

## Overview of the CERT® Resilience Management Model (CERT®-RMM)

**Jim Cebula**  
Technical Manager - Cyber Risk Management, CERT® Division

Jim Cebula is the Technical Manager of the Cyber Risk Management team in the Cyber Security Solutions Directorate of the CERT Division at the Software Engineering Institute (SEI), a unit of Carnegie Mellon University.

Cebula's current activities include risk management methods along with assessment and management of operational resilience among Federal departments and agencies as well as critical infrastructure and key resource (CIKR) providers. He is the co-author of the Taxonomy of Operational Cyber Security Risks, and has instructed courses in the OCTAVE method. He is also currently a co-PI on a research initiative studying perceptions of risk. He joined CERT in 2009 after spending nearly fifteen years in project management, IT and security roles supporting government agencies, most recently as a cyber security manager.

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

# CERT® Resilience Management Model (CERT-RMM)

<http://www.cert.org/resilience/>

Framework for managing and improving operational resilience

***“...an extensive super-set of the things an organization could do to be more resilient.”***

—CERT-RMM adopter

# What is CERT-RMM?

**Guides** implementation and management of operational resilience activities

Enables and promotes the **convergence** of

- Business Continuity, COOP, IT disaster recovery
- Information security, cybersecurity
- IT operations

Applicable to a variety of organizations

- small or large
- simple or complex
- public or private

# How was CERT-RMM developed?

CERT-RMM codifies best practices for info. sec., IT DR, and BC from world leading organizations and numerous standards and codes of practice.

# What drove development of CERT-RMM?

Increasingly complex operational environments

Siloed nature of operational risk activities

Lack of common language or taxonomy

Overreliance on technical approaches

Lack of means to measure organizational capability

Inability to confidently predict outcomes, behaviors, and performance under times of stress

# CERT-RMM – The Model

Guidelines and practices for

- converging of security, business continuity, disaster recovery, and IT ops
- implementing, managing, and sustaining operational resilience activities
- managing operational risk through process
- measuring and institutionalizing the resilience process

Common vernacular and basis for planning, communicating, and evaluating improvements

Focuses on “what,” not “how”

Organized into 26 process areas

# RISK Management

# Operational Risk Management

A form of risk affecting day-to-day business operations

A very broad risk category

- from high-frequency, low-impact to low-frequency, high-impact

## Types of Operational Risks

- actions of people
- systems and technology failures
- failed internal processes
- external events

Operational resilience emerges from effective management of operational risk.

# Hurdles to Effective Operational Risk & Resilience Mgmt.

Vague and abstract nature

Compartmentalization

Technology focus

Practice proliferation

Insufficient funding

**Insufficient success metrics**

Discrete nature of activity

(Over)reliance on people

Regulatory climate

Head-in-the-sand

# Convergence

A fundamental concept in managing operational resilience

Refers to the harmonization of operational risk management activities that have similar objectives and outcomes

Operational risk management activities include (but are not limited to)

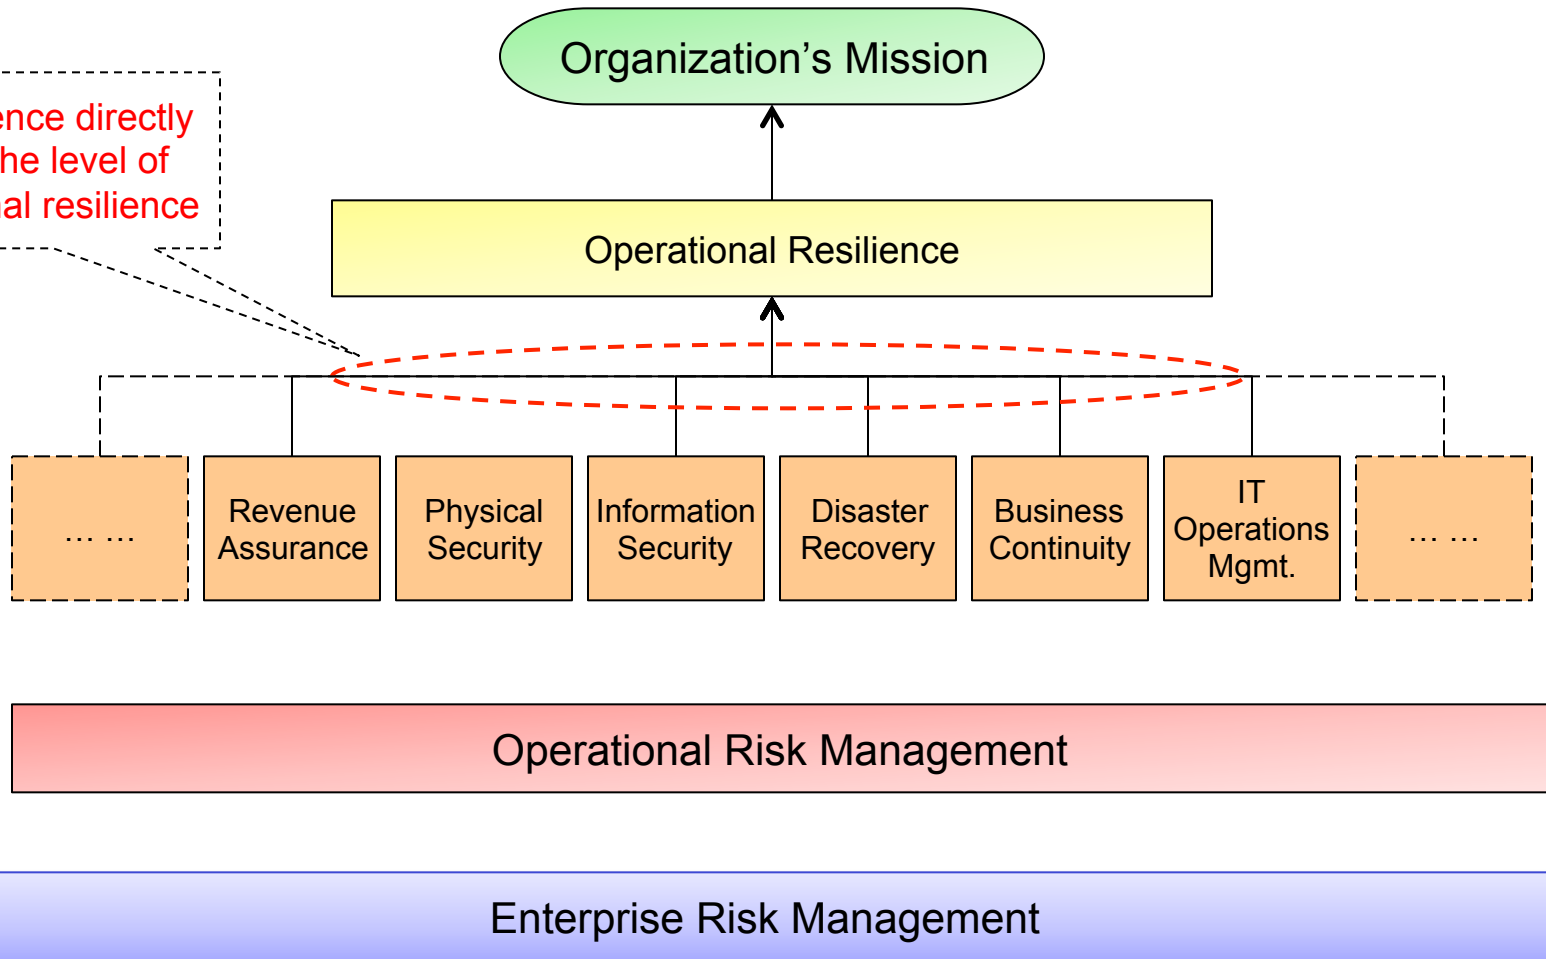

- security planning and management
- business continuity and disaster recovery
- IT operations and service delivery management

Other support activities may also be involved

- communications
- financial management
- etc.

# Convergence

Convergence directly affects the level of operational resilience

# Benefits of Convergence and Integration

Similar activities are bound by the same risk drivers

Allows for better alignment between risk-based activities and organizational risk tolerances and appetite

Eliminates redundant activities (and associated costs)

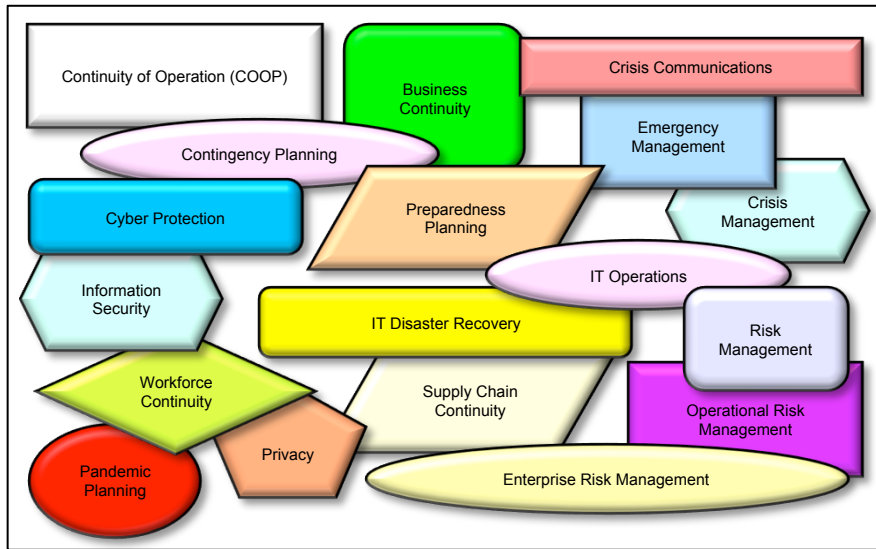

Forces collaboration between activities that have similar objectives

Enforces a mission focus

Facilitates a process that is owned across the organization

Influences how operational risk and resilience management work is planned, executed, and managed

# Desired Integrated Approach

# Desired Integrated Approach

Convergence

# Enemies of Convergence

Organizational structures

Traditional funding models

Overuse and misuse of codes of practice

Unclear or poorly defined and communicated risk drivers

Unclear or poorly defined enterprise objectives, strategic objectives, and critical success factors

Lack of supporting process orientation and definition

Lack of sponsorship and governance for the process

Lack of a risk-aware culture

# Institutionalizing a Culture of Resilience

**institutionalize** *verb* (CUSTOM) (UK USUALLY **institutionalise**) UK   
US  /,ɪn.stɪ'tjuː.ʃən.ə.laɪz/ (US) /-'tuː-/ [T]

to make something become part of a particular society, system, or organization

*What was once an informal event has now become institutionalized.*

Organizations must provide explicit guidance for institutionalizing resilience activities so that they persist over time.

Ask not “how well am I performing today?”

Ask “do I have what it takes to sustain high performance beyond today?”

# Lifecycle View

To improve and sustain an entity's operational resilience, it is not sufficient to improve only protection and sustainment activities.

Resilience should not be an afterthought bolt-on.

Resilience should be engineered and built in.

**Resilience Management is a Total Lifecycle Concept.**

## SERVICE CONTINUITY

### Purpose

The purpose of Service Continuity is to ensure the continuity of essential operations of services and related assets if a disruption occurs as a result of an incident, disaster, or other disruptive event.

### Introductory Notes

The continuity of an organization's service delivery is a paramount concern in the organization's operational resilience activities. The organization can invest considerable time and resources in attempting to prevent a range of potential disruptive events, but no organization can mitigate all risk. As a result, the organization must be prepared to deal with the consequences of a disruption to its operations at any time. Significant disruption can result in dire circumstances for the organization, even bankruptcy or termination.

## Summary of Specific Goals and Practices

### SC:SG1 Prepare for Service Continuity

- SC:SG1.SP1 Plan for Service Continuity
- SC:SG1.SP2 Establish Standards and Guidelines for Service Continuity

### SC:SG2 Identify and Prioritize High-Value Services

- SC:SG2.SP1 Identify the Organization's High-Value Services
- SC:SG2.SP2 Identify Internal and External Dependencies and Interdependencies
- SC:SG2.SP3 Identify Vital Organizational Records and Databases

### SC:SG3 Develop Service Continuity Plans

- SC:SG3.SP1 Identify Plans to Be Developed
- SC:SG3.SP2 Develop and Document Service Continuity Plans
- SC:SG3.SP3 Assign Staff to Service Continuity Plans
- SC:SG3.SP4 Store and Secure Service Continuity Plans
- SC:SG3.SP5 Develop Service Continuity Plan Training

### SC:SG4 Validate Service Continuity Plans

- SC:SG4.SP1 Validate Plans to Requirements and Standards
- SC:SG4.SP2 Identify and Resolve Plan Conflicts

# Example: Service Continuity Process Area

## **SC:SG2.SP1** IDENTIFY THE ORGANIZATION'S HIGH-VALUE SERVICES

*The high-value services of the organization and their associated assets are identified.*

*The identification and prioritization of the organization's high-value services as strategic planning activities are addressed in the Enterprise Focus process area. This practice is included here to emphasize the importance of prioritizing high-value services as a foundation*

### Typical work products

1. Prioritized list of high-value organizational services, activities, and associated assets
2. Results of security risk assessment and business impact analyses

### Subpractices

1. Identify the organization's high-value services, associated assets, and activities.
2. Analyze and document the relative value of providing these services and the resulting impact on the organization if these services are interrupted.

Consideration of the consequences of the loss of high-value organizational services is typically performed as part of a business impact analysis. In addition, the consequences of risks to high-value services are identified and analyzed in risk assess-

# Distinguishing Features of CERT-RMM

**Converges** key operational risk management activities: security, BC/DR, and IT operations

Guides **implementation and management** of operational resilience activities

**Descriptive** rather than prescriptive: focuses on the “what,” not the “how”

Provides an organizing convention for effective selection and deployment of codes of practice and standards

Guides improvement in areas where an organization’s capability does not equal its desired state

# Distinguishing Features of CERT-RMM (Cont.)

Improves confidence in how an organization responds in times of operational stress

Provides a baseline from which to perform an appraisal

Enables **measurements** of effectiveness

Is a process improvement model

Enables **institutionalization**

Is **not a proprietary** model

# Variety of Ways to Use CERT-RMM

Starting point for **socializing** important harmonization and **convergence** principles across security, business continuity, and IT operations activities

Reference model for understanding the scope of managing operational resilience

Process improvement model to catalyze a process improvement effort

**Baseline** from which to perform an appraisal of an organization's capability

**Guide for improvement** in areas where an organization's capability does not equal its desired state

**Organizing construct for codes of practice**
