

Distributed Acoustic Arrays: Infrastructure Architecture and Performance

Loren Clare
Rockwell Science Center
Thousand Oaks, CA

DARPA Air-Coupled Acoustic Sensors Workshop
24-25 August 1999
Crystal City, VA

Report Documentation Page

Form Approved
OMB No. 0704-0188

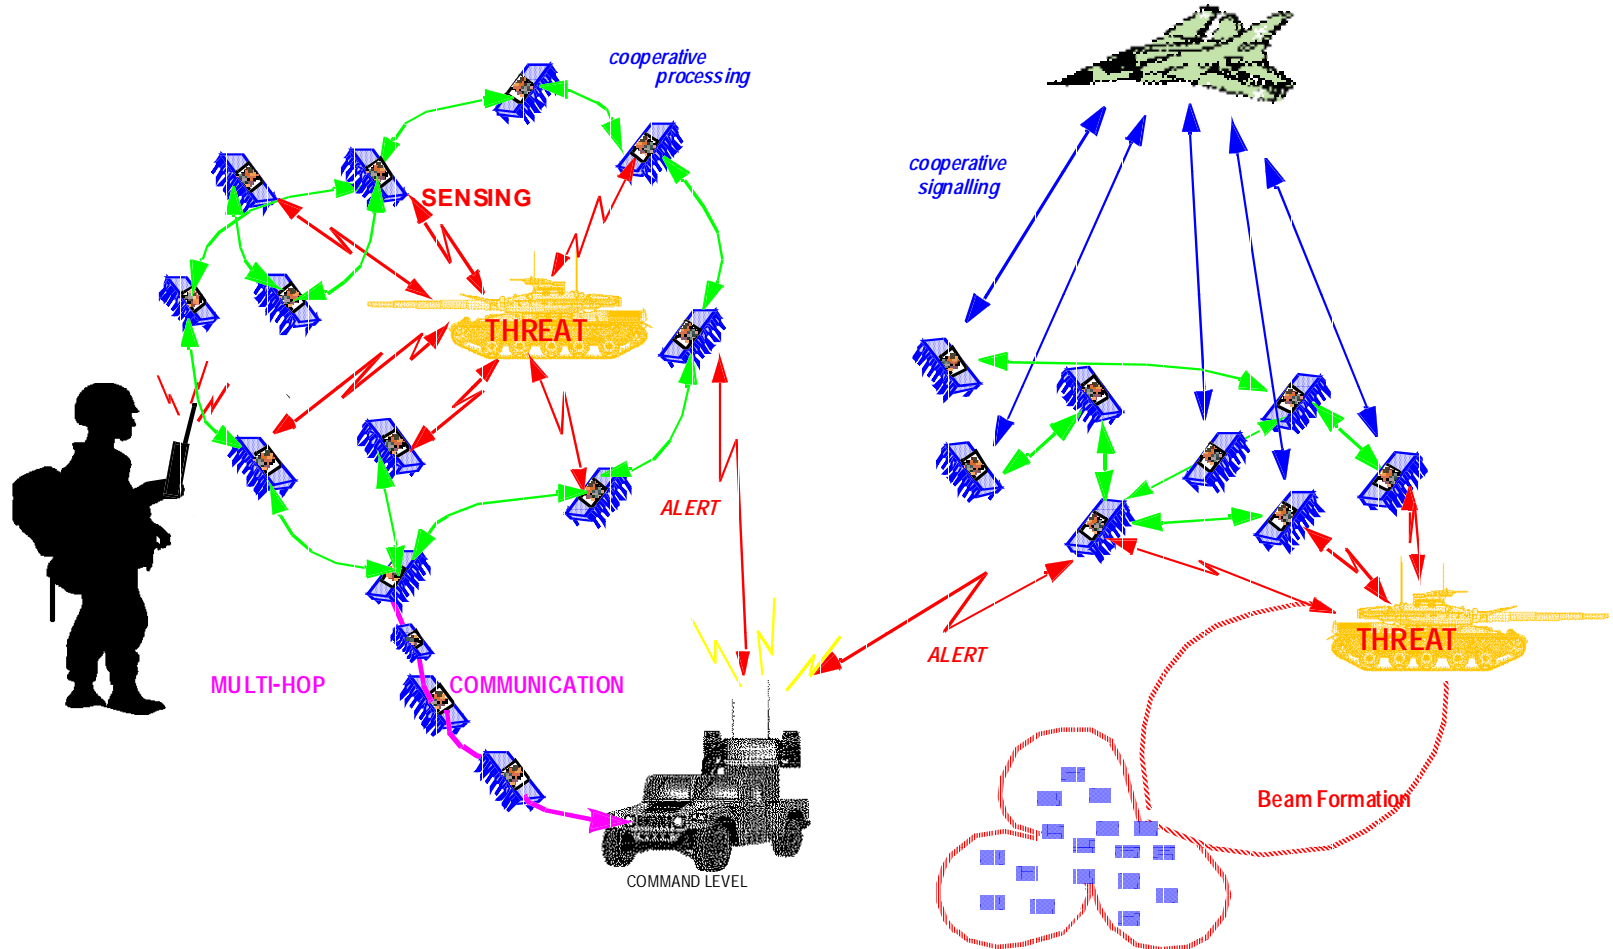

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

1. REPORT DATE 25 AUG 1999	2. REPORT TYPE N/A	3. DATES COVERED -	
4. TITLE AND SUBTITLE Distributed Acoustic Arrays: Infrastructure Architecture and Performance		5a. CONTRACT NUMBER	
		5b. GRANT NUMBER	
		5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)		5d. PROJECT NUMBER	
		5e. TASK NUMBER	
		5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) Rockwell Science Center Thousand Oaks, CA		8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)		10. SPONSOR/MONITOR'S ACRONYM(S)	
		11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release, distribution unlimited			
13. SUPPLEMENTARY NOTES DARPA, Air-Coupled Acoustic Microsensors Workshop held on August 24 and 25, 1999 in Crystal City, VA., The original document contains color images.			
14. ABSTRACT			
15. SUBJECT TERMS			
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified	UU
			18. NUMBER OF PAGES 6
			19a. NAME OF RESPONSIBLE PERSON

Distributed Acoustic Arrays: Infrastructure Architecture and Performance

- Concept:
 - A large number of sensor “nodes” cooperate.
 - Each node has an acoustic and possibly other sensors.
 - Each node has signal processing capability.
 - Each node is small, lightweight and inexpensive.
 - The nodes interact by wireless communications.
 - The nodes are easily deployed and self-organizing.
 - The nodes cooperate to provide low-power operation (hence longevity) to detect, localize and identify targets.
- Under the DARPA/ATO AWAIRS program, UCLA and the Rockwell Science Center have progressed toward achieving this system concept.

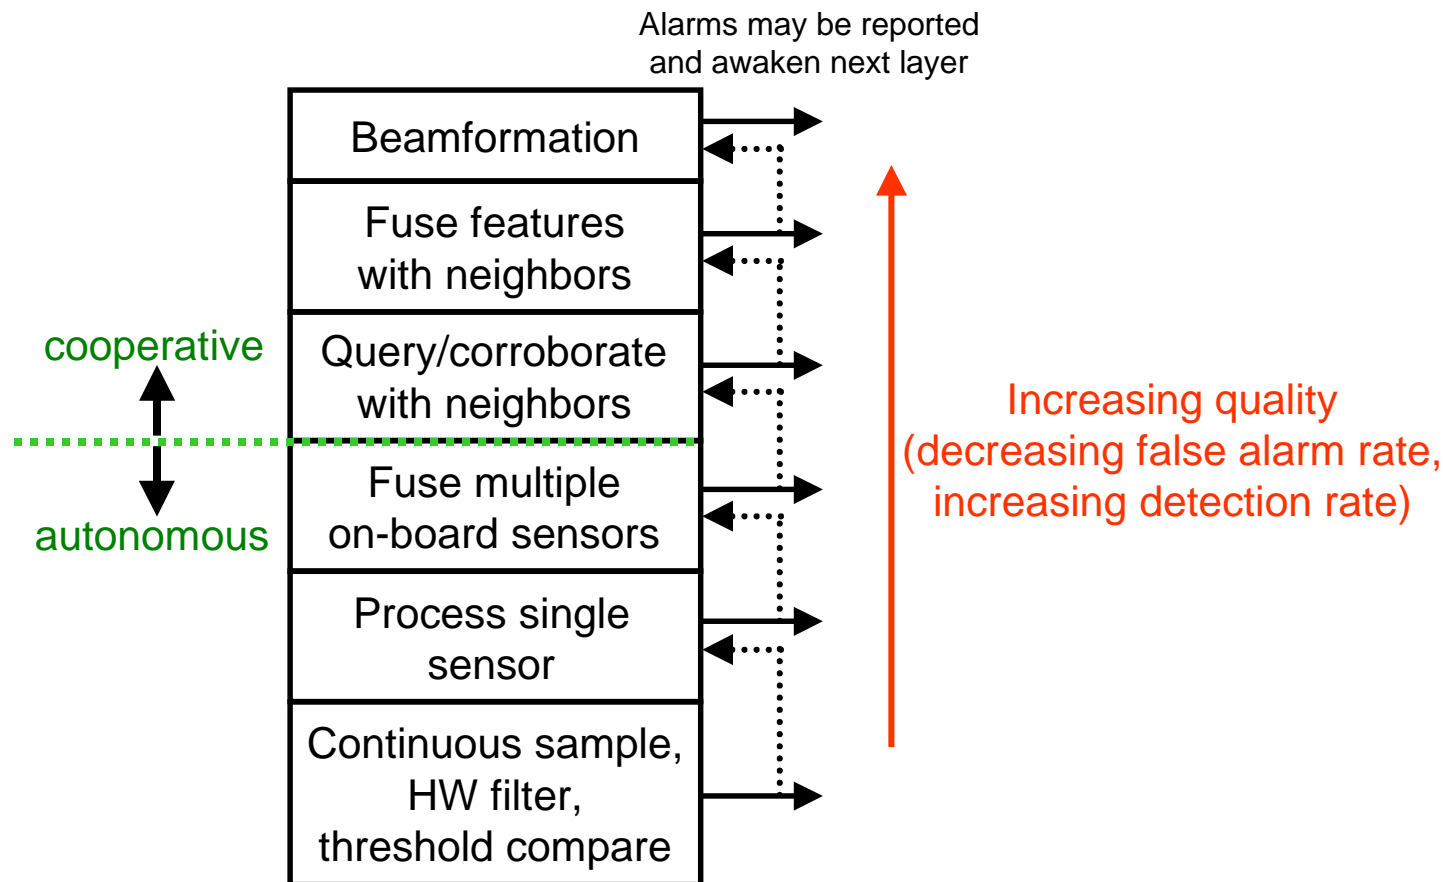

AWAIRS: Adaptive Wireless Arrays for Interactive RSTA for SUO

AWAIRS 1 PROTOTYPE NODE

Distributed Wireless Microsensor Network: Signal Processing Architecture for Low-Power Operation

Distributed Microsensor Arrays: Wireless Communications Networking

We have developed a prototype system capable of

- Synchronous streaming data collection from dispersed sensor nodes
 - Star radio topology to base station(s)
 - Each node samples at 1kHz
 - Internode sync within 100 μ sec
- Realtime “detection network” where target decisions are derived on-board each node and exchanged with neighbors
 - Extending infrastructure to accommodate dynamic establishment of streaming circuits to support on-line beamformation
