Report Documentation Page

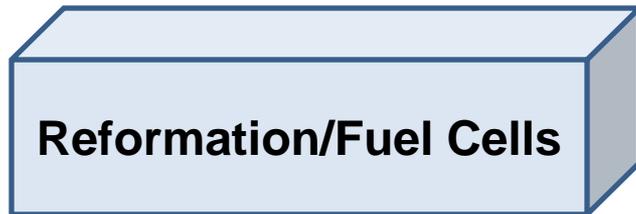

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

- Achieve increased power density for existing vehicle APU space claims
- Optimize injectors for heavy fuels
- Minimize acoustic signature

- Achieve increased power density for existing vehicle APU space claims
- Optimize system integration and controls

- Achieve increased range (vs. current batteries) with small engine and fuel cell-based power sources
- Minimize acoustic signature of small engine-based robotic platforms
- Increase fuel cell reliability and shock and vibration performance

Mission Goals for each Focus Area:

- High Power Density Engine APU that can provide up to 45 kWe auxiliary power to meet increasing onboard vehicle power demands without reducing mobility.
- Silent Watch (undetectable at 50m) through the use of a fuel cell based APU that power mission equipment with main engine off while the vehicle is stationary with reduced acoustic and thermal signature.
- Small UGV power through small engine and fuel cell based solutions that can extend the mission duration and range of UGVs, reducing risk to soldiers.

9kW JP-8 Rotary APU:

Integrated, Demonstrated, Tested

Project Purpose & Goal:

- Develop, integrate, test and demonstrate a 9kW rotary engine APU in Abrams M1A2 SEP V1 tank
- Ruggedize design to meet vibration requirements of tank
- Optimize component placement for ease of maintenance
- Produce 6 units for testing at various government test facilities

Program Status:

- Completed 200+ hours (2000 miles) of in-vehicle operational conditions at Yuma
- Completed two 100 hour high temperature (125F) tests at TARDEC Propulsion Lab
- Completed M1A2 SEP V1 Integration Test of 300+ tank commands
- Delivered performance specification to PM HBCT, which may be used for open competition
- Delivered test report of all testing completed

Challenges:

- Consumes oil: 1 qt. every 12hrs.
- Requires constant use of glow plug
- Maintenance required every 75hrs
- Minimal noise mitigation work done

Schedule

	FY06	FY07	FY08	FY09	FY10	FY11
Generation 1 – Proof of Concept	■					
Generation 2 – Test Prototype		■				
Generation 3 - 9 kW APU			■			
- TARDEC Testing				■		
- Aberdeen Proving Grounds Tests				■		
- Yuma Proving Grounds Test				■		

Project Purpose & Goals:

- Design, model, build & deliver Rotary Diesel APU
- Utilize lessons learned from previous Rotary APU work
- Produce APU for Abrams space claim
- Increase power by utilizing modern rotary engine technology
- Minimize dependence on glowplug
- Decrease oil consumption

Technology Description:

- Rotary engine, continuous glowplug ignition
- 17kW electrical output
- Improved fuel economy
- 350 lbs
- Fits in Abrams space
- Reduced cooling burden
- Lower fuel consumption (kg/kW)

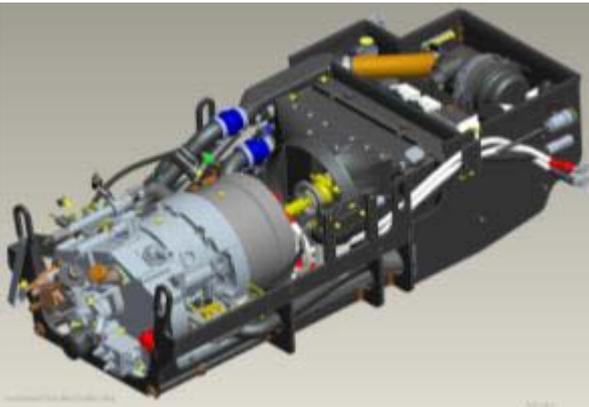

Challenges

- Consumes oil, but at lower rate than previous generation
- Requires use of glowplug for combustion
- New engine design: limited evaluation done

Schedule

	FY09		FY10		FY11		
	Q1	Q3	Q1	Q3	Q1	Q3	
Component Design	█						
Component Fabrication	█	█					
Engine Assembly		█	◆				
Engine Performance Testing		█	█	█	◆		
Component Testing			█				
Engine Endurance Testing				█	█	◆	
APU Fabrication					█	█	
APU Testing						█	◆

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Reciprocating Piston APU: Current Program

Project Purpose & Goals:

- Produce APU for Abrams space claim
- Utilize COTS Direct Injection (DI) compression ignition engine
 - State of the art in reducing fuel consumption and optimizing fuel control
- Integrate muffler inside space claim

Technology Description:

- 10kW electrical output (360A)
- Single Cylinder 4-stroke Diesel engine
- Liquid Cooled
- In-cylinder fuel injection
- 420 lbs
- Fits in Abrams space (including muffler)
- True compression ignition

Challenges

- Consumes oil: 1 qt. every 24hrs. Reservoir needs refill every 40 hrs
- No ballistic protection in unit design
- Not a drop-in design
- Minimal noise mitigation work done

Schedule

	FY08	FY09	FY10	FY11	
Component Design	[Gantt bar]				
Component Testing	[Gantt bar]				
Air Cooled Unit Fabrication	[Gantt bar]				
Air Cooled Unit Testing	[Gantt bar] [Milestone diamond]				
Liquid Cooled Unit Design	[Gantt bar]				
Liquid Cooled Unit Fabrication	[Gantt bar]				
Liquid Cooled Unit Testing	[Gantt bar] [Milestone diamond]				
TARDEC Test & Evaluation	[Gantt bar] [Milestone diamond]				

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Project Purpose & Goals:

- Build, test, mature & deliver Rotary Diesel Engine
- Utilize state of the art high pressure fuel system, direct injection, and turbocharger system
- Produce 25kW APU for Abrams in 3 yrs.
- Collaborate with AMRDEC UAV Shadow program to use same technology for multiple applications
- Minimize oil consumption, use oil for cooling to minimize logistical burden

Technology Description:

- 25kW shaft output , spark ignition
- Low noise & vibration design
- Extremely lightweight and power dense
- Fits in Abrams APU space
- Optimized fuel control and low fuel consumption
- Reduced logistic burden

Challenges

- New engine design: limited evaluation done
- Optimizing oil consumption, while providing enough lubrication for side seals
- Spark plug long term durability
- Use of multiple injectors have not been fully determined

Schedule

	FY11	FY12	FY13	FY14	FY15	FY16
Engine Build, Turbo Selection	█					
Engine Reliability Testing	█	█				
Engine Delivery & Demo		◆				
APU Build		█	█	█		
APU Delivery & Demo				◆		
APU Test & Evaluation (TRL 5)				█	◆	
APU Redesign & Optimization					█	

JP-8 Fuel Cell APU: Current Program

Project Purpose & Goals:

- Provide quiet, continuous, non-primary electrical power for extended engine-off operation with reduced acoustic and thermal signatures in a fuel cell based APU.
- Design and develop two APUs that deliver 5 kW (T), 10 kW (O) of vehicle electrical power
- Design systems to fit into the existing Abrams APU space claim

Technology Descriptions:

High Temperature PEM APU

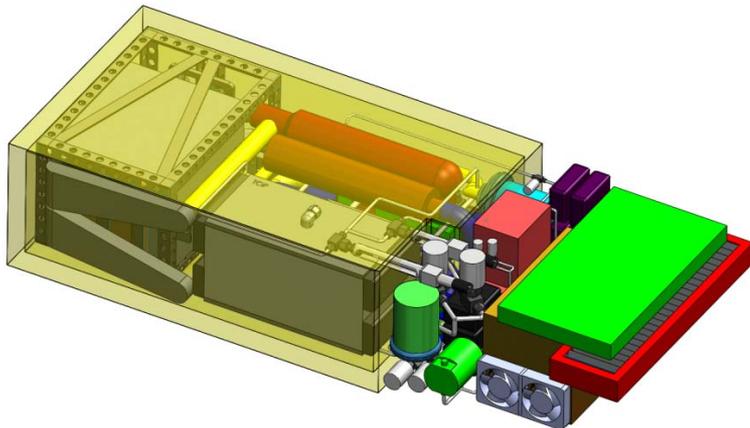

- Regenerable Desulfurization System
- Steam Reformer
- Water Gas Shift Reactor

Solid Oxide Fuel Cell APU

- Regenerable Desulfurization System
- Autothermal Reformer
- Sulfur Tolerant Stack

Challenges:

- Sulfur tolerant systems
- Immature technologies; Limited reliability data available
- High cost compared to conventional APUs

Schedule

MILESTONES	FY10	FY11	FY12	FY13	FY14	FY15
System M&S	█					
System Refinement		█				
Prototype Development			█			
Breadboard test				█		
Field Hardening				█		
Increase Power Density				█		
Preliminary TTA				◆		
APU Demonstration						█

TECHNOLOGY DRIVEN. WARFIGHTER FOCUSED.

Project Purpose & Goals:

- To integrate a 250 Watt Solid Oxide Fuel Cell system onto an existing Unmanned Ground Vehicle (UGV)
- Analyze current manufacturing process and perform a low rate initial production of 20 units
- Analyze production cost and unit variability
- Test 5 units at contractor facility for 2000 hours or failure

Technology Description:

- 250 Watt Solid Oxide Fuel Cell System
- Uses commercially available propane
- Fits into existing battery compartment
- Power system can be used as stand alone power source
- Increases mission duration over batteries

Challenges:

- Limited shock and vibration testing
- Meeting limited space constraints
- Manufacturability

Schedule

	FY10	FY11	FY12
250 Watt Sub-system analysis		■	
UGV SOFC system configuration		■	
Environmental testing shock/vib		■ ◆	
Design for Manufacture Study		■	
LRIP Mfg plan and execution			■
User/safety assessment			■
Delivery of SOFC power systems			◆

- Obtain 45kW in current or smaller space claim
- 2.5 gallon/hr for 25kW output
- Undetectable at 50 meters
- Mean time between failure 1140 hours
