Environment

BIODIESEL: PAVING THE WAY FOR DOD'S RENEWABLE FUTURE:

David Chavez, NAVFAC ESC

5/11/2011

The NDCEE is operated by:

Concurrent Technologies Corporation

Technology Transition – Supporting DoD Readiness, Sustainability, and the Warfighter

Report Documentation Page

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

1. REPORT DATE 11 MAY 2011		2. REPORT TYPE		3. DATES COVERED 00-00-2011 to 00-00-2011	
4. TITLE AND SUBTITLE Biodiesel: Paving the Way for DoD's Renewable Future				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) National Defense Center for Energy and Environment (NDCEE), Concurrent Technologies Corporation, 100 CTC Drive, Johnstown, PA, 15904				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES Presented at the NDIA Environment, Energy Security & Sustainability (E2S2) Symposium & Exhibition held 9-12 May 2011 in New Orleans, LA. U.S. Government or Federal Rights License					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT Same as Report (SAR)	18. NUMBER OF PAGES 39	19a. NAME OF RESPONSIBLE PERSON

**NDCEE Task 0555 in support of:
ESTCP WP-0728**

**Demonstration of Biodiesel Blend Use in Ground Tactical
Vehicles and Equipment (non-deployed)**

**Mr. David Chavez
NAVFAC Engineering Service Center**

Additional Project Support

- **Navy's Environmental Sustainability Development to Integration (NESDI) program**
- **Joint Group on Pollution Prevention (JG-PP)**

Project Team

- **Principal Investigator**
 - Dave Chavez, Naval Facilities Engineering Service Center (NFESC)
- **Tri-Service Petroleum, Oil, and Lubricant Working Group**
 - Luis Villahermosa, TARDEC, Army Team Leader, Subject Matter Expert (SME)
 - Richard Kamin, CNO, Navy Tactical Energy
 - Ben Curtis, Air Force Petroleum Agency
- **Field, Laboratory, and SME Support**
 - Bill Black, Marine Corps Light Armored Vehicle (LAV) Office
 - Sherry Williams, Navy Fuels and Lubricants Cross Functional Team
 - Emilio Alfaro, AFPET
 - George Handy, NDCEE/CTC
 - Kevin Merichko, NDCEE/CTC
 - Leanne Debias, NDCEE/CTC
 - Steven Westbrook, Southwest Research Institute (SwRI)
- **Additional DoD and Industry Support**
 - Omar Mendoza, Air Force Research Laboratory
 - Steve Howell, National Biodiesel Board
 - Robert McCormick, PhD, National Renewable Energy Laboratory

Technical Objectives

- The objective is to demonstrate and validate the use of B20 in non-deployed ground tactical vehicles and equipment by addressing users concerns:
 1. Stability of the biodiesel
 2. Accelerated deterioration during high temperature storage
 3. Vehicle operation and fuel properties in low temperatures
 4. Water affinity and microbial degradation
 5. Material compatibility and solvency

Technical Approach

- Demonstrated biodiesel blend (B20) in non-deployed tactical vehicles and equipment for various operational schedules and climate conditions to address user concerns

Demonstration Sites:

- NSWC Crane, IN (Hot/Cold, Humid)
 - User Concern #1 thru #5
 - LAV, Operated 4 hours/Month
 - LAV, Operated 15 Min/Month
- 29 Palms, CA (Hot, Dry)
 - User Concern #1, #2, #4 and #5
 - HMMWV (HUMVEE), Operated once every 4 weeks

Technical Approach

Demonstration Sites:

- Moody AFB, GA (Hot, Humid Climate)
 - User Concern #1, #2, #4 and #5
 - Older Model Bobtails (1997 Dodge)
 - Newer Model Bobtails (2008 Dodge)
 - Refueler Truck
- NBVC, CA (Mild Climate)
 - User Concern #1, #4 and #5
 - MTRV, Operated as a part of Seabee Training Schedule
- MCBH, HI (Hot, Humid Climate)
 - User Concern #1, #2, #4 and #5
 - HUMVEE
 - TRAM

Overview of Prior Work

- Established DoD Team
 - Subject Matter Experts from Army, Navy, and Air Force
- Gained DoD Sites and Vehicles for Demonstration
- Developed Demonstration Plan
- Established Laboratory Fuel Analysis Contract
- Began Collecting Data at 4 DoD Sites:
 - 29 Palms – July 2009
 - NSWC Crane – August 2009
 - Moody – Sept 2009
 - NBVC – July 2009 (Restarted January 2010)

Overview of Prior Work

- Added MCBH to site installations and began collecting data (June 2010):
 - TRAM
 - HUMVEE
- Completed data collection at 5 DoD sites (12/2010)
- Completed engine oil and fuel testing (1/2011)
- Performing trend analysis

Methodology

- Engine oil samples submitted to TARDEC for analysis (monthly).
- The oil testing methods are based upon the methodology contained in the JOAP Manual.
 - Wear Metals
 - Total Acid Number
 - Total Base Number
 - Kinematic Viscosity at 40°C
 - Kinematic Viscosity at 100°C
 - Viscosity Index
 - Soot Content
 - Percent Fuel Dilution
 - Water Content

Methodology

- B20 Vehicle and fuel storage tank (dispenser) samples submitted to *CTC* for analysis (monthly).
- Fuel sample testing and acceptance criteria derived from: B20 specification (A-A-59693A), Navy F-76 specification (MIL-PRF-16884K), and B6-B20 blend specification (ASTM D7467).
 - Appearance
 - Acid Number
 - Viscosity at 40°C
 - Water & Sediment
 - Total Water Content
 - Color
 - Particulate Contamination
 - Oxidation Stability, Rancimat
 - Stability
 - Total Insolubles
 - Iso-octane Insolubles
 - Acid value

Dispenser Oxidation Stability - Rancimat

Oxidation Stability (Rancimat)

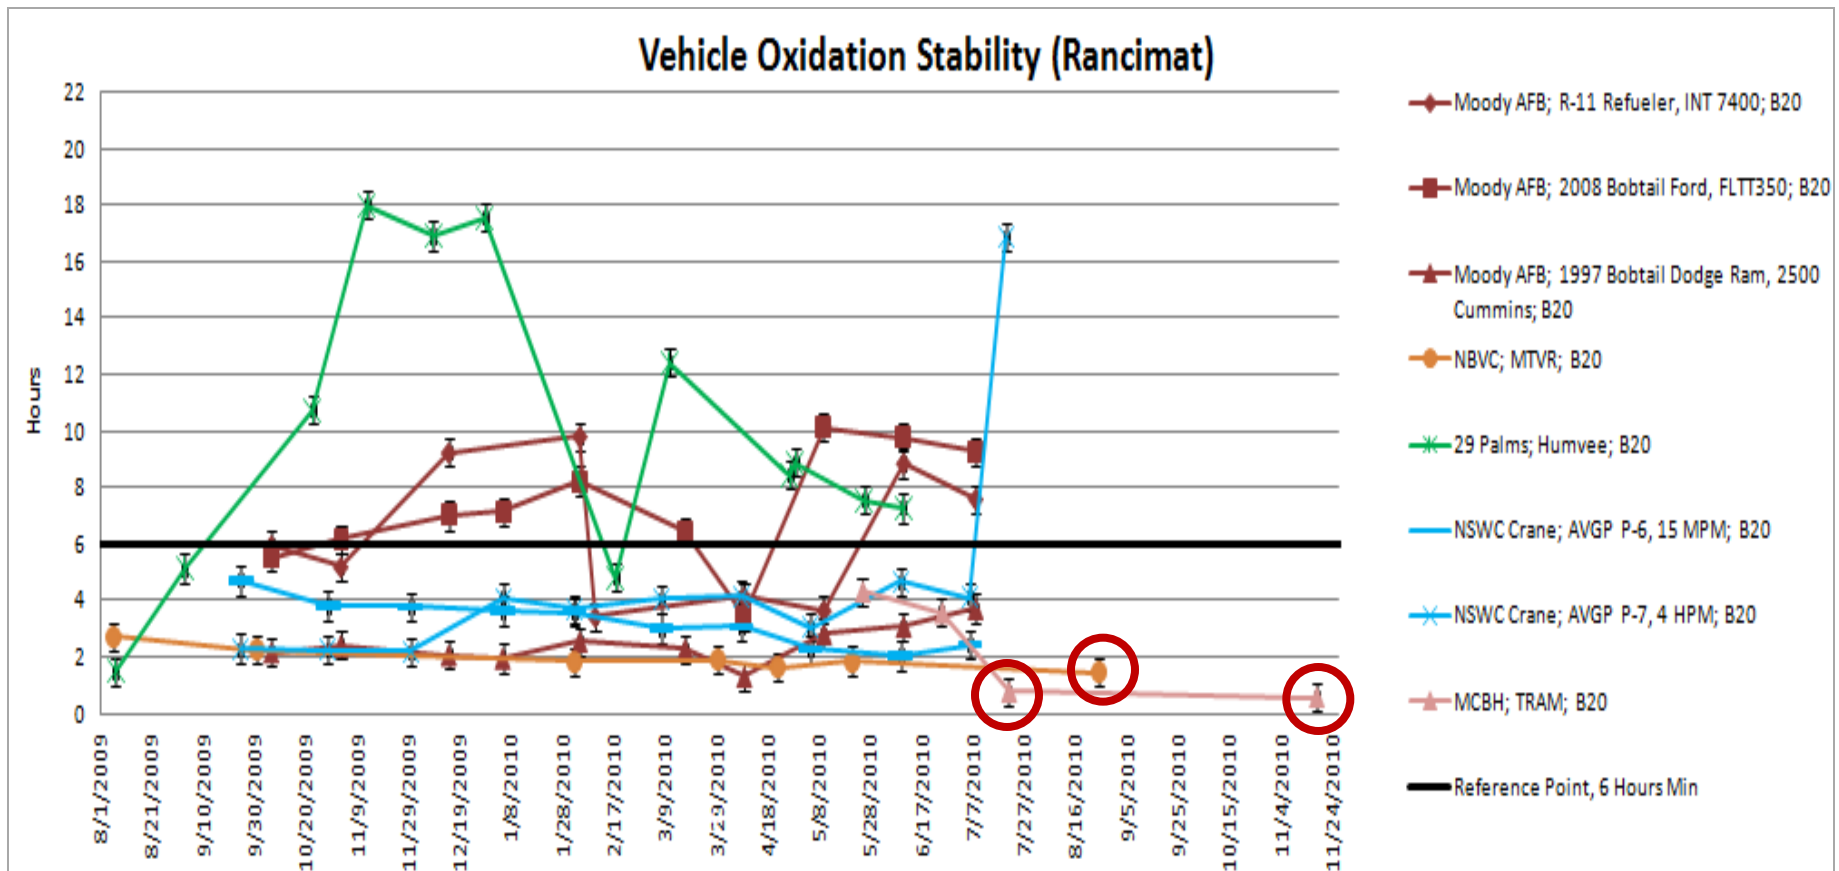

All Initial Fuel Samples Met or Exceeded the Acceptance Criteria.

Vehicle Oxidation Stability - Rancimat

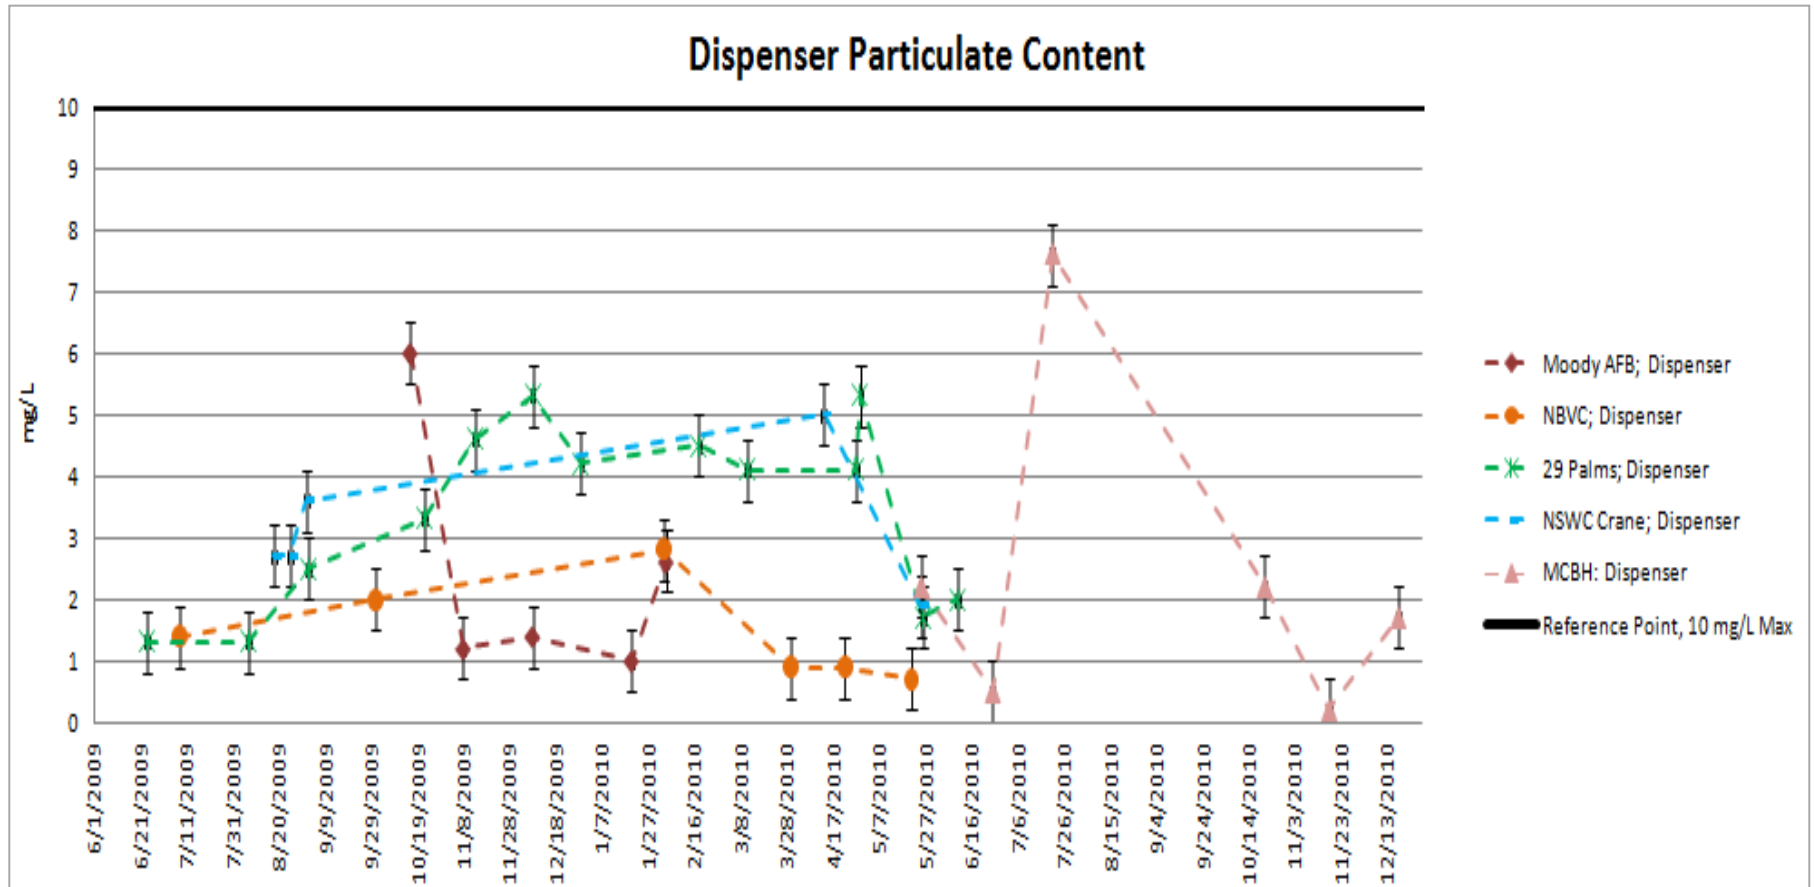

Vehicle sample QA Tests Increased as the vehicles were refueled. Even though the fuel fell below the reference line, vehicle performance remained unchanged. The 1997 Bobtail had a low Rancimat number, 1.3, on 4/9/2010.

Vehicle Oxidation Stability - Rancimat

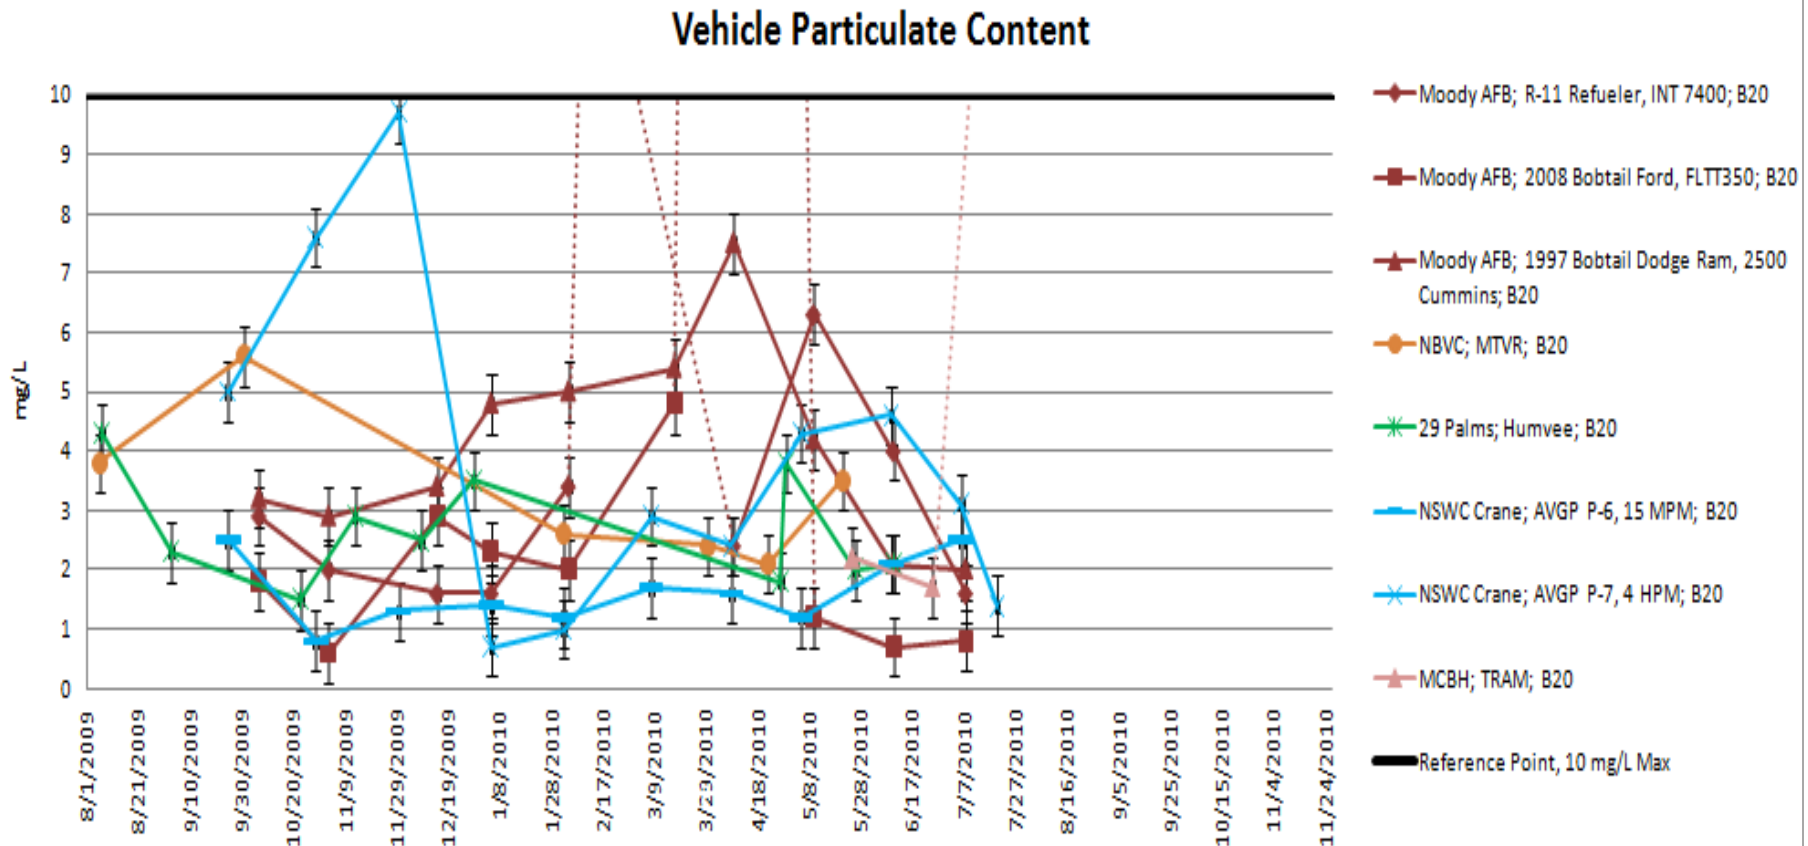

Other Points of Concern at MCBH and NBVC; one time delivery could be the reason for low Rancimat.

Dispenser Particulate Content – ASTM 6217

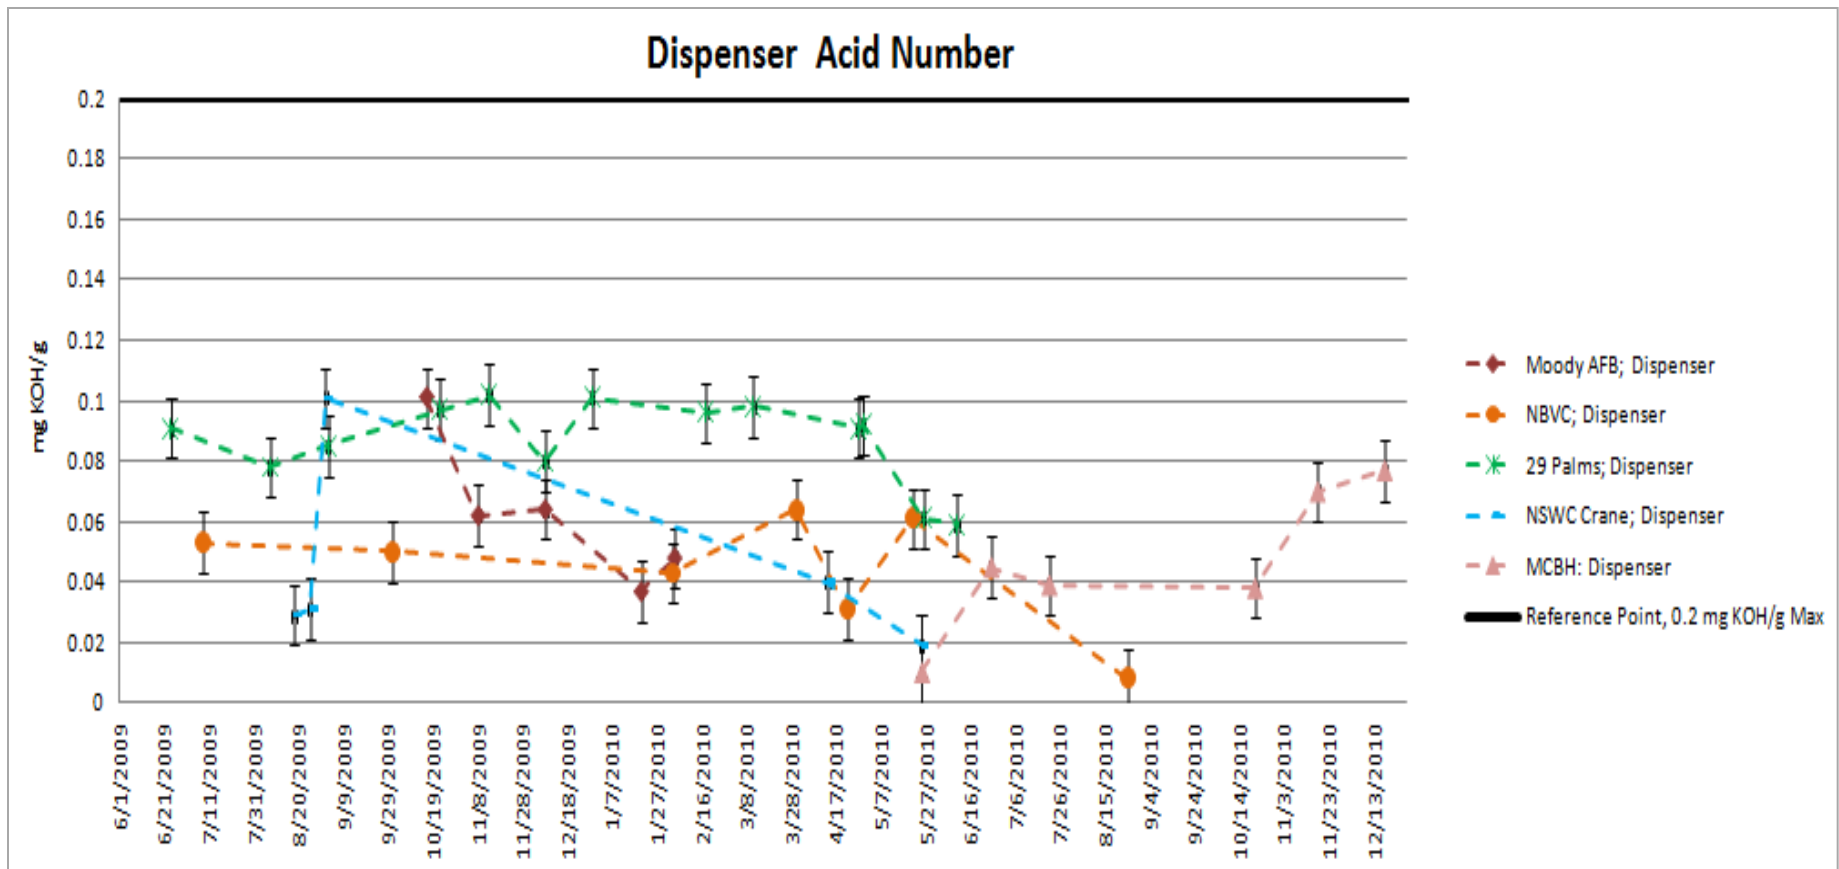

All dispenser samples were well below the reference point.

Vehicle Particulate Content – ASTM 6217

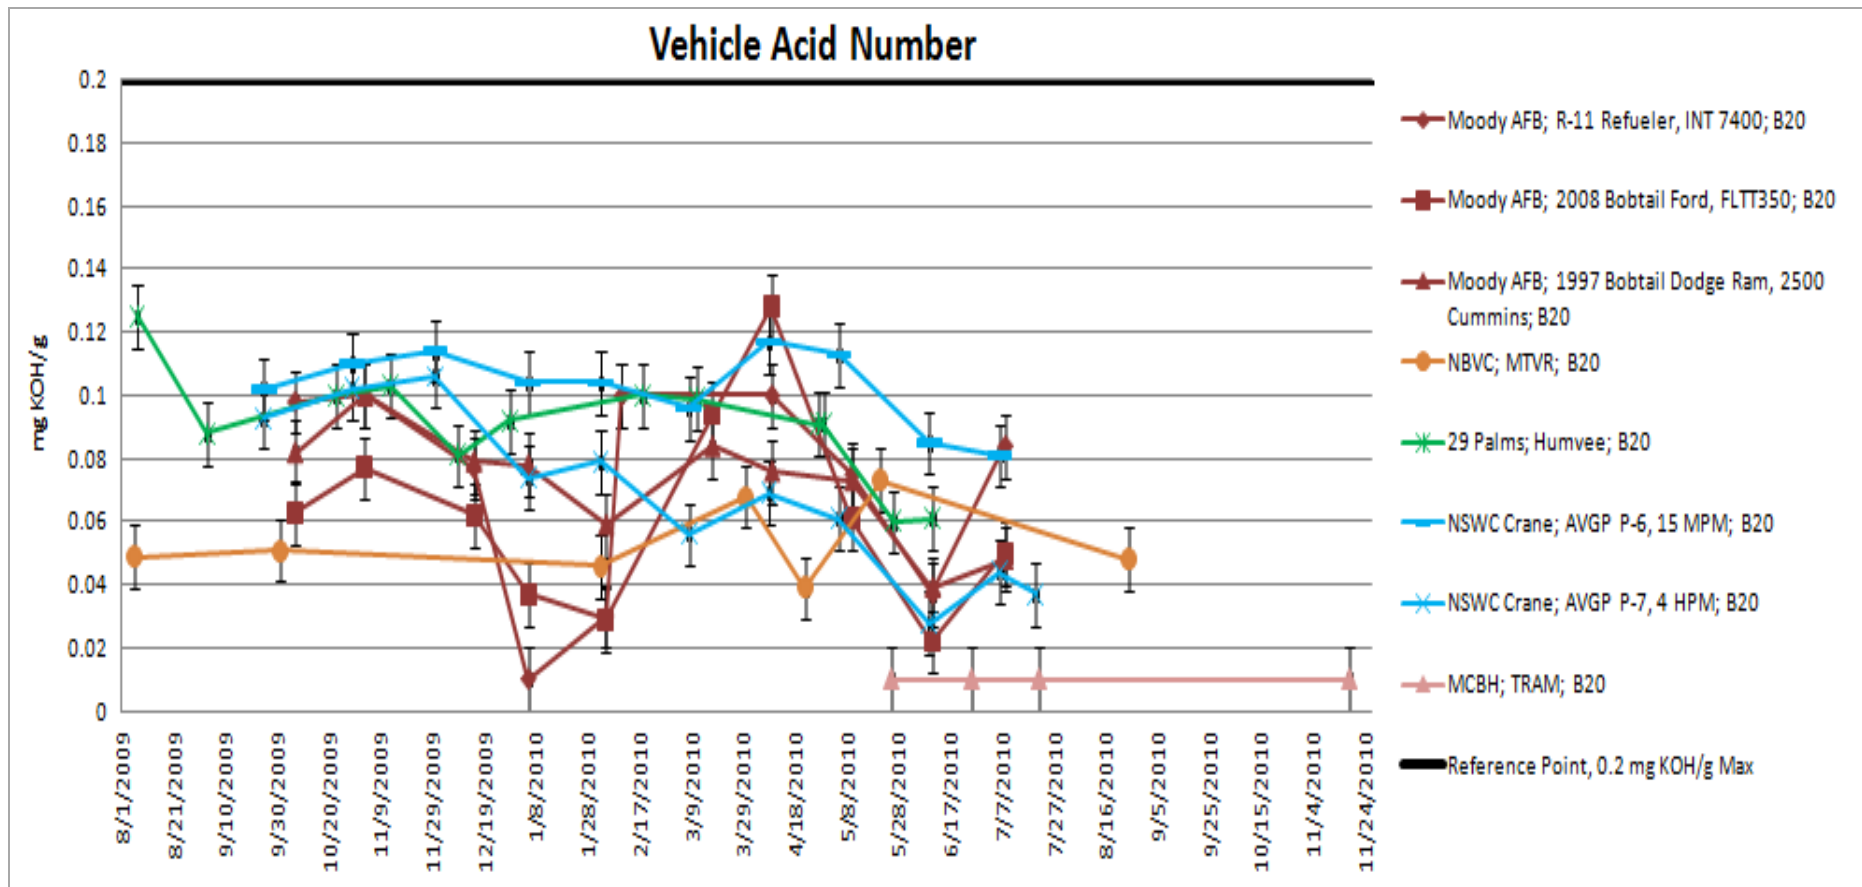

Two Moody AFB vehicles and the MCBH TRAM had incidences where the vehicle samples exceeded the reference points.

Dispenser Acid Number – ASTM D664

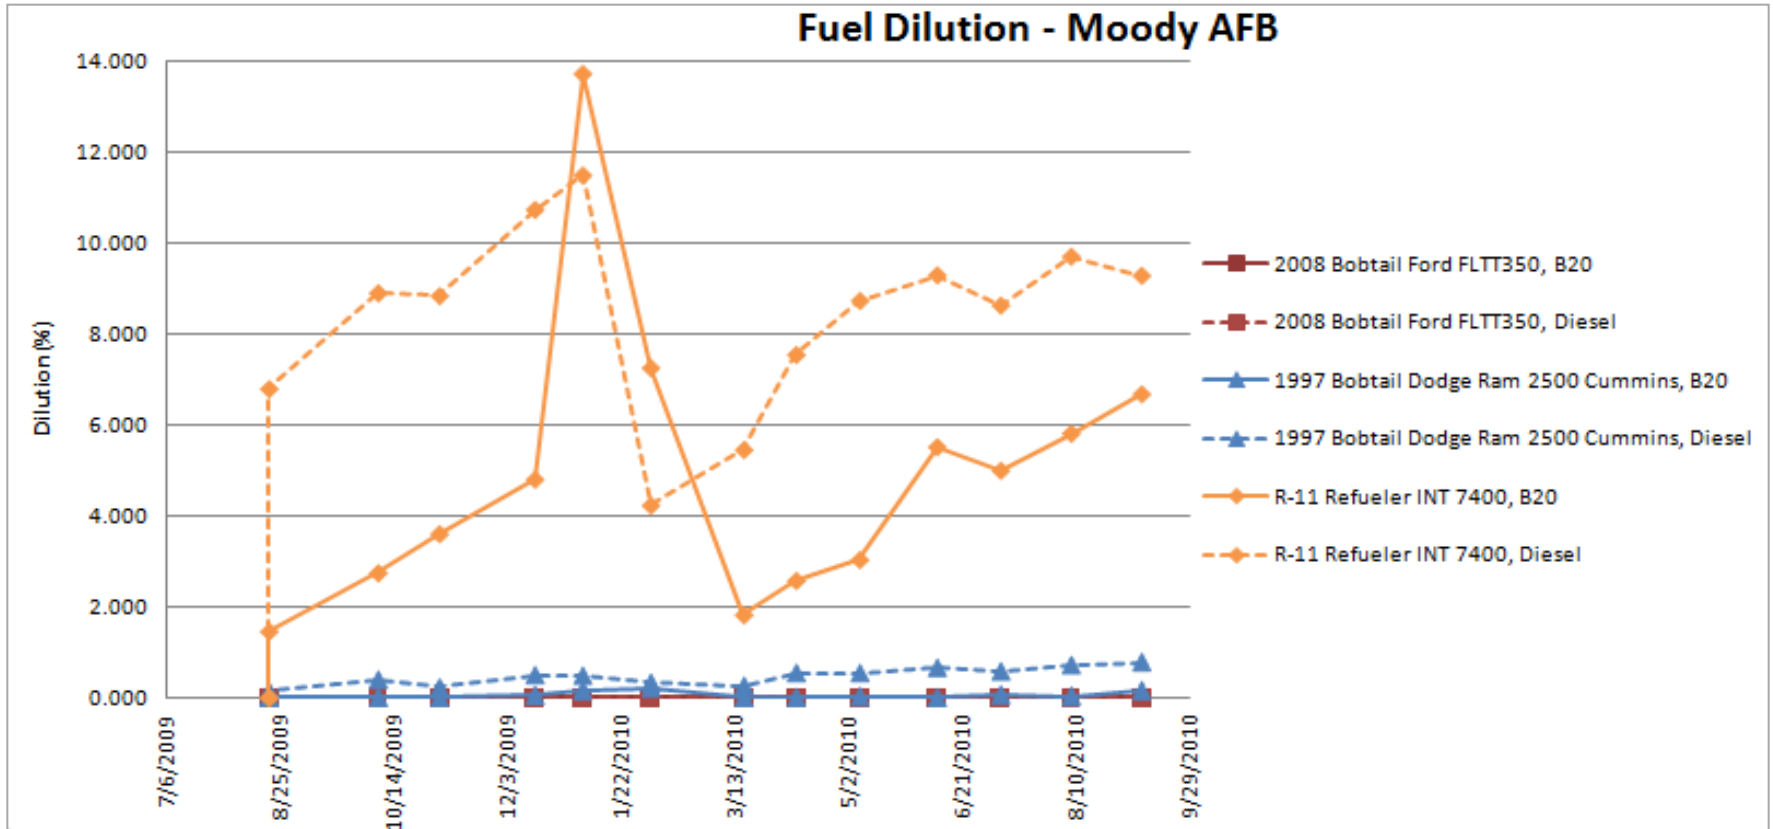

All samples had results less than the reference point of 0.2 mg KOH/g.

Vehicle Acid Numbers – ASTM D664

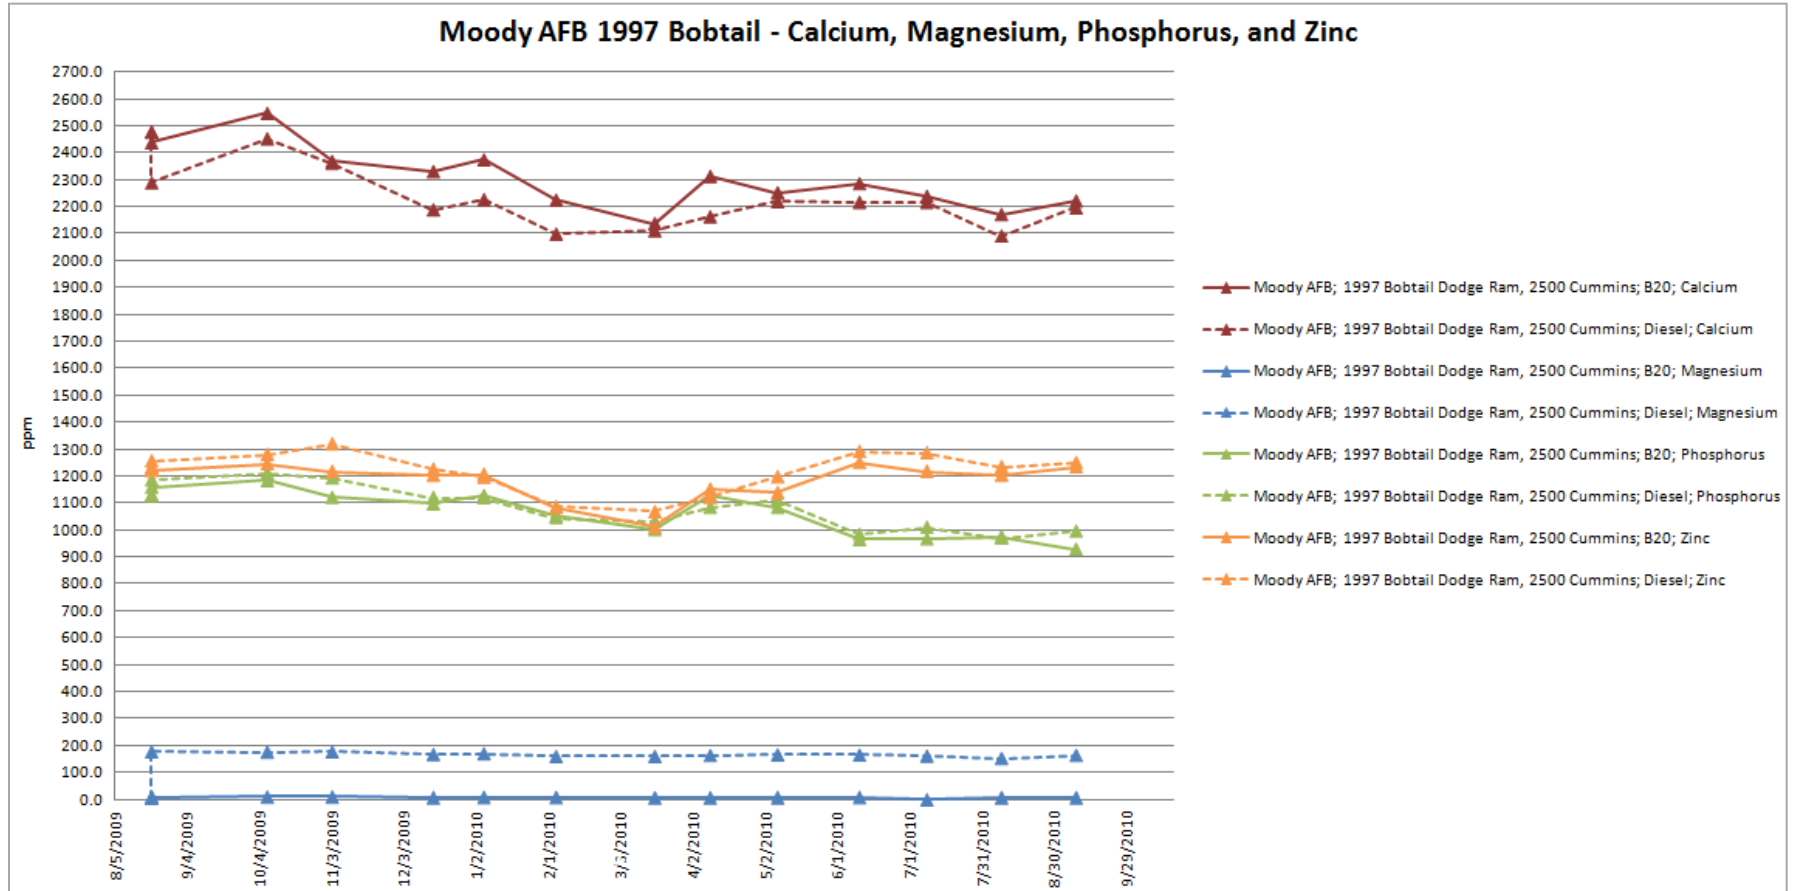

Again, all samples were well below the reference point, having results less than 0.2 mg KOH/g.

JOAP Oil Test Results

No significant difference between test and control vehicles; both Moody Refuelers have fuel infiltration into crank case.

JOAP Oil Test Results

No significant difference between test and control vehicles for JOAP

Vehicle Operator Observations

- Cold Start Issues (User Concern #3: Vehicle operation and fuel properties in low temperatures)
 - 29 Palms (Humvees)
 - Both Test and Control Vehicles have trouble starting after cold nights in desert (14-18 °F)
 - Replaced glow plug, that warms fuel prior to start, on both vehicles, cold starting issues have gone away
 - Crane (LAVs)
 - Vehicles smoke initially upon starting in cold weather, but then run normally
 - LAVs have engine pre-heaters to help with starting diesel vehicles in cold weather
 - The control vehicles, running on JP-8, also smoke, just not as long or as much as the test vehicles

Vehicle Operator Observations

- Material Compatibility Issues (User Concern #5, Material Compatibility and Solvency)
 - Moody AFB
 - Fuel sending unit screen separation due to material incompatibility in 1997 Bobtail Truck Fuel Tank
- Fuel Quality Issues (User Concern #1, Stability of the Biodiesel and User Concern #2, Accelerated Deterioration during High Temperature Storage)
 - Moody AFB
 - Orange Deposits in 1997 Bobtail Truck

Vehicle Design Bobtails (from AFPET Study)

- Moody experienced B20 orange residue and maintenance issues in 1997 Bobtail Test Vehicle.
- No B20 residue was seen in the 2000 test vehicle.
- Differences in vehicle design and usage may play a role.
 - Fuel tank covered, less exposed to the sunshine/heat
 - Fuel cap more appropriate and robust
 - Due to recess, less chance of getting water/rain into the fuel tank during refueling
 - Low Usage - 75 hours for the year

1997

2000

1997 and 2008 Bobtail Fuel System Components

1997 Bobtail (B20)

1997 Bobtail (DF2)

2008 Bobtail B20

Oxidative Stability Deposits at Moody AFB

- Orange deposits found in the Test Vehicle (1997 Bobtail Truck)
 - Deposits found in fuel tanks, fuel sending units, filters, fuel lines, fuel pumps, and other fuel wetted surfaces
 - Vehicle fuel system design a significant factor
 - 2008 Test Vehicle did not have any deposits
 - Caused by low turnover of fuel in vehicle tank, high heat, and humidity.
 - Difficult to clean (somewhat soluble in ethanol)
 - Fuel injector failures very high at this AF Base
 - Material incompatibility causing filter screens to fall out of fuel sending units and into the fuel tanks

Issues

- Fuel Stability Still a Major Concern
 - Moody AFB
- Lack of Maintenance Data
 - Limited number of vehicles
 - Duration of test
- Additional Funding Required to:
 - To Track Fleet of Vehicles Running on B20 (50% Fleet on B20)
 - Increase Variety and Number of Vehicles
 - Collect Statistically Significant Maintenance and Operational Data
 - Provide Periodic Fuel Sampling on Key Indicators
- Marine Corps and Army Interested in Fleet Test
 - MCBH Hawaii and USAG Hawaii

Technology Transfer

- **Path Forward**

- Develop Final Report with SME input
- Develop List of Qualified Vehicles and Training Operations with SME input
- Develop Economic Analysis of using B20 instead of JP-8
- Larger Number of Vehicles is required to ensure capture of all data
 - B20 related maintenance cost increases
 - Fuel system failures and vehicle break downs
 - Comparison of fuels over preventive maintenance cycles
- Monitor B20 use under training conditions
 - Interchanging between JP8 and B20

- **Post Project Results**

- Prior to participation in ESTCP Demonstration access to B20 was limited to test vehicles at MCBH, Base Commander expanded use of B20 to non-tactical fleet and brought on line a 10,000 gal B20 tank.
- USAG Hawaii currently seeking storage tank to support B20 dispensing

This work was funded through the Office of the Assistant Secretary of the Army Installations, Energy and Environment and conducted under contract W74V8H-04-D-0005, Task 0555. The views, opinions, and/or findings contained in this paper are those of the author(s) and should not be construed as an official Department of the Army position, policy, or decision unless so designated by other official documentation.

Questions?

Acronyms and Symbols

- AFPET – Air Force Petroleum Laboratory
- ARFL – Air Force Research Laboratory
- ASN - Assistant Secretary of the Navy
- ASTM – American Society for Testing and Materials
- B20 – Blend of Fuel: 20% biodiesel, 80% petroleum diesel by volume
- B100 – Pure Biodiesel. Biodiesel is defined in ASM D6751 as “a fuel comprised of mono-alkyl esters of long chain fatty acids derived from vegetable oils or animal fats, designated B100.”
- CNO – Chief of Naval Operations
- CTC – Current Technologies Corporation
- DENIX – Defense Environmental Network & Information Exchange
- DoD – Department of Defense
- DTIC – Defense Technical Information Network
- EQI – Environmental Quality Initiative
- HMMWV or (Humvees) - High Mobility Multipurpose Wheeled Vehicles
- JOAP – Joint Oil Analysis Program

Acronyms and Symbols

- JTP – Joint Technical Publication
- KOH – Potassium Hydroxide
- LAV – Light Armored Vehicle
- MCBH – Marine Corps Base Hawaii
- MTRV – Medium Tactical Vehicle Replacement or 7-Ton Vehicle
- NBVC – Naval Base Ventura County
- NDCEE – National Defense Center for Energy and Environment
- NESDI – Navy Environmental Sustainability Development to Integration
- NFESC – Naval Facilities Engineering Service Center
- NSWC – Naval Surface Warfare Center
- POL – Petroleum, Oil, and Lubricants
- SME – Subject Matter Expert
- SwRI – Southwest Research Institute
- TARDEC – Tank Automotive Research, Development and Engineering Center
- TRAM - Tractor, Rubber Tired, Articulated Steering, Multi-Purpose

Methodology

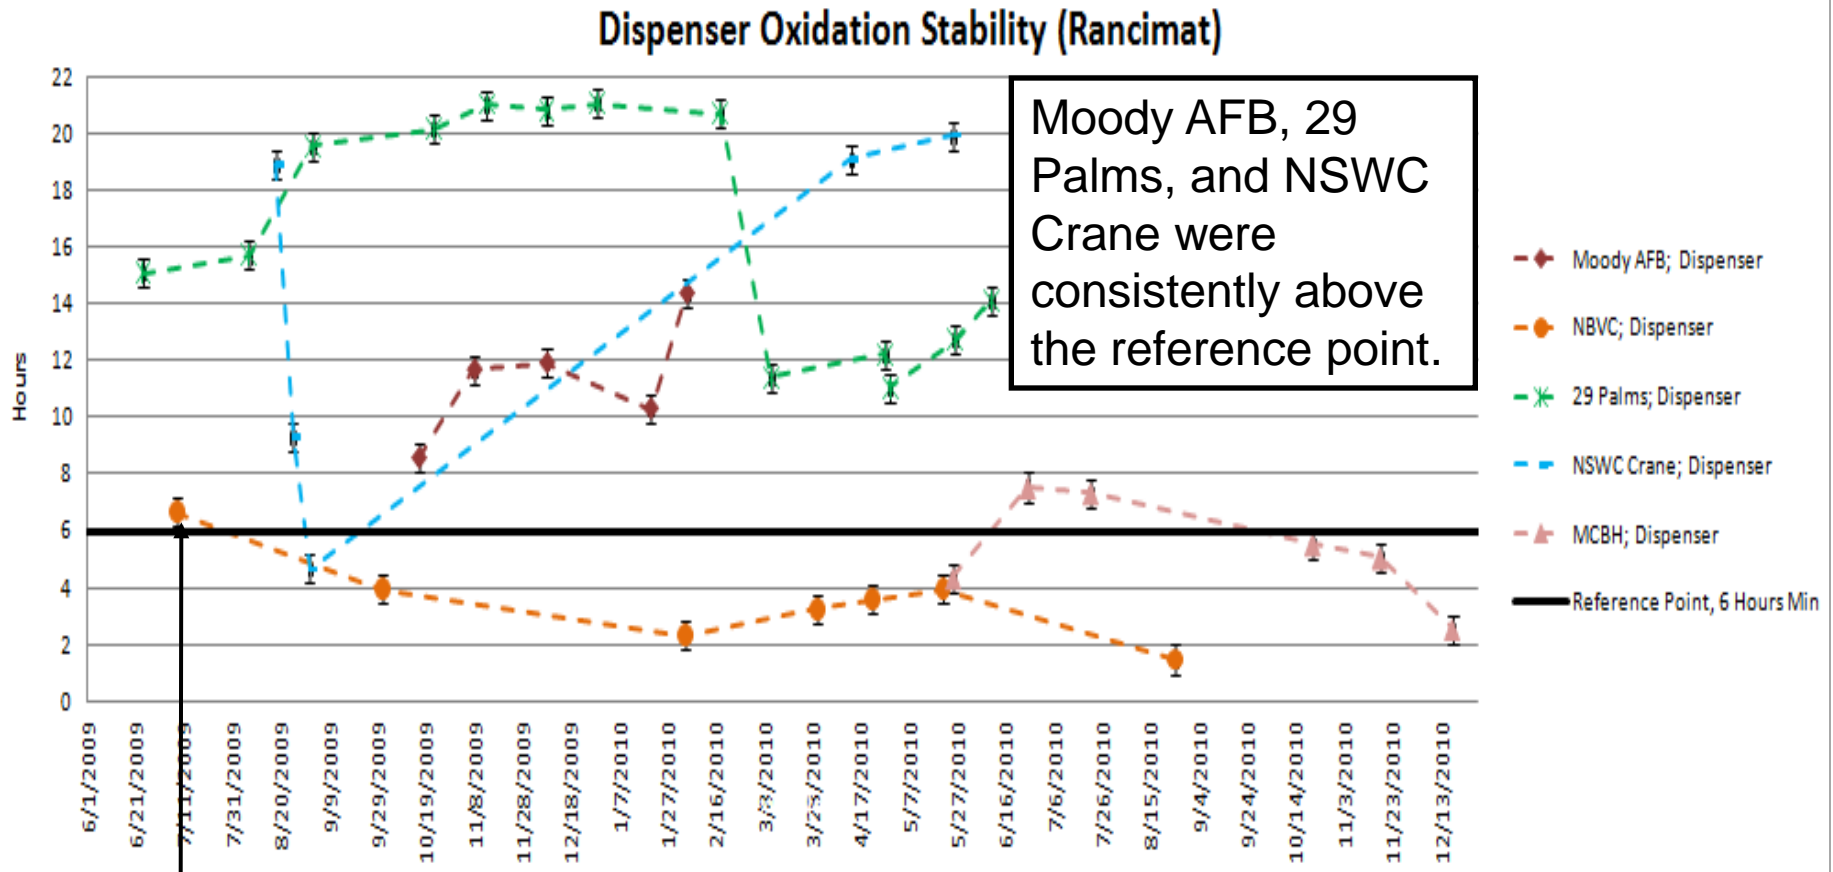

Example Test Methodology: Acid Number Test Methodology

Parameters	Set an autotitrator to deliver 0.05 mL/min of alcoholic KOH during a potentiometric titration until the potential changes by less than 5 mV/0.1 mL; calculate acid number
Experimental Control	Standardization of KOH, and Titrant blank
Acceptance Criteria	0.2 mg KOH/g, max
Reference Document	ASTM D664

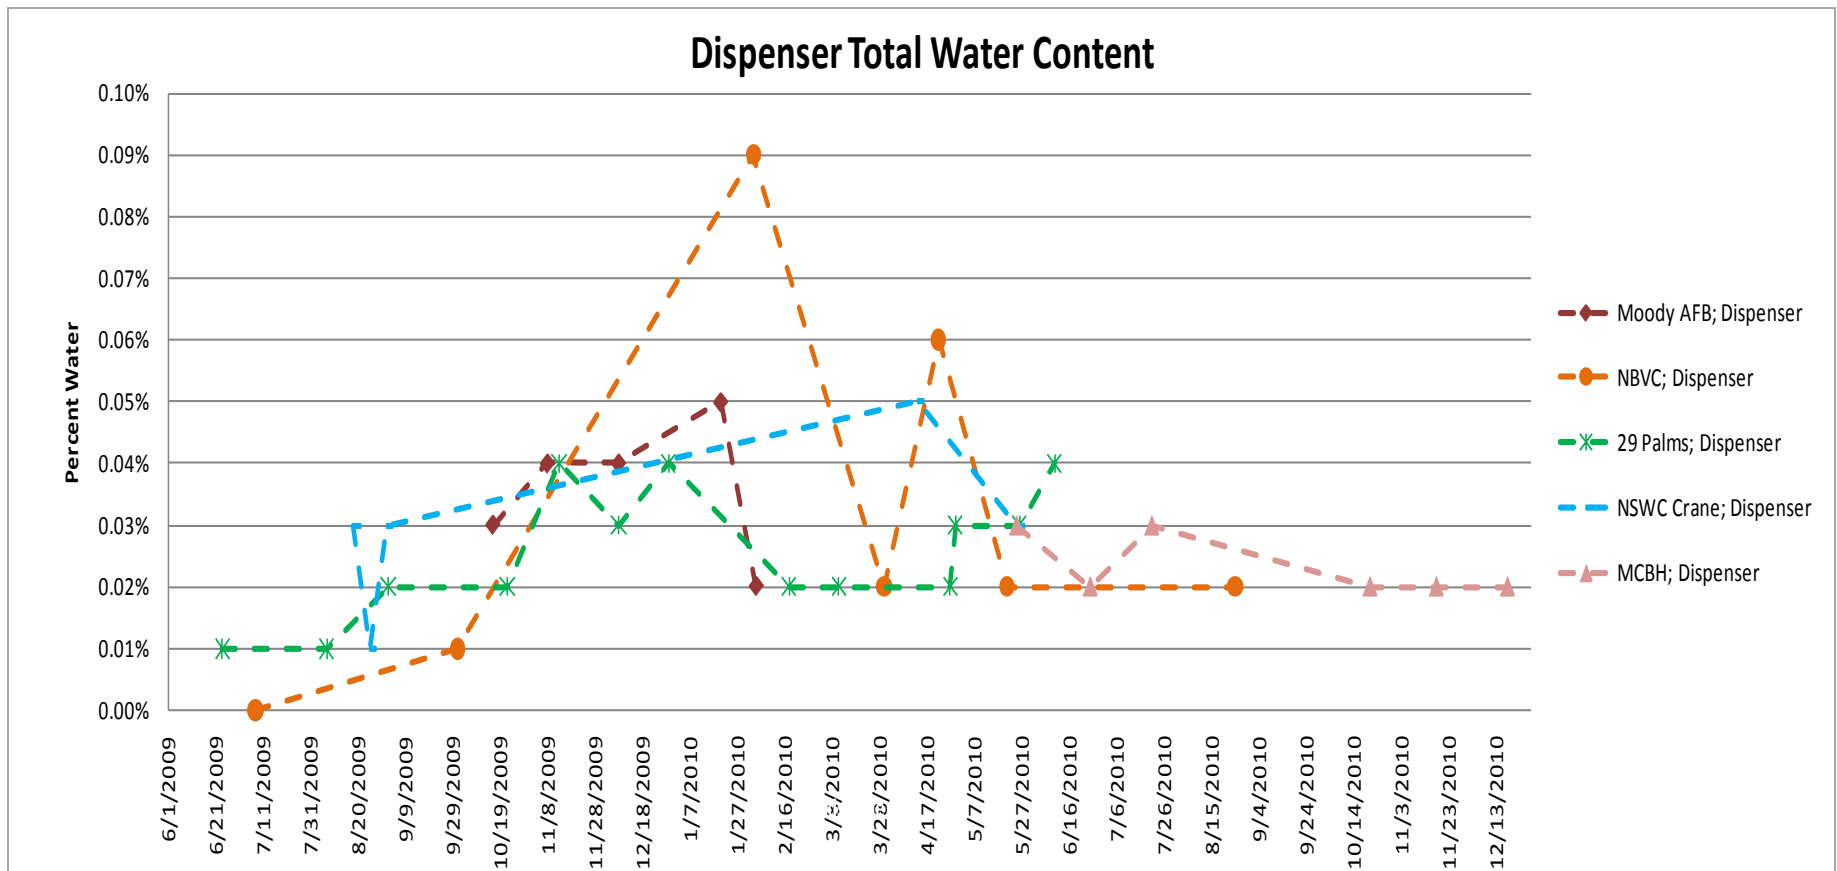

Test Equipment

Lab Equipment Required for Test	Manufacturer	Model #	Serial #
Autotitrator	Brinkmann Instruments/Metrohm USA	836 Titrande	1836002010117
Analytical Balance	A&D	N/A	10400184

Dispenser Oxidation Stability - Rancimat

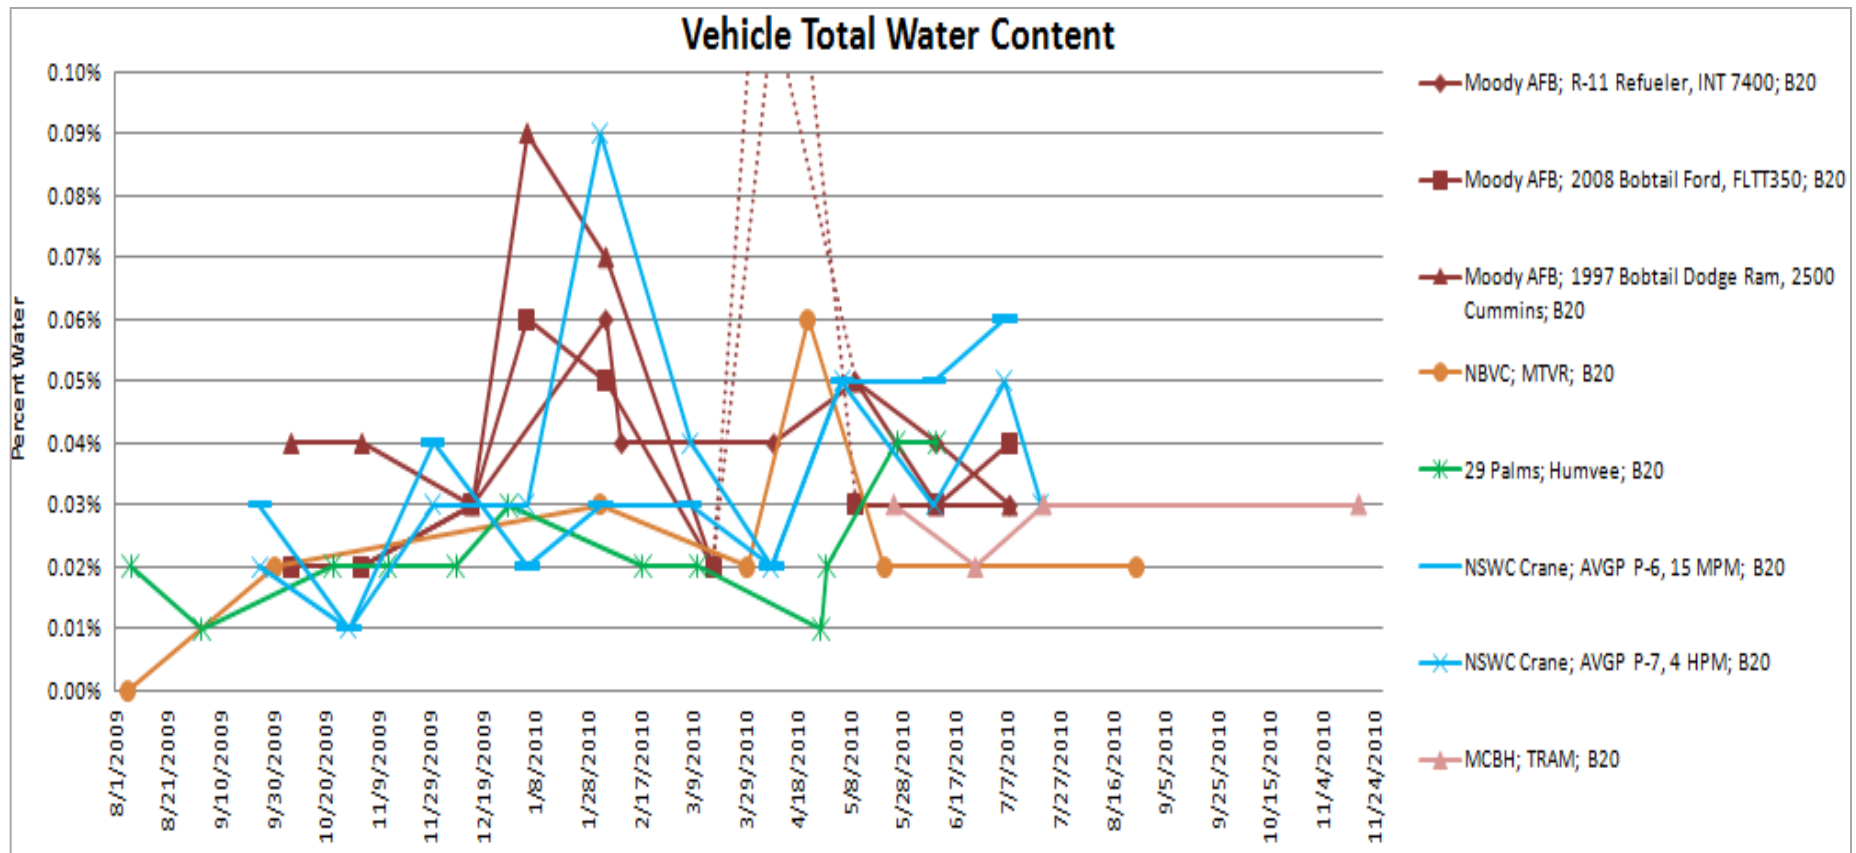

Dispenser Total Water Content – ASTM D6304

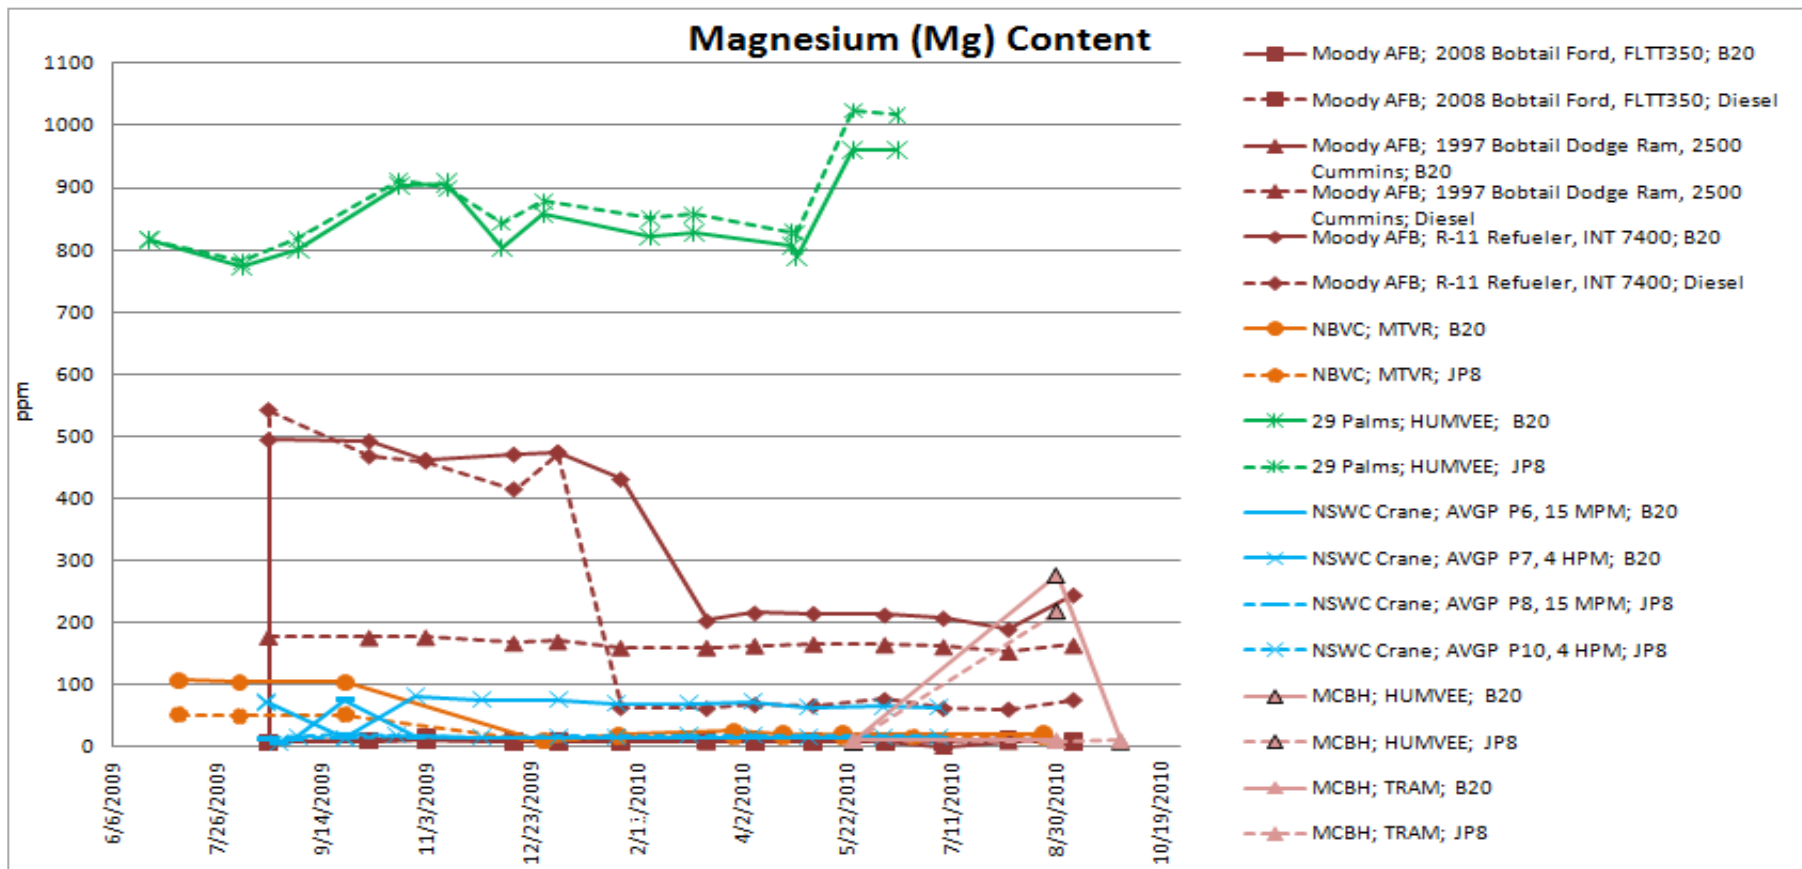

All storage tank samples had water content values well below 0.1%.

Vehicle Total Water Content – ASTM D6304

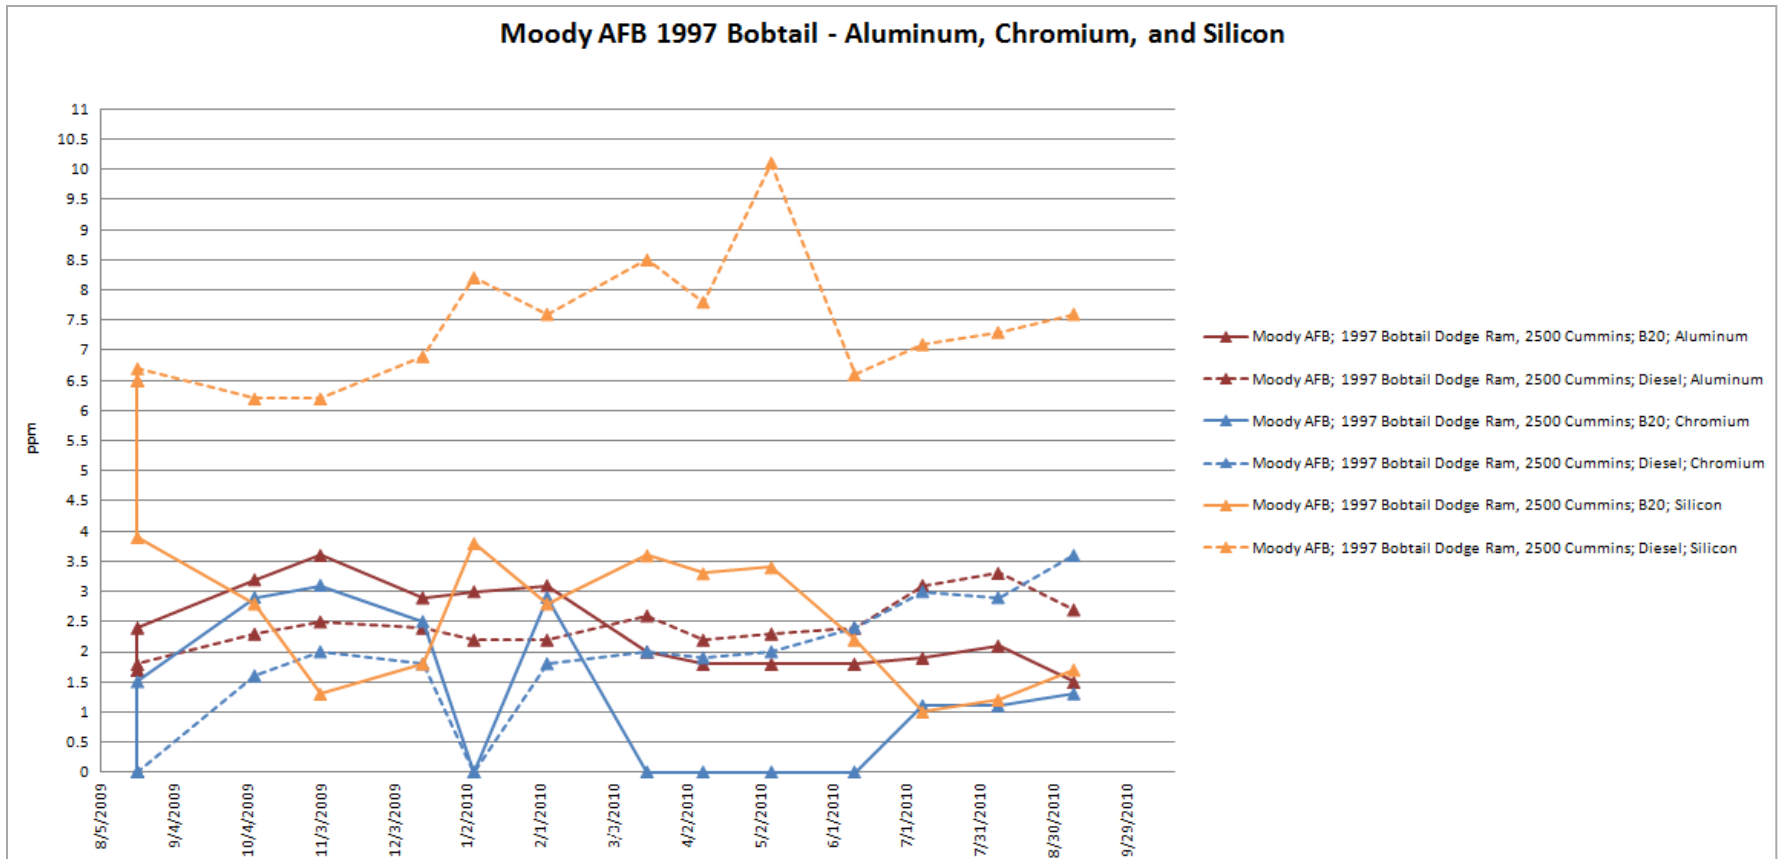

All results were less than 0.1% water, with the exception of two vehicle samples from Moody AFB.

JOAP Oil Test Results

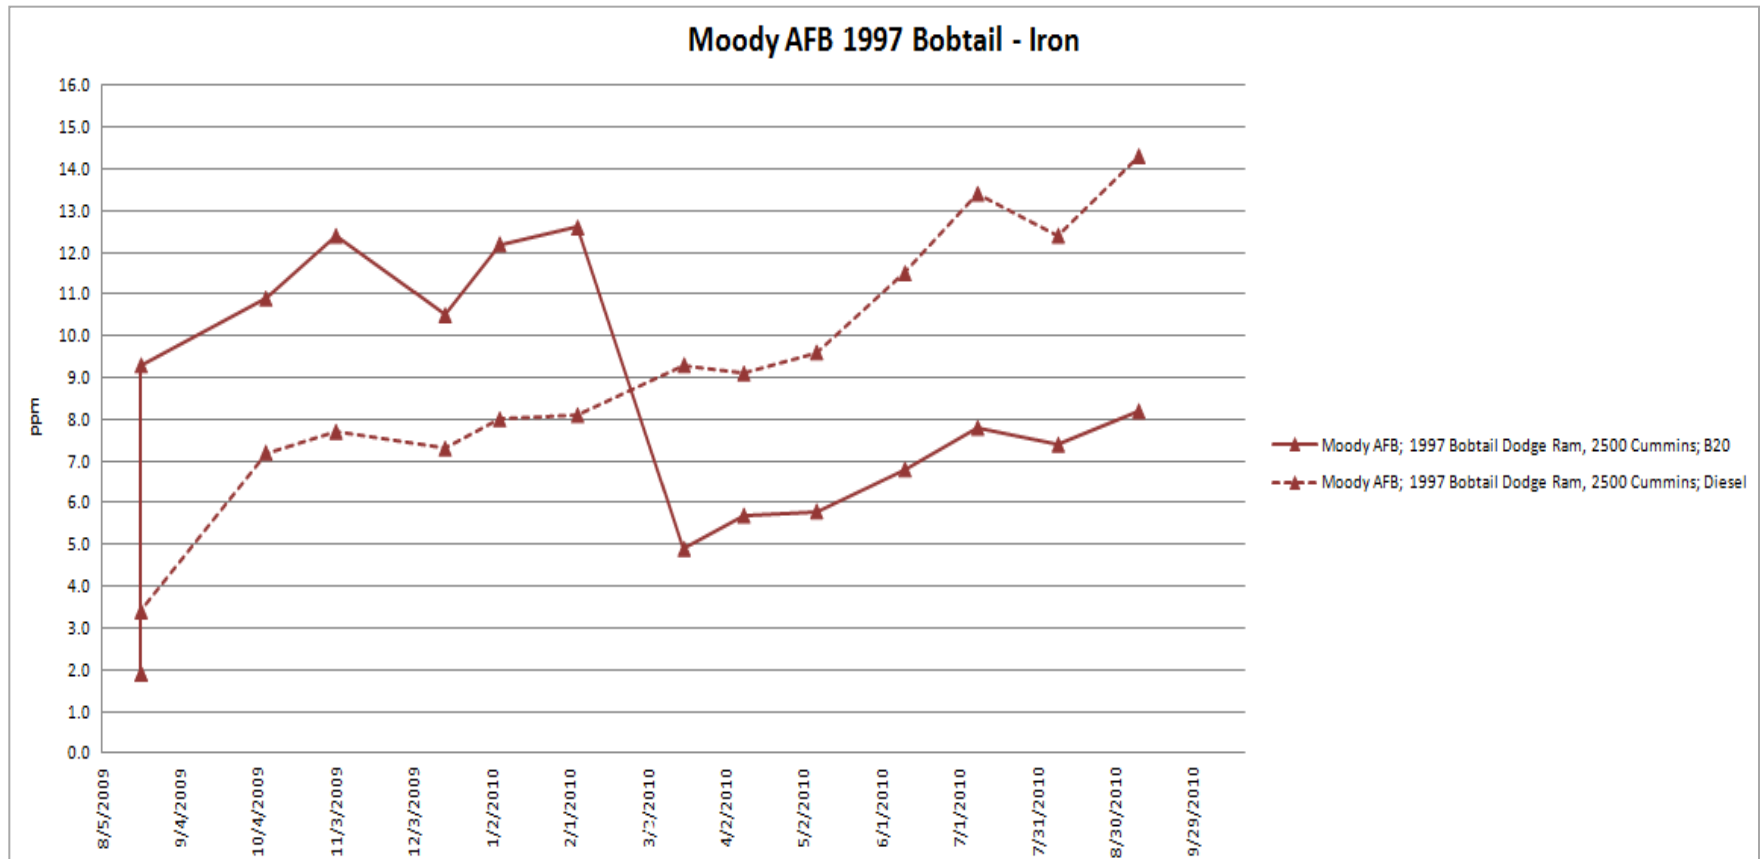

No significant difference between test and control vehicles.

JOAP Oil Test Results

No significant difference between test and control vehicles.

JOAP Oil Test Results

No significant difference between test and control vehicles.
