

## Report Documentation Page

*Form Approved  
OMB No. 0704-0188*

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

## **Applied Reverberation Modeling Workshop**

Charles W. Holland  
The Pennsylvania State University  
Applied Research Laboratory  
P.O. Box 30  
State College, PA 16804-0030  
Phone: (814) 865-1724 Fax (814) 863-8783 email: [holland-cw@psu.edu](mailto:holland-cw@psu.edu)

Grant Number: N00014-10-G-0259-0011

### **LONG TERM GOALS**

Improve accuracy, fidelity, and speed of reverberation models for modeling, simulation, training and sonar system performance predictions.

### **OBJECTIVES**

The objective is to achieve more efficient transitions from the 6.1 basic research community to the applied modeling community.

### **APPROACH**

The approach is to: 1) develop enhanced understanding of 6.2/6.3 needs within the 6.1 community (emphasis on physics rather than signal processing); 2) develop long-term interactions between 6.2/6.3 and 6.1 researchers (addressing current/future Navy needs through FNC or alternate paths) and 3) identify topics that require long-term 6.1 basic research.

### **WORK COMPLETED**

The PI worked closely with Ruth Keenan to analyze Fleet reverberation data in several regions (shallow, slope, and deep water) of operational interest and using operational reverberation models. In addition, the PI worked Joe Clemens (ARL-UT) to identify potential reverberation issues from Fleet (SSQ-53C) data. In some areas the Fleet reverberation predictions were very poor, tens of dB in error and work is underway to understand whether this is due to poor knowledge of environmental parameters or model physics problems.

### **IMPACT/APPLICATIONS**

It is anticipated that improved understanding of the 6.2/6.3 modeling issues by the 6.1 community will lead to enhanced transition of modeling research from the 6.1 community. For example, a 6.1 reverberation model based on energy flux has just been delivered to NAVOCEANO and they are using it to estimate bottom scattering parameters from survey data to build a database. A new Navy shallow

water bottom scattering database is likely to be transitioned to OAML in FY13. That database relies upon accurate reverberation modeling for accurate estimation of the bottom scattering parameters.

## **RELATED PROJECTS**

*SPAWAR Ocean Bottom Characterization Initiative*, One goal of this project was to develop a prototype bottom scattering database which could be used by the Fleet to replace the space and frequency-independent current model, Lambert's law with a Mackenzie coefficient.
