Report Documentation Page				Form Approved OMB No. 0704-0188	
Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

U.S. AIR FORCE

Introduction

- **Purpose:** An enterprise-wide risk assessment framework to inform decisions regarding multiple sources of unavoidable risk
- **Strategic Goals:** Assess current military capabilities to execute current operational war plans and support appropriately balancing Air Force capabilities to accomplish future defense strategy
 - We need a structured way to make defensible decisions regarding allocation of resources for both current and future budgets
 - The Air Force needs to express risk in a language that both DOD leaders and Congress understand
 - Risk Assessment Framework should facilitate communication
 - Help think about risk and build assessments
 - Assist presenting risk to decision makers
 - Guide risk discussions within and across disparate functions and scenarios

U.S. AIR FORCE

Four Parts of Risk Assessment Framework

- **Clarify comprehensive information in a risk assessment**
 - What activity or collection of activities are being assessed?
 - What are the content, setting, conditions, and assessment ?
 - What is the assumed risk mitigation actions?
- **Standardize presentation of individual risk assessments**
 - What is the severity and its likelihood to that activity?
 - What metrics underlie that assessment?
- **Aggregate individual risks to assess strategic risk**
 - How do risk for various activities combine?
 - How does this combination affect risk mitigation?
- **Relate types of risk into an enterprise risk assessment**
 - How does force management risk affect operational risk?
 - What is driving the risk and where should resources be applied?

U.S. AIR FORCE

Four Parts of Risk Assessment Framework

Clarify comprehensive information in a risk assessment

- What activity or collection of activities are being assessed?
- What are the content, setting, conditions, and assessment ?
- What is the assumed risk mitigation actions?

Standardize presentation of individual risk assessments

- What is the severity and its likelihood to that activity?
- What metrics underlie that assessment?

Aggregate individual risks to assess strategic risk

- How do risk for various activities combine?
- How does this combination affect risk mitigation?

Relate types of risk into an enterprise risk assessment

- How does force management risk affect operational risk?
- What is driving the risk and where should resources be applied?

Information in Risk Assessment

U.S. AIR FORCE

- **When someone says “this is high risk” what information is implicitly communicated? We identify 11 aspects in 4 groups:**
- **1) The activity or a collection of activities being assessed**
- **2) The context of the assessment**
 - Who accomplished or approved the assessment
 - When they completed it
 - The type of risks considered—specifies the assessment scope
 - The analytic rigor of their assessment process
- **3) Setting of the assessment**
 - Scenario and timeframe
 - Assumed environmental conditions (economic, political, war, ...)
 - Assumed major choices (acquisitions, divestments, policies, ...)
 - Mitigation measures taken to reduce risk
- **4) Resulting assessment** (metric or categorical value)

U.S. AIR FORCE

Standardized Risk Statement

For (Activity), (Organization) on (Date) assesses (Type of Risk) with (Analytic Rigor) for (Scenario) assuming (Conditions) at (Timeframe) with (Major Choices), and (Mitigation) is (Assessment).

Activity	Assessment Context			Assessment Setting					Assessment
ACTIVITY or OBJECTIVE	ORG and DATE	TYPE OF RISK	ANALYTIC RIGOR	SCENARIO	CONDI- TIONS	TIME- FRAME	MAJOR CHOICES	MITIGATION (Specified or AUTHORITY)	ASSESS-MENT (metric or categorical value)
Force Generation	Air Combat Cmnd	Oper- ational	SME based	Vignette Y	None	Near	Programme d Force	Mitigating weapon effectiveness with capacity	Low/ Green
Rapid Global Mobility	Army	Force Manag ement	Metrics/ Mitigation	Conflict w/ Country X	War in Scenario A has been initiated	Mid	TOA Force		Moderate/ Yellow
Homeland Defense	Joint Staff	Etc...	Metrics/ Traceable	Operational Plan XVI		Far	Budgeted Force	Mitigating force structure shortfall with building partner capacity effort	Significant/ Orange
Air Superiority	Etc...		Metrics/ Organi- zational	Scenario Z	A nuclear weapon detonation has occurred	FYDP	Etc...		High/ Red
Etc...			Enterprise	Etc...		Etc...		Etc...	

U.S. AIR FORCE

Four Parts of Risk Assessment Framework

■ **Clarify comprehensive information in a risk assessment**

- What activity or collection of activities are being assessed?
- What are the content, setting, conditions, and assessment ?
- What is the assumed risk mitigation actions?

➡ **Standardize presentation of individual risk assessments**

- What is the severity and its likelihood to that activity?
- What metrics underlie that assessment?

■ **Aggregate individual risks to assess strategic risk**

- How do risk for various activities combine?
- How does this combination affect risk mitigation?

■ **Relate types of risk into an enterprise risk assessment**

- How does force management risk affect operational risk?
- What is driving the risk and where should resources be applied?

U.S. AIR FORCE

Metric Based Approach

for Performance, Resource, and Schedule Goals/Metrics

- Metrics based assessment measure consequences (or at least planned actions)
 - Performance: effectiveness, mission accomplishment, deploy-to-dwell ratios
 - Resource/Cost: capacity or quantities, manpower, dollars, ...
 - Schedule: time or duration until mission accomplishment, days, ...
- Simplicity: presented expected metric value, rather than probability/severity matrix
- Scalability: defined success and failure points appropriate for assessed activity
- Consistency: categorized the risk assessment according to severity to assessed activity

Improved risk communication and understanding throughout the Air Force

U.S. AIR FORCE

Consistent Criteria Scaled to Assessed Activity

- Provides a structured approach where performance, resource, and schedule metrics for the activities underlie the risk assessment
 - Focused on information leaders need (well defined/defensible assessment)
 - Anchored endpoints (Success/Failure) and defined thresholds provide concise, consistent interpretation of results (and aligns with Joint Staff definitions)
 - Defensibility enhanced by metric endpoints and assessments developed via modeling & simulation, data analysis, wargaming, exercises and SME evaluations

Assessment results are defined by these levels supported by analytics

U.S. AIR FORCE

A Basic Example

Assessor

Type of Risk

Context - Scenario

Timeframe/Force Structure

Risk Assessment

Goals/Metrics

- Performance
- Resources, Costs
- Schedule

Mitigation Measures and Authorities

Defined Failure

High

- Unlikely Goal Achievement
- Resources or Schedule Near Failure

Significant

- Questionable Goal Achievement
- Substantial Additional Resources or Schedule

Moderate

- Likely Goal Achievement
- Some Additional Resources or Schedule

Low

- High Likely Goal Achievement
- Resources or Schedule Near Plan

Defined Success

ANALYTIC RIGOR LEVEL (1,2,3,4)

Defendable – Measurable – Repeatable – Traceable – Scalable – Linkable – Incorporates Military Judgment – Implementable

INFORMS DECISIONS

Military Activities

CSAF TO WING COMMANDERS

Give expectations to leaders

- Our roles/objectives are ...
- With given resources/timeline our risk is ...
- We may mitigate risk by ...
- To reduce risk further we would need _____ (DOTMLPF) changes or resources

- Defined success/failure points make sense
- If the risk is realized, we will not be able to ...
- Accepting additional risk would free ____ resources
- We should take action on _____ to reduce the risk of ...

U.S. AIR FORCE

Evaluating an Assessment

Questions Senior Leaders/Decision Makers Should Ask!

- What type of Risk are you describing? (Operational, Force Management, or Institutional)
- What metrics form the basis for this assessment?
 - Are these consequences or performance measures?
 - Which scenarios, timeframes and force structure assumptions did you use?
- What defines success and failure for the assessed activity in the scenario and timeframe?
 - How and why did you determine those success and failure points?
- What is the assessed risk with mitigation in place?
 - How did you determine the values? What is their analytic rigor?
 - What are you doing today or recommend for the future to mitigate this risk?

Shifted in the conversation from the assessor's qualifications to the expected outcomes of the activity in the assessed scenario!

U.S. AIR FORCE

Four Parts of Risk Assessment Framework

■ **Clarify comprehensive information in a risk assessment**

- What activity or collection of activities are being assessed?
- What are the content, setting, conditions, and assessment ?
- What is the assumed risk mitigation actions?

■ **Standardize presentation of individual risk assessments**

- What is the severity and its likelihood to that activity?
- What metrics underlie that assessment?

➡ **Aggregate individual risks to assess strategic risk**

- How do risk for various activities combine?
- How does this combination affect risk mitigation?

■ **Relate types of risk into an enterprise risk assessment**

- How does force management risk affect operational risk?
- What is driving the risk and where should resources be applied?

U.S. AIR FORCE

The Baseline Framework

(Objectives, Activities, & Goals)

- Framework uses a strategy-to-task approach where goals support activities and objectives
- Goals are assessed based on performance, resource, and schedule metrics
- Roll-up to higher levels may change the assessment level
 - Potential reduced if multiple activities rely on common goals/metrics
 - Potential improvement if additional mitigation means are available
- Approach may be applied at various levels of assessment (tactical, operational, strategic)

The Objective/Activity/Goal linkages relate the risk for assessments

Combining Risk Assessments ***(Same Activity)***

- **Different aspects of the same activity**
 - **The combined consequences from each aspect may be deemed sufficient to justify a worse risk assessment than any of the individual assessments**
 - **Related, positive correlation (which may be likely) increases the probability of a combination of worse consequences**
 - **Hence, the combined risk assessment may be worse than the individual risk assessments**
- **Example: program cost and schedule are positively correlated**
 - **If the program is behind schedule, usually the program will also be over cost**
 - **Therefore, combining risks assessments for cost and schedule should indicate increased risk**

U.S. AIR FORCE

Combining Risk Assessments ***(More Aggregate Activity)***

- **Combining several risk assessments to a more aggregate activity risk assessment**
 - **Does the scope encompass the entire aggregate activity? If not collectively exhaustive, the additional scope may increase risk**
 - **If not mutually exclusive (individual assessments account for the same consequences), the combined risk may be less**
 - **Are the individual activities' outcomes positively correlated?**
 - **If so, the combined consequences or increased probability may make the combined risk assessment to be worse**
 - **Do the underlying activities rely on common mitigation resources?**
 - **If so, then the combined risk assessment should be worse because the probability of not being able to mitigate more than one bad outcome**
 - **Does the aggregate activity have alternative approach to achieve the objective?**
 - **Alternative mitigation or approach would reduce the risk**

CJCS Integrated Risk Matrix

The Military Risk Application

U.S. AIR FORCE

RISK	CRITERIA	LOW	MODERATE	SIGNIFICANT	HIGH
Combatant Command "Risk to Mission" Ability to execute assigned missions at acceptable human, material, financial and strategic cost	Achieve Objectives (Current Ops)	Very Likely (ex: 80-100%)	Likely (ex: 50-80%)	Questionable (ex: 20-50%)	Unlikely (ex: 0-20%)
	Achieve Objectives (Contingencies)	Very Likely (ex: Can Win Decisive)	Likely (ex: Can Swift Defeat)	Questionable (ex: Must Hold-Win)	Unlikely (ex: Cannot Hold)
	Authorities	Full Authority Provided for all OBJs	Authority Provided to achieve most OBJs	Insufficient Authority to achieve key OBJs	Lack of Authority jeopardizes mission
	Planning	Level III or IV Plans	Level I or II Plans	CCDR CONOPs (Anticipated Event)	Initiate Planning (Complex Crisis)
Service / Joint Force Provider "Risk to Force" Ability to recruit, man, train, equip and sustain the force to meet strategic objectives	Resources Meet Required Timelines	As Planned	Limited Delays (Acceptable Costs)	Extended Delays (Substantial Costs)	Extreme Delays (Unacceptable Costs)
	Meet CCDR Req's (Current Ops)	Full capacity to source all req's	World-wide solutions for most req's	Shortfalls in critical requirements	No solutions for critical requirements
	Meet CCDR Req's (Contingencies)	Full capacity to source all req's	Shortfalls cause minor plan deviations	Shortfalls cause major plan deviations	Shortfalls make plan execution impossible
	DOTMLPF Capability vs. Threat	Dominance	Superiority	Parity	Inferiority
	Readiness	Strategic Depth for Full-Spectrum Missions	Strategic Depth for Current Operations	Next-to-Deploy Forces Ready "Just in Time"	Deployed Forces Not Ready for Mission
	Stress on the Force	Limited Stress (ex: AC DT > 1:2)	Increased Stress (ex: 1:2 > DT > 1:1.5)	Prolonged Stress (ex: 1:1.5 > DT > 1:1)	Extreme Stress (ex: DT < 1:1)
	Mobilization	Presidential Recall (ex: RC DT > 1:5)	Limited Partial Mob (ex: 1:5 > DT > 1:4)	Partial Mob (ex: 1:4 > DT > 1:3)	Full Mobilization (ex: DT < 1:3)
	Institutional	Force Development & Industrial Base meet all mission requirements	Force Development & Industrial Base meet priority requirements	Force Development & Industrial Base meet some priority requirements	Force Development & Industrial Base fail to meet essential reqs.

Risk to Mission - The ability of the current force to execute strategy successfully within acceptable human, materiel, financial, and strategic costs.* [AF Extended to mid and far term for planning assessments to cover Future Challenges.] *

Risk to Force - The ability to recruit, train, educate, equip, and retain the All-Volunteer Force, and to sustain its readiness and morale. This includes Institutional challenges of addressing management and business practices to plan for, enable, and support the execution of DoD missions in the near, mid, and far terms. *

Note: * The definitions for how risk should be categorized come from the Risk Assessment Process and Methodology for the 2014 Chairman's Risk Assessment (CRA) – 4 June 2013.

Air Force risk assessments align with this Joint Staff matrix

U.S. AIR FORCE

Identifying Linkages

For Military Risk Applications

- In the Military Risk Application (Risk to Mission and Risk to Force), Air Force elements must assess their ability to meet the timelines and force structure requests inherent to Combatant Command planning or force planning constructs for the future.
- Goals/Metrics should match and inform at the level of assessment. Strategic level assessment should be supported by strategic level metrics (i.e. million ton miles per day is informative at the strategic level while the readiness level of an individual unit is not).

U.S. AIR FORCE

Four Parts of Risk Assessment Framework

- **Clarify comprehensive information in a risk assessment**
 - What activity or collection of activities are being assessed?
 - What are the content, setting, conditions, and assessment ?
 - What is the assumed risk mitigation actions?
- **Standardize presentation of individual risk assessments**
 - What is the severity and its likelihood to that activity?
 - What metrics underlie that assessment?
- **Aggregate individual risks to assess strategic risk**
 - How do risk for various activities combine?
 - How does this combination affect risk mitigation?
- ➡ **Relate types of risk into an enterprise risk assessment**
 - How does force management risk affect operational risk?
 - What is driving the risk and where should resources be applied?

The Relationship Between Military Risk Types

Risk to Mission and Risk to Force Example

U.S. AIR FORCE

Unless mitigated, lowest risk assessment drives enterprise risk assessment

U.S. AIR FORCE

Air Force Risk Applications

Core Function Support Plan Risk Assessments

- Air Force Major Commands express how they meet Combatant Command Requirements in 2012 and updated in 2013 and 2014
- Laid foundation for strategic integration of long-term priorities

Strategic Master Plan Capability Gap Assessment

- The Air Force is aggregating the core function support plans into cor capability risk assessments in 2014

Air Force Requirements Oversight Council (AFROC) Application

- All new requirement validations require two assessments of with and without new requirement
- Improving link between requirement risk assessments and core function risk assessment

Weapons Systems Sustainment Application

- Best application to date; supports informed trades decision making

U.S. AIR FORCE

Summary

BENEFITS

- Compares unlike items in simple and flexible framework
- Translates presentation of existing processes rather than changing them
- Allows for quantitative/objective & qualitative/subjective data
- Facilitates communication and discussion to senior leaders
- Supports assessments at multiple organizational levels
- Creates basis for solid analytic support to decision making
- Enables aggregation of risk assessments
- Provides:
 - Common taxonomy/definitions
 - Scaled risk level for each activity based on success/failure
 - Standardized Format Risk Statements (similar and complete information)
 - Aggregation of risk metrics to the enterprise level
 - Critical information to senior leaders necessary for decision making

More analytically rigorous support for defensible decision making

Defendable – Measurable – Repeatable – Traceable – Linkable – Incorporates Military Judgment – Implementable – Scalable
