Summary

Coast Guard polar icebreakers perform a variety of missions supporting U.S. interests in polar regions. The Coast Guard's two heavy polar icebreakers—*Polar Star* and *Polar Sea*—have exceeded their intended 30-year service lives, and neither is currently in operational condition. The *Polar Star* was placed in caretaker status on July 1, 2006. Congress in FY2009 and FY2010 provided funding to repair *Polar Star* and return it to service for 7 to 10 years; the Coast Guard expects the reactivation project to be completed in December 2012. On June 25, 2010, the Coast Guard announced that *Polar Sea* had suffered an unexpected engine casualty and consequently would likely be unavailable for operation until at least January 2011.

The Coast Guard's third polar icebreaker—*Healy*—entered service in 2000. Compared to *Polar Star* and *Polar Sea*, *Healy* has less icebreaking capability (it is considered a medium polar icebreaker), but more capability for supporting scientific research. The ship is used primarily for supporting scientific research in the Arctic.

The Coast Guard's FY2012 budget proposes decommissioning *Polar Sea* in FY2011 and transitioning its crew to the reactivated *Polar Star*. The resulting U.S. polar icebreaking fleet would consist of *Polar Star* and *Healy*.

A 2007 report from the National Research Council (NRC) on the U.S. polar icebreaking fleet stated that “U.S. [polar] icebreaking capability is now at risk of being unable to support national interests in the north and the south.” The Coast Guard has stated since 2008 that it is studying how many polar icebreakers, with what capabilities, it will need in the future.

Following any decision to design and build one or more new polar icebreakers, the first replacement polar icebreaker might enter service in 8 to 10 years. The Coast Guard estimated in February 2008 that new replacement ships might cost \$800 million to \$925 million each in 2008 dollars, and that the alternative of extending the service lives of *Polar Sea* and *Polar Star* for 25 years might cost about \$400 million per ship. In August 2010, the Commandant of the Coast Guard, Admiral Robert Papp, reportedly estimated the cost of extending their lives at about \$500 million per ship.

Potential issues for Congress regarding Coast Guard polar icebreaker modernization include the potential impact on U.S. polar missions of the United States currently having no operational heavy polar icebreakers; the length of time that the Coast Guard has been studying requirements for polar icebreakers; the numbers and capabilities of polar icebreakers the Coast Guard will need in the future; whether to provide these icebreakers through construction of new ships or service life extensions of existing polar icebreakers; and whether new ships should be funded entirely in the Coast Guard budget, or partly or entirely in some other part of the federal budget, such as the Department of Defense (DOD) budget, the National Science Foundation (NSF) budget, or both.

Introduction

This report provides background information and issues for Congress on the modernization of the Coast Guard's polar icebreaker fleet, which performs a variety of missions supporting U.S. interests in polar regions. The Coast Guard's two heavy polar icebreakers—*Polar Star* and *Polar Sea*—have exceeded their intended 30-year service lives, and neither is currently in operational condition. The *Polar Star* was placed in caretaker status on July 1, 2006.¹ Congress in FY2009 and FY2010 provided funding to repair *Polar Star* and return it to service for 7 to 10 years; the Coast Guard expects the reactivation project to be completed in December 2012. On June 25, 2010, the Coast Guard announced that *Polar Sea* had suffered an unexpected engine casualty and consequently would likely be unavailable for operation until at least January 2011.²

The Coast Guard's third polar icebreaker—*Healy*—entered service in 2000. Compared to *Polar Star* and *Polar Sea*, *Healy* has less icebreaking capability (it is considered a medium polar icebreaker), but more capability for supporting scientific research. The ship is used primarily for supporting scientific research in the Arctic.

The Coast Guard's FY2012 budget proposes decommissioning *Polar Sea* in FY2011 and transitioning its crew to the reactivated *Polar Star*. The resulting U.S. polar icebreaking fleet would consist of *Polar Star* and *Healy*.

A 2007 report from the National Research Council (NRC) on the U.S. polar icebreaking fleet stated that “Over the last decade, some routine maintenance on [*Polar Star* and *Polar Sea*] has been deferred due to a lack of funds and no major life extension program has been planned; as a consequence, U.S. [polar] icebreaking capability is now at risk of being unable to support national interests in the north and the south.”³

The Coast Guard since 2008 has been studying how many polar icebreakers, with what capabilities, it will need in the future. Following a decision to design and build one or more new polar icebreakers, the first replacement polar icebreaker might enter service in eight to 10 years. The Coast Guard estimated in February 2008 that new replacement ships might cost \$800 million to \$925 million each in 2008 dollars, and that the alternative of extending the service lives of *Polar Sea* and *Polar Star* for 25 years might cost about \$400 million per ship.⁴

On July 16, 2008, the Commandant of the Coast Guard at that time, Admiral Thad Allen, testified that

¹ Source for July 1, 2006, date: U.S. Coast Guard e-mail to CRS on February 22, 2008.

² This passage, beginning with “The Coast Guard’s...”, originated in an earlier iteration of this CRS report and was later transferred by GAO with minor changes to Government Accountability Office, *Coast Guard[:]Efforts to Identify Arctic Requirements Are Ongoing, but More Communication about Agency Planning Efforts Would Be Beneficial*, GAO-10-870, September 2010, pp. 53-54.

³ National Research Council, *Polar Icebreakers in a Changing World, An Assessment of U.S. Needs*, Washington, 2007, p. 2.

⁴ This passage originated in an earlier iteration of this CRS report and was later transferred by GAO with minor changes to Government Accountability Office, *Coast Guard[:]Efforts to Identify Arctic Requirements Are Ongoing, but More Communication about Agency Planning Efforts Would Be Beneficial*, GAO-10-870, September 2010, pp. 40-41.

Today, our nation is at a crossroads with Coast Guard domestic and international icebreaking capabilities. We have important decisions to make. And I believe we must address our icebreaking needs now, to ensure we will continue to prosper in the years and decades to come, whether on the Great Lakes, the critical waterways of the East Coast or the harsh operating environments of the polar region.⁵

An August 17, 2008, press report quoted Admiral Allen as stating that, in light of the time required to build a new polar icebreaker, “I think we’re at a crisis point on making a decision.”⁶ Almost two years later, on May 10, 2010, a press report quoted him as stating, “We need to be able to project U.S. sovereignty up there [i.e., the Arctic] and do the missions that we need to do. We need to have a serious discussion about icebreakers. It has not concluded. It’s not even started, and you can see me be a little more vocal on that on the 26th of May [2010] because my change of command [i.e., the end of his term in office as Commandant of the Coast Guard] is the 25th of May.”⁷

A January 17, 2011, press report stated that while the current Commandant of the Coast Guard, Admiral Robert Papp, remained committed to funding the procurement of eight National Security Cutters (NSCs),⁸ “The admiral was less optimistic about the prospects of replacing the Coast Guard’s heavy polar icebreakers, both of which are currently in port for restoration or repairs. He estimated that replacing them would cost \$800 million each, and he does not see a national will to provide that kind of funding right now.” The article stated:

“There is no room in the Coast Guard budget to do that,” [Papp] said. “Nor is there a national will or consensus at this point about what we should be doing in the Arctic, who should be doing it, how we do it and how we resource it, so we’re continuing to make the case that in order to project our sovereignty in the Arctic, and with the evolving activities that are going on up there, there’s a need for a whole range of Coast Guard operational capability up there.”⁹

The issue for Congress is whether to approve, reject, or modify Coast Guard plans for modernizing its polar icebreakers. Congressional decisions on this issue could affect the Coast Guard’s ability to perform its polar missions, Coast Guard funding requirements, and the U.S. shipbuilding industrial base.

⁵ Transcript of spoken remarks of Admiral Allen at July 16, 2008, hearing on Coast Guard icebreaking needs before the Coast Guard and Maritime transportation subcommittee of the House Transportation and Infrastructure Committee.

⁷ Cid Standifer, Dan Taylor and Zachary M. Peterson, “Notes From The Navy League’s Sea-Air-Space Conference And Exhibition, May 3-5, 2010, National Harbor, MD,” *Inside the Navy*, May 10, 2010. On May 1, 2010, Janet Napolitano, Secretary of the Department of Homeland Security, announced that Allen would serve as the National Incident Commander for the Administration’s response to the Deepwater Horizon oil spill in the Gulf of Mexico. Allen stepped down as Commandant on May 25, 2010, and retired from active duty service in the Coast Guard on June 30, 2010, but continued as a civilian in his role as the National Incident Commander for the oil spill. A September 27, 2010, press report states that Allen would step down as National Incident Commander on September 30, 2010. (Rick Jervis, “BP Spill Shapes Allen’s Legacy,” *Navy Times.com*, September 27, 2010.)

⁸ For more on the NSCs, see CRS Report RL33753, *Coast Guard Deepwater Acquisition Programs: Background, Oversight Issues, and Options for Congress*, by Ronald O’Rourke.

⁹ Cid Standifer, “Coast Guard Comandant: Service Still Committed To Eight NSCs,” *Inside the Navy*, January 17, 2011.

Background

Missions of U.S. Polar Icebreakers

The missions of U.S. polar icebreakers can be summarized as follows:

- conducting and supporting scientific research in the Arctic and Antarctic;
- defending U.S. sovereignty in the Arctic by helping to maintain a U.S. presence in U.S. territorial waters the region;
- defending other U.S. interests in polar regions, including economic interests in waters that are within the U.S. exclusive economic zone (EEZ) north of Alaska;
- monitoring sea traffic in the Arctic, including ships bound for the United States; and
- conducting other typical Coast Guard missions (such as search and rescue, law enforcement, and protection of marine resources) in Arctic waters, including U.S. territorial waters north of Alaska.

Operations to support National Science Foundation (NSF) research activities in the Arctic and Antarctic have accounted in the past for a significant portion of U.S. polar icebreaker operations.¹⁰ Supporting NSF research in the Antarctic has included performing—or, in more recent years, standing ready to assist in—an annual mission, called Operation Deep Freeze, to break through the Antarctic ice so as to resupply McMurdo Station, the large U.S. Antarctic research station located on the shore of McMurdo Sound, near the Ross Ice Shelf.

Although polar ice is diminishing due to climate change, observers generally expect that this development will not eliminate the need for U.S. polar icebreakers, and in some respects might increase mission demands for them. Even with the diminishment of polar ice, there are still significant ice-covered areas in the polar regions. Diminishment of polar ice could lead in coming years to increased commercial ship, cruise ship, and naval surface ship operations, as well as increased exploration for oil and other resources, in the Arctic—activities that could require increased levels of support from polar icebreakers.¹¹ Changing ice conditions in Antarctic waters have made the McMurdo resupply mission more challenging since 2000.¹² An April 18, 2011, press report states that the Commandant of the Coast Guard, Admiral Robert Papp,

sees plenty of reasons the United States will need polar icebreakers for the “foreseeable future,” despite speculation that thinning ice in the Arctic could make the icebreakers replaceable with other ice-hardened ships, the admiral said last week....

¹⁰ This passage, beginning with “The missions of...”, originated in an earlier iteration of this CRS report and was later transferred by GAO with minor changes to Government Accountability Office, *Coast Guard[:]Efforts to Identify Arctic Requirements Are Ongoing, but More Communication about Agency Planning Efforts Would Be Beneficial*, GAO-10-870, September 2010, p. 53.

¹¹ For more on changes in the Arctic due to diminishment of Arctic ice, see CRS Report R41153, *Changes in the Arctic: Background and Issues for Congress*, coordinated by Ronald O'Rourke.

¹² National Research Council, *Polar Icebreakers in a Changing World, An Assessment of U.S. Needs*, Washington, 2007, pp. 6-7, 14, 63.

“I don’t see that causing us to back down on some minimal level of polar icebreakers,” Papp told *Inside the Navy*. “The fact of the matter is, there’s still winter ice that’s forming. It’s coming down pretty far. We don’t need to get up there just during summer months when there’s open water.”¹³

Current U.S. Polar Icebreakers

The U.S. polar icebreaker fleet currently includes four ships—three Coast Guard ships and one ship operated by the NSF. The ships are described briefly below, and then summarized in **Table 1**. Uses of the three Coast Guard polar icebreakers in FY2005-FY2007 by operational hours are summarized in **Table 2**.

Three Coast Guard Ships

The Coast Guard’s three polar icebreakers are multimission ships that can break through ice, support scientific research operations, and perform other missions typically performed by Coast Guard ships.

Polar Star and Polar Sea

Polar Star (WAGB-10) and *Polar Sea* (WAGB-11),¹⁴ sister ships built to the same general design (**Figure 1** and **Figure 2**), were procured in the early 1970s as replacements for earlier U.S. icebreakers. They were designed for 30-year service lives, and were built by Lockheed Shipbuilding of Seattle, WA, a division of Lockheed that also built ships for the U.S. Navy, but which exited the shipbuilding business in the late 1980s. Neither ship is currently in operational condition.

The ships are 399 feet long and displace about 13,200 tons.¹⁵ They are the world’s most powerful non-nuclear-powered icebreakers, with a capability to break through ice up to 6 feet thick at a speed of 3 knots. Because of their icebreaking capability, they are considered heavy polar icebreakers. In addition to a crew of 134, each ship can embark a scientific research staff of 32 people.

¹³ Cid Standifer, “Adm. Papp: Coast Guard Still Needs Icebreakers For Winter, Antarctic,” *Inside the Navy*, April 18, 2011.

¹⁴ The designation WAGB means Coast Guard icebreaker. More specifically, W means Coast Guard ship, A means auxiliary, G means miscellaneous purpose, and B means icebreaker.

¹⁵ By comparison, the Coast Guard’s new National Security Cutters—its new high-endurance cutters—are about 418 feet long and displace roughly 4,000 tons.

Figure 1. Polar Star and Polar Sea

Source: Coast Guard photo accessed at <http://www.uscg.mil/pacarea/cgcpolarsea/history.asp> on April 21, 2011.

Figure 2. Polar Sea

Source: Coast Guard photo accessed at <http://www.uscg.mil/pacarea/cgcpolarsea/img/PSEApics/FullShip2.jpg> on April 21, 2011.

Polar Star was commissioned into service on January 19, 1976, and consequently is now beyond its intended 30-year service life. The ship currently is not in operational condition due to worn out electric motors and other problems. The Coast Guard placed the ship in caretaker status on July 1, 2006.¹⁶ Congress in FY2009 and FY2010 provided funding to repair *Polar Star* and return it to service for 7 to 10 years; the Coast Guard expects the reactivation project to be completed in December 2012.¹⁷ An August 30, 2010, press report quoted the Commandant of the Coast Guard, Admiral Robert Papp, as saying, “We’re getting her back into service, but it’s a little uncertain to me how many more years we can get out of her in her current condition, even after we do the engine repairs.”¹⁸

Polar Sea was commissioned into service on February 23, 1978, and consequently is also beyond its originally intended 30-year service life. In 2006, the Coast Guard completed a rehabilitation project that extended the ship’s expected service life to 2014. Due to its age, however, the ship requires increasing amounts of maintenance to remain in operation. On June 25, 2010, the Coast Guard announced that

POLAR SEA suffered an unexpected engine casualty and will be unable to deploy on its scheduled fall 2010 Arctic patrol and may be unavailable for Operation Deep Freeze [the annual mission to break through the Antarctic ice so as to resupply McMurdo Station], Dec. 20 to Jan 2, 2011.

POLAR SEA will likely be in a maintenance status and unavailable for operation until at least January 2011....

Currently, the 420-foot CGC *HEALY*, commissioned in 1999, is the service’s sole operational polar region icebreaker. While the *HEALY* is capable of supporting a wide range of Coast Guard missions in the polar regions, it is a medium icebreaker capable of breaking ice up to 4.5-feet thick at three knots.

The impact on *POLAR SEA*’s scheduled 2011 Arctic winter science deployment, scheduled for Jan. 3 to Feb. 23, 2011, is not yet known and depends on the scope of required engine repair.¹⁹

A June 25, 2010, report stated that “inspections of the *Polar Sea*’s main diesel engines revealed excessive wear in 33 cylinder assemblies. The Coast Guard is investigating the root cause and hopes to have an answer by August.”²⁰ Another June 25 report stated that “five of [the ship’s] six mighty engines are stilled, some with worn pistons essentially welded to their sleeves.”²¹

¹⁶ The Coast Guard’s official term for the ship’s current status is “In Commission, Special.”

¹⁷ “Icebreaker POLAR SEA Sidelined By Engine Troubles,” *Coast Guard Compass (Official Blog of the U.S. Coast Guard)*, June 25, 2010. An FY2011 budget justification document—Department of Homeland Security, *Congressional Budget Justification FY 2011*, p. USCG-9 (pdf page 2176 of 3985)—states that the repairs to *Polar Star* are to be completed in FY2012.

¹⁸ Cid Standifer, “Papp: Refurbished Icebreaker Hulls Could Last ‘An Awful Long Time,’” *Inside the Navy*, August 30, 2010.

¹⁹ “Icebreaker POLAR SEA Sidelined By Engine Troubles,” *Coast Guard Compass (Official Blog of the U.S. Coast Guard)*, June 25, 2010.

²⁰ “USCG Cancels Polar Icebreaker’s Fall Deployment,” *DefenseNews.com*, June 25, 2010.

²¹ Andrew C. Revkin, “America’s Heavy Icebreakers Are Both Broken Down,” *Dot Earth (New York Times blog)*, June 25, 2010.

Healy

Healy (WAGB-20) (**Figure 3**) was procured in the early 1990s as a complement to *Polar Star* and *Polar Sea*, and was commissioned into service on August 21, 2000. The ship was built by Avondale Industries, a shipyard located near New Orleans, LA, that has built numerous Coast Guard and Navy ships, and which now forms part of Northrop Grumman Shipbuilding.

Figure 3. Healy

Source: Coast Guard photo accessed at http://www.uscg.mil/history/webcutters/Healy_CGC_I_300.jpg on April 21, 2011.

Healy is a bit larger than *Polar Star* and *Polar Sea*—it is 420 feet long and displaces about 16,000 tons. Compared to *Polar Star* and *Polar Sea*, *Healy* has less icebreaking capability (it is considered a medium polar icebreaker), but more capability for supporting scientific research. The ship can break through ice up to 4½ feet thick at a speed of 3 knots, and embark a scientific research staff of 35 (with room for another 15 surge personnel and two visitors). The ship is used primarily for supporting scientific research in the Arctic.

One National Science Foundation Ship

The nation's fourth polar icebreaker is *Nathaniel B. Palmer*, which was built for the NSF in 1992 by North American Shipbuilding, of Larose, LA. The ship, called *Palmer* for short, is owned by Edison Chouest Offshore (ECO) of Galliano, LA, a firm that owns and operates research ships and offshore deepwater service ships.²² NSF uses a contractor, Raytheon Polar Services Company

²² For more on ECO, see the firm's website at <http://www.chouest.com/>.

(RPSC), to lease the ship from ECO.²³ *Palmer* is considerably smaller than the Coast Guard’s three polar icebreakers—it is 308 feet long and has a displacement of about 6,500 tons. It is operated by a crew of about 22, and can embark a scientific staff of 27 to 37.²⁴

Unlike the Coast Guard’s three polar icebreakers, which are multimission ships, *Palmer* was purpose-built as a single-mission ship for conducting and supporting scientific research in the Antarctic. It has less icebreaking capability than the Coast Guard’s polar icebreakers, being capable of breaking ice up to 3 feet thick at speeds of 3 knots. This capability is sufficient for breaking through the more benign ice conditions found in the vicinity of the Antarctic Peninsula, to resupply Palmer Station, a U.S. research station on the peninsula. Some observers might view *Palmer* not so much as an icebreaker as an oceanographic research ship with enough icebreaking capability for the Antarctic Peninsula. *Palmer*’s icebreaking capability is not considered sufficient to perform the McMurdo resupply mission.

Table I. U.S. Polar Icebreakers

	<i>Polar Star</i>	<i>Polar Sea</i>	<i>Healy</i>	<i>Palmer</i>
Operator	USCG	USCG	USCG	NSF
U.S.-Government owned?	Yes	Yes	Yes	No ^a
Currently operational?	No (was placed in caretaker status July 2006; reactivation work scheduled to be completed December 2012)	No (experienced an engine casualty in June 2010)	Yes	Yes
Entered service	1976	1978	2000	1992
Length (feet)	399	399	420	308
Displacement (tons)	13,200	13,200	16,000	6,500
Icebreaking capability (ice thickness in feet) at 3 knots	6 feet	6 feet	4.5 feet	3 feet
Crew (when operational)	155 ^b	155 ^b	85 ^c	22
Additional scientific staff	32	32	35 ^d	27-37

Sources: Prepared by CRS using data from U.S. Coast Guard, National Research Council, National Science Foundation and (for *Palmer*) additional online reference sources.

- a. Owned by Edison Chouest Offshore (ECO) of Galliano, LA, and leased to NSF through Raytheon Polar Services Company (RPSC).
- b. Includes 24 officers, 20 chief petty officers, 102 enlisted, and 9 in the aviation detachment.
- c. Includes 19 officers, 12 chief petty officers, and 54 enlisted.
- d. In addition to 85 crew members 85 and 35 scientists, the ship can accommodate another 15 surge personnel and two visitors.

²³ For more on RPSC, see the division’s website at <http://rpsc.raytheon.com/>

²⁴ Sources vary on the exact number of scientific staff that can be embarked on *Palmer*. For some basic information on the ship, see <http://www.nsf.gov/od/opp/support/nathpalm.jsp>, http://www.usap.gov/vesselScienceAndOperations/documents/prvnews_june03.pdf, <http://nsf.gov/od/opp/antarct/treaty/pdf/plans0607/15plan07.pdf>, <http://www.nsf.gov/pubs/1996/nsf9693/fls.htm>, and <http://www.hazegray.org/worldnav/usa/nsf.htm>.

Table 2. Uses of Coast Guard Polar Icebreakers
(FY2005-FY2007, in mission hours)

Mission area	Polar Star			Polar Sea			Healy		
	FY 05	FY 06	FY 07	FY 05	FY 06	FY 07	FY 05	FY 06	FY 07
SAR	31					2			
ATON									
Ice Ops	1,809	1,642				2,658	3,563	3,210	2,930
MEP						16			
LMR	193								
PWCS									
DR						121			94
Support	34			1	802	21	256	424	596
Total	2,066	1,642	0	1	802	2,818	3,819	3,634	3,620

Source: U.S. Coast Guard data provided to CRS on June 12 and 20, 2008.

Notes: **SAR** = search and rescue; **ATON** = aids to navigation; **Ice Ops** = ice operations, polar icebreaking and domestic ice; **MEP** = marine environmental protection; **LMR** = living marine resources; **PWCS** = ports, waterways, and coastal security; **DR** = defense readiness; **Support** = includes operations such as training, public affairs, cooperation with federal, state, and local agencies.

The Coast Guard states further that

for CGC [Coast Guard Cutter] HEALY, all of the Polar Operations hours are either transit to/from the operating area or scientific research. For CGC POLAR SEA/POLAR STAR, all of the Polar Operations hours are transit to/from the operating area, scientific research or mobility logistics (icebreaking for re-supply). We estimate 25% transit / 75% scientific research for HEALY and 50% transit / 10% scientific research / 40% mobility logistics for POLAR SEA/POLAR STAR.

Summary

In summary, the U.S. polar icebreaking fleet currently includes one ship that is used primarily for scientific research in the Arctic (*Healy*), one ship that is used for scientific research in the Antarctic (*Palmer*), and two ships—neither currently in operational status—that can operate in either polar area and are capable of performing the challenging McMurdo resupply mission (*Polar Star* and *Polar Sea*).

2007 National Research Council Report

The most recent major study relating to Coast Guard polar icebreakers is the 2007 National Research Council (NRC) report, *Polar Icebreakers in a Changing World: An Assessment of U.S. Needs*, which assessed roles and future needs for Coast Guard polar icebreakers.²⁵ The NRC is a part of the National Academies. The study was completed in 2006 and published in 2007. Some

²⁵ National Research Council, *Polar Icebreakers in a Changing World, An Assessment of U.S. Needs*, Washington, 2007, 122 pp.

sources refer to the study as the 2006 NRC report. A hearing on the report was held by the Coast Guard and Maritime Transportation subcommittee of the House Transportation and Infrastructure Committee on September 26, 2006.

Origin of Study

The study was required by report language accompanying the FY2005 DHS appropriations act (H.R. 4567/P.L. 108-334).²⁶

Conclusions and Recommendations

The NRC report made the following conclusions and recommendations:

The [study] committee finds that both operations and maintenance of the polar icebreaker fleet have been underfunded for many years, and the capabilities of the nation's icebreaking fleet have diminished substantially. Deferred long-term maintenance and failure to execute a plan for replacement or refurbishment of the nation's icebreaking ships have placed national interests in the polar regions at risk. The nation needs the capability to operate in both polar regions reliably and at will. Specifically, the committee recommends the following:

- The United States should continue to project an active and influential presence in the Arctic to support its interests. This requires U.S. government polar icebreaking capability to ensure year-round access throughout the region.
- The United States should continue to project an active and influential presence in the Antarctic to support its interests. The nation should reliably control sufficient icebreaking capability to break a channel into and ensure the maritime resupply of McMurdo Station.

²⁶ H.R. 4567/P.L. 108-334 of October 18, 2004. The related Senate bill was S. 2537. The Senate report on S. 2537 (S.Rept. 108-280 of June 17, 2004) stated:

The Committee expects the Commandant to enter into an arrangement with the National Academy of Sciences to conduct a comprehensive study of the role of Coast Guard icebreakers in supporting United States operations in the Antarctic and the Arctic. The study should include different scenarios for continuing those operations including service life extension or replacement of existing Coast Guard icebreakers and alternative methods that do not use Coast Guard icebreakers. The study should also address changes in the roles and missions of Coast Guard icebreakers in support of future marine operations in the Arctic that may develop due to environmental change, including the amount and kind of icebreaking support that may be required in the future to support marine operations in the Northern Sea Route and the Northwest Passage; the suitability of the Polar Class icebreakers for these new roles; and appropriate changes in existing laws governing Coast Guard icebreaking operations and the potential for new operating regimes. The study should be submitted to the Committee no later than September 30, 2005.

The conference report on H.R. 4567 (H.Rept. 108-774 of October 9, 2004) stated:

As discussed in the Senate report and the Coast Guard authorization bill for fiscal year 2005, the conferees require the National Academy of Sciences to study the role of Coast Guard icebreakers.

The earlier House report on H.R. 4567 (H.Rept. 108-541 of June 15, 2004) contained language directing a similar report from the Coast Guard rather than the National Academies. (See the passage in the House report under the header "Icebreaking.")

- The United States should maintain leadership in polar research. This requires icebreaking capability to provide access to the deep Arctic and the ice-covered waters of the Antarctic.
- National interests in the polar regions require that the United States immediately program, budget, design, and construct two new polar icebreakers to be operated by the U.S. Coast Guard.
- To provide continuity of U.S. icebreaking capabilities, the POLAR SEA should remain mission capable and the POLAR STAR should remain available for reactivation until the new polar icebreakers enter service.
- The U.S. Coast Guard should be provided sufficient operations and maintenance budget to support an increased, regular, and influential presence in the Arctic. Other agencies should reimburse incremental costs associated with directed mission tasking.
- Polar icebreakers are essential instruments of U.S. national policy in the changing polar regions. To ensure adequate national icebreaking capability into the future, a Presidential Decision Directive should be issued to clearly align agency responsibilities and budgetary authorities.²⁷

Coast Guard Perspective on the Study

The Coast Guard stated in 2008 that it “generally supports” the NRC report, and that the Coast Guard “is working closely with interagency partners to determine a way forward with national polar policy that identifies broad U.S. interests and priorities in the Arctic and Antarctic that will ensure adequate maritime presence to further these interests. Identification and prioritization of U.S. national interests in these regions should drive development of associated USCG [U.S. Coast Guard] capability and resource requirements.” The Coast Guard also stated: “Until those broad U.S. interests and priorities are identified, the current USG [U.S. Government] polar icebreaking fleet should be maintained in an operational status.”²⁸

Cost Estimates for Certain Modernization Options

The Coast Guard in February 2008 provided CRS with cost estimates for four potential options for modernizing the Coast Guard’s polar icebreaker fleet.²⁹ The options are summarized below. Congress in FY2009 and FY2010 provided funding to implement the third option—repairing and reactivating *Polar Star* for 7 to 10 years. Funding this option mooted the fourth option of reactivating *Polar Star* for a single deployment.

²⁷ National Research Council, *Polar Icebreakers in a Changing World, An Assessment of U.S. Needs*, Washington, 2007, pp. 2-3.

²⁸ Coast Guard point paper provided to CRS on February 12, 2008, and dated with the same date, providing answers to questions from CRS concerning polar icebreaker modernization.

²⁹ Source for information and quotations in this section: Coast Guard point paper provided to CRS on February 12, 2008, op cit.

New Replacement Ships

The Coast Guard estimated in February 2008 that new replacement ships for the *Polar Star* and *Polar Sea* might cost between \$800 million and \$925 million per ship in 2008 dollars to procure. The Coast Guard said that this estimate

is based on a ship with integrated electric drive, three propellers, and a combined diesel and gas (electric) propulsion plant. The icebreaking capability would be equivalent to the POLAR Class Icebreakers [i.e., *Polar Star* and *Polar Sea*] and research facilities and accommodations equivalent to HEALY. This cost includes all shipyard and government project costs. Total time to procure a new icebreaker [including mission analysis, studies, design, contract award, and construction] is eight to ten years.³⁰

The Coast Guard further stated that this notional new ship would be designed for a 30-year service life. Following a decision to design and build one or more new polar icebreakers, the first replacement polar icebreaker might enter service in 8 to 10 years, by which time *Polar Star* and *Polar Sea* could be more than 40 years old.

25-Year Service Life Extensions

One alternative to procuring new replacement ships would be to extend the service lives of *Polar Star* and *Polar Sea*. The Coast Guard stated in February 2008 that performing the extensive maintenance, repair, and modernization work needed to extend the service lives of the two ships by 25 years might cost roughly \$400 million per ship. This figure, the Coast Guard said, is based on assessments made by independent contractors for the Coast Guard in 2004. The service life extension work, the Coast Guard said, would improve the two icebreakers' installed systems in certain areas. Although the work would be intended to permit the ships to operate for another 25 years, it would not return the cutters to new condition.

An August 30, 2010, press report stated that the Commandant of the Coast Guard, Admiral Robert Papp, estimated the cost of extending the lives of *Polar Star* and *Polar Sea* at about \$500 million per ship; the article quoted Papp as stating that *Polar Star* and *Polar Sea* "were built to take a beating. They were built with very thick special steel, so you might be able to do a renovation on them and keep going.... I think there are certain types of steel that, if properly maintained, they can go on for an awful long time. What the limit is, I'm not sure."³¹

Reactivate *Polar Star* for 7 to 10 Years

The Coast Guard estimated in February 2008 that it would cost \$56.6 million to perform the maintenance and repair work needed to reactivate *Polar Star* and extend its service life by 7 to 10

³⁰ The Coast Guard states further that the estimate is based on the procurement cost of the Mackinaw (WAGB-30), a Great Lakes icebreaker that was procured a few years ago and commissioned into service with the Coast Guard in June 2006. The Mackinaw is 240 feet long, displaces 3,500 tons, and can break ice up to 2 feet, 8 inches thick at speeds of 3 knots, which is suitable for Great Lakes icebreaking. The Coast Guard says it scaled up the procurement cost for the Mackinaw in proportion to its size compared to that of a polar icebreaker, and then adjusted the resulting figure to account for the above-described capabilities of the notional replacement ship and recent construction costs at U.S. Gulf Coast shipyards.

³¹ Cid Standifer, "Papp: Refurbished Icebreaker Hulls Could Last 'An Awful Long Time,'" *Inside the Navy*, August 30, 2010. Ellipsis as in original.

years, which is the approximate amount of time that would transpire under the Coast Guard's plan before a new replacement ship enters service. On July 16, 2008, the Coast Guard similarly testified that the cost of extending the ship's service life by 7 to 10 years would be "into the \$60 million range."³² The work would include system upgrades that have been installed in recent years on the *Polar Sea* but not the *Polar Star*. An additional cost would be incurred to create and train a full 134-person crew for the ship.

Congress in FY2009 and FY2010 provided funding to repair *Polar Star* and return it to service for 7 to 10 years; the Coast Guard expects the reactivation project to be completed in FY2012.³³

Reactivate *Polar Star* for a Single Deployment

The Coast Guard estimated in February 2008 that it would cost \$8.2 million to perform the maintenance and repair work needed to reactivate the *Polar Star* and make it ready for a single Deep Freeze deployment, meaning a deployment to Antarctica, such as the McMurdo resupply mission. On July 16, 2008, the Coast Guard provided a slightly different figure, testifying that the work would cost \$8.6 million.³⁴ The work, the Coast Guard says, would require between 12 months and 18 months to perform. Roughly half of the cost, the Coast Guard says, would be to rebuild the ship's worn-out electric motors. As with the previous option, an additional cost would be incurred to create and train a full 134-person crew for the ship.

This option was mooted by Congress's decision to fund the previous option of repairing and reactivating *Polar Star* for 7 to 10 years.

FY2012 Funding Request

The Coast Guard's proposed FY2012 budget requests \$39 million for its polar icebreaking program. The budget proposes decommissioning *Polar Sea* in FY2011 and transitioning its crew to the reactivated *Polar Star*. The resulting U.S. polar icebreaking fleet would consist of *Polar Star* and *Healy*. The Coast Guard states that its proposed FY2012 budget

provides budget authority to enable Coast Guard to make all critical decisions with respect to operation and maintenance of its polar icebreakers, consistent with MOUs [memoranda of understanding] between Coast Guard and its customer agencies. The request provides full-year personnel, operations, and maintenance funding for CGC HEALY and advance funding to support the reactivation of CGC POLAR STAR, ensuring its return to operations in FY 2013. AC&I industrial work on the CGC POLAR STAR reactivation project, funded in FY 2009 and FY 2010, is planned for completion in December 2012. The Coast Guard plans to decommission CGC POLAR SEA in FY 2011 and transition her crew to CGC POLAR STAR, enabling orderly transition to CGC POLAR STAR and facilitating her return to operations in FY 2013.

³² Transcript of spoken remarks of Admiral Thad Allen at July 16, 2008, hearing on Coast Guard icebreaking needs before the Coast Guard and Maritime transportation subcommittee of the House Transportation and Infrastructure Committee.

³³ Department of Homeland Security, *Congressional Budget Justification FY 2011*, p. USCG-9 (pdf page 2176 of 3985).

³⁴ Transcript of spoken remarks of Admiral Thad Allen at July 16, 2008, hearing on Coast Guard icebreaking needs before the Coast Guard and Maritime transportation subcommittee of the House Transportation and Infrastructure Committee.

Justification

Based on current Federal requirements, maintaining and operating one medium duty and one heavy duty icebreaker will allow the Coast Guard to meet operational requirements. CGC HEALY must be sustained to meet the federal survey and research needs in the Arctic, including joint projects with other nations that support cooperative efforts to establish jurisdictional rights in this region. Although the existing heavy-duty polar icebreakers are more costly to operate, are physically and technologically aged and are not optimally configured, it is prudent to maintain CGC POLAR STAR which is currently undergoing extensive maintenance to extend its service life as an interim capability while long-term Arctic capability requirements are finalized. CGC POLAR STAR will be a capable backup for the annual resupply of McMurdo Base and for CGC HEALY in the Arctic should it become beset in the ice.

To help define the capability that is needed to meet long-term federal needs in the changing Arctic environment, Coast Guard will participate in the DHS-led interagency working group, funded in FY 2012 to develop final requirements for acquisition of the 21st Century icebreaking capability. In the meantime, CGC POLAR STAR will provide a platform capable of staging resources and supporting international response to unanticipated emergencies or disasters (natural or manmade).

Impact on Performance

CGC HEALY and CGC POLAR STAR will continue to support federal activities in the high latitude regions. Additionally, the replacement of CGC POLAR SEA with CGC POLAR STAR in FY 2013 will provide a more dependable resource for contingency operations in both the Arctic and Antarctic. The funding for CGC POLAR STAR in FY 2012 will help Coast Guard sustain a trained crew and make ready for operations as quickly as possible.³⁵

Issues for Congress

The issue of Coast Guard polar icebreaker modernization presents several potential issues for Congress, including but not necessarily limited to those discussed below.

Impact of Currently Having No Operational Polar Icebreakers

One potential issue for Congress concerns the impact of currently having no operational heavy polar icebreakers. Potential oversight questions for Congress include the following:

- What are the mission impacts of currently having no operational heavy polar icebreakers?
- Did the removal of *Polar Star* from operational status in 2006 result in heavier use of *Polar Sea*, and if so, did this heavier use make *Polar Sea*'s engine casualty more likely?
- Did the rehabilitation project on *Polar Sea* that was completed in 2006 and which extended the ship's estimated service life to 2014 include work on the ship's

³⁵ Department of Homeland Security, *United States Coast Guard, Fiscal Year 2012 Congressional Justification*, pp. CG-OE-49 and CG-OE-50.

engines? Why did the ship experience an engine casualty reportedly involving excessive wear on engine cylinder assemblies four years after the completion of the rehabilitation project?

- How much would it cost to repair *Polar Sea*'s engines and return the ship to operational status?

A July 12, 2010, press report states that with neither *Polar Sea* and *Polar Star* in operational status, the Coast Guard may seek assistance from polar icebreakers operated by other countries:

“There are a number of our allies that have that [polar icebreaking] capability,” [Dana] Goward [director of Coast Guard Office of Assessment, Integration and Risk Management], said. “They’re not necessarily positioned optimally for support of U.S. missions in our waters, but if push comes to shove we’re sure that we can make arrangements with our allies to support the nation’s interests while we get the *Polar Sea* back in operation. We have very strong relationships with other coast guards and other navies, and at the moment I don’t see that we would have much choice.”

The press report states that *Healy* may be shifted between missions, but that the ship “will not likely spend more days than usual at sea.”³⁶

Length of Time Coast Guard Has Been Studying the Issue

Another potential issue for Congress concerns the length of time that the Coast Guard has been studying the issue of requirements and acquisition options for polar icebreakers. As mentioned earlier, the Coast Guard has stated since 2008 that is studying how many polar icebreakers, with what capabilities, it will need in the future. The Coast Guard stated in February 2008 that it

is awaiting the identification and prioritization of U.S. national policy in the Polar Regions in order to identify and develop the appropriate capability. In the meantime, the CG is proceeding with pre-acquisition activities, starting with project identification, to assess current capability gaps in Coast Guard mission performance in the high latitudes regions.³⁷

In connection with the above statement, it can be noted that a document establishing U.S. national policy in the Arctic—National Security Presidential Directive 66/Homeland Security Presidential Directive 25 (NSPD 66/HSPD 25)—was issued by the George W. Bush Administration on January 12, 2009.³⁸

A March 24, 2008, press report stated that

[Coast Guard] Commanders in Alaska plan to [conduct an unprecedented expedition to the Arctic this summer, including a trip already underway by the *Healy*, to get a clear sense of their capabilities and problems operating above the Bering Strait. When that survey is finished, probably by August [2008], [then-Coast Guard Commandant Admiral Thad] Allen

³⁶ Cid Standifer, “Coast Guard Looks To Fill Icebreakers Capability Gap With *Polar Sea* Out,” *Inside the Navy*, July 12, 2010.

³⁷ Coast Guard point paper provided to CRS on February 12, 2008, op cit.

³⁸ For more on NSPD 66/HSPD 25, see CRS Report R41153, *Changes in the Arctic: Background and Issues for Congress*, coordinated by Ronald O'Rourke.

and the commander of District 17, Rear Adm. Arthur “Gene” Brooks, will be able to make their case to Congress for funding and new gear, Allen said.³⁹

On July 16, 2008, the Commandant of the Coast Guard at that time, Admiral Thad Allen, testified that

Today, our nation is at a crossroads with Coast Guard domestic and international icebreaking capabilities. We have important decisions to make. And I believe we must address our icebreaking needs now, to ensure we will continue to prosper in the years and decades to come, whether on the Great Lakes, the critical waterways of the East Coast or the harsh operating environments of the polar region.⁴⁰

An August 17, 2008, press report quoted Admiral Allen as stating that, in light of the time required to build a new polar icebreaker, “I think we’re at a crisis point on making a decision.”⁴¹

Almost two years later—on May 10, 2010—a press report quoted him as stating, “We need to be able to project U.S. sovereignty up there [i.e., the Arctic] and do the missions that we need to do. We need to have a serious discussion about icebreakers. It has not concluded. It’s not even started, and you can see me be a little more vocal on that on the 26th of May [2010] because my change of command [i.e., the end of his term in office as Commandant of the Coast Guard] is the 25th of May.”⁴²

An August 30, 2010, press report states that the current Commandant of the Coast Guard, Admiral Robert Papp,

has not yet discussed the matter [of polar icebreakers] with Department of Homeland Security Secretary Janet Napolitano because he has been focused on dealing with the Deepwater Horizon oil spill since he took the helm of the Coast Guard in May.

“I will have to make the case with my secretary on what I think the best way ahead [for icebreakers] is,” he said. “I’ve got my staff looking at those options and what we might do, and then once we discern what the best way ahead is, then we’re going to have to sell that to the administration and hopefully get the funding from Congress.”⁴³

A September 2010 Government Accountability Office (GAO) report on the Coast Guard’s efforts to identify Arctic requirements in general stated:

³⁹ Philip Ewing, “CG Steps Up Bid to Rescue Icebreaker Funding,” *Navy Times*, March 24, 2008.

⁴⁰ Transcript of spoken remarks of Admiral Allen at July 16, 2008, hearing on Coast Guard icebreaking needs before the Coast Guard and Maritime transportation subcommittee of the House Transportation and Infrastructure Committee.

⁴¹ Andrew C. Revkin, “A Push To Increase Icebreakers In The Arctic,” *New York Times*, August 17, 2008.

⁴² Cid Standifer, Dan Taylor and Zachary M. Peterson, “Notes From The Navy League’s Sea-Air-Space Conference And Exhibition, May 3-5, 2010, National Harbor, MD,” *Inside the Navy*, May 10, 2010. On May 1, 2010, Janet Napolitano, Secretary of the Department of Homeland Security, announced that Allen would serve as the National Incident Commander for the Administration’s response to the Deepwater Horizon oil spill in the Gulf of Mexico. Allen stepped down as Commandant on May 25, 2010, and retired from active duty service in the Coast Guard on June 30, 2010, but continued as a civilian in his role as the National Incident Commander for the oil spill. A September 27, 2010, press report states that Allen would step down as National Incident Commander on September 30, 2010. (Rick Jervis, “BP Spill Shapes Allen’s Legacy,” *Navy Times.com*, September 27, 2010.)

⁴³ Cid Standifer, “Papp: Refurbished Icebreaker Julfs Could Last ‘An Awful Long Time,’” *Inside the Navy*, August 30, 2010.

The Coast Guard has taken specific action to identify Arctic requirements and gaps while also collecting relevant information from routine operations. The High Latitude Study is the centerpiece of the agency's efforts to determine its Arctic requirements. The Coast Guard has also established temporary operating locations in the Arctic and conducted biweekly Arctic overflights to obtain more information on the Arctic operating environment. In addition, information gathered during the Coast Guard's routine missions—ice breaking, search and rescue, and others—also informs requirements. The agency's preliminary efforts to identify its Arctic requirements generally align with key practices for agencies defining missions and desired outcomes.

The Coast Guard faces Arctic challenges including limited information, minimal assets and infrastructure, personnel issues, and difficult planning and funding decisions, but is taking initial steps to address these challenges. Specifically, the Coast Guard does not currently have Arctic maritime domain awareness—a full understanding of variables that could affect the security, safety, economy, or environment in the Arctic—but is acquiring additional Arctic vessel tracking data, among other things, to address this issue. In addition, the Coast Guard's Arctic assets and infrastructure are limited and not suitable for the harsh environment, but the agency is testing equipment and using alternative options to mitigate gaps. Finally, the Coast Guard faces uncertainty over the timing of predicted environmental changes in the Arctic, as well as over future funding streams. To address these challenges the Coast Guard obtains scientific data on Arctic climate change and is studying its Arctic resource requirements to support potential future funding needs.⁴⁴

The report also stated:

The Coast Guard has multiple efforts underway to better understand the agency's future requirements and gaps in both the Arctic and Antarctic with its primary effort being the High Latitude Study, an effort undertaken in response to congressional direction. In August 2009, the Coast Guard contracted out the development of the High Latitude Study with the goal of producing three related mission analyses related to (1) Polar icebreaking needs, (2) all 11 Coast Guard missions in the Arctic region, and (3) all 11 Coast Guard missions in the Antarctic region. In carrying out the study, contractors have conducted literature reviews, held workshops to obtain Coast Guard stakeholder input, and conducted site visits and interviews with Coast Guard units in Alaska as well as with other stakeholders, including private sector, federal, state, local, Alaska Native, and international interest groups. Coast Guard officials estimate the study's cost at \$1.7 million and that all three volumes will be ready for Coast Guard internal review in summer 2010; however, they won't be released publicly until a later date.

The Arctic mission analysis piece of the High Latitude Study is expected to include

- an analysis of the functional requirements to carry out the Coast Guard's existing missions in the Arctic,
- an analysis of how the Coast Guard might close any operational gaps,
- solutions for a range of future demand scenarios such as a mass search and rescue incident or an Arctic oil spill (including looking at partnerships and opportunities to leverage resources), and

⁴⁴ Government Accountability Office, *Coast Guard[:]Efforts to Identify Arctic Requirements Are Ongoing, but More Communication about Agency Planning Efforts Would Be Beneficial*, GAO-10-870, September 2010, summary page.

- a rough order of magnitude cost estimate.

According to Coast Guard officials, the High Latitude Study is not expected to detail specific recommended solutions or assets, but rather identify the types of capabilities needed in the Arctic. In addition, while not Arctic-specific, DHS and the Coast Guard have begun a comprehensive Fleet Mix Analysis—an analysis of the capabilities, number, and mix of assets it needs to fulfill the agency’s missions. According to Coast Guard officials, this analysis is due to be completed in December 2010 and is expected to include more specific fleet requirements for surface operations in the Bering Sea region of the Arctic but not above the Arctic Circle.⁴⁵

Potential oversight questions for Congress include the following:

- Why has the Coast Guard taken so long to identify requirements and assess acquisition options for polar icebreakers?
- In light of the publication in January 2009 of NSPD 66/HSPD 25 establishing U.S. policy in the Arctic, what additional national policy statements regarding U.S. policy in the polar regions, if any, does the Coast Guard need to complete its study of requirements and options for polar icebreakers?
- When does the Coast Guard plan to announce its preferences regarding required numbers and capabilities for polar icebreakers, and its preferred acquisition option for achieving and maintaining a polar icebreaker fleet with those numbers and capabilities?
- Has the Coast Guard been putting off announcing a plan for modernizing the polar icebreaker fleet in part because it cannot identify the budget resources that would be needed to implement the plan?

Number and Capabilities of Future Polar Icebreakers

Another potential issue for Congress concerns one of the questions the Coast Guard has been studying since 2008, namely, how many polar icebreakers, with what capabilities, the Coast Guard will need in the future. Specific questions within this issue include the following:

- Will the Coast Guard need two polar icebreakers (the number it currently had in operational condition prior to the engine problems on *Polar Sea*), three polar icebreakers (the number it currently has in inventory), or some higher number?
- Should new icebreakers be designed to cut through ice up to 6 feet thick, like *Polar Star* and *Polar Sea*, or less than 6 feet thick (like *Healy* and many foreign icebreakers), or more than 6 feet thick (like certain Russian icebreakers)?⁴⁶

⁴⁵ Government Accountability Office, *Coast Guard[:]Efforts to Identify Arctic Requirements Are Ongoing, but More Communication about Agency Planning Efforts Would Be Beneficial*, GAO-10-870, September 2010, pp. 24-26.

⁴⁶ A recently completed Russian nuclear-powered icebreaker called 50 Let Pobedy that is 524 feet long and displaces about 25,000 tons is reportedly capable of breaking through ice up to 2.8 meters (about 9.2 feet) thick, though not necessarily at a speed of 3 knots. Somewhat smaller nuclear-powered Russian icebreakers of the Arktika class, such as Yamal, reportedly can break through ice up to 2.3 meters (about 7.5 feet) thick at a speed of 3 knots. Yamal displaces about 23,500 tons. See, <http://sr.se/cgi-bin/euroarctic/amnessida.asp?programID=2460&Nyheter=0&grupp=2604&artikel=1219680>, <http://en.rian.ru/russia/20070131/59989100.html>, and http://www.coolantarctica.com/Antarctica%20fact%20file/ships/Yamal_ice_breaker.htm.

- Should new icebreakers be designed with the scientific research capabilities less than, greater than, or about equal to those of *Healy*?

In assessing this issue, factors that Congress may consider include, but are not limited to, the following:

- current and projected mission demands for Coast Guard polar icebreakers, including an assessment of how those demands might be affected in coming years by changing ice conditions and by future NSF decisions on how to acquire icebreaking services to support its research activities;
- the potential for various mission demands (not just those conducted in support of NSF research activities) to be met by non-Coast Guard icebreakers, including leases or charters of icebreakers owned by foreign governments or private firms; and
- the Coast Guard's overall missions-vs.-resources situation, which includes the Coast Guard's requirements to perform many non-polar missions and the Coast Guard's desire to fund programs, such as Deepwater acquisition programs, for performing these non-polar missions.⁴⁷

Regarding the first factor above, the NSF states that although Coast Guard polar icebreakers are very capable, the NSF is mandated by presidential directive to perform its research activities in the most cost-effective way possible, and that it can be more expensive for NSF to support its research activities with Coast Guard polar icebreakers than with charters of icebreakers crewed by contractor personnel. Although Coast Guard polar icebreakers in the past have performed the annual McMurdo break-in mission, the NSF in recent years has chartered Russian and Swedish contractor-operated icebreakers to perform the mission (with a Coast Guard polar icebreaker standing ready to assist if needed). The NSF has also noted that *Healy*, though very capable in supporting Arctic research, operates at sea for about 200 days a year, as opposed to about 300 days a year for foreign contractor-operated polar icebreakers. For additional discussion of the issue, see **Appendix C**.

Regarding the second factor above, issues to consider would include, among other things, the potential availability of ships for lease, leasing costs, regulatory issues relating to long-term leases of capital assets for the U.S. government, and the ability of leased ships to perform the missions in question, including the mission of defending U.S. sovereignty in Arctic waters north of Alaska, the challenging McMurdo resupply mission, or missions that emerge suddenly in response to unexpected events.⁴⁸

Regarding the first two factors above, some observers note the size of the polar icebreaking fleets operated by other countries. Countries with interests in the polar regions have differing requirements for polar icebreakers, depending on the nature and extent of their polar activities.

⁴⁷ For more on Deepwater acquisition programs, see CRS Report RL33753, *Coast Guard Deepwater Acquisition Programs: Background, Oversight Issues, and Options for Congress*, by Ronald O'Rourke.

⁴⁸ The potential for using leased ships, and the possible limitations of this option, are discussed at several points in the 2007 NRC report. The report argues, among other things, that the availability of icebreakers for lease in coming years is open to question, that leased ships are not optimal for performing sovereignty-related operations, and that some foreign icebreakers might be capable of performing the McMurdo resupply mission. See, for example, pages 80-81 of the NRC report.

According to one source, as of January 2009, Russia had a fleet of 25 polar icebreakers (including six active heavy icebreakers, two heavy icebreakers in caretaker status, 15 other icebreakers, and two additional icebreakers leased from the Netherlands); Finland and Sweden each had seven polar icebreakers; and Canada had six.⁴⁹

Advocates of a Coast Guard polar icebreaker fleet that included two ships—that is, *Healy* and one other ship—might argue that the Coast Guard has been able to operate with such a force since the *Polar Star* went into caretaker status on July 1, 2006, and that a force with *Healy* and one other ship would cost less than a larger icebreaker fleet and thereby permit the Coast Guard to better fund programs for performing its various non-polar missions.

Advocates of a Coast Guard fleet that included three ships—*Healy* and two other icebreakers—might argue that the current force of *Healy* and one other operational ship has made it more difficult for the Coast Guard to perform the McMurdo resupply mission using its own assets, that a force that included *Healy* and two other ships would provide the Coast Guard with more flexibility for responding to contingencies or dealing with mechanical problems on one of the icebreakers, and that it would still be sufficiently affordable to permit the Coast Guard to adequately fund programs for performing non-polar missions.

Advocates of a Coast Guard fleet that included *Healy* and three or more other icebreakers might argue that such a fleet would provide additional capability for responding to potentially increased commercial and military activities in the Arctic, and more strongly signal U.S. commitment to defending its sovereignty and other interests in the region. They might argue that although this option would be more expensive than a smaller fleet, the added investment would be justified in light of the growing focus on U.S. polar interests.

In July 2009 testimony to Congress, Admiral Thad Allen, the Commandant of the Coast Guard, stated that a fleet of six polar icebreakers would be needed to meet a goal of having one icebreaker continuously available in both the Arctic and Antarctic.⁵⁰

The 2007 NRC report provided one perspective on the issue of required numbers and capabilities for U.S. polar icebreakers, stating:

Based on the current and future needs for icebreaking capabilities, the [study] committee concludes that the nation continues to require a polar icebreaking fleet that includes a minimum of three multimission ships [like the Coast Guard's three current polar icebreakers] and one single-mission [research] ship [like *Palmer*]. The committee finds that although the demand for icebreaking capability is predicted to increase, a fleet of three multimission and one single-mission icebreakers can meet the nation's future polar icebreaking needs through the application of the latest technology, creative crewing models, wise management of ice conditions, and more efficient use of the icebreaker fleet and other assets. The nation should

⁴⁹ Slide entitled "Icebreaker Force Laydown," in "The Accessible Arctic, A Quick Overview," a presentation given at a seminar entitled "The Changing Strategic Landscape for Sea-Based Missile Defense," Center for Technology and National Security, National Defense University, Fort Lesley J. McNair, Washington, DC, December 2-3, 2009. The slide defined a heavy icebreaker as one with a propulsion plant rated at more than 45,000 break horsepower (BHP). Under this definition, the United States has three heavy icebreakers, including one active heavy icebreaker (*Polar Sea*), one heavy icebreaker in caretaker status (*Polar Star*), and one additional icebreaker (*Healy*). Russia's heavy icebreakers are nuclear powered.

⁵⁰ For a news report summarizing Allen's testimony, see Rebekah Gordon, "Allen: Six Polar Icebreakers Ideal for Maximum Arctic Presence," *Inside the Navy*, July 20, 2009.

immediately begin to program, design, and construct two new polar icebreakers to replace the POLAR STAR and POLAR SEA.

Building only one new polar icebreaker is insufficient for several reasons. First, a single ship cannot be in more than one location at a time. No matter how technologically advanced or efficiently operated, a single polar icebreaker can operate in the polar regions for only a portion of any year. An icebreaker requires regular maintenance and technical support from shipyards and industrial facilities, must reprovision regularly, and has to effect periodic crew changeouts. A single icebreaker, therefore, could not meet any reasonable standard of active and influential presence and reliable, at-will access throughout the polar regions.

A second consideration is the potential risk of failure in the harsh conditions of polar operations. Despite their intrinsic robustness, damage and system failure are always a risk and the U.S. fleet must have enough depth to provide backup assistance. Having only a single icebreaker would necessarily require the ship to accept a more conservative operating profile, avoiding more challenging ice conditions because reliable assistance would not be available. A second capable icebreaker, either operating elsewhere or in homeport, would provide ensured backup assistance and allow for more robust operations by the other ship.

From a strategic, longer-term perspective, two new Polar class icebreakers will far better position the nation for the increasing challenges emerging in both polar regions. A second new ship would allow the U.S. Coast Guard to reestablish an active patrol presence in U.S. waters north of Alaska to meet statutory responsibilities that will inevitably derive from increased human activity, economic development, and environmental change. It would allow response to emergencies such as search-and-rescue cases, pollution incidents, and assistance to ships threatened with grounding or damage by ice. Moreover, a second new ship will leverage the possibilities for simultaneous operations in widely disparate geographic areas (e.g., concurrent operations in the Arctic and Antarctic), provide more flexibility for conducting Antarctic logistics (as either the primary or the secondary ship for the McMurdo break-in), allow safer multiple-ship operations in the most demanding ice conditions, and increase opportunities for international expeditions. Finally, an up-front decision to build two new polar icebreakers will allow economies in the design and construction process and provide a predictable cost reduction for the second ship.⁵¹

As mentioned earlier, the Coast Guard, while generally agreeing with the NRC report, is currently studying requirements for future polar icebreakers. It is possible that the Coast Guard's eventual position on required numbers and capabilities of Coast Guard polar icebreakers will differ in some respects from those of the NRC report. It is also possible that third parties might come to positions that differ from those of both the NRC report and the Coast Guard.

New Construction vs. Modernization

Another potential issue for Congress is whether requirements for polar icebreakers over the next 25 to 30 years should be met by building new ships, by extending the service lives of existing polar icebreakers, or by pursuing some combination of these options. In assessing this question, factors to consider include the relative costs of these options, the capabilities that each option would provide, the long-term supportability of older ships whose service lives have been extended, and industrial-base impacts.

⁵¹ National Research Council, *Polar Icebreakers in a Changing World, An Assessment of U.S. Needs*, Washington, 2007, p. 2.

Regarding relative costs, as discussed in the “Background” section, the Coast Guard estimates that new icebreakers with a 30-year design life might cost \$800 million to \$925 million per ship, while a 25-year service life extension of *Polar Star* and *Polar Sea* might cost about \$400 million per ship. (As mentioned earlier, an August 30, 2010, press report stated that the Commandant of the Coast Guard, Admiral Robert Papp, estimated the cost of extending the lives of *Polar Star* and *Polar Sea* at about \$500 million per ship.)⁵² These estimates, however, should be compared with caution: the estimate for building new ships depends in part on the capabilities that were assumed for those ships, and estimates for service-life extension work can be very uncertain due to the potential for discovering new things about a ship’s condition once the ship is opened up for service-life-extension work.

Regarding capabilities provided by each option, the new-construction option would provide entirely new ships with extensive use of new technology, while the service-life-extension option would provide ships that, although modernized and reconditioned, would not be entirely new and would likely make less extensive use of new technologies. Among other things, new-construction ships might be able to make more extensive use of new technologies for reducing crew size, which is a significant factor in a ship’s life cycle operating and support costs.

Regarding long-term supportability of older ships, the Coast Guard has expressed concern about the ability to support ships whose service lives have been extended after FY2014, because some contracts that currently provide that support are scheduled to end that year.⁵³

Regarding potential impact on the industrial base, 25-year service life extensions would likely provide shipyards and supplier firms with less work, and also exercise a smaller set of shipyard construction skills, than would building new ships.

Funding Ships in Coast Guard Budget or Elsewhere

Another potential issue for Congress, if it is determined that one or more new icebreakers should be built, is whether the acquisition cost of those ships should be funded entirely through Coast Guard’s Acquisition, Construction, and Improvements (AC&I) account, or partly or entirely through other parts of the federal budget, such as the Department of Defense (DOD) budget, the NSF budget, or both.⁵⁴ Within the DOD budget, possibilities include the Navy’s shipbuilding account, called the Shipbuilding and Conversion, Navy (SCN) account, and the National Defense Sealift Fund (NDSF), which is an account where DOD sealift ships and Navy auxiliary ships are funded.

There is precedent for funding Coast Guard icebreakers in the DOD budget: The procurement of *Healy* was funded in FY1990 in the DOD budget—specifically, the SCN account.⁵⁵ Advocates of

⁵² Cid Standifer, “Papp: Refurbished Icebreaker Hulls Could Last ‘An Awful Long Time,’” *Inside the Navy*, August 30, 2010. Ellipsis as in original.

⁵³ CRS discussion with Coast Guard officials, January 30, 2008.

⁵⁴ For more on the NSF, whose budget is normally funded through the annual Commerce, Justice, Science, and Related Agencies appropriations bill, see CRS Report 95-307, *U.S. National Science Foundation: An Overview*, by Christine M. Matthews.

⁵⁵ The FY1990 DOD appropriations act (H.R. 3072/P.L. 101-165 of November 21, 1989) provided \$329 million for the procurement of *Healy* in the SCN account. (See pages 77 and 78 of H.Rept. 101-345 of November 13, 1989). The NDSF was created three years later, in FY1993, as a fund for procuring DOD sealift ships, among other purposes, and since FY2001 has been used to fund Navy auxiliary ships as well.

funding new icebreakers partly or entirely through the SCN account or the NDSF might argue that this could permit the funding of new icebreakers while putting less pressure on other parts of the Coast Guard's budget. They might also argue that it would permit the new icebreaker program to benefit from the Navy's experience in managing shipbuilding programs. Opponents might argue that funding new icebreakers in the SCN account or the NDSF might put pressure on these other two accounts at a time when the Navy and DOD are facing challenges funding their own shipbuilding and other priorities. They might also argue that having the Navy manage the Coast Guard's icebreaker program would add complexity to the acquisition effort, and that it is unclear whether the Navy's recent performance in managing shipbuilding programs is better than the Coast Guard's, since both services have recently experienced problems in managing shipbuilding programs—the Coast Guard with the procurement of new Deepwater cutters, and the Navy in the Littoral Combat Ship (LCS) program and the LPD-17 class amphibious ship program.⁵⁶

At the July 16, 2008, hearing on Coast Guard icebreaker needs, Dr. Arden Bement, Jr., Director of NSF, when asked whether he would deem it prudent to contribute capital costs for the building of a new icebreaker, replied, "I think at this point, based on my understanding of the mission space, that the Coast Guard has, especially with the opening up of the Arctic over time, that it would be a prudent course of action."⁵⁷

Options for Congress

Potential options for Congress include but are not limited to the following:

- hold hearings to solicit updated information from the Coast Guard on the long-term sustainment of the polar icebreaker fleet; or direct the Coast Guard to provide such information;
- provide guidance to the Coast Guard concerning the long-term sustainment of the polar icebreaker fleet;
- direct the Coast Guard to submit to Congress by a certain date a plan for the long-term sustainment of the polar icebreaker fleet that includes the Coast Guard's preferences regarding required numbers and capabilities for polar icebreakers, and its preferred acquisition option for achieving and maintaining a polar icebreaker fleet with those numbers and capabilities; and
- provide funding to begin implementing one or more options for the long-term sustainment of the polar icebreaker fleet.

⁵⁶ For more on Deepwater acquisition programs and the LCS and LPD-17 programs, see CRS Report RL33753, *Coast Guard Deepwater Acquisition Programs: Background, Oversight Issues, and Options for Congress*, by Ronald O'Rourke, CRS Report RL33741, *Navy Littoral Combat Ship (LCS) Program: Background, Issues, and Options for Congress*, by Ronald O'Rourke, and CRS Report RL34476, *Navy LPD-17 Amphibious Ship Procurement: Background, Issues, and Options for Congress*, by Ronald O'Rourke.

⁵⁷ Transcript of hearing.

Legislative Activity in 112th Congress

FY2012 Funding Request

The Coast Guard's proposed FY2012 budget requests \$39 million for its polar icebreaking program. The budget proposes decommissioning *Polar Sea* in FY2011 and transitioning its crew to the reactivated *Polar Star*.

Appendix A. Legislative Activity in 111th Congress

This appendix presents information on legislative activity regarding polar icebreakers in the 111th Congress.

FY2011 Funding Request

The proposed FY2011 Coast Guard budget did not request any funding in the Coast Guard's Acquisition, Construction, and Improvements (AC&I) account for polar icebreaker sustainment or acquisition of new polar icebreakers.

FY2011 DOD and Full-Year Continuing Appropriations Act (H.R. 1473/P.L. 112-10)

The text of the FY2011 Department of Defense and Full-Year Continuing Appropriations Act (H.R. 1473/P.L. 112-10 of April 15, 2011) does not provide any funding specifically identified as being for polar icebreaker sustainment or refurbishment, or for acquisition of new polar icebreakers.

FY2011 DHS Appropriations Bill (S. 3607)

Senate

The Senate Appropriations Committee, in its report (S.Rept. 111-222 of July 19, 2010) on S. 3607 of the 111th Congress, did not recommend any funding in the Coast Guard's AC&I account for polar icebreaker sustainment or refurbishment, or for acquisition of new polar icebreakers (pages 82-83). The report states:

POLAR ICEBREAKER SUSTAINMENT

The Coast Guard shall continue to periodically brief the Committee on progress made to reactivate CGC Polar Star. According to the Coast Guard, reactivation work will be completed by 2013, increasing the fleet of operational polar icebreakers to three. As discussed in the "Operating Expenses" section of this report, the Committee expects sufficient funding to be requested in fiscal year 2012 to field a crew for the vessel.

The Committee recently learned that the Polar Sea has been unexpectedly taken out of service due to excessive wear in its main diesel engines and will likely be in a maintenance status and unavailable for operations until at least January 2011. As a result of this situation, the scheduled fall 2010 Arctic patrol will be cancelled as will an Antarctic Operation Deep Freeze standby period (December 2010-January 2011). The Committee is aware of a root-cause failure-analysis into the underlying cause of the engine wear. The Committee is to be briefed on its results upon its completion and the Coast Guard's plans to address them. (Page 86)

The report also states:

POLAR OPERATIONS AND MAINTENANCE FUNDING

The Committee notes the budget request once again does not transfer operating and maintenance funds for the polar icebreakers from the National Science Foundation [NSF] to the Coast Guard despite congressional direction to the contrary. P.L. 111-117 transfers \$54,000,000 from the NSF to the Coast Guard for icebreaking services to cover all anticipated operation and maintenance costs for fiscal year 2010.⁵⁸ For fiscal year 2012, the Committee expects the operating and maintenance budget authority and associated FTE to be included in the Coast Guard's budget request.

The Coast Guard expects the Polar Star to be reactivated in fiscal year 2013. In keeping with the standard practice of crewing ships in advance to ensure appropriate training and readiness, fielding a crew for the Polar Star is required in fiscal year 2012. The Committee expects sufficient funding to be included in the Coast Guard's fiscal year 2012 request for this purpose.

The Committee also notes that the Coast Guard's analysis of national mission needs in the high latitude regions has yet to be completed. This effort was funded in fiscal year 2009 to inform the national polar policy debate. The results of this study are to be submitted expeditiously and include projected assets and resources necessary to address identified requirements. (Page 80; material in brackets as in original)

Coast Guard Authorization Act of 2010 (H.R. 3619/P.L. 111-281)

H.R. 3619 was passed by the House on October 23, 2009, and by the Senate on May 7, 2010. The Senate-passed version substituted the text of S. 1194 as reported by the Senate Commerce, Science, and Transportation Committee (see below), with modifications. The House and Senate resolved their differences and passed the final version of the bill on September 29 and 30, 2010. The bill was presented to the President on October 4, 2010, and signed into law as P.L. 111-281 on October 15, 2010.

House

The Coast Guard Authorization Act of 2010 (H.R. 3619) as reported by the House Committee on Transportation and Infrastructure (H.Rept. 111-303, Part 1, of October 16, 2009) contains two provisions relating to polar icebreaking—Section 311 and Section 1316.

Section 311 states:

SEC. 311. ARCTIC MARINE SHIPPING ASSESSMENT IMPLEMENTATION.

⁵⁸ The FY2010 Consolidated Appropriations Act (H.R. 3288/P.L. 111-117 of December 16, 2009) states, in the paragraph that appropriates funds for NSF research and related activities, that the funds are made available provided, among other things, "That from funds specified in the fiscal year 2010 budget request for icebreaking services, \$54,000,000 shall be transferred to the U.S. Coast Guard 'Operating Expenses' within 60 days of enactment of this Act...." The conference report on H.R. 3288 (H.Rept. 111-366 of December 8, 2009) states:

The conference agreement transfers \$54,000,000 from NSF to the United States Coast Guard (USCG) for icebreaking services to cover all anticipated operation and maintenance costs for fiscal year 2010. The conferees expect that in future years all operation and maintenance budget authority for these USCG icebreakers will be requested by the Department of Homeland Security. (Page 766)

(a) Purpose- The purpose of this section is to ensure safe, secure, and reliable maritime shipping in the Arctic including the availability of aids to navigation, vessel escorts, spill response capability, and maritime search and rescue in the Arctic.

(b) International Maritime Organization Agreements- To carry out the purpose of this section, the Secretary of the department in which the Coast Guard is operating shall work through the International Maritime Organization to establish agreements to promote coordinated action among the United States, Russia, Canada, Iceland, Norway, and Denmark and other seafaring and Arctic nations to ensure, in the Arctic—

- (1) placement and maintenance of aids to navigation;
- (2) appropriate icebreaking escort, tug, and salvage capabilities;
- (3) oil spill prevention and response capability;
- (4) maritime domain awareness, including long-range vessel tracking; and
- (5) search and rescue.

(c) Coordination by Committee on the Maritime Transportation System- The Committee on the Maritime Transportation System established under a directive of the President in the Ocean Action Plan, issued December 17, 2004, shall coordinate the establishment of domestic transportation policies in the Arctic necessary to carry out the purpose of this section.

(d) Agreements and Contracts- The Secretary of the department in which the Coast Guard is operating may, subject to the availability of appropriations, enter into cooperative agreements, contracts, or other agreements with, or make grants to individuals and governments to carry out the purpose of this section or any agreements established under subsection (b).

(e) Icebreaking- The Secretary of the department in which the Coast Guard is operating shall promote safe maritime navigation by means of icebreaking where needed to assure the reasonable demands of commerce.

(f) Demonstration Projects- The Secretary of Transportation may enter into cooperative agreements, contracts, or other agreements with, or make grants to, individuals to conduct demonstration projects to reduce emissions or discharges from vessels operating in the Arctic.

(g) Authorization of Appropriations- There are authorized to be appropriated—

(1) to the Secretary of the department in which the Coast Guard is operating—

(A) \$5,000,000 for each of fiscal years 2011 through 2015 for seasonal operations in the Arctic; and

(B) \$10,000,000 for each of fiscal years 2012 through 2015 to carry out agreements established under subsection (d); and

(2) to the Secretary of Transportation \$5,000,000 for each of fiscal years 2011 through 2015 to conduct demonstration projects under subsection (f).

(h) Icebreakers-

(1) ANALYSES- Not later than 90 days after the date of enactment of this Act or the date of completion of the ongoing High Latitude Study to assess Arctic polar ice-breaking mission requirements, which ever occurs later, the Commandant of the Coast Guard shall—

(A) conduct a comparative cost-benefit analysis of—

(i) rebuilding, renovating, or improving the existing fleet of icebreakers for operation by the Coast Guard,

(ii) constructing new icebreakers for operation by the Coast Guard, and

(iii) any combination of the activities described in clauses (i) and (ii), to carry out the missions of the Coast Guard; and

(B) conduct an analysis of the impact on mission capacity and the ability of the United States to maintain a presence in the Arctic regions through the year 2020 if recapitalization of the icebreaker fleet, either by constructing new icebreakers or rebuilding, renovating, or improving the existing fleet of icebreakers, is not fully funded.

(2) REPORTS TO CONGRESS-

(A) Not later than 90 days after the date of enactment of this Act or the date of completion of the ongoing High Latitude Study to assess Arctic ice-breaking mission requirements, which ever occurs later, the Commandant of the Coast Guard shall submit a report containing the results of the study, together with recommendations the Commandant deems appropriate under section 93(a)(24) of title 14, United States Code, to the Senate Committee on Commerce, Science, and Transportation and the House of Representatives Committee on Transportation and Infrastructure.

(B) Not later than 1 year after the date of enactment of this Act, the Commandant shall submit reports containing the results of the analyses required under subparagraphs (A) and (B) of paragraph (1), together with recommendations the Commandant deems appropriate under section 93(a)(24) of title 14, United States Code, to the Senate Committee on Commerce, Science, and Transportation and the House of Representatives Committee on Transportation and Infrastructure.

(i) Arctic Definition- In this section the term ‘Arctic’ has the same meaning as in section 112 of the Arctic Research and Policy Act of 1984 (15 U.S.C. 4111).

Section 1316 states:

SEC. 1316. ASSESSMENT OF NEEDS FOR ADDITIONAL COAST GUARD PRESENCE IN HIGH LATITUDE REGIONS.

Within 270 days after the date of enactment of this Act, the Secretary of the department in which the Coast Guard is operating shall submit a report to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives assessing the need for additional Coast Guard prevention and response capability in the high latitude regions. The assessment shall address needs for all Coast Guard mission areas, including search and rescue, marine pollution response and prevention, fisheries enforcement, and maritime commerce. The Secretary shall include in the report—

- (1) an assessment of the high latitude operating capabilities of all current Coast Guard assets, including assets acquired under the Deepwater program;
- (2) an assessment of projected needs for Coast Guard forward operating bases in the high latitude regions;
- (3) an assessment of shore infrastructure, personnel, logistics, communications, and resources requirements to support Coast Guard forward operating bases in the high latitude regions;
- (4) an assessment of the need for high latitude icebreaking capability and the capability of the current high latitude icebreaking assets of the Coast Guard, including—
 - (A) whether the Coast Guard’s high latitude icebreaking fleet is meeting current mission performance goals;
 - (B) whether the fleet is capable of meeting projected mission performance goals; and
 - (C) an assessment of the material condition, safety, and working conditions aboard high latitude icebreaking assets, including the effect of those conditions on mission performance;
- (5) a detailed estimate of acquisition costs for each of the assets (including shore infrastructure) necessary for additional prevention and response capability in high latitude regions for all Coast Guard mission areas, and an estimate of operations and maintenance costs for such assets for the initial 10-year period of operations; and
- (6) detailed cost estimates (including operating and maintenance for a period of 10 years) for high latitude icebreaking capability to ensure current and projected future mission performance goals are met, including estimates of the costs to—
 - (A) renovate and modernize the Coast Guard’s existing high latitude icebreaking fleet; and
 - (B) replace the Coast Guard’s existing high latitude icebreaking fleet.

Senate

On May 7, 2010, the Senate passed S.Amdt. 3912, which amended H.R. 3619 by substituting the text of S. 1194 as reported by the Senate Commerce, Science, and Transportation Committee (see below), with modifications. The Senate then passed H.R. 3619 the same day. **Section 603** of the Senate-passed version of H.R. 3619 states:

SEC. 603. ICEBREAKERS.

- (a) ANALYSES- Not later than 90 days after the date of enactment of this Act or the date of completion of the ongoing High Latitude Study to assess polar ice-breaking mission requirements, whichever occurs later, the Commandant of the Coast Guard shall require a nongovernmental, independent third party (other than the National Academy of Sciences) which has extensive experience in the analysis of military procurements to—
 - (1) conduct a comparative cost-benefit analysis, taking into account future Coast Guard budget projections (which assume Coast Guard budget growth of no more than inflation) and other recapitalization needs, of—

(A) rebuilding, renovating, or improving the existing fleet of polar icebreakers for operation by the Coast Guard,

(B) constructing new polar icebreakers for operation by the Coast Guard,

(C) construction of new polar icebreakers by the National Science Foundation for operation by the Foundation,

(D) rebuilding, renovating, or improving the existing fleet of polar icebreakers by the National Science Foundation for operation by the Foundation, and

(E) any combination of the activities described in subparagraph (A), (B), (C), or (D) to carry out the missions of the Coast Guard and the National Science Foundation;

(2) conduct an analysis of the impact on mission capacity and the ability of the United States to maintain a presence in the polar regions through the year 2020 if recapitalization of the polar icebreaker fleet, either by constructing new polar icebreakers or rebuilding, renovating, or improving the existing fleet of polar icebreakers, is not fully funded; and

(3) conduct a comprehensive analysis of the impact on all Coast Guard activities, including operations, maintenance, procurements, and end strength, of the acquisition of polar icebreakers described in paragraph (1) by the Coast Guard or the National Science Foundation assuming that total Coast Guard funding will not increase more than the annual rate of inflation.

(b) Reports to Congress-

(1) Not later than one year and 90 days after the date of enactment of this Act or the date of completion of the ongoing High Latitude Study to assess polar ice-breaking mission requirements, whichever occurs later, the Commandant of the Coast Guard shall submit a report containing the results of the study, together with recommendations the Commandant deems appropriate under section 93(a)(24) of title 14, United States Code, to the Senate Committee on Commerce, Science, and Transportation and the House of Representatives Committee on Transportation and Infrastructure.

(2) Not later than 1 year after the date of enactment of this Act, the Commandant shall submit reports containing the results of the analyses required under paragraphs (1) and (2) of subsection (a), together with recommendations the Commandant deems appropriate under section 93(a)(24) of title 14, United States Code, to the Senate Committee on Commerce, Science, and Transportation and the House of Representatives Committee on Transportation and Infrastructure.

Final Version

Section 307 of H.R. 3619/P.L. 111-281 states:

SEC. 307. ARCTIC MARINE SHIPPING ASSESSMENT IMPLEMENTATION.

(a) Purpose- The purpose of this section is to ensure safe and secure maritime shipping in the Arctic including the availability of aids to navigation, vessel escorts, spill response capability, and maritime search and rescue in the Arctic.

(b) International Maritime Organization Agreements- To carry out the purpose of this section, the Secretary of the department in which the Coast Guard is operating is encouraged

to enter into negotiations through the International Maritime Organization to conclude and execute agreements to promote coordinated action among the United States, Russia, Canada, Iceland, Norway, and Denmark and other seafaring and Arctic nations to ensure, in the Arctic—

- (1) placement and maintenance of aids to navigation;
- (2) appropriate marine safety, tug, and salvage capabilities;
- (3) oil spill prevention and response capability;
- (4) maritime domain awareness, including long-range vessel tracking; and
- (5) search and rescue.

(c) Coordination by Committee on the Maritime Transportation System- The Committee on the Maritime Transportation System established under a directive of the President in the Ocean Action Plan, issued December 17, 2004, shall coordinate the establishment of domestic transportation policies in the Arctic necessary to carry out the purpose of this section.

(d) Agreements and Contracts- The Secretary of the department in which the Coast Guard is operating may, subject to the availability of appropriations, enter into cooperative agreements, contracts, or other agreements with, or make grants to individuals and governments to carry out the purpose of this section or any agreements established under subsection (b).

(e) Icebreaking- The Secretary of the department in which the Coast Guard is operating shall promote safe maritime navigation by means of icebreaking where necessary, feasible, and effective to carry out the purposes of this section.

(f) Independent Ice Breaker Analyses-

(1) IN GENERAL- Not later than 90 days after the date of enactment of this Act, the Secretary of the department in which the Coast Guard is operating shall require a nongovernmental, independent third party (other than the National Academy of Sciences) that has extensive experience in the analysis of military procurements, to—

(A) conduct a comparative cost-benefit analysis, taking into account future Coast Guard budget projections (which assume Coast Guard budget growth of no more than inflation) and other recapitalization needs, of—

- (i) rebuilding, renovating, or improving the existing fleet of polar icebreakers for operation by the Coast Guard;
- (ii) constructing new polar icebreakers for operation by the Coast Guard;
- (iii) construction of new polar icebreakers by the National Science Foundation for operation by the Foundation;
- (iv) rebuilding, renovating, or improving the existing fleet of polar icebreakers by the National Science Foundation for operation by the Foundation; and

(v) any combination of the activities described in clause (i), (ii), (iii), or (iv) to carry out the missions of the Coast Guard and the National Science Foundation; and

(B) conduct a comprehensive analysis of the impact on all Coast Guard activities, including operations, maintenance, procurements, and end strength, of the acquisition of polar icebreakers described in subparagraph (A) by the Coast Guard or the National Science Foundation assuming that total Coast Guard funding will not increase more than the annual rate of inflation.

(2) REPORT- Not later than 1 year after the date of enactment of this Act, the Secretary of the department in which the Coast Guard is operating shall submit a report containing the results of the analyses required under paragraph (1), together with recommendations the Commandant considers appropriate under section 93(a)(24) of title 14, United States Code, to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives.

(g) High-Latitude Study- Not later than 90 days after the date of enactment of this Act or the date of completion of the ongoing High-Latitude Study to assess polar icebreaking mission requirements for all Coast Guard missions including search and rescue, marine pollution response and prevention, fisheries enforcement, and maritime commerce, whichever occurs later, the Commandant of the Coast Guard shall submit a report containing the results of the study, together with recommendations the Commandant considers appropriate under section 93(a)(24) of title 14, United States Code, to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives.

(h) Arctic Definition- In this section the term `Arctic` has the same meaning as in section 112 of the Arctic Research and Policy Act of 1984 (15 U.S.C. 4111).

FY2010 and FY2011 Coast Guard Authorization Bill (S. 1194)

Senate

The Senate Commerce, Science, and Transportation Committee reported S. 1194 on October 30, 2009 (S.Rept. 111-95 of October 30, 2009). Section 604 of S. 1194 as reported by the committee states:

SEC. 604. ICEBREAKERS.

(a) ANALYSES- Not later than 90 days after the date of enactment of this Act or the date of completion of the ongoing High Latitude Study to assess polar ice-breaking mission requirements, which ever occurs later, the Commandant of the Coast Guard shall—

(1) conduct a comparative cost-benefit analysis of—

(A) rebuilding, renovating, or improving the existing fleet of polar icebreakers for operation by the Coast Guard,

(B) constructing new polar icebreakers for operation by the Coast Guard for operation by the Coast Guard, and

(C) any combination of the activities described in subparagraphs (A) and (B), to carry out the missions of the Coast Guard; and

(2) conduct an analysis of the impact on mission capacity and the ability of the United States to maintain a presence in the polar regions through the year 2020 if recapitalization of the polar icebreaker fleet, either by constructing new polar icebreakers or rebuilding, renovating, or improving the existing fleet of polar icebreakers, is not fully funded.

(b) Reports to Congress-

(1) Not later than 90 days after the date of enactment of this Act or the date of completion of the ongoing High Latitude Study to assess polar ice-breaking mission requirements, which ever occurs later, the Commandant of the Coast Guard shall submit a report containing the results of the study, together with recommendations the Commandant deems appropriate under section 93(a)(24) of title 14, United States Code, to the Senate Committee on Commerce, Science, and Transportation and the House of Representatives Committee on Transportation and Infrastructure.

(2) Not later than 1 year after the date of enactment of this Act, the Commandant shall submit reports containing the results of the analyses required under paragraphs (1) and (2) of subsection (a), together with recommendations the Commandant deems appropriate under section 93(a)(24) of title 14, United States Code, to the Senate Committee on Commerce, Science, and Transportation and the House of Representatives Committee on Transportation and Infrastructure.

S.Rept. 111-95 summarizes section 604 on pages 24-25.

On May 7, 2010, the Senate passed S.Amdt. 3912, which amended H.R. 3619 (see above) by substituting the text of S. 1194 as reported by the Senate Commerce, Science, and Transportation Committee, with modifications. The Senate then passed H.R. 3619 the same day.

Arctic Marine Shipping Assessment Implementation Act of 2009 (H.R. 2865/S. 1514/S. 1561)

House

H.R. 2865 was introduced on June 12, 2009. Section 8(1)(A) would authorize appropriations of \$750 million per year in FY2011 and FY2012 for the construction of two polar capable icebreakers.

Section 2 states that Congress finds and declares several things, including the following:

The United States has continuing research, security, environmental, and commercial interests in the Arctic region that rely on the availability of icebreaker platforms of the Coast Guard. The Polar Class icebreakers commissioned in the 1970s are in need of replacement.

and

Building new icebreakers, mustering international plans for aids to navigation and other facilities, and establishing coordinated shipping regulations and oil spill prevention and response capability through international cooperation, including the approval of the International Maritime Organization, requires long lead times. Beginning those efforts now, with the completion of an Arctic Marine Shipping Assessment by the eight-nation Arctic

Council, is essential to protect United States interests given the extensive current use of the Arctic Ocean and adjacent seas by vessels of many nations.

Section 3 states:

To carry out the purpose of this Act, the Secretary of the department in which the Coast Guard is operating shall work through the International Maritime Organization to establish agreements to promote coordinated action among the United States, Russia, Canada, Iceland, Norway, and Denmark and other seafaring and Arctic nations to ensure, in the Arctic...

(2) appropriate icebreaking escort, tug, and salvage capabilities.

Section 6 states, in its entirety:

The Secretary of the department in which the Coast Guard is operating shall promote safe maritime navigation by means of icebreaking where needed to assure the reasonable demands of commerce.

Senate

S. 1514 was introduced on July 24, 2009. Section 8(1)(A) would authorize appropriations of \$750 million per year in FY2011 and FY2012 for the construction of two polar capable icebreakers.

Section 2 states that Congress finds and declares several things, including the following:

The United States has continuing research, security, environmental, and commercial interests in the Arctic region that rely on the availability of icebreaker platforms of the Coast Guard. The Polar Class icebreakers commissioned in the 1970s are in need of replacement.

and

Building new icebreakers, mustering international plans for aids to navigation and other facilities, and establishing coordinated shipping regulations and oil spill prevention and response capability through international cooperation, including the approval of the International Maritime Organization, requires long lead times. Beginning those efforts now, with the completion of an Arctic Marine Shipping Assessment by the eight-nation Arctic Council, is essential to protect United States interests given the extensive current use of the Arctic Ocean and adjacent seas by vessels of many nations.

Section 3 states:

To carry out the purpose of this Act, the Secretary of the department in which the Coast Guard is operating shall work through the International Maritime Organization to establish agreements to promote coordinated action among the United States, Russia, Canada, and other seafaring and Arctic nations to ensure, in the Arctic...

(2) appropriate icebreaking escort, tug, and salvage capabilities....

Section 6 states, in its entirety:

The Secretary of the department in which the Coast Guard is operating shall promote safe maritime navigation by means of icebreaking where needed to assure the reasonable demands of commerce.

S. 1561 was introduced on August 3, 2009. Section 11(a)(1) would authorize appropriations of \$40 million in FY2011 for the design of a new polar class icebreaker. Section 11(a)(2) would authorize appropriations of \$800 million per year in FY2011 and FY2012 for the construction of two polar capable icebreakers.

Section 2 states that Congress finds several things, including the following:

The United States has continuing research, security, environmental, and commercial interests in the Arctic region that rely on the availability of polar class icebreakers of the Coast Guard that were commissioned in the 1970s and are in need of replacement.

and

Building new icebreakers, forward operating bases, aids to navigation, and other facilities, and establishing coordinated shipping regulations and oil spill prevention and response capability through international cooperation requires long lead times.

Section 5 states:

It is the sense of Congress that, to carry out the purpose of this Act, the Secretary of State, in consultation with the Secretary of Homeland Security, acting through the Commandant of the Coast Guard, should work to establish agreements to promote coordinated action among the United States, Russia, Canada, Iceland, Norway, and Denmark and other seafaring and Arctic nations with respect to...

(4) appropriate icebreaking escort, tug, and salvage capabilities....

Section 6 states:

(a) Submission of Report Analysis to Congress-

(1) REQUIREMENT FOR SUBMISSION- Not later than 90 days following the completion of the High Latitude Polar Ice-Breaking Mission Analysis Report, the Commandant of the Coast Guard shall submit to the appropriate committees of Congress—

(A) such report; and

(B) consistent with section 93(a)(24) of title 14, United States Code, any recommendations of the Commandant related to such report.

(2) APPROPRIATE COMMITTEES OF CONGRESS DEFINED- In this subsection, the term `appropriate committees of Congress' means the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives.

(b) Mission Requirements Analysis-

(1) MISSION REQUIREMENTS ANALYSIS- Not later than 90 days after the date of the enactment of this Act, the Commandant of the Coast Guard shall, subject to the availability of appropriations, execute a contract with an independent entity to—

(A) conduct an analysis of future mission requirements of the Coast Guard in the Arctic and Antarctic; and

(B) estimate the necessary resources to provide for such requirements.

(2) SUBMISSION OF ANALYSIS AND ESTIMATE- Not later than 120 days after the date that the contract described in paragraph (1) is executed, the analysis and estimate described in subparagraph (A) and (B) of that paragraph shall be submitted to—

(A) the appropriate committees of Congress;

(B) the Commandant of the Coast Guard; and

(C) the Comptroller General of the United States.

(3) ADDITIONAL RECOMMENDATIONS- Not later than 90 days after the submission of the analysis and estimate described in paragraph (2)—

(A) the Commandant of the Coast Guard shall submit to the appropriate committees of Congress, consistent with section 93(a)(24) of title 14, United States Code, any recommendations of the Commandant related to such analysis and estimate; and

(B) the Comptroller General shall submit to the appropriate committees of Congress any recommendations of the Comptroller General related to such analysis and estimate.

(4) APPROPRIATE COMMITTEES OF CONGRESS DEFINED- In this subsection, the term ‘appropriate committees of Congress’ means—

(A) the Committee on Commerce, Science, and Transportation and the Committee on Homeland Security and Governmental Affairs of the Senate; and

(B) the Committee on Homeland Security and the Committee on Transportation and Infrastructure of the House of Representatives.

Section 10 states, in its entirety:

Notwithstanding any other provision of law, the Director of the National Science Foundation shall transfer all amounts provided pursuant to any Act for the procurement of polar icebreaking services to the United States Coast Guard Appropriation Accounts, and such amounts shall remain available until expended for operating expenses, renovation, and improvement.

FY2010 DHS Appropriations Act (H.R. 2892/P.L. 111-83)

House

The House Appropriations Committee, in its report (H.Rept. 111-157 of June 16, 2009) on H.R. 2892, did not recommend any funding in the Coast Guard’s AC&I account for polar icebreaker sustainment or acquisition of new polar icebreakers. The report stated:

POLAR ICEBREAKING OPERATING AND MAINTENANCE COSTS AND FUTURE POLAR NEEDS

The Committee continues to be concerned about Coast Guard’s ability to meet its polar operations mission requirements and provide the United States with the capability to support

national interests in the polar regions. These interests extend well beyond the realm of scientific research. As such, last year the Committee directed the Coast Guard and the National Science Foundation (NSF) to renegotiate the existing agreement on polar icebreaking in order to return the budget for operating and maintaining these vessels to the Coast Guard for fiscal year 2010, and to provide a new joint plan for Coast Guard support of scientific research by NSF and other Federal agencies, which was to be included in the 2010 budget request. No agreement was reached, and no plan was submitted. Negotiations are apparently underway between the Coast Guard and NSF, but the budget has yet to be returned to the Coast Guard accounts. Therefore, the Committee directs the Coast Guard to continue negotiating the agreement for the return of icebreaking in the 2011 budget, and to provide the joint plan for Coast Guard support as soon as possible.

The Committee further directs the Coast Guard to use existing appropriations to continue its analysis of national mission needs in the high latitude regions to inform national polar policy. (Pages 78-79)

Senate

The Senate Appropriations Committee, in its report (S.Rept. 111-31 of June 18, 2009) on the FY2010 DHS appropriation bill (S. 1298), recommended \$32.5 million in the Coast Guard's AC&I account for the reactivation and service life extension of *Polar Star*. Of this amount, \$27.3 million is in an AC&I line item for polar icebreaker sustainment, and the remaining \$5.2 million is included within a line item for AC&I direct personnel costs (page 76). The Senate included the provisions of S. 1298 in an amendment to H.R. 2892.

The committee's report on S. 1298 stated:

POLAR ICEBREAKER SUSTAINMENT

The Committee recommends \$32,500,000 above the budget request to complete the reactivation and service life extension of Coast Guard Cutter *Polar Star*. Of this amount, \$5,200,000 is funded in the AC&I direct personnel costs PPA [program, project, or activity]. Returning *Polar Star* to operational status is vital to ensuring the U.S. Government has the ability to project U.S. sovereignty and protect the broad range of security, economic, and environmental interests in the Arctic and Antarctic. Within this amount, the Coast Guard shall begin survey and design and conduct a business case analysis for either a new heavy polar icebreaker class or a major service life extension project for existing heavy icebreakers. The only existing heavy polar class icebreaker, the *Polar Sea*, has only 7 years remaining in its useful life. (Page 78)

The report also stated:

POLAR OPERATIONS AND MAINTENANCE FUNDING

The Committee notes the budget request did not include transfer of operating and maintenance funds for the polar icebreakers from the National Science Foundation [NSF] to the Coast Guard as directed in the joint explanatory statement accompanying the Department of Homeland Security Appropriations Act, 2009 (Public Law 110-329). For fiscal year 2011, the Committee expects the operating and maintenance budget authority and associated FTE to be included in the Coast Guard's request. The two agencies shall update the existing Memorandum of Agreement to reflect the change in budget authority. (page 73; material in brackets as in original)

Conference

The conference report (H.Rept. 111-298 of October 13, 2009) on H.R. 2892/P.L. 111-83 of October 28, 2009, provided \$32.5 million to complete the reactivation and service life extension of *Polar Star*. Of this total, \$27.3 million was provided in the AC&I account in a line item entitled “Polar Icebreaker sustainment” (Page 87). The conference report stated:

Polar Icebreaker Sustainment

The conference agreement provides an additional \$32,500,000 to complete the reactivation and service life extension of the Coast Guard Cutter POLAR STAR as proposed by the Senate. No additional funding for this activity was proposed by the House. Of this amount, \$5,200,000 is provided in the Acquisition, Construction, and Improvements direct personnel costs PPA [program, project, or activity]. Funds shall be applied as specified in the Senate report. The conferees believe returning POLAR STAR to operational status is vital to national interests in the polar regions. According to the Coast Guard the only existing operational heavy icebreaker, the POLAR SEA, has only five years of service life remaining. The absence of requested funding to complete fiscal year 2009 efforts to reactivate POLAR STAR, combined with the lack of compliance with standing Congressional direction on the polar icebreaking budget, implies a broader lack of commitment to sustaining polar capabilities and achieving longterm, strategic objectives in the Arctic. The conferees direct the Coast Guard to brief the Committees no later than December 15, 2009, on the program execution plan for reactivation of POLAR STAR and the status of resources required to achieve mission requirements for polar operations. (Page 89)

The conference report also stated, the section on the Coast Guard’s Operating Expenses (OE) account:

Polar Icebreaking Operations and Maintenance Funding

The conferees expect polar icebreaking operations and maintenance budget authority and associated FTE to be included in the Coast Guard’s budget request for fiscal year 2011. The National Science Foundation and Coast Guard shall update the existing Memorandum of Agreement to reflect the change in budget authority as proposed by the Senate. Furthermore, the conferees direct the Coast Guard to follow the direction regarding the high latitude study as outlined in the House report. (Page 85)

American Recovery and Reinvestment Act of 2009 (H.R. 1/P.L. 111-5)

A Senate version of H.R. 1 (amendment in Senate, January 30, 2009) stated, in the section on the Coast Guard’s Acquisition, Construction, and Improvements (AC&I) account, that of the funds provided in the bill for the AC&I account, “\$87,500,000 shall be for the design of a new polar icebreaker or the renovation of an existing polar icebreaker, and major repair and maintenance of existing polar icebreakers.” The provision was not included in other House and Senate versions of the bill, or in the conference version of the bill, which was signed into law on February 17, 2009.

Appendix B. Legislative Activity in 110th Congress

FY2009 DHS Appropriations Act (H.R. 2638/P.L. 110-329)

House

The House Appropriations Committee, in its report (H.Rept. 110-862 of September 18, 2008) on the FY2009 DHS appropriations bill (H.R. 6947), stated:

POLAR ICEBREAKING OPERATING AND MAINTENANCE COSTS AND FUTURE POLAR NEEDS

The Committee is concerned about Coast Guard's ability to meet its polar operations mission requirements and provide the United States with the capability to support national interests in the polar regions. The Committee provides \$200,000, as requested, to conduct an analysis of national mission needs in the high latitude regions to inform the national polar policy debate.

In fiscal year 2006 the Committees on Appropriations approved an Administration request for the National Science Foundation (NSF), the primary user of the three Coast Guard polar icebreaker vessels, to fund the costs of operating and maintaining these aging vessels. Because it has become more apparent that the national interest in the polar regions extends beyond scientific research, the Committee questions whether this arrangement should continue. Accordingly, the Committee directs Coast Guard and NSF to renegotiate the existing agreement in order to return the budget for operating and maintaining these vessels to Coast Guard for fiscal year 2010. This change is consistent with a new joint plan for Coast Guard support of scientific research by NSF and other Federal agencies, which also is to be included in the 2010 budget request. NSF shall retain responsibility for the contracting of scientific support services that Coast Guard does not have the capability to perform or cannot perform on a cost-competitive basis. The Committee is aware of a \$4,000,000 funding shortfall related to the caretaker status of the POLAR STAR, and directs Coast Guard to address this shortfall within the amounts appropriated for fiscal year 2009. (Page 82)

Senate

The FY2009 DHS appropriations bill (S. 3181) as reported by the Senate appropriations committee would make available about \$6.28 billion for the Coast Guard's Operating Expenses (OE) account, provided, among other things, "that notwithstanding any other provision of law, \$4,000,000 of the amounts made available under this heading may be available to maintain the USCGC POLAR STAR in caretaker status."

The Senate Appropriations Committee, in its report (S.Rept. 110-396 of June 23, 2008) on S. 3181, stated:

POLAR ICEBREAKERS

The Committee reiterates its concern with the Coast Guard's ability to meet its current and projected polar operations responsibilities. According to correspondence from the Commandant on May 23, 2008, the Coast Guard will submit a report on polar mission requirements no later than August 31, 2008. The Committee expects this report to address the concerns detailed in the explanatory statement accompanying the Department of

Homeland Security Appropriations Act, 2008. The Committee also expects all costs to operate the polar icebreakers for National Science Foundation [NSF] research, including unanticipated maintenance, will be reimbursed by NSF. However, the Committee notes that the NSF budget request states, “Effective with the fiscal year 2009 budget, NSF will no longer provide funds to maintain the USCGC Polar Star in caretaker status because NSF does not envision current or future use of this vessel in support of its mission.” Due to the changing environmental conditions and increased activity in the polar regions, as well as the Coast Guard’s multi-mission responsibilities in the polar regions that are not science related, the Committee includes statutory language making an additional \$4,000,000 available to maintain the USCGC Polar Star in caretaker status. The Committee also notes that the forthcoming report on Coast Guard polar mission requirements will address the sustainability of the current operations and maintenance cost sharing arrangement between the Coast Guard and the NSF to support both current and projected polar icebreaker operations. (Page 81)

Compromise

The FY2009 DHS appropriations bill became Division D of H.R. 2638/P.L. 110-329 of September 30, 2008, a consolidated appropriations act. H.R. 2638 began as a DHS appropriations act and was then amended to become a consolidated appropriations act that contained that includes, among other things, the FY2009 DHS appropriations act. In lieu of a conference report, there was a compromise version of H.R. 2638 that was accompanied by an explanatory statement. Section 4 of H.R. 2638 stated that the explanatory statement “shall have the same effect with respect to the allocation of funds and implementation of this Act as if it were a joint explanatory statement of a committee of conference.”

H.R. 2638 provided \$30.3 million for polar icebreaker sustainment. The funding was provided in a new line item in the surface ships section of the Deepwater portion of the Coast Guard’s Acquisition, Construction, and Improvements (AC&I) appropriation account. The explanatory statement stated:

Polar Icebreakers

One of the Coast Guard’s missions is to provide the United States with the capability to support national interests in the polar regions. In a report recently submitted, the Coast Guard stated that the United States will need a maritime surface and air presence in the Arctic sufficient to support prevention and response regimes as well as diplomatic objectives. However, no funding has been requested for the Coast Guard’s aging icebreakers despite its inability to meet current and projected polar operations mission responsibilities. The Coast Guard is directed to follow House report direction regarding the polar icebreaking operating budget. The Coast Guard should work with the National Science Foundation in the coming year to renegotiate the existing polar icebreaking agreement in order to return the budget for operating and maintaining its polar icebreakers to the Coast Guard in fiscal year 2010. The AC&I appropriation includes \$30,300,000 to reactivate the USCGC POLAR STAR for an additional 7-10 years of service life.

Coast Guard Authorization Act For FY2008 (H.R. 2830/S. 1892)

House

Section 422 of H.R. 2830 as passed by the House stated:

SEC. 422. ASSESSMENT OF NEEDS FOR ADDITIONAL COAST GUARD PRESENCE IN HIGH LATITUDE REGIONS.

Within 270 days after the date of enactment of this Act, the Secretary of the department in which the Coast Guard is operating shall submit a report to the Committee on Commerce, Science, and Transportation of the Senate and the Committee on Transportation and Infrastructure of the House of Representatives assessing the need for additional Coast Guard prevention and response capability in the high latitude regions. The assessment shall address needs for all Coast Guard mission areas, including search and rescue, marine pollution response and prevention, fisheries enforcement, and maritime commerce. The Secretary shall include in the report—

- (1) an assessment of the high latitude operating capabilities of all current Coast Guard assets, including assets acquired under the Deepwater program;
- (2) an assessment of projected needs for Coast Guard forward operating bases in the high latitude regions;
- (3) an assessment of shore infrastructure, personnel, logistics, communications, and resources requirements to support Coast Guard forward operating bases in the high latitude regions;
- (4) an assessment of the need for high latitude icebreaking capability and the capability of the current high latitude icebreaking assets of the Coast Guard, including—
 - (A) whether the Coast Guard’s high latitude icebreaking fleet is meeting current mission performance goals;
 - (B) whether the fleet is capable of meeting projected mission performance goals; and
 - (C) an assessment of the material condition, safety, and working conditions aboard high latitude icebreaking assets, including the effect of those conditions on mission performance;
- (5) a detailed estimate of acquisition costs for each of the assets (including shore infrastructure) necessary for additional prevention and response capability in high latitude regions for all Coast Guard mission areas, and an estimate of operations and maintenance costs for such assets for the initial 10-year period of operations; and
- (6) detailed cost estimates (including operating and maintenance for a period of 10 years) for high latitude icebreaking capability to ensure current and projected future mission performance goals are met, including estimates of the costs to—
 - (A) renovate and modernize the Coast Guard’s existing high latitude icebreaking fleet; and
 - (B) replace the Coast Guard’s existing high latitude icebreaking fleet.

Senate

Section 917 of S. 1892 as reported in the Senate stated:

SEC. 917. ICEBREAKERS.

(a) **IN GENERAL**—The Secretary of the department in which the Coast Guard is operating shall acquire or construct 2 polar icebreakers for operation by the Coast Guard in addition to its existing fleet of polar icebreakers.

(b) **NECESSARY MEASURES**—The Secretary shall take all necessary measures, including the provision of necessary operation and maintenance funding, to ensure that—

(1) the Coast Guard maintains, at a minimum, its current vessel capacity for carrying out ice breaking in the Arctic and Antarctic, Great Lakes, and New England regions; and

(2) any such vessels that are not fully operational are brought up to, and maintained at full operational capability.

(c) **REIMBURSEMENT**—Nothing in this section shall preclude the Secretary from seeking reimbursement for operation and maintenance costs of such polar icebreakers from other Federal agencies and entities, including foreign countries, that benefit from the use of the icebreakers.

(d) **AUTHORIZATION OF APPROPRIATIONS**—There are authorized to be appropriated for fiscal year 2008 to the Secretary of the department in which the Coast Guard is operating such sums as may be necessary to acquire the icebreakers authorized by subsection (a), as well as maintaining and operating the icebreaker fleet as authorized in subsection (b).

The Senate Commerce, Science, and Transportation Committee, in its report (S.Rept. 110-261 of February 5, 2008) on S. 1892, stated:

Section 917 would require the Secretary to acquire or construct two new polar icebreakers for operation by the Coast Guard. It also would instruct the Coast Guard to maintain their existing polar icebreakers and return them to operational status, if not operational already. This section would authorize such sums as are necessary to carry out this section. Currently, the Coast Guard's icebreaker fleet is funded by the National Science Foundation. However, the funding for these vessels has been inconsistent, allowing the Polar Star to fall behind on the maintenance necessary to keep the vessel in operating condition. With some climate models predicting an ice-free Arctic summer in the future, more international expeditions will be headed to the region to examine newly revealed oil and gas reserves and other natural resources. Canada, Russia, and other countries will begin to compete with the United States over jurisdiction and, without a strong polar icebreaker fleet, our Nation will suffer a severe disadvantage. A recent 2007 report by the National Academy of Sciences found that the United States needs to maintain polar icebreaking capacity and construct at least two new polar icebreakers. This provision follows those recommendations. (Page 29)

In presenting the CBO's estimate of the cost of Section 917 of S. 1892 as reported, the report stated:

Assuming appropriation of the necessary amounts, CBO estimates that the USCG would spend about \$1.4 billion over the next five years to purchase two icebreakers. (Costs to operate and maintain the two new vessels would total about \$50 million a year beginning in 2013.) We estimate that an additional \$50 million would be spent over the 2008-2010 period to recondition an existing USCG icebreaker, which is currently out of operation. Operating and maintaining that vessel would cost about \$10 million in 2010 and about \$25 million annually thereafter. This estimate is based on information provided by the Coast Guard regarding the cost of constructing, operating, and maintaining such vessels to agency specifications. (Page 8; see also pages 6 and 7)

FY2008 Consolidated Appropriations Act (H.R. 2764/P.L. 110-161)

FY2008 funding for the Department of Homeland Security (DHS), which includes the Coast Guard, was provided in the FY2008 Consolidated Appropriations Act (H.R. 2764/P.L. 110-161 of December 26, 2007). The explanatory statement for H.R. 2764/P.L. 110-161, which is intended to be the equivalent of a conference report for the bill, stated the following in its discussion of Division E (the FY2008 DHS appropriations act):

National Interests in the Polar Regions

The Committees on Appropriations are concerned about Coast Guard's ability to meet its polar operations mission requirements and provide the United States with the capability to support national interests in the polar regions. These mission requirements include, but are not limited to: global reach to the North and South poles; monitoring of U.S.-bound vessel traffic transiting international waterways in the far north; support of the International Ice Patrol; and support of other governmental and scientific organizations in pursuit of marine and atmospheric science activities in the polar regions. The Committees on Appropriations are specifically concerned whether Coast Guard's aging polar icebreaking fleet can meet current mission performance goals and whether this fleet and the service's small cadre of specialized polar operations personnel are capable of meeting projected mission performance goals in light of changing environmental conditions and increased activity in the polar regions. The National Academy of Sciences made several recommendations in this regard in September 2006, but the Administration has taken no action to implement those recommendations.

Therefore, the Commandant is directed to submit a comprehensive polar operations report that fully assesses the Coast Guard's ability to meet current and projected polar mission requirements and includes an evaluation of how Coast Guard's current capabilities and resources must be adapted or enhanced to account for changing environmental conditions and increased activity in the polar regions. This report is to include an analysis of the need for any permanent, forward operating presence in the polar regions in order to meet mission requirements and an assessment of the Coast Guard's ability to meet the requirements of partner agencies operating in the polar regions, such as the National Science Foundation (NSF) and the Departments of Commerce and Defense, under current and projected environmental conditions. Finally, this report should include an appraisal of the sustainability of the current operations and maintenance cost sharing arrangement between the Coast Guard and NSF to support both current and projected polar icebreaker operations.

Appendix C. NSF Use of Coast Guard vs. Other Polar Icebreakers

This appendix presents excerpts from the July 16, 2008, hearing on Coast Guard icebreaking needs that relate to the question of the NSF's use of Coast Guard polar icebreakers versus other polar icebreakers to support its research activities.

Excerpts from NSF Statement for July 16, 2008, Hearing

The prepared statement of Dr. Arden Bement, Jr., Director of the NSF, for the July 16, 2008, hearing on Coast Guard icebreaker needs stated in part:

NSF responsibilities in the Arctic and in Antarctica take somewhat different forms, and with the Committee's indulgence I'll explain briefly how they differ with respect to icebreaker requirements. *But in both cases the question of how best to meet those responsibilities boils down to consideration of three factors: cost, performance, and policy.*

NSF REQUIREMENTS IN THE ARCTIC

NSF supports research on the Arctic Ocean, atmosphere, and land areas, including marine and terrestrial ecosystems and their relationships to the well-being of local populations. In addition to research in individual disciplines, support is provided for interdisciplinary approaches to understanding the Arctic region, including its role in global climate. Over the last decade, changes have been measured in the distribution of polar ice cover, in atmospheric composition, Arctic Ocean conditions, some terrestrial parameters, as well as in northern ecosystems. Residents of the North are seeing these environmental changes affect their lives. It is important to determine whether these changes correlate to a short-term shift in regional atmospheric or ocean processes or whether they are the result of longer-term global change.

In the Arctic, science on land and in coastal areas tends to be based at a few sparsely distributed, remote outposts, and in many cases access by ship is the most advantageous means, even for projects that are not inherently oceanographic. In its few years of service, the Coast Guard icebreaker *Healy* has supported research in a variety of areas including biology, sea ice, marine geology and geophysics, cartography, physical and chemical oceanography and atmospheric science.

As research has advanced and become more technologically sophisticated, NSF has increasingly relied on coordinated international multi-ship expeditions to access the Arctic region and laboratory facilities. For example, while the USCGC *Healy* does have the capability to work alone in the deep Arctic during summer, any vessel by itself is more risky, making multi-ship arrangements necessary in lieu of an icebreaker research platform with more robust capabilities. The USCG *Polar Sea* and *Polar Star* have sufficient icebreaking capability to operate in the deep Arctic, but they have limited research capabilities, by design, and have been needed in the Antarctic. International collaborations also have become necessary, as the demands for research aboard the *Healy* have intensified. Recent international partnerships with Sweden involving their icebreaker, the *Oden*; and with Germany and their icebreaker, the *Polarstern*; have been highly successful, as have collaborations by NSF, National Oceanic and Atmospheric Administration (NOAA) and other agencies with various Canadian, Chinese, Russian and other ships.

Arctic Requirements: Ship Cost and Reliability

According to information provided by the Coast Guard, over the past decade NSF has typically used approximately 90 percent of the 185-200 days current USCG deployment standards allow *Healy* to spend at sea. Science programs are limited by the ship time available on the USCGC *Healy* and also by the number of berths available for science. *Healy* can accommodate up to 50 scientific personnel in addition to its operational Coast Guard crew of about 80. Other nations' research icebreakers with comparable icebreaking capability typically operate with crews half the size of *Healy*'s, with comparably greater numbers of scientist berths.

The *Healy* also faces limitations in its icebreaking capacity, especially during the spring when the ice coverage north of Alaska has been thick enough in some years (2004, 2005) to beset the ship for several days.

Under the current arrangement, NSF is responsible for funding *Healy* operations and maintenance while the Coast Guard is responsible for operating the ship and carrying out its maintenance program. Coordination between the two agencies is arranged under an MOA in which NSF provides the Coast Guard with a set of operational requirements annually based on an interagency call for icebreaker needs and the Coast Guard responds with an operational plan and cost estimate based on those requirements. Total *Healy* costs are approximately \$24 million annually, or about \$130,000 per day at sea in 2007.

I will return to the issues of cost, availability and policy shortly.

Plans have been underway for several years to construct a new ice-strengthened ship that could support scientific studies in the waters around Alaska. NSF has assigned high priority to building this ship, the Alaska Region Research Vessel (ARRV), and construction funds were included in the President's FY08 budget request for acquisition planning. It is estimated that it will take 2.5 years to construct and deploy the ship once a shipyard contract has been issued. The ship will be operated by the University-National Oceanographic Laboratory System (UNOLS) which operates a number of research vessels. The ARRV, which will replace the *Alpha Helix*, will be designed to work in up to 3 feet of ice. The ARRV will thus be able to conduct research cruises year round in the Gulf of Alaska and the southern Bering Sea; and in the summer, as far north as the Chukchi and Beaufort Seas during minimum ice cover. During heavy ice periods in the Bering Sea, the ARRV would probably need the assistance of the *Healy*. Estimated operating costs are about \$20K—\$30K/day. Arctic sea ice has diminished significantly since the ARRV design was established and thus ARRV's reach now extends farther into the Arctic Ocean than had been anticipated, making the ship even more valuable to the research community.

Finally, we need better access to the deep ocean in the Arctic. Options for supporting research in the deep Arctic should be integral to any study of future icebreaker needs.

In conclusion, the *Healy* is a capable and relatively new ship that can be the mainstay of U.S. Arctic Ocean research for years to come. However, under the current operational model the operating costs are significantly higher than non-military research icebreakers and its capability as an all-seasons deep arctic research platform is also limited.

NSF REQUIREMENTS IN ANTARCTICA

NSF provides approximately 85 percent of the U.S. funding for fundamental research in the Antarctic and the southern ocean. This research addresses a wide array of topics across many disciplines. For instance, researchers are studying topics as wide-ranging as the evolution of the ozone hole; the impact of extreme environments on gene expression; the effects of

ultraviolet radiation on living organisms; the relationship between changes in the ice sheet and global sea level; global weather, climate, and ocean circulation; the role of Antarctica in global tectonics and the evolution of life through geologic time; and the early evolution of our universe, as well as its current composition.

This research requires access to ships serving *two quite different functions*: multi-purpose icebreakers that can operate in the Southern Ocean as research platforms that also resupply our coastal Palmer Station on the Antarctic Peninsula; and heavy-duty icebreakers that can open a resupply channel through fast ice to McMurdo Station. From McMurdo, supplies are transferred to the U.S. research station at the South Pole and to temporary remote field stations at various points on the continent. These two requirements are met in quite different ways.

Antarctic Ship-Based Research Platforms: Ship Cost, Availability and Policy

U.S. Antarctic Program ship-based research and Palmer Station resupply depend primarily on two privately-owned vessels, the *Laurence M. Gould* (LMG) and the *Nathaniel B. Palmer* (NBP).

The NBP is leased by NSF's prime contractor, currently Raytheon Polar Services Company (RPSC), from the Louisiana-based shipping company, Edison Chouest Offshore (ECO). The vessel was built to specifications developed on the basis of input from the science community. The ship is an ABS A2 icebreaker capable of breaking 3 feet of level ice continuously at 3 knots, with 13,000 shaft horsepower and a displacement of 6,800 long tons. It is outfitted with all of the winches and A-frames necessary for deploying and retrieving oceanographic instrumentation. The vessel is fully outfitted with on-board oceanographic instrumentation and a networked computer suite, including multi-beam sonar, and has 5,900 ft² of lab space and 4,076 ft² of open deck space for oceanographic work and staging and a helicopter pad and hanger.

The NBP averages 300 days a year underway in support of science.

As is the case for the NBP, the *Laurence M. Gould* is leased by Raytheon from Edison Chouest Offshore (ECO). Also like the NBP, the vessel was designed and built on the basis of input from the science community. The ship is smaller than the NBP and has less ice breaking capability, as it was designed to operate in the more benign ice regions surrounding the Antarctic Peninsula. The ship is an ABS A1 ice-strengthened vessel with 4,600 shaft horsepower and a displacement of 3,400 long tons and can break one foot of level ice at a continuous 3 knots. It is fully instrumented with on-board oceanographic instruments and a networked computer suite. The LMG has the dual purpose of supporting oceanographic science and providing re-supply to Palmer Station, located on the Antarctic Peninsula. It should be noted, however, that the LMG will soon be at the end of its service contract. NSF recently issued a request for proposals to procure a replacement for the LMG.

The LMG averages 320 days a year underway in support of scientific research and associated logistics.

Annual costs for the NBP and LMG in 2007 were \$16.3M and \$7.5M, respectively, resulting in respective day costs of \$54.3K and \$23.4K for these ships.

Antarctic Station Resupply: Ship Cost, Reliability and Policy

As noted above, the resupply of the McMurdo and South Pole Stations, as well as of temporary remote field stations in Antarctica, depends on gaining access to the McMurdo pier through the ice in McMurdo Sound. Since 1988 the channel was opened by one U.S.

Coast Guard Polar Class vessel (either the *Polar Star* or the *Polar Sea*), but more recently two icebreaking vessels have been needed due to extreme ice conditions and concerns about the reliability of the aging Polar Class vessels.

After opening the channel, the icebreaker escorts two resupply vessels, a government-owned tanker and a chartered freighter, to and from the ice pier at McMurdo. These resupply vessels are ice-strengthened vessels under the operational control of U.S. Transportation Command's (USTRANSCOM) Component Command, Military Sealift Command. (Military Sealift Command utilizes commercial contracts for construction, maintenance and staffing of vessels. As a result, MSC operates a fleet of cargo ships and tankers that are contractor-owned and operated or government-owned and contractor-operated.)

In FY05, acting on advice from the Coast Guard that a second icebreaker should be brought in to assist the *Polar Star* due to extreme ice conditions in McMurdo sound, NSF chartered the Russian icebreaker *Krasin* for the purpose. The Coast Guard's *Polar Sea* was undergoing repairs and no other U.S. icebreakers were available, as the *Healy* was needed in the Arctic to support research. It also lacks both the maneuverability and performance for the McMurdo break in. In FY06 the *Polar Sea* was undergoing extensive repair. NSF again chartered the Russian icebreaker *Krasin* and held *Polar Star* in reserve (and eventually brought it in to assist in the final stages of the break-in). The situation was similar in FY07. *Polar Sea* was ready for duty but the Coast Guard recommended that a backup vessel again be employed due to continuing extreme ice conditions. NSF therefore arranged to use a Swedish research icebreaker (the *Oden*) under the auspices of the U.S. - Sweden S&T Agreement, both to open the channel to McMurdo Station and to host a joint U.S. - Swedish research expedition aboard the ship in the Southern Ocean. *Polar Sea* assisted with the final stages of the McMurdo break in. Based on the excellent performance of *Oden* in FY07 and the success of the joint research program, NSF elected to use the *Oden* again in FY08, this time as the primary icebreaker, holding the *Polar Sea* in reserve where it could also respond to any needs for its services in the Arctic. The *Polar Sea* deployed to the Arctic in FY08 in order to maintain crew proficiency.

The USCG has performed its icebreaking mission in Antarctica with distinction for many decades, but with increasing difficulty in recent years. Its two Polar Class icebreakers are nearing the end of their estimated service lives and are becoming increasingly difficult and costly to keep in service. According to the USCG, there are several years of service life in the *Polar Sea*, but the *Polar Star* has now been placed in caretaker status per agreement with USCG in view of the decreasing need for her services and the high cost of putting her back into service. The need to rely, first on the *Krasin* and then on the *Oden* has already been mentioned as has the need to keep the *Polar Sea* available to meet the needs in the Arctic and perhaps as occasional backup for the annual McMurdo Station break-in. Given this state of affairs, NSF has given careful consideration to how best to meet the needs of the scientific community over the long-term.

Under the current arrangement between NSF and the Coast Guard, NSF provides all the funding for USCG icebreaker operations and maintenance in support of scientific research, and the Coast Guard carries out those duties. NSF provided just under \$54M for operation of the USCG polar class icebreakers in 2007. In addition, NSF provided approximately \$7.5 million out of its base budget for fuel and charter of *Oden*. When chartering commercial vessels such as the *Krasin* and the *Oden*, NSF pays only for the time that the ships are under charter.

USE OF COMMERCIAL SHIPS AND MODELS/MODES OF OPERATION

As noted above, NSF has met the research community's need for research platforms in the Southern Ocean through long-term contracts with private firms for ice-strengthened ships

and icebreakers and through partnerships that provide access to other country's research vessels. For resupply of McMurdo and South Pole Stations, NSF has depended until recently entirely on U.S. Coast Guard icebreakers secured through reimbursement arrangements, and on chartered Military Sealift Command capabilities. More recently, NSF has had to arrange for chartered vessels to complement USCG capabilities. In the Arctic, NSF has relied on the Coast Guard's *Healy* and on partnerships with other countries. Once constructed and commissioned, the Arctic Regional Research Vessel (ARRV) will significantly increase the capacity for ship-based research in the coastal Arctic regions and where ice cover is relatively thin.

A variety of models have been and are being used by the U.S and other countries for meeting polar icebreaker needs. The U.S. Coast Guard and the Chilean and Argentinean Navies operate their icebreakers using military personnel. Some countries build their ships to meet military specifications and others do not. The German research icebreaker, the *Polarstern*, is owned by the government but operated by a private contractor. The Swedish government's operational arrangements for the *Oden* are similar to the German model. Both the *Oden* and the *Polarstern* are able to operate more than 300 days annually as a consequence of ship design and mode of operation. The Arctic Regional Research Vessel (ARRV) will be operated by civilian crews under contract to the University-National Oceanographic Laboratory Systems (UNOLS).

As noted above, NSF employs a contractor to operate and maintain the privately-owned *Laurence M. Gould* and *Nathanial B. Palmer*. The ships were built under a long-term lease agreement between the ship-owners and the Federal government, such that the construction costs are partially amortized over the duration of the lease (with the ship reverting to the owner at the government's option at the end of the lease). These ships also operate more than 300 days annually.

Finally, and as noted previously, the Military Sealift Command meets its needs (and those of NSF's for transport to McMurdo Station) either through commercial charters for ships and crews, or through government-owned, contractor-operated arrangements.

MEETING FUTURE NEEDS

International cooperation to provide icebreaker research platforms is expected to increase, both in arranging multi-ship expeditions and in sharing platforms. Certainly as Germany and the European community move forward in constructing the planned *Aurora Borealis*, NSF will work to establish mutually beneficial partnerships.

NSF's commitment to polar research and its responsibility for management of the U.S. Antarctic Program remains constant and therefore perpetuates the need for an icebreaker to open the shipping channel through the Ross Sea to enable resupply of the McMurdo and South Pole stations. Because opening the channel to McMurdo requires only a fraction of the time a modern icebreaker can operate annually, there may be interest among shipbuilders in providing icebreaker services to NSF under a contract in which the builder can lease the ship to others (other countries or private firms) during the remainder of the year.

An interagency working group co-led by the Department of State and the National Security Council is currently reviewing U.S. Arctic policy, and icebreaking needs will likely figure into the new policy. Clearly, the economics and efficiencies of the various acquisition and operating models merit further study and will depend on the suite of validated requirements put forth in the policy review. For research in the Arctic, the *Healy* should be a mainstay for many years to come, though its utility is restricted by its 200-day operational limitation. The *Healy's* inability to access the deep Arctic during periods of heavy ice cover is another

limitation. These limitations, combined with a military deployment mode, make the *Healy* as currently operated, a very expensive way to meet the needs of the research community.

And as noted above, once in service the *ARRV* will be a valuable additional resource for Arctic research.

For Antarctic research the issues are different. The two existing Coast Guard Polar Class ships are at or close to the end of their service life. The *Polar Star* is in caretaker status, and the *Polar Sea* is expensive to maintain relative to the costs for the use of foreign, non-military ice breakers over the past several years such as the Russian *Krasin* and Swedish *Oden*. The overriding question is how to open the channel through the ice to *McMurdo* Station so that year-round operation of the nation's *McMurdo* and *South Pole* stations can continue. This year-round occupation is central to demonstrating the "active and influential presence" which is the cornerstone of U.S. policy in Antarctica as articulated in Presidential Memorandum No. 6646 on U.S. Antarctic Policy and Programs (February 5, 1982). Other factors contributing to this presence are the 600 days annually that NSF's research vessels, the *LM Gould* and the *NB Palmer*, operate in Antarctic waters; the approximately twenty C-17 Air Force flights annually that fly passengers and cargo between New Zealand and *McMurdo*; and the more than 400 Air National Guard LC-130 flights annually that provide transportation for people and equipment throughout the continent. Furthermore, NOAA charters the Russian *R/V Yuzhmorgeologiya* approximately 100 sea days per year in support of its Antarctic program. This program focuses on living marine resources at the Antarctic Peninsula in support of U.S. interests at the Commission for the Conservation of Antarctic Marine Living Resources (CCAMLR) to which the United States is signatory.

In considering how best to insure the continued annual resupply of *McMurdo* Station and to meet our responsibility for the entire U.S. Antarctic Program, NSF operates in accordance with U.S. Policy and the instructions contained in Presidential Memorandum No. 6646, that "Every effort shall be made to manage the program in a manner that maximizes cost effectiveness and return on investment."

The Arctic policy review will certainly help inform future icebreaker discussions, but even if a decision were made today to build or refurbish an icebreaker, it would be years before the ship got underway. Accordingly, to meet its ongoing requirements in a cost-effective means, NSF has made arrangements to lease an icebreaker from Sweden (NSF signed a 5-year agreement with Sweden for a joint research program in the Southern Ocean with Sweden additionally providing break in services for the USAP.). NSF sees a need to keep the USCGC *Polar Sea* available to meet needs in the Arctic and perhaps as occasional backup for the break-in to *McMurdo* Sound. This, however, is clearly only a short-term solution. With an eye looking to the long-term, and after consultations with officials in OSTP and OMB, I wrote on May 31, 2006, to the chair of the NAS/NRC icebreaker study, Dr. Anita Jones, as follows: "Given the rapidly escalating costs of government providers for icebreaking services and the uncertain availability of USCG icebreakers beyond the next two years, it is NSF's intention to ... [seek] competitive bids for icebreaking services that support the broad goals of the USAP. This competition will be open to commercial, government, and international service providers." The request for proposals will not be for ships but rather for services and we would expect the service providers to use their ships for other purposes when not in service to meet NSF needs. Thus the cost to the Foundation could be substantially reduced.⁵⁹

⁵⁹ Testimony of Dr. Arden L. Bement, Jr., Director, National Science Foundation, Before the House Committee on Transportation and Infrastructure Subcommittee on Coast Guard and Maritime Transportation, July 16, 2008, pp. 2-8. Italics as in original. This excerpt constitutes the majority of Dr. Arden's 8-page prepared statement.

NSF Spoken Testimony at July 16, 2008, Hearing

During the question-and-answer portion of Dr. Bement's testimony, the following exchange occurred:

Representative Cummings: Mr. Bement, are the vessels currently available to the National Science Foundation, from the contract community and from foreign sources, capable of handling current ice—Europe agencies—current icebreaking needs to support research in the polar regions?

Dr. Bement: We believe so, but we haven't fully tested that.

Two years ago, we put out a Request for Information [RFI]. And as a matter of fact, it was through these RFIs that brought us the Krasin from Russia and the Oden from Sweden. And I should point out parenthetically, these are not agreements between the National Science Foundation and a private contractor. It's a government-to-government agreement.

And in the case of the Swedish Oden, it also carries with it a science agreement. It's a science exchange, because the Oden is capable of doing science, and there's a very active, collaborative activity between U.S. scientists and Swedish scientists in working the Southern Ocean. And so, the Oden, while it's deployed in the Southern Ocean, is also there for science, as well as a break-in.

I think that if we were to put out an RFI and ask those questions, based on the responses we got in the past, we would probably find expressions of interest, even private interest, that would build-to-lease icebreaker services over a period of time.

Representative Cummings: So, is it fair to say that NSF doesn't care where it gets its icebreaking services?

Dr. Bement: Our only—our only mandate, by presidential directive, is to operate in the Antarctic and in the logistics support of the Antarctica Program in the most cost-effective way possible. And, of course, the most cost-effective way carries with it a lot of conditions and a lot of options. So, we explore all those options in determining how we can operate under least cost.

Representative Cummings: But you mentioned Sweden and Russia, did you say?

Dr. Bement: Yes.

Representative Cummings: Were they—were they cheaper?

Dr. Bement: Four years ago, we did have the problem where the Polar Sea was out of operation. As a matter of fact, since that time, we have invested \$29 million in extraordinary maintenance in order to get the Polar Sea back into operation. And that's why we call it a fragile resource.

Now, at that time, it was agreed by the Coast Guard that we needed a backup vessel. And it was then that we put out an RFI and discovered that the Krasin was available. And so, we contracted with Russia. The Krasin is a GOCO vessel. It's government-owned, contractor-operated, as is the Oden. The Oden is also GOCO. It's government-owned, contractor-operated.

So, for two seasons, we backed up the Coast Guard with the Krasin. And then, two years ago we shifted to the Oden, because there was an expression of interest on the part of Sweden to enter into a U.S.-Swedish science exchange in return for also using the icebreaker for break-in services. And that was a very generous offer that we took advantage of.

So, that gave us the adequate primary break-in capability, and it allowed us to use the Coast Guard as the backup. And so, that's the way we've operated for the last two seasons.

Representative Cummings: Before we go to Mr. Oberstar, let me just ask you this. Is the—you said you spent \$29 million? And over how much—over what course of time?

Dr. Bement: It's over four years.

Representative Cummings: How long?

Dr. Bement: Four years.

Representative Cummings: Four years.

Dr. Bement: About four or five years. But I can give you more detailed information for the record, to give you all the details.

But if you go back about 4.5 years ago, the Polar Star was operational. The Polar Sea was not fully operational. It required extensive maintenance. So, we invested in getting the Polar Sea back into operational capability.

And at that time, the Polar Star then underwent some damage. And so, it was then that we put Polar Star in caretaker status. And it was the expectation, based on the repairs that we had made in the Polar Sea, that it was good for another seven or eight years, as long as we used the resource prudently.

Representative Cummings: And would you deem it prudent to contribute capital costs for the building of a new icebreaker?

Dr. Bement: I think at this point, based on my understanding of the mission space, that the Coast Guard has, especially with the opening up of the Arctic over time, that it would be a prudent course of action.

But my estimate or judgment would be that, even if the funds were approved tomorrow, it'd take about eight years to complete the construction of the vessel and make it operational. And we still have to—we still have to plan our course of action for the next eight years, and that's where we need flexibility.⁶⁰

Later in the question-and-answer portion of Dr. Bement's testimony, the following exchange occurred:

Representative Oberstar: The Finns built the first nuclear-powered icebreaker. They had to give it to the Soviet Union as war reparations after World War II. And then they continued to build the class of vessels. And they also build a standard, that is non-nuclear vessel, the most powerful of which is the Urho, built at the Wartsila shipyards in Helsinki.

⁶⁰ Transcript of hearing.

And that had—that has—it's still in operation—65,000 shaft horsepower capability. And they also developed the air skin around the vessel to slip more readily through the ice and the ability to ship 400, 500 tons of water from one side to another, to roll through and crush, as well as break ice.

Did you give any consideration to working with the Finns on...

Dr. Bement: Well, let me...

Representative Oberstar: ... icebreaking needs?

Dr. Bement: Thank you for bringing up that information. It turns out that the Oden was built by the Finns. So, it could be a sister ship to the one you're describing.

Representative Oberstar: Oh. Oh, well, very good. They're the master ship—icebreaker...

Dr. Bement: That's right.

Representative Oberstar: ... icebreaking ship builders.

Dr. Bement: The difference—a major difference between the Oden and the Polar Sea—and the Polar Star, for that matter—is that the Oden can use fresh water for ballast.

The Polar Sea uses fuel for ballast. That fuel has to come out of our McMurdo stock whenever the Sea or the Star operates in McMurdo, so there's a million gallons. And with the price of fuel, even at the pump, that's \$4 million. And you can use your imagination what fuel costs after you get it all the way down to McMurdo.

And that's an incremental cost that we pay to the Coast Guard that's over and above the appropriated funds that we provide them for readiness to serve and for operation and maintenance.

So, that's where the difference really comes in, in using the Oden versus the Polar Sea or the Polar Star.

The other big difference is that, because the Coast Guard icebreakers are military ships and have multiple missions, they have a much larger crew strength. Their manning is about 134 crew, officers and crew, compared with 18 on the Oden.

And it's important to keep in mind that, as a contractor-operated vessel, these people are career icebreakers. They've served for years, so they are highly professional. And that's in comparison with the crew on the Polar Sea, where the Coast Guard has to spend an enormous amount of time and effort to continually requalify crew, because of the turnover in the manning of the icebreaker.

Now, there are many other differences that make the Oden a very good bet for the taxpayer. First of all, it has much more scientific berthing for scientists, and it also has abundant laboratory space and full instrumentation for oceanographic research. And that's a reason why it's of great interest to us as a science vessel.

So, we not only get the service of the Oden—on a fixed-price basis, incidentally—if anything breaks on that ship, or any maintenance has to be done, or if there are any other operating expenses that weren't anticipated, it's all covered under the fixed price, under the contract. We don't have to pay that additional cost.

Representative Oberstar: What you're really saying is, you don't really need to have an NSF-owned icebreaker. It's probably lower cost and more efficient...

Dr. Bement: Well, the only...

Representative Oberstar: ... to (inaudible) with the current arrangement.

Dr. Bement: The current arrangement is a good one, because we're only paying for the time we use. In other words, if it's only in use for two months, we only pay for two months of the use of the vessel.

That's much better than owning a vessel for a short season down in the Antarctic. And that's a reason why having flexibility to look at various types of icebreaking providers—and in many cases we'll have to fall back on the Coast Guard, there's no doubt about it, if the need arises and we can't get other bidders.

But when we can get other bidders, it—it's much better than the current arrangement where we have to pay for the entire year, for the vessel, for the maintenance, the crew costs, the operation—I mean, the training of the crew, the readiness to serve—when we're only using it for a relatively short season.⁶¹

Still later in the question-and-answer portion of Dr. Bement's testimony, the following exchange occurred:

Representative Richardson: I'd like to build a little bit upon what our Chairman Oberstar was just referencing, regarding the foreign-flagged ships.

You know, someone taught me an old saying. They said, if you have to make a decision, do the old-fashioned Ben Franklin, and do a positive and a negative.

And I was just a little curious of why were we supporting really another country's being able to build up their fleet, and have, as Mr. Oberstar has shared, you know, can do it all, when we clearly have a fleet that is not adequate? Why wouldn't we be putting the money into our own fleet?

Dr. Bement: Well, I'm very sensitive to that point of view. And I don't take any issue with the question. I just don't have a very good answer for it.

Representative Richardson: Well, I'd like to suggest that we may want to consider, when I was referencing the kind of Ben Franklin pros and cons, the contractor idea, you know, sure, you might save a few bucks.

But for me, the plus and minuses for the Coast Guard, number one, we have better security, because from what I understand on our ships, we have more people who are actually on the vessel. And by having the Coast Guard, they're not only doing the icebreaking, but they're taking care of other tasks.

And if we were to pay for those independently, and you include the cost of icebreaking, it actually ends up costing us more.

The second point is jobs—I mean, if we're actually building these.

⁶¹ Transcript of hearing.

Third would be a faster response, if we have a national disaster. This gentleman just talked about the fact that, you know, it was said, help is coming.

Well, I've got to tell you. If someone in Finland or Sweden has to choose between their issue and ours, and we have a national disaster, they're going to their home first. They're not coming to us.

And then, the whole building and maintenance of our own fleet. We need to maintain some of our own independence, because God forbid, we don't want to be stuck with having no fleet, or a fleet that's not really appropriate, if we unfortunately come into a time of war. And maybe now we no longer have that relationship, and they're not willing to work with us.

So, Mr. Chairman, I would just like to really push back that, as we consider—and I've been listening to the thoughts of the discussion of the hearing thus far today. It seems like there is a will to have these additional fleets on our end.

But I'd just like to really push the point for the reasons that I just gave. We need to be more self-dependent, independent ourselves, and not relying upon some other country to bail us out.

I don't think that that's what America is about. And I don't think, if you had a choice, that would be probably where you would want to go.

Do you have a comment on that?

Dr. Bement: Well, I think, again, that's a matter of national policy. And the National Science Foundation is probably the last agency that ought to be involved in those kind of determinations.

Our focus is to carry on frontier science and to do it in the most cost-effective way possible.

And I think you rightly pointed out that the mission space for icebreaking is suddenly expanded. If I look at the Congressional Research Service report, they had five particular missions—five specific missions for icebreaking—and we were bullet number one. But there were four bullets underneath. And those are totally out of the scope of the National Science Foundation.

So, that's the only way I could answer your question. But again, I'm very sympathetic to your point of view.

Representative Richardson: Well, not only sympathetic. We might make a little money, because then we could contract ourselves. That would be a novel idea for us.

Dr. Bement: And I might point out, incidentally...

Representative Richardson: I'm sorry?

Dr. Bement: And I might point out, incidentally, that the National Science Foundation is not the only federal agency leasing ships from the Swedish.

Representative Richardson: Oh, I understand.

Dr. Bement: The Department of Defense is leasing—they've leased a submarine and they're leasing a merchant vessel from the Swedes to help in their operations in the Middle East.

So, it's—you know, the military in-service sealift command is also involved in leasing vessels from other countries in the world, and...

Representative Richardson: Sir, I've down to 30 seconds. I didn't mean to insinuate that you're not the only agency that's doing it. It's just—it's something I don't particularly happen to agree with, and would prefer to see us doing less of.

Mr. Chairman, would you allow me 30 seconds to hear Mr. Weakley's comments on that question?

Representative Cummings: Yes.

Representative Richardson: Thank you, sir.

Mr. Weakley:⁶² May I? There's no question, I represent American sailors. I think we have a proud tradition. We have a proud tradition, not just of going to sea, but I think we build the finest ships in the world. I think the U.S. Merchant Marine and our shipbuilding capability won World War II.

I'd be happy to take that mission. I think the labor unions that I work with sitting behind me would welcome the opportunity to man those ships. If it's a mission that the Coast Guard can't handle and it's seen as more of a private sector, we're ready to step up and meet that challenge.⁶³

⁶² James Weakley, President of the Lake Carriers' Association and Vice President of the Great Lakes Maritime Task Force, who was another witness at the hearing.

⁶³ Transcript of hearing.

Appendix D. May 2008 Memorandum from DOD Combatant Commanders

This appendix reprints the text of a May 21, 2008, memorandum for the Chairman of the Joint Chiefs of Staff on the topic of icebreaker support signed by three DOD combatant commanders, each a 4-star general or flag officer.⁶⁴

MEMORANDUM FOR CHAIRMAN, JOINT CHIEFS OF STAFF

FROM: CDR USPACOM / CDR USTRANSCOM / CDR USNORTHCOM

SUBJECT: Icebreaker Support

1. The United States has enduring national, strategic, and economic interests in the Arctic and Antarctic. In the north, the United States is an Arctic nation with broad and fundamental national security interests. In addition to the essential requirements for homeland security and maritime domain awareness, the effects of climate change and increasing economic activity require a more active presence in this maritime domain. In the south, the United States maintains three scientific stations. While the mission of the stations is largely scientific, their presence secures the United States' influential role in the Antarctic Treaty decision making process and maintains the balance necessary to maintain our position on Antarctic sovereignty.

2. To assert our interests in these regions, the United States needs assured access with reliable icebreaking ships. Today, however, two of the three Coast Guard icebreakers are nearing the end of their service lives, with one relegated to caretaker status. Over the past 10 years some routine maintenance has been deferred and there is no service life extension program for these ships. As a result, the nation's icebreaking capability has diminished substantially and is at risk of being unable to support our national interests in the Arctic regions. An example of our reduced icebreaking capability is last season's McMurdo Station resupply mission where USNS GIANELLA spent 50 hours in pack-ice awaiting escort from a leased Swedish icebreaker.

3. In summary, icebreakers are essential instruments of United States policy in the polar regions. We therefore recommend Joint Chiefs of Staff support for the following:

—A program for the construction of new polar icebreakers to be operated by the Coast Guard.

—Coast Guard funding to keep existing icebreakers viable until the new ships enter service.

—Sufficient Coast Guard operations funding to provide increased, regular and reliable icebreaker presence in the polar regions.

⁶⁴ Memorandum for Chairman, Joint Chiefs of Staff, from CDR USPACOM / CDR USTRANSCOM / CDR USNORTHCOM, Subject: Icebreaker Support. The Navy Office of Legislative Affairs provided CRS with a copy of the memorandum on September 11, 2008.
