Large Platforms**

# Large Platforms with 250 kW - 2+ MW Power Requirements

#### **Technologies:**

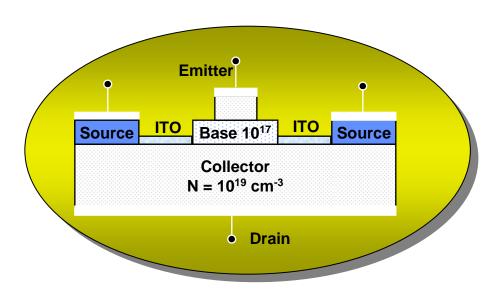

- MW-MMW Power Generation
- Integrated Engine / Power Extraction
- High Temperature Power System Components
- High Temperature Thermal Control Systems
- EMI Immunity
- Smart Power: Prognostics & Health Management
- Lightweight Compact Power Conditioning
- Energy Storage
- Electrochemical Power Generation

### **Optically Triggered SiC Switch**

#### **TECHNICAL CHALLENGES:**

Device design is foundational. Carrier transport and optical generation not quantified.

#### **APPROACH:**

- Develop key fabrication components
  - SiC photo-transistors (600V, 60-150A)
  - SiC "PGBT"-based switches
  - 2-D modeling in parallel with fab.
- Demo devices in electric actuator drive controllers or I-H motor drive

#### **OBJECTIVE & PAYOFF:**

Reduce actuator weight while providing photonic switching device to satisfy the robust actuator switching requirements for an EMI invulnerable FBL/PBW airframe concept.

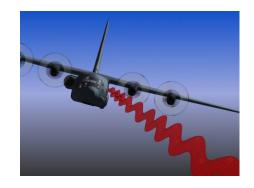

## **Directed Energy**

#### Directed Energy Concepts with 250 kW - MMW Power Requirements

#### **Technologies:**

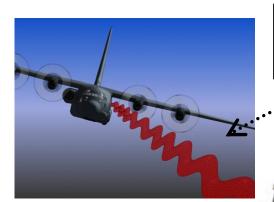

- Integrated Engine / Power Extraction
- MW-MMW Power Generation
- Active High Flux Thermal Control System
- Lightweight Compact Power Conditioning
- Energy Storage
- Pulse Power Components

- EMI Immunity
- High Temp. Power System Comp.
- High Temperature Thermal Control Systems
- Smart Power: Prognostics & Health Management

## Multimegawatt Electric Power System

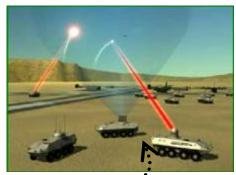

Directed Energy Weapons

1-5 MW Capability Needed for Multiple Applications

**Army Future Combat Systems Electric Weapons** 

Power

| Nogodolos bas | 20 MW | 3 MW | 20 MW | 4 MW | 4 MW | 6 MW | 20 MW | 1.5 MW | 2.5 kV DC | 4 MW | 50 V DC | 5 V

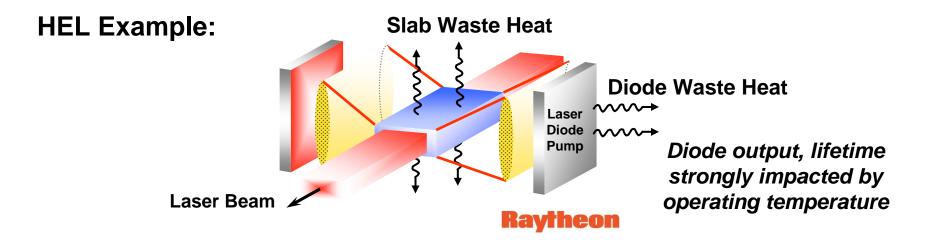

**Navy Distributed** 

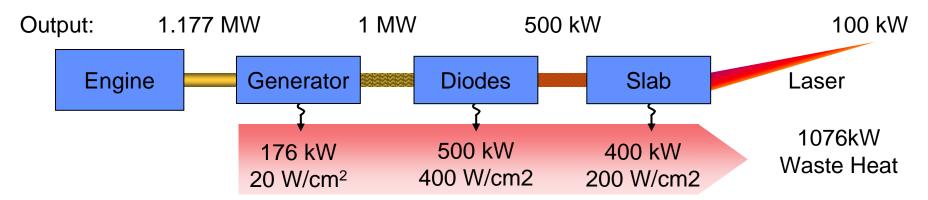

# Power & Thermal Management .. Critical to DEW System Success

The overall efficiency of solid state lasers vary from 10% to 30%, thus large amounts of waste heat must be managed

As an example, for a 10% efficient laser

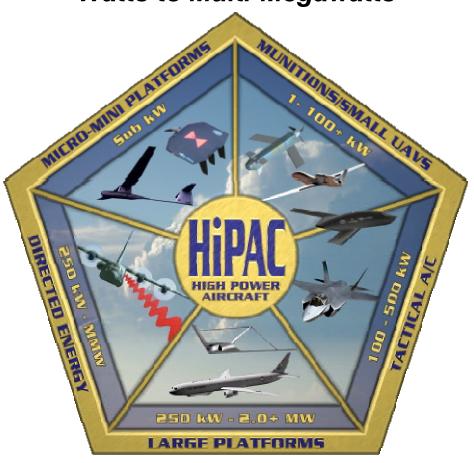

## **High Power for Aircraft Initiative**

## Five Power Regimes from Watts to Multi-Megawatts

Meet Today's and Tomorrow's Need for Unprecedented Power and Thermal Management

System
Approach to
Integrated and
Optimized
Weapons Power
and Thermal
Management

Powering the United States Air Force!
