Statement A: Approved for public release, distribution is unlimited (20 MARCH 2012)

***Information Dominance
Anytime, Anywhere...***

Report Documentation Page

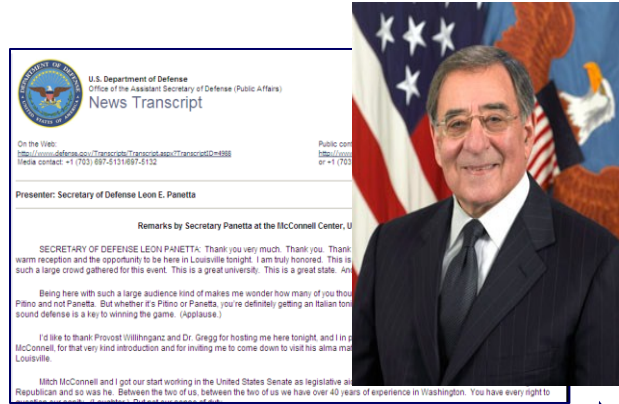

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

Bandwidth = Time = Battlespace

Proceedings Magazine, "Lead or Get Out of the Way: Winning the Millennium War," VADM Mark Edwards, US Navy, April 2008,

- We must continue to invest in new capabilities like cyber and unmanned systems and space...
- I have to tell you that I do worry, however, about this new area I talked about of cyber-war.
- I think the capabilities are available in cyber to virtually cripple this nation, to bring down our power grid system, to impact on our governmental system, to impact on our -- on Wall Street, on our financial systems, and to literally bring – paralyze this country.
- So the one thing that I worry about the most right now is knowing that this is possible and feeling that we have not taken all the necessary steps to protect this country from that possibility.

- Over the next 10-15 years, the Navy will evolve and remain the preeminent maritime force.
 - The reach and effectiveness of ships and aircraft will be greatly expanded through new and updated weapons, unmanned systems, sensors, and increased power.
 - Unmanned systems in the air and water will employ greater autonomy and be fully integrated with their manned counterparts.
 - Cyberspace will be operationalized with capabilities that span the electromagnetic spectrum – providing superior awareness and control when and where we need it.

PEO C4I End to End Capability Early – Mid 90's

RF Bandwidth

- *Inmarsat 16kbps*
- *SHF voice (CMD Ships) 16 kbps*
- *UHF Satcom 19.2 kbps*
- *OTCIXS ~8 kbps shared*

Network Storage

- *JOTS/JMCIS: 20 MB Hard drive*

Applications

- *Three*

WAN
- *None*

SHF – Super High Frequency
 EHF – Extremely High Frequency
 OTCIXS - Officer in Tactical Command Information Exchange Subsystem
 JOTS – Joint Operational Tactical System
 JMCIS – Joint Maritime Command Information System

Required Bandwidth achieved via helicopter – Navy disadvantaged and nearly kept out of the game....

PEO C4I End to End Capability 2010's

RF Bandwidth (up from 16 Kbps)

- Inmarsat 16kbps
- SHF up to 7 mbps
- EHF 1.5 mbps
- UHF Satcom 48 kbps
- GBS (rcv only) 45 mbps
- CWSP/CBSP up to 21 mbps

Network Storage

Common Computing Environment (ISNS):

20 TB storage per enclave (up from 20 MB Hardrive)

CANES: 9.5 TB for apps alone

Applications

- Over 800 Connected or hosted (up from 3)

1.5 - 21 Mbps

WAN (ADNS)

- 25 / 50 mbps

- CANES – Consolidated Afloat Networks and Enterprise Services
- ISNS – Integrated Shipboard Network System
- ADNS – Automated Digital Network System
- SHF – Super High Frequency
- EHF – Extremely High Frequency
- GBS – Global Broadcast System
- CWSP/CBSP – Commercial Wideband Satellite Program/Broadband

...now Supports Full Motion Video, persistent COP, ISR Data Management and full array of Warfare

PEO C4I End to End Capability

| Capability | Current Systems | Future Technology |
|--------------------|--|---|
| Local Area Network | <ul style="list-style-type: none"> - Integrated Shipboard Network Systems (ISNS) - Submarine LAN (SubLAN) - Combined Enterprise Regional Information Exchange System – Maritime (CENTRIXS-M) - Sensitive Compartmented Information Networks (SCI Net) | <ul style="list-style-type: none"> - Consolidated Afloat Networks and Enterprise Services (CANES) |
| C2 Application | <ul style="list-style-type: none"> - Global Command and Control System – Maritime (GCCS-M) - Naval Tactical Command Support System (NTCSS) - Distributed Common Ground System - Navy (DCGS-N) | <ul style="list-style-type: none"> - Maritime Tactical Command and Control System (MTC2) - NTCSS - DCGS-N |
| Wide Area Network | <ul style="list-style-type: none"> - Automated Digital Network System (ADNS) Increments I,II, III | <ul style="list-style-type: none"> - ADNS Inc III - ADNS Inc II (Airborne) |
| Communications | <ul style="list-style-type: none"> - Super High Frequency (SHF) - Navy Extremely High Frequency Program (NESP) - Global Broadcast System (GBS) - Commercial Wideband Satellite Program (CWSP) - Commercial Broadband Satellite Program (CBSP) - Battle Force Tactical Network (BFTN) | <ul style="list-style-type: none"> - Navy Advanced EHF Multiband Terminal (NMT) - CBSP - GBS - BFTN |

Network Development

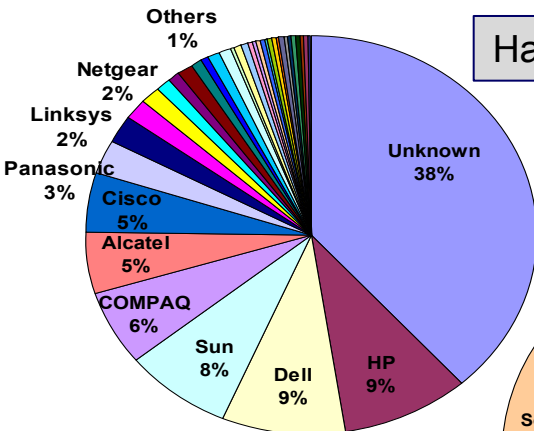

Status Quo

- Multiple security vulnerabilities
 - Inadequate levels of information security / network readiness
- Multiple unique networks & h/w variants
 - 642 legacy variants on 300+ platforms
- Multiple Operating Systems and versions
- Inefficient use of server/storage resources

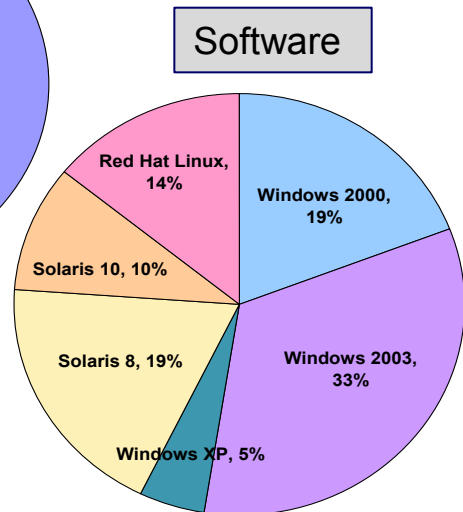

Across multiple security enclaves

CANES

- Common Computing and Software Environment
- Cross Domain Solutions (CDS)
- Systems Management
- Technology Refresh

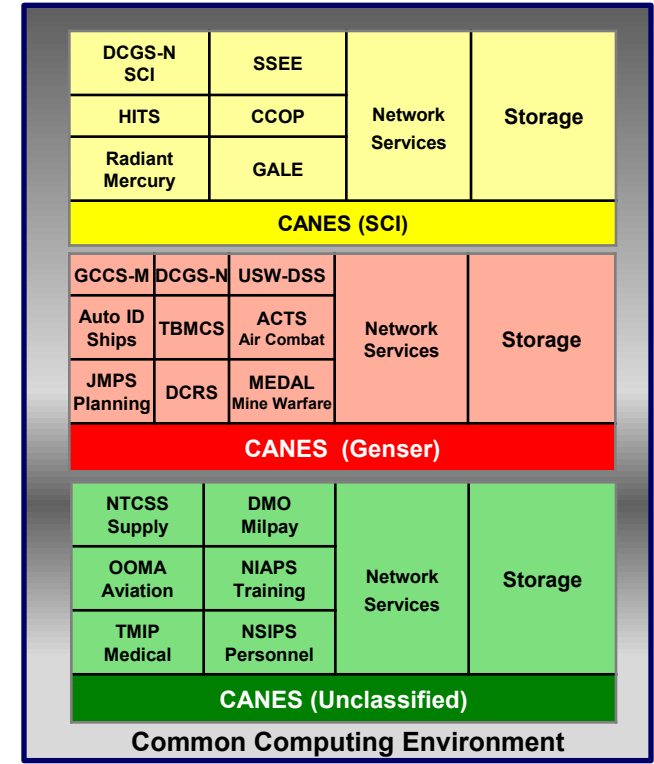

Hardware

Software

ADNS Evolutionary Development

| | Increment I 1997-2005 | Increment II | Increment IIa/IIb 2004- 2010 | Increment III 2009- 2020 |
|---------------------------------|--|---|--|---|
| RF links | IP over single RF Link | IP over dual RF Links | | IP over Several (no limit) RF Links |
| Throughput | Bandwidth limited to 1.5Mbps | 6Mbps Aggregate (2Mbps/channel) | 16Mbps Aggregate (8Mbps/channel) | 25/50Mbps Aggregate |
| Converged IP | ADNS feeds into Static TDM (Timeplex) Network | | Eliminates need for TDM (Timeplex). Voice, Video, and Data transported through ADNS (Converged IP realized). Increases Dynamic Bandwidth IP Management | |
| QoS | Baseline Routing, Encryption, & Network Management Based System with Fixed Bandwidth | Application Prioritization, Minimum Bandwidth Guarantees, and Static Traffic Distribution | | Enhanced QoS through Optimized Edge Routing (OER), Granular Application Prioritization at Enclave Levels, Minimum Bandwidth Guarantees, and Dynamic Traffic Distribution across multiple RF links |
| Reliability/Efficiencies | Supports Email, Web Browsing, File Transfer, & Multiple Security Level Enclaves | Automatic Failover and Restoral of RF links | Compression, High Speed Pier (IIa only), LM 5.0 (Linux, IIb only), Automatic Failover and Restoral of RF links | Acceleration, NETOPS (Linux), Compression, High Speed Pier, NOC Fail-Over, IPv4/IPv6 Dual Stack, Automatic Failover and Restoral of RF links |
| Transport | Secret core | | | Ciphertext Core |

Navy SATCOM Capability Growth

Desert Storm c. 1990

Inmarsat - A
SALTS (logistics)/FAX
Official Phones
2.4-16 kbps

SHF
Voice @ 16 kbps
(Command Ships Only)
16 kbps

UHF
"Dual DAMA"
8 2.4 kbps
Circuits
(25kHz only)
Secure Voice/Data
Netted Comms
19.2 kbps

Navy barely in the game

Post Desert Storm

- 1992 "QUICKSAT" SHF for CVNs
- 1994 ORDs define WB SATCOM requirements

Aggressive fielding schedules deliver:

- WB MILSATCOM for all Surface Combatants
- WB Commercial SATCOM (CWSP) augmentation for Large-decks
- Inmarsat-B HSD for others

...getting into the game

Today

...staying in the game.

Some Thoughts on Future Command, Control, Communications, Computers and Intelligence Capability and Capacity

Rapidly Evolving Requirements Drive Navy Capability Advancements

Operational Environment

Humanitarian Assistance, Short and Medium Range Ballistic Missiles, Parastant, Complex Threats Employing Advanced Technology in Challenging Environments

Force Integration
Force Level Sensor & Weapons Coordination

Sub-Sonic Anti-Air & Anti-Surface Missiles, Super-Sonic Anti-Air & Anti-Surface Missiles, Advanced Super-Sonic Anti-Air

Improved Mission Capability

- ◆ Integrated Force Level Kill Chain
 - Coordination of Netted Force Operations to Counter Mid-Term Threats
 - Joint Weapons and Sensors Coordination to Counter Far-Term Threats

Future DoD IT Environment

| | | |
|--|---|--|
| | | |
| Reduced costs for data centers and applications | Improved interoperability for better coordination and collaboration | Improved user satisfaction and mission success |
| | | |
| Faster, more responsive capability deliveries to Warfighters | Improved security to reduce cyber threats | Faster adoption of commercial IT breakthroughs |

Reference: DOD CIO

Future C4I Capability and Capacity drivers?

- **Cyberspace Operationalization**
- **Cyber Defense**
- **Broad Area Maritime Surveillance (BAMS)**
- **UAVs, USVs, UUVs**
- **LCS and Mission Modules**
- **Remote Sensors**
- **Maritime Aerial Layer Network**
- **Full Motion, High Resolution Video**
- **Advances in Computer Technology**
- **Advances in Network Technology**
- **Network and System Management**
- **Competition for Bandwidth**
- **Application Proliferation**
- **New ISR sources**
- **Advances in Waveforms**
- **Growth of Adversary Capabilities**
- **Growth of Coalition/Partner Capabilities**
- **Budget and Fiscal Realities**
- **Others????**

We get IT.

We also integrate it, install it and support it. For today and tomorrow.
