

Software Reviews Since Acquisition Reform – The Artifact Perspective

Dr. Peter Hantos

Senior Engineering Specialist

Software Acquisition and Process Office

Acquisition of Software Intensive Systems Conference 2004

Report Documentation Page

Form Approved
OMB No. 0704-0188

Public reporting burden for the collection of information is estimated to average 1 hour per response, including the time for reviewing instructions, searching existing data sources, gathering and maintaining the data needed, and completing and reviewing the collection of information. Send comments regarding this burden estimate or any other aspect of this collection of information, including suggestions for reducing this burden, to Washington Headquarters Services, Directorate for Information Operations and Reports, 1215 Jefferson Davis Highway, Suite 1204, Arlington VA 22202-4302. Respondents should be aware that notwithstanding any other provision of law, no person shall be subject to a penalty for failing to comply with a collection of information if it does not display a currently valid OMB control number.

1. REPORT DATE JAN 2004		2. REPORT TYPE		3. DATES COVERED 00-00-2004 to 00-00-2004	
4. TITLE AND SUBTITLE Software reviews Since Acquisition Reform - The Artifact Perspective				5a. CONTRACT NUMBER	
				5b. GRANT NUMBER	
				5c. PROGRAM ELEMENT NUMBER	
6. AUTHOR(S)				5d. PROJECT NUMBER	
				5e. TASK NUMBER	
				5f. WORK UNIT NUMBER	
7. PERFORMING ORGANIZATION NAME(S) AND ADDRESS(ES) The Aerospace Corporation, PO Box 92957, Los Angeles, CA, 90009-2957				8. PERFORMING ORGANIZATION REPORT NUMBER	
9. SPONSORING/MONITORING AGENCY NAME(S) AND ADDRESS(ES)				10. SPONSOR/MONITOR'S ACRONYM(S)	
				11. SPONSOR/MONITOR'S REPORT NUMBER(S)	
12. DISTRIBUTION/AVAILABILITY STATEMENT Approved for public release; distribution unlimited					
13. SUPPLEMENTARY NOTES 2004 Conference on the Acquisition of Software-Intensive Systems, 26-28 Jan, 2004.					
14. ABSTRACT					
15. SUBJECT TERMS					
16. SECURITY CLASSIFICATION OF:			17. LIMITATION OF ABSTRACT Same as Report (SAR)	18. NUMBER OF PAGES 17	19a. NAME OF RESPONSIBLE PERSON
a. REPORT unclassified	b. ABSTRACT unclassified	c. THIS PAGE unclassified			

Acknowledgements

- This work would not have been possible without assistance from the following:
 - Reviewers
 - Richard J. Adams, Software Acquisition and Process Office
 - Suellen Eslinger, Software Acquisition and Process Office
 - Karen L.Owens, Software Acquisition and Process Office
 - Mary A. Rich, Principal Director, Software Engineering Subdivision
 - Sponsor
 - Michael Zambrana, USAF Space and Missile Systems Center, Directorate of Systems Engineering
 - Funding source
 - Mission-Oriented Investigation and Experimentation (MOIE) Research Program (Software Acquisition Task)

Background of Problem

- **Pre-1994:**
 - MIL-STD-1521B (Technical Reviews)
 - Formal milestone reviews
 - Date of last version is June 4, 1985 (!)
 - DoD-STD-2167A (Defense System Software Development)
 - Single pass Waterfall Life Cycle Model bias
- **1994:**
 - MIL-STD-498 (Software Development & Documentation)
 - Although all other MIL standards are cancelled by the DoD, **MIL-STD-498** was approved as an interim standard for 2 years
 - Eliminated any Waterfall bias
 - Joint reviews: Schedule and content proposed by contractor

The Problems with Reviews

- **Now:**
 - No official development or review standards of record
 - Neither the government nor the contractor has clear concept of what reviews should contain and when they should occur
 - Interpretation of major contractual technical reviews (e.g., System PDR, System CDR) is left to individuals to decide
 - Quality and content of reviews is widely different both within and across programs
 - Quick, last-minute, before-review efforts to revive and customize MIL-STD-1521B proved to be ineffective

Perspectives on Review Issues

- **The Life Cycle Perspective (“When?”)***
 - Pre-acquisition reform assumptions:
 - Acquisition and development are exclusively Waterfall
 - Reviews (SSR, PDR, CDR, etc.) are clearly positioned
 - Now:
 - Evolutionary Acquisition
 - Iterative/Incremental and Spiral Development
 - Emerging agile methods
 - **Asynchronous, in-process, interim reviews**
- **The Artifact Perspective (“What?”)**
 - This is the subject of the presentation

** For more details see my upcoming presentation at the 2004 Software Technology Conference in Salt Lake City, Utah: Hantos, P., “Software Reviews Since Acquisition Reform – The Life Cycle Perspective”*

Presentation Objectives

- **Identify** modern software development trends within key areas of interest
- **Compare** pre-acquisition reform software development practices with the state-of-the-practice (With minor references to the state-of-the-art...)
- **Highlight** new work products and related, new review artifacts

Key Areas of Interest

Architecture	Unit Designation and Nomenclature
	Architecture Focus
	Software Reuse and COTS
	Frameworks
	Open Systems
	Distributed Systems
Product-Oriented Software Engineering Activities	Analysis/Design
	Programming Languages
	Programming
	Integration
	Test
Engineering Management Process	The Software Concept
	Quantitative Management, use of Software Metrics
	Organizational and Management Models
	Systems Engineering
Integral Software Engineering Activities	Process Maturity and Quality Frameworks
	Quality
	Risk Management
Hardware-Software Technology	Design Paradigms
	Host Processor
	Communications
	Database Management
	Tools
	Documentation
Security	Security

Architecture

	OLD	NEW
Unit Designation and Nomenclature	<p>CSCI – HWCI with high granularity:</p> <ul style="list-style-type: none"> Homogeneous, static view of CSCIs assuming unchanging configuration entities: <i>Design -> Source Code -></i> <i>-> Developmental executables -></i> <i>-> Delivered executables</i> 	<p>O-O concepts and nomenclature:</p> <ul style="list-style-type: none"> Objects – with flexible granularity Packages – for higher order, logical object structure Component diagrams – for components and interfaces Deployment – distribution of components on nodes Source code vs. executable releases
Architecture Focus	<p>Weak:</p> <ul style="list-style-type: none"> High-level Design = Architecture <p>Monolithic architectural patterns:</p> <ul style="list-style-type: none"> Mainframe Process control-type instruments 	<p>Strong:</p> <ul style="list-style-type: none"> Multiple, stakeholder views <p>Variety of architectural patterns:</p> <ul style="list-style-type: none"> Client-Server Distributed/networked Application-services
Software Reuse and COTS	<p>Sporadic, opportunistic reuse</p> <p>Limited, low-level libraries only</p> <p>No sensitivity to COTS software:</p> <ul style="list-style-type: none"> No impact on life cycle models No acknowledgement of risks due to COTS volatility 	<p>Systematic, application-domain reuse</p> <p>Increased use of system libraries</p> <p>High emphasis on using COTS:</p> <ul style="list-style-type: none"> Acknowledging life cycle impact High sensitivity to COTS volatility Coexistence with legacy code, “wrappers”

Architecture (Cont.)

	OLD	NEW
Frameworks	<p>Middleware concept didn't exist</p>	<p>Wide use of frameworks: COM, .NET, CORBA, etc. Distributed objects Domain-specific, reusable assets</p>
Open Systems	<p>Concept didn't exist</p> <ul style="list-style-type: none"> • Most solutions were proprietary • Limited acceptance of best practices 	<p>Rapidly emerging concept Push for commercial solutions Open to wide array of best practices Emerging, Open UML-based standards</p>
Distributed Systems	<p>Primitive networks only</p> <ul style="list-style-type: none"> • No WWW (World-Wide Web) 	<p>Large, high bandwidth networks 100 Gbit/sec Rapidly growing WWW Intranets/Extranets Remote network management Remote diagnostics</p>

Product-Oriented SW Engineering Activities

	OLD	NEW
Analysis/Design	Structured/Hierarchical: <ul style="list-style-type: none"> Functional decomposition of requirements No or little coding until design completed 	Object-Oriented/UML-based: <ul style="list-style-type: none"> Iterative/Incremental Use Case driven Exploratory coding, prototyping Might follow test-driven design process
Programming Languages	Primarily procedural Textual only	Dominant Object-Oriented Visual languages
Programming	Manual only Code metrics: <ul style="list-style-type: none"> McCabe complexity 	Visual programming Automated code generators: <ul style="list-style-type: none"> Executable models Round-trip engineering Code metrics for O-O programs: <ul style="list-style-type: none"> New metrics replace McCabe
Integration	“Big-bang”: <ul style="list-style-type: none"> Single, major event at the end 	Incremental integration: <ul style="list-style-type: none"> Multiple, frequent releases
Test	Manual only	Increased automated testing Load testing of networks

Engineering Management Processes

	OLD	NEW
The Software Concept	<p>“Software is software”</p> <p>“One size fits all”:</p> <ul style="list-style-type: none"> Scaling assumed to be simple and transparent 	<p>Acknowledges the differences between:</p> <ul style="list-style-type: none"> Information Management (IM) Decision-making systems Real-time applications Web-services Etc. <p>High sensitivity to scaling</p>
Quantitative Management, use of SW Metrics	<p>Weak management exploitation of metrics</p> <p>Sporadic choice and use of metrics</p>	<p>Systematic use of software metrics</p> <p>Strong emphasis on moving to statistical software process control:</p> <ul style="list-style-type: none"> CMMI® Level 4-5 Six Sigma
Organizational and Management Models	<p>Functional organization structure</p> <ul style="list-style-type: none"> Matches the hierarchically decomposed product architecture <p>No sensitivity to multi-contractor environments</p>	<p>Organization structured around IPTs (Integrated Product Teams)</p> <p>Acknowledges highly diverse and complex contractor structure</p>
Systems Engineering	<p>Weak, nominal software representation and awareness:</p> <ul style="list-style-type: none"> Software always the bottleneck Disjointed hardware-software processes 	<p>Stronger awareness of software processes and dependencies:</p> <ul style="list-style-type: none"> Integrated hardware-software planning Concurrent Engineering

Integral Software Engineering Activities

	OLD	NEW
Process Maturity and Quality Frameworks	Did not exist	CMM/CMMI®: Organizational process capability and maturity concepts Clearly defined process areas with detailed practices ISO 9000 series of quality standards
Quality	Software Quality = QA + QC = Test Emphasis on system test <ul style="list-style-type: none"> • Equivalent of QC Focus on product quality only	“New” Software Quality Assurance: Spread over the life cycle Peer Review of all requirements, design, coding, and test artifacts Emphasis is on defect prevention Scope now includes process audit and process improvement coaching
Risk Management	Hardware-focused: <ul style="list-style-type: none"> • Little sensitivity to and awareness of software risks • Assumes hardware-like reliability models for software • Hardware-software risks handled separately 	Integral activity of Spiral Development: Hardware-software risk mitigation related trade-offs must be done together

Hardware-Software Technology

	OLD	NEW
Design Paradigms	Single, basic software paradigm	New, emerging paradigms: Object-Oriented Agents Genetic Programming Neural Networks
Host Processor	Single processor	Multi-processor: Multi-threaded applications Networks of processors (Grid computing)
Communications	Low bandwidth: <ul style="list-style-type: none"> No significant compression Limited wireless communication 	High bandwidth: Sophisticated compression technologies High-speed wireless communication
Database Management	Mainframe oriented: <ul style="list-style-type: none"> Large Text only At most relational schema 	On any Host: Fully scalable Distributed O-O for any objects (image, voice, video)
Tools	Basic, independent tools No COTS software perspective	Rich toolset, integrated with life cycle process High tools vendor/product volatility sensitivity
Documentation	All documentation static Delivered on paper Text format primarily ASCII	Dynamic, interactive, searchable Executable models for design New media (CD, DVD, or on-line server-based)

Security

	OLD	NEW
Security	<p>No sensitivity to software specifics:</p> <ul style="list-style-type: none">• Satisfied with password level• System security view only	<p>High Security Consciousness:</p> <ul style="list-style-type: none">Kernel level securityMalicious penetration and virus issuesFirewalls, honeypotsDenial of Service attacksTrusted computer platformsSophisticated encryption algorithmsDigital Rights management

Conclusions

- In-process software technical reviews are replacing rigid milestone reviews
- The understanding of software development trends is essential for determining review artifacts and their expected performance and maturity according to their position in the system life cycle
- Key Areas of Interest:
 - Architecture
 - Product-Oriented Software Engineering Activities
 - Engineering Management Processes
 - Integral Software Engineering Activities
 - New Hardware-Software Technologies
 - Security

Acronyms and Abbreviations

ASCII	American Standard Code for Information Interchange
CD	Compact Disc
CDR	Critical Design Review
CMMI	Capability Maturity Model Integration
COM	Component Object Model
CORBA	Common Object Request Broker Architecture
COTS	Commercial Off-the-Shelf
CSCI	Computer Software Configuration Item
DVD	Digital Video Disc
HWCI	Hardware Configuration Item
IPT	Integrated Product Team
ISO	International Organization for Standards
.NET	Microsoft's Web-services Framework
O-O	Object-Oriented
PDL	Page Definition Language
PDR	Preliminary Design Review
QA	Quality Assurance
QC	Quality Control
SSR	System Specification Review
UML	Unified Modeling Language
USAF	US Air Force
WWW	World Wide Web
XML	Extensible Markup Language
