Report Documentation Page

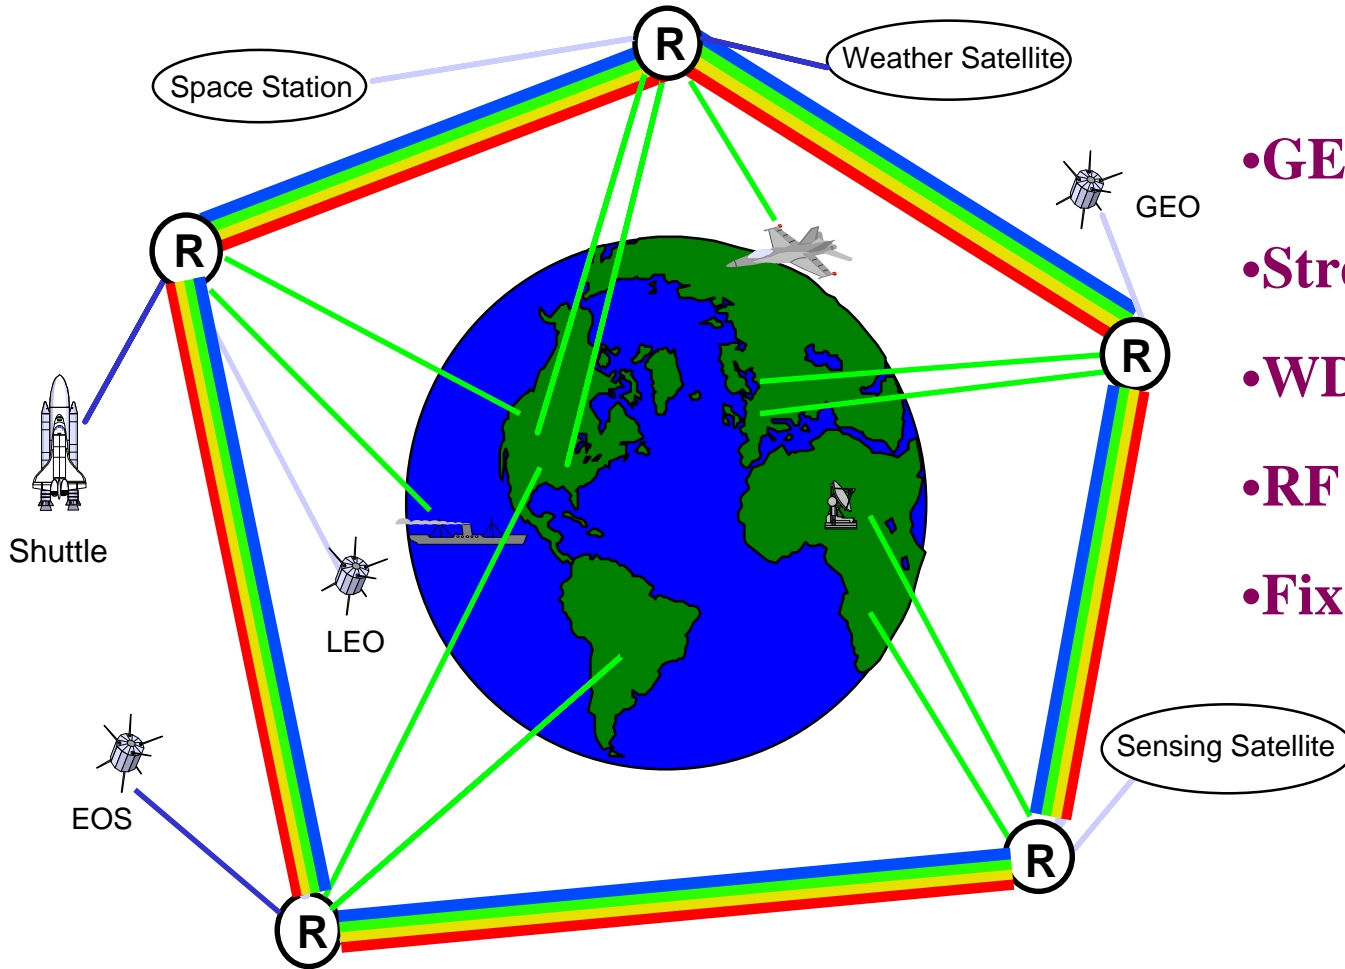

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

1. REPORT DATE 18 APR 2000		2. REPORT TYPE N/A		3. DATES COVERED -	
4. TITLE AND SUBTITLE WDM Networking for Defense Applications				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Massachusetts Institute of Technology				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release, distribution unlimited					
13. SUPPLEMENTARY NOTES DARPA/MTO, WDM for Military Platforms Workshop held in McLean, VA on April 18-19, 2000, The original document contains color images.					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT	18. NUMBER OF PAGES	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

WDM Wide Area Network in Space

- GEO/MEO/LEO
- Streams & Packets
- WDM trunks
- RF & optical accesses
- Fixed/mobile users

MIT

4-D Global Network

INDORSEMENT OF FACTUAL ACCURACY OR OPINION

Optical Space Cross-Link

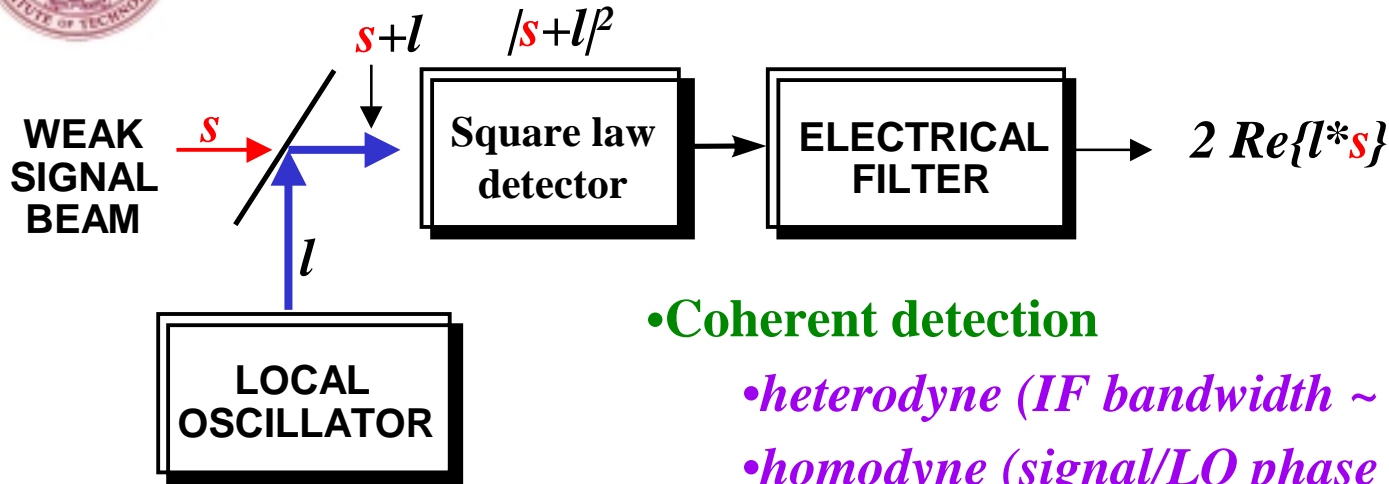

- Space backbone
- Digital or analog
- On-board demod
- Transponded
- E/O routed

Structured Receivers

•Coherent detection

- heterodyne (IF bandwidth $\sim 2 \times$ data rate)
- homodyne (signal/LO phase lock required)
- 30-50dB gain, quantum limit easily achieved

•Direct detection

- simple
- noisy gain other PMT
- PMT can achieve quantum limit (BW and QE limited)

But quantum receivers are just over the horizons

Bit Error Rate Performance

Signal Set	Direct Detection	Heterodyne Detection	Homodyne Detection	Quantum Optimum
On-off Signal	$2N_s$	$N_s/2$	N_s	$2N_s$
Orthogonal Signal (PPM, FSK)	N_s	$N_s/2$	N_s	$2N_s$
Antipodal Signal (PSK)	Not Applicable	N_s	$2N_s$	$4N_s$

Receiver performance comparison; probability of detection error, $\Pr[\epsilon]$ for binary signaling

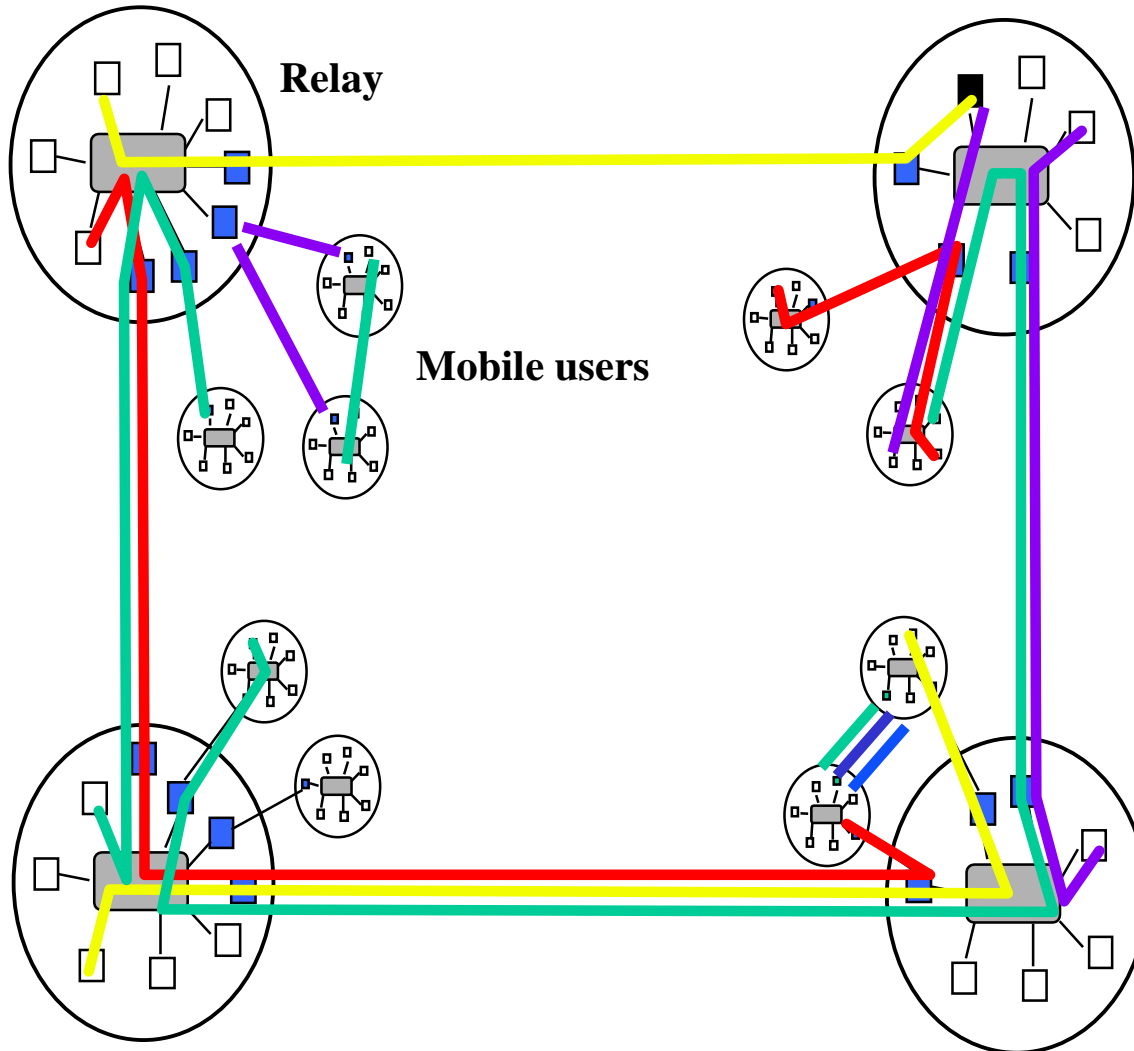

¹ Exponent θ of tightest exponential bound, $\Pr[\epsilon] = e^{-\theta}$

² N_s = average number of detected photons per bit

Detection Scheme	Direct Detection	Homodyne Detection
Computation Cut-off Rate, R_0	1 nat/photon	1 nat/photon
Capacity, C	∞	2 nat/photon

Node Concepts

- e/o switching/routing
- Streams/packets
- Interconnect with RF
- Analog links

 = S/C LAN

Spacecraft LAN Architecture

MIT

ONRAMP Regional Access Network Physical Architecture

REVIEW OF THIS MATERIAL DOES NOT IMPLY DEPARTMENT OF DEFENSE
INDORSEMENT OF FACTUAL ACCURACY OR OPINION

•Feeder network

Active

Multi-fiber WDM

Configurable access nodes

Banded add/drop

Full restoration

•Distribution network

Passive

WDM

Tree/Bus/Ring topology

•End-to-end light paths

MAC protocol setup

Local/global coordination

Efficient multicasting

Optical Flow Switching and Bypass

REVIEW OF THIS
MATERIAL DOES NOT
IMPLY DEPARTMENT OF
DEFENSE
INDORSEMENT OF
FACTUAL ACCURACY
OR OPINION

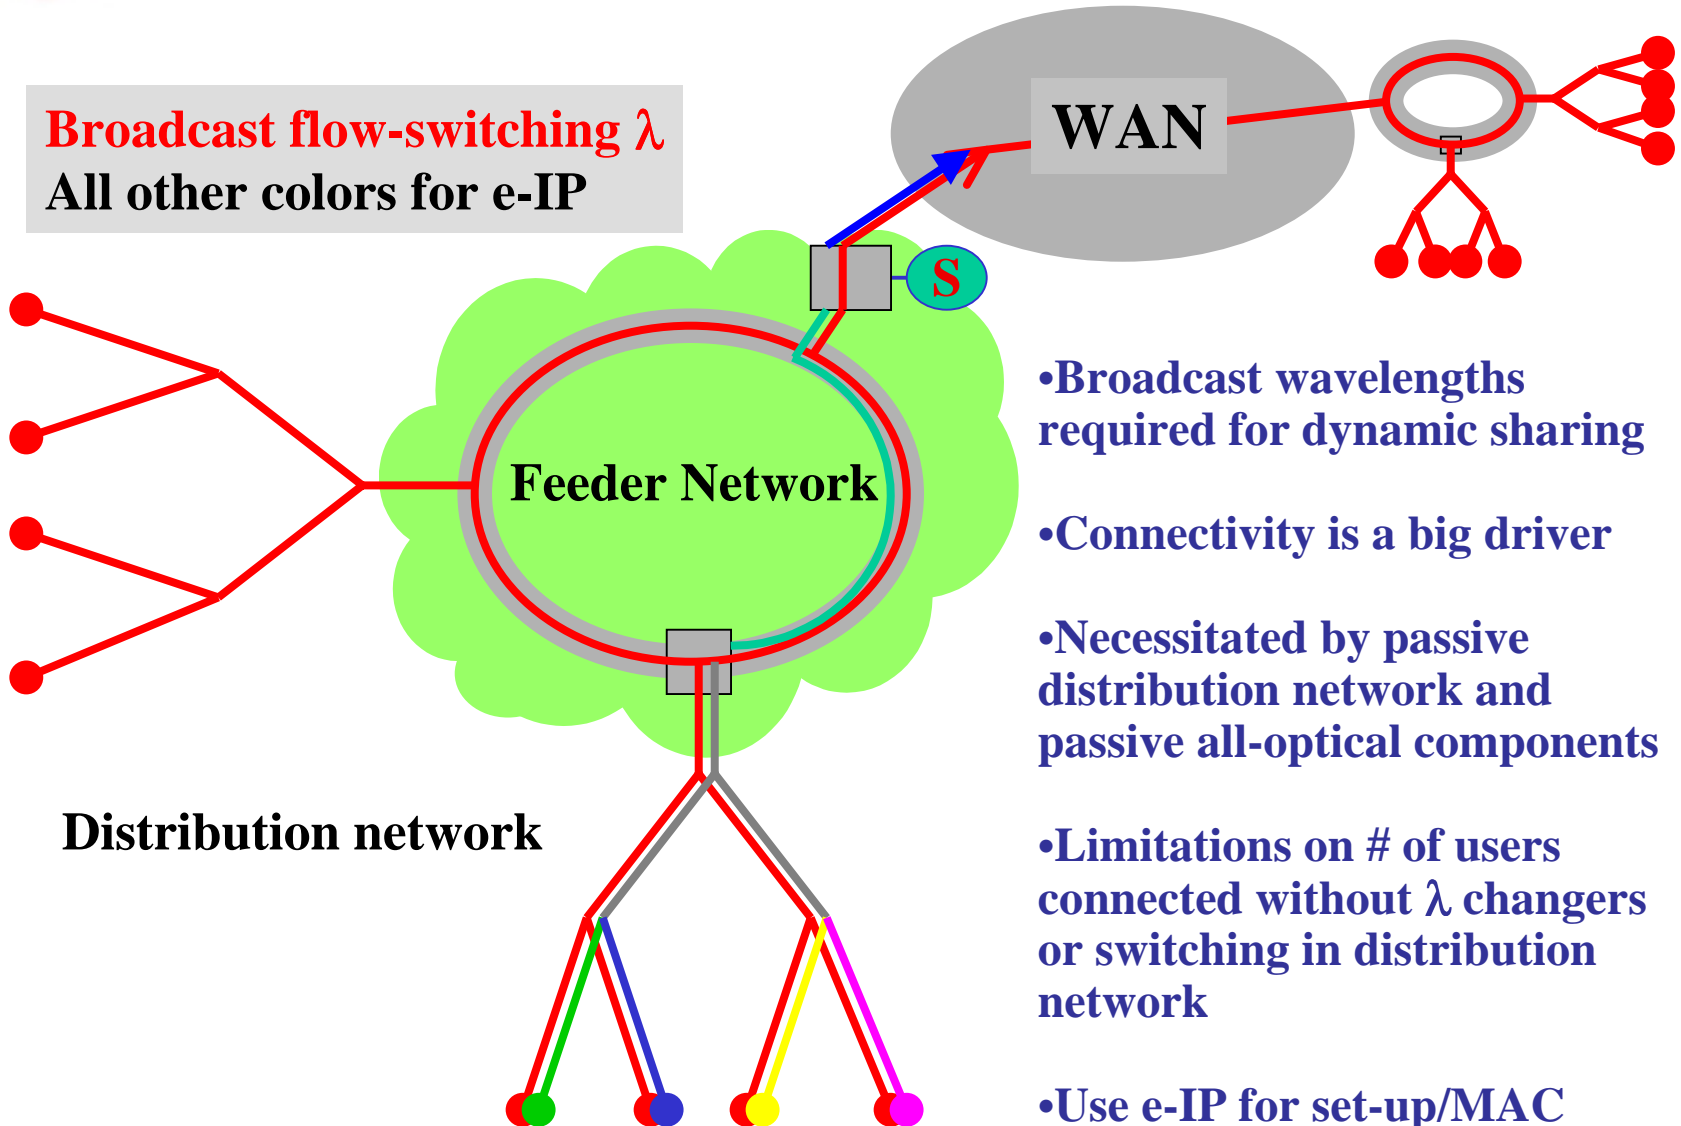

- **Conventional packet routing**
- **Optical bypass of intermediate routers for high volume traffic**
- **End-to end (user-to-user) flow of entire file bypassing routers**
 - *~ 1 S duration or longer via fast end-to-end scheduling*
 - *MAC protocol for reservation request*
 - *Scheduling time ~ 100 mS*
- **Application and TCP/IP layers implications and modifications**
- **Network management and control**

Flow Switching Physical Layer Architecture

Broadcast flow-switching λ
All other colors for e-IP

- Broadcast wavelengths required for dynamic sharing
- Connectivity is a big driver
- Necessitated by passive distribution network and passive all-optical components
- Limitations on # of users connected without λ changers or switching in distribution network
- Use e-IP for set-up/MAC
Bounded jitter required

LIST

1. **High power efficient fiber amp ($>20\text{W}$)**
2. **Ultra-low loss WDM combiner ($<0.1\text{db}$)**
3. **Low-loss, low-crosstalk WDM components ($>30\text{db}$)**
4. **Photon counting receiver**
5. **Analog transmitter/receivers/amplifiers**
