

Award Number: W81XWH-10-1-0818

TITLE: "A Medical Center Network for Optimized Lung Cancer Biospecimen Banking"

PRINCIPAL INVESTIGATOR: Christopher A. Moskaluk M.D., Ph.D.

CONTRACTING ORGANIZATION: University of Virginia
Charlottesville VA, 22908

REPORT DATE: October 2015

TYPE OF REPORT: Annual Report

PREPARED FOR: U.S. Army Medical Research and Materiel Command
Fort Detrick, Maryland 21702-5012

DISTRIBUTION STATEMENT:

X Approved for public release; distribution unlimited

The views, opinions and/or findings contained in this report are those of the author(s) and should not be construed as an official Department of the Army position, policy or decision unless so designated by other documentation.

REPORT DOCUMENTATION PAGEForm Approved
OMB No. 0704-0188

Public reporting burden for this collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing this collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden to Department of Defense, Washington Headquarters Services, Directorate for Information Operations and Reports (0704-0188), 1215 Jefferson Davis Highway, Suite 1204, Arlington, VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to any penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number. **PLEASE DO NOT RETURN YOUR FORM TO THE ABOVE ADDRESS.**

14. ABSTRACT The mission statement of the Lung Cancer Biospecimen Resource Network (LCBRN) states that the LCBRN will collect, annotate, store, and distribute human lung cancer biospecimens in a manner that embraces the highest ethical standards for human subjects research, that conforms to the best practices of biorepository science, and that furthers basic, translational and clinical research in the understanding, diagnosis, and treatment of this disease. Year 5 of the award has been spent collecting and tracking follow-up data collection, building on the informatics infrastructure to support sample searches and distribution, completing histologic quality control and macrodissection, and serving biospecimens to LCBRN investigators.

Section I: Introduction

The mission statement of the Lung Cancer Biospecimen Resource Network (LCBRN) states that the LCBRN “will collect, annotate, store, and distribute human lung cancer biospecimens in a manner that embraces the highest ethical standards for human subjects research, that conforms to the best practices of biorepository science, and that furthers basic, translational and clinical research in the understanding, diagnosis and treatment of this disease”. The specific aims to support this program include: 1) the creation of a Coordinating Center at The University of Virginia (UVA) that provides standard operating procedures (SOPs), standardized specimen collection kits, informatics infrastructure, quality control procedures and specimen storage as well as being the contact site for investigators using the resources of the LCBRN, 2) the creation of Biospecimen Resource Sites at UVA, the Medical University of South Carolina (MUSC) and Washington University in St. Louis (WUSTL) that will recruit subjects with lung cancer and procure the biospecimens, and 3) the establishment of a centralized biobank of high quality tissue, blood, urine, bronchoscopic washing and saliva samples from lung cancer subjects that are annotated to clinical, laboratory and radiographic data.

Section II: Progress

Subject Accrual

In March of 2014, the Lung Cancer Research Program (LCRP) voted to provide the LCBRN with additional funds for the continued collection of follow-up data only for currently enrolled LCBRN patients. Active enrollments, therefore, ceased on 08/01/2014, and follow-up specimen collection ended on 09/05/2014. 763 patients were enrolled in the LCBRN study since the start of the grant: UVA enrolled 254 subjects, MUSC 213 subjects, and WUSTL 296 subjects. An additional 122 subjects were recruited at the collective sites but were subsequently withdrawn from the study due to various reasons, including benign disease, non-lung cancer related disease, or insufficient sample collection.

Follow-up Accrual

All Resource Sites were provided with a monthly report of patients who are 6 months past-due for their next follow-up data collection. Table 1 below summarizes the data collection performed at each site during the reporting period.

Table 1: LCBRN Follow-up Data Collection

10/17/2014 – 10/14/2015	UVA	WUSTL	MUSC
Total # of patients eligible for follow-up (not including deceased patients)	185	207	157
# of follow-ups collected	311	306	183
# of patients with at least 1 follow-up past due	48	113	97

Conference calls

The LCBRN conference calls now take place on a quarterly basis. Topics for conference calls have dealt with issues regarding follow-up data collection and informatics. Calls have occurred on the following dates: 01/30/2015, 05/01/2015, 07/31/2015. All meeting and conference call minutes are available on the LCBRN Collab Resource Site (<https://collab.itc.virginia.edu/portal>).

Informatics

The LCBRN's central database stores subject identification, clinical data and tracks all aspects of biospecimen procurement. The patient, specimen, QC, specimen inventory, search and distribution modules of the database are fully operational and being used at the Coordinating Center. The Informatics team continues to make improvements to the LCBRN database when necessary and is currently working on a plan to transfer LCBRN data to the Cooperative Human Tissue Network (CHTN) in 2017.

The LCBRN website (<http://www.lcbrn.org>) has been updated to include all digital H&E images of FFPE tumors that are available. Scanned images can be found on the *Access H&E Images* page of the LCBRN website.

Biospecimen Quality Control

Histologic quality control for all cases were completed in July 2015 with macrodissection being completed soon thereafter in September 2015. Molecular quality control is currently being performed on all cases where additional tumor tissue is available. RQI values of 7 or above indicate excellent quality RNA, values between 4 and 7 are considered moderate, and any values below 4 indicate poor quality RNA. The majority of LCBRN tissue samples fall into the moderate to excellent quality range (average RQI of 6.1).

Distribution

The Coordinating Center received a total of 134 inquires from investigators seeking information about the LCBRN's resources since the start of distribution. 32 investigators have submitted applications; 25 were accepted without any changes, 6 were accepted with modifications, and 1 was rejected. The investigators with applications that were accepted with modifications were given suggestions to make better use of LCBRN resources, or had research that was deemed too risky and were therefore offered a smaller sample set than was originally requested for the purpose of obtaining preliminary results. The application that was rejected was due to the rare type of tumor requested. Of noted interest, the LCBRN received a request for clinical data only, which included the already accumulated clinical data on all LCBRN patients, as well as for additional data that was not already included in the cost of biospecimens. Although this project demanded extensive time and effort on the part of the LCBRN, this application was approved and is indicative of the value that many investigators place on having a

resource available to them that can provide detailed clinical annotation, thus furthering the advancement of cancer research. A summary of LCBRN distributions are outlined in Table 2 below.

Table 2: LCBRN Distributions (06/01/2013-10/14/2015)

# Frozen tumor tissue	84
# Frozen non-neoplastic tissue	77
# Serum aliquots	714
# Plasma aliquots	369
# Urine aliquots	237
# Saliva aliquots	69
# BAL fluid aliquots	40
# BAL cell pellet	30
# Buffy coat RNA	10
# Buffy coat DNA	3
#Tumor tissue RNA	176

# Normal tissue RNA	51
# Tumor tissue DNA	135
# Normal tissue DNA	32
# Tumor tissue protein	10
# Normal tissue protein	9
# Unstained slides	444
Total # of samples distributed	2490
Request for LCBRN data only, per record	285
Request for additional charts/data, per record	311
Total Amount Invoiced	\$108,195.00
Total Amount Paid	\$94,541.00

The LCBRN submitted an application to the NCI for their Assay Development Program in September 2013 in response to their request seeking applications from tissue and laboratory resources. The application proposed that the NCI subcontract the LCBRN for any of their lung cancer biospecimen needs, which will in turn help the LCBRN increase sample distribution while providing researchers with a valuable resource. The NCI approved the LCBRN's application but unexpectedly decided not to pursue its previously proposed collaboration with the LCBRN. There was no reason given for this decision other than that they decided not to pursue the project.

Section III: Key Research Accomplishments

- Tracked and collected clinical data on all patients eligible for follow-up
- Successfully implemented quarterly conference calls with minutes recorded and retained on the LCBRN Collab online resource
- Completed histologic quality control and macrodissected on all tissue specimens stored at the Coordinating Center

- Shipped 2490 biospecimens to investigators, all with positive feedback
- Performed and distributed 311 extensive chart reviews
- Distributed marketing emails to the Directors of all NCI-designated Cancer Centers and to researchers who have applied to the NIH for a lung cancer grant

Section IV: Reportable Outcomes

UVA - Cumulative Metrics

Number of subjects currently enrolled in study: 254

Number of subjects withdrawn from study: 64

Reasons for withdrawal from study: Benign disease (31), Ineligible to continue (27),

Withdrew consent (6)

Number of subjects withdrawn from follow-up: 69 (deceased)

Percentage of subjects who have tissue collection: 89%

Percentage of subjects who have at least 1 follow-up specimen collection: 72%

Percentage of subjects who have at least 1 follow-up data collection: 99%

WUSTL - Cumulative Metrics

Number of subjects currently enrolled in study: 296

Number of subjects withdrawn from study: 31

Reasons for withdrawal from study: Benign disease (18), Ineligible to continue (12), Withdrew consent (1)

Number of subjects withdrawn from follow-up: 89 (deceased)

Percentage of subjects who have tissue collection: 80%

Percentage of subjects who have at least 1 follow-up specimen collection: 50%

Percentage of subjects who have at least 1 follow-up data collection: 97%

MUSC - Cumulative Metrics

Number of subjects currently enrolled in study: 213

Number of subjects withdrawn from study: 26

Reasons for withdrawal from study: Benign disease (8), Ineligible to continue (17), Withdrew consent (1)

Number of subjects withdrawn from follow-up: 56 (deceased)

Percentage of subjects who have tissue collection: 85%

Percentage of subjects who have at least 1 follow-up specimen collection: 53%

Percentage of subjects who have at least 1 follow-up data collection: 83%

LCBRN Consortium - Cumulative Metrics

Number of subjects currently enrolled in study: 763

Number of subjects withdrawn from study: 121

Reasons for withdrawal: Benign disease (57), Ineligible to continue (56), Withdrew consent (8)

Number of subjects who died during the study: 214

Percentage of subjects who have tissue collection: 85%

Percentage of subjects who have tumor tissue collection: 78%

Percentage of subjects with a military history: 20%

Percentage of subjects who have never smoked: 9%

Percentage of subjects who are Caucasian: 90%

Percentage of subjects who are male: 52%

Mean age of subjects: 65 years

Number of applications received: 32

Number of applications approved: 31

Number of samples distributed: 2490

Total amount invoiced: \$108,195.00

Total amount received: \$94,541.00

Section V: Conclusion

The LCBRN is successfully reviewing applications for suitability and distributing samples to investigators, all of whom have given positive feedback. In an effort to address the underutilization of its resources, the LCBRN sent out another marketing email in January 2015 to the Directors of all NCI-designated Cancer Centers and to 187 researchers who have applied to the NIH for a lung cancer grant. The response from the research community was not as large as expected but several new inquiries were still received as well as continued interest from existing investigators. The LCBRN is still seeking new avenues to help market its resources and has found many of its current investigators to be excellent references for obtaining new applicants.

Although new subject enrollments and specimen collection have ceased, the LCBRN is committed to the outcome of this project, which is a bank of high quality and highly annotated biospecimens from lung cancer patients that will support research into the molecular basis of this disease, the discovery of diagnostic and prognostic biomarkers, and the validation of new biomarker assays. Samples will continue to be distributed under the support of the Department of Defense CDMRP until a plan to absorb any remaining biospecimens into the Cooperative Human Tissue Network (CHTN), for which the LCBRN Coordinating Center P.I. is a member, is complete. It is a priority that this valuable resource remains available to the general research community, with a panel of experts ensuring its judicious use by projects with a significant likelihood of creating new knowledge of human lung cancer and innovative tools for the diagnosis and treatment of this disease.
